 Subject: Microsoft Settlement

To whom it may concern,

I am writing in response to the proposed settlement agreement with Microsoft in the Anti-trust lawsuit. I want to express my severe disappointment and outrage with the proposed settlement agreement. This agreement does nothing at all to Microsoft. All it forces them to do is to follow current law as it already is written. It does nothing at all to remove all the power and influence Microsoft has received by exercising its illegal monopoly over the computer OS industry. How can you even start to believe that this settlement is fair for anyone outside of Microsoft? You are basically giving them a slap on the wrist, and saying, "Ok, we caught you. Don't do this again now. You can go back to your business, but play by the rules now." This action is akin to catching a major drug dealing ring, arresting them, and then letting them go, as long as they promise not to deal drugs again. And not only did you let them go, you gave back all the drugs you confiscated when you made the arrest as well as all their drug money. Microsoft has a clear unfair advantage over any other company in the operating system industry. Microsoft already received enough of the fruits of illegally using its monopoly and has been able to grow to what it is now because of this. Something needs to be done in any settlement that DIRECTLY AFFECTS Microsoft's assets and holdings, as well as its power and influence over the OS industry. These aspects of Microsoft grew out of the direct result of them illegally using its power. As such, anything that was gotten illegally should be taken away, or at least an attempt needs to be made to level the playing field in the industry. This settlement falls very short of what needs to be done so.

One of the major flaws in the settlement is that Open Source projects like the Linux Operating System also should have access to the communication and API protocols that Microsoft's OS's use. Linux is currently the MAIN competition that Microsoft is facing in the OS industry. No allowing Microsoft's main competition access to the protocols simply because the system is Open Source makes no sense at all. Linux is the competition and as such needs to have access to the protocols as well.

Direct compensation needs to be made to the consumers of Microsoft products. Prices on their OS licenses have not changed at all. Because there is no competition, there was no reason for Microsoft to give a reasonable price for their product, simply because people had to use it.

The idea of letting Microsoft possibly make compensation by purchasing computers and software for some of the country's poorest school district does nothing but increase Microsoft's hold over the computer industry. If any deal like this is made, Microsoft should be forced to use the full amount of money in any such action to purchase computer hardware only. The cost of the software to Microsoft would be nothing, if Microsoft software was used. Because

Microsoft has the ability to make an infinite number of licenses of their software, the actual cost of that software to them is nothing, and as such does nothing to hurt Microsoft. All this type of deal would do is create another generation of people to later purchase a Microsoft product. Red Hat Linux had an alternate proposal that I and many others feel would be much more effective. Red Hat proposed that Microsoft purchase only hardware, and that Red Hat would provide the software for the computers. Thus allowing many more computers to be given to more schools and also teaching people that there is more than one choice for a computer operating system. In closing, this proposed settlement does NOTHING but allow Microsoft to continue business as usual. We had a better settlement deal BEFORE Microsoft was found GUILTY then we have with this settlement after their guilt was PROVEN in court. This deal is completely one sided and its side most certainly looks like Microsoft to me. What do I as a member of the computer industry get out of this? What does everyone else who simply had to pay outrageous prices for Microsoft products get out of this? What does the computer industry get out of this other than the fact that Microsoft will still be as powerful as ever? How does this do anything to change the way things are? Well, if you ask me the answer to all those questions above is nothing. And that is what this settlement does, its does nothing.

 Subject: Microsoft Settlement

I am of the opinion that Microsoft is actually *Winning* this case with the settlement proposed. It is the equivalent of a slapping a murderer on the wrist. And yes, MS is very much a murderer. A suitable punishment would be to force open all of their API's, an API is the code base used to write the uppermost tier of executable programs. The Win32 API, if open, would not only embarrass the company (with their feeble attempts at programming), but will allow any number of windows programs to run on alternative operating systems. There is a project underway to create an API that mimics the win32 API, called WINE, but life would be so much easier if the code-base was already open. Another part of this is the networking/communications APIs. MS Outlook and MS Exchange Server have a closed protocol. Opening this would pave the way for alternative Office platforms, or actually using MS Office on top of another OS (Beos, Linux, Solaris).

Have you ever really read the Microsoft licensing schemes? They had this one scheme that flopped, not too long ago, that had 3 options:

- 1) You don't sign up for anything special. MS then jacks up the costs of individual licenses.
- 2) You pay a yearly fee, and receive MS upgrades and licenses.

3) You pay a significantly reduced amount if you promise to use ONLY MS products.

Everyone and their brother originally bought MS products because they were cheap, and because they managed to worm into the OEM distribution channels. They have become a defacto standard, even though their OS is worth crap. Let us count the number of security issues Windows XX has had in the past 6 months, and the amount of bandwidth that the entire internet lost because of it. If the Gov't doesn't hold MS's hand while doing business, to ensure that it is done fairly, I will have significantly less confidence in every part of this country. I swear... If you actually need something done right, you can't write to anyone any longer because you will be ignored. How many senators check their e-mail anymore? How much thought will you (the reader) actually give this letter, as well as the thousands of other letters you receive just like this one? We actually need computer literate people deciding on this case, and it is apparent that we do not have that. In their stead, we have a pile of lemmings that have been fed MS gestapo propoganda. Yeah, ironically, I send this via Outlook Express, on the only windows machine I own. I have had to patch this machine 20 times a month, compared to the goose-egg off my two Linux machines.

Go figure.

Mike

I am a student at NOVA in Virginia. I feel the proposed settlement in the anti-trust case United States vs. Microsoft is severely lacking in coverage and effective enforcement. I suspect a symptom of Microsoft's tyrannical behavior, and the lack of restraint, is the flare up of Open Source development. Perhaps this public movement could be used to penalize Microsoft and benefit the public at the same time? Regardless, I've seen Microsoft's tactics over the years, and the current settlement does almost nothing to curb their behavior. Microsoft will have completely evaded the minimal restraints and enforcement within five years and have lost none of its power to elbow competition out in the short or long run.

 Subject: Microsoft Settlement

The proposed Settlement is outrageously deficient. The Microsoft anti-trust offense is on a scale that boggles the mind. It will only worsen as Microsoft adds new technological sectors to its domination. Any sanction that falls short of definitively preventing this stranglehold from growing is a monumental miscarriage of justice. Please make the remedy definitive by breaking up Microsoft into non-colluding units.

Under the Tunney Act, I wish to comment on the proposed Microsoft settlement. I agree with the problems identified in Dan Kegels analysis (on the Web at <http://www.kegel.com/remedy/remedy2.html>), namely:

The PFJ doesn't take into account Windows-compatible competing operating systems

Microsoft increases the Applications Barrier to Entry by using restrictive license terms and intentional incompatibilities. Yet the PFJ fails to prohibit this, and even contributes to this part of the Applications Barrier to Entry.

The PFJ Contains Misleading and Overly Narrow Definitions and Provisions

The PFJ supposedly makes Microsoft publish its secret APIs, but it defines "API" so narrowly that many important APIs are not covered.

The PFJ supposedly allows users to replace Microsoft Middleware with competing middleware, but it defines "Microsoft Middleware" so narrowly that the next version of Windows might not be covered at all.

The PFJ allows users to replace Microsoft Java with a competitor's product—but Microsoft is replacing Java with .NET. The PFJ should therefore allow users to replace Microsoft.NET with competing middleware.

The PFJ supposedly applies to "Windows", but it defines that term so narrowly that it doesn't cover Windows XP Tablet PC Edition, Windows CE, Pocket PC, or the X-Box—operating systems that all use the Win32 API and are advertised as being "Windows Powered".

The PFJ fails to require advance notice of technical requirements, allowing Microsoft to bypass all competing middleware simply by changing the requirements shortly before the deadline, and not informing ISVs.

The PFJ requires Microsoft to release API documentation to ISVs so they can create compatible middleware—but only after the deadline for the ISVs to demonstrate that their middleware is compatible.

The PFJ requires Microsoft to release API documentation—but prohibits competitors from using this documentation to help make their operating systems compatible with Windows.

The PFJ does not require Microsoft to release documentation about the format of Microsoft Office documents.

The PFJ does not require Microsoft to list which software patents protect the Windows APIs. This leaves Windows-compatible operating systems in an uncertain state: are they, or are they not infringing on Microsoft software patents? This can scare away potential users.

The PFJ Fails to Prohibit Anticompetitive License Terms currently used by Microsoft
Microsoft currently uses restrictive licensing terms to keep Open Source apps from running on Windows.

Microsoft currently uses restrictive licensing terms to keep Windows apps from running on competing operating systems.

Microsoft's enterprise license agreements (used by large companies, state governments, and universities) charge by the number of computers which could run a Microsoft operating system—even for computers running competing operating systems such as Linux! (Similar licenses to OEMs were once banned by the 1994 consent decree.)

The PFJ Fails to Prohibit Intentional Incompatibilities Historically Used by Microsoft

Microsoft has in the past inserted intentional incompatibilities in its applications to keep them from running on competing operating systems.

The PFJ Fails to Prohibit Anticompetitive Practices Towards OEMs

The PFJ allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system.

The PFJ allows Microsoft to discriminate against small OEMs—including regional "white box" OEMs which are historically the most willing to install competing operating systems—who ship competing software.

The PFJ allows Microsoft to offer discounts on Windows (MDAs) to OEMs based on criteria like sales of Microsoft Office or Pocket PC systems. This allows Microsoft to leverage its monopoly on Intel-compatible operating systems to increase its market share in other areas.

The PFJ as currently written appears to lack an effective enforcement mechanism.

I also agree with the conclusion reached by Dan Kegels analysis, namely that the

Proposed Final Judgment, as written, allows and encourages significant anticompetitive practices to continue, would delay the emergence of competing Windows-compatible operating systems, and is therefore not in the public interest. It should not be adopted without substantial revision to address these problems.

Date: 1/24/02 1:56am
Subject: Microsoft Settlement
To Whom It May Concern:

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future. The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions. Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general. While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded.

Sincerely,
Fred von Stein

From: John McGready
To: Microsoft ATR
Date: 1/24/02 1:56am
Subject: Microsoft Settlement

Regarding the Microsoft settlement, I don't believe the current proposal provides adequate remedies for those injured by Microsoft's anti-competitive behavior. Over the decades hundreds, even thousands, of small companies have been driven out of existence by Microsoft's objectionable business practices. As was done with AT&T, Microsoft should be severely regulated, if not subdivided until its market share drops to an acceptable level, perhaps 33 to 40 percent (assuming one of its competitors is now also at 40%). Until this is true of all Microsoft product lines, such regulations shouldn't be realxed. Even after being found guilty of

monopolistic practices, Microsoft's behavior shows a complete lack of respect for the law, a complete lack of remorse for their actions, or even repentance for their crime. Strict regulation of their behavior, coupled with the threat of incredibly severe criminal penalties for noncompliance, is the only remedy that will contain them—for it speaks the only language Microsoft either knows or respects—the language of compulsion and enforced compliance. The market must be able to return to its rightful state—a balance born of countervailing competition. We don't need another Enron. Imagine the damage to the nation should a monopoly like Microsoft were to fail.... or even to have a bad quarter....

The risks of a monopoly are greater than merely the loss of competition. Any benefit of monopoly is far outweighed by its stifling of the great and diverse chorus of voices joined together to form the rich tapestry that is the American Dream. I ask that you not implement the proposal as it is now, but instead fight for the small companies that best express the golden opportunities and freedoms for which our armed forces are fighting even now.... save the towers of this nation's economy from another remorseless attack....

Thank you for your time.

Subject: Microsoft Settlement

To whom it may concern:

I am very concerned about the ongoing settlement discussion with Microsoft. After following the involved issues since a couple of years from different perspectives (user, interested individual, software professional) I developed a strong opinion on the required action. Microsoft's monopoly has gone too far. Freedom and protection of users in America and around the world need to be taken more seriously. Any proposed settlement must put an emphasize on new alternatives to the current situation. It can be + a push for other operating systems (Mac, open source, etc.)
+ a clear cut between Windows OS and Windows applications (e.g. browser, office suite, media player)
+ or steps that ensure open standards when connecting computer and/or exchanging information (e.g. files).

It also should be emphasized that the user is in control of the software on his computer. That he/she can decide, which programs to install or not and that he/she can buy computers from companies that were allowed to freely make those decisions for them. Simply paying some money or donating some of the software under discussion does not solve the problem. I hope the involved government organizations will put an emphasize on the interest of millions of computer users and organizations.

Best regards,
Matrin W.

The continued abuse of the privilege of operating in an open market by Microsoft must lead to some remedial action that does more than simply "sending a message" to them. The Netscape fiasco is yet another blatant example of Microsoft's idea of how free enterprise works and if Microsoft does not pay substantial damages and does not allow competitors to compete without being threatened, what sort of precedent does that set for the future direction of US business practices? Indeed, the message would be loud and clear that such practices are actually permitted by the government if a corporation is large and powerful enough to be able to convince bodies, such as the DOJ, that any harm to that company might harm the US economy; a specious argument since it purports to show how vulnerable the US economy is... which it is not!! (9/11 has proven just how robust this country is.) Moreover, if other systems such as Apple, Linux etc can be allowed to prosper from their innovations, that is all to the good of the US economy as diversification has always been what has made America different... read successful and strong. The feudal system epitomized in the whole Microsoft ethos is appalling at first blush and outright dangerous in full light. Please show courage and fairness in your deliberations but above all show us that, in the end, the interests of the US, not Microsoft, are what must be protected.

Subject: Microsoft Settlement.

As a professional computer programmer, I've been monitoring the Microsoft Case with a great deal of interest. Like many people who've had MicroSoftWare inflicted upon me over the years, I'm hoping the power of Government can do what the marketplace has so spectacularly failed at: making Microsoft Play Nice with the other children. But I don't think the currently suggested remedies are going to do that.

I still think Judge Jackson had the right idea: Break MS into two companies, one for applications, one for OSs. (I'd add one for

hardware, but that's just me.) If that truly is impossible, I think an equally good idea would be to force MS to reveal ALL their Application Programming Interfaces (APIs) to any programmer who wants to see them. They have a long and proud tradition of using hidden APIs to get better performance out of their own applications, while letting outsiders gimp along with the poorer-performing, better-documented "official" APIs, which sounds like a fairly ringing abuse of monopoly power to me. Good luck coming up with a solution. You'll be flogged if you get it wrong, and you'll get flogged if you get it right. But I've heard it hurts less when you get it right.

Good luck,
R. Bain.

