Food and Drug Administration

Pulmonary Artery Catheter and Clinical Outcomes Workshop: Public Workshop

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is announcing a public workshop entitled "Pulmonary Artery Catheter and Clinical Outcomes Workshop" to address critical concerns related to the use of pulmonary artery catheters, and to identify any other significant issues that clinicians, manufacturers, and other interested parties may have in clinical use of this device.

DATES: The public workshop will be held on Monday, August 25, 1997, from 8 a.m. to 5 p.m., and Tuesday, August 26, 1997, from 9 a.m. to 12 m. Submit written notices of participation by August 21, 1997.

ADDRESSES: The public workshop will be held at the Holiday Inn Old Town Select, 480 King St., Alexandria, VA. Submit written notices of participation to the contact person listed below.

FOR FURTHER INFORMATION CONTACT:

Carole C. Webb, Center for Devices and Radiological Health (HFZ-520), 1350 Piccard Dr., Rockville, MD 20850, 301-594-3948, or internet "CCW@cdrh.fda.gov".

SUPPLEMENTARY INFORMATION:

Pulmonary artery catheters (PAC's), also known as right heart catheters, provide data on blood pressure, blood flow, and oxygen levels that many doctors consider crucial to the care of critically ill hospital patients. A study reported in the September 18, 1996, *Journal of the American Medical Association* (JAMA), however, suggests use of these catheters may increase risks of morbidity and mortality (the JAMA article).

PAC's have been used in the practice of critical care medicine since 1970. The initial marketing of these devices preceded FDA's authority to regulate medical devices which began in 1976. The JAMA article by Connors et al. examined the survival of patients monitored with and without this device in an intensive care setting. The Connors et al. study does not provide evidence that the catheter itself is unsafe; however, it does raise questions about the benefit to patients of the device as it is currently being used. Concerns about the benefits and risks of using PAC's are not new. As early as 1987, other scientists found a greater risk of morbidity and mortality in use of PAC's, but those early studies, as in the Connors et al. study, were not randomized. Although the Connors et al. study showed a relationship between use of PAC's and a higher risk of death, it did not show that use of the catheter caused those additional deaths. The additional risk might be related to how information gained from the catheter is used or the result of medical therapy a patient receives. It is possible the results may not apply when the catheter is used for diseases or in situations other than those studied by Connors et al. The device provides important clinical information relied upon in determining a course of treatment. However, FDA and the National Institutes of Health (NIH) believe rigorous scientific evaluations of the device may be needed in evaluating the context of appropriate clinical care.

The Pulmonary Artery Catheter and Clinical Outcomes Workshop will be cosponsored by FDA and NIH. The goals of the workshop are to summarize the following:

- (1) Clinical indications, benefits, and major risks of PAC use;
- (2) Current standards for clinical practice in PAC use;

(3) The need and specific clinical issues for PAC use in specific patient populations;

(4) To identify suggestions or opportunities for future research, regulatory action, or clinical practice guidelines.

The workshop will commence with introductions, overviews of goals, discussion of contemporary clinical knowledge of PAC use, and catheter technology issues. Two concurrent sessions will be convened in the morning and afternoon. Each session will cover two major disease and trauma topics in separate breakout groups. The first pair of breakout groups will focus on PAC use in respiratory disease and trauma/perioperative/postoperative management. The second pair of breakout groups will include sepsis/multiorgan dysfunction syndrome and cardiovascular disease. The objective of these sessions will be to debate critical clinical issues specific to these areas. Attendees may observe any available session and may participate in open discussions. Following these sessions, cochairs will guide their teams to identify pragmatic and prioritized research considerations. On August 26, 1997, each group will present their report to the entire workshop. Open discussions and concluding remarks will follow. Cochairs will only remain after the formal part of the workshop to discuss areas of disagreement and to write the first draft of the final document. It is expected the final document will be delivered to Federal agencies within 2 weeks.

Dated: August 13, 1997.

William K. Hubbard,

Associate Commissioner for Policy Coordination.
