SUPPLEMENTARY INFORMATION:

I. Background

The National Longitudinal Survey of Youth79 (NLSY79) has been conducted since 1979. It consists of a nationally representative sample of individuals who were age 14 to 21 in 1979. The cohort members were interviewed annually from 1979 to 1994. After the 1994 interview, the survey was moved to a biennial cycle.

The data collected by the NLSY79 will contribute to the knowledge about labor market processes involved in transitions between jobs, job searches, and hierarchies within jobs. Survey data will contribute to the knowledge about individuals' ability to succeed in the job market and how levels of success relate to educational attainment, vocational training, prior occupational experiences, and general and job-specific experiences.

The NLSY79 research contributes to the formation of national policy in the areas of education, training and employment programs, and unemployment compensation. In addition, members of the academic community publish articles and reports based on these NLSY79 data for the Department of Labor (DOL) and other funding agencies. The DOL uses the changes measured in the labor market to design programs that would ease employment and unemployment problems. The survey design provides data gathered over time to form the only data set that contains this information. Without the collection of these data, an