From: Eric Nehrlich
To: Microsoft ATR
Date: 1/24/02 2:04am
Subject: Microsoft Settlement

To Whom It May Concern:

I would like to register my opposition to the proposed settlement in the Microsoft antitrust trial. I feel that Microsoft has circumvented such restrictions in the past, and has shown no indication that they will not do so again with the proposed settlement. They have consistently shown no inhibitions about taking any actions necessary to protect their monopoly. If their operating system were being compared to others on a level playing field in terms of stability and usability, Microsoft would lose every time, so it is clear that they are taking advantage of their monopoly position. I believe that the settlement needs to include a recognition of the immense damage that Microsoft has caused to the computer user community over the past ten years. By crushing innovation that could conceivably harm its monopoly, it has held back the progress of the computer software industry. Users have been conditioned to expect that their software should be expected to fail all the time, that their computer needs to be rebooted at least once a day, and that software must be hard to use. The amount of time that the typical computer user (which is almost everybody these days) spends fighting with their computer to get it to do what they want is probably half an hour a day. Add that up, and that could be a 5% drop in productivity that is directly linked to the inferiority of Microsoft's products, products which have only maintained their market position due to Microsoft's abuse of their monopoly status. Any settlement needs to recognize the massive negative impact that Microsoft has

had over the past ten years, and punish Microsoft for their behavior.

From: Waldauer
To: Microsoft ATR
Date: 1/24/02 2:03am
Subject: Microsoft Settlement

As allowed by the Tunney Act, I would like to voice my opinion on the past proposed settlement and current anti-trust lawsuit in the case against Microsoft. Previously Microsoft proposed a settlement for the anti-trust trial. Their settlement included roughly one billion dollars worth of software, computers, and technical support to be delivered to schools across the country. This proposed settlement seemed to me to be not much more than a simple public relations trick and possibly even an attempt to EXTEND their monopoly. The facts of the matter are that a 500 million dollar donation of SOFTWARE to schools across the country would actually cost Microsoft considerably LESS than 500 million dollars. A donation of a \$100 product such as a Windows operating system license would only end up costing Microsoft whatever relatively small cost of shipping and packaging. The rest of the \$100 (probably in the range of 90%) makes up the license, which costs Microsoft nothing to donate. Another fact about this proposed settlement is that if it had been passed, Apple Computers would have most certainly suffered a huge blow by losing a large portion of its current market share. Apple Computers make up, by recent estimates, between 40% and 50% of all computers in American schools. Had the proposed Microsoft settlement been passed, many of those computers would have been replaced with Microsoft Windows machines thereby, in all likelihood, permanently displacing Apple Macintosh operating system machines from schools. I think there is an inherent problem with an anti-trust settlement when a monopoly's sole (albeit very small) competitor would be seriously injured. Lastly, I believe that if one billion dollars were to be donated to American schools, I feel that donations in the form of computers, software, and technical support would not be the most useful form. I remember my high school, we had a very full and up-to-date computer lab; unfortunately, we lacked enough teachers and staff to keep the computer lab open after school when the most use can be made of a computer lab. I also remember my high school severely lacking desks and chairs and an ever increasing class size. If one billion dollars is to be donated to American schools, I believe the problems I have laid out should be addressed first.

Although I found the previous settlement proposal to be nothing more than a PR joke with nearly nothing to produce any results in reducing Microsoft's monopoly or compensating the public for abuse of that monopoly, I do believe that there is a solution to the problem. Microsoft's monopoly resides in three software

applications that control three separate markets. First is the Windows operating system itself. The main reason this monopoly lingers and is so difficult to eliminate is because nearly every program on Earth runs on windows, but relatively very few will run on any other operating system. So in order to run your favorite programs, you need to buy a copy of Windows. The best solution to this problem would be to allow someone to run a program written and designed for Windows, but without purchasing a copy of Windows. Every operating system uses a set of API's (application program interface) that allows a programmer to draw windows and objects onto the screen. The API allows for just enough "hooks" for a developer to use, but the API itself is hidden, only a description of what it does is publicly known. Because of this, it becomes virtually impossible to duplicate the Windows API. Step one to eliminating a Microsoft monopoly is to force Microsoft to publish the complete source code to the Window's API thereby allowing other producers to produce operating systems that can run Windows programs and thereby directly compete with Windows.

The second Microsoft application that unfairly monopolizes a market is the Office Suite program, Microsoft Word. Although this program is deemed by many to be the best of its kind, it is not the quality of the program that has given Microsoft an unfair edge in the market, it is instead the format that the program by default saves documents in. The Microsoft Word document format is proprietary, and in order to open a file written in Microsoft Word, a person needs to have Microsoft Word (there are programs that attempt to open Word documents, but these are not complete and usually can only open the most basic Word documents). In order to alleviate this problem, the specifications of the Word document should be released to the public so that a document created by Microsoft Word can be opened and edited or manipulated without the need to purchase a copy of Microsoft Word. Lastly, the third program that has monopolized an entire market is Microsoft's Internet Explorer. Through monopolistic practices, Internet Explorer pushed Netscape's Navigator out of the market. Microsoft also released web authoring tools which produce webpages that can only be correctly viewed with Internet Explorer. When the graphical internet started to become popular, standards were formed on how webpages should be formatted using the HTML (Hypertext Markup Language) code. With a monopoly on web browsers, Microsoft violated these standards in their authoring programs to solidify their monopoly. Although today many alternative web browsers do exist, none of them "work" as well as Microsoft's simply because so many web pages are made to only be viewed in Internet Explorer. As a solution to this, the rendering engine (the part of the web browser that "renders" the HTML code to put the correct layout and text of the webpage on the screen) of Internet Explorer should be made public so that competing web browsers may incorporate into their web browsers code to allow their users to view "Internet Explorer only" webpages.

In all three of the mentioned markets Microsoft has maintained a monopoly by forcing proprietary standards and formats and NOT by producing quality products at low prices. In all three of my solutions Microsoft would lose that unfair edge allowing other companies to step in with competing products like never before. Before a competing product had most of its focus on merely being compatible, take away that edge and time and money can be spent on making quality products at low prices (or free products as the case may very well be, I.E. Linux, OpenOffice, etc.). In my proposal Microsoft would be punished for its abuse, but more importantly, it would take away the edge that Microsoft enjoys in order to maintain their monopoly. My proposal would allow for competition to fairly enter the market and hopefully would result in a better and less expensive computing experience for everyone.

Subject: Microsoft Settlement

Dear Sirs,

The current proposed settlement (PS) is flawed. Because of many different legal loopholes in the PS, Microsoft will be able to find ways to easily exploit their customers and OEMs to their advantage. Microsoft has already extended, or tried to extend, their monopoly since the start of the trial, such as:

Microsoft .NET and MS's plans to force everybody to sign for a MS Passport (which has already been proven to be a very insecure system)

The failed attempt to turn an educational lawsuit into a way to inject their software into yet another market

Imposing highly-restrictive EULAs and license agreements in XP to try to milk as much money as possible from the end user and businesses, which has already forced other governments (such as the UK and China) to consider other options besides MS software

Using PR stunts to hide the fact that security was never a major concern of any of their products, and never will be (even though recent developments in Windows XP and Internet Explorer have proven this)

Starting petty lawsuits to snuff out competition, in the hopes of running them out of money (such as the recent Lindows lawsuit)

Rigging web polls and writing fake letters (from people already long dead and buried) to influence business and DoJ decisions The government's intentions in the PS are in good faith, but the language puts too much faith in MS's interpretation of it. Dan Kegel has a great analysis of the flaws found in the PS here: <http://www.kegel.com/remedy/remedy2.html> In short, I feel that it's the DoJ's duty to revamped the PS and/or return to the drawing board, as its current revision is not enough to stop Microsoft's anti-competitive practices.

Subject: Microsoft Settlement

Given the course and time that legal proceedings have taken for the Microsoft Anti-Trust Case, it would seem that Microsoft is winning this war, even if it is losing the battle. States have settled with Microsoft because they can ill-afford the monetary losses that they've indulged into this case. Microsoft lawyers cleverly petition to extend the case, and the Court keeps setting new dealines for hearings. Then there are the settlement offers that Microsoft offers, mere pittance that secretly hold a different agenda, underneath a veil of altruism. Microsoft is both demeaning and insulting the court's ignorance of the Software Industry. Evidence has already been shown that Microsoft has reaped, plundered, and murdered many an honest companies" viable products, and yet it continues to strong-arm many of its competitors today. It would seem that Microsoft's war of attrition is winning out over the Justice Dept. and States. It will win, whether or not it loses this case.

Subject: Microsoft Settlement

I am writing to express my opposition to the proposed microsoft settlement as it currently stands. Let there be no doubt about Microsoft's widespread influence, as evidenced by their popular windows OS. My primary complaint lies with the fact that the problems associated with Microsoft's monopoly are not being adequately addressed in this settlement. For example, in the interest of protecting "intellectual property," Microsoft is not required to reveal protocol or interface information, thereby hampering competing software companies from developing products compatible with Microsoft's windows OS. This is akin to a hypothetical automobile manufacturer who develops a monopoly via an outrageous volume of vehicle sales, and is allowed to produce inferior parts that require frequent replacement (to that company's benefit), while simultaneously inhibiting production of better quality replacement parts by competing manufactures, because the part specifications of the monopolistic company are protected in the name of "intellectual property." Unless Microsoft is required to release such information, without the controlling nature and costs associated with licenses, their monopoly is not limited and is in fact enabled. In the interest of permitting competitors to produce better

"parts" for the omnipresent windows OS, which would better serve the general public AND Microsoft, as well as helping to preserve the viability of such competitors, this settlement must be modified accordingly. Such a change would control costs for consumers and more appropriately restrict the monopolistic influence of Microsoft. Personally, I appreciate the ability to choose new auto parts, at discounted prices, and from a variety of manufacturers, and I would like the same privilege with my computer.

Thank you for your consideration,
Jonathan S. Talbot

I would like to go on record as opposing the proposed settlement in the Microsoft antitrust case.

The proposed settlement has so many problems that it is nearly impossible to address them in a brief note such as this one. However, I will address two issues:

1. The PFJ does nothing to prohibit anticompetitive license terms currently used by Microsoft.

2. The PFJ does not prohibit Microsoft's historical practice of intentionally modifying its operating systems to introduce incompatibilities with competing non-operating-system software products, with the sole goal of making those other products unable to compete with Microsoft's own non-operating-system products.

Dear reader...

I write this letter to present my opinion regarding the Microsoft anti-trust case. I strongly object this deal, I think it was rushed, all because the justice department was busy dealing with the september 11th attacks against the US. The deal struck between the DOJ and Microsoft doesn't in any way:

1. punish Microsoft of its previous illegal acts.

2. restrict future monopolistic behaviour. Therefore I would love to see a review of the case settlement.

Thanks for your time

Dear Mr. Ashcroft:

I strongly support your efforts to end the Microsoft antitrust litigation, now of three years in length, and implement the settlement reached by the parties. I think this lawsuit should never have seen daylight. I am not alone in this. The lawsuit is unproductive and disruptive. By putting the suit behind us, the American computer industry will be freed to innovate at the world-leading pace it had held for many years. In order to end that litigation uncertainty and wasteful expense, Microsoft has agreed to, give up some of its rights, and make it easier for other companies to work with its Windows operating system. Microsoft has agreed to make it easier to remove the useful programs it includes in Windows, such as Internet Explorer, Windows Media Player and Windows Messenger. So, if AOL Time Warner wanted to contract with a computer builder, such as Dell, to put Netscape Navigator and AOL Messenger on the desktop and remove Microsoft's offering they could do that. Microsoft has also agreed to have a technical monitoring committee come into its business to check for compliance with the agreement and check out any complaints by third parties. All of these terms show a Microsoft that wants to cooperate for the good of the American computer industry and to move on to better innovations, rather than wasteful unproductive time in legal wrangling. I feel you are taking the right road in supporting the settlement of this case. Thank you.

Sincerely,
Christopher Wade Farlowe

"Surgeons must be very careful

When they take the knife! Underneath their fine incisions Stirs the culprit,—Life!" Emily Dickinson wrote that. Or, more bluntly, Robert X. Cringley wrote in a recent article for PBS.org

[1]: "If this deal goes through as it is written, Microsoft will emerge from the case not just unscathed, but stronger than before." In this sense, it is not Microsoft who will die over a matter of a slip of the knife, so to speak, but everyone who chooses to offer serious alternatives to anything Microsoft develops and releases. Easily implementable MPEG (a type of audio and video format) decoding standards for DVD video and audio could be trampled to death if Microsoft is easily and freely able to push its more proprietary formats on the DVD industry [2]. For example, owners of non-Windows laptops with DVD players could be seriously affected in the long term. (What if I can't play some DVD I want because there's some obscure incompatibility in my DVD player? This is just one important question that can be posed.) What may be the worst issue of all is demonstrated by visiting the following URL: <<http://www.microsoft.com/library/shared/deeptree/bot/bot.asp?xmlsrc=/techne/t/library/1033/toc/tllib/tllib6586—xml>> What you're looking at is a list of just —some— of the major, KNOWN security issues with Microsoft's software. You'll notice I pulled this link from Microsoft.com itself. The dominance of Windows in the United States is becoming a national security threat [3], and will inevitably become worse as they're left more loopholes in court rulings and established case law. Their seedier actions are rooted in the loose and often downright retarded language in legal precedents, and if they aren't provided with precedents that are solid and thought-out, they will, as Mr Cringley wrote, continue obfuscating the intent of courts in which they argue and rulings to which they're told to adhere. I would have little problem continuing on and on, but I am aware of the almost uncountable amount of communication you must be receiving on this subject, and understand that an extremely long-winded, rambling rant would not be in the best interests of anyone but those about whom I seek to write.

Best regards,
Michael Watson

Dear Renata B. Hesse,

I oppose the Microsoft Settlement. It is far too weak and does not protect innovation from the stifling effect of Microsoft's monopoly, nor does it protect consumers from Microsoft's pricing. Instead I suggest that all vendors of computer equipment which is to be supplied with Microsoft software be required to offer the same equipment without Microsoft's software and that they be required to offer the same software to anyone at the price difference between the hardware supplied with Microsoft's software and without. This will prevent Microsoft from exploiting their market position to force vendors to keep better and cheaper solutions away from their customers.

Subject: Thoughts on the MSettlement

Would it be unreasonable to ask MS to sell technology BACK to the original seller (this, of course, is in reference to the many bought-out companies out there) for \$1 or something to that effect? This would CREATE business and more jobs, not to mention competition, would it not? Another thought: Would it be unreasonable to devise a settlement clause that specifically tries to decrease OS market share? For example, they could pay for advertisements of Apple products.

Subject: Microsoft Settlement

Dear Sir or Madam:

I believe the proposed remedy is neither a commensurate punishment for Microsoft's misdeeds nor even a deterrent to future anti-competitive behaviour. As a software and systems engineer (programmer) at a Fortune 100 company, I bear the burden of Microsoft's sins every day because much of my job is to make things work together. Microsoft has proven time and again that they will use their market penetration to push others out of a competitive market by any means necessary. These means are well documented: secret APIs, embrace-and-extend tactics that allow only Microsoft's clients to talk to Microsoft servers, and closest to my work, the banishment (via click-through licenses on some Microsoft products) of Open Source programs and tools from *my* development environment. I urge you to consider making Open Source Software (<http://www.opensource.org>) and Free Software (<http://www.fsf.org>) part of any remedy as these movements empower the users of software. If we, the users of software, are sufficiently empowered, then Microsoft nor any other entity will not be able to run roughshod over us.

