SUPPLEMENTARY INFORMATION: EPA is required by law to reregister existing

pesticides that originally were registered years ago when the standards for government approval were less stringent than they are today. This comprehensive reevaluation of pesticide safety is critical to protecting human health and the environment. In 1988, Congress amended the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) to strengthen and accelerate EPA's reregistration program. The reregistration scheme mandated by "FIFRA '88" applies to each registered pesticide product containing an active ingredient initially registered before November 1, 1984.

In 1988 approximately 600 groups of related pesticide active ingredients, or "cases," representing 1,150 active ingredients in 45,000 formulated products, required reevaluation. Of those, over 200 cases and 20,000 products have been cancelled because the producers failed to support them or EPA has taken regulatory action to cancel them. Of the remaining 382 cases being supported, EPA has made reregistration eligibility decisions on 129 cases, to date.

In reviewing pesticides for reregistration, EPA gathers a substantially complete set of data on each chemical case, examines related health and environmental effects, and employs measures to most effectively mitigate risks. This evaluation and risk mitigation process is complete when EPA is satisfied that the pesticide(s), used in accordance with approved labeling, will not pose unreasonable risks to human health or the environment.

EPA's regulatory conclusion about each case is presented in a RED document. Later, once product-specific data and revised labeling are submitted to EPA and approved, the Agency reregisters products containing the eligible pesticide(s). A pesticide product is not reregistered, however, until all of its active ingredients are eligible for reregistration.

EPA completed 40 REDs in fiscal year 1995 (FY '95). (The federal government's fiscal year begins on October 1 and ends on September 30 of the named year.) Several of the FY '95 RED documents, while signed, still are undergoing in house processing including printing. Copies of most, but not all, of these REDs are available. The FY '95 REDs follow:

- Amitraz
- Ancymidol

During FY '96, EPA's goal is to complete 40 REDs from the following list of 50 candidate pesticide reregistration cases. The Agency believes it has a substantially complete data base regarding the human health and environmental effects of each of these pesticides. However, due to the complexities involved in refining risk mitigation measures, and available Agency resources, EPA's goal is to complete REDs for only 40 of these 50 candidates, this year.

EPA's goal is to complete an additional 40 REDs during FY '97. These most likely will consist of some FY '96 RED candidates from the list above, plus other RED candidates from the two lists below. The first list below contains 17 pesticide reregistration cases for which the Agency already has begun to develop scientific assessments.

- Benomyl
- Bromoxynil
- Butralin
- Cypermethrin
- DEF
- Dimethoate
- Fluvalinate
- Fonofos
- Methodathion
- Oxamyl
- Oxyfluorfen
- PCNB
- Permethrin
- Sulprofos
- Thiobencarb
- Thiodicarb
- Triclopyr

EPA expects to have complete data sets in FY '97 for the following pesticide reregistration cases, but has not yet scheduled scientific assessments or REDs for these cases. Due to the limited Agency resources available to make reregistration eligibility decisions, EPA's goal is to complete a total of about 40 REDs during the next fiscal year. In addition to the cases listed above, science reviews will be completed for some of the cases listed below, in preparation for REDs in future years.

The public is invited to submit information to assist the Agency in prioritizing the following pesticides for reregistration eligibility decisions in FY '97. EPA is interested in knowing which of these pesticides are of the greatest interest or concern to the public from a human health or environmental perspective, and why, so that our

limited resources may be focused most effectively.

Of these pesticides, those that the Agency believes may pose high dietary, occupational, or residential exposure or risk are ones that the Agency would give priority to in its reregistration evaluation. Therefore, information of particular value to the Agency in prioritizing these FY '97 candidates should relate to exposure and risks from use of the chemicals.
