BILLING CODE 7590-01-M

[Docket Nos. 50-327 and 50-328]

**Tennessee Valley Authority Sequoyah  
Nuclear Plant, Units 1 and 2;  
Consideration of Issuance of  
Amendments to Facility Operating  
License, Proposed No Significant  
Hazards Consideration Determination,  
and Opportunity for a Hearing**

The U.S. Nuclear Regulatory Commission (the Commission) is considering issuance of an amendment to Facility Operating License Nos. DPR-77 and DPR-79, issued to the Tennessee Valley Authority (TVA or the licensee), for operation of the Sequoyah Nuclear Plant, Units 1 and 2 located in Soddy-Daisy, Tennessee.

The proposed amendments would add a permissive statement to Surveillance Requirement 4.9.7.1 that will allow the auxiliary building bridge crane interlocks and physical stops to be defeated during implementation of the spent fuel pool (SFP) storage capacity increase modification (rerack). This modification was approved by Amendment Nos. 167 and 157 for Unit 1 and Unit 2 respectively, dated April 28, 1993.

The original request and subsequent amendments described the implementation of the SFP storage capacity increase modification in detail, but did not explicitly address the need to actually bypass the crane interlocks and remove the physical stops. This need was implied since the crane would have to be positioned above the SFP to remove and replace the racks. However, when the reracking began, a concern was raised that the inability to perform the crane interlock and physical stops surveillance test was not explicitly allowed by the amendments or the technical specifications. As a result, the reracking has been stopped at considerable expense to the utility and will result in schedule slippage. Also, the components are in an interrum configuration with equipment and tools temporarily in a standby status. Since it is desirable to complete the modification without delay in order to ensure adequate off-load capability, the amendments are being processed on an exigent basis.