From: Glenn
To: Microsoft ATR
Date: 1/24/02 2:07am
Subject: Microsoft Settlement

Dear Sirs:

I am writing to give my comments on the Microsoft antitrust settlement.

I believe this settlement is counter to the interests of the American public, deleterious to the American economy, and not adequate given the findings of fact in the trial.

Microsoft's anti-competitive practices are counter to the law and spirit of our free-enterprise system. These practices inhibit competition, reduce innovation, and thereby

decrease employment and productivity in our nation. Microsoft's monopolistic practices cause the public to bear increased costs and deny them the products of the innovation which would otherwise be stimulated through competition. The finding of fact which confirmed that Microsoft is a monopoly requires strict measures which address not only the practices they have engaged in the past, but which also prevent them from engaging in other monopolistic practices in the future. It is my belief that a very strong set of strictures must be placed on convicted monopolists to insure that they are unable to continue their illegal activities. I do not think that the proposed settlement is strong enough to serve this function.

From: Jason Reich
To: Microsoft ATR
Date: 1/24/02 2:07am
Subject: Microsoft Settlement
To Whom It May Concern:

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future. The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past actions. Additionally, the proposed settlement does nothing to correct Microsoft's previous actions. Microsoft has been found guilty, but is not being punished by this settlement. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general. While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded.

Sincerely,
Jason Reich

I'd like to add my voice to those pointing out the flaws in the proposed Final Judgement in United States v. Microsoft.

1. In the absence of effective means of enforcement, the proposed Final Judgement is meaningless. Microsoft has already been

found to have violated the terms of other agreements; why should they respect this one?

2. If the proposed Final Judgement is modified to include some effective means of enforcements, there would still be numerous loopholes (such as those enumerated in Dan Kegel's Open Letter to the Department of Justice, <http://www.kegel.com/remedy/letter.html>). Several of these loopholes are large enough to allow Microsoft to completely avoid compliance with the intention of the proposed Final Judgement. In short, the proposed Final Judgement is not in the public interest.

From: John G. Jones
To: Microsoft ATR
Date: 1/24/02 2:14am
Subject: AOL-Netscape

To Whom It May Concern,

My name is John G. Jones, I have been a reseller and consultant for almost 20 years. I was an avid Netscape promoter for several years (1994-1998). We were an ISP (Internet Service Provider) and distributed Netscape Navigator Exclusively for connections to our service (including their dialer software). We paid Netscape something like \$12,000 for this privilege, (for about 2000 users) while most ISP's were providing this for free. Netscape did not update their software with user fixes as often as Microsoft, nor did they continue their dialer software which caused us to re-engineer our Dial-in Modems. We initially had to spend weeks with Netscape engineers to get their software to work with Windows, they finally went with Shiva (a third party, which had mastered this technology) to perform their Dial-up software operations. Microsoft has the BEST products for Internet connectivity and Browsing, and our customers want them. Netscape and AOL products are freely available to ANYONE without much of a hassle (it is as simple as typing www.netscape.com in any browser). It is important that an Operating system has a basic browser and an Internet Connectivity client so a person can get on the Internet and download the software they choose to use.

Much of the premise behind the lawsuit is the fact that Microsoft has taken advantage of their ability to incorporate the Internet Explorer Browser into the Operating System (OS). The fact remains that they did not and have not ever inhibited AOL or Netscape from installing their applications on the Microsoft OS. The fact that AOL and/or Netscape feels as if they deserve recognition or recourse from the industry for their inability to capture the public is a farce. Netscape, for years, made their browser available for free and indiscriminately charged fees to gain recognition and market share for the sole purpose of selling their higher end products. In addition, resellers or OEM's have the ability to add ANY software product they choose to the original installation. It is my understanding that AOL has filed a new Private lawsuit against Microsoft. I wish to make some comparison material for your thought. AOL has the predominant Instant messenger(IM) software

available on the market. It is free! They won't allow other companies to integrate their IM product with theirs. What is the difference between Internet Explorer and Netscape Browsers? Netscape offers an Instant messaging product that is actually AOL's? I am a computer reseller and every computer I have delivered to a customer has had the option of AOL for an Internet provider, as well as, an option for Netscape Navigator to be installed.

I believe that AOL & Netscape have inferior products and are trying to use the legal system and media to win support from the general public rather than have a good product that is easy for the end user to use, and provide cooperation for other companies. Let's spend these dollars we are using for prosecuting Microsoft on legitimate government purposes.

Thanks,
John G. Jones

From: THXSparrow@aol.com@inetgw
To: Microsoft ATR
Date: 1/24/02 2:14am
Subject: Microsoft Settlement

To Whom It May Concern—

I wanted to express my opinion in hopes that there might be an appreciation for the value that Microsoft has brought to the market and this country, in particular. I have been designing computer software and hardware since 1981, having received a BSEE at that time. My experience is one of a user and a developer. I would like to begin by referring to several benefits, I personally have received through Microsoft crashing of other companies proprietary offerings.

1. Under Bell Labs' thumb, we were required to pay \$70,000 for the Unix operating system. This was just for the OS. From my perspective, Microsoft, by turning the esoteric into the mundane, has repeatedly produced generation after generation of low cost standardized operating systems. Bells Labs didn't do this certainly, but sought to protect their super high margin software. IBM didn't do this, nor did Digital (DEC). Operating system software performs a magnitude more than it did two decades ago, yet, at \$200 to \$300, costs 1/350th of what it did. Conversely, automobile manufacturers during that same time, raised prices from approximately \$3000 to \$30,000, a ten-fold increase.

2. Under Adobe's thumb fonts and typefaces cost in the neighborhood of \$100 to \$200 per font. After Microsoft repeatedly was unable to get Adobe to open the PostScript Type 1 Font encoding, so others could have reasonably priced fonts, Microsoft created a competing standard called TrueType fonts and made this available to the world. Because of this single act, a thousand fonts can be bought today for \$29, rather than \$100,000. Adobe had the opportunity to act and they didn't. They used their power to extract the maximum amount they could from the customer. Microsoft did exactly the opposite—they exposed the fraud, created a counter standard, and gave it to the world. My first set of 25 Microsoft fonts cost me less than \$15 total, at a time when Adobe was still selling the equivalent PostScript fonts for over \$2500.

3. A lot more credit has been given to the one-trick pony designers of Netscape. Keep in mind that Netscape was formed, based on a single product—a Internet browser. This browser had been developed as a college project, as a variant on an existing freeware Mozilla browser. Microsoft was presumed to have had its heyday and to be in decline by investors, who gave Netscape a valuation of over \$13 billion dollars—more than Microsoft, at the time. This occurred in spite of the fact that Netscape had never had a positive cash-flow in its existence as a company and had only generated a gross revenue—if memory serves me correctly—of \$134,000. Clearly, investors did not have a clue what the technology was. Really, it was only a different way of looking at the same data, comparable to using pie charts instead of text to demonstrate data. Microsoft understood that and integrated the browser into the operating system, as they had done previously with TCP LAN communications, modem support, text editors, memory managers, management tools, and so forth. Virtually every company, like Netscape, like Quarterdeck, like Procomm, like Banyan, each had products that began as one-trick ponies that eventually were incorporated into the Windows operating system. Instead of paying \$100 for the browser, \$240 for the modem software, \$99 for the memory manager, or \$695 for the LAN network software, Microsoft gave you all those things for FREE. In the process, they produced standards to which all companies could write software. In each case, they improved and mass produced was originally was a niche product, then they gave it to you for FREE. Like the breaking of Adobe's hammerlock on fonts, Microsoft also broke Oracle's gouging capability, by producing a competitive relational database product, MSSQL, at less than 100th of the cost of Oracle. If anything, Microsoft, by its competitive nature, has benefited the market and the user—and, yes, this has been at the expense of the one-trick wonders. I could go on—Microsoft's ridiculously low pricing of products, their single-handed rescue of the American economy with super-productive computing tools and open standards, and so forth. Almost fifteen years ago, I heard Bill Gates first explain about Microsoft's vision of how diverse applications should be able to share data. We take this as such a trivial thing

today, but this was such a major undertaking when it was first announced—because it had never been done. Today we routinely swap data between word processors, spreadsheets, Web pages, Photo editing packages, etc. without a thought about the complexities involved. It is all so trivial to accomplish, in many ways. But Microsoft created that, AND gave it away. Technology, by technology, they have had a singular vision of where computing should be going and brought us there, every time making it cheaper for us, the users.

When I started in graphics design, over 20 years ago, we routinely sold systems to produce books and newspaper display ads for \$50,000 to \$75,000 per workstation. Today that same workstation with 1000 times the processing speed and software with a magnitude more capability costs less than \$2,000—complete. This could never have happened with Microsoft's unique standard-setting software. We all have benefited by Microsoft's continued innovations and cost-cutting products. The US economy has been in a dizzying spin, since the day that the Microsoft trials began. (Yes, I believe there is a correlation) The volatility will continue until we begin to allow Microsoft to develop the next computing generation's products, without continual legal harassment, for what is arguably a whirlwind of innovation and competitive business strategies. It is critical for the benefit of the United States economy. It is with enlightened self-interest that the US government should come to Microsoft's defense, because they have for the past 2 years been dangerously wounding the goose that lays the golden eggs.

Penetration and The Lawsuit [Text body exceeds maximum size of message body (8192 bytes). It has been converted to attachment.]

MTC-00020221-0001

Hi,

I want to move my network entirely to Linux or FreeBSD. However, I'm discovering problems in doing so. The biggest one of which is that I must maintain compatibility with Microsoft Office users, and I'm therefore forced into the same regime of upgrading Office to support features that no human being will ever use in order to maintain the ability to read their proprietary *.doc and *.xls files.

Or to be able to watch streamed media on the Internet, which is more and more in *.asf format, "advanced streaming format". ASF is a proprietary format, a slightly modified industry-standard AVI file, and will only play on Windows Media Player. Of course, in order to be able to use Office XP and therefore read files from clients, I need to run Windows. But that's easily enough done, I had to pay for Windows (which I promptly deleted) when I bought a new machine on which to run a Linux webserver. In fact, in the past year, I've paid for Windows four times because the various PC manufacturers won't (can't) remove it from bundles, and yet I still need the machines. (I use Windows on exactly *one* machine.)

Needless to say, I'm trapped. I am writing this e-mail on a Windows machine.

Bandwidth, in the computer field, is a commodity like electricity or gasoline. I pay for it as I use it. Every time someone visits my Linux webserver, the communication between the visiting machine and my servers consumes bandwidth, and I pay for it. Every time someone e-mails me, their mail server contacts my mail server, and we consume my bandwidth.

Microsoft software is notoriously poorly written, and full of security flaws which allow (literally) children to write things like the Code Red worm. Code Red, you may recall, attacked Microsoft IIS webserver. Now, by the way Windows installs "features" by default, there are literally thousands of people on the Internet right now, running IIS webserver software without even knowing it. Many who run IIS deliberately don't even know that there are known vulnerabilities and self-propagating programs which exploit these Microsoft flaws.

As a result, my webserver gets lots of visits (below) from people whose infected Windows machines are blindly attempting to infect my Linux servers. And, in the process, that costs me bandwidth. Which costs me money.

You can imagine how much it costs me whenever some jackass writes a Windows e-mail virus, a phenomenon which is nearly impossible in any responsibly-designed operating system.

Companies which produce operating systems *should not* be allowed to sell software or other services. And file formats (*.doc, *.xls, etc.) should be based on standards devised by consortium using the same RFC ("Request For Comments") processes that brought us HTML and FTP and DNS.

What kind of gas mileage would you expect from your car, if the car companies were owned by the oil companies? If Ford was owned by Exxon, could an Explorer run on fuel from Shell?

I'm a staunch Libertarian, but this is too much: Break up Microsoft.

Lawrence Wade

Although I am not a US citizen, I feel very strongly that Microsoft should not be allowed to continue in their current position, and am writing this e-mail to make that clear. Although Microsoft's products are very widely used (I am using a computer with Windows running on it to type this), the current situation, with Microsoft supplying both OS and applications, is unethical even if not illegal. This market position allows Microsoft to decide, without any consultation, to alter standards, causing other companies/developers to re-write most of their output, causing inconvenience and lack of competition. Also, Microsoft's near-monopoly on computer Operating Systems leads to a falsely inflated consumer confidence in Microsoft, distorting the free market. I realise that this message may have no effect or legal force, but I wished to make my views known. Thankyou for reading.

Dear Renata Hesse,

I am responding to the call for comments on the revised proposed Final Judgment. I respectfully submit that the proposed settlement is inadequate. Please allow me to elaborate on one of the many flaws of this proposal.

One of the core inadequacies of the proposed settlement is the weakness of provisions J.1 and J.2, which provide Microsoft with opportunities to withhold information concerning interoperability from parties with legitimate rights obtain it. This is a serious oversight considering the Findings of Fact, which demonstrate that Microsoft has used interoperability of products as a weapon against it's competitors. This weakness is also particularly egregious because this type of information—referred to as “interoperability data” sometimes—is a major part of what has made personal computing and the Internet such important influences. When this “interoperability data” is published (and overseen by diverse committees or independent organizations) it is called a standard. Standards are essential to the state of computing technology. The Internet could not exist without them. They are a foundation for further competition in computing technology. More importantly, they make possible rapid innovation in surrounding technologies. In view of this error, I strongly urge you to revise the proposed judgment. A settlement that is congruous to the Findings of Fact must not allow the defendant to exert this type of pressure on the computer industry, again. This flaw, and many others, are explained in greater detail at this Universal Resource Locator: <http://www.kegel.com/remedy/> —

Thank you,
Paul DeStefano

Subject: “Microsoft Settlement”

I am of the opinion that Microsoft has done nothing but taken advantage of the opportunity that this country offers to everyone who wishes to use their ingenuity to better themselves. Microsoft has done nothing but make its products more attractive

and cheaper. They have done a much better job of that than the automobile manufacturers. If you applied the pricing structure to the auto industry that Microsoft has applied to the computer industry, automobiles would be selling for \$2500 a piece. It is time to stop the witch hunt against Microsoft.

Subject: MicroSoft Settlement

I am writing this in regards to the Tunny Act public comment period and the proposed antitrust settlement case in which Microsoft was found guilty of abusing it's power as a monopoly.

