

improve the CES design by developing the best approach to incorporate births into the CES sample.

This will reduce or eliminate the need for substantial "bias adjustments" currently applied to the CES sample.

This survey will utilize computer assisted telephone interview (CATI) techniques to administer the birth questionnaire to sampled units. Those units that are classified as births will further answer questions on employment and Standard Industrial Class (SIC) verification. These units will be asked only to submit employment figures for each subsequent month during a two-year period by either CATI or Touch-Tone Data Entry (TDE).

The sample design calls for the probability of small establishments being selected to be smaller than the probability for larger establishments. This will reduce response burden for small business.
