## 16. TRUST FUNDS AND FEDERAL FUNDS

The budget consists of two major groups of funds: Federal funds and trust funds. This section presents summary information about the transactions of each of these two fund groups. Information is provided about the income and outgo of the major trust funds and a number of Federal funds that are financed by earmarked collections in a manner similar to trust funds. Since the effects on the existing Medicare trust funds and on Federal funds of the President's Medicare modernization proposals have not yet been determined, the effects of these reforms are not reflected in detail in this chapter.

### Federal Funds Group

The Federal funds group comprises the larger part of the budget. It includes all transactions not classified by law as being in trust funds.

The main financing component of the Federal funds group is the general fund, which is used to carry out the general purposes of Government rather than being restricted by law to a specific program. It consists of all collections not earmarked by law to finance other funds, including virtually all income taxes and many excise taxes, and all expenditures financed by these collections and by general Treasury borrowing.

The Federal funds group also includes special funds and revolving funds, which earmark collections for spending on specific purposes. Where the law requires that Federal fund collections from a specified source be earmarked to finance a particular program, such as a portion of the Outer Continental Shelf mineral leasing receipts deposited into the Land and Water Conservation Fund, the collections and associated disbursements are recorded in special fund receipt and expenditure accounts. The majority of special fund collections are derived from the Government's power to impose taxes, fines, and other compulsory payments. They must be appropriated before they can be obligated and spent. However, significant amounts of collections credited to special funds are derived from business-like activity, such as the receipts from Outer Continental Shelf mineral leasing.

Revolving funds conduct continuing cycles of business-like activity. They charge for the sale of products or services and use the proceeds to finance their spending. Instead of being deposited in receipt accounts, their proceeds are recorded in the revolving funds, which are expenditure accounts. These collections generally are available automatically for obligation and making payments. Outlays for revolving funds are reported net of offsetting collections. There are two classes of revolving funds. Public enterprise funds, such as the Postal Service Fund, conduct business-like operations mainly with the public. Intragovernmental funds, such as the

Federal Buildings Fund, conduct business-like operations mainly within and between Government agencies.

### Trust Funds Group

The trust funds group consists of funds that are designated by law as trust funds. Like special funds and revolving funds, they earmark collections for spending on specific purposes. Many of the larger trust funds finance social insurance payments for individuals, such as Social Security, Medicare, and unemployment compensation. Other major trust funds finance military and Federal civilian employees' retirement, highway and transit construction, and airport and airway development. There are a few trust revolving funds that are credited with collections earmarked by law to carry out a cycle of business-type operations. Trust funds also include a few small funds established to carry out the terms of a conditional gift or bequest.

There is no substantive difference between trust funds and special funds or between revolving funds and trust revolving funds. Whether a particular fund is designated in law as a trust fund is, in many cases, arbitrary. For example, the National Service Life Insurance Fund is a trust fund, but the Servicemen's Group Life Insurance Fund is a Federal fund, even though both are financed by earmarked fees paid by veterans and both provide life insurance payments to veterans' beneficiaries.<sup>1</sup>

The Federal budget meaning of the term "trust" differs significantly from the private sector usage. The beneficiary of a private trust owns the trust's income and often its assets. A custodian manages the assets on behalf of the beneficiary according to the stipulations of the trust, which he or she cannot change unilaterally. In contrast, the Federal Government owns the assets and earnings of most Federal trust funds, and it can unilaterally raise or lower future trust fund collections and payments, or change the purpose for which the collections are used, by changing existing law. Only a few small Federal trust funds are managed pursuant to a trust agreement where the Government is the trustee, and the Government generally has some ability to determine the amount deposited into or paid out of these funds. Other amounts are held in deposit funds by the Government as a custodian on behalf of some entity outside the Government. The Government makes no decisions about the amount of these deposits or how they are spent. Therefore, they are considered to be

<sup>1</sup>Another example is the Violent Crime Reduction Trust Fund, established pursuant to the Violent Crime Control and Law Enforcement Act of 1994. Because the Fund is substantively a means of accounting for general fund appropriations, and does not consist of dedicated receipts, it is classified as a Federal fund rather than a trust fund, notwithstanding the presence of the words "Trust Fund" in its official name.

Note: Receipts include governmental, interfund, and proprietary receipts. They exclude intrafund receipts, which are offset against intrafund payments so that cash income and cash outgo are not overstated.

non-budgetary instead of Federal trust funds and are excluded from the Federal budget.

A trust fund must use its income for the purposes designated by law. Some, such as the Federal Employees Health Benefits fund, spend their income almost as quickly as it is collected. Others, such as the Social Security and the Federal civilian employees retirement trust funds, currently spend considerably less than they collect each year. A surplus of income over outgo adds to the trust fund's balance, which is available to finance future expenditures. The balances are generally invested, by law, in Treasury securities.<sup>2</sup> Any net cash inflow from the public to the trust funds decreases the Treasury's need to borrow from the public in order to finance a Federal funds deficit.

A trust fund normally consists of one or more receipt accounts (to record income) and an expenditure account (to record outgo). However, a few trust funds, such as the Veterans Special Life Insurance fund, are established by law as revolving funds. These funds are similar to revolving funds in the Federal funds group. They conduct a cycle of business-type operations, offsetting collections are credited to the funds (which are expenditure accounts), and their outlays are displayed net of the offsetting collections.

<sup>2</sup>An exception is the National Railroad Retirement Investment Trust, which under recently-enacted legislation will be able to invest its balances in private securities in hopes of being able to finance higher benefit payments with lower contribution rates.

### Income and Outgo by Fund Group

Table 16–1 shows income, outgo, and surplus or deficit by fund group and adds them together (and removes double-counting) to derive the total unified budget receipts, outlays, and surplus or deficit. The estimates assume enactment of the President's budget proposals. Income consists mostly of receipts (derived from governmental activity—primarily income, payroll, and excise taxes—and gifts). It also consists of offsetting receipts, which include proprietary receipts (derived from business-like transactions with the public) and interfund collections (receipts by one fund of payments from a fund in the other fund group) that are deposited in receipt accounts. Outgo consists of payments made to the public and/or to a fund in the other fund group.

Two types of transactions are treated specially. First, income and outgo for a fund group exclude transactions between funds within the same fund group.<sup>3</sup> These intrafund transactions constitute outgo and income for the individual funds that make and collect the payments. However, because the totals for each fund group measure its transactions with the public and the other fund group, intrafund transactions must be subtracted

<sup>3</sup>For example, the railroad retirement trust funds pay the equivalent of social security benefits to railroad retirees, in addition to the regular railroad pension. These benefits are financed by a payment from the Federal Old-Age and Survivors Insurance trust fund to the railroad retirement trust funds. The payment and collection are both deducted so that total trust fund income and outgo measure disbursements to the public and to Federal funds.

\* \$50 million or less.

from the sum of the income and outgo of all individual funds within the fund group to calculate the consolidated income and outgo for that fund group as a whole. Second, income excludes the offsetting collections, which are offset against outgo in revolving fund expenditure accounts instead of being deposited in receipt accounts.<sup>4</sup> It would be conceptually appropriate to classify these collections as income, but at present the data are not tabulated centrally for both fund groups. Consequently, they are offset against outgo in Table 16-1 and are not shown separately.

Some funds in the Federal funds group and some trust funds are authorized to borrow from the general fund of the Treasury.<sup>5</sup> Borrowed funds are not recorded as receipts and are excluded from the income of the fund. The borrowed funds finance outlays by the fund in excess of available receipts. Subsequently, fund receipts are transferred from the fund to the general fund in repayment of the borrowing. The repayment is not recorded as an outlay of the fund or included in fund outgo.

<sup>4</sup>For example, postage stamp fees are deposited as offsetting collections in the Postal Service fund. As a result, the Fund's outgo is disbursements net of collections.

<sup>5</sup>For example, the Bonneville Power Administration Fund, a revolving fund in the Department of Energy, is authorized to borrow from the general fund, and the Black Lung Disability Trust Fund in the Department of Labor is authorized to receive appropriations of repayable advances from the general fund (a form of borrowing).

Some income in both Federal funds and trust funds consists of offsetting receipts. In contrast, for most budget purposes, offsetting receipts are excluded from receipts figures and subtracted from gross outlays. There are two reasons for this treatment:

- Business-like or market-oriented activities with the public: The collections from such activities are deducted from gross outlays, rather than added to receipts, in order to produce budget totals for receipts and outlays that represent governmental rather than market activity.
- Intragovernmental transactions: Collections by one Government account from another are deducted from gross outlays, rather than added to receipts, so that the budget totals measure the transactions of the Government with the public.

Because the income for Federal funds and for trust funds recorded in Table 16-1 includes offsetting receipts, those offsetting receipts must be deducted from the two fund groups' combined gross income in order to reconcile to total (net) unified budget receipts. Similarly, because the outgo for Federal funds and for trust funds in Table 16-1 consists of gross outlays, the amount of the offsetting receipts must be deducted from the sum of the Federal funds' and the trust funds' gross outgo in order to reconcile to total (net) unified budget outlays. Table 16-3 reconciles, for fiscal year

2002, the gross total of all trust fund and Federal fund receipts with the net total of the Federal fund group's and the trust fund group's cash income (as shown in Table 16-1), and with the unified budget's receipt total.

### Income, Outgo, and Balances of Trust Funds

Table 16-2 shows, for the trust funds group as a whole, the funds' balance at the start of each year, income and outgo during the year, and the end of year balance. Income and outgo are divided between transactions with the public and transactions with Federal funds. Receipts from Federal funds are divided between interest and other interfund receipts.

The definition of income and outgo in this table differs from those in Table 16-1 in one important way. Trust fund collections that are offset against outgo (as offsetting collections) within expenditure accounts instead of being deposited in separate receipt accounts are classified as income in this table but not in Table 16-1. This classification is consistent with the definitions of income and outgo for trust funds used elsewhere in the budget. It has the effect of increasing both income and outgo by the amount of the offsetting collections. The difference was approximately \$38 billion in 2002. Table 16-2, therefore, provides a more complete summary of trust fund income and outgo.

The trust funds group is expected to have large and growing surpluses over the projection period. As a consequence, trust fund balances are estimated to grow substantially, as they have over the past two decades.

The size of the anticipated balances is unprecedented, and it results mainly from relatively recent changes in the way some trust funds are financed.

Primarily because of these changes, but also because of the impact of real growth and inflation, trust fund balances increased tenfold from 1982 to 2000, from \$205 billion to \$2.1 trillion. Under the proposals in the President's budget, the balances are estimated to nearly double again by the year 2008, rising to \$4.1 trillion. Almost all of these balances are invested in Treasury securities and earn interest. Therefore, they represent the value, in current dollars, of taxes and user fees that have been paid in advance for future benefits and services.

Until the 1980s, most trust funds operated on a pay-as-you-go basis. Taxes and user fees were set at levels high enough to finance benefits and administrative expenses, and to maintain prudent reserves, generally defined as being equal to one year's expenditures. As a result, trust fund balances tended to grow at about the same rate as their annual expenditures.

Pay-as-you-go financing was replaced in the 1980s by full or partial accrual funding for some of the larger trust funds. In order to partially prefund the social security benefits of the "baby-boomers", the Social Security Amendments of 1983 raised payroll taxes above the levels necessary to finance current expenditures. In 1984 a new system was set up to finance military retirement benefits on a full accrual basis. In 1986 full accrual funding of retirement benefits was man-

| Proprietary receipts .....   | -78.3   |
| Subtotal, offsetting receipts .....  | -421.5  |
| Unified budget receipts .....  | 1,853.2 |

<sup>1</sup> Offsetting receipts are included in cash income for each fund group, but in the unified budget totals are excluded from the receipts total and instead deducted from outlays.

dated for Federal civilian employees hired after December 31, 1983. The latter two changes require Federal agencies and their employees to make annual payments to the Federal employees' retirement trust funds in an amount equal to the value of the retirement benefits earned by employees in that year. Since many years will pass before current employees are paid retirement benefits, the trust funds will accumulate substantial balances over time.

These balances are available to finance future benefit payments and other trust fund expenditures—but only in a bookkeeping sense. These funds are not set up to be pension funds, like the funds of private pension plans. They do not hold real economic assets that can be drawn down in the future to fund benefits. Instead, they are claims on the Treasury. When trust fund holdings are redeemed to pay benefits, Treasury will have to finance the expenditure in the same way as any other Federal expenditure: out of current receipts, by borrowing from the public, or by reducing benefits or other expenditures. The existence of large trust fund balances, therefore, does not, by itself, increase the Government's ability to pay benefits.

From an economic standpoint, the Government is able to prefund benefits only by increasing saving and investment in the economy as a whole. This can be fully accomplished only by simultaneously running trust fund surpluses equal to the actuarial present value of the accumulating benefits and not allowing the Federal fund deficit to increase, so that the trust fund surplus reduces a unified budget deficit or increases a unified budget surplus. This would reduce Federal borrowing

by the amount of the trust funds surplus and increase the amount of national saving available to finance investment. Greater investment would increase future incomes and wealth, which would provide more real economic resources to support the benefits.

Table 16–4 shows estimates of income, outgo, and balances for 2002 through 2008 for the major trust funds. With the exception of transactions between trust funds, the data for the individual trust funds are conceptually the same as the data in Table 16–2 for the trust funds group. As explained previously, transactions between trust funds are shown as outgo of the fund that makes the payment and as income of the fund that collects it in the data for an individual trust fund, but the collections are offset against outgo in the data for the trust fund group. Additional information for these and other trust funds can be found in the Status of Funds tables in the Budget Appendix.

Table 16–5, which immediately follows Table 16–4, at the end of this chapter, shows income, outgo, and balances of four existing Federal funds—a revolving fund and three special funds. It also shows a new special fund of the same general type: a new fund for military retirees' health benefits. All these funds are similar to trust funds in that they are financed by earmarked receipts, excesses of income over outgo are invested, the interest earnings add to balances, and the balances remain available to finance future expenditures. The table is illustrative of the Federal funds group, which includes many other revolving funds and special funds in addition to the ones shown.

\* \$50 million or less.

Note: Balances shown include committed and uncommitted cash balances.

<sup>1</sup> The increases in the Highway Trust Fund cash balance between 2003 and 2007 are attributable to a modification in the treatment of outlays associated with transit programs.

## 17. NATIONAL INCOME AND PRODUCT ACCOUNTS

The National Income and Product Accounts (NIPA's) are an integrated set of measures of aggregate U.S. economic activity that are prepared by the Department of Commerce. Because the NIPA's include Federal transactions and are widely used in economic analysis, it is important to show the NIPA's distinctive presentation of Federal transactions and contrast it with the Budget.

One of the main purposes of the NIPA's is to measure the Nation's total production of goods and services, known as gross domestic product (GDP), and the incomes generated in its production. GDP is a measure of the Nation's final output, which excludes intermediate product to avoid double counting. Both government consumption expenditures and government gross investment—State and local as well as Federal—are included in GDP as part of final output, together with personal consumption expenditures, gross private domestic investment, and net exports of goods and services (exports minus imports).

Other government expenditures—transfer payments, grants to State and local governments, subsidies, and net interest payments—are not purchases of final output and as such are not included in GDP; however, these transactions are recorded in the NIPA government receipts and expenditure account, together with government consumption expenditures (which includes depreciation on government gross investment).

Federal transactions are included in the NIPA's as part of the government sector.<sup>1</sup> The Federal subsector is designed to measure certain important economic effects of Federal transactions in a way that is consistent with the conceptual structure of the entire set of integrated accounts. The NIPA Federal subsector is not itself a budget, because it is not a financial plan for proposing, determining, and controlling the fiscal activities of the Government. NIPA concepts differ in many ways from budget concepts, and therefore the NIPA presentation of Federal finances is significantly different from that of the budget.

### Differences Between the NIPA's and the Budget

Federal transactions in the NIPA's are measured according to NIPA accounting concepts in order to be compatible with the purposes of the NIPA's and other transactions recorded in the NIPA's. As a result they differ from the budget in *netting*, *timing*, and *coverage*. These differences cause total receipts and expenditures in the NIPA's to differ from total receipts and outlays in the budget, albeit by relatively small amounts.<sup>2</sup> Dif-

ferences in timing and coverage also cause the NIPA current surplus or deficit to differ from the budget surplus or deficit. Netting differences have equal effects on receipts and expenditures and thus have no effect on the current surplus/deficit. Besides these differences, the NIPA's combine transactions into different categories from those used in the budget.

*Netting differences* arise when the budget records certain transactions as offsets to outlays while they are recorded as receipts in the NIPA's (or vice versa). The budget treats all income that comes to the Government due to its sovereign powers—mainly, but not exclusively, taxes—as governmental receipts. The budget offsets against outlays any income that arises from voluntary business-type transactions with the public. The NIPA's generally follow this concept as well, and all income to government enterprises such as the Postal Service or the power administrations is offset against expenditures. However, the NIPA's have a narrower definition of “business-type transactions”. Rents, royalties, and regulatory or inspection fees, which are classified as offsetting receipts in the budget, are recorded in the NIPA's as Government receipts (business nontaxes). The NIPA's include Medicare premiums as Government receipts, while the budget classifies them as business-type transactions (offsetting receipts).

In the budget, any intragovernmental income from one account to another is offset against outlays rather than being recorded as a receipt. Government contributions for Federal employee social insurance (such as social security) is an example: the budget offsets these payments against outlays. In contrast, the NIPA's treat the Federal Government like any other employer and show contributions for Federal employee social insurance as expenditures by the employing agencies and as governmental (rather than offsetting) receipts. The NIPA's also impute certain transactions that are not explicit in the budget. For example, unemployment benefits for Federal employees are financed by direct appropriations rather than social insurance contributions. The NIPA's impute social insurance contributions by employing agencies to finance these benefits—again, treating the Federal Government like any other employer.

*Timing differences* for receipts occur because the NIPA's generally record personal taxes and social insurance contributions when they are paid and business taxes when they accrue, while the budget generally records all receipts when they are received. Thus the NIPA's attribute corporations' final settlement payments back to the quarter(s) in which the profits that gave rise to the tax liability occurred. The delay between accrual of liability and Treasury receipt of payment can result in significant timing differences be-

<sup>1</sup>The other subsector of the NIPA government sector is a single set of transactions for all U.S. State and local units of government, treated as a consolidated entity.

<sup>2</sup>Over the period 1993–2001, NIPA current expenditures averaged three percent higher than budget outlays, while NIPA current receipts averaged one percent higher than budget receipts.

tween NIPA and Budget measures of receipts for any given accounting period.

Timing differences also occur for expenditures. When the first of a month falls on a weekend, monthly benefit checks normally mailed on the first of the month may be mailed out a day or two earlier; the budget then reflects two payments in one month and none the next. On occasion, the budget totals reflect 13 monthly payments in one year and only 11 the next. NIPA expenditure figures always reflect 12 benefit payments per year, giving rise to a timing difference compared to the budget.

*Coverage differences* also differentiate the budget and the NIPA's. Unlike the budget, the NIPA's exclude transactions with U.S. territories. The NIPA's also exclude the proceeds from the sales of nonproduced assets such as land. Bonuses paid on Outer Continental Shelf oil leases and proceeds from broadcast spectrum auctions are shown as offsetting receipts in the budget and are deducted from budget outlays. In the NIPA's these transactions are excluded as an exchange of assets with no production involved.

A type of coverage difference arises on the expenditure side because of the NIPA treatment of government investment. The budget includes outlays for Federal investments as they are paid, while the Federal sector of the NIPA instead excludes current investments but includes a depreciation charge on past investments ("consumption of general government fixed capital") as part of "current expenditures." The inclusion of depreciation on fixed capital (structures, equipment and software) in current expenditures is a proxy for the services that capital renders; i.e., for its contribution to government output of public services.

The treatment of government pension plan income and outgo creates a coverage difference. Where the budget treats employee payments to these pension plans as governmental receipts, and employer contributions by agencies as offsets to outlays, the NIPA's treat both of these components of employee compensation as personal income, in the same way as it treats contributions to pension plans in the private (household) sector. Likewise, the budget records a government check to a retired government employee as a current outlay, but under NIPA concepts, no government expenditure occurs at that time; the payment is treated (like private pension payments) as a transfer of income within the household sector.

Federal investment grants to State and local governments (such as for interstate highway construction), investment subsidies to business, and forgiveness of debt owed by foreign governments are included as outlays in the budget but excluded from the NIPA's as being capital transfers unrelated to current economic production. Likewise, estate and gift taxes, included in budget receipts, are excluded from the NIPA's as capital transfers.

Financial transactions such as loan disbursements, loan repayments, loan asset sales, and loan guarantees are excluded from the NIPA's on the grounds that such

transactions simply involve an exchange of assets with no production involved. In contrast, under the Federal Credit Reform Act of 1990, for direct loan obligations and loan guarantee commitments made after 1991, the budget records the estimated subsidy cost of the direct loan or loan guarantee as an outlay when the loan is disbursed. The cash flows with the public are recorded in nonbudgetary accounts as a means of financing the budget rather than as budgetary transactions themselves. This treatment recognizes that part of a Federal direct loan is an exchange of assets with equal value but part is a subsidy to the borrower. It also recognizes the subsidy normally granted by loan guarantees. In the NIPA's, neither the subsidies nor the loan transactions are included. However, the NIPA's, like the budget, include all interest transactions with the public, including net interest paid to the loan financing accounts.

Deposit insurance outlays for resolving failed banks and thrift institutions are similarly excluded from the NIPA's on the grounds that there are no offsetting current income flows from these transactions. In 1991, this exclusion was the largest difference between the NIPA's and the budget and made the NIPA current deficit significantly smaller than the budget deficit that year. In subsequent years, as assets acquired from failed financial institutions were sold, these collections tended to make the budget deficit smaller than the NIPA current deficit.

### Federal Sector Current Receipts

Table 17-1 shows Federal current receipts in the four major categories used in the NIPA's, which are similar to the budget categories but with significant differences.

Personal tax and nontax receipts is the largest category of current receipts. It is composed primarily of the individual income tax, but also includes fees, fines, and other receipts from persons.

Corporate profits tax accruals differs in classification from the corresponding budget category primarily because the NIPA's include the deposit of earnings of the Federal Reserve System as corporate profits taxes, while the budget treats these collections as miscellaneous receipts. The timing difference between the NIPA's and the budget is especially large for corporate receipts.

Indirect business tax and nontax accruals is composed of excise taxes, customs duties, royalties, fines, and other receipts from business.

Contributions for social insurance differs from the corresponding budget category primarily because: (1) the NIPA's include Federal employer contributions for social insurance as a governmental receipt, while the budget offsets these contributions against outlays as undistributed offsetting receipts; (2) the NIPA's include premiums for Part B of Medicare as governmental receipts, while the budget nets them against outlays; (3) the NIPA's treat government employee contributions to their pension plans as personal income, while the budget includes them in governmental receipts; and (4) the

\* \$50 million or less.

NIPA's impute employer contributions for Federal employees' unemployment insurance and workers' compensation.

### Federal Sector Current Expenditures

Table 17-1 shows current expenditures in the six major NIPA categories, which are very different from the budget categories.

Government consumption expenditures are the goods and services purchased by the Federal Government in the current account, including compensation of employees and depreciation. Gross investment (shown as addendum items in Table 17-1) is thus excluded from current expenditures in computing the government current surplus or current deficit on a NIPA basis, whereas depreciation—charges on federally owned fixed capital—"consumption of general government fixed capital" is included. The NIPA's treat State and local investment and capital consumption in the same way—regardless of the extent to which it is financed with Federal aid (capital transfers) or from State and local own source receipts.

Although gross investment is not included in government current expenditures, both government gross investment and current consumption expenditures (including depreciation) are included in total GDP, which makes the treatment of the government sectors in the

NIPA's similar to that of the private sector. Investment includes structures, equipment, and computer software.

Transfer payments are the largest expenditure category. Transfer payments to persons are mainly for income security and health programs, such as Social Security and Medicare. Payment of pension benefits to former government employees is not included, as explained previously. Transfer payments to the rest of the world include grants to foreign governments and payments under Social Security and other similar programs to individuals living abroad.

Grants-in-aid to State and local governments help finance a range of programs, including income security, Medicaid, and education (but capital transfers for construction of highways, airports, waste-water treatment plants, and mass transit are excluded).

Net interest paid is the interest paid by the Government on its debt (excluding debt held by trust funds, other than Federal employee pension plans; and other Government accounts), less interest received on its loans.

Subsidies less current surplus of Government enterprises consist of two elements: (1) subsidy payments for resident businesses (excluding subsidies for investment); and (2) the current surplus (or deficit) of "Government enterprises," such as the Postal Service, which are business-type operations of Government that usually appear in the budget as public enterprise revolving

funds. Depreciation (consumption of enterprise fixed capital) is netted in calculating the current surplus of government enterprises.

NIPA subsidies do not include the imputed credit subsidies estimated as budget outlays under credit reform. Rather, loans and guarantees are categorized as financial transactions and are excluded from the NIPA's except for associated interest and fees.

Wage disbursements less accruals is an adjustment that is necessary to the extent that the wages paid in a period differ from the amount earned in the period.

### Differences in the Estimates

Since the introduction of the unified budget in January 1968, NIPA receipts have been less than budget receipts in most years. This is due principally to the fact that estate and gift taxes, which they exclude as capital transfers, have exceeded Medicare premiums, which they include as a governmental receipt but the budget treats as an offsetting receipt. (In the budget, offsetting receipts are netted against the outlay total and not included in the governmental receipts total.) NIPA current expenditures have usually been higher than budget outlays (from which the Medicare premiums and employer retirement contributions are netted out as offsetting receipts), despite the omission from NIPA expenditures of grants for capital construction and pension benefit payments to former government employees.

Two components of budget outlays, however, are sometimes sufficiently large in combination to match the netting adjustments. These are financial transactions and net investment (the difference between gross investment and depreciation). Large outlays associated with resolving the failed savings and loan associations and banks in 1990 and 1991 caused those year's budget outlays to exceed NIPA current expenditures. With the change in budgetary treatment of direct loans in 1992 under credit reform, one type of financial transaction—direct loans to the public—has been recorded in the budget in a way that is closer to the NIPA treatment. Disbursement and repayment of loans made since that time are recorded outside the budget as in the Federal sector of the NIPA's, although, unlike the NIPA's, credit subsidies are recorded as budget outlays.

During the period 1975–1992, the budget deficit exceeded the Federal current deficit as measured in the NIPA's every year. The largest difference, \$78.6 billion, occurred in 1991 as a result of resolving failed financial institutions as discussed above; the budget deficit was then \$269.3 billion, while the NIPA current deficit was \$190.7 billion. In 1993–1997, the NIPA current deficit was slightly larger than the budget deficit each year. For 1998–2001, the NIPA current surplus was lower than the budget surplus. For 2002 the NIPA current deficit was larger than the budget deficit, while those for 2003 and 2004 are projected to be slightly smaller.

Table 17-2. RELATIONSHIP OF THE BUDGET TO THE FEDERAL SECTOR, NIPA's

Department of Commerce advance estimates for the Oct.-Dec. quarter, released January 30, 2003, were not available in time for inclusion in this table.

\* \$50 million or less.

Table 17-1 displays Federal transactions using NIPA concepts with actual data for the years 1993-2002 and estimates for 2003 and 2004 consistent with the Administration's budget proposals. Table 17-2 summarizes the reasons for differences between the data using budget concepts and NIPA concepts. Table 17-3 displays quarterly data using NIPA concepts beginning in October 2001. Annual NIPA data for 1960-2004 are published

in Section 14 of a separate budget volume, *Historical Tables, Budget of the U.S. Government, Fiscal Year 2004*.

Additional detailed estimates of NIPA current receipts and expenditures will be published in a forthcoming issue of the Department of Commerce publication, *Survey of Current Business*.

## 18. COMPARISON OF ACTUAL TO ESTIMATED TOTALS

In successive budgets, the Administration publishes several estimates of the surplus or deficit for a particular fiscal year. Initially, the year appears as an outyear projection at the end of the budget horizon. In each subsequent budget, the year advances in the estimating horizon until it becomes the “budget year.” One year later, the year becomes the “current year” then in progress, and the following year, it becomes the just-completed “actual year.”

The budget is legally required to compare budget year estimates of receipts and outlays with the subsequent actual receipts and outlays for that year.<sup>1</sup> Part I of this chapter meets that requirement by comparing the

actual results for 2002 with the current services estimates shown in the 2002 Budget published in April 2001.

Part II of the chapter presents a broader comparison of estimates and actual outcomes. This part first discusses the historical record of budget year estimates versus actuals over the last two decades. Second, it broadens the focus to estimates made for each year of the budget horizon, extending four years beyond the budget year. This broader focus shows that the differences between estimates and the eventual actual results grow as the estimates extend further into the future.

### PART I: COMPARISON OF ACTUAL TO ESTIMATED TOTALS FOR 2002

This part of the chapter compares the actual receipts, outlays, and deficit for 2002 with the current services estimates<sup>2</sup> shown in the 2002 Budget published in April 2001. This part also presents a more detailed comparison for mandatory and related programs, and reconciles the actual receipts, outlays, and deficit totals shown here with the figures for 2002 previously published by the Department of the Treasury.

#### Receipts

Receipts in 2002 were \$1,853 billion, which is \$368 billion less than the current services estimate of \$2,221 billion in the 2002 Budget. As shown in Table 18–1, this shortfall was the net effect of legislative and administrative changes; economic conditions that differed from what had been expected; and technical factors that resulted in different collection patterns and effective tax rates than had been assumed.

**Table 18–1. COMPARISON OF ACTUAL 2002 RECEIPTS WITH THE INITIAL CURRENT SERVICES ESTIMATES**

(In billions of dollars)

|  | April 2001 estimate | Enacted legislation/administrative actions | Different economic conditions | Technical factors | Net change  | Actual       |
|--|---------------------|--|-------------------------------|-------------------|-------------|--------------|
| Individual income taxes .....                  | 1,103               | -64  | -125                          | -55               | -245        | 858          |
| Corporation income taxes .....                 | 220                 | -15  | -50                           | -7                | -72         | 148          |
| Social insurance and retirement receipts ..... | 726                 | *  | -25                           | *                 | -25         | 701          |
| Excise taxes .....                             | 74                  | *  | -3                            | -4                | -7          | 67           |
| Estate and gift taxes .....                    | 32                  | -2   | -1                            | -2                | -6          | 27           |
| Customs duties .....                           | 23                  | *  | -4                            | -1                | -5          | 19           |
| Miscellaneous receipts .....                   | 43                  | -1   | -7                            | *                 | -9          | 34           |
| <b>Total .....</b>                             | <b>2,221</b>        | <b>-83</b>                                 | <b>-215</b>                   | <b>-70</b>        | <b>-368</b> | <b>1,853</b> |

\* \$500 million or less.

*Policy differences.* The Economic Growth and Tax Relief Reconciliation Act, which was signed by President Bush on June 7, 2001, reduced 2002 receipts by \$32 billion. Enactment of the Job Creation and Worker Assistance Act in March 2002 reduced 2002 receipts by an additional \$53 billion (see Chapter 4: “Federal Receipts” for a description of this Act). These reductions

were partially offset by other legislative and administrative changes, which increased 2002 receipts relative to the April 2001 current services estimate by a net \$3 billion.

*Economic differences.* Differences between the economic assumptions upon which the current services estimates were made and actual economic performance

<sup>1</sup>These requirements, for receipts and “uncontrollable outlays,” are in 31 USC 1105(a)(18) through (20).

<sup>2</sup>The current services concept is discussed in Chapter 15: “Current Services Estimates.” For mandatory programs and receipts the April 2001 current services estimate is based

on laws then in place. For discretionary programs the current services estimate is based on the prior year estimates adjusted for inflation.

accounted for a reduction in 2002 receipts of \$215 billion. Lower-than-anticipated wages and salaries and other sources of personal income were in large part responsible for the reductions in individual income taxes and social insurance and retirement receipts of \$125 billion and \$25 billion, respectively. A shortfall in corporation income taxes, attributable to lower-than-expected corporate profits, reduced 2002 receipts by an additional \$50 billion relative to the April 2001 estimate. Lower-than-estimated levels of gross domestic product (GDP), which affect excise taxes, and lower-than-expected interest rates, which affect deposits of earnings by the Federal Reserve (miscellaneous receipts), reduced receipts below the budget estimates by an additional \$3 billion and \$7 billion, respectively. Customs duties were \$4 billion below the budget estimate, reflecting lower-than-expected imports.

*Technical reestimates.* Technical factors reduced 2002 receipts a net \$70 billion below the April 2001 current services estimate. This net reduction was primarily attributable to lower-than-anticipated collections of individual and corporation income taxes of \$55 billion, and \$7 billion, respectively. Lower effective tax rates on personal income than estimated in April 2001, and the effect of the stock market on capital gains, were primarily responsible for the net reduction in individual income tax receipts. Different collection patterns and effective tax rates than assumed in April 2001 and the effect of the stock market on capital gains, were primarily responsible for the lower-than-anticipated collections of corporation income taxes.

### Outlays

Outlays for 2002 were \$2,011 billion, \$73 billion more than the \$1,938 billion current services estimate in the 2002 Budget (April 2001).

Table 18-2 distributes the \$73 billion net increase in outlays among discretionary and mandatory pro-

grams and net interest.<sup>3</sup> The table also makes rough estimates according to three reasons for the changes: policy; economic conditions; and technical estimating differences, a residual.

*Policy changes* are the result of legislative actions that change spending levels, primarily through higher or lower appropriations or changes in authorizing legislation. For 2002, policy changes increased outlays an estimated \$73 billion relative to the initial current services estimates.

