Background

On February 25, 1994, Turbomeca applied for an amendment to Type Certificate No. E19EU to add a new Model Arriel 2S1 turboshaft engine. The Model Arriel 2S1 turboshaft engine, a derivative of the Arriel 1 turboshaft engine will be rated at 30-Second OEI, 2-Minute one engine inoperative (OEI), Continuous OEI, Takeoff, and Maximum Continuous ratings.

The applicable airworthiness requirements do not contain 30-Second OEI and 2-Minute OEI rating definitions, and do not contain adequate or appropriate safety standards for the type certification of these new and unusual engine ratings.

Type Certification Basis

Under the provisions of section 21.101 of the Federal Aviation Regulations (FAR's) Turbomeca must show that the new Model Arriel 2S1 turboshaft engine meets the applicable provisions of the regulations incorporated by reference in Type Certificate No. E19EU or the applicable regulations in effect on the date of application. The FAR's incorporated by reference in type Certificate No. E19EU are: Section 21.29 and part 33, effective February 1, 1965, as amended.

The Administrator finds that the applicable airworthiness regulations in part 33, as amended, do not contain adequate or appropriate safety standards for the Turbomeca Arriel 2S1 turboshaft engine because of the new and unique engine ratings. Therefore, the Administrator proposes special conditions under the provisions of section 21.16 to establish a level of safety equivalent to that established in the regulations.

Special conditions, as appropriate, are issued in accordance with section 11.49 of the FAR after public notice and opportunity for comment, as required by sections 11.28 and 11.29(b), and become part of the type certification basis in accordance with section 21.17(a)(2).

Conclusion

This action affects only certain novel or unusual design features on one model engine. It is not a rule of general