As a consumer and a American I am profoundly upset with the current proposed settlement which has made it's way to the public. Microsoft was found guilty of abusing it's power as a monopoly and it must be punished accordingly in order to fix the harm which was done to the PC industry and tech sector as a whole. The proposed settlement will only lead to further abuse by Microsoft and in the long run and it will help Microsoft further establish a even greater strangle hold in the OS market. At the same time Microsoft will more then likely continue to do all it can to stifle competition because it feels that it has the power and means to do so despite the guilty verdict which was handed down by the courts. If government were to seek a solution like making Microsoft to the likes of forcing Microsoft to open it's file formats or if they were to only allow them (Microsoft) to use open file formats in their applications I feel this would greatly help fix the damage done by Microsoft to the technology industry along with a few other well thought out measures. All of which when combined together will hopefully open Microsoft up so they would have to really compete on the merits of their products instead of the weight they push around in this industry. Which of course it has used maliciously to intimidate, lie, cheat, and steal all in order so they can maintain their bloated monopoly.

Monopolies like Microsoft only hurt our economy by denying consumers the right to choose and by victimizing/blackmailing OEM and Hardware Vendors and the many Software companies waiting in the wings who wish to offer a alternatives to Microsoft products. All of whom are afraid to so because they fear being bullied by Microsoft because of the power which it wields in the PC world. Let us not forget that whatever Microsoft can't steal (example : Sun's JAVA,) it will try to destroy (Netscape, Lotus, Corel Word Perfect, Corel Linux, and many more software applications and companies) by using it's control of the OS market to push a Microsoft only solution. I hope that our government would please rethink the propose settlement so that the consumers and our government will not be held hostage by Microsoft and it's dominance in the OS market which it unjustly gained control of through the use of illegal and abusive means as a monopoly.

Sincerely,

Douglas G. Martinez (A Consumer, A Capitalist and Proud American.)

Subject: Why MS Needs To Be Punished

I am a computer programmer and used to be a PC support technician. I support harsh penalties against Microsoft (MS) because of direct experience I've had using their and competitors software. During my work at the Franchise Tax Board/State of California I installed Novell networking client software on Windows NT 4.0 workstations. When you wanted to install TCP/IP and IPX/SPX networking software on the work station, the Microsoft operating system required you to install their version first before you could install Novell's. It seems to me that something was left off the operating system that sabotaged competing software if it was installed directly. Recently, another technician friend installed MS-Office on his new Macintosh. The next thing you know, his Netscape browser was giving error messages and his Works software went dead. This friend is a longtime Mac user and support person and something adversely happened when MS-Office was installed. The fact of the matter is that this type of sabotage of competing software is not surprising when it involves MS software. My friend has now banned MS from his machine. While working at the Franchise Tax Board, I observed management rigging software evaluations in favor of MS. I since have come to learn that this type of favoritism of certain vendors is common among state agencies and certainly does not apply only to MS. I have read how MS is now “lobbying” properly in Washington DC and it looks like they will get the justice they have paid for. Having been raised by a law enforcement officer, it is a shame to see law enforcement personnel having to walk away from a crime. It seems that justice is being denied by the people who are supposed to enforce it. Good luck to you in your fight against crime. It appears that white collar crime is at an all time high so hopefully that means an opportunity to you and your agency.

Here's Hoping.

Microsoft Settlement U.S. Department of Justice

Dear Microsoft Settlement U.S. Department of Justice:

The Microsoft trial squandered taxpayers' dollars, was a nuisance to consumers, and a serious deterrent to investors in the high-tech industry. It is high time for this trial, and the wasteful spending accompanying it, to be over. Consumers will indeed see competition in the marketplace, rather than the courtroom. And the investors who propel our economy can finally breathe a sigh of relief.

Upwards of 60% of Americans thought the federal government should not have broken up Microsoft. If the case is finally over, companies like Microsoft can get back into the business of innovating and creating better products for consumers, and not wasting valuable resources on litigation. Competition means creating better goods and offering superior services to consumers. With government out of the business of stifling progress and tying the hands of corporations, consumers—rather than bureaucrats and judges—will once again pick the winners and losers on Wall Street. With the reins off the high-tech industry, more entrepreneurs will be encouraged to create new and competitive products and technologies. Thank you for this opportunity to share my views.

Sincerely,
Nikhil

Subject: Microsoft Settlement

I am opposed to the proposed Microsoft Anti Trust Settlement. It is far too lenient on Microsoft. Bill Gates and Microsoft have stolen money from nearly every household in America. Bill Gates has practiced predatory business practices while failing to support the user, while failing to produce a secure

operating system, while failing to insure the end user can maintain the back up integrity of their data from upgrade to upgrade.

Bill Gates on one hand has used the lack of regulation and enforcement to his advantage, while on the other hand selling an inherently flawed product and then hiding behind licensing laws that deny the user any protection from buggy, leaky, and generally badly written application and operating software. I believe Microsoft should be broken 4 companies. (1) Consumer operating systems, (2) Internet applications, (3) Application software such as business suites, (4) Network operating systems.

Re: Microsoft Settlement

The Proposed Final Judgement is seriously flawed and should not be accepted as written.

As long as any judgement permits Microsoft to maintain its monopoly in the PC Operating System (OS) market, Microsoft must be enjoined to treat all OEMs alike, IAPs (Internet Access Providers) alike, and ISVs alike so it does not artificially upset competition in non-PC OS markets in which it does not offer a competing product.

The Judgement treats Microsoft partners and competitors unfairly by singling out "the 20 largest".

In markets in which it does offer a competing product, it must expose to competitors all OS APIs which it takes advantage of in its own products. This requires a definition of what comprises an OS API. I suggest that any program that is bundled with a Microsoft OS as part of a single salable unit or which is required to make the OS functionally complete for its intended purpose, which exposes an interface which can be programmatically accessed (e.g. COM typelibrary, scripting interface, or command-line interface), is an OS API.

The Judgement permits Microsoft to define what is, and is not, part of the OS. Since it is possible to incompletely document APIs, if a Microsoft product ships (becomes available for use by non-Microsoft employees) which uses an undocumented feature of an API, the source code for that specific API must be made publicly available on the Web to: 1. make up for the deficiency in documentation, and 2. remove any inequity between ISVs receiving the information before others. To determine if a Microsoft product uses an undocumented API, the U.S. Government must retain the right to reverse engineer Microsoft properties, and be required to do so whenever a competitor requests.

The Judgement permits Microsoft to continue to take advantage of its monopoly power in the most fundamental ways. There needs to be a concrete definition of when Microsoft ceases to have a monopoly in the PC OS market so that these special requirements can be abandoned. This will encourage Microsoft to permit competition. A minimum requirement is that there appear in the market competing platforms that support a minimum set of functions which do not rely on Microsoft products or services. The functions which are required by the consumer market today are, at a minimum: email, web-browsing (including animation, audio, and video data types), written document authoring, file transfer, spreadsheet functions, action video games, and non-technical maintenance. Linux is getting close, but lacks consumer market momentum. The Judgement lacks a termination clause that is strongly linked to the definition of Microsoft's monopoly power. I'd like to comment on the harm Microsoft has brought to consumers by its anti-competitive actions. We lack security because Microsoft has ignored basic mechanisms introduced in competing technologies (e.g. Java's sandbox security model and provably secure programming languages). We lack choice from highly componentized OS architectures. We lack integration because of proprietary file formats, APIs, and communication protocols.

Since the PC has become a required utility for the American industry and citizenry, and Microsoft has established itself as the gatekeeper for the quality of access to this utility, Microsoft must be constrained to manage that utility in the best interests of the public.

I want Microsoft to be able to profit from its innovation, but not at the loss of innovations which are undermined, not because they are technically inferior, but because they were not Microsoft's.

Yours,
Gregory S. Buhtz

Subject: Microsoft Settlement
I am against the proposed Microsoft settlement. As a student in computer science, I take this issue very personally. Microsoft has used its monopoly in the OS market to crush any competing operating systems (e.g. Be (maker of BeOS, a pretty slick OS) was working on agreements with several computer companies to distribute the BeOS along with their computers, but Microsoft used its monopoly to threaten computer manufacturers into not including BeOS. In the end, only one company included BeOS with their PC, and even then it was hidden from the user, most never knew about it. The proposed settlement does not seem to address this issue.

Also, many open source projects (e.g. Samba and WINE) would be threatened by the proposed settlement. Samba is vital for many non-Windows computers to share files on a Windows network (Apple uses Samba in Mac OS X). Section III(J)(2) would give Microsoft the right to effectively kill these products.

This is one of many problems I can find with the proposed settlement. Microsoft has used its presence to bully, shut down and injure many companies and projects. This settlement does not address Microsoft's previous actions, nor does it prevent them from making similar ones in the future. This is an extremely critical decision, one that will have a very strong and lasting impact on the technology industry. I strongly urge you to reconsider your proposal.

Sincerely,
Robert Hencke

I think that the proposed settlement is a bad idea and does not effectively address consumer interests. Microsoft has not played fair and will not have any incentive to play fair unless firm and strong actions are taken. In my opinion, if Microsoft is not broken into at least three pieces, the industry will continue to stagnate.

Sincerely,
David M. Karakas

Dear Ms. Renata Hesse:

Please put a stop to the economically-draining witch-hunt against Microsoft. This has gone on long enough. Microsoft has already agreed to hide its Internet Explorer icon from the desktop; the fact is, this case against Microsoft is little more than "welfare" for Netscape and other Microsoft competitors, with not a nickel going to those supposedly harmed by Microsoft: the computer user. This is just another method for states to get free money, and a terrible precedent for the future, not only in terms of computer technology, but all sorts of innovations in the most dynamic industry the world has ever seen.

Please put a stop to this travesty of justice now. Thank you.

From: Paul Komarek
To: Microsoft ATR
Date: 1/24/02 2:30am
Subject: Microsoft Settlement

To whom it may concern,

I am a doctoral student in Algorithms, Combinatorics, and Optimization at Carnegie Mellon University. My research involves the fields of artificial intelligence and signal processing. I am professionally and personally tied to the information technology economy as a researcher, administrator, purchasing assistant, and as an ordinary computer user. For this reason I have kept close watch on the most recent Department of Justice v. Microsoft antitrust trial. I have read transcripts from the depositions and trial, numerous court reporters' views, and many related antitrust and computer decisions. In every way reasonable, I have attempted to familiarize myself with the applicable laws, economies, and social structures that surround this and other information technology cases. I do not claim to be a legal expert; however, I am a citizen of this country, a member of this society, and as such appreciate this opportunity to make my views on the proposed settlement known. Two courts have already stated their legal opinions. Both determined that Microsoft is a monopolist in the relevant economies. Both ruled that Microsoft has illegally abused their monopoly position. Furthermore, this isn't the first time that Microsoft's behavior in certain computer markets has been called into question by the Department of Justice. Because the readers of this letter should already be familiar with this background, there is no need for me to recall details. Instead, I wish to summarize my feelings about Microsoft's position in our society, and why I do not believe the proposed settlement will prevent illegal and unacceptable social behavior by Microsoft.

The fundamental purpose of our capitalistic economy is to create efficient markets which serve the needs of the society. The preferred mechanism for creating efficient markets is fair competition. Microsoft's past and present behavior suggest that they have no interest in fair, or even legal, competition. They have been convicted of stealing another company's software (e.g.

Stac Corporation); they have attempted to circumvent law with respect to fair employment practices regarding temporary workers; they have been convicted of violating Java license agreements with Sun Corporation with the intent to destroy the benefits to our society that a platform-neutral programming language might bring; they have purposefully deceived customers with respect to interoperability of their software with competitors' software (e.g. the fake errors reported by Windows 3.0 when run on Digital Research's DR-DOS operating system, as documented by the pre-trial documents in Caldera v. Microsoft); they knowingly and purposefully falsified evidence during the recent Department of Justice v. Microsoft hearings; they have publicly disparaged United States courts, and refuse to accept the guilty verdict received by the lower and appellate courts; they continue to use their monopoly in the operating system market to drive other Microsoft products (e.g. the new Windows Media Player). Clearly I am leaving out many details and further transgressions of the law and appropriate social behavior by Microsoft. My point is that Microsoft is an unsportsmanlike cheater in our economy, has shown and continues to show no interest in reforming their behavior. Microsoft's failure to admit or even accept the courts' guilty verdicts suggests that a strong sentence, or settlement if possible, is needed to end Microsoft's antisocial behavior. It is clear that the proposed settlement is an attempt to bring quick, strong remedy to the ailing markets Microsoft has stifled. However, the proposed settlement is far too complex, with too many exceptions to too many rules, to be enforceable without many long and expensive legal battles in the future. Of particular importance are provisions relating to which programming interfaces do not need to be disclosed. Quoting from the proposed settlement,

"No provision of this Final Judgment shall: 1. Require Microsoft to document, disclose or license to third parties: (a) portions of APIs or Documentation or portions or layers of Communications Protocols the disclosure of which would compromise the security of a particular installation or group of installations of anti-piracy, anti-virus, software licensing, digital rights management, encryption or authentication systems, including without limitation, keys, authorization tokens or enforcement criteria;" and these programming interfaces may be withheld from any part failing to "meet[] reasonable, objective standards established by Microsoft for certifying the authenticity and viability of its business, (d) agree[] to submit, at its own expense, any computer program using such APIs, Documentation or Communication Protocols to third-party verification, approved by Microsoft, to test for and ensure verification and compliance with Microsoft specifications for use of the API or interface."

(these sections of the proposed settlement are quoted from an article in an online information technology news service). It is clearly, plainly stupid to allow Microsoft to establish security standards which apply only to products released by their competitors. Not only is this unfair in the

best traditions of Microsoft, but there is no indication that Microsoft is qualified to establish reasonable security standards. Furthermore, this wording can easily be construed as allowing Microsoft to withhold programming interfaces from individuals whose work is not associated with a business. This should not be ignored at this time when the viability of volunteer-driven software projects is being tested in our society. Though easily overlooked, charitable works by computer hobbyists have an important role in our society, and a significant impact on our economy. For instance the Apache webserver software, which currently dominates the web server market, is not owned or controlled by a business. However, it competes directly with Microsoft's commercial Internet Information Server webserver software. It does not require stretching one's imagination to see that Microsoft could use the exceptions above to disadvantage the freely available and redistributable Apache webserver software. Microsoft would only need to identify a programming interface as being related to financial transactions of any sort to invoke the security exemption, and could then deny information about their programming interfaces to the volunteer programmers participating in the development and maintenance of the Apache webserver software.

The proposed settlement is of such complexity that any enforcement will be thwarted by arguments about every fine point. I have already established that Microsoft has repeatedly disregarded the best interests of our society when making their business decisions. It is my belief that Microsoft will use the proposed settlement as a legal defense for future antisocial behavior, by manipulating technical and legal interpretations in a manner that violates the spirit of the proposed settlement. Furthermore, I do not believe that the proposed settlement adequately anticipates this behavior and provides appropriate enforcement provisions. I am not proposing any specific changes to the proposed settlement, as I believe the entire construction is flawed.