Policy changes increased discretionary outlays by \$51 billion. Defense discretionary outlays increased by \$35 billion and nondefense discretionary outlays increased by \$16 billion, largely due to emergency supplemental appropriations pursuant to the September 11, 2001 terrorist attacks. Policy changes increased mandatory outlays by \$17 billion above current law. Most significantly, the Job Creation and Worker Assistance Act increased unemployment compensation outlays by \$8 billion and the Economic Growth and Tax Relief Reconciliation Act increased outlays for refundable tax credits by \$4 billion. Other legislative changes increased 2002 outlays by a net \$5 billion, including \$2 billion for airline grants pursuant to September 11th and another \$2 billion for farm income subsidies. Debt service costs increased by \$4 billion due to policy changes.

*Economic conditions* that differed from those forecast in April 2001 resulted in a net decrease in outlays of \$15 billion. Outlays for mandatory programs increased an estimated \$13 billion, largely due to a higher-than-expected unemployment rate, which contributed to higher outlays for unemployment compensation and Food Stamps. The increased outlays for mandatory programs were more than offset by a decrease of \$28 billion in net interest due to lower-than-expected interest rates.

<sup>3</sup> Discretionary programs are controlled by annual appropriations, while mandatory programs are generally controlled by authorizing legislation. Mandatory programs are mostly formula benefit or entitlement programs with permanent spending authority that depend on eligibility criteria, benefit levels, and other factors.

**Table 18-2. COMPARISON OF ACTUAL 2002 OUTLAYS WITH THE INITIAL CURRENT SERVICES ESTIMATES**

| <b>Total outlays .....</b>    | <b>1,938</b>                     | <b>73</b> | <b>-15</b> | <b>15</b> | <b>73</b>     | <b>2,011</b> |

\*\$500 million or less.

*Technical estimating differences* and other changes resulted in a net increase in outlays of \$15 billion. Technical changes result from changes in such factors as the number of beneficiaries for entitlement programs, crop conditions, or other factors not associated with policy changes or economic conditions. Outlays for discretionary programs decreased an estimated \$1 billion. Outlays for mandatory programs increased an esti-

mated \$8 billion, largely due to higher-than-anticipated outlays for unemployment compensation and lower-than-anticipated offsetting receipts for spectrum auctions. Net interest outlays also increased by \$8 billion largely due to the lower surplus in 2001 and higher deficit in 2002 stemming from technical factors compared to the April 2001 estimates.

### Surplus/Deficit

The preceding two sections discussed the differences between the initial current services estimates and the actual amounts of Federal Government receipts and outlays for 2002. This section combines these effects to show the net impact of these differences.

As shown in Table 18-3, the initial 2002 current services estimate was a surplus of \$283 billion. The

actual result was a deficit of \$158 billion, which yields an estimating difference of \$441. Receipts were \$368 billion less than the initial estimate and outlays were \$73 billion more. The table shows the distribution of the changes according to the categories in the preceding two sections.

**Table 18-3. COMPARISON OF THE ACTUAL 2002 SURPLUS WITH THE INITIAL CURRENT SERVICES SURPLUS ESTIMATE**

(In billions of dollars)

|                      | Current Services<br>(April 2001) | Changes     |             |            |               | Actual      |
|----------------------|----------------------------------|-------------|-------------|------------|---------------|-------------|
|                      |                                  | Policy      | Economic    | Technical  | Total changes |             |
| Receipts .....       | 2,221                            | -83         | -215        | -70        | -368          | 1,853       |
| Outlays .....        | 1,938                            | 73          | -15         | 15         | 73            | 2,011       |
| <b>Surplus .....</b> | <b>283</b>                       | <b>-156</b> | <b>-201</b> | <b>-84</b> | <b>-441</b>   | <b>-158</b> |

Note: Surplus changes are receipts minus outlays. For these changes, a minus indicates a decrease in the surplus.

The net effect of policy changes for receipts and outlays reduced the surplus by \$156 billion. Economic conditions that differed from the initial assumptions in April 2001 accounted for an estimated \$201 billion decrease in the surplus. Technical factors further reduced the surplus by an estimated \$84 billion.

### Comparison of the Actual and Estimated Outlays for Mandatory and Related Programs for 2002

This section compares the original 2002 outlay estimates for mandatory and related programs under current law in the 2002 Budget (April 2001) with the actual outlays. Major examples of these programs include Social Security and Medicare benefits for the elderly, agricultural price support payments to farmers, and deposit insurance for banks and thrift institutions. This

category also includes net interest outlays and undistributed offsetting receipts.

A number of factors may cause differences between the amounts estimated in the budget and the actual outlays. For example, legislation may change benefit rates or coverage; the actual number of beneficiaries may differ from the number estimated; or economic conditions (such as inflation or interest rates) may differ from what was assumed in making the original estimates.

Table 18-4 shows the differences between the actual outlays for these programs in 2002 and the amounts originally estimated in the 2002 Budget, based on laws in effect at that time. Actual outlays for mandatory spending and net interest in 2002 were \$1,277 billion, which was \$23 billion more than the initial estimate of \$1,254 billion, based on existing law in April 2001.

**Table 18–4. COMPARISON OF ACTUAL AND ESTIMATED OUTLAYS FOR MANDATORY AND RELATED PROGRAMS UNDER CURRENT LAW**

\*\$500 million or less

<sup>1</sup> Estimates reflect the function shift for foster care and adoption assistance in the 2003 Budget.

Note: Estimates may not add due to rounding.

Actual outlays for mandatory human resources programs were \$1,137 billion, \$35 billion more than originally estimated. This increase was largely due to outlays for unemployment compensation, mostly due to the extended unemployment benefits enacted in the Job Creation and Worker Assistance Act and higher unemployment and average reciprocity rates than initially assumed.

Outlays for other functions were \$1 billion less than originally estimated. Undistributed offsetting receipts were \$4 billion less than expected, largely due to lower spectrum auction receipts.

Outlays for net interest were \$171 billion or \$16 billion less than the original estimate. This decrease was the net effect of changes in interest rates from those initially assumed, changes in borrowing requirements due to differences in surpluses, and technical factors.

### Reconciliation of Differences with Amounts Published by Treasury for 2002

Table 18–5 provides a reconciliation of the receipts, outlays, and surplus totals published by the Department of the Treasury in the September 2002 Monthly Treasury Statement and those published in this budget. The Department of the Treasury made adjustments to

the estimates for the Combined Statement of Receipts, Outlays, and Balances, which increased receipts by \$8 million and reduced outlays by \$846 million. Additional adjustments for this budget reduced receipts by \$123 million and increased outlays by \$13 million. The major changes were reclassification of certain U.S. Trustees System receipts and inclusion of the transactions of the United Mine Workers of America benefit funds.

**Table 18–5. RECONCILIATION OF FINAL AMOUNTS FOR 2002**

## Part II: HISTORICAL COMPARISON OF ACTUAL TO ESTIMATED SURPLUSES

This part of the chapter compares actual surpluses to estimated surpluses over the last two decades. The first section compares the estimate for the budget year of each budget with the subsequent actual surplus. The second section extends the comparison to the estimated surpluses for each year of the budget window—that is, for the current year through the fourth year following the budget year. This part concludes with some observations on the historical record of surplus estimates versus the subsequent actual surpluses.

### Historical Comparison of Actual to Estimated Surpluses for the Budget Year

Table 18–6 compares the estimated and actual surpluses or deficits since the deficit estimated for 1982 in the 1982 Budget. The estimated surpluses or deficits here for each budget include the Administration's policy proposals. Therefore, the estimated surplus for 2002 differs from that shown in table 18–3, which is on a current services basis. Earlier comparisons of actual and estimated surpluses were on a policy basis, so for consistency the figures in Table 18–6 are on this basis.

On average, the estimates for the budget year overestimated actual surpluses (or underestimated actual deficits) by \$14 billion over the 21-year period. Policy outcomes that differed from the original proposals reduced the surplus by an average of \$21 billion. Differences between economic assumptions and actual eco-

nomics performance reduced the surplus an average of \$11 billion. Differences due to these two factors were partly offset by technical revisions, which increased the surplus an average of \$18 billion.

The relatively small average difference between actual and estimated surpluses conceals a wide variation in the differences from budget to budget. The differences ranged from a \$389 billion overestimate to a \$190 billion underestimate. The \$389 billion overestimate, in the 2002 Budget, was due largely to receipt shortfalls associated with the 2001 recession and associated weak stock market performance. About a quarter of the overestimate was due to increased spending for recovery from the September 11, 2001 terrorist attacks, homeland security measures, and the war against terror, along with lower receipts due to the March 2002 economic stimulus act. The \$190 billion underestimate of the surplus, in the 1998 Budget, stemmed largely from stronger-than-expected economic growth and a surge in individual income tax collections beyond that accounted for by economic factors.

Because the average surplus difference obscures the degree of under- and overestimation in the historical data, a more appropriate statistic to measure the magnitude of the differences is the average absolute difference. This statistic measures the difference without regard to whether it was an under- or overestimate. Since 1982, the average absolute difference has been \$90 billion.

**Table 18–6. COMPARISON OF ACTUAL AND ESTIMATED SURPLUSES SINCE 1982**

(In billions of dollars)

| Budget                              | Surplus or deficit (-) estimated for budget year <sup>1</sup> | Differences due to  |                  |                   | Total difference | Actual surplus or deficit(-) |
|-------------------------------------|---|---------------------|------------------|-------------------|------------------|------------------------------|
|                                     |   | Enacted legislation | Economic factors | Technical factors |                  |                              |

<sup>1</sup> Surplus or deficit estimate includes the effect of the budget's policy proposals.<sup>2</sup> Absolute average is the average without regard to sign.

Another measure of variability is the standard deviation. This statistic measures the dispersion of the data around the average value. The standard deviation of the surplus differences since 1982 is \$128 billion. Like the average absolute difference, this measure illustrates the high degree of variation in the difference between estimates and actual surpluses.

The large variability in estimates of the surplus for the budget year underscores the inherent uncertainties in estimating the future path of the Federal budget. Some estimating errors are unavoidable, because of differences between the President's original budget proposals and the legislation that Congress actually enacts. Occasionally such differences are huge, such as Congressional appropriations for disaster recovery, homeland security, and war efforts in response to the terrorist attacks of September 11, 2001, which were obviously not envisioned in the President's budget submitted the previous February. Even aside from differences in policy outcomes, errors in budget estimates can arise from new economic developments, unexpected changes in program costs, shifts in taxpayer behavior, and other factors. The budget impact of changes in economic assumptions are discussed further in Chapter 2 of this volume, "Economic Assumptions."

### Five-Year Comparison of Actual to Estimated Surpluses

The substantial differences between actual surpluses and the budget year estimates made less than two years earlier raises questions about the degree of varia-

bility for estimates of years beyond the budget year. Table 18–7 shows summary statistics for the surplus differences for the current year (CY), budget year (BY), and the four succeeding years (BY+1 through BY+4). These are the years that are required to be estimated in the budget by the Budget Enforcement Act of 1990.

On average, the budget estimates since 1982 understated the surplus in the current year by \$16 billion, but overestimated the surplus in the budget year by \$14 billion. The budget estimates overstated the surplus in the years following, by amounts growing from \$21 billion for BY+1 to \$35 billion for BY+4. While these results suggest a slight tendency to overestimate surpluses toward the end of the budget horizon, the averages are not statistically different from zero in light of the high variation in the data.

The average absolute difference between estimated and actual surpluses grows dramatically over the six years from CY through BY+4, from \$47 billion in the current year to \$90 billion for the budget year, to \$203 billion for BY+4. While under- and overestimates of the surplus have historically tended to average out, the absolute size of the under- or overestimates grows as the estimates extend further into the future. The standard deviation of the surplus differences shows the same pattern. The standard deviation grows from \$61 billion for current year estimates to \$128 billion for the budget year estimates and continues to increase steadily as the estimates extend further out, reaching \$236 billion for BY+4.

The estimates of variability in the difference between estimated and actual surpluses can be used to construct a range of uncertainty around a given set of surplus estimates. Statistically, if these differences are normally distributed, the actual surplus will be within a range of two standard deviations above or below the

estimate about 90% of the time. Chart 18-1 shows this range of uncertainty applied to the surplus estimates in this budget. This chart illustrates that unforeseen economic developments, policy outcomes, or other factors could give rise to large swings in the surplus estimates.

**Table 18-7. DIFFERENCES BETWEEN ESTIMATED AND ACTUAL SURPLUSES FOR FIVE-YEAR BUDGET ESTIMATES SINCE 1982**  
(In billions of dollars)

| Measure  | Current year estimate | Budget year estimate | Estimate for budget year plus |                  |                    |                   |
|--|-----------------------|----------------------|-------------------------------|------------------|--------------------|-------------------|
|  |                       |                      | One year (BY+1)               | Two years (BY+2) | Three years (BY+3) | Four years (BY+4) |
| Average difference <sup>1</sup> .....          | 16                    | -14                  | -21                           | -30              | -41                | -35               |
| Average absolute difference <sup>2</sup> ..... | 47                    | 90                   | 121                           | 158              | 183                | 203               |
| Standard deviation .....                       | 61                    | 128                  | 158                           | 189              | 207                | 236               |

<sup>1</sup> A positive figure represents an underestimate of the surplus or an overestimate of the deficit.  
<sup>2</sup> Average absolute difference is the average difference without regard to sign.

## 19. RELATIONSHIP OF BUDGET AUTHORITY TO OUTLAYS

Budget authority is the authority provided by law to incur financial obligations that will result in outlays.<sup>1</sup> Budget authority must be provided in laws, in accordance with Article I, Section 9, of the Constitution: “No money shall be drawn from the Treasury, but in Consequence of Appropriations made by Law...” Hence, Federal agencies cannot obligate the Government to make outlays until budget authority has been provided to them by appropriation.

New budget authority for most Federal programs is provided in 13 annually enacted appropriations acts.<sup>2</sup> However, new budget authority for more than half of all outlays is made available through permanent appropriations under existing laws. These permanent appropriations take three main forms. The first is budget authority for trust funds, which for most trust funds is automatically appropriated under existing law from the available balance of their receipts and equals the estimated annual obligations of the funds. The second is interest on the public debt, for which budget authority is automatically provided under a permanent appropriation enacted in 1847 and equals interest outlays. The third is the authority to spend offsetting collections credited to appropriation or fund accounts.

Not all of the new budget authority for 2004 will be obligated or spent in 2004:<sup>3</sup>

- Budget authority for most trust funds comes from the authority of these funds to spend their receipts (limited, in most cases, by the estimated obligations). Any unexpended balances remain available to these trust funds indefinitely in order to finance benefits and for other purposes specified by law.
- Budget authority for most major construction and procurement projects covers the entire cost estimated when the projects are initiated, even though work will take place and outlays will be made over a period extending beyond the year for which the budget authority is enacted.
- Until the 1998 budget, budget authority for large portions of the subsidized housing programs was equal to the Government’s estimated obligation to

pay subsidies under contracts, which extended for periods of up to 40 years. New budget authority is now appropriated year-by-year for renewal of these contracts as they expire. For many years into the future, however, some of the outlays under these programs will continue to originate from budget authority enacted in 1997 and earlier years.

- New budget authority for most other long-term contracts covers the estimated maximum obligation of the Government.
- Budget authority for most education and job training activity is appropriated for school or program years that begin in the fourth quarter of the fiscal year. Most of these funds result in outlays in the year after the year of appropriation.
- Government enterprises are occasionally given budget authority for standby reserves that will be used only in special circumstances.

As a result of these factors, a substantial amount of budget authority carries over from one year to the next. Most of this is earmarked for specific uses and is not available for new programs. A small part may never be obligated or spent, primarily the amount for contingencies that do not occur or reserves that never have to be used. Also, some budget authority results in an exchange of assets for which no corresponding outlays are scored; budget authority backing International Monetary Fund arrangements to resolve international monetary crises is an example.

As shown in the following chart, \$421 billion of the outlays in 2004 (19 percent of the total) will be made from budget authority enacted in previous years. At the same time, \$436 billion of the new budget authority proposed for 2004 (19 percent of the total amount proposed) will not lead to outlays until future years. Although outlays in 2004 are, coincidentally, very nearly equal to budget authority for that year (99.4 percent), this coincidence only occurs because the prior-year authority that will produce 2004 outlays (\$421 billion) nearly equals the new 2004 authority that will not be spent until future years (\$436 billion). Thus, in general, the total budget authority for a particular year is not directly indicative of that year’s outlays, since it combines various types of budget authority that have different short-term and long-term implications for budget obligations and outlays.

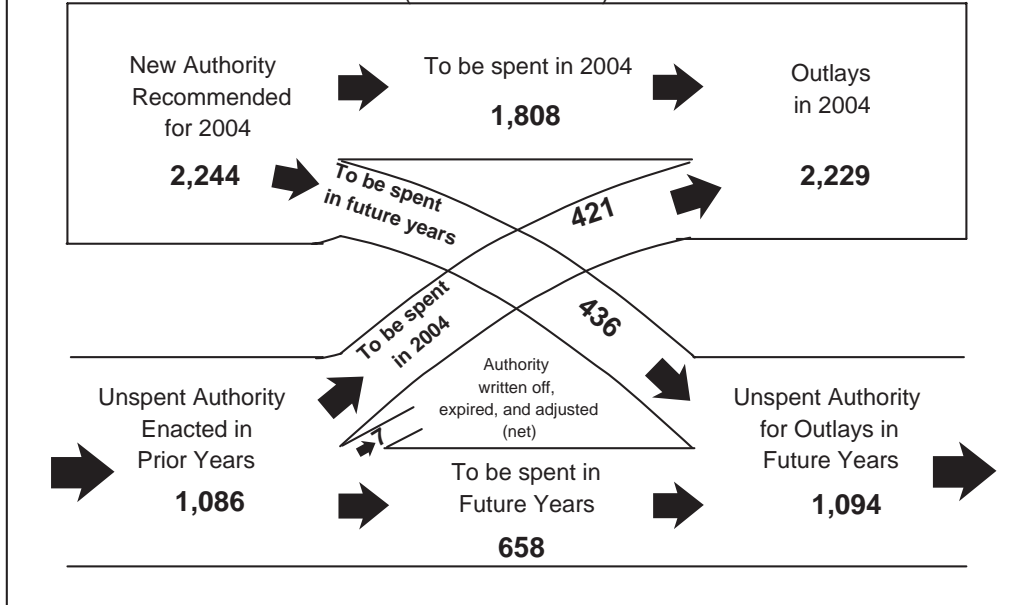

<sup>1</sup>The relationship of budget authority, obligations, and outlays is discussed generally in Chapter 24 of this volume, “Budget System and Concepts and Glossary”; for most individual budget accounts, this relationship is traced in a “program and financing” schedule (table) in the budget Appendix volume.

<sup>2</sup>Some or all of the 13 “regular” appropriation bills have sometimes been consolidated into a few acts or a single act.

<sup>3</sup>This subject is also discussed in a separate OMB report, “Balances of Budget Authority,” which can be purchased from the National Technical Information Service shortly after the budget is transmitted and is available on the internet, with the other budget documents.

(Dollars in billions)

## 20. OFF-BUDGET FEDERAL ENTITIES AND NON-BUDGETARY ACTIVITIES

The unified budget of the Federal Government is divided by law between on-budget and off-budget entities. The off-budget Federal entities conduct programs that result in the same kind of spending and receipts as on-budget entities. Despite its off-budget classification, this spending channels economic resources toward particular uses in the same way as on-budget spending. Off-budget spending and receipts are discussed in the following section on off-budget Federal entities.

The budget does not include activities that are related to the Federal Government but that are non-budgetary by their inherent nature. In some cases this is because the activities are not conducted by the Government, such as the financial intermediation provided by the Government-sponsored enterprises; and in other cases this is because the activities are not costs to

the Government itself, such as regulation. Nevertheless, some of these activities are important instruments of Federal policy. Some are discussed in the budget documents, and in certain cases the amounts involved are presented in conjunction with budget data. They are discussed in the section of this chapter on non-budgetary activities.

### Off-Budget Federal Entities

The Federal Government has used the unified budget concept as the foundation for its budgetary analysis and presentation since the 1969 budget. This concept was developed by the President's Commission on Budget Concepts in 1967. It calls for the budget to include all the Federal Government's programs and all the fiscal transactions of these programs with the public.

**TABLE 20-1. COMPARISON OF TOTAL, ON-BUDGET, AND OFF-BUDGET TRANSACTIONS <sup>1</sup>**

(In billions of dollars)

| Fiscal Year         | Receipts |           |            | Outlays |           |            | Surplus or deficit (-) |           |            |
|---------------------|----------|-----------|------------|---------|-----------|------------|------------------------|-----------|------------|

<sup>1</sup> Off-budget transactions consist of the social security trust funds for all years and the Postal Service fund as of 1989.

Every year since 1971, however, at least one Federal entity has been off-budget. Off-budget Federal entities are federally owned and controlled, but their transactions are excluded from the on-budget totals by law. When a Federal entity is off-budget, its receipts, outlays, and surplus or deficit are not included in the on-budget receipts, outlays, and surplus or deficit; and its budget authority is not included in the totals of budget authority for the on-budget Federal entities. The Budget Enforcement Act of 1990 excluded off-budget entities from general enforcement provisions (except for the administrative expenses of Social Security), although it had special enforcement provisions for Social Security.

The off-budget Federal entities conduct programs of the same type as the on-budget entities. Most of the tables in the budget documents include the on-budget and off-budget amounts both separately and in combination, or show them only as a total amount, in order to arrive at the unified budget totals that show Federal outlays and receipts comprehensively.

The off-budget Federal entities currently consist of the two Social Security trust funds, old-age and survivors insurance and disability insurance, and the Postal Service fund. Social Security was classified off-budget as of 1986 and the Postal Service fund in 1989. A number of other entities were off-budget at different times before 1986 but were classified on-budget by law in 1985 or earlier.

The preceding table divides the total Federal Government receipts, outlays, and surplus or deficit between the on-budget and off-budget amounts. Within this table Social Security is classified as off-budget for all years, in order to provide consistent comparison over time. The much smaller Postal Service transactions are classified as off-budget starting in 1989. Entities that were off-budget at one time but are now on-budget are classified as on-budget for all years.

The off-budget entities are a significant part of total Federal spending and receipts. In 2004, the off-budget receipts are an estimated 28 percent of total receipts, and the off-budget outlays are a moderately smaller percentage of the total. The unified budget deficit in that year is \$307 billion—a \$482 billion on-budget deficit partly offset by a \$175 billion off-budget surplus. The off-budget surplus is virtually the same as the Social Security surplus. Social Security had a deficit in the latter 1970s and early 1980s, but since the middle 1980s it has had a large and growing surplus. This surplus is expected to continue to grow throughout the period of this table and for some years thereafter. However, it is estimated to subsequently decline, turn into a deficit, and never reach balance again under present law. The long-term challenge to Social Security is discussed in a chapter in the main *Budget* volume, “The Real Fiscal Danger,” and is analyzed with much greater detail in chapter 3, “Stewardship,” of this volume.

## Non-Budgetary Activities

**Federal credit: budgetary and non-budgetary transactions.**—The Federal Credit Reform Act of 1990 refined budget concepts by distinguishing between the costs of credit programs, which are budgetary in nature, and the other transactions of credit programs, which are not. For 1992 and subsequent years, the costs of direct loans and loan guarantees are calculated as the present value of estimated cash outflows from the Government less the present value of estimated cash inflows to the Government. These costs are equivalent to the outlays of other Federal programs and are included in the budget as outlays of credit program accounts when the Federal Government makes a direct loan or guarantees a private loan.

The complete cash transactions with the public—the disbursement and repayment of loans, the payment of default claims on guarantees, the collection of interest and fees, and so forth—are recorded in separate financing accounts. The financing accounts also receive payments from the credit program accounts for the costs of direct loans and loan guarantees. The net transactions of the financing accounts—i.e., the cash transactions with the public less the amounts received from the program accounts—are not costs to the Government. Therefore, the net transactions of the financing accounts are non-budgetary in concept, and the Act excludes them from the budget.<sup>1</sup> Because they are non-budgetary in concept, they are not classified as off-budget Federal entities. Their effect on the Government’s borrowing requirement is explained in chapter 13 of this volume, “Federal Borrowing and Debt.”

The budget outlays of credit programs thus measure the cost of Government credit decisions, and they record this cost when the credit assistance is provided. This enables the budget to more effectively fulfill its purpose of being a financial plan for allocating resources among alternative uses: comparing the cost of a program with its benefits, comparing the cost of credit programs with the cost of other spending programs, and comparing the cost of one type of credit assistance with the cost of another type.<sup>2</sup>

Credit programs are discussed in chapter 9 of this volume, “Credit and Insurance.”

**Premiums and discounts on debt buybacks.**—The Treasury Department bought back outstanding bonds as part of its debt management from March 2000 to April 2002. The premiums paid on debt buybacks were recorded outside the budget totals as a “financing other

<sup>1</sup> See sec. 505(b).

<sup>2</sup> For more explanation of the budget concepts for direct loans and loan guarantees, see the sections on Federal credit and credit financing accounts in chapter 24 of this volume, “Budget System and Concepts and Glossary.” The structure of credit reform is further explained in chapter VIII.A of the Budget of the United States Government, Fiscal Year 1992, Part Two, pp. 223–26. The implementation of credit reform through 1995 is reviewed in chapter 8, “Underwriting Federal Credit and Insurance,” Analytical Perspectives, Budget of the United States Government, Fiscal Year 1997, pp. 142–44. Refinements and simplifications enacted by the Balanced Budget Act of 1997 or provided by later OMB guidance are explained in chapter 9, “Underwriting Federal Credit and Insurance,” Analytical Perspectives, Budget of the United States Government, Fiscal Year 1999, p. 170.

than the change in debt held by the public.” This budgetary treatment is explained in a section of chapter 24, “Budget System and Concepts and Glossary,” in the *Analytical Perspectives* volume of the 2001 budget, pages 457–58. The buyback premiums in 2002 are shown in chapter 13 of this volume, “Federal Borrowing and Debt.”

**Deposit funds.**—Deposit funds are non-budgetary accounts that record amounts held by the Government temporarily until ownership is determined (such as earnest money paid by bidders for mineral leases) or held by the Government as an agent for others (such as state income taxes withheld from Federal employees’ salaries and not yet paid to the states). The largest deposit fund is the Thrift Savings Fund, which holds stocks and bonds for Federal employees who participate in the Thrift Savings Plan, a defined contribution retirement plan. Because these assets are the property of the employees and are held by the Government in a fiduciary capacity, the transactions of the fund are not transactions of the Government itself and therefore are non-budgetary in concept. The administrative costs and the transactions of budgetary accounts with the fund are included in the budget. For similar reasons, the budget excludes funds that are owned by Indian tribes and held and managed by the Government in a fiduciary capacity on the tribes’ behalf. Deposit funds are further discussed in a section of chapter 24 of this volume, “Budget System and Concepts and Glossary.”

**Taxation and tax expenditures.**—Taxation provides the Government with income, which is included in the budget as “receipts,” and which withdraws purchasing power from the private sector to finance Government expenditures. In addition to this primary economic effect, taxation has important effects on the incentives that affect the allocation of resources among private uses and the distribution of income among individuals. These effects depend on the composition of the Federal tax system and the rates and other structural characteristics of each Federal tax. The latter effects of taxation on resource allocation and income distribution are in many ways analogous to the effects of outlays, but these effects are not recorded as budget outlays nor are they measured by budget receipts.

Some of the effects of taxes on resource allocation and income distribution, but not all, arise from special exclusions, exemptions, deductions, and similar provisions that are identified by comparing the tax law with a baseline. Revenue losses caused by these special provisions are defined as “tax expenditures” and are discussed in chapter 6 of this volume, “Tax Expenditures.” The chapter includes tables with estimates for all known tax expenditures associated with the individual and corporation income taxes. The chapter also compares tax expenditures with spending programs and regulation as alternative methods for achieving policy objectives, and it provides an illustrative overview of performance measures that might be used to evaluate tax expenditures.

The baseline concepts used to identify and measure tax expenditures in chapter 6 have important ambiguities. Although partly patterned on a comprehensive income tax, they are subjective, as noted last year, and are thus open to question in a number of respects. The Treasury Department has therefore begun a review of the tax expenditure presentation. The appendix to chapter 6 provides an initial review, focusing on three issues: (1) using a comprehensive income tax as a baseline, (2) including negative tax expenditures in the presentation (i.e., provisions that cause people to pay more tax than they would under a baseline—such as the failure to adjust interest, capital gains, and depreciation for inflation in comparison to a comprehensive income tax), and (3) using a comprehensive consumption tax as a baseline.

**Government-sponsored enterprises.**—The Federal Government has established a number of Government-sponsored enterprises, such as Fannie Mae, Freddie Mac, and the Farm Credit Banks, to provide financial intermediation for specified public purposes. They are excluded from the budget because they are privately owned and controlled. However, primarily because they were established by the Federal Government for public-policy purposes, estimates of their activities are reported in a separate chapter of the budget *Appendix*, their activities are analyzed in chapter 9 of this volume, “Credit and Insurance,” and their lending and borrowing are summarized in tables 9–11 and 9–12 of that chapter.

**Regulation.**—Some types of regulation have economic effects that are similar to budget outlays or tax expenditures by requiring the private sector to make expenditures for specified purposes, such as safety and pollution control. The regulatory planning process is described annually in *The Regulatory Plan and the Unified Agenda of Federal Regulatory and Deregulatory Actions*.<sup>3</sup>

The Office of Management and Budget began to publish a report on the costs and benefits of Federal regulation in 1997. The latest report, *Stimulating Smarter Regulation*, was released in December 2002 and includes a report on unfunded mandates.<sup>4</sup> The report estimates the total costs and benefits of Federal regulations reviewed by OMB from April 1995 through September 2001 and the impact of Federal regulation on state, local, and tribal governments and on wages, economic growth, and small business. It also discusses regulatory policy under the present Administration, regulatory governance abroad, and recommendations for reform. The report on regulation is required by statute to be updated annually.

<sup>3</sup>The most recent publication was issued by the Regulatory Information Service Center in December 2002 and printed in the Federal Register of December 9, 2002 (vol. 67, no. 236).

## 21. OUTLAYS TO THE PUBLIC, NET AND GROSS

Table 21-1 shows net and gross outlays, and the relationship between them, for all major agencies. Outlays are the measure of Government spending. The budget records outlays when the Government makes payment for such things as Federal employee salaries, the purchase of supplies and equipment, grants to state and local government, and benefits to individuals. The Government's gross outlays are the sum of all these payments.

The outlay totals in the budget, however, whether for the Government as a whole or for agencies, programs, and functions (such as national defense), are net outlays, unless otherwise specified. Gross outlays, as the table shows, equal the net outlays plus offsetting receipts and collections from the public. Offsetting receipts and collections constitute the income the Government receives from its business-like enterprises and other market activities with the public, such as the proceeds from selling postage stamps, the fees charged for admittance to recreational areas, and the proceeds from selling land or natural resources. The budget refers to them as "offsetting," because they are subtracted from gross outlays rather than added to taxes and other collections from the public resulting from the exercise of the Government's sovereign or governmental powers

to levy or impose taxes, fees, fines, and the like. The table shows that offsetting receipts and collections are more important for some agencies than for others.

The budget focuses on net outlay totals in order to show outlays and receipts that measure governmental activity rather than a combination of governmental and market activity. As a result, the budget totals represent the amount of resources allocated and distributed by Governmental decision making rather than by private choice and the market mechanism. The surplus or deficit is calculated by subtracting total outlays from total receipts. It would be exactly the same if offsetting collections and receipts were to be included in total receipts and not subtracted from gross outlays.

In this table, negative net outlays occur when collections exceed payments. The amounts for "Allowances" cover certain transactions that are expected to increase or decrease outlays but are not, for various reasons, attributed to any specific agency. The amounts labeled "undistributed offsetting receipts" are deducted from the Government-wide outlay totals but not from any specific agency. Chapter 5, "User Charges and Other Collections," in this volume discusses offsetting collections and receipts in more detail.

**Table 21-1. TOTAL OUTLAYS, NET AND GROSS OF OFFSETTING COLLECTIONS AND RECEIPTS FROM THE PUBLIC, BY AGENCY, 2002-2004**  
(In millions of dollars)

# INFORMATION TECHNOLOGY INVESTMENTS

---

---

## 22. PROGRAM PERFORMANCE BENEFITS FROM MAJOR INFORMATION TECHNOLOGY INVESTMENTS

The federal government's investment in information technology (IT) is estimated to be \$59 billion for 2004, up from the 2003 Budget request of \$53 billion. This increase, much of which is expected to occur during 2003, has two primary causes: better reporting by agencies has identified \$2 billion that was not previously reported as IT; and new spending is planned to support homeland security and the war on terrorism. The increase in IT spending has primarily been achieved through reprioritizing to support key Administration goals, with a shift by agencies toward strategic use of technology to improve performance.

This investment continues to make the federal government the largest buyer of information technology (IT) in the world, and agencies are deriving better value from IT. Indeed, more effective use of IT will improve the government's overall performance. This is occurring within agencies by modernizing to support their mission and improve their infrastructure and across agencies by simplifying and unifying activities around the needs of citizens.

