**BILLING CODE 7590-01-P**

**NRC Bulletin 96-01, Control Rod Insertion Problems Issuance of Bulletin**

**AGENCY:** Nuclear Regulatory Commission.

**ACTION:** Notice of issuance.

**SUMMARY:** The Nuclear Regulatory Commission (NRC) has issued Bulletin 96-01 to alert holders of pressurized water reactor (PWR) licenses (except those licenses that have been amended to possession-only status) to several recent events in which control rods have failed to completely insert into the reactor core after receiving a scram signal, and assess the operability of control rods, particularly in high burnup fuel assemblies. It is expected that all PWR license holders will review the information for applicability to their facilities and consider actions, as appropriate, to avoid similar problems. However, action is only requested from PWR license holders of Westinghouse-designed plants. This bulletin is available in the NRC Public Document Room under accession number 9603120001. This bulletin is discussed in Commission information paper SECY-96-048 which is also available in the NRC Public Document Room.

**DATES:** The bulletin was issued on March 8, 1996.

**ADDRESSES:** Not applicable.

**FOR FURTHER INFORMATION CONTACT:** Laurence I. Kopp, (301) 415-2879 (or Internet:lik@nrc.gov).

**SUPPLEMENTARY INFORMATION:** Several recent events in domestic reactors, as well as similar events in foreign reactors, have raised concerns about the operability of control rods in high burnup fuel assemblies, and may be precursors of more significant control rod binding problems in which required shutdown margins and rod drop times may be violated. Therefore, the NRC issued this bulletin to request that licensees promptly inform operators of recent events in which control rods did not fully insert and subsequently provide necessary training in required emergency response procedures. The bulletin also requests licensees to promptly determine the continued

operability of control rods based on current information, to measure and evaluate control rod performance characteristics at each outage of sufficient duration during 1996, and assess the operability and performance trend of the rods, in particular those which do not fully insert promptly, for each reactor trip during 1996.