That the Department of Justice has agreed to this proposed settlement deeply worries me. In my eyes, it appears that the Department of Justice has grown tired of prosecuting their case, perhaps for political reasons. Therefore, I encourage our government and country to pursue a sentence for Microsoft which is created through thorough, and above all, open proceedings guided by Judge Kollar-Kotelly. I believe that this is our only hope for a sentence which adequately addresses Microsoft's illegal and antisocial behavior.

Sincerely,
Paul Komarek

Subject: Microsoft Settlement
To Whom It May Concern:

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the

current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future.

The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions.

Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general.

While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded.

Sincerely,
Micah Groppo

Subject: Microsoft Settlement

I am AGAINST the proposed settlement with Microsoft. Microsoft has wreaked terribly havoc on the entire personal computer industry, and anything but a strong remedy will only allow more damage to be done, and the existing damage to continue unpunished.

I am concerned about Microsoft sales to schools in general. I'm concerned about the many actions Microsoft has taken to create a monopoly on operating systems. I am concerned about Microsoft being both a competitor and a developer for Apple.

Here is one example. I am a college teacher, and I just got a brochure to buy Microsoft Office for a total of \$44. However, I would prefer to use Wordperfect and Adobe Persuasion—both products which have been discontinued, because competing products from Microsoft are included with MS Office (Word and Powerpoint). Microsoft has killed off all the competition.

Subject: Microsoft Settlement

To The Department of Justice,

I have looked up to Microsoft for a long time. I see the measure of their wealth as the measure of the value they have created. I am grateful to them every day I enjoy using their products. I respect the immensity of the task of creating what they have. It feels good to

look up to them. I like to know that there are strong people using their abilities to make life better. Seeing them persecuted in court has been sickening. If they were forcing people to buy their products at the point of a gun, or threatening competitors with acts of terrorism, that would be one thing, but the only wrong I hear them accused of is using their position in the marketplace to their best advantage. Windows did not become dominant because of force. Microsoft, nor the Government, stifled competition. It became dominant because the vast majority of people considered it the best solution. To see such success met with such hostility makes me wonder what kind of world I'm living in, and how high I care to aspire. Am I in favor of the settlement? They don't belong in a courtroom at all. They belong on a pedestal.

Sincerely,
Christopher J Grace

Subject: Accept the Settlement!
January 23, 2002
Attorney General John Ashcroft
U.S. Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530-0001

Dear Mr. Ashcroft:

I am writing today to urge you and the Department of Justice to accept the Microsoft antitrust settlement, which I have never believed to be in the consumer's best interest to begin with. My personal experience with computers has only been possible because of Microsoft's and other's work to integrate technology into a single package. If I had had to assemble my first computer from components and drivers I would still be in the dark ages. I have always thought that this lawsuit stemmed more from vindictiveness or jealousy than real concern for what's best for the consumer. I won't even mention the devastating effects on the technology

industry or the economy as a whole. (Although I agree with the many people that blame this lawsuit for starting the recession)

Microsoft has agreed to a wide range of concessions in order to put the issue behind them. The agreement is fair; the only thing left is for the government to accept its own settlement.

During the negotiations, Microsoft agreed to a wide range of restrictions. They agreed to allow computer makers the flexibility to install and promote any software that they see fit. They also agreed not to enter into any agreement obligating any third party to distribute or promote any Windows technology exclusively or in a fixed percentage. Microsoft also agreed to terms that extended well beyond the problems that actually at issue in the suit.

Microsoft has given up a lot in order to put the issue beyond them. They have made an agreement and are ready to move on. All that is needed is for the government to accept their own agreement. Please accept the Microsoft antitrust settlement.

Sincerely,
KarolAnn S. Jamison

To whom it may concern:

My name is Aaron Henderson. I am deeply concerned about the upcoming settlement of the Microsoft anti-trust case. I have so much to say about this case that I could not fit it all into a single letter. But there are at least three arguments to be made against the government's case, the practicality of anti-trust and the morality of punishing the able. First, the government claims that Microsoft was engaging in anti-competitive business practices. Exactly what concept of ???competition??? do the government and the anti-trust laws hold? As far as I know, when there is a competition, there are winners and there are losers. When Microsoft began bundling Internet Explorer, Netscape had the vast majority of the market. Microsoft turned the situation around without resorting to government intervention. Microsoft was

winning, honestly; consequently their competitors (who were losing because they were unable to compete) are now asking the government to stop Microsoft lest they actually win. This is the equivalent of a golf player, unable to compete with Tiger Woods, who asks someone to break Woods's legs, lest Woods win. Remember, it was the competitors who brought the suit, not the consumers whom they claim to want to protect. Curious, is it not, how their selfless protection of us conveniently removes their greatest competitor?

???But what if they win???? cry our would-be protectors. Well, that means we consumers have received what we wanted. We have voted, with our dollars, to support Microsoft, not their competitors. If the goal of the government is to protect the consumers, should they not be on Microsoft's side? After all, they are the ones who have responded best to the consumer. The less competent losers (henceforward the losers???) in this competition should not be foisted on an unwilling public because they are less competent. What kind of a world would that be? A world where competition is ruled by the less able is a world where people would compete to see who could do the shoddiest job, where the winner of such a contest is the biggest, laziest slacker, whose reward is money extorted at the point of a gun from those who committed the unspeakable crime of being good at what they do. How dare they! How is a law that creates this situation practical?

This leads me to my last, most important point. How is a law that creates the above situation moral? If morality is the sanction of life and a measure of someone's fitness to exist, what sort of life is the one described above? What sort of person would desire to live by the effort they did not exert? If no one else will say it, I will. It is only the unfit, the unsanctified, in short, the immoral who choose to live on what they have not chosen to do. The losers are now asking to be compensated for their lack of ability. It is immoral. To reward failure is immoral and impractical; it violates the rights of consumers and the able, honest producers. Do not, I beg all who have power in this case, do not punish Microsoft. Ability is neither a vice nor a burden.

Sincerely,
Aaron Henderson.

Subject: Microsoft Settlement

You asked for commentary, this is mine..

I feel that the Microsoft settlement should include in it a provision that would prevent them from having Windows automatically associate file types with their own applications upon any number of unrelated events.

Having this be the "default" behavior gives them an opportunity to have their software essentially (for many users) "remove" competing products. . making them unusable..

Ideally, Windows should also be a stripped down form with no built-in hooks to web browsers.. They use this to launch IE against people's will, and using Captive-X or other built-in hooks most people don't know about, upload. .essentially exchange privacy-compromising information with their own servers. . This is wrong.

Netscape and Internet Exploiter as well as others should be treated equally and mime types/file associations should be controllable by an external application.

Also they should be prevented from installing what is essentially spy-ware in their software as they seem to be doing now. Barely a week goes by without news of another backdoor that they have built into Windows. Of course they claim that these "Trojan horses" are bugs. But given the fact that the proffered "fixes" often don't fix the holes they purport to repair, and the number..(there have been so many it cannot be simple incompetence.) I think that it's clear that they have criminal intent. They should be prosecuted under the anti-hacking laws for breaking into people's systems.

Thank you, and "good luck",
Sheldon Pannisi

Subject: The Suit against Microsoft

Please drop the suit against Microsoft and let them get on with their business, which is serving its customers the best they can. I've never understood why government can't stand to see any company be successful. Of course, the business of government is to prevent force and fraud, but Microsoft was not involved in "force or fraud", apparently. The government attempt to level the playing field inhibits good businesses from doing what they do best: serve the customers. The market will do the right thing if government will get out of the way and quit meddling in the affairs of the market.

If force (the gun) or fraud (as in Enron) occurs, then let the government bring Microsoft to justice and incarcerate the criminals involved. I don't see Microsoft as a proper target for the DOJ and you've been at this too long. Give it up.

Subject: MS proposal

To whom it may concern,

The settlement proposed in the case against Microsoft (MS) will *not* resolve the problems that prompted the case. This case was not about saving Sun Microsystems and Netscape from the abuses of MS. These two companies have both in their own way tried to do what MS has in abusing its monopoly position in the market. Netscape was well on its way to destroying all other web browsers when MS came along and did the same to them, so I have ZERO sympathy for Netscape. Sun's efforts to control Java while trying to make it a "standard" are contradictory at best.

The problem that needs to be addressed in the MS antitrust settlement is "how do we make the market more competitive?". Breaking up MS won't work because you'll have 2+ "baby Bills" out there pulling the same shenanigans. The antitrust suit against IBM was dropped (for good reason), because IBM had reformed its practices enough to make the case irrelevant. MS has proven time and again they have zero respect for the "rule of law", and figure they can get away with anything through delay tactics, fake "grassroots" campaigns, PR, and huge campaign donations.

The current MS "abuse of monopoly" is no longer a Windows problem, but is an OFFICE

problem. The Office Suite product line is the MS cash cow, and MS used Windows to create its Office monopoly. MS has control of the desktop OS market, and only time can erode their commanding market share there.

The key to getting MS to behave is force them to make MS-Office run on at minimum 3 other Operating Systems with the same exact functionality as the Windows version for 10 years. Next they must also be forced to stop giving discounts on Windows to OEMs that "play ball" by not promoting non-MS products.

If MS wants to make a donation to the schools as part of any settlement, then it should be "hardware only" for any monetary value. If they also want to donate the software, then it must be completely free and include unlimited usage licenses. This will allow schools to decide if they want MS products for free or Open Source products at the same price.

I completely oppose the Proposed Final Judgment tentatively agreed on 06-Nov-2001 between DoJ and Microsoft.

The Proposed Final Judgment has a multitude of weak definitions, leaves several holes where Microsoft's anti-competitive conduct is not regulated, and provides insufficient protections to ISVs who wish to use Microsoft APIs.

I demand that DoJ reject this Proposed Final Judgment and rewrite it in much stronger terms. The comments at Slashdot are a good starting point for this.

Thank you for your time.

Dear Sirs

AM extremely disappointed with the provisions of the Microsoft settlement as disclosed in the press. I believe the 9 states who have chosen to pursue Microsoft on their own have a better settlement in mind for the public. Please adopt their stance on this issue.

Personally, I believe the break up of "Office" from the "OS" is the only way to assure competition. Otherwise Microsoft will continue to "embrace and extend" other standards so that we will never have a choice except Microsoft's products.

Please re-introduce competition to the computer market place by supporting the 9 states or breaking up Microsoft.

To whomever, Your recently sell-out to Microsoft in the form of your so called settlement DOES NOT correct nor punish Microsoft. It is worded in such a way to allow MS to continue to behave as it has and continue to reap the benefits. Your settlement caves on all the important areas. Ms will continue to use its influence to bundle more and more into the OS until third party applications aren't needed. Impose REAL regulations on MS. Require them to follow the law—AND don't let them benefit from their past misconduct. In the 90's they used IE to destroy Netscape for control of the Web, they rewrote Java so it would only work on their products. As it stands now, you might as well sit as MS's table because your "settlement" is nothing more than MS's wishlist.

MTC-00020279

From: Alex Johnson
To: Microsoft ATR
Date: 1/24/02 2:45am
Subject: Microsoft Settlement

Dear sir:

I'd like to take his opportunity to comment one of the inadequacies I see in the Proposed Settlement of the Microsoft Case.

Specifically, the Proposed Final Judgment (PFJ) appears to attempt erode the Applications Barrier to Entry in two ways:

1. By forbidding retaliation against OEMs, ISVs, and IHVs who support or develop alternatives to Windows.

2. By taking various measures to ensure that Windows allows the use of non-Microsoft middleware. It omits, however, perhaps the most effective method available to eliminate the Applications Barrier to Entry: making sure that Microsoft raises no artificial barriers to non-Microsoft operating systems which implement the APIs needed to run application programs written for Windows. In fact, Paragraph 52 of the Findings of Fact considers just this possibility. As the owner of an information systems consulting business, I find myself no alternative but to recommend Microsoft operating systems to my clients who must use software written to the Microsoft APIs. Requiring Microsoft to publish these APIs would make it possible for developers of other operating systems to allow the running of these applications. This would provide valid and healthy competition as an alternative to the current Microsoft monopoly.

This letter highlights just one of the many problems I see within the PFJ. I hope that the U.S. Department of Justice will take proactive measures to correct the inadequacies as highlighted by this and other correspondence received during this public comment period.

MTC-00020284

From: J(038)B Seybold
To: Microsoft ATR
Date: 1/24/02 2:50am
Subject: Microsoft Settlement

While the proposed settlement appears to meet the defined goals, I am very concerned that the definition of "Microsoft Middleware Product" in the "REVISED PROPOSED FINAL JUDGMENT" is far too narrow and restrictive. Specifically, in "Section IV, Definitions", paragraph K.2.b.i, the definition states ". . . is, or in the year preceding the commercial release of any new Windows Operating System Product was, distributed separately by Microsoft (or by an entity acquired by Microsoft) from a Windows Operating System Product. . ."

This definition appears to exclude functionality which was based directly upon or substantially identical in function to the a previous commercial product, but where said functionality was modified by Microsoft. This is a major exclusion, because it is very rare in commercial software for unchanged software to be published for two consecutive years. It is common practice for Microsoft to modify software, either by reducing functionality, or by adding functionality, when incorporating the functionality of previously commercial software. Under the provisions of the proposed definition, similar but distinctly different functionality would exclude such modified software from the Microsoft Middleware Product definition. Microsoft could therefore make small or even trivial changes in software that would otherwise be clearly defined as Microsoft Middle Product, and thereby claim that it was exempt from the provisions of this judgment.

Further, the definition of "Microsoft Middleware Product" in the "REVISED PROPOSED FINAL JUDGMENT" carefully excludes new software functionality developed by Microsoft and included as Microsoft Middleware or as part of the Windows operating system, with the intent of competing directly with commercially available software to reduce competition. The pattern shown in the development and release of Internet Explorer, Microsoft's Java Virtual Machine, Windows Media Player, Windows Messenger, and Outlook Express is now being repeated in many other areas. For example, the capabilities of Microsoft Backup has been extended to include the file backup

functionality provided by NovaStor Corporation's NovaDisk, or Veritas Corporation's Backup Exec. Since NovaStor and Veritas have not been acquired by Microsoft, Microsoft Backup does not meet the definition of a Microsoft Middleware Product. Therefore, I suggest that the Proposed Final Judgment does not provide the necessary restrictions to preclude continued anticompetitive conduct by Microsoft to unlawfully protect and maintain its operating system monopoly in violation of Section 2 of the Sherman Act.

I suggest that Specifically, in "Section IV, Definitions", paragraph K.2.b.i, be modified to state "i. is, or in the year preceding the commercial release of any new Windows Operating System Product was, distributed separately by from a Windows Operating System Product,"

Thank you for your consideration.