Some improvements have been attained through better IT management within agencies, which is discussed in detail in Table 22-1 of this document. Additionally, specific initiatives in the federal IT portfolio have started to deliver real successes in citizen services and government operations. For example:

- **FirstGov:** [www.firstgov.gov](http://www.firstgov.gov) is the gateway to the federal government. The site was redesigned to provide government services within "three clicks". This was accompanied by the creation of the Office of Citizen Services at the General Services Administration, which integrated FirstGov with the operations of the Federal Consumer Information Center to serve as a single point of contact to the Government on-line and by telephone. The new strategy has increased the number of site visitors by 50 percent, and the site was named "One of the Top 50 Most Incredibly Useful Web Sites" by Yahoo.
- **GovBenefits:** The Government now provides one-stop access to information and services of almost 200 government programs representing more than \$1 trillion in annual benefits. [GovBenefits.gov](http://GovBenefits.gov) receives over 500,000 visitors per month and appears on *USA Today's* list of "Hot Sites."
- **Free Filing:** The Internal Revenue Service has created a single-point of access to free online preparation and electronic tax filing services, provided by industry partners, to reduce burden and costs to taxpayers. As of January 2003, this service is available to a substantial majority of taxpayers at [www.firstgov.gov](http://www.firstgov.gov) and [www.irs.gov](http://www.irs.gov).

- **GoLearn:** This on-line training initiative is the number one most visited e-training site in the world, with more than 36 million hits for information on many thousands of e-training courses, e-books, and career development resources. [GoLearn.gov](http://GoLearn.gov) has already allowed over 30,000 federal employees to receive training at a cost of pennies per course that would not have been possible prior to the launch of GoLearn. Traditional training approaches only serve a fraction of this number of people, often at as much as \$2,500-\$5,000 per class.
- **Departments of Defense and Veterans Affairs Sharing of Information Technology:** The Department of Veterans Affairs has incorporated the Department of Defense's eligibility and enrollment system—providing veterans with seamless services as they leave the military and apply for benefits at the Department of Veterans Affairs. The Departments also are working jointly on computerized patient medical records that will allow instant exchange of patient information between the two health care systems by the end of 2005. These joint efforts escalate the pace of coordination, reducing costs while increasing efficiency and health care quality for those who have served our nation.
- **Performance Based Data Management Initiative (PBDMI):** At the Department of Education, IT is being used to transform how state student academic performance information is collected and managed. Currently states and school districts are bogged down in complicated and redundant reporting that is not effectively shared among Department of Education programs or education partners. This initiative will result in a streamlined data collection process that reduces burden on state governments and eliminates redundancy across the department.
- **I-MANAGE:** The cornerstone of the Department of Energy's efforts to improve management effectiveness, I-MANAGE will integrate disparate human resources, financial management, procurement, facilities management, budget formulation, financial and cost accounting systems. I-MANAGE replaces a less effective financial management system that was behind schedule. When implemented, I-MANAGE will provide real-time information enabling managers to monitor program performance.

The Government has also improved productivity and results from IT investments because of success in the way agencies identify, select and manage their IT investments. Some agencies—including Office of Per-

sonnel Management and the Departments of Energy and Labor—have made significant strides in identifying “modernization blueprints”, or Enterprise Architectures, to target IT investments that enable programs and business lines to high priority effectiveness and efficiency goals.

Improved business cases and other information on agency IT investments allow the Administration to more accurately identify opportunities for agencies to achieve results. Specifically, the 2004 Budget includes roughly 1400 major projects at \$35 billion. IT investments are funded only when agencies demonstrated that the project would provide significant value to its mission, had a reasonable likelihood for success in meeting goals and objectives, incorporated sufficient IT security, helped achieve the President’s Management Agenda, and did not duplicate other investments.

Despite the major gains that the Government has made over the last year, we still have much work to do. OMB continues to monitor the performance of IT investments by agencies. For example, of the \$59 billion in the 2004 Budget for IT investments, 771 projects representing \$20.9 billion are currently on an “At-Risk List”. This list includes mission-critical projects that do not successfully demonstrate sufficient potential for success through the business case, or do not adequately address IT security (currently 694 at risk projects accounting for \$18.9 billion). Agencies continually work to improve these projects and address the weaknesses that placed them on the “At Risk List”. OMB will allow investments on the list to move forward only after agencies present successful business cases.

Specific challenges that remain to better serving the citizen through E-Government include:

- There is a shortfall in qualified project managers and IT architects needed to successfully manage the federal IT investments.
- IT security continues to be an issue. Many agencies find themselves faced with the same security weaknesses year after year and are not adequately

prioritizing security improvements in their IT investment portfolio. As a result, agencies seek funding to develop new systems while significant IT security weaknesses continue, especially in their legacy systems.

As this Chapter will discuss, correcting these and other longstanding issues requires a focused effort across the Government. OMB will increasingly work to ensure that the federal government consolidates and improves the quality of IT investments. Under OMB Circular A-11 and decisions made in preparing this Budget, agencies are required to leverage existing IT investments when appropriate, and pursue agency-unique solutions only where a business case justifies such an approach.

**Background**

The Clinger-Cohen Act of 1996 (CCA) requires that, in conjunction with the President’s budget submission, the OMB Director submit a report to Congress on the results of federal IT spending. The Act requires that the report identify “net program performance benefits achieved as a result of major capital investments made by executive agencies in information systems and how the benefits relate to the accomplishments of the goals of the executive agencies.” The Act also requires that appropriate security and privacy controls are identified and implemented to safeguard the federal government’s information and systems. Finally, the Clinger-Cohen Act and the Federal Acquisition Streamlining Act of 1994 contain IT management reform activities that must be documented in the President’s budget submission to Congress.

More recently, the E-Government Act of 2002 requires OMB to submit an annual report on the status of E-Government, timed for submission with the Budget.

The table below provides detail on these statutory requirements.

**Background for Legislation**

| Legislation  | Description  |
|--|--|
| Clinger-Cohen Act of 1996                                      | In 1996, recognizing the importance of information technology for effective government, the President signed the Information Technology Management Reform Act and the Federal Acquisition Reform Act. These two Acts, together known as the Clinger-Cohen Act, require the heads of federal agencies to link IT investments to agency accomplishments. The Clinger-Cohen Act also requires that agency heads establish a process to select, manage and control their IT investments. |
| Federal Acquisition Streamlining Act of 1994, Title V (FASA V) | There are two major components of the Federal Acquisition Streamlining Act Title V (FASA V). First, agencies must demonstrate sound decision-making and a results-oriented focus when planning for projects. Second, agencies must effectively manage ongoing programs and achieve at least ninety percent of planned costs, schedule, and performance goals.  |

## Background for Legislation—Continued

| Legislation                  | Description   |
|------------------------------|---|
| The E-Government Act of 2002 | <p>The E-Government Act:</p> <ul style="list-style-type: none"> <li>• Codifies an Office of Electronic Government, headed by an Administrator within the Office of Management and Budget</li> <li>• Requires Agency compliance with OMB guidance on E-Government and IT.</li> <li>• Authorizes \$345 million over four years for interagency E-Government projects</li> <li>• Requires privacy impact assessments for new IT systems and information collections that contain personal information</li> <li>• Authorizes a centralized online portal (<a href="http://www.firstgov.gov">www.firstgov.gov</a>), so that information and services are organized according to citizens' needs</li> <li>• Improves recruitment and training of information technology professionals</li> </ul> <p>The Act contains a variety of other provisions, for example authorizing online rule-making, enhanced use of electronic signatures, and strong new privacy protections. In addition, it makes permanent information security laws under the Federal Information Security Management Act of 2002, initially enacted through the Government Information Security Reform Act (GISRA).</p> |

This Budget fulfills the statutory requirements through four components: Chapter 22, Table 22–1, the Agency IT Investments Portfolios (Exhibit 53 as required by OMB Circular A-11), and “Performance Information for Major IT Investments”. Table 22–1 summarizes the results of IT management processes at major agencies. The table documents how agency actions are improving the program results from IT investments, fulfilling the requirements of the Clinger Cohen Act.

The Agency IT Investment Portfolios (available in Exhibit 53 on the Internet at <http://www.whitehouse.gov/OMB>) provide details for the 2004 IT investments, including:

- Agency summaries of major projects and many significant projects, and
- Current and anticipated funding.

Performance Information for Major IT Investments uses the business cases provided by agencies to demonstrate project information for major investments, support of the agency's strategic goals and missions, performance goals and measures covering two years, and a description of the planned benefits of the project. Performance Information for Major IT Investments will be published on the internet at <http://www.whitehouse.gov/OMB> by March 31, 2003.

Related documents on IT security and E-Government are discussed below, and will also be available at <http://www.whitehouse.gov/OMB>.

### Expanding E-Government: Bringing E-Business to the Government

Over the last year, the federal government has made significant progress toward becoming a transformed and more productive “E-Enterprise” to serve citizens. The Administration has taken a two-pronged approach to IT reform: modernizing within agencies around the tenets of e-business, and consolidating and integrating IT investments across agencies around groups of citizens that include individuals, businesses, other govern-

ments, and federal government employees. Specific achievements during the past year have included:

- Release of the federal government's first E-Strategy last February, which will be updated later this month.
- Implementation of the citizen-centered, cross-agency E-Government initiatives, discussed in the 2003 Budget, that have started to make a real improvement in government service.
- The redesign of FirstGov and creation of the Office of Citizen Services at GSA.
- The development and use of the Federal Enterprise Architect (FEA) to focus modernization on better results.
- The initial development of a “content model”, which will provide a framework to govern how the government makes information available to the public through the Internet.
- Major strides by individual agencies, such as the Departments of Energy and Veterans' Affairs, in developing e-strategies that leverage IT to modernize programs and activities.
- The development and use of standard performance measures to identify progress and areas for improvement within agency IT security programs.

In addition, the E-Government Act of 2002, signed into law by the President on December 17, 2002, codifies high-level leadership in OMB to direct the changes made possible through E-Government, embrace new initiatives and funding mechanisms, and break down the narrowly focused agency silos that have served to develop and finance IT for too long. The statute authorizes a number of the Administration's E-Government initiatives. It also embraces and furthers this Administration's citizen-centered, cross-agency and performance-based strategy to reform government through more effective use of information technology and sound development of information policy.

Other major steps that OMB and the agencies have taken in the past year include:

- The Chief Information Officer (CIO) Council members (CIOs, Deputy CIOs, and Chief Technology Officers) from the Cabinet level agencies) agreed in May 2002 to work together on investment and architecture decisions that improve Government performance, such as more effective use of enterprise licenses that allow for consolidated software purchasing at significantly lower prices. This represented a major step forward to leverage IT activities across agencies, and the CIO Council's Architecture and Infrastructure Committee has been restructured to implement this agreement. The Committee's work will be enhanced with the doubling of visibility into planned IT purchases; agency business cases now address \$35 billion in the Government's IT portfolio, up from \$18 billion last year.
- OMB developed guidance under the President's Expanding E-Government Initiative that requires agencies to create "modernization blueprints", identifying the business lines of the agency, the information needed to manage these business processes, and the IT that is needed to achieve program and business goals. Law and policy use the term "enterprise architecture" to identify these agency plans; this Budget also uses the term modernization blueprints to better describe strategies that will transform and modernize an agency around the needs of the citizen.
- To provide a framework that will strengthen and integrate modernization blueprints, last year OMB and the CIO Council developed the Business Reference Model, the first of five modules of a FEA. The FEA gives OMB and agencies significant opportunities to consolidate IT investments around the needs of citizen groups (including businesses and state and local governments). Under the FEA, agencies have started to develop modernization blueprints for IT. OMB used the BRM to identify redundancies and gaps in agency business lines and proposed IT investments. More detail on the FEA and next steps can be found at the end of this chapter.

### Continuing Challenges for Federal Information Technology

Even with these important achievements, the government still has a lot of work to do to address key challenges:

- As indicated, the FEA reveals significant redundancies in agency activities, while "siloed" agency-specific buying perpetuates redundant IT purchases and limits productivity gains from government technology investments.
- Data collected in the 2004 Budget Process revealed that the federal government has a major shortage of skilled IT program managers and program management skills.

- Implementation of the Government Information Security Reform Act (GISRA—now amended to be FISMA, the Federal Information Security Management Act) has provided a baseline for agency IT security performance, and the Administration now knows what has been secured and the workload remaining. The 2002 GISRA reports documented significant new and remaining gaps in federal IT security programs.

The Administration is taking steps to address each of these challenges. Specifically, the next section addresses policy improvements, as well as actions being taken in response to six "chronic problems" discussed in the 2003 Budget.

### How Has the Government Responded to These Challenges?

*The Principles of E-Government Lie at the Core of OMB Policy.* In order to move the federal IT portfolio toward the General Accounting Office (GAO) and industry views of best practice, OMB guidance identified how agencies should provide information that improved the IT portfolio included in this Budget. This guidance discussed how to collaborate across government and within agencies, and then informed agencies on the standards that OMB would use to review and select the portfolio. Industry best practices for IT Portfolio Management were followed in the review and analysis.

*Business Cases Drive Performance Improvement.* As one of the key elements in the President's Management Agenda, E-Government should close performance gaps and leverage E-Business techniques to achieve an order of magnitude improvement in government performance. As in the 2003 budget process, the 2004 Budget continues to use IT investment business cases in assuring that IT investments generate increased efficiency, effectiveness, and, most importantly, maximized service to citizens. As required in OMB Circular A-11, several key criteria were applied to determine the viability of an agency's business case:

- *Linkage to the Agency and Program Performance*—Performance goals must be provided for the agency, linked to the annual performance plan as well as the agency mission and strategic goals, and performance measures must demonstrate how the project will support the improvements in the effectiveness and efficiency of the programs. Agencies must also clearly demonstrate how the project assists the agency to become more productive, citizen-centered, and results oriented.
- *Support of the President's Management Agenda*—IT proposals must include multiple agencies; state, local, or tribal governments; use E-Business technologies; be governed by citizen needs; support the FEA Business Reference Model (FEA BRM) published by OMB; and, where appropriate, be fully aligned with the President's E-Gov initiatives.
- *Mitigation of Risk to the federal government*—Agencies must demonstrate an Acquisition Strategy that uses a strong Risk Mitigation Plan to

limit the government’s risk; accommodates Section 508 (access for persons with disabilities); and has a program plan with milestones, a viable program management structure, and a clearly defined way to implement the Acquisition Strategy.

- *Management of IT Security and Privacy*—Agencies must demonstrate through their business cases that each investment is compliant with IT security requirements and security costs have been identified and integrated in the overall life cycle costs of the investment. Additionally, each investment must address privacy implications when collecting personal information.

The following table documents the process used in applying these criteria for 2004 IT Budget decisions:

STEPS FOR THE 2004 BUDGET PREPARATION

|    |   |
|----|---|
|    |   |
| 1. | June: A-11 Guidance published; agencies were required to submit business case information that shows project value, program plan, cost, schedule, risk management, and leverages partnering around E-Gov projects and the FEA BRM Lines of Business.  |
| 2. | May-August: OMB memoranda identified potential opportunities for leveraging cross agency partnering.  |
| 3. | Agencies submitted business cases and IT portfolios in September, with ongoing updates; data arrived via Extensible Markup Language (XML) and were made available for on-line analysis within OMB.  |
| 4. | OMB reviewed and scored business cases based on A-11 criteria <ul style="list-style-type: none"> <li>• Individual projects were reviewed for strategic value, viability, program decisions, etc</li> <li>• Agencies were provided scores and resubmitted improved business cases.</li> </ul>  |
| 5. | OMB identifies opportunities for consolidation in three key areas: <ul style="list-style-type: none"> <li>• The Presidential E-Government initiatives</li> <li>• The Lines of Business and sub-functions of the BRM. There are many potentially redundant projects within these 35 sub-functions; OMB determined a need to focus on opportunities in 6 business lines with multiple IT development requests totaling more than \$100M (human resource information systems, financial management, monetary benefits, data and statistics, public health monitoring, and criminal investigation)</li> <li>• Comparison of business cases for agency infrastructure against commercial best practices and IT spending benchmarks. Significant opportunities were identified for consolidating office automation and infrastructure within an agency, supporting enterprise licenses and hardware buys as well as consolidation of enterprise architecture programs.</li> </ul> |
| 6. | OMB provided guidance to agencies on Capital Planning and Investment Control (CPIC), Enterprise Architecture (EA), business cases, at risk projects, IT security, Government Paperwork Elimination Act (GPEA), and E-Gov initiatives. Investment increases were directed to priority areas such as Homeland Security, the war on terrorism and modernization.   |
| 7. | Agencies continue to improve business cases and revise IT Budgets to reflect decisions.   |

**Information Technology (IT) Performance: Transformation through E-Government Must Continue to Address Six Chronic Problems**

Over the past year, the Administration made significant progress in addressing the six chronic problems that were identified in the 2003 Budget as limiting IT effectiveness. Indeed, the increased visibility into major IT projects allows OMB to identify redundancy and duplication, and provides a wealth of agency data for use in funding decisions. Consequently, the Administration has implemented IT decision-making practices that review IT investments across agencies to resolve these six issues that have previously limited productivity improvements. Ultimately, agencies must continue to meet these longstanding challenges in order to deliver measurable improvements in the key areas of program performance: reduced time to process information and services (“cycle time”), lower costs for provide information and services, and improved quality in agency decisionmaking. The 2004 Budget indicates improvement in the way that agencies are handling these problems, yet there is still much to do.

**1. Automation of existing outdated processes, instead of fixing underlying management problems or simplifying agency procedures to take advantage of new E-Business and E-Government capabilities.**

For years IT Investments in the federal government focused on agency hardware and software needs, without addressing underlying management issues in the overall design and scope of the project. Consequently, government agencies traditionally used IT to automate existing processes rather than create more efficient and effective solutions now possible because of the state of technology. This approach, commonly referred to as paving the cowpath, has been documented as a cause of failure in major IT investments. Systems are often evaluated by the percentage of time they are working rather than the results delivered to the programs and citizen they support.

OMB’s guidance for the 2004 IT budget process required that agencies take a comprehensive reform approach in identifying people, processes, and technology required to deliver significantly better results. Specifically, criteria were added to the Risk Management Section and the EA Section of the business cases to address these issues. As a result, more than 600 projects, representing approximately \$20 billion, are on the “At Risk List” for failing to address people and process transformation needed to ensure success.

In addition, OMB issued guidance to ensure that agency Government Paperwork Elimination Act (GPEA) implementation plans were not merely automating existing processes. GPEA requires agencies to reengineer their business processes in order to maximize the benefits of technology to create online transactions that are faster, cheaper, and more efficient to the citizen; GPEA means much more than simply automating a paper form. While agencies have made significant progress, much work remains. Of the 5,800 reported transactions,

only 52 percent are expected to meet the October 2003 statutory deadline of providing an electronic reporting option. OMB is driving government compliance with GPEA through its reviews of agency information collection requests under the Paperwork Reduction Act, use of the President's Management Agenda scorecard to push agencies to be in full compliance with GPEA, and leveraging resources across government to promote electronic transaction through specific E-Government initiatives. In addition, OMB is working closely with the agencies to improve their status in complying with the Act.

A key example of an IT investment request that successfully leverages technology with process redesign is the Entry-Exit program in the new Department of Homeland Security. To improve the security of our nation's borders, the processes and systems that support entry and exit from the United States must be reengineered to ensure improved information sharing and technology optimization. The Departments of Justice, State, Treasury, and Transportation, over the last year, have been developing an entry exit program to more effectively manage the people, cargo, and transport crossing U.S. borders. Ensuring that the appropriate IT systems support improved entry and exit processes is essential to achieving our Nation's Homeland Security goals. This effort is now underway and the Department of Homeland Security will take over the program in 2003.

## 2. Duplicative IT investments.

OMB policy calls for agencies to make maximum use of shared IT solutions and to stop redundant IT purchases. Best practices in private industry identify several opportunities for savings within an IT portfolio of investments. Three consolidation practices in the private sector also are applicable to the federal government:

- Consolidation of IT around the customer.
- Consolidation of IT within a line of business or function.
- Consolidation of IT infrastructure.

To identify potential opportunities in these areas, OMB analyzed the agency IT investment portfolios and provided feedback and suggestions to the agencies. This consolidation analysis not only identified savings for the agencies, but also served to strengthen the governance processes for IT management by identifying and continually pursuing opportunities in this area. For example, use of enterprise licenses for software can generate hundreds of millions of dollars in reduced costs.

In order to maximize consolidation opportunities, agencies must continue to identify and inventory the proposed IT investments within the agencies and across organizations. These processes are increasing the agencies' and OMB's visibility into the type of IT investments the federal government is planning, and provides a vehicle for agencies to collaborate much more effectively on solutions. Over the past year, OMB:

- Determined that due to redundant infrastructure investments, the federal government was pur-

chasing excess infrastructure capacity, such as telecommunications, office automation, and mainframe computers.

- Identified redundant IT investments made for the same purpose and supporting the same lines of business across multiple agencies.
- Developed portfolios and deployed initial versions of IT investments consolidated around citizen needs. The four portfolios comprise cross-agency E-Government initiatives for citizens, businesses, other levels of government, and the federal government's internal efficiency and effectiveness.
- Rejected agency requests for duplicative IT investments across the federal government, and rather directed agencies to collaborate together to create one-stop points of service.

In key examples of cross agency consolidations, payroll operations will be standardized and consolidated from approximately 22 separate providers to a few federal payroll providers by September 2004. The current systems employ a variety of paper and electronic processing; records are not easily shared between agencies as federal employees change jobs in the federal system; and records are manually retired upon employees' retirement and resignation. Numerous agencies had targeted their payroll operations for costly modernization efforts. Millions of dollars will be saved through shared resources and processes and by modernizing on a cross-agency, government-wide basis rather than agency-by-agency. In addition, the Departments of Agriculture and the Interior, and the Army Corps of Engineers, consolidated into one parks reservation system, which will allow the public to obtain information and make reservations for all the recreational opportunities that these agencies offer.

The Administration continues work to ensure that IT investments:

- Reflect consolidation around citizen groups and along lines of business,
- Reduce duplicative collection of data from citizens, businesses, and state and local government
- Purchase enterprise licenses for the federal government where appropriate, and
- Reduce surplus infrastructure capacity.

## 3. Few IT investments have significantly improved mission performance.

IT investment results have been limited by significant redundancy in federal business operations. OMB issued guidance requiring that agency IT investments synchronize with the FEA. The FEA is a tool that enables the government to identify opportunities that leverage technology and alleviate redundancy or to highlight where agency overlap limits the value of IT investments. Led by OMB, this effort identified opportunities to simplify processes and unify IT investments across the agencies and within the lines of business of the federal government. The Business Reference Model (BRM) is the foundation of the FEA. It describes the federal government's lines of business, including operations and services to the citizen—independent of the

Agencies, bureaus, and offices that perform them. The outcome will be a more citizen-centered, customer-focused government that maximizes technology investments to better achieve mission outcomes.

For 2004 Budget decisions, OMB required agencies to map their major IT investments, as presented in the Exhibit 300, to the BRM. OMB then mapped Exhibit 300s to the model and captured the information in the Federal Enterprise Architecture Management System (FEAMS). The system can now generate analysis reports for agency IT investments by each line of business, sub-function, and Agency.

As a result, OMB now can ensure that IT resources are being allocated optimally across common functions that the government performs. Functions that are performed by multiple agencies are now clearly delineated, and the opportunities for cross-agency collaboration to improve performance are readily apparent. Furthermore, because the FEA has been validated by the agencies, it has become a common framework for initiating cross-agency performance improvements. Over the past year, OMB used the BRM to:

- Assist agencies in identifying opportunities for collaborative investments, joint infrastructure projects, and greater use of enterprise licensing across the government—all of which can help agencies to focus on their mission and avoid unnecessary redundant spending.
- Deny funding to redundant investments, while directing agencies to reuse existing IT or join with other agencies making overlapping investments in the appropriate line of business.

**4. Few agencies have plans demonstrating and documenting the linkage between IT capabilities and business needs.**

While there are many ways to prepare enterprise architecture, the most important element is identification of how IT can be leveraged best to improve agency performance of core missions. Many agency Enterprise Architectures lack focus on business results. As a result, many agencies, bureaus and operating divisions cannot share information or systems. This shortfall increases operating costs as well as burden on citizens and businesses. Additionally, agencies cannot easily analyze IT security risks and determine investment needs; and agencies make redundant investments in IT because programs cannot predict whether IT requirements will be met without buying their own version of a system. These issues can be addressed through better use of enterprise architectures that comprise a “modernization blueprint”.

Although some improvements have been made in recent years through progress in implementing capital planning and investment control, agencies still often base IT investments on business cases that fail to link IT investments to performance improvement. As part of OMB’s evaluation on agency progress in the President’s Management Agenda, agencies are rated on the quality of their Enterprise Architecture as a modernization blueprint. For the 2004 budget, the Administration

added specific questions to the business case guidance to ensure that agencies began to tie IT investments to performance goals and measures.

Progress in this area includes:

- Agencies are progressing towards fully implementing their own Enterprise Architecture frameworks, meeting criteria set by OMB and the General Accounting Office; these criteria are used to assess agencies on their EA performance as part of the Administration’s Management Scorecard for E-Government. Some agencies, such as Department of Energy and Environmental Protection Agency, are basing IT investments on core modernization initiatives identified using their Enterprise Architecture activities. These agencies use the Enterprise Architecture process as an opportunity to identify performance gaps and ways that technology can be used to help close those gaps and better serve the citizen.
- OMB has begun to coordinate EA efforts, groups, working groups, communities of practices, etc., to ensure that the overall strategy and any guidance for EA is driven by the FEA. In the place of the redundant and overlapping activities will be a structured and well-planned modernization effort guided by the work of the FEA.
- For the 2004 business cases, OMB added specific questions to ensure that agencies began to tie IT investments to the performance goals and measures of the programs they support.

**5. Many major IT projects do not meet cost, schedule, and performance goals.**

Under the Federal Acquisition Streamlining Act (FASA) and the Clinger Cohen Act, agencies must report and track progress against cost, schedule and performance goals for IT. Under OMB Circular A-11, agencies are expected to achieve on average 90 percent of the cost and schedule goals without reducing the performance capabilities of the items being acquired. There is wide variation in the performance of agencies against these benchmarks. The greatest problem for the agencies is identifying how a project is performing against planned costs, schedule, and mission improvement goals. Until agencies begin to establish and document baselines, the Administration’s ability to assess whether agencies are meeting such goals will be limited.

A comparison of agency investment requests for 2003, versus what is reported as actual costs, provides specific demonstration that too many IT projects have cost and schedule overruns. A sample comparison of projects-identified cost growth ranging from 10 percent to 225 percent! Not surprising, these same projects failed to successfully make the business case for the 2004 budget and have either been rejected or placed on the “At Risk List”.

Over the past year, OMB has approached this issue from two separate yet complementary standpoints: 1) improving agencies abilities to meet planned cost, schedule, and performance targets, and 2) raising the skills of the federal IT workforce and agencies.

The root problem appears to be a shortfall of skilled IT professionals to support the magnitude of federal IT projects. Specifically, nearly 1,200 of this year's IT projects (major and small) represent IT projects over \$5 million; therefore, the federal government needs a similar number of qualified project managers and solutions architects. However, review of over 1,000 proposed IT business cases for 2004 indicates a significant shortage of skilled personnel, which increases the risk that IT projects will fail. A Gartner August 2002 report (Get the federal IT Workforce in Shape, 19 August 2002, Gartner) found that "Projects to improve federal security, intelligence and E-Government will not succeed unless the U. S. government has a talented and high-caliber IT workforce." For a variety of reasons, the current IT workforce is not able to meet the increased workload and rapidly changing IT environment.

It is important to note that the skills required of today's IT workforce have less to do with technology than with developing and justifying business cases; building and leading cross-functional and cross-organization teams; and planning and monitoring contractor cost, schedule, and performance. Solutions architects are needed to oversee integration of people, process and technology elements of a successful program. Project managers are needed to lead and direct myriad government and contractor personnel, while interfacing with program and oversight officials. Unfortunately, many IT project staff have been selected based on their education and experience in positions requiring technology skills without the benefit of honing business and change management skills. In addition, there is a significant change in the number of projects in a department from year to year, and IT staff cannot move across departments in line with shifting requirements. The skills imbalance was identified by the federal CIO Council, which established the CIO Council IT Workforce Committee to work with OPM to implement innovative commercial best practices toward identifying and closing the skills gap.

The Administration has established a number of efforts to address this area, including an inventory of skills and training opportunities, enhanced training programs, and an online "virtual" job fair. Most recently, OPM and the CIO Council IT Workforce Committee developed federal project management qualifications. Positions requiring those qualifications will be titled with a "project management" suffix. The qualifications are currently being reviewed by the HR community as well as the CIO community. Attaining breakthroughs in closing the skills gap requires partnership of Agency mission program managers, HR officers, and CIOs. While it was primarily the CIO Council that led the charge, the project management challenge and the OPM qualifications are recognized as enterprise tools that apply to project management of every federal investment.

There are several strategies to improve the government's capacity to manage its IT portfolio. In response to the President's Management Agenda, and emerging

needs such as homeland security, the federal IT workforce needs to become flexible to meet these new cross-agency needs. To address this issue, over the past year, OMB:

- Required that all major acquisitions implement an Earned Value Management System (EVMS), based on the industry developed ANSI/EIA Standard 748. An EVMS supports program management by effectively integrating the work scope of a program with the schedule and cost elements for optimum program planning and control. The system requires thorough planning, combined with the establishment and disciplined maintenance of a baseline for performance measurement.
- Directed that by the end of 2004 all major acquisition programs should have an EVMS in place that will enable agencies to report accurate information on the achievement of the baseline cost, schedule and performance goals during 2005.
- Indicated that for the 2005 budget submissions, OMB will compare what was reported in the 2004 business cases against what agencies report in 2005 to determine whether or not the investments are meeting cost, schedule and performance goals.
- Directed agencies to have a program management plan and a qualified project manager for projects to be approved for spending in 2004 and thereafter.

#### **6. Major gaps exist in agency and government-wide computer-related security.**

The Government Information Security Reform Act (GISRA) requires federal agencies and Inspector General (IGs) to conduct annual IT security reviews of programs and systems and report the results of those reviews to OMB and the Congress. OMB issued specific reporting instructions to agencies and IGs to ensure appropriate and uniform reporting. GISRA was recently revised under the E-Government Act of 2002 and renamed the Federal Information Security Management Act.

Under the first year of GISRA reporting in 2001, the Administration was able to establish a baseline of agencies' IT security performance. OMB is assessing the 2002 agency and IG reports, to identify progress made against that baseline as well as identify new or remaining weaknesses. A summary of agency and IG reports will be included in the annual OMB report to Congress on IT security in 2003. Initial review of agency and IG reports are mixed. While some agencies (e.g., DOJ, DOT, and DOL) have demonstrated clear progress over the last year, significant challenges remain for other agencies.

Agency and IG reviews identify numerous IT security weaknesses. To ensure that those weaknesses are appropriately addressed, OMB guidance also requires agencies to develop, implement, and maintain plans of action and milestones for every program and system where an IT security weakness was found. Agencies submit these plans along with quarterly updates on their progress in closing security performance gaps to

OMB. These plans are tied directly to the budget request for a system. Agency progress in executing their plans is used in determining the quarterly E-Government score for the President's Management Agenda Scorecard. Last year, OMB also increased enforcement of the IT security criteria for funding new investments. This year, OMB is reinforcing longstanding policy that agencies address serious IT security weaknesses in their legacy systems prior to proceeding with new IT investments.

For the first time, the federal government's IT security program now has a basic set of IT security performance measures, a comprehensive and uniform process for collecting data against those measures, and a set of tasks and milestones that enable tracking of federal IT security progress. Additionally, agency reports reveal that further progress has been made against the six common government-wide IT security weaknesses identified in last year's budget:

1. *Increasing agency senior management attention to IT security.* In addition to conditionally approving or disapproving agency IT security programs, OMB used the President's Management Agenda Scorecard to focus on serious IT security weaknesses. Through the scorecard, OMB and senior agency officials monitor agency progress on a quarterly basis. As a result, senior executives at most agencies are paying greater attention to IT security.

2. *Development of IT security performance measures.* For the 2002 reporting instructions OMB developed high-level management performance measures to assist agencies in evaluating their IT security status and the performance of officials charged with implementing specific IT security requirements. Agencies reported the results of their security evaluations and their progress implementing their corrective action plans according to these performance measures. These measures are mandatory and help to ensure that accountability follows authority.

3. *Improving security education and awareness.* Through the Administration's "Go-Learn" E-Government initiative on establishing and delivering electronic training, IT security courses were available to all federal agencies in late 2002. Initial courses are targeted to CIOs and program managers, with additional courses to be added for IT security managers, and the general workforce.

4. *Increasing integration of security into capital planning and investment control.* OMB continues to aggressively address this issue through the budget process, to ensure that adequate security is incorporated directly into and funded over the life cycle of all systems and programs before funding is approved. Through this process agencies can demonstrate explicitly how much they are spending on security and associate that spending with a given level of performance. OMB also provided agencies guidance in determining IT security costs of their IT investments. As a result, federal agencies will be far better equipped to determine what fund-

ing is necessary to achieve improved IT security performance.

5. *Working toward ensuring that contractor services are adequately secure.* Through the Administration's Committee on Executive Branch Information Systems Security, an issue group was created to review this problem and develop recommendations for its resolution, to include addressing how security is handled in contracts themselves. This issue is currently under review by the Federal Acquisition Regulatory Council to develop, for government-wide use, a clause to ensure security is addressed as appropriate in contracts.

