**SUPPLEMENTARY INFORMATION:** Section 3517 of the Paperwork Reduction Act of 1980 (44 U.S.C. Chapter 3517) requires that the Director of OMB provide interested Federal agencies and persons an early opportunity to comment on information collection requests. OMB may amend or waive the requirement for public consultation to the extent that public participation in the approval process would defeat the purpose of the information collection, violate State or Federal law, or substantially interfere with any agency's ability to perform its statutory obligations.

The Director, Information Resources Group, publishes this notice with the attached proposed information collection request prior to submission of this request to OMB. This notice contains the following information: (1) Type of review requested, e.g., expedited; (2) Title; (3) Abstract; (4) Additional Information; (5) Frequency of collection; (6) Affected public; and (7) Reporting and/or Recordkeeping burden. Because an expedited review has been requested, a description of the information to be collected is also included as an attachment to this notice.

Dated: April 24, 1995.

## DEPARTMENT OF ENERGY

### Final Environmental Impact Statement for Programmatic Spent Nuclear Fuel Management and Idaho National Engineering Laboratory Environmental Restoration and Waste Management Programs

**AGENCY:** Department of Energy.

**ACTION:** Notice of Availability.

**SUMMARY:** The Department of Energy (DOE) is giving notice of the availability of the final environmental impact statement (EIS) for Programmatic Spent Nuclear Fuel Management and Idaho National Engineering Laboratory (INEL) Environmental Restoration and Waste Management Programs (DOE/EIS-0203). The final EIS was prepared in accordance with the requirements of the National Environmental Policy Act of 1969 (NEPA); Council on Environmental Quality regulations implementing NEPA, 40 CFR Parts 1500-1508; and DOE NEPA Implementing Procedures, 10 CFR Part 1021. The final EIS addresses Department-wide spent nuclear fuel (SNF) management strategies for the transportation, receipt, storage, and processing of these fuels. In addition, the final EIS addresses proposed environmental restoration and waste management activities at the INEL. The Department of the Navy was a cooperating agency in preparing this EIS.

Upon completion of general distribution of the document, DOE will file the final EIS with the Environmental Protection Agency, which will then publish a Notice of Availability in the Federal Register. The final EIS will also be available to the public in DOE reading rooms and designated information locations which are identified in this notice. DOE plans to issue a Record of Decision on the final EIS by June 1, 1995.

**ADDRESSES:** Requests for copies of the final EIS and for further information on the final EIS should be directed to: U.S. Department of Energy, Idaho Operations Office, Office of Communications, Attention: Brad Bugger, 850 Energy Drive, MS 1214, Idaho Falls, ID 83402. Mr. Bugger can be reached by telephone

at: 208-526-0833. Addresses of DOE Public Reading Rooms, Navy Information Locations, and other locations where the final EIS will be available for public review are listed below under "Supplementary Information."

General information on the DOE NEPA process may be obtained from Ms. Carol Borgstrom, Director, Office of NEPA Policy and Assistance (EH-42), U.S. Department of Energy, 1000 Independence Avenue, SW, Washington, DC 20585. Ms. Borgstrom may be reached by telephone at: (202) 586-4600 or by leaving a message at (800) 472-2756.

#### SUPPLEMENTARY INFORMATION:

##### Background

DOE issued a draft EIS for public comment and published a Notice of Availability in the Federal Register on June 24, 1994 (59 FR 32688). Thereafter, DOE held 33 public hearings in 20 cities across the nation in order to obtain public comments on the draft EIS. In addition, public comments were received by mail, a toll-free telephone line, and facsimile. More than 1,430 commentors, including a broad spectrum of private citizens, businesses, local, state and federal officials, Native American Tribes, and public interest groups, commented on the draft EIS. Comments are summarized in Volume 3 of the final EIS. DOE and Navy responses to those comments are also provided in Volume 3, as well as discussions of which comments resulted in changes to the EIS.

Public comments on the draft EIS were assessed and considered both individually and collectively by DOE and the Navy. Some comments resulted in modifications to the EIS. For other comments, DOE explained why a change to the EIS was not warranted. Most responses to such comments communicated government policy, indicated that the comment was beyond the scope of the EIS, explained the relationship of this EIS to other related NEPA documents, referred commentors to information in the EIS, answered technical questions, or further explained technical issues.