Subject: MICROSOFT SETTLEMENT

It is time to settle this case.

The settlement agreement is very harsh on Microsoft, the company that has been THE major driver of the economic and technological boom of the 90's. By creating a standard Operating System for all personal computers Microsoft has been instrumental in making computers affordable and easy to use. THE CLEAR WINNER HAS BEEN THE CONSUMER.

Microsoft's jealous competitors started this lawsuit because they could not compete with the greatest American company on a fair business basis, even though their business practices have been just as aggressive. We consumers do not want to turn the clock back to a multitude of incompatible Operating Systems that only work on certain manufacturers computers and raise the cost of application software. We want to be free to chose.

Eva Breyer

MTC-00020288

From: Jason Pascucci
To: Microsoft ATR
Date: 1/24/02 2:59am
Subject: Microsoft Settlement

As a long time Microsoft user and software developer, and not having particularly benefited because of it, I have several problems with the Microsoft Settlement as it currently exists. I believe that the fundamental problems of Microsoft's worst business practices remain unaddressed. Some of those are:

a) Consistent business practice of taking existing innovations, stripping them down to component parts, and producing a solution that is (usually barely) "good enough" without being "better", where the real differentiator is that they ship a "good enough" solution free. By bundling many software systems that fundamentally do not belong to part of their Operating System, they stifle competition.

The "operating system" of a machine is a defined thing. It never had nor ever should include a web browser, or a media player, or restrictive and incompatible authentication models.

b) refusing to implement interoperable, "open" and compatible solutions (c.f. Sun's Java versus Microsoft's implementation, IE's built-in incompatibility with existing standards (thus impacting Netscape), etc)

c) In Microsoft's quest for market dominance, they are so busy in pursuing market-blocking activities that they fundamentally do not provide sufficient resources to make their own products significantly better. Microsoft does not significantly update products whose competitors do not impinge on their existing, near dominant, market-share. They rely on the fact that the barrier to entry is so high, and that existing problems could be addressed for far less than the cost of full re-implementation, to dissuade competition and avoid making important updates. Fundamentally, the original proposals of splitting Microsoft may have been adequate to level the playing field.

Another option not apparently considered, but the most useful to address the problems, would be merely to force the unbundling of—all—unrelated components: if a user could

buy each component separately, he could price and compare products, and pick the one best suited to his needs. And, in that scenario, Microsoft would be in the same boat as all other competitors: either make better components, or risk losing business.

Sir/Madam,

I am writing this to express my dissatisfaction with the Proposed Final Judgement to the Microsoft Antitrust case.

One of my main concerns with the Proposed Final Judgement (PFG) is that it supposedly makes Microsoft publish its secret APIs, but it defines "API" so narrowly that many important APIs are not covered.

If these APIs and terms are not clearly defined, it will leave many loopholes with which Microsoft will have ample opportunity to continue with its anti-competitive practices.

I urge the Department of Justice to take appropriate measures to make sure such injustice does not happen.

From: Lynn Clark
To: Microsoft ATR
Date: 1/24/02 2:56am
Subject: Microsoft Settlement
To whom it may concern:

I am writing to express my disappointment about the proposed settlement in the Microsoft antitrust trial.

The proposed settlement will have little, if any, effect in curbing Microsoft's illegal behavior. Having read both Judge Jackson's "Findings of Fact" and "Final Judgement" in the antitrust trial and the appellate court's decision, and having read the proposed settlement, it is difficult to imagine how Microsoft's attorney's were able to so successfully roll the government negotiator, in light of the malicious behavior of which Microsoft was found guilty. The proposed settlement has holes big enough to fly a Microsoft 777 through.

Microsoft is an unrepentant monopolist. Microsoft's past actions have hurt the marketplace and its present actions continue to do so, even after having been found guilty of egregiously violating antitrust laws. For example, after having been found guilty in the antitrust trial, Microsoft has subverted the "open" kerberos security standard in a way that can have only adverse consequences for platform-independent computing, effectively preventing non-Microsoft software from seamlessly interoperating with Microsoft software in a networked computing environment. This decreases consumer choice, thus stifling competition.

The government won the case, and won it bigtime. The proposed settlement is in proportion with neither the magnitude of the government's victory in the case, nor the magnitude of the egregious actions Microsoft took to stifle competition in the marketplace, for which they were found guilty. The proposed settlement must be thrown out and a settlement—which should include a large fine (\$5 billion, at least) and serious restrictions on Microsoft's conduct—should be pursued.

Subject: Microsoft Settlement—Business Practices on Trial

Dear Department of Justice,

Following are my comments in support of the recommendations put forth by the nine non settling states.

Microsoft's predatory, monopolistic, and anti-competitive practices are well documented. They are under legal fire in the United States, China, Brazil and Europe. But, with their enormous monopoly gained resources they are able to buy settlements with nine states, to buy endless legal delays (that promote a denial of justice) while their products and associated proprietary training become ubiquitous, capture the marketplace, and eliminate innovation and competition.

Microsoft is the only large hi tech company to grow their earnings per share EACH quarter in 2001 and to increase their stock price by 30% BECAUSE they are a monopoly and not subject to pricing pressures.

Microsoft's arrogance is magnified in these times when Americans are making sacrifices and responding with unprecedented patriotism to threats against our country and threats against our inherited legal system which protects us all and is the envy of the world.

Microsoft, Enron—the global investment community is watching. America's business practices are on trial.

THIS IS THE TIME FOR OUR LEGAL SYSTEM TO UPHOLD THE LAW FOR THE BENEFIT ALL BUSINESSES, CONSUMERS, INVESTORS, INNOVATION, COMPETITION AND INTERNATIONAL TRADE.

Subject: Microsoft Settlement

I am writing to comment on what is a seriously flawed "settlement" in this Case. In its current form, this "Settlement" is a giveaway to Microsoft, with flimsy, avoidable "penalties" of no substance whatsoever..it's LOADED with loopholes. Microsoft deserves REAL punishment. I propose three options here:

1. Microsoft must be forced to divulge to the world at large its specs, current and future, for its ".DOC" file format, the one used to create documents in Microsoft WORD..its famous wordprocessor.

2. Microsoft must allow and and ALL Computer Manufacturers whom it licenses to sell its Operating System..the freedom to have SOME machines preloaded with The Other Guy's Product..be it Linux, FreeBSD, IBM's OS/2, or Netware. Certainly Microsoft

will be given its normal Licensing rights via the Computer Maker, regarding how its OWN products are installed, etc..but if the Maker has other machines with a competing Operating System on it? Tough if Microsoft doesn't like it. Give our Computer makers some freedom!

3. Any future "security lapses" TIABLE TO A MICROSOFT SECURITY FLAW should cost them heavily in fines and forced punitive corrective-measures.

Thanks for listening.

Very Truly Yours,
Robert McMorrow

Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530
Subject: Microsoft Settlement

Dear Mr. Ashcroft:

After three long years of costly court battles, Microsoft and the government have settled an antitrust suit that has profound implications for all software publishers, the

rest of the computer industry and consumers. This settlement will surely give a boost to our lagging economy. The settlement, with its new rules, will provide certainty about compliance and thereby ensure that the computer industry can continue delivering advanced technology to the marketplace.

Therefore, no new litigation should be brought to the courts by the "Feds" beyond this agreement.

Sincerely,
C. C. Chenoweth

Dear Sirs: I am writing this to express my support for Microsoft Corporation and to rise in objection to the government thinking that it has the right to throttle the productive genius of one of America's finest companies. I have chosen to use some Microsoft products at work and at home and find them to be excellent. They have helped me be very productive. We should be rewarding Microsoft for their contributions to our economy, not punishing them. I do not recognize the right of the government to intrude into the business place in this manner. I am in the United States Navy, and I can tell you that it is very disheartening to be willing to give my life to the defense of freedom in America, only to see it eroded from the inside out. I implore you to rethink the position of the government on this issue and give Microsoft the free hand it requires to be as productive as it can be. If you throttle Microsoft's productive ability, we will all lose, including the competitors it has supposedly shut out by force (which I disagree with). No one has put a gun to anyone's head and ordered them to buy Microsoft's products. It is all a matter of choice. Are we to punish corporations now for giving away things free? That is simply too much to believe. I am trusting you to do the right thing. Be strong, America will support your decision. Thanks, sincerely, Jim Nault, CDR, U.S. Navy.

Subject: Microsoft Settlement

Dear Sir/Madam,
I wish to go on record as being opposed to the current proposed settlement in the anti-trust case against Microsoft. As a computer professional for nearly 25 years in various capacities, and as the founder of several software companies, I have witnessed firsthand the stifling effect that Microsoft's dominance and predatory business practices have had on the industry. Many times I have heard from investors that they would invest in a good idea except for the fear that Microsoft would leverage their operating system dominance to co-opt the market once it becomes lucrative. Witness the past situation with the web browsers, disk compression utilities, etc., and the current

battles over multimedia, network services, instant messaging, and handheld computers.

The current settlement does nothing to punish Microsoft for its past behavior, nor does it meaningfully prevent the company from engaging in similar activities in the future. I hope that you will consider much more aggressive remedies in this case.

In particular, I would like to suggest one: Prohibit Microsoft from distributing their OS software preinstalled on any computers for the term of ten years, and prohibit sales of hardware/software bundles and discounts containing Microsoft software. Customers would be required to pay for and install Windows independent of the computer hardware, which may contain other competing operating systems preinstalled. This would allow an opportunity for other current and future operating systems vendors to be able to make a pitch to customers that they offer a viable alternative. Much of Microsoft's dominance comes from their exclusionary practices with regard to preinstallation. It is nearly impossible to buy an Intel-compatible computer without Windows preinstalled, and Microsoft has used illegal business practices to assure that it stays that way. Please give the customers a chance to make the choice denied them in the past.

Sincerely,
Duane Maxwell

DOJ,

I am a Value Added Reseller (VAR) in the IT marketplace. I have followed the Microsoft case extensively throughout its history. I

have read the Revised Proposed Final Judgment (RFPJ) agreement and feel that it is fair to both sides. It may be that longtime Microsoft rivals are not satisfied with the agreement, but their view may be skewed by anger and bitterness. While it is certainly fair to argue that Microsoft was wholly unfair in its business practices, they have made long strides in pushing information technology into the consumers' hands. Microsoft may not have originally possessed innovation, but they have brought it forcefully to market.

The Revised Proposed Final Judgment (RFPJ) really takes the teeth out of Microsoft's rough sense of business practices, but at the same time does not cripple this American frontier company. Please remember that Microsoft is keeping America very much ahead in the world of technology.

Please Approve the Revised Proposed Final Judgment (RFPJ) and allow this matter to be settled once and for all.

From: antv@antv.org@inetgw
To: Microsoft ATR
Date: 1/24/02 3:09am
Subject: Microsoft Settlement

To Whom It May Concern:

It seems like the proposed settlement for Microsoft antitrust trial is flawed. Because of many different legal loopholes in it, Microsoft will be able to find ways to easily exploit their customers and OEMs to their advantage.

A great analysis of flaws in the proposed settlement could be found here: <http://www.kegel.com/remedy/remedy2.html>. Below are my main complains about the settlement:

1) Microsoft's APIs, file formats, and protocols. The complete documentation for these must be made public and be updated in a timely manner. Closed APIs and file formats are a major barrier to entry, since virtually no company can afford to convert its existing documents into a new format. Currently anyone using Microsoft products is effectively "locked in" to those products because they cannot be easily converted to another format. While some attempts had been made to produce programs and/or libraries that can read and write files in Microsoft's formats, they are only partially compatible and usually fail on complex documents. The main reasons for this are undocumented changes in Microsoft APIs and lack of complete documentation. Anything that can be done to reduce this barrier can only help to create more opportunity in the market.

2) Microsoft's business practices. Microsoft must not be allowed to enter into deals with OEMs, ISPs, or other businesses that would create disincentives or prohibit those

companies from offering non-Microsoft products or services to their customers. Since the vast majority of the desktop computing world currently uses Microsoft products, OEMs, ISPs, and others must be able to offer those products to consumers. Allowing Microsoft to continue to take advantage of that situation by prohibiting those companies from offering alternatives effectively means allowing Microsoft to continue to hold the industry hostage.

3) Microsoft's attempts to extend their monopoly in new markets * Microsoft attempted (often successfully) to extend their monopoly in several new markets already, using the same monopolistic tactics. Most prominent examples are:

—Microsoft .NET and MS's plans to force everybody to sign for a MS Passport (which has already been proven to be a very insecure system), and also to sabotage development Sun Microsystems' Java language on Windows platform in favor of their own ".NET" system.

—Audio/Video market, where Microsoft used their OS monopoly to push products like Windows Media Player and gain unfair advantage over competitors such as Real Player and QuickTime

—The failed attempt to turn an educational lawsuit into a way to inject their software into yet another market

If these concerns are addressed by the eventual settlement or court ruling, they should remove most of Microsoft's ability to abuse its monopoly power to the detriment of the industry. I feel that a healthy IT industry should consist of competing products from a variety of companies, all able to interoperate with each other, with no single company able to leverage its dominance in one area to bolster its position in another.

Microsoft Settlement U.S. Department of Justice
Dear Microsoft Settlement U.S. Department of Justice:

I believe every word below absolutely. The Microsoft trial squandered taxpayers' dollars, was a nuisance to consumers, and a serious deterrent to investors in the high-tech industry. It is high time for this trial, and the wasteful spending accompanying it, to be over. Consumers will indeed see competition in the marketplace, rather than the courtroom. And the investors who propel our economy can finally breathe a sigh of relief.

Upwards of 60% of Americans thought the federal government should not have broken up Microsoft. If the case is finally over, companies like Microsoft can get back into the business of innovating and creating better products for consumers, and not wasting valuable resources on litigation.

Competition means creating better goods and offering superior services to consumers. With government out of the business of stifling progress and tying the hands of corporations, consumers—rather than bureaucrats and judges—will once again pick the winners and losers on Wall Street. With the reins off the high-tech industry, more entrepreneurs will be encouraged to create new and competitive products and technologies.

Thank you for this opportunity to share my views.

Sincerely,
C T Archer

So you found them "guilty of abusing their monopoly power but you are going to let them off with the most mild slap on the wrist" is how the settlement reads to almost everyone.

All monopolies that have been broken have resulted in massive benefits for the consumer, and long term the whole economy,

I see no reason why you should think that the Microsoft monopoly is one that should be allowed to continue.

The DOJ has made itself look weak and ineffectual, it won, then allowed Microsoft to walk all over it. What respect can you have if you do not follow through clear court victories with appropriate remedies? At the very very least you —must— remove all the additional clauses that allow Microsoft to not disclose interfacing information, so people can interface to Microsoft operating systems. Microsoft will deem all useful information a “security risk” and not disclose it, and nothing will have changed. The world needs prompt and full disclosure of all networking protocols and file formats, including those for Microsoft office and related products. No exception clauses allowed.