6. *Improving process of detecting, reporting, and sharing information on vulnerabilities.* Early warning for the entire federal community starts first with detection by individual agencies and reporting to incident response centers at the FBI, GSA, DOD, or elsewhere. While it is critical that agencies and their components report all incidents in a timely manner, it is also essential that agencies actively install corrective patches for known vulnerabilities. To further assist agencies in doing so, GSA's Federal Computer Incident Response Center (FedCIRC) recently awarded a contract on patch management. Through this work, FedCIRC will be able to disseminate patches to all agencies more effectively.

As agencies conduct more reviews, the number of security weaknesses they will find is likely to increase. Based on agency and IG IT security reports, agencies' plans of action and milestones, and IT budget materials, both progress and weaknesses have been identified. OMB set targeted milestones for improvement for some of the critical IT security weaknesses. These targets include:

- More agencies must establish and maintain an agency-wide process for developing and implementing program and system level plans. Plans of action and milestones must serve as an agency's authoritative management tool, to ensure that program and system level IT security weaknesses, once identified, are tracked and corrected. By the end of 2003, all agencies shall have an adequate process in place.
- Many agencies find themselves faced with the same security weaknesses year after year. They lack system level security plans and certifications. Through the budget process, OMB will continue to assist agencies in prioritizing and reallocating funds to address these problems. By the end of 2003, 80 percent of federal IT systems shall be certified and accredited.
- While agencies have made improvements in integrating security into new IT investments, significant problems remain in ensuring security of new and in particular, legacy systems. By the end of 2003, 80 percent of the federal government's 2004 major IT investments shall appropriately integrate security into the lifecycle of the investment.

### **Making Use of Statutory Authorities for IT Management**

In addition to the cross-cutting steps taken to address each of these chronic problems as discussed above, OMB has also begun to use one of the key authorities established in section 5113 “Enforcement of Accountability” of the CCA. Under this authority, the use of which has been endorsed by the General Accounting Office (GAO), the Director is required to evaluate information resources management practices of the executive agencies with respect to IT investments. As part of this evaluation OMB issued “Clinger Cohen Letters”. These letters were used to identify and halt further investment in potentially redundant IT investments, and are summarized below.

#### **Clinger Cohen Letters Issued:**

##### **E-Clearance issued on April 29, 2002 (B-02-03) “Expedited Processing of National Security Clearances using the Clearance Verification System”**

- The Clearance Verification System (CVS) ensures that there is documentation in a centrally accessible databases of all government issued security clearances, and is an important element in the Administration’s Homeland Security efforts.
- The purpose of this bulletin is to direct Executive branch departments and agencies whose clearance records are not in JPAS or an intelligence community database to comply with the Bulletin’s requirements to load clearance information into the combined environment. The bulletin also gives OPM the authority to link the DoD and OPM systems to simplify and automate locating investigations and clearances for anyone in DoD or any civilian agencies, and will reduce the number of reinvestigations.

##### **Online Rulemaking Management issued on May 6, 2002 (M-02-08)**

##### **“Redundant Information Systems Relating to On-Line Rulemaking Initiative”**

- The purpose of this memorandum is to advise agency heads of the intention to consolidate redundant IT systems relating to the President’s on-line rulemaking initiative.

The memo directs all federal rulemaking agencies to:

- Leverage and use a single, front-end web application for receiving public comments on proposed agency rules by December 31, 2002.
- Consolidate duplicative “back end” information technology systems into an integrated solution built on an existing system and processes by December 31, 2003.
- Conform agency IT spending to the On-Line Rulemaking program plan.

##### **Homeland Security issued July 19, 2002 (M-02-12)**

##### **“Reducing Redundant IT Infrastructure Related to Homeland Security”**

- Consolidation and integration of IT infrastructure across the component agencies of the Department of Homeland Security presents significant opportunities for savings while providing the best investments for our homeland security mission.
- The memo directs component agencies to:
  - Cease temporarily all IT infrastructure system development and planned modernization efforts above \$500,000 pending an expedited review of all DHS component agencies investments.
  - Identify any current or planned spending on IT infrastructure
  - Participate in the Homeland Security IT Investment Review Group led by the Office of Homeland Security (OHS) and OMB.

##### **Homeland Security issued July 30, 2002 (M-02-13)**

##### **“Review and Consolidation of Business Management Systems for the Proposed Department of Homeland Security”**

- An effective DHS requires high quality integrated common systems. A similar opportunity to integrate IT for effectiveness and economy exists in the case of management systems for financial management, procurement, and human resources.
- The memo directs component agencies to:
  - Cease temporarily new financial management, procurement, and HR system development or modernization efforts above \$500,000 pending an expedited review of all DHS component agency investment plans.
  - Identify any current and planned spending on IT systems directly for or related to financial management, human resources management, and procurement.
  - Participate in the Business Systems IT Review Group led by OMB and OHS.

##### **Recreation One-Stop issued on December 17, 2002 (M-03-03)**

##### **“Redundant Reservations Systems Relating to Recreation One-Stop Initiative”**

- The purpose of this memorandum is to advise agency heads of the intention to consolidate redundant IT systems relating to recreation reservations systems as part of the President’s Recreation One-Stop Initiative.
- Affected agency IT spending for recreation reservation systems must conform to the Recreation One-Stop reservation program plan and the October 2003 consolidation. If necessary, OMB will apportion funds consistent with a migration plan developed by the Recreation One-Stop reservation initiative team.

##### **E-Payroll issued on January 10, 2003 (M-03-05) “Consolidating and Standardizing Federal Civilian Payroll”**

- The purpose of this memorandum is to advise agency heads of the actions required to consolidate federal government Payroll providers. Specific actions include:

- DoD, GSA, DOI, and USDA will proceed with payroll processing migration and consolidation to two partnerships under OPM's leadership.
- Agencies who receive payroll processing from DoD, GSA, DOI or USDA will remain with those providers through September 30, 2004.
- Agencies identified to migrate to a new provider must confirm selection of payroll processing provider with OPM no later than February 3, 2003.
- Agencies other than DoD, GSA, DOI, and USDA shall not spend 2003 funds for modernization of payroll processing unless that IT investment facilitates the agency migration to one of the consolidated payroll processors.

Many agencies made significant progress in accomplishing the goals of expanded E-Government, leveraging information technology to become more citizen-centered and results oriented. For more information on agency implementation of the Expanding E-Government initiative, see Table 22-1; and for more information about the PMA Scorecard, see the "Governing with Accountability" chapter in the Budget volume.

#### **Improving Performance and Citizen Service Across Government through the E-Gov Initiatives:**

The expanded E-Government initiatives are improving the delivery of government services to the citizen. Instead of putting thousands of government forms and reams of information online, the federal government is using technology as a tool to better serve citizens and improve efficiency. IT provides higher quality of information at an often lower cost to the government. People are able to choose when they access the information and utilize these government services electronically. The government is making progress both in agency-specific efforts and in the cross-agency initiatives. Detail on these cross-agency initiatives is provided in Table 22-2 of this document. Here are some highlights of major successes since February 2002:

**Volunteer.gov:** Works in support of the President's USA Freedom Corps initiative, allowing citizens to volunteer for more than 100,000 openings at national parks, veteran's hospitals and other federal facilities.

**Recreation.gov:** One-stop online access to America's National Parks and public recreation areas. The website includes links to 1900 federal parks with over 750,000 site visitors per month.

**GovBenefits.gov:** One-stop access to information and services of almost 200 government programs representing more than \$1 trillion in annual benefits. GovBenefits receives over 500,000 visitors per month and is represented on USA Today's list of "Hot Sites."

**Integrated Acquisition:** Supports cost-effective acquisition of goods and services by agencies, while eliminating inefficiencies in the current acquisition environment by providing a one-stop portal for vendor registration. In addition, this initiative is providing government purchasing managers with a past performance informa-

tion retrieval system and an on-line catalog of items available at different prices from multiple agency contracts.

Progress has also improved in agencies becoming more citizen-centered and results oriented, based on results from the perspective of the four key citizen-centered groups.

*Government to Citizen (G2C).* The objective of the portfolio is to provide one-stop, on-line access to information and services for the citizen. The portfolio has met most of its objectives, but work remains to be done. GovBenefits.gov has compiled most government benefit programs online and developed a tool so citizens can easily determine their eligibility for benefit programs. The portfolio is reusing this tool on specific benefit topics like seniors, loans, and disabilities—multiplying its impact for the citizen. 77 percent of government site users have gotten tourism and recreation information from government websites (Pew Internet & American Life Project, April 2002). Recreation.gov has merged recreation data from across the government into an easy to use site that addresses this demand. It also provides the same data to private sector sites that pick subsets for their specific topic web site—"franchising" much like GovBenefits above. Finally IRS Free Filing is using a private-public partnership to deliver free Internet tax filing to the public. 70 percent of those who filed their taxes online say have saved time and about half say they saved more than an hour (Pew).

*Government to Business (G2B).* The goal of the Government to Business portfolio is to reduce burdens on business, provide one-stop access to information and enable digital communication using the language of E-Business (XML). Businesses have started to receive benefits as a result of our efforts through a series of one-stop portals and soon as a result of limited information re-use across agencies. Success from the Business Compliance One-Stop initiative can already be found in Businesslaw.gov where businesses can access information about laws and regulations and can use expert tools that make it easier and cheaper to understand and comply with laws and regulations. Exciting work has also begun to form the basis for a unified portfolio of health data domains that will allow for the sharing of medical record information across government agencies and healthcare organizations. Under the E-Rule-making initiative, businesses will no longer need the assistance of a lawyer or lobbyist to participate in the regulatory process. Citizens and businesses can now easily find, read and comment on proposed federal rules or regulations at the regulations.gov website. Finally, the Expanding Electronic Tax Products for Businesses Initiative will benefit 5.4 million corporations by reducing

the burden associated with filing the 1120/1120S (Corporate Income Tax) Forms.

*Government to Government (G2G).* The G2G portfolio's primary goal is to enable federal, state and local governments to more easily work together to better serve citizens within key lines of business. There are mixed results. Tremendous progress was made on two initiatives, E-Grants and E-Vital. In 2002, both projects worked closely with state and local governments to create standards and pilots that facilitate data integration and deliver measurable benefits to all levels of government. Three other projects, relate to Homeland Security. Stakeholders in these initiatives serve vital constituencies, and in many cases maintain significant existing infrastructure investments. The Disaster Management initiative launched a portal (disasterhelp.gov) for public safety personnel that includes secure messaging and tools to facilitate communication and disaster response.

*Internal Efficiency and Effectiveness (IEE).* This portfolio's focus is to apply industry best practices to government. Accomplishments in 2002 initiated business transformation successes by advancing agency partnering, citizen focus, and reduction of stovepipe systems. DOT's Virtual University investment was leveraged to deliver the E-Training government-wide online training portal (Golearn.gov); migrating online training services from over 40 agencies to one, while supporting areas of competency in achieving Human Capital goals. E-Payroll, through the efforts of multi-agency teams, is initiating the migration of agencies from the present 22 providers to two payroll partnerships, with a projected lifecycle cost savings of \$1.2 billion. Integrated Acquisition has resulted in an agency-shareable single vendor-performance file; a single vendor registration area that makes it easier to do business with the federal government, and a community platform for the Intra-Governmental Transfers, a significant governmental accounting challenge. E-clearance has defined the aggregation and sharing of clearances along a single entry point, 98 percent of investigations will be located with one search.

### **Looking to the Future: Overall Governance Process**

In order to generate performance improvement from IT across the government, it is necessary to rethink the organizational, governance, and funding structures that hamper cross-agency coordination. Actively managing federal IT investments as a consolidated portfolio is needed to obtain more productivity from the federal IT investments. There are major policy decisions that must be made, including what will be the roles of agencies with overlapping responsibilities. These decisions must be made to drive productivity and better deliver the services to the citizens.

To facilitate the federal government working as one enterprise, the government has developed a number of new tools. The FEA is helping to identify opportunities for agencies to collaborate and eliminate redundant spending. The FEA BRM describes the federal government by common lines of business, and opportunities for key cross organization initiatives. By describing the federal government around common business areas instead of the stovepiped agency-by-agency view, it promotes agency collaboration. The Performance Reference Model (PRM) provides a framework for identifying performance improvement opportunities in quality, costs, and cycle time, spanning traditional organizational structures and boundaries.

In addition, the Expanding E-Government Initiative requires agencies to develop modernization blueprints that will close performance gaps and more effectively perform their mission to the citizens. Together, the FEA and agency modernization blueprints identify what agencies have IT investments and where there are gaps in leveraging technology for performance improvement or opportunities to consolidate IT spending.

Agencies have started to come together under the leadership of the President's Management Council (PMC) to establish a framework for collaboration. The PMC has identified three of the E-Government initiatives (Project SAFECOM on wireless interoperability, Disaster Management, and E-authentication) as needing full PMC involvement, while determining the remaining 21 should be managed by either the team of agencies affected or a lead agency that has primary mission responsibility addressed by an initiative.

In 2004 OMB proposes to add staff to the new Office of Electronic Government and IT to develop and use the FEA. The FEA will be used to identify both significant gaps as well as redundancies across agency major IT investments.

While there are new tools to foster collaboration, agencies' CIOs have not felt empowered to develop new joint investments. Using agency business case data and the BRM, OMB identified that as much as 20 percent of agency IT requests could benefit from a joint agency approach. However, of the approximately 1300 major projects that were submitted in 2004, a small number were joint submissions from multiple agencies. The government will continue to incorporate enterprise architecture criteria into the regular process of developing joint IT investment proposals as well as to use the budget process to reduce duplicative spending.

Emerging from this process will be a systematic way to group interagency initiatives into three areas. In each area, it will be critical to assign clear responsibility to the agency or agencies that must take the lead in implementing the initiatives. The three areas are:

1. IT and E-Government projects where it is clear that one agency has the lead. These can be implemented through the normal agency-specific budget process.

2. IT and E-Government projects where a subset of agencies are involved. These may require joint ownership and funding.

3. IT and E-Government projects that are common to all agencies or rise and govern at a level of major policy significance. These will require action from the PMC as a whole to be successful, as well as a new way to finance their operations.

### Expanding the Transformation by Modernizing Across Agencies

In order to continue, enhance, and make lasting E-Government transformation, the Administration is working to integrate the FEA with federal budget preparation and execution processes. The fully integrated processes will allow continuous integration and consolidation of systems and processes in order to better fulfill citizen needs. The FEA is a powerful tool for identifying both key gaps and redundant efforts and can be used to determine the most effective investment of IT.

A recent report by the National Commission on the Public Service, chaired by Paul A. Volcker, entitled “Urgent Business for America: Revitalizing the Federal Government for the 21st Century”, found that “Across the full range of government activities, new demands are accelerating, and the pace of change is quickening. At the same time, the federal government has had difficulty in adapting to the knowledge-based economy and taking advantage of the significant advances in technology.” The FEA will allow the government to address these challenges by identifying both significant gaps as well as opportunities to leverage technology across agency processes. The FEA BRM describes the federal government by common lines of business, and points to opportunities for key cross organization initiatives.

Working with the Chief Information Officer’s (CIO) Council, OMB built a first version of the BRM. It has used this model to assess agency IT investments for 2004 and identify areas for future integration across agencies. The Administration is incorporating enterprise architecture criteria into the regular process of developing joint IT investment proposals. In addition, the new E-Government Act should the identification and use of cross agency initiatives consistent with this approach. The process is premised on several critical success factors:

- The Director of OMB and the PMC work together to establish targets for consolidation of IT initiatives to achieve substantial cost and citizen service gains.
- Federal agencies analyze IT redundancies and gaps in order to achieve citizen outcome goals.
- Business line owners in agencies are identified and provided with the authority and resources to lead cross-agency consolidation efforts.
- Resources are committed by both the business line owners and the involved agencies to ensure that complete and accurate analysis of consolidation opportunities are conducted.

- OMB oversees the overall process, utilizing the FEA, of evaluating agency progress in eliminating redundancies and gaps through the budget process.
- Communication with key Congressional stakeholders, including GAO and the appropriate committees, occurs regularly.

The Administration has defined an annual cycle for identifying, analyzing and deploying opportunities to integrate and consolidate activities along business lines that cross agency boundaries. The policy of the Administration is that IT transformation will be based on consolidation along lines of business and citizen needs: agencies will have to make the business case for developing a unique solution.

As a result of deployment and use of the FEA BRM in evaluating 2004 agency IT budgets requests, OMB has been able to identify potential redundancies in six business lines:

**Financial Management**—involves the aggregate set of accounting practices and procedures that allow for the accurate, efficient, transparent, and effective handling of all government revenues, funding, and expenditures. This includes cost management, funds management, financial reporting, general ledger management, payment management and accounts receivable management. OMB identified over \$250 million in financial projects that are candidates for further analysis of potential savings.

**Data and Statistics**—includes activities performed in providing data and information pertaining to the current state of the nation in areas such as the economy, labor, weather, international trade, etc.

**Human Resources**—includes all activities associated with the recruitment, management and separation of employees. It includes recruitment, staffing, employee and labor relations, advancement and awards, benefit management, payroll management and expense reimbursement, resource training and development and security clearance management. Based upon a review of systems in the Human Resources business line, OMB identified systems requests of over \$50 million that should be further assessed for potential savings.

**Monetary Benefits**—involves the allocation of money to members of the public for retirement (e.g., Social Security), welfare, unemployment, medical services (e.g., Medicare, Medicaid), and other related services. Initial review revealed an estimated \$200 million in investments that require further assessment.

**Criminal Investigations**—includes the systems that support the federal government’s criminal investigation activities. Initial review revealed an estimated \$300 million in investments that require further assessment.

**Public Health Monitoring**—involves activities associated with monitoring the public health and tracking the spread of disease.

Funding for systems in these areas will be subject to review and potential integration or consolidation. Teams composed of representatives of each partner agency, the lead agency or “business line owner”, and

appropriate OMB officials would be established to conduct a thorough assessment of the potential redundancies in each business line. Based on these assessments, funding would be aligned; the funding would then be managed by the business line owners. A portion of the savings from eliminating redundant systems within these business lines could be re-allocated to higher priority activities, as appropriate, in coordination with the agency.

### **Conclusion**

E-Government is an integral part of the President's Management Agenda, making it easier for citizens and businesses to interact with their government, save taxpayer dollars and streamline citizen-to-government transactions. Table 22-1 summarizes the results of IT management processes at major agencies while Table 22-2 provides summary information on each of the Presidential E-Government initiatives. A copy of the President's E-Government strategy, which includes additional information on each of the E-Government Ini-

tiatives, is available on the OMB Web site at [www.omb.gov](http://www.omb.gov).

In conclusion, while the federal government has made significant progress in implementing E-Government to better serve the citizen efficiently, work remains. The federal government must further rationalize its architecture to eliminate redundant IT investments that are both costly and often create unnecessary burden to the citizen. OMB expects the number of interagency E-Government initiatives to grow significantly in the 2005 budget process as a result of the further deployment of other FEA Reference Models and the expansion of OMB's FEA governance processes, as discussed above. Agencies must continue to collaborate together to develop innovative solutions and work as one federal enterprise instead of individual agencies. OMB will continue to focus agencies on achieving measurable results from IT investments. Agencies must also continue to improve their workforce to better manage its IT investment and improve the security of these investments.

**Table 22-1. EFFECTIVENESS OF AGENCY'S IT MANAGEMENT AND E-GOV PROCESSES**

| Capital Planning and Investment Control (CPIC) Effectiveness   | Enterprise Architecture (EA) Effectiveness   | Business Cases for IT Projects  | E-Gov Progress   | Process Improvement Milestones for Calendar Year 2003  |
|--|--|---|--|--|
| <b>Agriculture</b>   |  |   |  |  |
| <p>USDA's CPIC process is used in concert with their Modernization Blueprint, EA, and their E-Gov Strategy throughout the budget process. The CPIC and EA are working toward full integration.</p> | <p>USDA's EA is continuing to focus on the business, data, application, and technology layers of the EA. USDA is also working to integrate the EA efforts throughout the department.</p> | <p>For the 2004 budget, USDA prepared 50 business cases. 48 made the business case. USDA will review its IT investments to ensure that projects and systems that meet the criteria for major projects provide business cases.</p> | <p>USDA continues to participate in many E-Gov initiatives including Safecom, Gov-Benefits, Geospatial, e-Loans, e-Grants, e-Payroll, e-Training, e-Travel, Integrated Acquisition, and e-Authentication. Starting in 2003, USDA will participate in the e-Grants pilot by using the new standard for grant applications and synopsis data. The USDA E-loans initiative must be aligned and coordinated with the government wide e-Loans initiative managed by the Department of Education. As a federal payroll provider, USDA is responsible for financing and migration strategies to ensure e-Payroll goals are met. USDA's progress in complying with GPEA has 58 percent (272) of its 469 total transactions projected to meet the deadline.</p> | <p>The Department should create an integrated EA effort that consolidates the myriad of EA efforts underway in the Department. All organizations within USDA should partner with the Department's Office of the CIO to eliminate the redundant EA efforts and to continually pursue opportunities for consolidating office automation.</p> |

**Table 22-1. EFFECTIVENESS OF AGENCY'S IT MANAGEMENT AND E-GOV PROCESSES—Continued**

| Capital Planning and Investment Control (CPIC) Effectiveness   | Enterprise Architecture (EA) Effectiveness  | Business Cases for IT Projects  | E-Gov Progress   | Process Improvement Milestones for Calendar Year 2003   |
|--|---|---|--|---|
| <b>Commerce</b>  |   |   |  |   |
| <p>All components (CIO, CFO, Procurement Executive) participate in the CPIC process. DOC has made progress toward integrating its CPIC and EA processes.</p> | <p>DOC's EA work is identifying key business modernization issues and has made progress on developing the 4 layers (Business, Data, Application, Technology). The EA is used to make budget decisions about IT investments.</p> | <p>Commerce provided business cases for all major systems and 60 percent of its total IT investments.</p> | <p>DOC's International Trade Administration is the managing partner of the International Trade Process Streamlining initiative (ITPS), and NOAA and Census are actively involved in the Geospatial One-Stop initiative. DOC is also participating in the integrated project team of Project SAFECOM and is involved in Rec-One Stop, e-Grants, e-Training, e-Travel, Integrated Acquisition and e-Authentication. DOC has made progress in meeting its GPEA requirements; only 11 significant transactions (transactions with over 5000 respondents) will be delayed beyond the end of 2003.</p> | <p>In 2003, Commerce should continue their efforts to align the agency EA with the Federal Enterprise Architecture. The department will continue and increase involvement in the development and deployment of the President's E-Government initiatives. By mid-February, the Department will update the Agency's IT Strategic Plan, tie to specific measurable results and identify 2-3 major modernization initiatives for the department that are also strongly linked to measurable outcomes/results. Commerce will submit a revised Enterprise Architecture that reflects these major modernization initiatives.</p> |

**Table 22-1. EFFECTIVENESS OF AGENCY’S IT MANAGEMENT AND E-GOV PROCESSES—Continued**

| Capital Planning and Investment Control (CPIC) Effectiveness   | Enterprise Architecture (EA) Effectiveness   | Business Cases for IT Projects   | E-Gov Progress  | Process Improvement Milestones for Calendar Year 2003  |
|--|--|--|---|--|
| <b>Department of Defense</b>   |  |  |   |  |
| <p>DoD operates a lengthy budget review process, the Planning, Programming and Budgeting System (PPBS), which serves as the capital planning and investment control process for DoD. The PPBS system often fails, however, to link budget and performance for Information Technology systems and to integrate Information Technology efforts with the mission of the department.</p> | <p>DoD’s Enterprise Architecture, the Global Infrastructure Grid (GIG), is a good start for developing an Enterprise Architecture. The newest version, Version 2.0, to be released in January 2003 for departmental coordination, is expected to expand the scope of the current version of the Enterprise Architecture. The DoD Chief Information Officer will work to ensure the Financial Management Architecture (FMA) effort is consistent with the department’s Enterprise Architecture, the Global Infrastructure Grid.</p> | <p>DoD submitted complete business cases for 184 major projects, as defined by DoD, totaling about \$14 billion. This shows a substantial improvement by the department to increase the visibility into the Information Technology portfolio. In addition, the quality of the business cases improved greatly.</p> | <p>DoD is involved in many of the E-Gov initiatives including, Online Rule-making Management, Disaster Assistance and Crisis Response, Project Safecom, e-Grants, Geospatial One-Stop, Integrated Acquisition, e-Authentication, and e-Records. DoD is commended for the work it has done with the E-Clearance and E-Authentication E-Gov projects. DoD is also working with other federal agencies in the e-Payroll initiative. DoD is improving the coordination and alignment of the medical care delivery systems in DoD and the Department of Veterans Affairs (VA). DoD continues to make progress implementing the requirements of GPEA. DoD projects that 69 percent (94) of 137 total transactions will meet the deadline to comply with GPEA.</p> | <p>DoD will release the newest version (version 2.0) of the department’s Enterprise Architecture, known as the Global Information Grid (GIG) in January 2003 for Departmental coordination. DoD will release the Financial Management “To-Be” Architecture in April 2003. DoD will continue to determine the most appropriate alignment of the department’s Enterprise Architecture and the Financial Management Architecture with the Federal Business Reference Model.</p> |

**Table 22-1. EFFECTIVENESS OF AGENCY'S IT MANAGEMENT AND E-GOV PROCESSES—Continued**

| Capital Planning and Investment Control (CPIC) Effectiveness   | Enterprise Architecture (EA) Effectiveness  | Business Cases for IT Projects  | E-Gov Progress  | Process Improvement Milestones for Calendar Year 2003  |
|--|---|---|---|--|
| <b>Education</b>   |   |   |   |  |
| <p>All components (CIO, CFO, PEC) participate in its CPIC process. The Department has developed an integrated CPIC process which will allow for analysis of IT investments for compliance with the EA.</p> | <p>Education's EA work has made progress on developing the 4 layers (business, data, application, and technology), but does not yet fully address security. ED has developed a draft Security Reference Model which addresses this shortfall. ED should continue its work to align FSA's EA with the Department's EA and the Federal Enterprise Architecture.</p> | <p>Many of ED's projects failed to make successful business cases because of security weaknesses and will be placed on the "At-Risk" list for monitoring. ED will report to OMB on a quarterly basis the progress made toward certifying and accrediting each system described in an "At-Risk" business case.</p> | <p>ED's E-Gov efforts are resulting in tangible efficiencies and improvements. ED has improved its business cases and investment review process and is significantly ahead of other agencies on GPEA requirements. The Department is involved in a number of the E-Gov initiatives including Gov-Benefits, e-Loans, e-Grants, e-Travel, e-Training, Integrated Acquisition and e-Authentication. The Department should begin implementation of the e-Loans initiative. ED has made progress in meeting GPEA requirements: 74 percent (126) of its transactions (representing 88 percent of the total respondent burden) are projected to have an electronic option. ED is developing a plan for the incorporation of the remaining relevant transactions.</p> | <p>In terms of EA, ED must develop a comprehensive strategy that clarifies:</p> <ul style="list-style-type: none"> <li>• the factors that will guide EA development prior to One-ED completion;</li> <li>• how IT decisions will be coordinated with both an "interim" EA and ongoing information provided by One-ED; and</li> <li>• how agency-wide IT decisions will be coordinated with FSA IT decisions prior to the completion of an integrated EA. ED should continue the implementation of system risk assessments and associated corrective action plans, and certify and accredit all major systems.</li> </ul> |

**Table 22–1. EFFECTIVENESS OF AGENCY’S IT MANAGEMENT AND E-GOV PROCESSES—Continued**

| Capital Planning and Investment Control (CPIC) Effectiveness   | Enterprise Architecture (EA) Effectiveness  | Business Cases for IT Projects   | E-Gov Progress   | Process Improvement Milestones for Calendar Year 2003   |
|--|---|--|--|---|
| <b>Energy</b>  |   |  |  |   |
| <p>The Department has a strong CPIC process that is integrated with both the EA efforts and the budget process.</p>  | <p>DOE has made significant progress on its EA efforts and should continue working on aligning its EA with the Federal Enterprise Architecture (FEA) effort.</p>                    | <p>The Department has made significant progress on providing business cases compliant with A–11 and A–130. However, many of DOE’s projects failed to make successful business cases and will be placed on the “At-Risk” list for monitoring. DOE must report to OMB on a quarterly basis on the progress made toward strengthening business cases for “At-Risk” projects and the management of the projects.</p> | <p>The Department should continue working on the E-Gov initiatives. It is currently a partner in including Gov-Benefits, E-Records, E-Grants, E-Training, E-Travel, Integrated Acquisition, and E-Authentication. DOE’s progress in complying with GPEA indicates three of the projected 19 transactions will meet the deadline of 10/03.</p>  | <p>The Department should create an integrated EA effort that accommodates the myriad of EA efforts underway in the Department. All organizations within DOE are directed to partner with the Department’s Office of the CIO to eliminate the redundant EA efforts and to continue to pursue opportunities for consolidating office automation and infrastructure buys by utilizing enterprise licenses and Departmental purchases. DOE is also reviewing all financial management systems and efforts to ensure alignment with the Department’s plans for I-MANAGE.</p> |
| <b>Health and Human Services</b>   |   |  |  |   |
| <p>HHS shows evidence of commitment to strengthening its central CPIC process. Progress must continue and produce results including a true integration of IT capital planning with the general budget decision-making process.</p> | <p>The departmental EA efforts are in the early stages, not addressing equally all parts of the Department, and manifested in several separate Enterprise Architecture efforts.</p> | <p>HHS’ IT projects are generally tracking well on cost, schedule, and performance. However, more than 50 percent of the HHS major system business cases (Ex. 300s) require improvement because they inadequately address security. HHS did not submit Ex. 300s for some large projects.</p>   | <p>HHS has continued to lead well on E-Grants and Consolidated Health Informatics (CHI). On the cross-agency E-Gov agenda front, HHS has moved forward on many detailed implementation issues encountered in E-Grants, filed the Ex. 300 for Consolidated Health Informatics, and increased commitment of resources. HHS’s progress report on complying with GPEA shows 63 percent (212) of its 337 total transactions projected to meet the deadline. Additional progress is dependent upon establishing a Public Key Infrastructure for electronic signatures, working with the E-Authentication initiative.</p> | <p>Improve coordination of HHS’s internal IT activities with E-Grants, Geospatial One-stop and E-Gov initiatives related to simplifying administrative systems. OMB notes that work on the Enterprise Architecture should progress quickly to an integrated and comprehensive departmental process for EA, to identify and reduce redundancies, and map the Departmental EA to the Federal Enterprise Architecture efforts of OMB.</p>  |

**Table 22-1. EFFECTIVENESS OF AGENCY'S IT MANAGEMENT AND E-GOV PROCESSES—Continued**

| Capital Planning and Investment Control (CPIC) Effectiveness   | Enterprise Architecture (EA) Effectiveness   | Business Cases for IT Projects   | E-Gov Progress  | Process Improvement Milestones for Calendar Year 2003   |
|--|--|--|---|---|
| <b>Housing and Urban Development</b>   |  |  |   |   |
| <p>HUD has a strong CPIC process that is integrated with both the EA efforts and the budget process.</p>                         | <p>HUD has made significant progress on their EA efforts and should continue working on aligning their EA with the Federal Enterprise Architecture (FEA) effort.</p>   | <p>HUD submitted business cases on 100 percent of major systems for the 2004 Budget and were operating within 90 percent of submitted cost, schedule, and performance targets.</p>   | <p>HUD has continued to be a partner in many of the 24 E-Gov initiatives, including: Gov-Benefits, Online Rule, E-Grants, E-Loans, E-Training, E-Travel, Integrated Acquisition, and E-Authentication. HUD delivered the New FHA module on time. Given HUD's number of transactions, it is recommended that HUD move to aggressively implement the requirements of GPEA.</p>  | <p>HUD will develop an Action Plan for meeting milestones in major systems. HUD must continue to make progress in delivering new working systems, including the FHA Ledger Project and other important delivery milestones to be laid out by HUD.</p>   |
| <b>Interior</b>  |  |  |   |   |
| <p>Interior's CPIC process and governance document was piloted in 2002, revised, and reissued to bureaus for implementation.</p> | <p>Interior is reviewing its many separate and uncoordinated EA efforts and creating an integrated and comprehensive departmental process for EA. OMB was briefed on the strategy and the agency is moving forward on these efforts.</p> | <p>Significant strides have been made to identify all IT investments and to use OMB's Exhibit 53 and 300s to display and track IT investments. The initial budget submission included business cases for 35 projects with 20 of them remaining on the "At-Risk" list. Interior has recently submitted additional business cases and strengthened business cases initially submitted. Interior will continue strengthening the business cases on the "At-Risk" list and the projects they represent. Interior will review its IT portfolio and ensure that all projects meeting the major project definition provide business cases. Interior and OMB will work together to improve the linkage between budget data and IT investment data from Exhibit 53.</p> | <p>Recreation One-Stop is making good progress and will expand to include enhanced links to reservation and other services. Geospatial One-stop is being coordinated with Federal agencies, states, and local governments. Interior hired a permanent Executive Director and established an intergovernmental Board of Directors for the project. Interior is making progress in complying with GPEA. OMB identified 271 eligible GPEA transactions for Interior to review. Of these, Interior identified an initial 80 eligible for conversion—50 percent will be completed by the deadline and Interior will make every effort to complete the others by the deadline. For the remaining possible eligible transactions, Interior is reviewing the transactions to determine the feasibility of making those transactions electronic in tandem with its information technology modernization.</p> | <p>The Department is creating an integrated and comprehensive departmental process for EA to identify and reduce redundancies of EA efforts across the department and working with OMB to develop a department-wide EA process. Interior continues its efforts to map the departmental EA to the Federal Enterprise Architecture efforts of OMB. OMB endorses the process used by Bureau of Land Management. The EA should be fully developed to a detail level that ensures the efficient management of Department IT resources, not merely a high-level overview. The Department will implement an inter-bureau IT consolidation. Interior's CPIC process will be implemented at the bureau level in 2003. The remaining 50 percent (40) of initial eligible GPEA transactions will have plans in place to be completed post 10/2003.</p> |