The final EIS, like the draft EIS, addresses the potential environmental impacts associated with alternatives for managing DOE spent nuclear fuel on a national level (Volume 1). The final EIS also addresses potential environmental impacts related to the management of solid, radioactive, mixed and hazardous wastes, spent nuclear fuel, and environmental restoration activities at the INEL (Volume 2). DOE conducted

these analyses as part of the decisionmaking process for: (1) Programmatic (nationwide) decisions regarding the management of DOE and Navy spent nuclear fuel; and (2) site-specific decisions regarding the future direction of the environmental restoration and waste management programs at the INEL. DOE's programmatic decisions will determine the locations for managing existing and projected quantities of spent nuclear fuel from now until the year 2035. DOE's site-specific decisions for INEL will determine how to manage environmental restoration and waste management activities and spent nuclear fuel during the next 10 years. DOE's objectives are to mitigate, through environmental restoration, the impacts of previous operations, and to treat, store, and dispose of waste at INEL in a safe and efficient manner.

#### Alternatives Considered

Programmatic management alternatives for spent nuclear fuel discussed in Volume 1 include: Alternative 1, No Action—perform minimum activities required for safe and secure management at or close to the generation site or current storage location; Alternative 2, Decentralization—storage and stabilization of most spent nuclear fuel at or near the generation site with limited shipments from university and non-DOE facilities; Alternative 3, the 1992/1993 Planning Basis—transport to and store newly generated spent nuclear fuel at INEL or the Savannah River Site and consolidate some existing spent nuclear fuel at INEL; Alternative 4, Regionalization—distribute existing and projected spent nuclear fuel among DOE sites based on fuel type or geographic location (an eastern regional site and a western regional site); and Alternative 5, Centralization—manage all existing and projected spent nuclear fuel at one site until ultimate disposition. Five DOE sites have been analyzed for roles in the management of DOE spent nuclear fuel: (1) the Hanford Site at Richland, Washington; (2) the Idaho National Engineering Laboratory in southeastern Idaho; (3) the Savannah River Site in Aiken, South Carolina; (4) the Oak Ridge Reservation in Oak Ridge, Tennessee; and (5) the Nevada Test Site near Mercury, Nevada. In addition, four Naval shipyards and the Kesselring site (near West Milton, New York) are being considered for management of Naval spent nuclear fuel only. The four Naval shipyards are: (1) Norfolk Naval Shipyard, Portsmouth, Virginia; (2) Portsmouth Naval Shipyard, Kittery, Maine; (3) Pearl Harbor Naval Shipyard,

Honolulu, Hawaii; and (4) Puget Sound Naval Shipyard, Bremerton, Washington.

The INEL site-specific alternatives related to environmental restoration and waste management discussed in Volume 2 include: Alternative A, No Action—complete all identified near-term actions and continue to operate most existing facilities; Alternative B, the 10-Year Plan—complete all identified actions and initiate new projects to enhance cleanup, manage laboratory wastes and spent nuclear fuel; Alternative C, Minimum Treatment, Storage, and Disposal—minimize treatment, storage and disposal activities to the extent possible, conduct minimum cleanup and decontamination and decommissioning activities prescribed by regulation and transfer spent nuclear fuel and waste from environmental restoration activities to another site; and Alternative D, Maximum Treatment, Storage, and Disposal—maximize treatment, storage and disposal functions at INEL to accommodate waste and spent nuclear fuel from the DOE complex and conduct maximum cleanup and decontamination and decommissioning.

#### Preferred Alternatives

DOE's preferred alternatives are identified in the final EIS. The identification of the preferred alternatives for Volume 1 and Volume 2 was based on consideration of environmental impacts, regulatory compliance, DOE and Navy spent nuclear fuel programmatic missions, Idaho National Engineering Laboratory environmental restoration and waste management programs, public comments, national security and defense, and cost.

#### Preferred Alternative for Programmatic Spent Fuel Management (Volume 1)

The DOE's preferred alternative for programmatic spent nuclear fuel management is Regionalization-By-Fuel-Type (Alternative 4A). Under this alternative, aluminum clad fuel would be consolidated at the Savannah River Site, non-aluminum fuel (including spent nuclear fuel from the Fort Saint Vrain reactor in Colorado) would be consolidated at the Idaho National Engineering Laboratory, and defense production fuel would be retained at the Hanford Site.

The Navy would continue to conduct refueling and defueling of nuclear-powered vessels and prototypes, and to transport spent nuclear fuel to the Idaho National Engineering Laboratory for full examination at the Expanded Core Facility and interim storage. Following

examination, fuel would remain in storage at the Idaho National Engineering Laboratory. The DOE preferred alternative is consistent with the Navy's preferred alternative identified in the draft EIS.

Under the preferred alternative, facility upgrades, replacements, and additions would be undertaken as necessary, and research and development activities would be conducted. Spent nuclear fuel processing might also occur. Other forms of stabilization might be needed to provide for safe storage and/or transport. Site-specific spent nuclear fuel management decisions will be made after further site-specific or project-specific NEPA evaluations, as appropriate, have been prepared.