Please think again, and significantly toughen the terms of the settlement.

Before I say anything that might indicate to the contrary, (deep breath) the settlement is a lousy idea!

I am a PC user. Therefore, if I am to do what 90% of other PC users do, I am forced to use Windows. “Nonsense!” cries Microsoft. “There’s PLENTY of competition! Just look at what Linux is doing!” This is precisely why I am forced to use Windows: because Microsoft is so large, they will stop at nothing, ignoring any moral or ethical standards set forth, to dominate their

markets, or, I daresay, the world. They have challenged you, and you cowed to their demands for whatever reason was given to you. You are, as police and district attorneys everywhere would say, giving them a “slap on the wrist”.

Fines are not the answer. Nor is redistributing the wealth that Microsoft commands; neither will slow the pace of this monstrosity that devours any that it thinks will stand in its way. Does this not sound like Standard Oil or Ma Bell? Both were split apart into smaller companies to re-introduce competition and give consumers a greater amount of choices in the marketplace. Yet by this move you allow the largest computer software corporation to exist, with its hungry sights on every computer in operation today.

From: zan/Charles
To: Microsoft ATR
Date: 1/24/02 3:18am
Subject: Microsoft Settlement

I am writing to express my vehement opposition to settling the antitrust matter with Microsoft in the manner proposed by the company and agreed to by some of the states participating in the suit.

It strikes me as especially bizarre to remedy the hindrance of competitors by bundling free competing products with a dominant product, Windows, by allowing the offending company to give even more free software away. This educational “gift” is especially insidious, because it gives Microsoft an easy inroad into the education market where it still has a competitor in the form of Apple Computer. In Microsoft’s eyes, this is merely another software giveaway that will reap profits further down the line.

Microsoft engaged in illegal, anticompetitive actions and continues to do so. For instance, by recently integrating its MSN internet services with its Internet Explorer browser, Microsoft was able to wrest the position as top web destination for searches from Yahoo! Their tactic: convert the default “page not found” into an MSN search, driving users to their own products and advertisers. Experts note that fully half of Microsoft’s MSN search visitors arrive there via this method.

Users do not try MSN’s search, compare it to other services and favor the best provider; they are sheperded there by default as a result of using other Microsoft products. In a free-market system, I thought the point was to reward innovation and quality, not ubiquitousness.

But Microsoft seems to think that only its own interests matter. Again and again, its tactics are designed for nothing else but the benefit of Microsoft, and are very seldom beneficial to the American consumer. Bearing in mind that Microsoft has been asked before to voluntarily alter its behavior and it has failed to do so, I urge you to reject this ridiculous settlement

Subject: Microsoft Settlement

I would truly like to understand how Microsoft’s giving of software products they have already produced, to schools and people that would never buy them anyway punishes their monopoly and decreases their market share. The only true cost to Microsoft giving their software to these people is the cost of printing the manuals and CDs. This does nothing to make amends to the millions of Microsoft customers who have suffered overpriced, un-inovative, poor quality products because alternative competing products have been either bought or forced out of business by Microsoft. Furthermore, I would like to understand how training many of the young recipients of this settlement to use Microsoft products helps improve awareness and support of competing products.

As an engineering graduate student, I don’t consider myself a fool but I simply can’t imagine a scenario under which the currently proposed settlement reduces Microsoft’s monopoly of several markets. Maybe I have a poor imagination. I’d very much like to see alternative settlements under which, Microsoft’s competitors and customers are awarded monetary or other creative product replacement settlements such as RedHat Software’s proposal to supply the same underprivileged schools with computers using RedHat’s software at Microsoft’s dime. As a person who is aware of the social/political, technological and economical impacts of this case, I urge you to reconsider this settlement.

Thanks,
Matthew Du Puy

Sirs,

As a user of Microsoft products (both at home and at work) I feel that the results of the settlement does not go far enough in either:

a) penalising Microsoft for the previous monopolistic tactics— which have seriously (to my mind) reduced the innovation in the desktop and browser market

b) limiting the monopolistic tendencies of microsoft in the future

It is sad to see a toothless anti-trust case which seemed to start with the right intentions but, at its finish, has become a farce and a whitewash.

Regards,
Michael Angel.

Dear Sirs,

Although this issue isn't connected directly with US Antitrust laws, I thought you should be aware of Microsoft Israel's ("MSI") behaviour.

Microsoft Israel were announced as a Monopoly by the Head of the Antitrust authority in Israel, Adv. Dror Shturm, a couple of months ago. But such an announcement hasn't made MSI change it's behaviour towards Macintosh users in Israel. For a couple of years now, Macintosh users in Israel are requesting again, and again, that Microsoft Office for the Macintosh would support the Hebrew language. An issue that is taken for granted in the PC platform.

MSI keeps refusing to do so, stating that they do not have the knowledge nor manpower to perform such a task. A deeper investigation of the matter, and discussions between Apple France and MSI, revealed the sad fact that MSI were "ordered" by MS, NOT to localize Microsoft Office to hebrew, no matter what ! Their concern is that people in Israel would actually prefer Macintosh computers, rather than Windows based PCs.

There is alot more to be said about this. But, the bottom line is, that MS and MSI are intensionally damaging the free competition in the Israeli computer software market. Misuse of market power is an Antitrust felony, if I'm not mistaking.

Please consider this issue. I would be glad to provide more information on this matter, by demand.

The proposed Microsoft case settlement is in my opinion fundamentally flawed and wholly inadequate. It should not be adopted without complete revision.

1. Only a separation of the Windows operating system from the Office Suite and from Internet Explorer can "unfetter" the Windows market and allow competitors to emerge. Only such a three-way breakup of Microsoft can end the company's unlawful conduct. This Proposed Final Judgment is completely inadequate because it does not separate control of Office from control of Windows, and control of Internet Explorer from both Office and Windows.

2. The prohibited conduct provisions of the Proposed Final Judgment cannot be effectively enforced with regard to Microsoft due to the extraordinarily subtle ways in which the company can shift and redefine the operating systems environment to the disadvantage of its competitors. Any effective settlement must lay out enforcement provisions and attempt to address these subtleties.

3. The definitions presented in the Proposed Final Judgment for "middleware", "API", and the "Windows Operating System Product" are vague and easily circumvented by Microsoft. The company can trivially evade the intent of the settlement by altering its product naming and/or distribution schemes in obvious ways. Any reasonable settlement must have its provisions continue in force regardless of minor shifts in Microsoft's nomenclature and marketing spin.

4. The Proposed Final Judgment fails entirely to protect potential competitors to the Windows Operating System because it limits the usage of information disclosed by Microsoft under the settlement to use by those producing competing applications software. Any settlement which is to restore competition to the operating systems marketplace must protect competing operating systems, and facilitate their compatibility with Windows.

In summary, this Proposed Final Judgment is not in the public interest and should not be adopted.

Sincerely,

Jason Campbell

The settlement falls far short from actually making sure a crafty monopolist relents and desists. Microsoft will just continue business as usual (in a slightly different form to work around hard to enforce regulation), and new entrants will still not be able to get a foothold, which is bad for users and the computer business.

The Fed. Gov. blackmail of Microsoft and the welfare of Netscape and all the other competitors of Microsoft. This I would expect in the Old Russia or China today, but not here in this Country where the free open market has made this the greatest civilization in history.

It's time to stop the socialist/ communistic approach. I think you have too many still their from the slick willie era and house should be cleaned or you need to go back and retake ecom. 101. You are going to keep screwing around and destroy the most innovative industry to come down the pike in history, who single handily created more jobs than you can tally, my guess would be more than the automotive industry did in it's time. Who is going to suffer? THE AMERICAN PEOPLE and our economy.

The turn down in the economy before September 11, 2001 I'm sure can be tied to you'all's suit against Microsoft.

I guess your'all's response will be to sit back all smug with your thumbs hooked in your suspenders and say look what we have done HURRAH, HURRAH!!! REMEMBER YOU ARE PART OF THE AMERICAN PEOPLE TOO, SO THOSE hurrah hurrah better be said in a whisper because you are going to look like fools.

Honorable Justice,

We can notice from the lifestyle of those working in Microsoft and we know that they have this absence of fear, a god-like stand, knowing and is assured that MICROSOFT, above all, will withstand the brunt of the wheels of justice running them over.

If you can see, even in our tiny island here in Asia, we can feel how Microsoft is controlling the market of system integration. You must be a "big fish" or a "big player" before they can deal with you, in terms of the licensing fees. If not for this issues, we could have developed an embedded device using WinCE as OS. However, due to the license fee, we moved into Linux and other OS conceivable without paying the high price.

Well, let the voice of the people decide on the fate of the Giant. Will we allow them to continue living at an extravagant lifestyle at our own expense?

Thank you.

In the proposed final judgement, Microsoft isn't required to disclose the formats of its various "Office" files. For example, with Microsoft's monopoly, people have become accustomed to sending Word documents in their native format. Microsoft doesn't have a lot of documentation any more for their Word document structure, so competitors must "reverse-engineer" the structure and implement what they can. People might be satisfied with a competitor's software—with the sole exception—of Word document interpretation, and thus might switch to Microsoft's software—solely—on this basis. Thus, a barrier to entry is maintained.

Broadly speaking, most of the proposed settlement doesn't do much to correct or even address Microsoft's past abuses—see Dan Kegel's analysis (<http://www.kegel.com/remedy/remedy2.html>). Microsoft commits crime but is then still able to profit from it. I hope this isn't how the Justice System is intended to work. If it is (right to profit from past crimes), then Kevin Mitnick ought to have a computer (because that would enable him to profit from past crimes).

I am not happy with this proposed settlement, please consider this a "no" vote. A stronger remedy please!

Thanks!

I do not believe that the settlement is punishment enough for the illegal practices that Microsoft has performed on others in the industry. The settlement should be more than just a mere, bonus marketing move for Microsoft. You are performing in a case that is crucial for everyone in the Modern world, and allowing such a small punishment to be settled, is unsettling. It will just allow Microsoft to continue to bully.

 RE:Microsoft Settlement

To whom it may concern Jan 23, 2002
 Antitrust Division
 U.S. Department of Justice
 Suite 1200
 601 D Street NW
 Washington, DC 20530-0001

I am opposed to the proposed settlement in the United States v. Microsoft antitrust case in its current form.

As someone who has been involved in the computing industry since the late 80's, I have watched Microsoft rise to dominance with concern for the longer term health of the industry as a whole. While I have often found Microsoft's techniques distasteful and unethical, my primary concern is that everyone involved concentrate their efforts toward a solution better able to deal with future behavior, not one that corrects the mistakes of the past.

Any remedy directed toward past events will be ineffective as rendered due to the rapid pace of change in our industry today. With an eye toward the future, I respectfully submit the following for consideration:

Microsoft should be compelled to fully document and publish file formats and application programming interfaces in a format without restriction for public review. Compulsory RAND licenses allowing the use of the formats will be made available to closed development efforts regardless of size. Open development efforts would be able to make use of the public documents without license provided that the resulting code remain open. Publication of said standards should be made in a timely manner in order to foster competition and innovation among all parties involved. The above provisions, while not precise enough for final rendered judgment, serve as a rough framework intended to achieve a number of goals all contributing to the longer term health of the industry in general and long term benefit to its users.

Competing developers would be able to build applications better able to inter-operate with Microsoft's own, thus enabling competition for common applications on a number of platforms. The average persons choice of computer is sharply limited today because it is artificially difficult to develop viable alternatives. API and file format interoperability is necessary for this to change.

Microsoft's ability to "Embrace and Extend" open standards would be sharply limited by the provisions outlined above. Open standards are often developed either in an academic environment, or through peer review. Use of said standards should remain open. Closing them only benefits Microsoft.

The rapid growth of the Internet as we see it today is due to the open standards upon which it is built. Another facet of the internet that is worth consideration, at this point, is the fact that it runs on a number of different platforms, including those offered by Microsoft. If current behavior is allowed to continue, this will change for the worse. We will end up with one company controlling a very large portion of the Internet also in a position to control its future direction. Given the relative youth of the Internet today, I am not convinced that this is the best outcome.

Almost every computer working today regardless of vintage or make is capable of performing the basic computing tasks most users need, yet the latest Microsoft offerings demand the latest machines. While I clearly recognize Microsoft's need to innovate and take advantage of the latest technology, I also have concern over the lack of alternatives able to make good use of the hardware already available. Open data formats, and applications programming interfaces will enable better solutions to common needs on existing hardware. There is a lot of value in these types of solutions. Longer term, the presence of these solutions also provide a powerful incentive for future development to remain realistic in its hardware demands.

In summary, my primary concern is with the way Microsoft has leveraged its file formats and application programming interfaces to build its business at the expense of everyone, including its own customers. Addressing future behaviour, rather than correcting problems of the past, takes best advantage of the fast pace of technology today.

Thank you for your time and consideration,

MTC-00020349

From: Christopher Owen
 To: Microsoft ATR
 Date: 1/24/02 3:52am
 Subject: Microsoft Judgment

As an European based consumer and small business I am very concerned at the way that despite the well documented methods that Microsoft used to lever itself into market dominance there is going to be no real remedy. If this was the automotive industry or even in the utilities steps would have been taken to sort out the anti competitive practices and the theft of intellectual property. The only time a small software house tried to get compensation from Microsoft for the illegal use of their intellectual property was when the Stac corporation sued Microsoft for bundling disk compression in MS DOS 6.0. The outcome Stac won the day but as the court did not award costs the cost of the case broke the company so in essence it was an hollow victory. Microsoft has admitted to tactics such as increasing the price of products to a company if they find out any competing products are being used. It was this last tactic that helped pushed Vobis and Escom into history. Recently we had Microsoft posting cereal packets to Novell customers and insinuating that the support would run out soon as far as I am aware this case is still ongoing. The fact that Novell had just announced the release of a new product did not seem to stop the Microsoft marketing machine from trying to convince Novell customers that Novell were leaving the network software market. From a users point of view most of the Microsoft product line is woefully inadequate with constant patching require to get it to work correctly and once the product is stable it is dropped an a new more glitzy product is introduced. Steve Balmer's statement that in time everyone would be paying Microsoft for their Internet uploads and downloads is a cause for concern as Microsoft does not own the

Internet so how can they charge for access to it. In the UK we had the embarrassment of a site set up for the UK government only allowing Microsoft Browsers access, little more than a method of forcing people who needed to access that site to change not only their browser ! but in some cases their platform and OS as well. This last point has now been opened up to other browsers but it still goes to show how Microsoft will try to further consolidate its market dominance to reach the goal of a monopoly. Pricing in Europe is a mess with the K paying the highest prices for Microsoft products and no real reason being given for this, the new Xbox is a prime example made in Europe yet we will be paying 50% more for the product than the Americans an Japanese. Consumers here in the UK did look to the American courts to get Microsoft to play fair. With standard oil, IBM and AT&T remedies were forced on the companies to make them compete fairly yet it seems to view here that Microsoft has placed itself above to law. Has access to the Gates mansion been granted for tax assessment purposes yet? If you are still unsure of the conduct of this company just read a Book called The Microsoft Files it is reveting reading and goes a long way to explaining how market dominance was achieved., or are the methods described in the book standard American practices? For the sake of the little man in the street just make sure that the Microsoft remedy is just and fair to all parties and not a licence for Microsoft to carry on its quest for world domination.

