The Draft CCP/EA will also be available online for viewing and download at <http://pacific.fws.gov/planning>.

Background

The Antioch Dunes Refuge was the first National Wildlife Refuge in the country established to protect endangered plants and insects. Created in 1980 by the U.S. Fish and Wildlife Service (Service), this riverside Refuge provides protection and critical habitat for three endangered species: Lange's metalmark butterfly (*Apodemia mormo langei*) (Lange's), Contra Costa wallflower (*Erysimum capitatum* ssp. *angustatum*) (wallflower), and Antioch Dunes evening primrose (*Oenothera deltoides* ssp. *howellii*) (primrose). The Refuge, 55-acres of former dunes, in addition to the adjacent 12 acres of Pacific Gas and Electric Company (PG&E) land, is an isolated patch of what was once a larger dune system that hosted a unique assemblage of plants, insects, and reptiles. A major effort is currently underway to restore and improve dune habitat on the Refuge. The Refuge staff is based in the San Francisco Bay National Wildlife Refuge Complex office in Fremont, California.

This Draft CCP/EA identifies and evaluates four alternatives for managing the Refuge for the next 15 years. Alternative D is the Service's preferred alternative.

Under Alternative A (No Action), current management and public use would continue unchanged. The Refuge would continue its current weed control program. Various control methods would be used, including hand weeding, treating with herbicide, and prescribed fire. As opportunities arise, the Refuge would recontour existing sand dunes at the Refuge by using heavy equipment to reshape existing sand substrate into steep dunes and by importing sand from offsite. The Service would continue to outplant primrose, wallflower, and buckwheat on an as-needed basis. Annual surveys of the three endangered species would continue. The Refuge boundary would remain the same. The Service would continue to work to finalize a Cooperative Agreement with PG&E to manage its adjacent lands. The Refuge would continue to be closed to public use except for occasional staff guided tours for schools and other groups.

Under Alternative B, the Refuge would be restored and managed to pre-industrial natural conditions (oak woodland on sandy soils) with limited and controlled public access. Most of the Refuge would be managed as upland habitat and blowout areas along the shore would be allowed and encouraged to erode and to be colonized by endangered species. Nonnative weeds would continue to be controlled using