**Table 22-1. EFFECTIVENESS OF AGENCY’S IT MANAGEMENT AND E-GOV PROCESSES—Continued**

| Capital Planning and Investment Control (CPIC) Effectiveness           | Enterprise Architecture (EA) Effectiveness  | Business Cases for IT Projects  | E-Gov Progress  | Process Improvement Milestones for Calendar Year 2003  |
|--|---|---|---|--|
| <b>Justice</b>   |   |   |   |  |
| <p>All components (CIO, CFO, PEC) participate in the CPIC process.</p> | <p>DOJ has made progress toward integrating their CPIC and EA. Justice’s work on its EA shows progress in developing the 4 layers (business, data, application, and technology), but does not yet fully address security. Justice does use the EA to make decisions about IT investments. The Department appears to have many separate and uncoordinated Enterprise Architecture efforts.</p> | <p>DOJ prepared 2004 business cases for their major investments; however, many will be placed onto the “At-Risk” List due to deficiencies that must be addressed.</p> | <p>The Department issued its Strategic Plan in July of 2002. The Department was active in a number of E-Gov initiatives including E-Authentication and E-Grants. It was also involved in other E-Gov initiatives including Disaster, Safecom, e-Travel, e-Training, and Integrated Acquisition. It should continue to stay an active participant in these initiatives. As part of the e-Authentication Initiative, DOJ is requested to coordinate its E-Commerce Controlled Substances Ordering System effort with the e-authentication project and report its progress in Spring Review. DOJ’s progress in complying with GPEA has 63 percent (68) of its 108 total transactions projected to meet the deadline.</p> | <p>The Department will create an integrated and comprehensive departmental process for EA, including identifying and reducing redundancies in these separate approaches. Justice will work with OMB to develop a department wide EA process and continue its efforts to map the Departmental EA to the Federal Enterprise Architecture efforts of OMB. The Department should conduct an analysis to map its major system 300s to business, stakeholders, and selected other layers of the IT architecture.</p> |

**Table 22-1. EFFECTIVENESS OF AGENCY’S IT MANAGEMENT AND E-GOV PROCESSES—Continued**

| Capital Planning and Investment Control (CPIC) Effectiveness   | Enterprise Architecture (EA) Effectiveness  | Business Cases for IT Projects   | E-Gov Progress  | Process Improvement Milestones for Calendar Year 2003  |
|--|---|--|---|--|
| <b>Labor</b>   |   |  |   |  |
| <p>DOL’s CPIC process is used to implement the Modernization Blueprint and EA throughout the budget process. The CPIC and EA are fully integrated.</p> | <p>DOL’s EA is a Modernization Blueprint for improving agency mission performance and is consistent with the FEA BRM. It addresses the four layers (business, data, application, technology) and security. It is used to make budget decisions about IT. DOL should continue to work to ensure that its EA efforts are consistent with the Federal Enterprise Architecture.</p> | <p>Only 15 of DOL’s 55 business cases were evaluated as “At-Risk”. Most of these were for lack of security reviews that were already in progress but not complete. All of these business cases are scheduled for revision within the first quarter of CY 2003.</p> | <p>DOL was the first department with a central IT fund to promote cost-effective investments to serve its mission. The percentage of investments in this fund, while still small, increased from 13 percent in 2002 to 17 percent in 2003. DOL is the managing partner of GovBenefits, which was launched publicly April 29, 2002. DOL is a partner agency and active participant in 12 other E-Gov initiatives. DOL’s progress in complying with GPEA has 73 percent of their transactions projected to meet the deadline. In 2003, it should work toward ensuring the streamlining of all of its electronic transactions that had until recently been paper-based. In this way, DOL will move toward being an exemplar for converting paper to E-Government transactions.</p> | <p>GovBenefits should work with State governments to define virtual social services application forms. Labor should complete implementation of its common e-mail system, which is scheduled for 5/03. DOL should establish an integrated, publicly accessible website for Service Contract Act wage determination data. DOL should complete its IT improvements to its Davis-Bacon system.</p> |

**Table 22–1. EFFECTIVENESS OF AGENCY’S IT MANAGEMENT AND E-GOV PROCESSES—Continued**

| Capital Planning and Investment Control (CPIC) Effectiveness  | Enterprise Architecture (EA) Effectiveness  | Business Cases for IT Projects  | E-Gov Progress   | Process Improvement Milestones for Calendar Year 2003   |
|---|---|---|--|---|
| <b>State</b>  |   |   |  |   |
| <p>State is currently reviewing its CPIC process and has negotiated an improvement plan with OMB to address CPIC, EA, and E-Gov issues.</p> | <p>State’s initial EA is heavily focused on the technical aspects of the enterprise and does not provide a Modernization Blueprint for the agency. OMB received an EA Project Plan from State with milestones that clearly defines how the agency will move forward on their EA work.</p> | <p>Since September 30, 2001, State has markedly improved its business cases. None of the business cases submitted with the 2004 budget failed. 15 of 24 are on the “At-Risk” list, a big improvement over last year. State should continue strengthening those business cases on the “At-Risk” list and the projects they represent. State should also review its IT portfolio to ensure that all projects meeting the definition of “major” provide successful business cases.</p> | <p>State is a participating partner in several E-Gov initiatives; however, it seems that State is continuing to develop systems in isolation that would benefit from collaboration with other agencies, in particular USAID. State Department is beginning to partner with the E-Government e-Training project management team. State’s progress in complying with GPEA has 48 percent (45) of its 94 total transactions projected to meet the deadline.</p> | <p>State and USAID agreed to develop a joint Enterprise Architecture and identify opportunities for collaboration and consolidation of IT systems, beginning with financial management. State is launching a major new system, SMART, designed to replace many key functions (cables, messaging, document management). This project could be the lynchpin of State’s operations. We expect that State’s management team will diligently and carefully plan, design, and evaluate this new system. One key aspect that must be considered is how SMART meshes with the E-Gov initiatives and how it will function as a shared multi-agency tool. State’s new E-diplomacy office should work in concert with State’s Information Resource Management Office to assess how IT systems meet the Administration’s goals to unify, simplify, and reduce redundancy in IT systems government-wide.</p> |

**Table 22-1. EFFECTIVENESS OF AGENCY’S IT MANAGEMENT AND E-GOV PROCESSES—Continued**

| Capital Planning and Investment Control (CPIC) Effectiveness   | Enterprise Architecture (EA) Effectiveness  | Business Cases for IT Projects   | E-Gov Progress   | Process Improvement Milestones for Calendar Year 2003   |
|--|---|--|--|---|
| <b>Transportation</b>  |   |  |  |   |
| <p>DOT has made progress in the area of its CPIC process, including finalization of its overall IT CPIC policy and convening of the Departmental Investment Review Board, which resulted in the consolidation of multiple redundant systems. This consolidation effort is underway and will be reflected in the 2005 submission. The department should continue strengthening the process and ensure that the CPIC is fully integrated with the budget and EA.</p> | <p>DOT’s EA is still in the early stages of development. DOT needs to maintain its focus on a business driven EA that addresses all of the necessary security issues and an EA that is aligned with the Federal Enterprise Architecture effort.</p> | <p>The department has made tremendous progress in terms of providing business cases as part of the budget, though much work remains to be done in this area. The initial budget submission included business cases for 85 projects. 44 of these projects remain on the “At-Risk” list and Transportation should continue to strengthen the business cases and the projects they represent.</p> | <p>DOT is an active partner and continue to be in many of the E-Gov initiatives including Rec-One Stop, Disaster, Safecom, Online Rulemaking, Geospatial, e-Grants, e-Training, e-Travel, Integrated Acquisition. DOT’s progress in complying with GPEA has 90 percent (338) of its 375 total transactions projected to meet the deadline.</p> | <p>The Department will provide OMB an update on its progress at least quarterly and further integrate its EA into the budget process for future years. DOT should work with the Online Rulemaking Management Initiative managing partner (EPA) to develop and adopt a common rule-making solution. As part of E-Authentication, it should coordinate with the Common Access Architecture—Public Key Infrastructure (PKI) for Digital Signature project with the E-authentication team to determine if this system is redundant with e-authentication.</p> |

**Table 22-1. EFFECTIVENESS OF AGENCY’S IT MANAGEMENT AND E-GOV PROCESSES—Continued**

| Capital Planning and Investment Control (CPIC) Effectiveness   | Enterprise Architecture (EA) Effectiveness   | Business Cases for IT Projects  | E-Gov Progress  | Process Improvement Milestones for Calendar Year 2003  |
|--|--|---|---|--|
| <b>Treasury</b>  |  |   |   |  |
| <p>While Treasury’s CPIC process has existed within the Department it does not appear to be integrated with the budget process. The bureaus within the Department have independent CPIC processes that fail to be integrated into one Department wide process.</p> | <p>Treasury’s EA has a very strong technology layer with little business and data information. Treasury should continue work on their EA and provide information in the four layers (business, data, application, and technology) with a clear view of how Treasury will use the EA to modernize the agency.</p> | <p>The Department cannot demonstrate that its IT investments are achieving at least 70 percent of planned costs, schedule, and performance goals. The majority of its business cases for 2004 did not successfully make the business case and therefore will be placed on the “At-Risk” list.</p> | <p>Treasury is leading two E-Gov initiatives, Free Filing and Expanded Electronic Tax Products for Business and is actively supporting expansion of Pay.gov. It should deploy the Internet application for EINs as part of the One-Stop Business Compliance project. Treasury should carefully review the IT portfolios of its bureaus to ensure that the bureaus are investing in projects in a manner fully consistent with the government-wide E-Government initiatives and continue participating in such projects as Free Filing, Online Rule, Expanding Electronic Products for Business, e-Training, e-Travel, Integrated Acquisition, and e-Authentication. Treasury’s progress in complying with GPEA has 36 percent (256) of its 700 total transactions projected to meet the deadline. 86 percent of these transactions are from IRS, who should continue to make progress towards GPEA compliance and the goal established by the IRS Restructuring and Reform Act of 1998 (RRA98) of 80 percent of all tax and information returns being filed electronically by 2007.</p> | <p>Develop a project plan that describes how Treasury will achieve an integrated CPIC process across the Department during 2003 before publication of the President’s Budget. Create an integrated and comprehensive departmental process for Enterprise Architecture (EA). To do this, it would help to identify and reduce redundancies in the current separate bureau by bureau approaches. These architecture efforts should include efforts to map the Departmental EA to the Federal Enterprise Architecture. All bureau-specific EA efforts should be put on hold until a Department-wide EA plan, consistent with the Federal Enterprise Architecture efforts, is developed.</p> |

**Table 22-1. EFFECTIVENESS OF AGENCY'S IT MANAGEMENT AND E-GOV PROCESSES—Continued**

| Capital Planning and Investment Control (CPIC) Effectiveness   | Enterprise Architecture (EA) Effectiveness   | Business Cases for IT Projects  | E-Gov Progress   | Process Improvement Milestones for Calendar Year 2003  |
|--|--|---|--|--|
| <b>Veterans Affairs</b>  |  |   |  |  |
| <p>VA has implemented a CPIC process governed by its Senior Management Committee (SMC). VA has made progress toward integrating their CPIC and EA.</p> | <p>VA should continue its efforts to modernize IT using the EA effort and report quarterly progress on milestones to OMB. VA should continue looking for opportunities to unify, simplify, and consolidate around the needs of the veterans.</p> | <p>The 2004 budget submission demonstrates significant improvement in VA's business cases. While a number of the business cases were on the "At-Risk" list, the department has continued to strengthen these business cases and the projects they represent. There are opportunities for VA and DoD to expand collaboration on projects. VA should increase its coordination and alignment with VA's and DoD's medical care delivery systems. This effort will allow both Departments to better serve their beneficiaries, many of whom are dually eligible, while using Federal funds more efficiently and effectively. These efforts should be in addition to efforts currently underway.</p> | <p>VA has expanded its participation in E-Gov initiatives, including becoming a significant partner in at least one project in each of the four E-Gov portfolios. VA will continue participation in E-Gov initiatives, especially e-Payroll, e-Grants, e-Loans, e-Travel, e-Training, e-Authentication and Gov-Benefits. VA's progress in complying with GPEA has 88 percent (156) of its 177 total transactions projected to meet the deadline.</p> | <p>VA will continue to implement the centralization of IT authority under the CIO. VA will continue populating the One-VA Enterprise Architecture. It should complete the crosswalk of the VA EA with the Federal EA and Business Reference Model (BRM). VA and DoD collaboration milestones: VA and DoD should provide OMB with a joint draft site selection proposal three weeks prior to submission to Congress, quarterly reports detailing progress on development of the pilot projects (starting April 1, 2003), and a joint implementation plan before proceeding with operations at the pilot sites (by July 15, 2004).</p> |

**Table 22–1. EFFECTIVENESS OF AGENCY’S IT MANAGEMENT AND E-GOV PROCESSES—Continued**

| Capital Planning and Investment Control (CPIC) Effectiveness  | Enterprise Architecture (EA) Effectiveness   | Business Cases for IT Projects   | E-Gov Progress   | Process Improvement Milestones for Calendar Year 2003   |
|---|--|--|--|---|
| <b>Environmental Protection Agency</b>  |  |  |  |   |
| <p>EPA’s CPIC process has all the components (CIO, PEC, CFO) participating in the process. EPA has made progress toward integrating CPIC and EA. However, additional work remains to integrate the CPIC and budget processes.</p> | <p>EPA has provided a baseline “As Is” architecture and is rapidly creating a Modernization Blueprint and identifying key business modernization issues as part of their target architecture. It has made progress on developing the 4 layers of the Enterprise Architecture (business, data, application, and technology), but does not fully address security. EPA should continue its work to align agency EA efforts to the Federal Enterprise Architecture.</p> | <p>EPA submitted revised 2004 business cases as required. After final review, 100 percent of business cases received passing scores.</p> | <p>As the managing partner for the Online Rulemaking initiative, EPA has established a highly capable program management office for this project and is poised to deliver the rulemaking website ahead of schedule. Overall, EPA is currently participating in 14 of the 24 E-Government initiatives. EPA’s progress in complying with GPEA has 26 percent (131) of its 505 total transactions projected to meet the deadline.</p> | <p>EPA is already working to better integrate their budget planning and CPIC processes. The agency submitted its Target Architecture in December and is continuing to develop a robust Enterprise Architecture that will serve as the Agency’s Modernization Blueprint. EPA should also continue its involvement in all appropriate E-Government initiatives including e-Travel, Disaster Management, Geospatial, Integrated Acquisition, e-Records, and e-Authentication. To support this, the agency should continue its centralized mechanisms for ensuring its active participation in the initiatives.</p> |

**Table 22-1. EFFECTIVENESS OF AGENCY'S IT MANAGEMENT AND E-GOV PROCESSES—Continued**

| Capital Planning and Investment Control (CPIC) Effectiveness  | Enterprise Architecture (EA) Effectiveness   | Business Cases for IT Projects   | E-Gov Progress  | Process Improvement Milestones for Calendar Year 2003   |
|---|--|--|---|---|
| <b>General Services Administration</b>  |  |  |   |   |
| <p>GSA has all of the appropriate organizational components (CIO, PEC, CFO) participating in its CPIC process. GSA has made progress toward integrating its CPIC and Enterprise Architecture (EA). GSA issued a 5 year IT Strategic Plan in December, 2002.</p>   | <p>GSA has developed a satisfactory "As-Is" financial management architecture and recently submitted the "To-Be" architecture for its financial management functions. While GSA has made progress towards developing a modernized financial management architecture approach because these financial management functions constitute most but not all of the enterprise, the EA is still technology-driven, and not business driven.</p> | <p>GSA has made progress on providing business cases compliant with A-11 and A-130. However, many of GSA's projects failed to make successful business cases because of security weaknesses and will be placed on the "At-Risk" list for monitoring. GSA must report to OMB on a quarterly basis on the progress made toward strengthening business cases for "At-Risk" projects and the management of the projects.</p>   | <p>GSA continues to provide good support for the five E-Gov initiatives for which GSA is managing partner and OMB E-Gov activities generally. It should continue its participation in the E-Gov initiatives as managing partner of Federal Asset Sales, e-Travel, Integrated Acquisition, USA Services, and e-authentication. It should also continue its participation in e-Payroll and e-Records. By March 14th 2003, GSA should provide OMB a schedule for adding the Federal Acquisition Institute and the Applied Learning Center training activities to the e-Training website. GSA's recent GPEA report to OMB has all of GSA's remaining 48 transactions, which are not yet GPEA compliant projected to meet the October 2003 deadline.</p> | <p>GSA should demonstrate it is making IT decisions across the enterprise, with full service involvement (e.g. the work begun on Enterprise wide Infrastructure, web page content management, and Customer Relationship Management). GSA must continue to fully leverage its partner resources for the five E-Gov initiatives it manages; and actively participate in the internal efficiency initiatives where GSA currently has redundant or complementary systems (e-Training and Recruitment One Stop).</p> |
| <b>Agency for International Development</b>   |  |  |   |   |
| <p>USAID has made progress in updating its CPIC process since last year primarily through its Business Transformation Executive Committee (BTEC). It is in the process of defining requirements for its newly established Capital Investment Working Group. USAID will update its CPIC process to reflect the group's participation in the agency's CPIC process.</p> | <p>USAID EA has a very strong technology layer with some business and data information. USAID has been in the process of updating their EA. They should continue these activities and provide information in the four layers (business, data, application, and technology) with a clear view of how AID will use the EA to modernize the agency and collaborate with State.</p>  | <p>Since September 30, 2001, USAID has markedly improved its business cases. None of the business cases submitted with the 2004 budget failed, however all six of the business cases that were submitted were placed on the "At-Risk" List. USAID should continue strengthening those business cases on the "At-Risk" list and the projects they represent. USAID should also review its IT portfolio to ensure that all projects meeting the definition of "major" provide successful business cases.</p> | <p>USAID and State will develop a joint Enterprise Architecture and identify opportunities for collaboration and consolidation of IT systems, beginning with financial management. In addition, USAID has begun more active participation in government-wide initiatives, including e-Grants. USAID's GPEA plan shows that 92 percent of its transactions are projected to meet the deadline.</p>   | <p>State and USAID will develop a joint Enterprise Architecture and a plan for increased IT collaboration. USAID will also investigate potential collaboration with other agencies on their grants and acquisition systems. Finally, USAID will bring their business cases in compliance with A-11 requirements and be a full and active participant in relevant government-wide initiatives, including e-Grants and Integrated Acquisition.</p>  |

**Table 22-1. EFFECTIVENESS OF AGENCY’S IT MANAGEMENT AND E-GOV PROCESSES—Continued**

| Capital Planning and Investment Control (CPIC) Effectiveness  | Enterprise Architecture (EA) Effectiveness  | Business Cases for IT Projects  | E-Gov Progress  | Process Improvement Milestones for Calendar Year 2003  |
|---|---|---|---|--|
| <b>National Aeronautics and Space Administration</b>  |   |   |   |  |
| <p>NASA's has all the appropriate stakeholders participating in the CPIC process (e.g., the CIO, Procurement Executive (PEC), and CFO).</p> | <p>NASA has aligned its Enterprise Architecture with the Federal Business Reference Model and discussed it with the OMB Chief Technology Officer.</p> | <p>NASA has made great strides in refining its plans and processes for monitoring and reporting on its IT investments. However, only two of NASA's 14 IT business cases were judged to be adequate and not "At-Risk". NASA and OMB will continue to review its IT portfolio to improve the information that NASA collects and to determine which IT investments require business cases.</p> | <p>NASA is aggressively increasing its integration of E-Government activities internally, and continues to participate in four inter-agency E-Gov initiatives. Additionally, NASA is providing informal support to five other interagency initiatives. NASA has a key role in cross-agency certification of Public Key Encryption. NASA should continue being an active participant in the following E-Gov initiatives: e-Travel, Geospatial, e-Training, Integrated Acquisition, and e-Authentication. NASA will take necessary steps to make its OneNASA Portal operational by February 2003. The NASA CIO and Comptroller have issued new guidance letters on the collection of information to address IT investments and their alignment with IT security. As NASA already provides online access to a majority of its transactions, the agency is making progress towards compliance with GPEA. However, NASA should concentrate its efforts on the information collections related to IFMP.</p> | <p>NASA should create an integrated CPIC process that incorporates the various centers and enterprises into one unified CPIC process. NASA has made some progress toward integrating its CPIC and Enterprise Architecture (EA). NASA needs to create an integrated EA effort that accommodates the various EA efforts underway in the agency. All centers and enterprises within NASA are directed to partner with NASA's Office of the CIO on these EA efforts, eliminate any redundant EA efforts, and continually pursue opportunities for consolidating office automation and infrastructure buys.</p> |

**Table 22–1. EFFECTIVENESS OF AGENCY’S IT MANAGEMENT AND E-GOV PROCESSES—Continued**

| Capital Planning and Investment Control (CPIC) Effectiveness  | Enterprise Architecture (EA) Effectiveness   | Business Cases for IT Projects   | E-Gov Progress   | Process Improvement Milestones for Calendar Year 2003   |
|---|--|--|--|---|
| <b>National Science Foundation</b>  |  |  |  |   |
| <p>NSF’s CPIC process is used to implement the agency’s Enterprise Architecture (EA) throughout its budget process. The CPIC and EA are fully integrated.</p> | <p>NSF’s EA is consistent with the Federal Enterprise Architecture Business Reference Model.</p>   | <p>NSF submitted 5 business cases. While some of them were initially placed on the “At-Risk” list, NSF has continued to strengthen these business cases and the projects they represent.</p>   | <p>NSF receives over 99 percent of its annual proposals electronically through its FASTLANE system. NSF continued as an active partner in e-Grants, it has paid its full share of e-Grants Phase I costs. It should continue its involvement in the E-Gov initiatives and seek additional opportunities to participate in the E-Gov initiatives. NSF’s progress in complying with GPEA is excellent. Of NSF’s nearly 25 transactions, it has only one transaction that lacks a date for GPEA compliance.</p> | <p>NSF should continue work to ensure that the agency’s EA efforts map to and support the Federal Enterprise Architecture. Based on its upcoming Business Analysis, NSF will develop its next generation Enterprise Architecture that supports and maps to the Federal Enterprise Architecture. It will include the development of a phased implementation plan for the identified new technologies. NSF should ensure that its five-year IT strategic plan is consistent with government-wide E-Gov efforts.</p> |
| <b>Office of Personnel Management</b>   |  |  |  |   |
| <p>OPM uses its CPIC process to implement the Modernization Blueprint and EA through the budget process.</p>  | <p>OPM’s EA is a Modernization Blueprint for improving agency mission performance. The next update will align OPM’s business lines to the Federal Enterprise Architecture and the governmentwide and agency E-Gov initiatives.</p> | <p>Business cases for major projects substantially comply with the requirements of OMB Circular No. A–11 and A–130. Major projects with approved cost, schedule &amp; performance goals are on time, within budget and meeting performance objectives.</p> | <p>OPM leads five of the 24 governmentwide E-Gov initiatives—Recruitment One-Stop, e-Training, e-Clearance, Enterprise HR Integration, and e-Payroll—that support the federal employee lifecycle and help to transform federal human capital management. At least 81 percent of OPM’s information transactions will meet the GPEA deadline for electronic options.</p>   | <p>Continue to achieve planned security remediation activities for 42 program systems and report progress quarterly.</p>  |

**Table 22-1. EFFECTIVENESS OF AGENCY'S IT MANAGEMENT AND E-GOV PROCESSES—Continued**

| Capital Planning and Investment Control (CPIC) Effectiveness   | Enterprise Architecture (EA) Effectiveness   | Business Cases for IT Projects  | E-Gov Progress  | Process Improvement Milestones for Calendar Year 2003  |
|--|--|---|---|--|
| <b>Small Business Administration</b>   |  |   |   |  |
| SBA's CPIC process has all the necessary components (CIO, PEC, CFO) participating in the decision making process. SBA has made progress toward integrating its CPIC and EA. SBA needs to improve IT program performance oversight. | Through SBA's EA work, the agency is currently identifying key business modernization issues, and has made progress on developing the 4 critical IT layers (business, data, application, technology). Nonetheless, the EA does not yet fully address security. SBA should continue aligning its EA efforts with the Federal Enterprise Architecture. | Submitted revised 2004 business cases as required. After final review, 100 percent of business cases received passing scores.         | Established BusinessLaw.gov to provide small businesses easy access to information on how to find, understand, and comply with government regulations. Citizen one-stop service delivery integrated through Firstgov.gov. SBA plans to enhance management and support of customers and partners through implementation of relationship models, including the elimination of program "stove-pipes" and better integration of all programs and delivery systems through one-stop shops and/or supply chain management techniques. SBA should continue its participation in e-Loans, One Stop Biz, e-Training, Integrated Acquisition, and e-Travel. SBA projects that 81 percent (47) of its 58 total transactions will meet the GPEA deadline. | SBA is steadily improving its IT processes and business cases have shown improvements. SBA must formally implement its EA process and ensure that CFO, procurement, and other officials partake in the investment decision and review process. |
| <b>Social Security Administration</b>  |  |   |   |  |
| SSA's CPIC process is integrated with business modernization plans and the budget process. The CPIC and EA are fully integrated.   | SSA's EA work is currently identifying key business modernization issues, has made progress on developing the 4 layers (business, data, application, technology), but does not yet fully address security.   | SSA provided business cases for all major projects but does not show that 90% of projects meet cost, schedule, and performance goals. | SSA remains a paper-driven agency but is building capacity to reduce reliance on paper-based processes and provide integrated service delivery in the future. SSA is the managing partner for e-Vital, which is on schedule, and participates in e-Authentication, e-Training and other cross-agency initiatives. SSA formulated performance indicators for customer Internet usage and established baseline data. SSA projects that 16 percent (32) of SSA's 201 total transactions will meet the GPEA deadline.   | SSA should continue working to align its EA efforts with the Federal Enterprise Architecture and actively pursue opportunities to collaborate with other agencies to design and deliver systems around the needs of the citizens.              |

**Table 22–1. EFFECTIVENESS OF AGENCY’S IT MANAGEMENT AND E-GOV PROCESSES—Continued**

| Capital Planning and Investment Control (CPIC) Effectiveness   | Enterprise Architecture (EA) Effectiveness   | Business Cases for IT Projects  | E-Gov Progress   | Process Improvement Milestones for Calendar Year 2003  |
|--|--|---|--|--|
| <b>National Archives and Record Administration</b>   |  |   |  |  |
| <p>NARA’s CPIC process has all of the components (CIO, PEC, CFO) participating. NARA has made progress toward integrating their CPIC and EA.</p> | <p>NARA’s EA work is currently identifying key business modernization issues, has made progress on developing the 4 layers (business, data, application, technology), but does not fully address security.</p>   | <p>NARA has made significant progress on providing business cases compliant with A–11 and A–130. However, most of NARA’s projects failed to make successful business cases and will be placed on the “At-Risk” list for monitoring. NARA is working to improve the business case for their “Electronic Records Archives.”</p> | <p>NARA serves as the Managing Partner for the E-Records E-Gov initiative. It should continue to be an active participant in the e-Travel and Integrated Acquisition projects. NARA’s progress in complying with GPEA has 6 percent (3) of its 50 total transactions projected to meet the deadline.</p> | <p>NARA should continue working to align its EA efforts with the Federal Enterprise Architecture. It should develop a strategy for using its EA as the Modernization Blueprint for the agency.</p>   |
| <b>Nuclear Regulatory Commission</b>   |  |   |  |  |
| <p>NRC uses its CPIC process to implement its Modernization Blueprint and EA throughout its budget process.</p>                                  | <p>NRC’s EA work is currently identifying key business modernization issues, has made progress on developing the four layers (business, data, application, technology), but does not fully address security.</p> | <p>NRC submitted business cases for its major IT investments and exceeded the performance goal of at least 60 percent of its IT budget request accompanied by business cases. However, many of the business cases did not successfully make the business case and therefore will be placed on the “At-Risk” list.</p>         | <p>NRC should continue participating in the e-Travel and Integrated Acquisition E-Gov initiatives. NRC should also work with the Online Rulemaking Management Initiative (OLRM) managing partner (EPA) to develop and adopt a common rulemaking solution.</p>  | <p>NRC should continue work to align its EA with the Federal Enterprise Architecture and continue working to ensure that its EA will serve as the agency’s Modernization Blueprint. NRC should continue working to ensure full alignment and integration of all NRC enterprise-wide IT policies and processes, to include best practices systems development, CPIC, EA, systems security certification and accreditation, and routine E-Gov reviews of existing and proposed IT investments.</p> |

**Table 22-1. EFFECTIVENESS OF AGENCY’S IT MANAGEMENT AND E-GOV PROCESSES—Continued**

| Capital Planning and Investment Control (CPIC) Effectiveness                              | Enterprise Architecture (EA) Effectiveness   | Business Cases for IT Projects  | E-Gov Progress  | Process Improvement Milestones for Calendar Year 2003   |
|---|--|---|---|---|
| <b>Corps of Engineers</b>   |  |   |   |   |
| <p>The Corps uses the CPIC process to implement its EA throughout the budget process.</p> | <p>The Corps conducted significant work to integrate its EA activities with the work of the Federal Enterprise Architecture. The Corps needs to develop a more robust EA that should serve as its Modernization Blueprint.</p> | <p>All of the business case the Corps submitted will be placed on the “At-Risk” List. Only 11 percent of the Corps 2004 IT budget request was accompanied with business cases and therefore it did not meet the performance goal of major projects accounting for at least 60 percent of the IT investment portfolio for 2004 reporting. (A-11, Section 53)</p> | <p>As part of Recreation One Stop, the Corps should have a plan for accommodating the Department of Interior in the National Recreation Reservation Service. The Corps should continue working on the other E-Gov initiatives they are currently involved with including Geospatial and Integrated Acquisition. Corps’ progress in complying with GPEA has all of its 17 transactions projected to meet the deadline.</p> | <p>The Corps will develop an action plan with milestones for developing an Enterprise Architecture that will serve as the agency’s Modernization Blueprint. The Corps will develop additional business cases for 2005 to increase the visibility of its IT Portfolio.</p> |

**Table 22–2. Government to Citizen—By Projects**

| Lead Agency & Project Website  | Description   | Performance Metrics   | Progress to Date   | Key Migration Milestones  |
|--|---|---|--|---|
| <b>GOVBENEFITS.GOV</b>   |   |   |  |   |
| DOL <a href="http://www.govbenefits.gov">www.govbenefits.gov</a>   | Provides a single point of access for citizens to locate and determine potential eligibility for government benefits and services.                                    | <ul style="list-style-type: none"> <li>Hits to site per month (Target: 350,000)</li> <li># of referrals to partner benefit sites (Target: 10% increase)</li> <li>Average time to find benefits and determine eligibility (Target: 20 minutes or less)</li> </ul>      | <ul style="list-style-type: none"> <li>Initial services locator launched on 04/29/02 as a screening tool to identify services citizens may qualify for (Now at 200 programs)</li> </ul>  | <ul style="list-style-type: none"> <li>03/31/03—Establish first iteration of virtual benefits data standards with states</li> <li>04/30/03—Online screening tool for 225 benefit programs from current 200</li> <li>Q1 2004—Make progress in migrating SSA and VA forms toward a single site, which may be maintained by one of these agencies</li> </ul> |
| <b>RECREATION ONE-STOP</b>   |   |   |  |   |
| DOI <a href="http://www.recreation.gov">www.recreation.gov</a><br><a href="http://www.volunteer.gov">www.volunteer.gov</a> | Provides citizens with a single-point of access to a web-based resource, offering information and access to government recreational sites in a user friendly format.  | <ul style="list-style-type: none"> <li># of partners sharing data via Recreation.gov (Target: 35 partners added)</li> <li># of facilities listed in Recreation.gov (Target: 25% increase)</li> <li># of online reservations</li> <li>Customer satisfaction</li> </ul> | <ul style="list-style-type: none"> <li>First county/state data added to Recreation.gov as part of intergovernmental “Government Without Boundaries” initiative, May 2002</li> <li>Recreation.gov relaunched with enhanced map interface and state data in September 2002</li> <li>Joined OASIS and initiated RecML data standard process December 2002</li> <li>Data provided in a consistent format for 2,471 recreation sites managed by 10 Federal organizations, 4 states, and 1 county, January 2002</li> </ul> | <ul style="list-style-type: none"> <li>4/30/03—Add new map capability</li> <li>09/30/03—Complete Recreation data standard (RecML)</li> <li>10/31/03—Online cross-government reservation system relaunches; Park Service reservation system de-activated</li> </ul>  |

| Lead Agency & Project Website                                       | Description   | Performance Metrics  | Progress to Date   | Key Migration Milestones   |
|---|---|--|--|--|
| <b>CONSOLIDATED HEALTH INFORMATICS</b>                              |   |  |  |  |
| HHS   | Adopts a portfolio of existing health information interoperability standards (health vocabulary and messaging) enabling all agencies in the federal health enterprise to speak the same language based on common enterprise-wide business and information technology architectures. | <ul style="list-style-type: none"> <li>• # of federal agencies &amp; systems using the standards to store and/or share health information</li> <li>• # of contracts requiring the standards</li> <li>• # Impact on patient service, public health and research</li> <li>• # increase in common data available to be shared by users</li> </ul> | <ul style="list-style-type: none"> <li>• # Government-wide health IT governance council established</li> <li>• # Resubmitted business case including full work breakdown structure and in-kind financing plan</li> <li>• # Proposed messaging and laboratory data standards under consideration by partners</li> </ul> | <ul style="list-style-type: none"> <li>• # 02/02—Establish &amp; institutionalize federal health data standards governance; announce council</li> <li>• # 02/03—Announce four messaging and one vocabulary standard including initial deployment efforts</li> <li>• # 02/03—Announce 25 target priority vocabulary domains for initiative and schedule for federal adoption</li> <li>• # 09/03—Begin deploying health informatics standards, including laboratory and messaging vocabularies in federal systems</li> <li>• # 09/03—Standards maintenance and ever greening processes in place</li> </ul> |
| <b>GEOSPATIAL INFORMATION ONE-STOP</b>                              |   |  |  |  |
| DOI   | Provides federal and state agencies with single-point of access to map-related data enabling consolidation of redundant data.   | <ul style="list-style-type: none"> <li>• # of data sets posted to portal</li> <li>• # of users</li> <li>• # of cost sharing partnerships for data collection activities</li> <li>• # of data-set hits</li> </ul>   | <ul style="list-style-type: none"> <li>• Created a draft standard to ensure consistency among data sets that describe transportation routes and allows governments to share data about transportation related issues</li> <li>• Kick started development of open standards based interoperable portal</li> </ul>       | <ul style="list-style-type: none"> <li>• 02/03—Complete draft standards for critical spatial data themes (framework data)</li> <li>• 02/03—First iteration of the planned metadata</li> <li>• 05/03—Deploy first iteration of the Geospatial One-Stop Portal</li> </ul>  |
| <b>DISASTER MANAGEMENT</b>  |   |  |  |  |
| FEMA <a href="http://www.disasterhelp.gov">www.disasterhelp.gov</a> | Provides federal, state, and local emergency managers online access to disaster management related information, planning and response tools.  | <ul style="list-style-type: none"> <li>• Reduce response recovery time by 15%</li> <li>• Improve situational awareness planning capability by 25%</li> <li>• Increase the number of first responders using DMIS tools by 10%</li> </ul>  | <ul style="list-style-type: none"> <li>• Pilot launch on 11/25/02</li> </ul>   | <ul style="list-style-type: none"> <li>• 10/1/03—Deploy an integrated channel for access to Disaster Management organizations, knowledge, services, and tools</li> </ul>   |

