will be preserved within the Conservation Plan area and approximately 1,000 acres will be subject to incidental take in the permit area. For the golden-cheeked warbler, approximately 26,753 acres of potential habitat is located within the permit area and may be subject to incidental take. This potential warbler habitat could support from 1,605 to 3,210 pairs of warblers. Of the 45,368 acres of potential karst invertebrate habitat occurring in the permit area, approximately 38,349 acres will be unprotected by the proposed Conservation Plan.

To minimize and mitigate the impacts of take, the applicants propose to conserve a minimum of 30,428 acres of black-capped vireo and golden-cheeked warbler habitat in a preserve system; provide for the ongoing maintenance, patrol, and biological management of the conserved habitat; conduct the biological monitoring and research activities in support of the Conservation Plan; and provide funds to implement the habitat Conservation Plan. Alternatives considered include no action; issuance of the permit with the submitted Balcones Canyonlands Conservation Plan and a 30,428 acre preserve; and issuance of the permit with the submitted Balcones Canyonlands Conservation Plan and a 35,428 acre preserve.
