Proposed Project: Pilot Research for Epidemiologic Studies of Migrant and Seasonal Farmworkers—New—A pilot study will be conducted to evaluate the ability to trace farmworkers over extended periods of time, to determine cancer diagnosis and treatment patterns among migrant and seasonal farmworkers, and to assess the reliability of farm work histories from

farmworkers and from their spouses. The information will be used by the National Cancer Institute to identify the most appropriate study design, case ascertainment procedures, and exposure assessment methods for a full-scale epidemiologic study of cancer among migrant and seasonal farmworkers. Determining the feasibility of using automated data collection techniques to obtain occupational histories from farmworkers will be part of this project. Burden estimates are as follows:

	Number of respondents	Number of responses per respondent	Average burden/response (hours)
Farmworkers and families	230	1	.33
Farmworker relatives of cancer patients	300	1	.25
Farmworkers and spouses	160	1	1.00
Farmworker Opportunity Program clients	50,000	1	.10