The final EIS also states that for planning purposes, DOE assumes that some or all of the SNF in its inventory that satisfies a geologic repository's acceptance criteria, could be placed in the first repository developed under the Nuclear Waste Policy Act, as amended. While sufficient quantity and quality of information are still not available to determine whether the Yucca Mountain site is a suitable candidate for geologic disposal of SNF and high-level radioactive wastes, DOE is in the early planning stages of a repository EIS which will be prepared pursuant to the directives of the Nuclear Waste Policy Act, as amended. Until the repository EIS is complete, no final decision could be made concerning what DOE SNF would be accepted in a geologic repository.

#### Preferred Alternative for Environmental Restoration and Waste Management Programs at the Idaho National Engineering Laboratory (Volume 2)

The DOE's preferred alternative for INEL environmental restoration and waste management programs is the Ten Year Plan (Alternative B) enhanced to include elements from other alternatives. Under the preferred alternative, ongoing spent nuclear fuel management, environmental restoration, and waste management activities would continue and be enhanced to meet current and anticipated spent nuclear fuel management and waste handling needs. These enhanced activities, related to acceptance of additional offsite-generated materials and waste, would be needed to comply with applicable regulations and agreements. Existing environmental restoration and waste management facilities and projects would continue to operate. Waste generation from onsite sources would increase, as a result of regulatory

requirements and increased environmental restoration activities. In addition to existing facilities and projects, projects proposed under Alternative B for 1995 through 2005 would be implemented to meet the current Idaho National Engineering Laboratory mission, comply with negotiated agreements and commitments, and enhance cleanup.

Spent nuclear fuel, transuranic and mixed low level waste would be received from other sites. These activities may be modified following other evaluations currently underway, including proposed actions being negotiated pursuant to Federal Facility Compliance (FFC) Act site treatment plans, the Waste Management Programmatic Environmental Impact Statement and other NEPA Reviews. Generally, the transuranic and mixed low-level waste would be treated and returned to the site of origin (generator) or transported to an approved offsite disposal facility, depending on agreements to be negotiated under the FFC Act with the State of Idaho, the Environmental Protection Agency, and with other affected States. Plans would be developed for a high-level waste treatment facility that would minimize resulting high-radioactivity waste. Ongoing remediation and decommissioning and decontamination projects would continue and additional projects would be constructed.

#### Availability of Copies of the Final EIS

Copies of the final EIS are being distributed to Federal, State, and local officials and agencies; to organizations and individuals known to be interested in the EIS; and to persons and agencies that commented on the draft EIS. Additional copies may be obtained by contacting Mr. Bugger at the above address. Copies of the final EIS, including appendices, comment letters, public hearing transcripts, and the DOE responses to comments, will be available for public review at the locations listed below. Microfiche copies of selected reference materials will also be available in DOE Reading Rooms and Navy Information Locations listed below. Copies of the reference material may also be obtained upon request.

The final EIS, including appendices, is more than 5,100 pages in length, and is separately bound into the following portions:

#### Summary of the EIS

Volume I—Programmatic Spent Nuclear Fuel Management EIS (includes Appendices G through L).

Appendix A—Hanford Site Spent Nuclear Fuel Management Program.

Appendix B—Idaho National Engineering Laboratory Spent Nuclear Fuel Management Program.

Appendix C—Savannah River Site Spent Nuclear Fuel Management Program.

Appendix D—Naval Spent Nuclear Fuel Management.

Appendix E—Spent Nuclear Fuel Management at Other Sites.

Appendix F—Nevada Test Site and Oak Ridge Reservation Spent Nuclear Fuel Management.

Volume II—INEL Environmental Restoration and Waste Management Programs EIS (includes Appendices A through F).

Volume III—Response to Public Comments.

The 80-page Summary is available for review for those who do not wish to have the entire final EIS. When requesting copies of the final EIS, please indicate whether you wish to receive only the summary, or the entire final EIS and all of its associated appendices, or specific volumes or appendices, as listed above.

**BILLING CODE 6450-01-P**

#### **Notice of Floodplain Involvement for Casey's Pond Improvement Project at Fermi National Accelerator Laboratory, Batavia, IL**

**AGENCY:** U.S. Department of Energy (DOE).

**ACTION:** Notice of floodplain involvement.

**SUMMARY:** DOE proposes to construct a six acre cooling pond in a floodplain located in DuPage County, Illinois. Approximately 15% of the new pond would be within the 100-year floodplain of Kress Creek on the Fermi National Accelerator Laboratory (Fermilab) site. In accordance with DOE Regulations for Compliance with Floodplains/Wetlands Environmental Review Requirements (10 CFR Part 1022), DOE will prepare a floodplain assessment and will perform this proposed action in a manner so as to avoid or minimize potential harm to or within the affected floodplain.

