DEPARTMENT OF ENERGY

Financial Assistance Award Intent to Award a Grant to Fusion Lighting, Incorporated for the Office of Energy Efficiency and Renewable Energy

AGENCY: U. S. Department of Energy.

ACTION: Notice of Non-Competitive Financial Assistance Solicitation.

SUMMARY: The Department of Energy announces that pursuant to 10 CFR 600.6(a)(5), it is making a discretionary financial assistance award based on the criterion set forth at 10 CFR 600.7(b)(2)(i)(A) to Fusion Lighting, Incorporated under proposed grant number DE-FG01-95EE23796. Total estimated funding in the amount of \$2,620,000 over a period of two years will be provided to Fusion Lighting for this effort. The Department of Energy will provide funding to Fusion Lighting to continue development of both the high and low power versions of the high efficiency Sulfur Lamp (S-Lamp). The following work will be done on each of the following sub-systems common to both the high and low power lamps: (1) development of an electrical power supply for converting power from an electrical power main to radio frequency (RF) or microwave frequency; and (2) output from the power supply (RF or microwave) is matched and coupled to the light emitting bulb.

The Department of Energy has determined in accordance with 10 CFR 600.7(b)(2)(i)(A) that the "the activity is necessary to the satisfactory completion of, or is a continuation or renewal of, an activity presently being funded by the Department of Energy or another Federal agency, and for which competition for support would have a significant adverse effect on continuity or completion of the activity." The continuity of the effort is critical at this time in order to maintain research momentum and research staff. It is also highly important to follow up as soon as possible on consequences and applications related to the initial discovery and development of the lamp.

Fusion Lighting has been involved in the development of both low and high power versions for the S-Lamp. They have identified personnel and resources capable of performing the activities, and

they have extensive experience related to this research.

This award will serve the public by supporting efforts to develop an illumination source which is energy efficient and environmentally friendly. This technology could result in considerable savings for consumers in electric energy expenditures, as well as reductions in environmental pollutants produced by electrical generating plants.

The period of performance is two years from the date of award.
