NRC Bulletin 96-03, Potential Plugging of Emergency Core Cooling Suction Strainers by Debris in Boiling-Water Reactors

AGENCY: Nuclear Regulatory Commission.

ACTION: Notice of issuance.

SUMMARY: The Nuclear Regulatory Commission (NRC) has issued Bulletin 96-03 to request boiling-water reactor (BWR) licensees to implement measures to ensure the capability of the emergency core cooling system (ECCS) to perform its safety function following a loss-of-coolant accident (LOCA), and require that BWR licensees report to the NRC whether and to what extent the requested actions will be taken and to notify the NRC when the actions associated with the bulletin are complete. This bulletin is available in the NRC Public Document Room under accession number 9605020119. This bulletin is discussed in Commission information paper SECY-96-087 which is also available in the NRC Public Document Room.

DATES: The bulletin was issued on May 6, 1996.

ADDRESSES: Not applicable.

FOR FURTHER INFORMATION CONTACT: Robert B. Elliott, (301) 415-1397 or Internet: rbe@nrc.gov, or M. David Lynch, (301) 415-3023 or Internet: mdl@nrc.gov.

SUPPLEMENTARY INFORMATION: The NRC issued this bulletin to request BWR licensees to implement appropriate procedural measures and plant modifications to minimize the potential for clogging of ECCS suppression pool suction strainers by debris generated during a LOCA. The NRC has identified three potential resolution options, which include (1) the installation of a large capacity passive strainer design, (2) the installation of a self-cleaning strainer, and (3) the installation of a backflush system. However, licensees may propose an alternative course of action provided it offers an equivalent level of assurance that the ECCS will be

able to perform its safety function following a LOCA. The actions requested by this bulletin are considered backfits in accordance with NRC procedures and are necessary to ensure compliance with existing NRC rules and regulations. In particular, Section 50.46 of Title 10 of the *Code of Federal Regulations* (10 CFR 50.46) requires that adequate ECCS flow be provided to maintain the core temperature at an acceptably low value and to remove decay heat for the extended period of time required by the long-lived radioactivity remaining in the core following a design basis accident. Therefore, this bulletin was issued as a compliance backfit under the terms of 10 CFR 50.109(a)(4)(i).

Dated at Rockville, Maryland, this 7th day of May, 1996.

For the Nuclear Regulatory Commission.

Brian K. Grimes,

Acting Director, Division of Reactor Program Management, Office of Nuclear Reactor Regulation.