**Table 22-2. Government to Government—By Projects—Continued**

| Lead Agency & Project Website                                | Description   | Performance Metrics   | Progress to Date  | Key Migration Milestones   |
|--|---|---|---|--|
| <b>SAFECOM</b>   |   |   |   |  |
| FEMA   | Provides interoperable wireless solutions for federal, state and local public safety organizations and ensures they can communicate and share information as they respond to emergency incidents.                             | <ul style="list-style-type: none"> <li>• # of agencies that can communicate with one another</li> <li>• Response times for jurisdictions and disciplines to respond to an event</li> <li>• # of wireless grant programs that include Safecom-approved equipment</li> <li>• Voice, data and video convergence</li> </ul> | <ul style="list-style-type: none"> <li>• Identifying existing wireless network integration solutions fielded by federal, state, tribal, and local public safety agencies proven to provide interoperability. Solutions will be used as models to provide a baseline from which to further implement options for interoperability within the public safety community.</li> <li>• Modifying an existing web-based tool as a channel of distribution for the identified wireless network integration solutions</li> <li>• Developing process for grant funding to state, tribal, and local organizations</li> <li>• Plans in place to launch a requirements definition and analysis</li> </ul> | <ul style="list-style-type: none"> <li>• 02/03—Develop short-term interim solution for immediate integration of wireless networks</li> <li>• 07/03—Define the requirements for first responder interoperability at state, local, tribal, and federal levels to develop a long-term architecture</li> <li>• 09/03—Identify gaps between existing wireless systems and interoperability requirements</li> <li>• 10/03—Develop concept of operations for interoperability</li> <li>• 09/04—Develop national architecture</li> </ul> |
| <b>E-VITAL</b>   |   |   |   |  |
| SSA  | Establishes common electronic processes for federal and state agencies to collect, process, analyze, verify and share birth and death record information. Also promotes automating how deaths are registered with the States. | <ul style="list-style-type: none"> <li>• Time for state to report death to SSA (Target: 15 days)</li> <li>• # of verified death records</li> <li>• Time to verify birth and death entitlement factors (Target: 24 hours)</li> <li>• # of false identity cases</li> </ul>  | <ul style="list-style-type: none"> <li>• As of Dec 2002, birth and death information from eight states (CO, HI, MO, MS, MN, IA, CA, OK) is available online for Social Security to use</li> <li>• Three states (MN, MT, SD) and New York City have signed contracts to implement an improved death registration process</li> </ul>  | <ul style="list-style-type: none"> <li>• 06/1/04—Launch production EVVE hub</li> <li>• 10/31/03—Deploy an initial capability for Electronic Death Registration (EDR) records with DC, NJ, and NH</li> </ul>  |
| <b>E-GRANTS</b>  |   |   |   |  |
| HHS <a href="http://www.fedgrants.gov">www.fedgrants.gov</a> | Creates a single, online portal for all federal grant customers to access and apply for grants, thus making it easier for potential recipients to obtain information about federal grants.                                    | <ul style="list-style-type: none"> <li>• # of grant-making agencies publishing grant opps in portal</li> <li>• # of grant programs available for electronic application</li> <li>• % of reusable information per grant application</li> <li>• # of applications received electronically</li> </ul>                      | <ul style="list-style-type: none"> <li>• Launched on 8/30/02</li> <li>• Unified grant application standard completed 10/1/02</li> <li>• HHS reached an agreement with agencies, universities and nonprofits, setting data standards for grant applications</li> </ul>   | <ul style="list-style-type: none"> <li>• 10/1/03—Deploy simple, unified grant application mechanism</li> </ul>   |

**Table 22-2. Internal Efficiency and Effectiveness—By Projects**

| Lead Agency & Project Website   | Description   | Performance Metrics   | Progress to Date  | Key Migration Milestones  |
|---|---|---|---|---|
| <b>E-TRAINING</b>   |   |   |   |   |
| <p>OPM <a href="http://www.golearn.gov">www.golearn.gov</a></p>         | <p>Provides a single point of online training and strategic human capital development solutions for all federal employees, reducing instructor and travel costs and improving human capital management.</p>   | <ul style="list-style-type: none"> <li>• Cost avoidance: total tuition/travel cost reductions for participating agencies (Target: minimum of \$50M in reductions)</li> <li>• % of executive branch agencies receiving their e-training via golearn.gov</li> <li>• E-Training is supplier of choice to fulfill Human Capital training at all Cabinet-level agencies</li> </ul> | <ul style="list-style-type: none"> <li>• Launched on 07/23/02 and as of October has had over 35 million visitors with over 28,000 registered users</li> <li>• Variable training costs have been reduced to less than a penny per student</li> <li>• Recently launched IT security courses that map to the GISRA and NIST requirements (developed in collaboration with, and endorsed by NSA)</li> </ul> | <ul style="list-style-type: none"> <li>• 01/31/03—Launch Module 2 which includes additional free and fee-for-service course (contains user and managerial tools such as virtual classrooms and eval tools, FLECT CoP, KARTA)</li> <li>• 06/30/03—Launch Module 3 which establishes CoPs/ Knowledge Domains categorized by profession, linked to competencies, KSAs, and mapped to E-Training courses</li> <li>• 09/30/04—Interface to/ shutdown of existing on-line training systems</li> </ul> |
| <b>RECRUITMENT ONE-STOP</b>   |   |   |   |   |
| <p>OPM <a href="http://www.usajobs.opm.gov">www.usajobs.opm.gov</a></p> | <p>Outsources delivery of USAJOBS Federal Employment Information System to deliver state-of-the-art on-line recruitment services to job seekers that include intuitive job searching, on-line resume submission, applicant data mining, and on-line feedback on status and eligibility.</p> | <ul style="list-style-type: none"> <li>• Cost-per-hire</li> <li>• Time-to-fill vacancies</li> <li>• % of federal job applicants using Recruitment One-Stop (Target: 80%)</li> <li>• Availability of applicant status (Target: Real-time)</li> </ul> <p>Additional metrics can be captured based on market-based metrics incorporated in the Recruitment One-Stop solution</p> | <ul style="list-style-type: none"> <li>• An improved site was re-launched on 06/30/02</li> <li>• Evaluating vendor proposals</li> </ul>   | <ul style="list-style-type: none"> <li>• 01/03—Contract award</li> <li>• 3/10/03—Implement improved job application submission process, job searching, job vacancies / announcements and linkage to agency assessment tools</li> <li>• 08/29/03—Implement applicant database mining; full integration to agency assessment tools; applicant status tracking</li> <li>• 12/31/03—Shutdown of agency job search engines and resume builders</li> </ul>  |

**Table 22–2. Internal Efficiency and Effectiveness—By Projects—Continued**

| Lead Agency & Project Website    | Description  | Performance Metrics   | Progress to Date   | Key Migration Milestones   |
|----------------------------------|--|---|--|--|
| <b>ENTERPRISE HR INTEGRATION</b> |  |   |  |  |
| OPM                              | Streamlines and automates the exchange of federal employee human resources information. Replaces official paper employee records.  | <ul style="list-style-type: none"> <li>• Cost/cycle time savings per transaction due to reduction in manual paper processing</li> <li>• Time for inter-agency transfers</li> <li>• Usage of analytics by all Cabinet-level agencies in the Human Capital Planning process</li> </ul>                    | <ul style="list-style-type: none"> <li>• Gained agreement of federal human resource officers on common data standards</li> <li>• Demonstrated Workforce Analysis and Support System (WASS) and Civilian Forecasting (CIVFORS) tools to EHRI Partners</li> </ul>  | <ul style="list-style-type: none"> <li>• 02/11/03—Demonstrate analytics and forecasting</li> <li>• 05/1/03—Propose data standards and standard components to CIO Council Architecture Committee</li> <li>• 01/30/04—Deploy EHRI Repository to support CPDF replacement, E-Payroll and E-Clearance</li> <li>• 06/30/04—Establish standardization policy</li> <li>• 06/30/04—Deploy EHRI Repository to support Inter-Agency Employee Transfer Requirement</li> <li>• 06/30/04—Deploy EHRI Repository to support RSM</li> </ul> |
| <b>E-CLEARANCE</b>               |  |   |  |  |
| OPM                              | Streamlines and improves the quality of the current security clearance process.  | <ul style="list-style-type: none"> <li>• Cost per application</li> <li>• Reciprocation between agencies</li> <li>• Average time to process clearance forms</li> <li>• Average time to complete clearance forms</li> <li>• Time to locate and evaluate previous investigations and clearances</li> </ul> | <ul style="list-style-type: none"> <li>• Finalizing testing of federal security questions (SF86)</li> <li>• Consolidated clearance investigation results to a DOD and civilian database, May 2002</li> </ul>   | <ul style="list-style-type: none"> <li>• 01/31/03—Deploy Clearance Verification System (CVS)</li> <li>• 05/31/03—Imaging: All agencies begin imaging background investigation information</li> <li>• 06/30/03—Implement e-QIP</li> </ul>   |
| <b>E-PAYROLL</b>                 |  |   |  |  |
| OPM                              | Consolidates 22 federal payroll systems to simplify and standardize federal human resources/payroll policies and procedures to better integrate payroll, human resources, and finance functions. | <ul style="list-style-type: none"> <li>• Payroll cost per transaction/per employee (Target: in-line with industry averages)</li> <li>• Accuracy of Treasury Disbursements, Post Payroll Interfaces, and Periodic Reporting</li> </ul>   | <ul style="list-style-type: none"> <li>• Selected four qualified payroll providers; negotiating with the best qualified group on terms and conditions of Memorandum of Agreement</li> <li>• Customer education forum—12/5/02</li> <li>• Identified 87 opportunities to standardize policies affecting payroll</li> </ul> | <ul style="list-style-type: none"> <li>• 01/8/03—Agencies and OPM announce selection of payroll providers</li> <li>• 03/1/03—Start migration to move from the 22 existing providers to the two selected payroll partnerships</li> <li>• 07/28/03—Standardize payroll processes</li> <li>• 09/30/03—First consolidations (DOE, EPA, ...)</li> <li>• 09/30/04—Executive agencies migrated to 1 of 2 payroll partnerships</li> </ul>  |

**Table 22–2. Internal Efficiency and Effectiveness—By Projects—Continued**

| Lead Agency & Project Website             | Description  | Performance Metrics   | Progress to Date   | Key Migration Milestones  |
|---|--|---|--|---|
| <b>E-TRAVEL</b>                           |  |   |  |   |
| GSA                                       | Provides a common government wide end-to-end travel service that rationalizes, automates, and consolidates the travel process in a self-service web-centric environment, covering all aspects of travel planning, authorization and reservations, to expense reporting and reimbursement. Leverages administrative, financial and information technology best practices to realize significant cost savings and improved employee productivity in-line with industry averages. | <ul style="list-style-type: none"> <li>• Administrative cost per trip (Target: in-line with industry averages)</li> <li>• # trips serviced through E-Travel</li> <li>• # of agencies and users using E-Travel services</li> <li>• % of use of E-Travel services within each agency</li> <li>• % improvement of time for traveler to get reimbursed</li> </ul> | <ul style="list-style-type: none"> <li>• Developed government-wide inventory and business case defining cost/benefits and high-level agency migration requirements</li> <li>• In final stages of completing MOUs with 24 BRM agencies</li> <li>• Provided an online booking engine for interim use</li> <li>• Approved acquisition plan to consolidate and aggregate government-wide E-Travel services</li> <li>• Posted final RFP draft</li> <li>• Partnered with VA on benchmarking study of agency-specific end-to-end service</li> <li>• Issued Federal Travel Regulation guidance and mandates for use of the E-Travel service</li> </ul> | <ul style="list-style-type: none"> <li>• 06/30/03—Compete an acquisition and award to end-to-end service provider</li> <li>• 10/01/03—Establish Travel Management Office (TMO) for ongoing travel service management</li> <li>• 12/31/03—Complete pilot to deploy first full agency and initiate migration of all agencies to end-to-end service</li> <li>• 12/31/03—Begin agency capture of detailed travel and financial information in government-wide data warehouse</li> <li>• 12/31/04—All agencies fully committed to using end-to-end solution and replace all existing agency end-to-end travel systems</li> </ul> |
| <b>INTEGRATED ACQUISITION ENVIRONMENT</b> |  |   |  |   |
| GSA                                       | Creates a secure business environment that will facilitate and support cost-effective acquisition of goods and services by agencies, while eliminating inefficiencies in the current acquisition environment.  | <ul style="list-style-type: none"> <li>• % reduction in time for delivery of products and services</li> <li>• cost-per-spend</li> <li>• % of intragovernmental transactions going through IAE</li> <li>• % reduction in procurement transaction errors</li> <li>• % of vendors registered in central database</li> </ul>                                      | <ul style="list-style-type: none"> <li>• Launched a Business Partner Network, a one-stop portal for vendor registration</li> <li>• Launched past performance information retrieval system (July 2002)</li> </ul>   | <ul style="list-style-type: none"> <li>• 07/01/03—Contract directory fully populated</li> <li>• 09/30/03—Publish standardized eTransactions for interface and data exchanges</li> <li>• 10/01/03—Deploy updated management information system</li> <li>• 10/01/03—Deploy initial intra-governmental exchange portal</li> <li>• 12/31/03—Implement online representations and certifications with new clauses</li> <li>• Consolidate/leverage contract writing systems</li> </ul>  |

**FEDERAL DRUG CONTROL FUNDING**

---

---

## 23. FEDERAL DRUG CONTROL FUNDING

The FY 2004 Federal Drug Control Budget reflects a significant restructuring of past years' Drug Control Budgets, as outlined in the Fiscal Year 2003 Budget of the President. To the maximum extent possible, resources included in this, and future drug budgets, will now tie directly to identifiable line items in the Budget of the President or to agency budget justifications for Congress, accompanying the budget.

In addition, several accounts previously included in the Drug Control Budget have been dropped. Some accounts were dropped because drug funds in those accounts were either very small portions of the agency's budget; e.g., drug funding in the National Park Service represented about .4 percent of the agency's total budget. Others were dropped because the reported drug-related spending was simply a derivation from the

agency's budget, which provided a gross estimate of a secondary cost of drug use (e.g., approximately 60 percent of the Bureau of Prisons budget was previously reported as drug spending because that portion of Federal prisoners were serving sentence due to a drug conviction.)

The drug budget now reflects only those expenditures aimed at reducing drug use, rather than those associated with the consequences of drug use. These latter costs will continue to be periodically reported by ONDCP in the Economic Costs of Drug Abuse in the United States. Further, the modified drug budget provides a more realistic basis for policy makers to consider tradeoffs between spending for prevention, treatment and law enforcement programs.

**Table 23-1. FEDERAL DRUG CONTROL FUNDING, FY 2002-2004**

(Budget authority, in millions of dollars)

| Department/Agency   | 2002<br>Enacted | 2003<br>Estimate | 2004<br>Request |
|---|-----------------|------------------|-----------------|
| Department of Defense .....                               | 853             | 872              | 817             |

## BUDGET SYSTEM AND CONCEPTS AND GLOSSARY

---

---

## 24. BUDGET SYSTEM AND CONCEPTS AND GLOSSARY

The budget system of the United States Government provides the means for the President and Congress to decide how much money to spend, what to spend it on, and how to raise the money they have decided to spend. Through the budget system, they determine the allocation of resources among the agencies of the Federal Government. The budget system focuses primarily on dollars, but it also allocates other resources, such as Federal employment. The decisions made in the budget process affect the nation as a whole, State and local governments, and individual Americans. Many budget decisions have worldwide significance. The Congress and the President enact budget decisions into law. The budget system ensures that these laws are carried out.

This chapter provides an overview of the budget system and explains some of the more important budget concepts. It includes summary dollar amounts to illustrate major concepts. Other chapters of the budget documents discuss these amounts and more detailed amounts in greater depth. A glossary of budget terms appears at the end of the chapter.

Various laws, enacted to carry out requirements of the Constitution, govern the budget system. The chapter refers to the principal ones by title throughout the text and gives complete citations in the section just preceding the glossary.

### THE BUDGET PROCESS

The budget process has three main phases, each of which is interrelated with the others:

- (1) Formulation of the President's proposed budget;
- (2) Congressional action on the budget; and
- (3) Budget execution.

#### Formulation of the President's Budget

The Budget of the United States Government consists of several volumes that set forth the President's financial proposal with recommended priorities for the allocation of resources by the Government. The primary focus of the budget is on the budget year—the next fiscal year for which Congress needs to make appropriations, in this case 2004. (Fiscal year 2004 will begin on October 1, 2003 and end on September 30, 2004.) The budget also covers at least the four years following the budget year in order to reflect the effect of budget decisions over the longer term. It includes the funding levels provided for the current year, in this case 2003, so that the reader can compare the President's budget proposals to the most recently enacted levels, and it includes data on the most recently completed fiscal year, in this case 2002, so that the reader can compare budget estimates to actual accounting data.

The President begins the process of formulating the budget by establishing general budget and fiscal policy guidelines, usually by the Spring of each year, at least nine months before the President transmits the budget to Congress and at least 18 months before the fiscal year begins. (See the Budget Calendar below.) Based on these guidelines, the Office of Management and Budget (OMB) works with the Federal agencies to establish specific policy directions and planning levels for the agencies, both for the budget year and for at least the following four years, to guide the preparation of their budget requests.

During the formulation of the budget, the President, the Director of OMB, and other officials in the Executive Office of the President continually exchange information, proposals, and evaluations bearing on policy decisions with the Secretaries of the departments and the heads of the other Government agencies. Decisions reflected in previously enacted budgets, including the one for the fiscal year in progress, reactions to the last proposed budget (which Congress is considering when the process of preparing the upcoming budget begins), and how programs are actually performing influence decisions concerning the upcoming budget. So do projections of the economic outlook, prepared jointly by the Council of Economic Advisers, OMB, and the Treasury Department.

In early Fall, agencies submit their budget requests to OMB, where analysts review them and identify issues that OMB officials need to discuss with the agencies. OMB and the agencies resolve many issues themselves. Others require the involvement of the President and White House policy officials. This decision-making process is usually completed by late December. At that time, the final stage of developing detailed budget data and the preparation of the budget documents begins.

The decision-makers must consider the effects of economic and technical assumptions on the budget estimates. Interest rates, economic growth, the rate of inflation, the unemployment rate, and the number of people eligible for various benefit programs, among other things, affect Government spending and receipts. Small changes in these assumptions can affect budget estimates by billions of dollars. (Chapter 2, "Economic Assumptions," provides more information on this subject.)

Statutory limitations on changes in receipts and outlays also influence budget decisions (see Budget Enforcement below).

Thus, the budget formulation process involves the simultaneous consideration of the resource needs of individual programs, the allocation of resources among the agencies and functions of the Federal Government, the total outlays and receipts that are appropriate in rela-

tion to current and prospective economic conditions, and statutory constraints.

The law governing the President's budget specifies that the President is to transmit the budget to Congress on or after the first Monday in January but not later than the first Monday in February of each year for the following fiscal year, which begins on October 1. This gives Congress eight to nine months before the fiscal year begins to act on the budget.

In some years, for various reasons, the President cannot adhere to the normal schedule. One reason is that the current law does not require an outgoing President to transmit a budget, and it is impractical for an incoming President to complete a budget within a few days of taking office on January 20th. President Clinton, the first President subject to the current requirement, submitted a report to Congress on February 17, 1993, describing the comprehensive economic plan he proposed for the Nation and containing summary budget information. He transmitted the Budget of the United States for 1994 on April 8, 1993. President George W. Bush similarly submitted an initial document, *A Blueprint for New Beginnings—A Responsible Budget for America's Priorities*, to Congress on February 28, 2001, and transmitted the Budget of the United States for Fiscal Year 2002 on April 9, 2001.

In some years, the late or pending enactment of appropriations acts, other spending legislation, and tax laws considered in the previous budget cycle have delayed preparation and transmittal of complete budgets. For this reason, for example, President Reagan submitted his budget for 1988 forty-five days after the date specified in law. In other years, Presidents have submitted abbreviated budget documents on the due date, sending the more detailed documents weeks later. For example, President Clinton transmitted an abbreviated budget document to Congress on February 5, 1996, because of uncertainty over 1996 appropriations as well as possible changes in mandatory programs and tax policy. He transmitted a Budget Supplement and other budget volumes in March 1996.

### **Congressional Action<sup>1</sup>**

Congress considers the President's budget proposals and approves, modifies, or disapproves them. It can change funding levels, eliminate programs, or add programs not requested by the President. It can add or eliminate taxes and other sources of receipts, or make other changes that affect the amount of receipts collected.

Congress does not enact a budget as such. Through the process of adopting a budget resolution (described below), it agrees on levels for total spending and receipts, the size of the deficit or surplus, and the debt limit. The budget resolution then provides the framework within which congressional committees prepare appropriations bills and other spending and receipts

legislation. Congress provides spending authority for specified purposes in several regular appropriations acts each year (traditionally thirteen). It also enacts changes each year in other laws that affect spending and receipts. Both appropriations acts and these other laws are discussed in the following paragraphs.

In making appropriations, Congress does not vote on the level of outlays (spending) directly, but rather on budget authority, which is the authority provided by law to incur financial obligations that will result in outlays. In a separate process, prior to making appropriations, Congress usually enacts legislation that authorizes an agency to carry out particular programs and, in some cases, limits the amount that can be appropriated for the programs. Some authorizing legislation expires after one year, some expires after a specified number of years, and some is permanent. Congress may enact appropriations for a program even though there is no specific authorization for it.

Congress begins its work on the budget shortly after it receives the President's budget. Under the procedures established by the Congressional Budget Act of 1974, Congress decides on budget totals before completing action on individual appropriations. The Act requires each standing committee of the House and Senate to recommend budget levels and report legislative plans concerning matters within the committee's jurisdiction to the Budget Committee in each body. The Budget Committees then initiate the concurrent resolution on the budget. The budget resolution sets levels for total receipts and for budget authority and outlays, both in total and by functional category (see Functional Classification below). It also sets levels for the budget deficit or surplus and debt.

In the report on the budget resolution, the Budget Committees allocate the amounts of budget authority and outlays within the functional category totals to the House and Senate Appropriations Committees and the other committees that have jurisdiction over the programs in the functions. The Appropriations Committees are required, in turn, to allocate amounts of budget authority and outlays among their respective subcommittees. The subcommittees may not exceed their allocations in drafting spending bills. The other committees with jurisdiction over spending and receipts may make allocations among their subcommittees but are not required to. The Budget Committees' reports may discuss assumptions about the level of funding for major programs. While these assumptions do not bind the committees and subcommittees with jurisdiction over the programs, they may influence their decisions. The budget resolution may contain "reconciliation directives" (discussed below) to the committees responsible for tax laws and for spending not controlled by annual appropriation acts, in order to conform the level of receipts and this type of spending to the levels specified in the budget resolution.

The congressional timetable calls for the whole Congress to adopt the budget resolution by April 15 of each year, but Congress regularly misses this deadline.

<sup>1</sup>For a fuller discussion of the congressional budget process, see Robert Keith and Allen Schick, *Manual on the Federal Budget Process* (Congressional Research Service Report 98-720 GOV, August 28, 1998) and *Introduction to the Federal Budget Process* (Congressional Research Service Report 98-721 GOV, December 24, 2002).

For 2003, Congress did not enact a budget resolution. Once Congress passes a budget resolution, a member of Congress can raise a point of order to block a bill that would exceed a committee's allocation.

A concurrent resolution, such as the one on the budget, is not a law and, therefore, does not require the President's approval. However, Congress considers the President's views in preparing budget resolutions, because legislation developed to meet congressional budget allocations does require the President's approval. In some years, the President and the joint leadership of Congress have formally agreed on plans to reduce the deficit or balance the budget. These agreements were reflected in the budget resolution and legislation passed for those years.

Once Congress approves the budget resolution, it turns its attention to enacting appropriations bills and authorizing legislation. Appropriations bills are initiated in the House. They provide the budget authority for the majority of Federal programs. The Appropriations Committee in each body has jurisdiction over annual appropriations. These committees are divided into subcommittees that hold hearings and review detailed budget justification materials prepared by the agencies within the subcommittee's jurisdiction. After a bill has been drafted by a subcommittee, the committee and the whole House, in turn, must approve the bill, usually with amendments to the original version. The House then forwards the bill to the Senate, where a similar review follows. If the Senate disagrees with the House on particular matters in the bill, which is often the case, the two bodies form a conference committee (consisting of Members of both bodies) to resolve the differences. The conference committee revises the bill and returns it to both bodies for approval. When the revised bill is agreed to, first in the House and then in the Senate, Congress sends it to the President for approval or veto.

The President can only approve or veto an entire bill. He cannot approve or veto selected parts of a bill. In 1996, Congress enacted the Line Item Veto Act, granting the President limited authority to cancel new spending and limited tax benefits when he signs laws enacted by the Congress. However, in 1998, the Supreme Court declared the authority provided by the Act to be unconstitutional.

For 21 of the last 22 years, including 2003, appropriations bills have not been enacted by the beginning of the fiscal year. When Congress does not complete action on one or more appropriations bills by the beginning of the fiscal year, it usually enacts a joint resolution called a "continuing resolution," which is similar to an appropriations bill, to provide authority for the affected agencies to continue operations at some specified level up to a specific date or until their regular appropriations are enacted. In some years, a continuing resolution has funded a portion or all of the Government for the entire year. Congress must present these resolutions to the President for approval or veto. In some cases, Presidents have rejected continuing resolutions

because they contained unacceptable provisions. Left without funds, Government agencies were required by law to shut down operations with exceptions for some activities until Congress passed a continuing resolution the President would approve. Shutdowns have lasted for periods of a day to several weeks.

As explained earlier, Congress also provides budget authority in laws other than appropriations acts. In fact, while annual appropriations acts control the spending for the majority of Federal programs, they control only one-third of the total spending in a typical year. Permanent laws, called authorizing legislation, control the rest of the spending. A distinctive feature of these laws is that they provide agencies with the authority to collect or to spend money without first requiring the Appropriations Committees to enact funding. This category of spending includes interest the Government pays on the public debt and the spending of several major programs, such as Social Security, Medicare and Medicaid, unemployment insurance, and Federal employee retirement. This chapter discusses the control of budget authority and outlays in greater detail under BUDGET AUTHORITY AND OTHER BUDGETARY RESOURCES, OBLIGATIONS, AND OUTLAYS.

Almost all taxes and most other receipts result from permanent laws. The House initiates tax bills, specifically in the Ways and Means Committee. In the Senate, the Finance Committee has jurisdiction over tax laws.

The budget resolution often includes reconciliation directives, which require authorizing committees to change permanent laws that affect receipts and outlays. They direct each designated committee to report amendments to the laws under the committee's jurisdiction that would change the levels of receipts and spending controlled by the laws. The directives specify the dollar amount of changes that each designated committee is expected to achieve, but do not specify the laws to be changed or the changes to be made. However, the Budget Committees' reports on the budget resolution may discuss assumptions about how the laws would be changed. Like other assumptions in the report, they do not bind the committees of jurisdiction but may influence their decisions.

The committees subject to reconciliation directives draft the implementing legislation. Such legislation may, for example, change the tax code, revise benefit formulas or eligibility requirements for benefit programs, or authorize Government agencies to charge fees to cover some of their costs. In some years, Congress has enacted an omnibus budget reconciliation act, which combines the amendments to implement reconciliation directives in a single act. These acts, together with appropriations acts for the year, often implement agreements between the President and the Congress. They may include other matters, such as laws providing the means for enforcing these agreements, as described below.

### Budget Enforcement

The Budget Enforcement Act (BEA), first enacted in 1990 and extended in 1993 and 1997, significantly amended the laws pertaining to the budget process, including the Congressional Budget Act, the Balanced Budget and Emergency Deficit Control Act, and the law pertaining to the President's budget (see *PRINCIPAL BUDGET LAWS*, later in the chapter). The BEA constrained legislation enacted through 2002 that would increase spending or decrease receipts. The BEA expired at the end of 2002. The Administration proposes to extend the BEA's mechanisms for limiting discretionary spending for 2004 and 2005 consistent with the levels proposed in the 2004 Budget and plans to announce a comprehensive discretionary cap proposal at a later date. The Administration also proposes to extend the pay-as-you-go requirements for two years. This chapter describes the BEA requirements under the Balanced Budget and Emergency Deficit Control Act.

The BEA divides spending into two types—discretionary spending and direct spending. Discretionary spending is controlled through annual appropriations acts. Funding for salaries and other operating expenses of Government agencies, for example, is usually discretionary because it is usually provided by appropriations acts. Direct spending is more commonly called mandatory spending. Mandatory spending is controlled by permanent laws. Medicare and Medicaid payments, unemployment insurance benefits, and farm price supports are examples of mandatory spending, because permanent laws authorize payments for those purposes. The BEA specifically defines funding for the Food Stamp program as mandatory spending, even though appropriations acts provide the funding. The BEA includes receipts under the same rules that apply to mandatory spending, because permanent laws generally control receipts. The BEA constrains discretionary spending differently from mandatory spending and receipts, as explained in the following paragraphs.

The BEA defines categories of discretionary spending and specifies dollar limits (“caps”) on the amount of spending in each category. The categories and their amounts are determined by negotiations between Congress and the President each time the BEA is amended. Amounts cannot be shifted from one category to another, and the BEA provides no incentive for appropriating less than the cap levels. Thus, the caps tend to be targets for the amount of spending in each category. The caps apply to both budget authority and outlays except in the case of the highway and mass transit caps, which apply only to outlays.

The categories have varied from year to year under the original and amended versions of the BEA. Laws enacted since the 1997 revision of the BEA added categories. The Transportation Equity Act for the 21st Century (TEA-21, Public Law 105-178) added categories for highways and mass transit spending for 1999 through 2003. The Department of Interior and Related Agencies Appropriations Act, 2001 (Public Law

106-291) added a category for conservation spending for 2002 through 2006.<sup>2</sup>

Because the BEA itself expired after 2002, the categories in later years will apply to budgets for those years only if an extension of the BEA is enacted and those categories are retained. In some years prior to 2000, the BEA divided discretionary spending into the major categories of national defense, international, domestic spending, and violent crime reduction. The Historical Tables volume of the budget provides comparable data for the major BEA categories for 1962 through 2008.

The BEA includes general requirements for OMB to adjust the caps up or down for changes in concepts and definitions, to accommodate appropriations designated by the President and the Congress as emergency spending, and to allow a limited amount of leeway when the level of budget authority does not exceed the budget authority cap but the estimate of outlays resulting from the budget authority exceeds the outlay cap.

The BEA also specifies cap adjustments for certain programs for various reasons. For example, the caps must be increased up to a specified dollar limit to accommodate appropriations for continuing disability reviews by the Social Security Administration. This adjustment was included in the BEA because it was determined that the reviews reduce overall spending by eliminating benefit payments to ineligible individuals.

