

ACTION: Planned supplemental grant award to the Cooperative Agreement for an HIV/AIDS High-Risk Behavior Prevention/Intervention Model for Young Adults/Adolescents and Women Coordinating Center.

SUMMARY: This notice is to provide information to the public concerning a planned supplemental award by CMHS/SAMHSA to an existing grant to the Research Triangle Institute (RTI). This award will provide additional support for the HIV/AIDS High-Risk Coordinating Center in order to assist seven existing study sites to increase the number of eligible individuals who can participate in the intervention studies under way at each site, and to provide each study site with the capacity to include the use of biological markers as an outcome measure in the study protocol as part of the model protocol, and to centrally coordinate data collection and analysis of these measures. Upon receipt of a satisfactory application that is recommended for approval by an Initial Review Group and the CMHS National Advisory Council, up to \$750,000 in Federal funds may be awarded to this organization each year over the remaining project period of the existing HIV/AIDS High Risk Coordinating Center grant which is scheduled to end on August 31, 2001.

This is not a formal request for applications. Grant funds may only be provided to the organization named above.

Authority/Justification: This grant will be made under the authority of Section 520A of the Public Health Service Act, as amended (42 U.S.C. 290bb-32).

The Catalog of Federal Domestic Assistance (CFDA) number for this program is 93.125. The purpose of the HIV/AIDS High-Risk Program is to develop and test, through a series of pilot studies, a single model for a brief/short-term prevention/intervention protocol, based on what is currently known, to encourage and enable adolescents/women who engage in high-risk behaviors associated with HIV/AIDS transmission to change these behaviors. In FY 1997, the Research Triangle Institute (RTI) competed successfully to be the coordinating center to assist the study sites in developing/implementing a single model for a brief/short-term prevention/intervention protocol, using state-of-the-art methodology. However, CMHS subsequently determined that the development/implementation of a state-of-the-art intervention model will require additional participants at the

individual sites and the use of biological markers as outcome measures. The purpose of this supplemental award is to fund the additional coordination, personnel, data collection and data management for the increased sample and the inclusion of biological markers as an outcome measure. RTI will build upon the expertise gained by the coordinating center during the first two years of the study, to develop and implement these additional aspects of the program. The supplemental work is inextricably linked to the current activities that RTI is already performing for the AIDS High-Risk Program.

For the above reasons, only an application from the Research Triangle Institute will be considered for this program.
