### Bureau of Reclamation

#### Prospective Grant of Exclusive Patent Licenses—Filing Receipt Number: S.N. 08/933, 175—Sept. 18, 1997

**AGENCY:** Bureau of Reclamation, Interior.

**ACTION:** Notice.

**SUMMARY:** This notice is issued in accordance with 35 U.S.C. 209(c)(1) and 37 CFR 404.7(a)(1)(I). The Bureau of Reclamation (Reclamation) is contemplating the granting of a limited exclusive license in the United States to practice the invention embodied in an invention titled “A Water Treatment Chemical Metering and Control System”. The exclusive license is to be granted to Turner Designs Inc., having a place of business in Salt Lake City, Utah. The patent rights in this invention have been assigned to the United States of America.

The prospective limited exclusive license will be royalty-bearing and will comply with the terms and conditions of 35 U.S.C. 209 and 37 CFR 404.7. While the primary purpose of this notice is to announce Reclamation’s intent to grant an exclusive license to practice the invention listed above if it issues as a patent, it also serves to publish the availability of this invention for licensing in accordance with law. The prospective license may be granted unless Reclamation receives written evidence and argument which establish that the grant of the license would not be consistent with the requirements of 35 U.S.C. 209 and 37 CFR 404.7.

**DATES:** Written evidence and arguments against granting the prospective license must be received by June 29, 1998.

**ADDRESSES:** Inquiries, comments, and other materials relating to the contemplated license may be submitted to Donald E. Ralston, Bureau of Reclamation, Research and Technology Transfer, MS–7621, 1849 C Street, N.W., Washington, D.C. 20240.

A copy of the above-identified patent may be purchased from the National Technical Information Service (NTIS) Sales Desk by telephoning 1–800–553–NTIS, or by writing NTIS at 5285 Port Royal Road, Springfield VA 22161.

**FOR FURTHER INFORMATION CONTACT:** Donal E. Ralston by telephone at (202) 208–5671.

**SUPPLEMENTARY INFORMATION:** The invention is capable of automatically controlling the injection of any chemical into any flow stream regardless of the characteristics of the stream or the ability to detect the injected chemical.

The system was originally developed to control the concentration of pesticides used for weed control in canals with fluctuating flow rates. Generally, aquatic pesticides are most effective if injected at constant concentrations over a period of several days. With many of these pesticides, it is not possible to measure concentrations in real time, and in canals it is not possible to measure the flow rate accurately without expensive construction. This novel technology addresses these problems.

Properly filed competing applications received by Reclamation in response to this notice will be considered as objections to the grant of the contemplated license.

Dated: March 12, 1998.
