The recommendations made in this draft guidance are intended to enhance the use of MDIs, specifically to help

**SUPPLEMENTARY INFORMATION:**

#### I. Background

FDA is announcing the availability of a draft guidance for industry entitled "Integration of Dose-Counting Mechanisms into MDI Drug Products." It is intended primarily for manufacturers of MDI drug products designed to deliver drugs to the lungs (e.g., an MDI for the treatment of asthma). Dose-counters are mechanisms designed to accurately track the number of actuations used by a patient over the life span of an individual MDI. The dose-counter would provide the patient with continuing, accurate data on the amount of medication left in the MDI. Currently, patients do not have an adequate way to track the number of metered-doses left in MDIs, and there is no way to detect when these devices have exceeded their dose limit. The incorporation of a reliable, accurate dose-counter into each MDI will enhance these drug products, which are relied on to deliver important and sometimes life-saving drugs to patients with asthma and other obstructive lung diseases.

This draft guidance is being issued consistent with FDA's good guidance practices regulation (21 CFR 10.115). The draft guidance, when finalized, will represent the agency's current thinking on the integration of dose-counting
