SUPPLEMENTARY INFORMATION:**I. Abstract**

Over the last six years, the Building and Fire Research Laboratory of the National Institute of Standards and Technology (NIST) has developed and automated an approach for measuring the life-cycle environmental and economic performance of building products. Known as BEES (Building for Environmental and Economic Sustainability), the tool reduces complex, science-based technical content (e.g., up to 400 material and energy flows from raw material extraction through product disposal) to decision-enabling results and delivers them in a visually intuitive graphical format. BEES Please is a voluntary program to collect data from building product manufacturers so that the environmental performance of their products may be evaluated scientifically using BEES.

NIST will publish in BEES an aggregated version of the data collected from manufacturers that protects data confidentiality, subject to
