

The intent of the natural gas development is to extract and recover natural gas from the Pinedale Anticline lease area, allowing the companies to provide more natural gas to companies distributing and supplying natural gas to consumers. This would benefit consumers by making additional supplies of clean-burning natural gas available.

Land and resource management issues and concerns associated with the construction of roads, well pads, and pipelines; the drilling and completion of wells; and the operation and maintenance of a producing well field that will be analyzed in the EIS will include;

- * Potential impacts to nesting raptors.
- * Potential impacts to Threatened/Endangered/Candidate species (plant and animal).

- * Potential impacts to Threatened/Endangered Colorado River fish from water depletions.

- * Potential impacts to sage grouse breeding, nesting, and winter range habitat.

- * Potential impacts to Sublette antelope herd migration.

- * Potential impacts to Sublette mule deer herd migration.

- * Potential impacts to wildlife habitat and fish habitat.

- * Potential impacts to State Priority One birds and mammals.

- * Potential conflicts with livestock and range improvements.

- * Potential impacts on cultural resources (prehistoric and historic resources).

- * Potential impacts from increased drilling related traffic on Federal and State highways and increased public access to the area.

- * Potential social and economic affects to the local communities (increased Federal, State, and local revenues).

- * Potential impacts to surface and groundwater resources.

- * Potential impacts to air quality and air quality related values of the Bridger-Teton and Fitzpatrick Wilderness Areas.

- * Potential impacts on wetlands, floodplains, and/or riparian areas.

- * Potential impacts on paleontology.
- * Potential impacts from hazardous substances.

- * Potential impacts to visual resources (e.g., conformance with visual resource management classifications; potential impacts from development on the natural landscape).

- * Potential impacts to current land use (industrialization).

- * Revegetation and restoration of short-term disturbances and long-term stabilization, and control of noxious weeds.

- * Potential impacts to human health and safety.

- * Potential impacts to domestic animal health and safety.

- * Potential cumulative impacts from the development when added to other energy-related activities ongoing or planned in the vicinity of the project.

- * Split-estate concerns.

- * Potential impacts to the National Historic Trail System.

- * Potential impacts to sites sensitive to American Indians.

Opportunities that may be derived from the natural gas development include: increased royalties and tax revenues to local, State and Federal Governments; added employment and economic benefits to communities near the natural gas field; increase in Wyoming's share of new and existing markets; and development of natural gas to assist in the attainment of clean air in conformance with Presidential and Congressional direction.

Dated: July 8, 1998.

Alan L. Kesterke,

Associate State Director.