The cap adjustments required for the highways and mass transit categories are designed to ensure that spending levels are consistent with the level of receipts that are earmarked for those programs. The highways and mass transit caps on outlays were based on estimates, at the time TEA-21 was drafted, of gasoline excise taxes and other receipts credited to the Highway Trust Fund each year. The TEA-21 amendments require OMB to adjust these caps up or down for the difference in the amount of receipts actually collected in the past year and for reestimates of the amount the Government expects to collect in the budget year.

The cap adjustments required for the conservation spending category are designed to encourage Congress to appropriate up to the cap level. If appropriations for a given year in the conservation spending category are less than the caps, the BEA requires OMB to increase the caps for the following year by the shortfall. And, if appropriations for a given year in a subcategory of the conservation spending category are less than the specified level for that category, the BEA requires OMB to increase the minimum level for the following year by the shortfall.

If the BEA is extended, the Administration will support a number of cap adjustments to reserve additional spending for specific purposes. These potential adjustments would include funds to develop the nuclear waste repository at Yucca Mountain, continuation of adjust-

<sup>2</sup>In addition to specifying caps for this category, the BEA specifies minimum levels of spending for six subcategories. The subcategories are not binding and are not enforced by sequestration.

ments for Social Security Administration's program integrity activities and the earned income tax credit compliance initiative, as well as an adjustment for fully accruing pensions and retiree health benefits for Federal employees. (See BASIS FOR BUDGET FIGURES, later in this chapter, for more information on the accrual proposal.)

Chapter 14, "The President's Budget Reform Proposals," provides more information on the Administration's principles for new discretionary spending limits and cap adjustments.

If the amount of budget authority provided in appropriations acts for a given year exceeds the cap on budget authority for a category, or the amount of outlays in that year exceeds the cap on outlays for a category, the BEA requires a procedure, called sequestration, for reducing the spending in that category. A sequestration reduces spending for most programs in the category by a uniform percentage. The BEA specifies special rules for reducing some programs and exempts some programs from sequestration entirely. In recent years, the caps have been circumvented by designating funds as emergency spending (such as spending for the decennial census) and by using advance appropriations to spread budget authority over more than one year, when there is no programmatic purpose for doing so.

The BEA does not cap mandatory spending or require a certain level of receipts. Instead, it requires that all laws enacted through 2002 that affect mandatory spending or receipts must be enacted on a "*pay-as-you-go*" (*PAYGO*) basis. This means that if a law increases the deficit or reduces a surplus in the budget year or any of the four following years, another law must be enacted with an offsetting reduction in spending or increase in receipts for each year that is affected. Legislated increases in benefit payments, for example, would have to be offset by legislated reductions in other mandatory spending or increases in receipts. Otherwise, a sequestration would be triggered at the end of the session of Congress in the fiscal year in which the deficit would be increased. The BEA sequestration procedures require a uniform reduction of mandatory spending programs that are neither exempt nor subject to special rules. The BEA exempts most mandatory spending, including Social Security, interest on the public debt, Federal employees retirement, Medicaid, most means-tested entitlements, deposit insurance, other prior legal obligations, and most unemployment benefits. A special rule limits the sequestration of Medicare spending to no more than four percent, and other special rules limit the size of a sequestration for other programs. As a result of exemptions and special rules, only about three percent of all mandatory spending is subject to sequestration, including the maximum amounts allowed under special rules.

The PAYGO rules do not apply to increases in mandatory spending or decreases in receipts that are not the result of new laws. For example, mandatory spending for benefit programs, such as unemployment insurance, rises when the population of eligible beneficiaries

rises, and many benefit payments are automatically increased for inflation under existing laws. Likewise, tax receipts decrease when the profits of private businesses decline as the result of economic conditions.

The BEA requires OMB to make the estimates and calculations that determine whether there is to be a sequestration and report them to the President and Congress. It requires the Congressional Budget Office (CBO) to make the same estimates and calculations, and the Director of OMB to explain any differences between the OMB and CBO estimates. The BEA requires the President to issue a sequestration order without changing any of the particulars of the OMB report. It requires the General Accounting Office to prepare compliance reports.

The BEA requires OMB and CBO to publish three sequestration reports—a "preview" report at the time the President submits the budget, an "update" report in August, and a "final" report at the end of a session of Congress (usually in the fall of each year). The preview report discusses the status of discretionary and PAYGO sequestration, based on current law. This report also explains the adjustments that are required by law to the discretionary caps and publishes the revised caps. Since the BEA reporting requirements have expired, a Preview Report is not included in this budget. Instead, Chapter 14, "The President's Budget Reform Proposals" provides a number of policy ideas to reform the budget process and outlines a framework for BEA extension. The Administration plans to submit comprehensive legislation for BEA extension at a later date.

The update and final reports revise the preview report estimates to reflect the effects of newly enacted discretionary and PAYGO laws. The BEA requires OMB and CBO to estimate the effects of appropriations acts and PAYGO laws immediately after each one is enacted and to include these estimates, without change, in the update and final reports. OMB's final report estimates trigger a sequestration if the appropriations enacted for the current year exceed the caps or if the cumulative effect of PAYGO legislation is estimated to increase a deficit or reduce a surplus. In addition, CBO estimates the effects of bills as they move through Congress for the purpose of the Budget Committees' enforcement of the budget resolution within Congress. OMB provides advisory estimates on bills that might have significant consequences as they move through Congress.

From the end of a session of Congress through the following June 30th, discretionary sequestrations take place whenever an appropriations act for the current fiscal year causes a cap to be exceeded. Because a sequestration in the last quarter of a fiscal year might be too disruptive, the BEA specifies that a sequestration that otherwise would be required then is to be accomplished by reducing the cap for the next fiscal year. These requirements ensure that supplemental appropriations enacted during the fiscal year are subject to the budget enforcement provisions.

### Budget Execution

Government agencies may not spend more than Congress has appropriated, and they may use funds only for purposes specified in law. The Antideficiency Act prohibits them from spending or obligating the Government to spend in advance of an appropriation, unless specific authority to do so has been provided in law. Additionally, the Act requires the President to apportion the budgetary resources available for most executive branch agencies. The President has delegated this authority to OMB, which usually apportions by time periods (usually by quarter of the fiscal year) and sometimes by activities. Agencies may request OMB to re-apportion funds during the year to accommodate changing circumstances. This system helps to ensure that funds are available to cover operations for the entire year.

During the budget execution phase, the Government often finds that it needs to spend more money than Congress has appropriated for the fiscal year because of circumstances that were not anticipated when the budget was formulated and appropriations enacted for that fiscal year. For example, more money might be needed in order to provide adequate assistance to an area stricken by an unusually severe natural disaster.

Under such circumstances, Congress may enact a supplemental appropriation.

On the other hand, changing circumstances may reduce the need for certain spending for which Congress has appropriated funds. Under the requirements of the Impoundment Control Act of 1974, the President cannot simply decline to spend appropriations. The President may propose deferrals or rescissions. Deferrals, which are temporary withholdings, take effect immediately unless overturned by an act of Congress. The President may only defer funds to provide for contingencies, to achieve savings made possible through changes in requirements or greater efficiency of operations, or as otherwise specifically provided in law. He may not defer funds for policy reasons. In 2002, over \$1.9 billion in deferrals were proposed, and Congress overturned none. Rescissions, which permanently cancel budget authority, take effect only if Congress passes a law approving them. The law may approve only part of a rescission. If Congress does not pass such a law within 45 days of continuous session, the President must make the funds available for spending. The President may propose a rescission for any reason. In total, Congress has rescinded about one-third of the amount of funds that Presidents have proposed for rescission since enactment of the Impoundment Control Act. In 2002, no rescissions were proposed.

### Budget Calendar

The following timetable highlights the scheduled dates for significant budget events during the year.

|  |  |
|--|--|
| Between the 1st Monday<br>in January and the 1st<br>Monday in February ..... | President transmits the budget, including a sequestration preview report.                            |
| Six weeks later .....  | Congressional committees report budget estimates to Budget Committees.                               |
| April 15 .....   | Action to be completed on congressional budget resolution.   |
| May 15 .....   | House consideration of annual appropriations bills may begin.  |
| June 15 .....  | Action to be completed on reconciliation.  |
| June 30 .....  | Action on appropriations to be completed by House.   |
| July 15 .....  | President transmits Mid-Session Review of the budget.  |
| August 20 .....  | OMB updates the sequestration preview report.  |
| October 1 .....  | Fiscal year begins.  |
| 15 days after the end of a<br>session of Congress .....                      | OMB issues final sequestration report, and the President issues a sequestration order, if necessary. |

## COVERAGE OF THE BUDGET

### Federal Government and Budget Totals

**Table 24-1. TOTALS FOR THE BUDGET AND THE FEDERAL GOVERNMENT**

(In billions of dollars)

|                          | 2002<br>actual | Estimate |       |
|--------------------------|----------------|----------|-------|
|                          |                | 2003     | 2004  |
| <b>Budget authority:</b> |                |          |       |
| Unified .....            | 2,090          | 2,154    | 2,243 |
| On-budget .....          | 1,725          | 1,781    | 1,856 |
| Off-budget .....         | 365            | 374      | 387   |
| <b>Receipts:</b>         |                |          |       |
| Unified .....            | 1,853          | 1,836    | 1,922 |
| On-budget .....          | 1,338          | 1,305    | 1,366 |
| Off-budget .....         | 515            | 532      | 556   |
| <b>Outlays:</b>          |                |          |       |
| Unified .....            | 2,011          | 2,140    | 2,229 |
| On-budget .....          | 1,655          | 1,772    | 1,848 |
| Off-budget .....         | 356            | 368      | 382   |
| <b>Surplus:</b>          |                |          |       |
| Unified .....            | -158           | -304     | -307  |
| On-budget .....          | -318           | -468     | -482  |
| Off-budget .....         | 160            | 164      | 175   |

The budget documents provide information on all Federal agencies and programs. However, because the laws governing Social Security (the Federal Old-Age and Survivors Insurance and the Federal Disability Insurance Trust Funds) and the Postal Service Fund exclude the receipts and outlays for those activities from the budget totals and from the calculation of the deficit or surplus for Budget Enforcement Act purposes, the budget presents on-budget and off-budget totals. The off-budget totals include the transactions excluded by law from the budget totals. The on-budget and off-budget amounts are added together to derive the totals for the Federal Government. These are sometimes referred to as the unified or consolidated budget totals.

The on-budget totals include the transactions of the Public Company Accounting Oversight Board (PCAOB), which was established this year pursuant to the Sarbanes-Oxley Act of 2002 (P.L. 107-204). Even though the statute says the PCAOB is not an agency or establishment of the Government, its sources of funding and activities are governmental in nature. The PCAOB has the authority to assess and collect mandatory fees from accounting firms and public companies to cover the costs of its operations. All public accounting firms are required to be registered with the PCAOB, pay its fees, and follow its regulations. The PCAOB is allowed to conduct investigations, bring charges, and levy sanctions against public accounting firms under the authority of the U.S. Government. These actions are reinforced by the Board's ability to request the Securities and Exchange Commission (SEC) to issue subpoenas on its behalf. The PCAOB's Board members are appointed by governmental officials, the SEC Commissioners, and all fundamental decisions by the PCAOB are subject to approval by the SEC. The classification

of the PCAOB as budgetary is therefore based on substance, not arbitrary designations.

Neither the on-budget nor the off-budget totals include transactions of Government-sponsored enterprises, such as the Federal National Mortgage Association (Fannie Mae). Federal laws established these enterprises for public policy purposes, but they are privately owned and operated corporations. Because of their close relationship to the Government, the budget discusses them and reports their financial data in the *Appendix* to the budget and in some detailed tables.

The *Appendix* includes a presentation for the Board of Governors of the Federal Reserve System for information only. The amounts are not included in either the on-budget or off-budget totals because of the independent status of the System within the Government. However, the Federal Reserve System transfers its net earnings to the Treasury, and the budget records them as receipts.

### Functional Classification

The functional classification arrays budget authority, outlays, and other budget data according to the major purpose served, such as agriculture, income security, and national defense. There are nineteen major functions, most of which are divided into subfunctions. For example, the Agriculture function comprises the subfunctions Farm Income Stabilization and Agricultural Research and Services. The functional classification is an integral part of the congressional budget process, and the functional array meets the Congressional Budget Act requirement for a presentation in the budget by national needs and agency missions and programs.

The following criteria are used in establishing functional categories and assigning activities to them:

A function encompasses activities with similar purposes, emphasizing what the Federal Government seeks to accomplish rather than the means of accomplishment, the objects purchased, the clientele or geographic area served, or the Federal agency conducting the activity.

A function must be of continuing national importance, and the amounts attributable to it must be significant.

Each basic unit being classified (generally the appropriation or fund account) usually is classified according to its primary purpose and assigned to only one subfunction. However, some large accounts that serve more than one major purpose are subdivided into two or more subfunctions.

Chapter 25, "Detailed Functional Tables," provides detailed information on government activities by function and subfunction.

### Agencies, Accounts, Programs, Projects, and Activities

Various summary tables in the *Analytical Perspectives* volume of the budget provide information on budget authority, outlays, and offsetting collections and re-

ceipts arrayed by Federal agency. Chapter 26, "Federal Programs by Agency and Account," consists of a table that lists budget authority and outlays by budget account within each agency and the totals for each agency of budget authority, outlays, and receipts that offset the agency spending totals. The *Appendix* provides budgetary, financial, and descriptive information about programs, projects, and activities by account within each agency. The *Appendix* also presents the most recently enacted appropriation language for an account and any changes that are proposed to be made for the budget year.

### Types of Funds

Agency activities are financed through Federal funds and trust funds.

**Federal funds** comprise several types of funds. Receipt accounts of the **general fund**, which is the greater part of the budget, record receipts not earmarked by law for a specific purpose, such as almost all income tax receipts. The general fund also includes the proceeds of general borrowing. General fund appropriation accounts record general fund expenditures. General fund appropriations draw from general fund receipts and borrowing collectively and, therefore, are not specifically linked to receipt accounts. **Special funds** consist of receipt accounts for Federal fund receipts that laws have earmarked for specific purposes and the associated appropriation accounts for the expenditure of those receipts. **Public enterprise funds** are revolving funds used for programs authorized by law to conduct a cycle of business-type operations, primarily with the public, in which outlays generate collections. **Intragovernmental funds** are revolving funds that conduct business-type operations primarily within and between Government agencies. The collections and the outlays of revolving funds are recorded in the same budget account.

**Trust funds** account for the receipt and expenditure of monies by the Government for carrying out specific purposes and programs in accordance with the terms of a statute that designates the fund as a trust fund (such as the Highway Trust Fund) or for carrying out

the stipulations of a trust where the Nation is the beneficiary (such as any of several trust funds for gifts and donations for specific purposes). **Trust revolving funds** are trust funds credited with collections earmarked by law to carry out a cycle of business-type operations.

The Federal budget meaning of the term "trust," as applied to trust fund accounts, differs significantly from its private sector usage. In the private sector, the beneficiary of a trust usually owns the trust's assets, which are managed by a trustee who must follow the stipulations of the trust. In contrast, the Federal Government owns the assets of most Federal trust funds, and it can raise or lower future trust fund collections and payments, or change the purposes for which the collections are used, by changing existing laws. There is no substantive difference between a trust fund and a special fund or between a trust revolving fund and a public enterprise revolving fund. The Government does act as a true trustee for some funds. For example, it maintains accounts on behalf of individual Federal employees in the Thrift Savings Fund, investing them as directed by the individual employee. The Government accounts for such funds in **deposit funds**, which are not included in the budget. (Chapter 16, "Trust Funds and Federal Funds," provides more information on this subject.)

### Current Operating Expenditures and Capital Investment

The budget includes all types of spending, including both current operating expenditures and capital investment. Capital investment includes direct purchases of land, structures, equipment, and software. It also includes subsidies for capital investment provided by direct loans and loan guarantees; purchases of other financial assets; grants to state and local governments for purchases of physical assets; and the conduct of research, development, education, and training. (Chapter 7, "Federal Investment Spending and Capital Budgeting," provides more information on capital investment.)

## RECEIPTS, OFFSETTING COLLECTIONS, AND OFFSETTING RECEIPTS

### In General

The budget records money collected by Government agencies two different ways. Depending on the nature of the activity generating the collection, they are recorded as either:

- **Receipts**, which are compared in total to outlays (net of offsetting collections and receipts) in calculating the surplus or deficit.
- **Offsetting collections** or **offsetting receipts**, which are deducted from gross outlays to produce net outlay figures.

### Receipts

Receipts are collections that result from the Government's exercise of its sovereign power to tax or otherwise compel payment and gifts of money to the Government. Sometimes they are called governmental receipts. They consist mostly of individual and corporation income taxes and social insurance taxes, but also include excise taxes, compulsory user charges, regulatory fees, customs duties, court fines, certain license fees, and deposits of earnings by the Federal Reserve System. Total receipts for the Federal Government include both on-budget and off-budget receipts (see Table 24-1, "Federal Government and Budget Totals," which appears

earlier in this chapter.) Chapter 4, "Federal Receipts," provides more information on receipts.

### Offsetting Collections and Receipts

Offsetting collections and receipts result from either of two kinds of transactions:

- ***Business-like or market-oriented activities with the public.*** The budget records the proceeds from the sale of postage stamps, the fees charged for admittance to recreation areas, and the proceeds from the sale of Government-owned land, for example, as offsetting collections or receipts. They are deducted from gross budget authority and outlays, rather than added to receipts. This treatment produces budget totals for receipts, budget authority, and outlays that represent governmental rather than market activity.
- ***Intragovernmental transactions.*** The budget also records collections by one Government account from another as offsetting collections or receipts. For example, the General Services Administration records payments it receives from other Government agencies for the rent of office space as offsetting collections in the Federal Buildings Fund. These transactions are completely offsetting and do not affect the surplus or deficit. However, they are an important accounting mechanism for allocating costs to the programs and activities that cause the Government to incur the costs. Intragovernmental offsetting collections and receipts are deducted from gross budget authority and outlays so that the budget totals measure the transactions of the Government with the public.

A table in Chapter 21, "Outlays to the Public, Net and Gross," shows the effect of offsetting collections and receipts on gross outlays for each major Federal agency.

Although offsetting collections and offsetting receipts offset gross budget authority and outlays, the budget accounts for them differently, as explained in the following sections.

### Offsetting Collections

Some laws authorize agencies to credit collections directly to the account from which they will be spent and, usually, to spend the collections for the purpose of the account without further action by Congress. Most revolving funds operate with such authority. For example, a permanent law authorizes the Postal Service to use collections from the sale of stamps to finance its operations without a requirement for annual appropriations. The budget records these collections in the Postal Service Fund (a revolving fund) and records budget authority in an amount equal to the collections. In addition to revolving funds, some agencies are authorized to charge fees to defray a portion of costs for a program that are otherwise financed by appropriations from the general fund. In such cases, the budget records the offsetting collections and resulting budget authority in the program's general fund expenditure account. Simi-

larly, intragovernmental collections authorized by some laws may be recorded as offsetting collections and budget authority in revolving funds or in general fund expenditure accounts.

Sometimes appropriations acts or provisions in other laws limit the obligations that can be financed by offsetting collections. In those cases, the budget records budget authority in the amount available to incur obligations.

Where accounts have offsetting collections, the budget shows the budget authority and outlays of the account both gross (before deducting offsetting collections) and net (after deducting offsetting collections). Totals for the agency, subfunction, and budget are net of offsetting collections.

While most offsetting collections credited to expenditure accounts result from business-like activity or are collected from other Government accounts, some are governmental in nature but are required by law to be misclassified as offsetting. The budget labels these "offsetting governmental collections."

### Offsetting Receipts

Collections that are offset against gross outlays but are not authorized to be credited to expenditure accounts are credited to general fund, special fund, or trust fund receipt accounts and are called offsetting receipts. Offsetting receipts are deducted from budget authority and outlays in arriving at total budget authority and outlays. However, unlike offsetting collections credited to expenditure accounts, offsetting receipts do not offset budget authority and outlays at the account level. In most cases, they offset budget authority and outlays at the agency and subfunction levels. Offsetting receipts are subdivided into three categories, as follows:

- ***Proprietary receipts from the public.***—These are collections from the public that arise out of the business-type or market-oriented activities of the Government. Most proprietary receipts are deducted from the budget authority and outlay totals of the agency that conducts the activity generating the receipt and of the subfunction to which the activity is assigned. For example, fees for using National Parks are deducted from the totals for the Department of Interior, which has responsibility for the parks, and the Recreational Resources subfunction. Proprietary receipts from a few sources, however, are not offset against any specific agency or function and are classified as undistributed offsetting receipts. They are deducted from the Government-wide totals for budget authority and outlays. For example, the collections of rents and royalties from outer continental shelf lands are undistributed because the amounts are large and for the most part are not related to the spending of the agency that administers the transactions and the subfunction that records the administrative expenses.

- **Intragovernmental transactions.**—These are collections of payments from expenditure accounts that are deposited into receipt accounts. Most intragovernmental transactions are deducted from the budget authority and outlays of the agency that conducts the activity generating the receipts and of the subfunction to which the activity is assigned. However, in two cases, agencies' payments as employers into employee retirement trust funds and interest received by trust funds, intragovernmental transactions are classified as undistributed offsetting receipts. They appear as special deductions in computing total budget authority and outlays for the Government rather than as offsets at the agency level. This special treatment is necessary because the amounts are large and would distort measures of the agency's activities, if they were attributed to the agency.
- **Offsetting governmental receipts.**—These are collections that are governmental in nature but are required by law to be misclassified as offsetting and are not authorized to be credited to expenditure accounts.

### User Charges

User charges are fees assessed on individuals or organizations for the provision of Government services and

for the sale or use of Government goods or resources. The payers of the user charge must be limited in the authorizing legislation to those receiving special benefits from, or subject to regulation by, the program or activity beyond the benefits received by the general public or broad segments of the public (such as those who pay income taxes or customs duties). User charges are defined and the policy regarding user charges is established in OMB Circular A-25, "User Charges" (July 8, 1993). The term encompasses proceeds from the sale or use of government goods and services, including the sale of natural resources (such as timber, oil, and minerals) and proceeds from asset sales (such as property, plant, and equipment). User charges are not necessarily earmarked for the activity they finance and may be credited to the general fund of the Treasury.

The term "user charge" does not refer to a separate budget category for collections. User charges are classified in the budget as receipts, offsetting receipts, or offsetting collections according to the principles explained above.

See Chapter 5, "User Charges and Other Collections," for a more detailed discussion of user charges, offsetting collections, and offsetting receipts.

## BUDGET AUTHORITY AND OTHER BUDGETARY RESOURCES, OBLIGATIONS, AND OUTLAYS

Budget authority, obligations, and outlays are the primary benchmarks and measures of the budget control system. Congress enacts laws that provide agencies with spending authority in the form of budget authority. Before agencies can use the resources, OMB must approve their spending plans. After the plans are approved, agencies can enter into binding agreements to purchase items or services. These agreements are recorded as obligations of the United States and deducted from the amount of budgetary resources available to the agency. When payments are made, the obligations are liquidated and outlays recorded. These concepts are discussed more fully below.

### Budget Authority and Other Budgetary Resources

Budget authority is the authority provided in law to enter into legal obligations that will result in immediate or future outlays of Government funds. In other words, it is the amount of money that the law allows the Government to commit to be spent in current or future years. Government officials may obligate the Government to make outlays only to the extent they have been granted budget authority. The budget records budget authority as a dollar amount in the year when it first becomes available. Under the circumstances described below, unobligated balances of budget authority may be carried over into the next year. The budget does not record these balances as budget authority again. They do, however, constitute a budgetary re-

source that is available for obligation. In some cases, a provision of law (such as a limitation on obligations or a benefit formula) precludes the obligation of funds that would otherwise be available for obligation. In such cases, the budget records budget authority equal to the amount of obligations that can be incurred. A major exception to this rule is for the highway and mass transit programs financed by the Highway Trust Fund, where budget authority is measured as the amount of contract authority (described below) provided in authorizing statutes, even though the obligation limitations enacted in annual appropriations acts restrict the amount of contract authority that can be obligated.

In deciding the amount of budget authority to request for a program, project, or activity, agency officials estimate the total amount of obligations they will need to incur to achieve desired goals and subtract the amounts of unobligated balances available for these purposes. The amount of budget authority requested is influenced by the nature of the programs, projects, or activities being financed. For current operating expenditures, the amount requested usually covers needs for the year. For major procurement programs and construction projects, agencies generally must request sufficient budget authority in the first year to fully fund an economically useful segment of a procurement or project, even though it may be obligated over several years. This full funding policy is intended to ensure that the decision-makers take into account all costs and benefits fully at the time decisions are made to

provide resources. It also avoids sinking money into a procurement or project without being certain if or when future funding will be available to complete the procurement or project.

Budget authority takes several forms:

- **Appropriations**, provided in annual appropriations acts or permanent laws, permit agencies to incur obligations and make payment;
- **Authority to borrow**, usually provided in permanent laws, permits agencies to incur obligations but requires them to borrow funds, usually from the general fund of the Treasury, to make payment;
- **Contract authority**, usually provided in permanent law, permits agencies to incur obligations in advance of a separate appropriation of the cash for payment or in anticipation of the collection of receipts that can be used for payment; and
- **Spending authority from offsetting collections**, usually provided in permanent law, permits agencies to credit offsetting collections to an expenditure account, incur obligations, and make payment using the offsetting collections.

Because offsetting collections and receipts are deducted from gross budget authority, they are referred to as negative budget authority for some purposes, such as Congressional Budget Act provisions that pertain to budget authority.

Authorizing statutes usually determine the form of budget authority for a program. The authorizing statute may authorize a particular type of budget authority to be provided in annual appropriations acts, or it may provide one of the forms of budget authority directly, without the need for further appropriations. Most programs are funded by appropriations. An appropriation may make funds available from the general fund, special funds, or trust funds, or authorize the spending of offsetting collections credited to expenditure accounts, including revolving funds. Borrowing authority is usually authorized for business-like activities where the activity being financed is expected to produce income over time with which to repay the borrowing with interest. The use of contract authority is traditionally limited to transportation programs.

Annual appropriations acts generally make budget authority available for obligation only during the fiscal year to which the act applies. However, they frequently allow budget authority for a particular purpose to remain available for obligation for a longer period or indefinitely (that is, until expended or until the program objectives have been attained). Typically, budget authority for current operations is made available for only one year, and budget authority for construction and some research projects is available for a specified number of years or indefinitely. Budget authority provided in authorizing statutes, such as for most trust funds, is available indefinitely. Only another law can extend a limited period of availability (see Reappropriation below).

Budget authority that is available for more than one year and not obligated in the year it becomes available is carried forward for obligation in a following year. In some cases, an account may carry forward unobligated budget authority from more than one year. The sum of such amounts constitutes the account's **unobligated balance**. Budget authority that has been obligated but not paid constitutes the account's **obligated balance**. For example, in the case of salaries and wages, one to three weeks elapse between the time of obligation and the time of payment. In the case of major procurement and construction, payments may occur over a period of several years after the obligation is made. Obligated balances of budget authority at the end of the year are carried forward until the obligations are paid or the balances are canceled. (A general law cancels the obligated balances of budget authority that was made available for a definite period five years after the end of the period, and then other resources must be used to pay the obligations.) Due to such flows, a change in the amount of obligations incurred from one year to the next does not necessarily result from an equal change in the amount of budget authority available for that year and will not necessarily result in an equal change in the level of outlays in that year. Conversely, a change in the amount of budget authority available in any one year may change the level of obligations and outlays for several years to come.<sup>3</sup>

Congress usually makes budget authority available on the first day of the fiscal year for which the appropriations act is passed. Occasionally, the appropriations language specifies a different timing. The language may provide an **advance appropriation**—budget authority that does not become available until one year or more beyond the fiscal year for which the appropriations act is passed. **Forward funding** refers to budget authority that is made available for obligation beginning in the last quarter of the fiscal year (beginning on July 1st) for the financing of ongoing grant programs during the next fiscal year. This kind of funding is used mostly for education programs, so that obligations for grants can be made prior to the beginning of the next school year. For certain benefit programs funded by annual appropriations, the appropriation provides for **advance funding**—budget authority that is to be charged to the appropriation in the succeeding year but which authorizes obligations to be incurred in the last quarter of the current fiscal year if necessary to meet benefit payments in excess of the specific amount appropriated for the year.

Provisions of law that extend the availability of unobligated amounts that have expired or would otherwise expire are called **reappropriations**. Reappropriations count as new budget authority in the fiscal year in which the balances become newly available. For example, if a 2004 appropriations act extends the availability of unobligated budget authority that otherwise would

<sup>3</sup>A separate report, "Balances of Budget Authority," provides additional information on balances. The National Technical Information Service, Department of Commerce, makes the report available shortly after the budget is transmitted.

expire at the end of 2003, new budget authority would be recorded for 2004.

For purposes of the Budget Enforcement Act (discussed earlier under "Budget Enforcement"), the budget classifies budget authority as **discretionary** or **mandatory**. Generally, budget authority is discretionary if provided in an annual appropriations act and mandatory if provided in authorizing legislation. However, the BEA requires the budget authority provided in annual appropriations acts for certain specifically identified programs to be treated as mandatory. This is because the authorizing legislation in these cases entitles beneficiaries to receive payment or otherwise obligates the Government to make payment, even though the payments are funded by a subsequent appropriation. Since the authorizing legislation effectively determines the amount of budget authority required, the BEA classifies it as mandatory. As discussed later, the discretionary and mandatory classification applies to the outlays that flow from budget authority, according to the classification of the budget authority.

The amount of budget authority recorded in the budget depends on whether the law provides budget authority in a specific amount or specifies a variable factor that determines the amount. It is considered definite if the legislation that provides it specifies a dollar amount (which may be an amount not to be exceeded). It is considered indefinite if, instead of specifying an amount, the legislation providing it permits the amount to be determined by subsequent circumstances. For example, indefinite budget authority is provided for interest on the public debt, payment of claims and judgments awarded by the courts against the U.S., and many entitlement programs. Many of the laws that authorize collections to be credited to revolving, special, and trust funds make all of the collections available for expenditure for the authorized purposes of the fund, and such authority is considered to be indefinite budget authority. In some such cases, only a portion of collections otherwise available is counted as budget authority, because the rest is precluded from obligation in a fiscal year by a provision of law, such as a limitation on obligations or a benefit formula that determines the amounts to be paid (for example, the formula for unemployment insurance benefits).

### Obligations Incurred

Following the enactment of budget authority and the completion of required action, Government agencies incur obligations to make payments (see earlier discussion under "Budget Execution"). Agencies must record obligations when they enter into binding agreements that will result in outlays, immediately or in the future. Such obligations include the current liabilities for salaries, wages, and interest; and contracts for the purchase of supplies and equipment, construction, and the acquisition of office space, buildings, and land. For Federal credit programs, obligations are recorded in an amount equal to the estimated subsidy cost of direct loans and loan guarantees (see FEDERAL CREDIT below).

### Outlays

Outlays are the measure of Government spending. They are payments that liquidate obligations (other than the repayment of debt). The budget records them when obligations are paid, in the amount that is paid.

Agency, function, and subfunction, and Government-wide outlay totals are stated net of related refunds to the Government, offsetting collections, and offsetting receipts for most budget presentations. (Offsetting receipts from a few sources do not offset any specific function, subfunction, or agency but only offset Government-wide totals.) Outlay totals for accounts with offsetting collections are stated both gross and net of the offsetting collections credited to the account. However, the outlay totals for special and trust funds with offsetting receipts are not stated net of the offsetting receipts.

The Government usually makes outlays in the form of cash (currency, checks, or electronic fund transfers). However, in some cases agencies pay obligations without disbursing cash, and the budget records outlays nevertheless. For example, the budget records outlays for the full amount of Federal employees' salaries, even though the cash disbursed to employees is net of Federal and state income taxes, retirement contributions, life and health insurance premiums, and other deductions. (The budget also records receipts for the deductions of Federal income taxes and other payments to the Government.) When debt instruments (bonds, debentures, notes, or monetary credits) are used to pay obligations, the budget records outlays financed by an increase in agency debt. For example, the budget records the acquisition of physical assets through certain types of lease-purchase arrangements as though a cash disbursement were made for an outright purchase. Because no cash is paid up front to the nominal owner of the asset, the transaction creates a Government debt, and the cash lease payments are treated as repayments of principal and interest.

The measurement of interest varies. The budget records outlays for the interest on the public issues of Treasury debt securities as the interest accrues, not when the cash is paid. A small portion of this debt consists of inflation-indexed securities, which feature monthly adjustments to principal for inflation and semi-annual payments of interest on the inflation-adjusted principal. As with fixed-rate securities, the budget records interest outlays as the interest accrues. The monthly adjustment to principal is recorded, simultaneously, as an increase in debt outstanding and an outlay of interest.

Most Treasury debt securities held by trust funds and other Government accounts are in Government account series (special issues). The budget normally states the interest on these securities on a cash basis. When a Government account is invested in Federal debt securities, the purchase price is usually close or identical to the par (face) value of the security. The budget records the investment at par value and adjusts the interest paid by Treasury and collected by the account

by the difference between purchase price and par, if any. However, two trust funds in the Department of Defense, the Military Retirement Trust Fund and the Education Benefits Trust Fund, routinely have relatively large differences between purchase price and par. For these funds, the budget records the holdings of debt at par but records the differences between purchase price and par as adjustments to the assets of the funds that are amortized over the life of the security. The budget records interest as the amortization occurs.

