

five main reasons: (1) The OES survey produces valid, reliable data; (2) it significantly reduces the burden on the respondent; (3) it produces the first national wage rate survey with comparable methodology across all locales; (4) it standardizes the collection process; and (5) it costs \$7 million less than the current system.

As indicated, in addition to the use of wage data with the Alien Labor Certification process, reliable wage data have many other practical uses. Wage data can enhance information currently provided under the JTPA and Perkins Act. OES wage data also can inform important legal and administrative decisions such as Social Security adjudication, Unemployment Insurance work-search requirements, or minimum wage deliberations. Timely and reliable wage information is a valuable commodity to vocational trainers and enrollees.

II. Current Actions

BLS plans to revise the collection method of the OES survey. The revised OES survey will continue to be a probability-based sample survey of nonfarm establishments. Beginning in 1996, the OES survey will implement three major changes: (1) The sample will include all industries each year; (2) Estimates will be produced for 360 sub-State areas; and (3) Wage information will be collected for all States.

Although OES will continue to operate on a three-year cycle, under the revised sampling procedures the OES survey will collect both occupational employment and wage information each year for all nonagricultural industries. To minimize response burden, the new sampling system will include an establishment, at most, once every three years. With the revised sampling procedures, the OES survey will produce employment and wage estimates on an annual basis.

The OES sample is designed to yield reliable estimates by industry at the national, State, and sub-State levels. The revised OES survey will allow for estimates in 360 areas (310 Metropolitan Statistical Areas (MSAs) and other specified sub-State areas.) The sampling frame will stratify units by industry, geographic area, and by size of establishment. Establishments that employ 250 or more employees at a single worksite will be sampled with certainty once every three years.

The revised survey solicits occupational employment information by wage ranges. A respondent participating in the OES survey will provide the number of employees by occupation, broken out across 11 wage

range categories. The survey will be a cost-effective, statistically reliable method of producing occupational wage distributions as well as mean and median wage estimates. To comply with the Alien Labor Certification legislation, State agencies will use the OES survey in place of current State wage surveys. The overall effect on respondents will be a decrease in burden placed on them by Federal and State government agencies.
