Joint Draft Supplemental Environmental Impact Statement/ Supplemental Draft Environmental Impact Report (DSEIS/SDEIR) American River Watershed Project, California

AGENCY: Army Corps of Engineers, Sacramento District (Federal); The Reclamation Board (State), Sacramento Area Flood Control Agency (Local).

ACTION: Notice of availability.

SUMMARY: This DSEIS/SDEIR analyzes the potential environmental and related impacts associated with three candidate plans to increase flood protection to the Sacramento area. The Folsom Modification Plan would reduce the probability of flooding to less than 1 chance in 180 in any given year by increasing the seasonal flood storage in Folsom Reservoir to a space varying from 475,000 to 720,000 acre-feet, constructing 24 miles of seepage cutoff in the levees along the lower American River, and raising and stabilizing 12 miles of Sacramento River levees in Natomas. This plan would reduce water-supply capacity and hydropower production at Folsom Reservoir as a result of the permanent increase in seasonal flood storage space. Some environmental resources at the reservoir and along the lower American River would be adversely affected. The Folsom Stepped Release Plan would reduce the probability of flooding to less than 1 chance in 230 in any given year by continuing the variable seasonal flood storage reservation at Folsom Reservoir of 400,000 to 670,000 acre-feet, constructing 2 miles of new levees and 2 miles of floodwall, 26 miles of seepage cutoff in the levees along lower American River; raising and stabilizing 12 miles of Sacramento River levees in Natomas; widening the Sacramento Bypass 1,000 feet; and modifying 52 miles of levees along the Yolo Bypass. The Detention Dam Plan would reduce the probability of flooding to less than 1 chance in 500 in any given year. This plan consists of constructing a 508-foot high concrete dam that could

temporarily impound a total of 894,000 acre-foot of water near Auburn, constructing 24 miles of seepage cutoff in the levees along the lower American River, and raising and stabilizing 12 miles of Sacramento River levees in Natomas. About 1,533 acres of vegetation would be lost due to construction and operation of this plan.

This DSEIS/SDEIR has been prepared to fulfill the requirements of the National Environmental Policy Act and the California Environmental Quality Act. The overall analysis considered an array of alternative plans developed to meet the primary planning objective of improving flood protection for the City of Sacramento while avoiding or minimizing adverse environmental and related impacts to the maximum extent practicable. This document does not recommend a plan. The State and SAFCA will identify their Recommended Plan following receipt of comments on this document.
