

Potential threats include trampling and overgrazing by livestock and wild horses and burros, and increasing recreational use of the species' habitat. Recovery efforts will focus on restoring historical habitat in one spring outflow, monitoring population stability and health, and eliminating threats from ongoing habitat modification and sympatric nonnative species. Habitat for desert dace is currently public land administered by the Bureau of Land Management and private land under a conservation easement.

Soldier Meadows cinquefoil are also endemic to Soldier Meadows, although one additional population occurs in Ash Valley, Lassen County, California. In Soldier Meadows, the species occupies alkali meadow, seep, and marsh habitats bordering thermal springs, outflow streams, and depressions. Soldier Meadows contains 10 subpopulations of the cinquefoil. An estimated 84,650 individual plants are distributed on approximately 28 hectares (69 acres). Threats to the species include habitat modifications due to agricultural diversions, trampling and overgrazing by livestock and wild horses and burros, and recreational use; and competing nonnative plants. Conservation efforts will focus on eliminating threats from ongoing habitat modification and invading nonnative plants, and monitoring population stability and health. Habitat for Soldier Meadows cinquefoil in Soldier Meadows is currently public land administered by the Bureau of Land Management and private land under a conservation easement.