**DATES:** Comments are due to the address below no later than May 15, 1995.

**ADDRESSES:** Comments should be addressed to Andrew E. Mravca, Area Manager, Batavia Area Office, U.S. Department of Energy, P.O. Box 2000, Batavia, Illinois 60510.

**FOR FURTHER INFORMATION ON THIS PROPOSED ACTION, CONTACT:** Andrew E. Mravca, Area Manager, Batavia Area Office, U.S. Department of Energy, P.O. Box 2000, Batavia, Illinois 60510, Phone: (708) 840-3281, FAX: (708) 840-3285.

**FOR FURTHER INFORMATION ON GENERAL DOE FLOODPLAIN ENVIRONMENTAL REVIEW REQUIREMENTS, CONTACT:** Dr. W. Sedgefield White, Chicago Operations Office, U.S. Department of Energy, 9800 South Cass Avenue, Argonne, Illinois 60439, Phone: (708) 252-2101, FAX: (708) 252-2835.

**SUPPLEMENTARY INFORMATION:** The proposed action would consist of two parts. The first would be to add a six acre pond to an existing system of surface waters including ponds and ditches to provide needed additional cooling capacity. The second would be to install a transfer pipe and pumphouse to connect Casey's Pond to the existing surface water storage system to provide more efficient use of surface water storage capacity. The cooling water from the existing system is used primarily to cool heat exchangers located within the fixed target experimental complex at Fermilab. The additional cooling capacity and effective use of storage capacity is needed to avoid inefficiency and potential system shutdowns due to overheating. The added cooling would also help to avert unacceptable thermal discharges to Kress Creek. The new pond also would provide increased storage capacity for fire protection systems. Consultation with the Illinois Environmental Protection Agency and the Illinois Department of Transportation has been initiated to obtain the required permits.

In accordance with DOE regulations for compliance with floodplain and wetlands environmental review requirements (10 CFR Part 1022), DOE will prepare a floodplain assessment for this proposed DOE action.

The assessment will be included in the Environmental Assessment (EA) prepared for the proposed project in accordance with the requirements of the National Environmental Policy Act. Should the evaluation of environmental impacts in the EA support a finding of no significant impact (FONSI), the floodplain statement of finding shall be included. In the event an environmental impact statement (EIS) is needed, the floodplain statement will be contained in the record of decision (ROD).

Issued in Argonne, Illinois, this 12th day of April 1995.

**BILLING CODE 6450-01-P**

#### **Chicago Operations Office, Federal Assistance Solicitation for Cooperative Agreement Proposals**

**AGENCY:** U.S. Department of Energy.

**ACTION:** Notice of availability of a Federal assistance solicitation for cooperative agreement proposals.

**SUMMARY:** The U.S. Department of Energy (DOE) pursuant to the DOE Financial Assistance Rule 10 CFR 600.9, announces the availability of a solicitation, FASCAP No. DE-SC02-95CE41122, for the Industrial Heating Equipment Research Program. This notice supersedes Federal Register Publication dated February 7, 1995, (60 FR 7178).

**FOR FURTHER INFORMATION CONTACT:** Cynthia Anderson, U.S. Department of Energy, Chicago Operations Office, 9800 South Cass Avenue, Argonne, IL 60439, (708) 252-2844.

**SUPPLEMENTARY INFORMATION:** The U.S. Department of Energy (DOE) plans to issue a Federal Assistance Solicitation for Cooperative Agreement Proposals (FASCAP), April 21, 1995 for the Industrial Heating Equipment Research Program. The program has the following objectives: (1) To improve industrial energy use efficiency and productivity in heating and combustion for process heat by at least 20%; (2) to improve and increase the use of waste-source fuels; (3) to reduce the national environmental impacts of industrial wastes that results from less efficient production and delivery of process heat; and (4) to lower the industrial production costs and improve the competitive position of U.S. industry relative to foreign-based industry.

The areas of interest of the Solicitation are centered on four main targeted areas that economically conserve energy while minimizing or reducing waste materials. They are (1) optimization of heat transfer to furnace loads, (2) development of adjustable co-fired combustors/combustion chambers for converting industrial waste to process heat or electric power, (3) development of low-cost combustion controls for improving efficiency of multi-burner boilers and industrial furnaces, and (4) high temperature (Order of 2000 degrees F) particulate removal system for application to solid-fueled gas turbines. The Solicitation will apply to any or all of the DOE Industries of the Future, which are high consumers of heating fuel. These industries presently include petroleum, chemicals, pulp/paper, aluminum, glass and steel. Initial funding will favor proposals that apply to the glass industry, and to more than one of the