For Federal credit programs, outlays are equal to the subsidy cost of direct loans and loan guarantees and are recorded as the underlying loans are disbursed (see FEDERAL CREDIT below).

The budget records refunds of receipts that result from overpayments (such as income taxes withheld in excess of tax liabilities) as reductions of receipts, rather than as outlays. The budget records payments to taxpayers for tax credits (such as earned income tax credits) that exceed the taxpayer's tax liability as outlays.

Outlays during a fiscal year may liquidate obligations incurred in the same year or in prior years. Obligations, in turn, may be incurred against budget authority provided in the same year or against unobligated balances of budget authority provided in prior years. Outlays,

therefore, flow in part from budget authority provided for the year in which the money is spent and in part from budget authority provided in prior years. The ratio of the outlays resulting from budget authority enacted in a given year to the amount of that budget authority is referred to as the spendout rate for that year.

As described earlier, the budget classifies budget authority as discretionary or mandatory for the purposes of the BEA. This classification indicates whether appropriations acts or authorizing legislation control the amount of budget authority that is available. Outlays are classified as discretionary or mandatory according to the classification of the budget authority from which they flow. This classification of outlays measures the extent to which actual spending is controlled through the annual appropriations process. Typically, only one-third (\$734 billion in 2002) of total outlays for a fiscal year are discretionary and the rest (\$1,277 billion in 2002) consists of mandatory spending and net interest. Such a large portion of total spending is nondiscretionary because authorizing legislation determines net interest (\$171 billion in 2002) and the spending for a few programs with large amounts of spending each year, such as Social Security (\$452 billion in 2002) and Medicare (\$228 billion in 2002).

### FEDERAL CREDIT

Some Government programs make direct loans or loan guarantees. A *direct loan* is a disbursement of funds by the Government to a non-Federal borrower under a contract that requires repayment of such funds with or without interest. The term includes equivalent transactions such as selling a property on credit terms in lieu of receiving cash up front. A *loan guarantee* is any guarantee, insurance, or other pledge with respect to the payment of all or a part of the principal or interest on any debt obligation of a non-Federal borrower to a non-Federal lender. The Federal Credit Reform Act (FCRA) prescribes the budget treatment for Federal credit programs. Under this treatment, the budget records the net cost to the Government (subsidy cost) when the loans are disbursed, rather than the cash flows over the term of the loan, so direct loans and loan guarantees can be compared to each other and to other methods of delivering benefits, such as grants, on an equivalent basis.

The budget records the estimated long-term cost to the Government arising from direct loans and loan guarantees in *credit program accounts*. The cost is estimated as the present value of expected disbursements over the term of the loan less the present value of expected collections.<sup>4</sup> As for most other kinds of programs, agencies can make loans or guarantee loans only if Congress has appropriated funds sufficient to cover the subsidy costs in annual appropriations acts.

When a Federal agency disburses a direct loan or when a non-Federal lender disburses a loan guaranteed by a Federal agency, the program account outlays an amount equal to the cost to a non-budgetary *credit financing account*. The financing accounts record the actual transactions with the public. For a few programs, the estimated cost is negative, because the present value of expected collections exceeds the present value of expected disbursements over the term of the loan. In such cases, the financing account makes a payment to the program's receipt account, where it is recorded as an offsetting receipt. In a few cases, the receipts are earmarked in a special fund established for the program and are available for appropriation for the program.

The agencies responsible for credit programs must reestimate the cost of the outstanding direct loans and loan guarantees, each year. If the estimated cost increases, the program account makes an additional payment to the financing account. If the estimated cost decreases, the financing account makes a payment to the program's receipt account, where it is recorded as an offsetting receipt. The FCRA provides permanent indefinite appropriations to pay for upward reestimates.

If the Government modifies the terms of an outstanding direct loan or loan guarantee in a way that increases the cost, as the result of a law or the exercise of administrative discretion under existing law, the program account records obligations for an additional amount equal to the increased cost and outlays the amount to the financing account. As with the original

<sup>4</sup>Present value is a standard financial concept that allows for the time value of money, that is, for the fact that a given sum of money is worth more at present than in the future because interest can be earned on it.

cost, agencies may incur modification costs only if Congress has appropriated funds to cover them. Modification may also reduce costs, in which case the financing account makes a payment to the program's receipt account.

Credit financing accounts record all cash flows to and from the Government arising from direct loan obligations and loan guarantee commitments. These cash flows consist mainly of direct loan disbursements and repayments, loan guarantee default payments, fees and interest from the public, the receipt of subsidy cost payments from program accounts, and interest paid to or received from Treasury. Separate financing accounts record the cash flows of direct loans and of loan guarantees for programs that provide both types of credit. The budget totals exclude the transactions of financing accounts because they are not a cost to the Government. Financing account transactions affect the means

of financing a budget surplus or deficit (see Credit Financing Accounts in the next section). The budget documents display the transactions of the financing accounts, together with the related program accounts, for information and analytical purposes.

The FCRA, which was enacted in 1990, grandfathered direct loan obligations and loan guarantee commitments made prior to fiscal year 1992. The budget records these on a cash basis in credit liquidating accounts, the same as they were recorded before FCRA was enacted. However, this exception ceases to apply if the direct loans or loan guarantees are modified as described above. In that case, the budget records a modification subsidy cost or savings, as appropriate, and begins to account for the associated transactions as the FCRA prescribes for direct loan obligations and loan guarantee commitments made in fiscal year 1992 or later.

## BUDGET DEFICIT OR SURPLUS AND MEANS OF FINANCING

When outlays exceed receipts, the difference is a deficit, which the Government finances primarily by borrowing. When receipts exceed outlays, the difference is a surplus, and the Government uses the surplus to reduce debt. The Government's debt (debt held by the public) is approximately the cumulative amount of borrowing to finance deficits, less repayments from surpluses. Borrowing is not exactly equal to the deficit, and debt repayment is not exactly equal to the surplus, because of the other means of financing such as those discussed under this heading. Some, such as the premium on debt buybacks, normally increase the Government's borrowing needs or decrease its ability to repay debt; others normally have the opposite effect or may be either positive or negative. In some years, such as 2002, the net effect of the other means of financing may be significant relative to the borrowing or debt repayment.

### Borrowing and Debt Repayment

The budget treats borrowing and debt repayment as a means of financing, not as receipts and outlays. If borrowing were defined as receipts and debt repayment as outlays, the budget would be virtually balanced by definition. This rule applies both to borrowing in the form of Treasury securities and to specialized borrowing in the form of agency securities (including the issuance of debt securities to liquidate an obligation and the sale of certificates representing participation in a pool of loans). In 2002, the Government borrowed \$221 billion from the public. This was primarily to finance the \$158 billion deficit in that year. The rest of the borrowing was mainly needed to finance direct loans disbursed in credit financing accounts, which are discussed below, and the accumulation of operating cash balances and compensating balances in financial institutions. At the end of 2002, the debt held by the public was \$3,540 billion.

In addition to selling debt to the public, the Treasury Department issues debt to Government accounts, primarily trust funds that are required by law to invest in Treasury securities. Issuing and redeeming this debt does not affect the means of financing, because these transactions occur between one Government account and another and thus do not raise or use any cash for the Government as a whole. (See Chapter 13, "Federal Borrowing and Debt," for a fuller discussion of this topic.)

### Debt Buyback Premiums

From 2000 through April 2002, the Treasury Department bought back outstanding U.S. Treasury bonds as part of its efforts to manage efficiently the publicly held debt. Because interest rates were lower than the coupon rates on the bonds that Treasury bought back, the government had to pay a premium over the book value of these securities. This buyback premium is recorded as a means of financing, not as outlays. Chapter 24, "Budget System and Concepts and Glossary," pages 457-58 in the *Analytical Perspectives* volume of the 2001 budget, discusses the basis for this treatment in more detail, including an examination of the alternatives that were considered.

### Exercise of Monetary Power

Seigniorage is the profit from coining money. It is the difference between the value of coins as money and their cost of production. Seigniorage adds to the Government's cash balance, but unlike the payment of taxes or other receipts, it does not involve a transfer of financial assets from the public. Instead, it arises from the exercise of the Government's power to create money and the public's desire to hold financial assets in the form of coins. Therefore, the budget excludes seigniorage from receipts and treats it as a means of financing other than borrowing from the public. The budget also treats profits resulting from the sale of

gold as a means of financing, since the value of gold is determined by its value as a monetary asset rather than as a commodity.

### **Credit Financing Accounts**

The budget records the net cash flows of credit programs in credit financing accounts. They are excluded from the budget because they are not allocations of resources by the Government (see FEDERAL CREDIT above). However, even though they do not affect the surplus or deficit, they can either increase or decrease the Government's need to borrow. Therefore, they are recorded as a means of financing.

Financing account disbursements to the public increase the requirement for Treasury borrowing in the same way as an increase in budget outlays. Financing account receipts from the public can be used to finance the payment of the Government's obligations and therefore reduce the requirement for Treasury borrowing from the public in the same way as an increase in budget receipts.

### **Deposit Fund Account Balances**

The Treasury uses non-budgetary accounts, called deposit funds, to record cash held temporarily until ownership is determined (for example, earnest money paid by bidders for mineral leases) or held by the Government as agent for others (for example, State and local income taxes withheld from Federal employees' salaries and not yet paid to the State or local government). Deposit fund balances may be held in the form of either invested or uninvested balances. To the extent that they are not invested, changes in the balances are available to finance expenditures and are recorded as a means of financing other than borrowing from the public. To the extent that they are invested in Federal debt, changes in the balances are reflected as borrowing from the public in lieu of borrowing from other parts of the public.

### **Exchanges with the International Monetary Fund (IMF)**

Under the terms of its participation in the IMF, the U.S. transfers dollars to the IMF and receives Special Drawing Rights (SDR's) in return. The SDR's are interest-bearing monetary assets and may be exchanged for foreign currency at any time. These transfers are like bank deposits and withdrawals, where the government exchanges one type of financial asset (cash) for another (bank deposit), with no change in total financial assets. Following a recommendation of the 1967 President's Commission on Budget Concepts, the budget excludes these transfers from budget outlays or receipts. In contrast, the budget records interest paid by the IMF on U.S. deposits as an offsetting receipt in the General Fund of the Treasury. It also records outlays for foreign currency exchanges to the extent there is a realized loss in dollars terms and offsetting receipts to the extent there is a realized gain in dollar terms.

### **Railroad Retirement Board Investments**

Under longstanding rules, the budget treats investments in non-Federal securities as a purchase of an asset, recording an obligation and an outlay in an amount equal to the purchase price in the year of the purchase. Since investments in non-Federal securities consume cash, fund balances (of funds available for obligation) normally exclude the value of non-Federal securities. However, the Railroad Retirement and Survivors' Improvement Act of 2001 (Public Law 107-90) requires purchases or sales of non-Federal assets by the National Railroad Retirement Investment Trust to be treated as a means of financing in the budget.

Earnings on investments by National Railroad Retirement Investment Trust in private assets pose special challenges for budget projections. Equities and private bonds earn a higher return on average than the Treasury rate, but that return is subject to greater uncertainty. Sound budgeting principles require that estimates of future trust fund balances reflect both the average return and the cost of risk associated with the uncertainty of that return. (The latter is particularly true in cases where individual beneficiaries have not made a voluntary choice to assume additional risk.) Estimating both of these separately is quite difficult. While the additional returns that these assets have received in the past are known, it is quite possible that these premiums will differ in the future. Furthermore, there is no existing procedure for the budget to record separately the cost of risk from such an investment, even if it could be estimated accurately. Economic theory suggests, however, that the difference between the expected return of a risky liquid asset and the Treasury rate is equal to the cost of the asset's additional risk as priced by the market. Following through on this insight, the best way to project the rate of return on the Fund's balances is to use a Treasury rate. This will mean that assets with equal economic value as measured by market prices will be treated equivalently, avoiding the appearance that the budget could benefit if the Government bought private sector assets.

The actual and estimated returns to private securities will be recorded in subfunction 909, other investment income. The actual year returns will include interest, dividends, and capital gains and losses on private equities and other securities. The Fund's portfolio of these assets will be revalued at market prices at the end of the actual year to determine capital gains or losses. As a result, the Fund's end-of-year balance will reflect the current market value of resources available to the Government to finance benefits. Earnings for the current and future years will be estimated using the 10-year Treasury rate and the value of the Fund's portfolio at the end of the actual year. No estimates will be made of gains and losses for the current year or subsequent years.

### **Federal Communications Commission Monetary Credit**

In June 2000, the Federal Communications Commission (FCC) issued a transferrable monetary credit of \$125 million in the form of an Auction Discount Voucher to Qualcomm, Incorporated in satisfaction of the court's ruling in litigation brought by Qualcomm against the FCC. The monetary credit was structured to work in a manner similar to that of an auction bidding credit and could be used to bid on spectrum licenses in future FCC auctions. Consistent with the budgetary treatment of other monetary credits, the budget recorded an outlay and borrowing from the public in 2000.

Qualcomm transferred \$11 million of the monetary credit in 2002, and the transferee used it as an auction bidding credit. In November 2002, the FCC revised its Order governing the ADV to allow Qualcomm to transfer the remaining \$114 million to a debtor to repay outstanding direct loans issued for the purpose of purchasing spectrum licenses at previous FCC auctions. Qualcomm is expected to redeem the voucher in this manner before June 2003, when the voucher will expire.

The \$11 million used as an auction bidding credit in 2002 was recorded as an offsetting collection in FCC's Pioneer's Preference Account and then applied to extinguish \$11 million of the \$125 million FCC debt that was recorded when the Qualcomm voucher was originally issued. The \$114 million that is expected to be used to repay outstanding loans will be recorded as offsetting collections in the Spectrum Auction Direct Loan Financing Account and then applied to repay outstanding debt of the financing account to Treasury. Simultaneously, \$114 million in general fund auction receipts will be applied to extinguish the remaining outstanding FCC debt to the public.

### **Reclassification of Guaranty Agencies Reserves**

Beginning in the late 1960's and continuing into the 1980's, about \$800 million was appropriated to the Department of Health, Education, and Welfare (later the Department of Education) and then outlayed to public and non-profit guaranty agencies participating in the Guaranteed Student Loan program (now called the Federal Family Education Loan program). The guaranty agencies invested the funds and used them as reserves for default claims.

The Higher Education Amendments of 1998 (20 U.S.C. 1072(g)(1)) clarified that these reserve funds, along with any accumulated interest, are Federal assets, even though they were being held and invested outside Treasury. As such, the budget should not have recorded outlays when the funds were disbursed to the guaranty agencies; it should have recorded receipts each year as the reserves earned interest; and it should have recorded outlays when payments for default claims were made. Correcting the actual data for these errors would require significant investment of resources with little value. Alternatively, an adjustment to outlays for all past errors could be recorded in a single year, but this would distort that year's reported outlays. OMB and Treasury agreed that correcting for the past errors should not distort current year budget totals. In 2000, these amounts (about \$2.2 billion) were presented in the budget as Federal assets (unobligated balances). Treasury made a corresponding accounting adjustment and recorded the same amount as funds held by the Government outside Treasury. This adjustment is reflected as a means of financing in 2000 and as an adjustment to balances, without any outlay or deficit impact.

## **FEDERAL EMPLOYMENT**

The budget includes information on civilian and military employment and personnel compensation and benefits. It also compares the Federal workforce, State and local government workforces, and the United States population. The budget provides two different measures of Federal employment levels—actual positions filled and full-time equivalents (FTE). One FTE equals one work year or 2,096 hours. For most purposes, the FTE

measure is more meaningful, because it takes into account part-time employment, temporary employment, and vacancies during the year. For example, one full-time employee and two half-time employees would count as two FTE's but three positions. (Chapter 11, "Federal Employment and Compensation," provides more information on this subject.)

## **BASIS FOR BUDGET FIGURES**

### **Data for the Past Year**

The past year column (2002) generally presents the actual transactions and balances as recorded in agency accounts and as summarized in the central financial reports prepared by the Treasury Department for the most recently completed fiscal year. Occasionally the budget reports corrections to data reported erroneously to Treasury but not discovered in time to be reflected in Treasury's published data. The budget usually notes

the sources of such differences (see Chapter 18, "Comparison of Actual to Estimated totals for 2002" for a summary of these differences).

### **Data for the Current Year**

The current year column (2003) generally includes estimates of transactions and balances based on the amounts of budgetary resources that were available when the budget was transmitted, including amounts

appropriated for the year. This column also reflects any supplemental appropriations or rescissions proposed in the budget.

At the time this budget was prepared, only two of the regular fiscal year 2003 thirteen appropriations bills had been enacted (Department of Defense and Military Construction), and funding for programs covered by the other appropriations acts was provided by a continuing resolution (P.L. 107-229, as amended). For discretionary accounts funded by continuing resolution, the current year policy amounts reflect the Administration's 2003 policy proposals. The baseline amounts for discretionary accounts were calculated based on the continuing resolution rates, except for appropriated entitlements, which are reported at the current law level. (See Baseline below.)

### Data for the Budget Year

The budget year column (2004) includes estimates of transactions and balances based on the amounts of budgetary resources that are estimated to be available, including new budget authority requested under current authorizing legislation, and amounts estimated to result from changes in authorizing legislation and tax laws.

The budget *Appendix* generally includes the appropriations language for the amounts proposed to be appropriated under current authorizing legislation. In a few cases, this language is transmitted later because the exact requirements are unknown when the budget is transmitted. The *Appendix* generally does not include appropriations language for the amounts that will be requested under proposed legislation; that language is usually transmitted later, after the legislation is enacted. Some tables in the budget identify the items for later transmittal and the related outlays separately. Estimates of the total requirements for the budget year include both the amounts requested with the transmittal of the budget and the amounts planned for later transmittal.

### Data for the Outyears

The budget presents estimates for each of the four years beyond the budget year (2005 through 2008) in order to reflect the effect of budget decisions on longer term objectives and plans.

### Federal Employee Pensions and Annuitant Health Benefits

In order to link the full cost of resources used with results achieved in support of budgeting and managing for performance, the Administration proposes to pay the full share of accruing employee pensions and annuitant health benefits for Federal employees. The additional funding for this conceptual change would not constitute additional program level and would not change total budget outlays and the deficit; instead, it would ensure that the budget recognizes and accurately measures the full costs of employees. The budget presents information by account on the net budget au-

thority and outlay impact of this change. The data are displayed as memoranda entries in the budget *Appendix* on a three-year comparable basis (i.e., for 2002 through 2004). Unlike the 2003 budget, the amounts are not included in the budget request and baseline estimates. (See Chapter 1, "Budget Performance Integration" and Chapter 14, "The President's Budget Reform Proposals" for more information on this topic.)

### Department of Homeland Security

On November 25, 2002, the President signed into law the Homeland Security Act of 2002. The Act merges twenty-two Federal agencies and programs to create the new Department of Homeland Security (DHS). The budget presents the DHS as a freestanding agency with comparable estimates for all years including 2002 and 2003. All budget data associated with the DHS components are displayed in the DHS chapter of the budget *Appendix*. The other budget volumes treat DHS similarly, with the data for and discussion of DHS components included in the DHS sections. The only exception is the Management Scorecard, which displays the most recent agency scores including the DHS components.

### Allowances

The budget may include lump-sum allowances to cover certain transactions that are expected to increase or decrease budget authority, outlays, or receipts but are not, for various reasons, reflected in the program details. For example, the budget might include an allowance to show the effect on the budget totals of a proposal that would actually affect many accounts by relatively small amounts, in order to avoid unnecessary detail in the presentations for the individual accounts. Congress does not enact the allowances as such.

### Baseline

The budget baseline is an estimate of the receipts, outlays, and deficits or surpluses that would occur if no changes were made to current laws during the period covered by the budget. The baseline assumes that receipts and mandatory spending, which generally are authorized on a permanent basis, will continue in the future as required by current law. The baseline assumes that the future funding for discretionary programs, which generally are funded annually, will equal the most recently enacted appropriation, adjusted for inflation. For accounts that are funded by a continuing resolution for fiscal year 2003, the baseline amounts for discretionary programs were calculated based on the amounts provided by the continuing resolution, except for appropriated entitlements, which are reported at the current law level. This is required by section 257(b) of the BEA.

The baseline represents the amount of resources, in real terms, that would be used by the Government over the period covered by the budget on the basis of laws currently enacted. (Chapter 15, "Current Services Estimates," provides more information on the baseline.)

The baseline serves several useful purposes:

- It may warn of future problems, either for Government fiscal policy as a whole or for individual tax and spending programs.
- It provides a starting point for formulating the President's budget.
- It provides a "policy-neutral" benchmark against which the President's budget and alternative pro-

posals can be compared to assess the magnitude of proposed changes.

- OMB uses it, under the BEA, to determine how much will be sequestered from each account and the level of funding remaining after sequestration.

### PRINCIPAL BUDGET LAWS

The following basic laws govern the Federal budget process:

- **Article 1, section 8**, clause 1 of the Constitution, which empowers the Congress to collect taxes.
- **Article 1, section 9**, clause 7 of the Constitution, which requires appropriations in law before money may be spent from the Treasury.
- **Antideficiency Act (codified in Chapters 13 and 15 of Title 31, United States Code)**, which prescribes rules and procedures for budget execution.
- **Chapter 11 of Title 31, United States Code**, which prescribes procedures for submission of the President's budget and information to be contained in it.
- **Congressional Budget and Impoundment Control Act of 1974 (Public Law 93-344)**, as amended. This Act comprises the:
  - Congressional Budget Act of 1974, as amended, which prescribes the congressional budget process; and
  - Impoundment Control Act of 1974, which controls certain aspects of budget execution.
- **Balanced Budget and Emergency Deficit Control Act of 1985 (Public Law 99-177)**, as amended, which prescribes rules and procedures (includ-

ing "sequestration") designed to eliminate excess spending.

- **Budget Enforcement Act of 1990 (Title XIII, Public Law 101-508)**, which significantly amended key laws pertaining to the budget process, including the Congressional Budget Act and the Balanced Budget and Emergency Deficit Control Act. The Budget Enforcement Act of 1997 (Title X, Public Law 105-33) extended the BEA requirements through 2002 (2006 in part) and altered some of the requirements. The requirements generally referred to as BEA requirements (discretionary spending limits, pay-as-you-go, sequestration, etc.) are part of the Balanced Budget and Emergency Deficit Control Act. The BEA expired at the end of 2002.
- **Federal Credit Reform Act of 1990 (as amended by the Budget Enforcement Act of 1997)**, a part of the Budget Enforcement Act of 1990, which amended the Congressional Budget Act to prescribe the budget treatment for Federal credit programs.
- **Government Performance and Results Act of 1993**, which emphasizes managing for results. It requires agencies to prepare strategic plans, annual performance plans, and annual performance reports.

### GLOSSARY OF BUDGET TERMS

**Advance appropriation** means appropriations of new budget authority that become available one or more fiscal years beyond the fiscal year for which the appropriation act was passed.

**Advance funding** means appropriations of budget authority provided in an appropriations act to be used, if necessary, to cover obligations incurred late in the fiscal year for benefit payments in excess of the amount specifically appropriated in the act for that year, where the budget authority is charged to the appropriation for the program for the fiscal year following the fiscal year for which the appropriations act is passed.

**Agency** means a department or establishment of the Government.

**Allowance** means a lump-sum included in the budget to represent certain transactions that are expected to increase or decrease budget authority, outlays, or receipts but that are not, for various reasons, reflected in the program details.

**Balances of budget authority** means the amounts of budget authority provided in previous years that have not been outlaid.

**Baseline** means an estimate of the receipts, outlays, and deficit or surplus that would result from continuing current law through the period covered by the budget.

**Budget** means the Budget of the United States Government, which sets forth the President's comprehensive financial plan for allocating resources and indicates the President's priorities for the Federal Government.

**Budget authority (BA)** means the authority provided by law to incur financial obligations that will result in outlays. (For a description of the several forms of budget authority, see Budget Authority and Other Budgetary Resources earlier in this chapter.)

**Budget totals** mean the totals included in the budget for budget authority, outlays, and receipts. Some presentations in the budget distinguish on-budget totals from off-budget totals. On-budget totals reflect the

transactions of all Federal Government entities except those excluded from the budget totals by law. The off-budget totals reflect the transactions of Government entities that are excluded from the on-budget totals by law. Under current law, the off-budget totals include the Social Security trust funds (Federal Old-Age and Survivors Insurance and Federal Disability Insurance Trust Funds) and the Postal Service Fund. The budget combines the on- and off-budget totals to derive unified or consolidated totals for Federal activity.

**Budgetary resources** mean amounts available to incur obligations in a given year. The term comprises new budget authority and unobligated balances of budget authority provided in previous years.

**Cap** means the legal limits for each fiscal year on the budget authority and outlays provided by discretionary appropriations.

**Cash equivalent transaction** means a transaction in which the Government makes outlays or receives collections in a form other than cash or the cash does not accurately measure the cost of the transaction. (For examples, see the section on Outlays earlier in this chapter.)

**Collections** mean money collected by the Government that the budget records as either a receipt, an offsetting collection, or an offsetting receipt.

**Credit program account** means a budget account that receives and obligates appropriations to cover the subsidy cost of a direct loan or loan guarantee and disburses the subsidy cost to a financing account.

**Current services estimate**—See *baseline*.

**Deficit** means the amount by which outlays exceed receipts in a fiscal year. It may refer to the on-budget, off-budget, or unified budget deficit.

**Direct loan** means a disbursement of funds by the Government to a non-Federal borrower under a contract that requires the repayment of such funds with or without interest. The term includes the purchase of, or participation in, a loan made by another lender. The term also includes the sale of a Government asset on credit terms of more than 90 days duration as well as financing arrangements for other transactions that defer payment for more than 90 days. It also includes loans financed by the Federal Financing Bank pursuant to agency loan guarantee authority. The term does not include the acquisition of a federally guaranteed loan in satisfaction of default or other guarantee claims or the price support loans of the Commodity Credit Corporation. (Cf. loan guarantee.)

**Direct spending**—See *mandatory spending*.

**Discretionary spending** means budgetary resources (except those provided to fund mandatory spending programs) provided in appropriations acts. (Cf. mandatory spending.)

**Emergency appropriation** means an appropriation that the President and the Congress have designated as an emergency requirement. Such spending is not subject to the limits on discretionary spending, if it is discretionary spending, or the pay-as-you-go rules, if it is mandatory.

**Federal funds group** refers to the moneys collected and spent by the Government through accounts other than those designated as trust funds. Federal funds include general, special, public enterprise, and intragovernmental funds. (Cf. trust funds.)

**Financing account** means a non-budgetary account (its transactions are excluded from the budget totals) that records all of the cash flows resulting from post-1991 direct loan obligations or loan guarantee commitments. At least one financing account is associated with each credit program account. For programs that make both direct loans and loan guarantees, there are separate financing accounts for the direct loans and the loan guarantees. (Cf. liquidating account.)

**Fiscal year** means the Government's accounting period. It begins on October 1st and ends on September 30th, and is designated by the calendar year in which it ends.

**Forward funding** means appropriations of budget authority that are made for obligation in the last quarter of the fiscal year for the financing of ongoing grant programs during the next fiscal year.

**General fund** means the accounts for receipts not earmarked by law for a specific purpose, the proceeds of general borrowing, and the expenditure of these moneys.

**Intragovernmental fund**—See *revolving fund*.

**Liquidating account** means a budget account that records all cash flows to and from the Government resulting from pre-1992 direct loan obligations or loan guarantee commitments. (Cf. financing account.)

**Loan guarantee** means any guarantee, insurance, or other pledge with respect to the payment of all or a part of the principal or interest on any debt obligation of a non-Federal borrower to a non-Federal lender. The term does not include the insurance of deposits, shares, or other withdrawable accounts in financial institutions. (Cf. direct loan.)

**Mandatory spending** means spending controlled by laws other than appropriations acts (including spending for entitlement programs) and spending for the Food Stamp program. Although the Budget Enforcement Act uses the term direct spending to mean this, mandatory spending is commonly used instead. (Cf. discretionary spending.)

**Means of financing** refers to borrowing, the change in cash balances, and certain other transactions involved in financing a deficit. The term is also used to refer to the debt repayment, the change in cash balances, and certain other transactions involved in using a surplus. By definition, the means of financing are not treated as receipts or outlays.

**Obligated balance** means the cumulative amount of budget authority that has been obligated but not yet outlaid. (Cf. unobligated balance.)

**Obligation** means a binding agreement that will result in outlays, immediately or in the future. Budgetary resources must be available before obligations can be incurred legally.

**Off-budget**—See *budget totals*.

**Offsetting collections** mean collections that, by law, are credited directly to expenditure accounts and deducted from gross budget authority and outlays of the expenditure account, rather than added to receipts. Usually, they are authorized to be spent for the purposes of the account without further action by Congress. They result from business-type or market-oriented activities with the public and other Government accounts. The authority to spend offsetting collections is a form of budget authority. (Cf. receipts and offsetting receipts.)

**Offsetting receipts** mean collections that are credited to offsetting receipt accounts and deducted from gross budget authority and outlays, rather than added to receipts. They are not authorized to be credited to expenditure accounts. The legislation that authorizes the offsetting receipts may earmark them for a specific purpose and either appropriate them for expenditure for that purpose or require them to be appropriated in annual appropriation acts before they can be spent. Like offsetting collections, they result from business-type or market-oriented activities with the public and other Government accounts. (Cf. receipts, undistributed offsetting receipts, and offsetting collections.)

**On-budget**—See *budget totals*.

**Outlay** means a payment to liquidate an obligation (other than the repayment of debt principal). Outlays generally are equal to cash disbursements but also are recorded for cash-equivalent transactions, such as the issuance of debentures to pay insurance claims, and in a few cases are recorded on an accrual basis such as interest on public issues of the public debt. Outlays are the measure of Government spending.

**Outyear estimates** means estimates presented in the budget for the years beyond the budget year (usually four) of budget authority, outlays, receipts, and other items (such as debt).

**Pay-as-you-go (PAYGO)** means the requirements of the Budget Enforcement Act that result in a sequestration if the estimated combined result of legislation affecting mandatory spending or receipts is a net cost for a fiscal year.

**Public enterprise fund**—See *revolving fund*.

**Receipts** mean collections that result from the Government's exercise of its sovereign power to tax or otherwise compel payment and gifts of money to the Government. They are compared to outlays in calculating a surplus or deficit. (Cf. offsetting collections and offsetting receipts.)

**Revolving fund** means a fund that conducts continuing cycles of business-like activity, in which the fund charges for the sale of products or services and uses the proceeds to finance its spending, usually without requirement for annual appropriations. There are two types of revolving funds: Public enterprise funds,

which conduct business-like operations mainly with the public, and intragovernmental revolving funds, which conduct business-like operations mainly within and between Government agencies.

**Scorekeeping** means measuring the budget effects of legislation, generally in terms of budget authority, receipts, and outlays for purposes of the Budget Enforcement Act.

**Sequestration** means the cancellation of budgetary resources provided by discretionary appropriations or mandatory spending legislation, following various procedures prescribed by the Budget Enforcement Act. A sequestration may occur in response to a discretionary appropriation that causes discretionary spending to exceed the discretionary spending caps set by the Budget Enforcement Act or in response to net costs resulting from the combined result of legislation affecting mandatory spending or receipts (referred to as a "pay-as-you-go" sequestration).

**Special fund** means a Federal fund account for receipts or offsetting receipts earmarked for specific purposes and the expenditure of these receipts. (Cf. trust fund.)

**Subsidy** means the estimated long-term cost to the Government of a direct loan or loan guarantee, calculated on a net present value basis, excluding administrative costs and any incidental effects on governmental receipts or outlays.

**Surplus** means the amount by which receipts exceed outlays in a fiscal year. It may refer to the on-budget, off-budget, or unified budget surplus.

**Supplemental appropriation** means an appropriation enacted subsequent to a regular annual appropriations act, when the need for funds is too urgent to be postponed until the next regular annual appropriations act.

**Trust fund** refers to a type of account, designated by law as a trust fund, for receipts or offsetting receipts earmarked for specific purposes and the expenditure of these receipts. Some revolving funds are designated as trust funds, and these are called trust revolving funds. (Cf. special fund and revolving fund.)

**Trust funds group** refers to the moneys collected and spent by the Government through trust fund accounts. (Cf., Federal funds group.)

**Undistributed offsetting receipts** mean offsetting receipts that are deducted from the Government-wide totals for budget authority and outlays instead of offset against a specific agency and function. (Cf. offsetting receipts.)

**Unobligated balance** means the cumulative amount of budget authority that is not obligated and that remains available for obligation under law.

***User charges*** are charges assessed for the provision of Government services and for the sale or use of Government goods or resources. The payers of the user charge must be limited in the authorizing legislation to those receiving special benefits from, or subject to

regulation by, the program or activity beyond the benefits received by the general public or broad segments of the public (such as those who pay income taxes or custom duties).

## 26. FEDERAL PROGRAMS BY AGENCY AND ACCOUNT

### **EXPLANATORY NOTE**

This section includes a detailed tabulation containing information on budget authority (BA), and outlays (O), for each appropriation and fund account. Budget authority amounts reflect transfers of budget authority between appropriations. All budget authority items are definite appropriations except where otherwise indicated.

Congressional action on appropriations occasionally results in the establishment of a limitation on the use of a trust fund or other fund, or an appropriation to liquidate contract authority. Amounts for these and other such items, which do not affect budget authority, are included here in parentheses and identified in the stub column, but are not included in the totals.