How can you sue a company for putting its own products in its programs. Surely you wouldn't sue Pepsi for putting Pepsi in their own cans, or sue Marlboro for putting their products in their own packaging. Microsoft could not obviously put anybody else's internet browser in their operating system. If you want to sue a company, SUE AOL, for making such useless software, and buying out Netscape and forcing their subscribers for using it. IF Microsoft were forced to supply a bare bones Windows, then myself, and everyone I know (which is a lot of people, being an IT manager.) would transfer the products back into Windows. If I could, for some reason NOT use Internet Explorer (which has to be, by far, the easiest, most secure and reliable browser) I would never, ever use Netscape, but choose a far superior browser than Netscape (which is not hard really!!) called Opera.

My 5 cents.

Hi, I'm just a guy sitting back reading the spins on the Microsoft case, and it seems to me that common sense has never entered into the situation. To me, what Microsoft has done / is doing in terms of their marketing isn't right. It's kind of like magic—pay attention to this hand, so you don't notice what the other hand is doing. What I find difficult to believe is that my government is falling for this. God forbid, that they see what's going on, and are just turning a blind eye. If you were told you could buy any car you want as long as it's a Ford Escort, I don't think you'd go for it. Then if you were told that you had to pay extra for things you didn't want, you might get upset, maybe mad. Well this is just my \$.02 worth. No one from your office reads these things anyway.

Frustrated,
Jeff Roberts

Renata B. Hesse
Antitrust Division
U.S. Department of Justice
601 D Street NW
Suite 1200
Washington, DC 20530-0001

To Whom It May Concern,
I am writing to express my dissatisfaction with the Justice Department's settlement over the Microsoft antitrust case.

I am a computer professional who has worked with Microsoft products for 9 years in support environments. I have been quite appreciative of many Microsoft software products over the years (particularly the improvements of Windows 95 and Windows NT over DOS and the introduction of standard GUI interfaces on the PC platform through MS office) but I am quite aware that Microsoft does not play fair in the marketplace. The demise of quality competitors in many markets, including the web browser market, word processing software market, office suite market, operating system market and network environment market; added to unfair licensing of operating systems (requiring PC manufacturers to pay per computer sold rather than per MS OS sold), bundling to eliminate competition (MS Office, Internet Explorer, etc.), intentional bugs to prevent competitor's software from working correctly (Netscape, OS/2, etc..) and a myriad of other dishonest business tactics lead me to believe there will never be an honest Microsoft as they exist today. (Despite the many good things that led me to certify myself as an NT 4.0 Microsoft Certified Systems Engineer and to support many of their products.)

I would encourage you to reconsider this settlement and move to break up Microsoft so that we can restore competition to the software market.

Thank you for your time.

MTC-00020355

From: CE
To: Microsoft ATR
Date: 1/24/02 3:58am
Subject: Microsoft Settlement
To Whom It May Concern:

In regards to the proposed Microsoft settlement, I do not believe the current proposal provides adequate regulation to keep Microsoft from smothering competition. Many businesses and products have ceased to exist over the last two decades due to Microsoft's business practices. Some examples include companies like Be (makers of BeOS) and products like DR-DOS (currently owned by Caldera).

Even after being found guilty of being an illegal monopoly, Microsoft's behavior has not changed. Regulation of thier actions, with the threat of criminal penalties for non-compliance, is the only remedy that I can believe will curtail them. The market must be able to return to a state of competition.

Our economy is far too fragile, and our society too dependant on computers to allow one company to control a monopolistic share of the market.

Dear DOJ,

I understand that the law regards my opinion as relevant at this time. I am happy to state my opinion. I buy Microsoft products because they provide enormous value to me. I have never regarded any of their software distribution or legal practices as harmful to me in the least. Microsoft has consistently delivered the best overall value in mainstream consumer operating systems since the early 1990s.

Professionally, I do use other operating systems. I, unlike most people who comment on this case, am not an unobjective partisan of one OS or another. Each OS offers different values for different niches. But Microsoft, as a company, has consistently outstripped every competitor in serving the markets they target. Nobody can beat their ability to balance the many values users want as they build a single integrated product.

They've earned their success, their wealth, and their market share by one means: delivering superior value.

Why can't I buy a PC (A PC note, not a mac) without Microsoft software installed? Why don't I have a choice?

frankly I don't care what you do in the settlement the whole world knows that Microsoft is run by crooks and sharks sponsored by crooks and sharks in government over the next few years, people will gradually realise that they *don't* have to pay the MS tax, it is possible to do the same thing for free.

I have just received MicroSoft's latest Freedom to Innovate newsletter, in which they complain about AOL's new lawsuit against them. Since I dispise AOL even more than I dislike Micro\$oft, I am inclined to agree with Micro\$oft: "This latest legal move appears to be an attempt by AOL to once again retreat from the rigors of competition to the safer confines of the courtroom, where the company is clearly more comfortable."

Having said that, I also must say that the "settlement" to which you are agreeing in the antitrust case against Micro\$oft is a case in which the DoJ has dropped it pants, bent over, spread its cheeks, and said "insert whatever you want as deeply as you want." It appears that the "whatever" was a barbed-wire dildo. Unfortunately it is really the taxpayers and consumers that are getting the shaft, not the DoJ. I apologize if the graphic imagery of my metaphor is disturbing, but it is the gentlest one that comes to mind.

I have neither the time nor the inclination to detail my objections to the "settlement." Suffice it to say that since the antitrust suit was filed, M\$ has released *two* new versions of Windows in which they have

blatantly incorporated an application that mascerades as an operating system feature, Internet Explorer. As I recall, the purpose of the suit was to get it out of Windows...hello? is anyone home? It's still there! A browser has no more business as an integral part of an operating system than a word processor does, or porn web site, or Donkey Kong. Furthermore, your lawsuit and "settlement" put the fear of God into them so badly that they felt quite comfortable incorporating Messenger Service and Netmeeting, two more applications, into Windows XP. The competitive pressures that you've brought to bear are so intense that Windows XP is actually more expensive than previous versions of Windows.

They are going to donate a billion dollars worth of software? Bah, I'm not impressed. A chump change tax write off. A billion dollars worth of Windows XP will cost them between 5 and 10 million dollars, if that much, and give them a \$1 billion tax deduction. Not to mention 5 million Windows users to add to their monopoly. Lovely.

Good work guys. Micr\$oft thanks you.

Pete Howells
Reno, NV
phowells@usa.net

PS: I am not a Macintosh or Linux user that is railing about Micro\$oft. My exclusive operating system is Windows XP. Not because Windows is superior, but because the monopoly forces me to conform. My work is with computers and without Windows I lose 90+% of my potential customer base.

Subject: Microsoft Settlement
Hello there.

I have read reports of the Microsoft Anti-trust settlement, that refer to a deal where Microsoft gets to donate fee computers and software to schools and education establishments as part of their reparations. I think most people, myself included would consider this grossly unfair and contrary to natural justice.

Why should a company found guilty of monopoly and anti-competitive practices be allowed to FURTHER entrench their monopoly, by targetting one of the most influential markets for future business. It will cost them a LOT less, as the software is nearly free to them. It is grossly unfair on other vendors selling into the education market (e.g. Apple Computer) as it gives Microsoft market share they couldn't EVER buy otherwise, and only the most perverted sense of justice would see it as anything other than a huge victory for Microsoft and a capitulation by those seeking to curb unethical practices.

I strongly urge those concerned to re-consider this settlement.

From: Jim Gottlieb
To: Microsoft ATR
Date: 1/24/02 4:10am
Subject: Microsoft Settlement

I would like to register my opinion on the proposed Microsoft settlement. I am not related to any of the parties in the case except that I am often forced to use Microsoft software in the course of my business.

I believe that the proposed settlement is severely flawed. I have personally observed Microsoft's illegal (as presented in the Findings of Fact) behavior and the settlement proposed does nothing to punish them for past abuses nor does it really give them discouragement from further extending their monopoly and using that monopoly to crush any and all competitors.

Armed with this knowledge that they can get away with anything, they will now continue this behavior with impunity. I could spend pages listing the companies they have set out to crush and have largely been successful at. They systematically give away product for free until other companies can no longer afford to stay in business. Then note their recent hefty price increases for the licenses for their products and be certain that this will continue too.

Competition is always good for the consumer. Sure, I would love for my company to have a monopoly in our line of business, but that's not how the free market system works. Our competitors keep us on our toes, forcing us to constantly innovate and to keep our prices in line. We don't try to kill our competition; we believe in fair

play. Microsoft clearly does not, and they are not satisfied with a monopoly in the desktop computer market but are working towards their goal of "Windows Everywhere".

Imagine if all consumer electronics products were as buggy as Microsoft Windows. Despite what Microsoft would like you to believe, Microsoft has not been good for the American consumer. We need real competition in this market and at this point only the U.S. Government can effect this.

At the very least, force Microsoft to open their file formats. They use this not only to squeeze their competitors but to force users to constantly upgrade to newer versions of their product. Imagine if the car you bought two years ago was made incompatible with today's gasoline so you were forced to trade it in. This is what Microsoft does.

I am not knowledgeable enough to suggest many remedies, but I have read many good ideas in magazines and newspapers written by experts in the computer industry and I urge you to listen to them.

Thank you for listening.

Dear Sir,

I find it unacceptable that the Dept. of Justice has been bullied and politicised into this mediocre settlement. Therefore I wish to add my name to any list/petition that reaffirms the original requirement that Microsoft should be split. Jackson was right, though his conduct was questionable. Without a major change to restrict Microsoft's leverage on the computer industry, the entire world will suffer poor quality, unchallenged products sold by a monopoly that simply doesn't care about anything other than profit.

Subject: Microsoft Settlement

Please be clear that this is a personal e-mail and therefore does not necessarily reflect the views of my employer.

I wish to express strong concern over this revised settlement between yourselves and Microsoft. I agree with many who feel that many of the statements made within the settlement are insufficiently stringent to make them effective.

Taking the example of the invocation of Microsoft Middleware: "the Windows Operating System Product may invoke a Microsoft Middleware Product in any instance in which: 1. that Microsoft Middleware Product would be invoked solely for use in inter-operating with a server maintained by Microsoft..."

Though a welcome initiative, and though it does specifically exclude web browsers from this context, the detail through this and subsequent paragraphs exposes many simple means by which, for example, microsoft can force the use of its own e-mail client, authentication services etc... Particularly of

note in providing these loopholes are the above exclusion and the active-x related exclusion. On the whole, use of active-x to access such services achieves slick-looking integration, not extra functionality. Many people, including myself choose to avoid microsoft applications providing these services, both through personal preference and through concern over the number of serious security vulnerabilities that have been exposed in these products over the past few years. Allowing Microsoft to take this route may well result in a similar situation to the Internet Explorer v Netscape saga for a host of other services.

Yours sincerely

From: Stephen Borrill
To: Microsoft ATR
Date: 1/24/02 4:07am
Subject: Microsoft Settlement

I've been following the Microsoft (MS) vs DoJ case since the start (many years ago) and agreed with Judge Jackson's conclusions and proposed remedies. MS indeed have a monopoly and have demonstrably proved that they will defend and strengthen that monopoly rigourously. Therefore, I believe that the proposed settlement is and astoundingly accomodating in favour of MS. The Middleware clauses are weak and full of bizarre pro-MS conditions (such as "any replacement middleware should be of similar size and shape to the MS version"). It was proved during the trial that IE was removable and Windows would still function (contradicting what MS alleged), yet the settlement allows IE to merely be hidden from the user, but invoked at any time for the purposes of communicating with MS servers or when alternatives do not implement certain heavily proprietary "standards" such as ActiveX in a MS-designated fashion.

The restriction of the protocol licencing clause to protocols which aren't used for remote administration is extremely worrying. MS could successfully argue that fundamnetal protocols such as CIFS/SMB and RDP can be used for remote administration and thus should be excluded from disclosure.

Finally, the complete removal of the clean-room technical disclosure practise proposed by Judge Jackson in favour of a clause which explicitly allows MS to opt out on the basis of some notional potential security compromise (section J 1), is a massive backwards step and provides no consumer protection. This is made all the more insulting because of the proprietary non-disclosed extensions to Kerboros in Windows 2000. In conclusion, I believe the proposed settlement to be heavily skewed in favour of Microsoft and as such it should be rejected.

Subject: Microsoft vs the Citizens of American

It appalls me to even be writing this letter. But I feel that it is a necessity, due to the mockery that Microsoft is making of the American Justice System. After being found guilty of being a monopoly, the DOJ has decided to let Microsoft off with no more than a slap on the wrist. The present judgement has no teeth. And Microsoft continues to buy opinions. Even recently, I received a phone call from a Microsoft representative on a champaign to flood this email box with pro Microsoft opinions.

I am an engineer and have been working in the computers industry for more than ten years. I started just before Microsoft began to be a player in this industry and I admit that Microsoft has played a significant role in creating the industry that I am in. The problem is that it is now trying to control this industry. It is killing off competition and stifling innovation. Microsoft claims to innovate, but I have seen Nothing new that Microsoft has created that isn't a Microsoft spin of someone else's idea. One by one I have watched company that have innovated and create fresh new product die off due to Microsoft's anti-competitive practices. They have copied and undersold, made applications required by calling them part of the operating system and not letting them be uninstalled.

To me is just about a ridiculous to have such a meaningless judge against Microsoft as it would be leave Osama Bin Laden alive, in power with his terrorist cells and the Taliban intact and tell him that he did a bad thing bombing America and we aren't ever going to give him a Visa now. Microsoft has continue to demonstrate it's contempt and disregard for the fair competition in the industry by continuing to Kill Netscape Plugins, require Passport for upgrades and even more tightly tie the Desktop to his back-end

Server so that you almost have no choice but to choose a total Microsoft solution. Now that the back-end server market has secured its march on to monopoly, the Database market is next. The next version of the server will require Microsoft Database, and like the Browser wars, if you're going to have to buy Microsoft's Database with their server, then it will be a hard justification to buy other 3rd party database servers, especially since they won't run as well since they are given inferior API calls by Microsoft. I am a believer in the free market enterprise and believe that Microsoft is entitled to the all money that they have made. After all I believe that for Microsoft, this is more about power and control than money. I believe that the most fair way to guarantee increased competition and new innovation is to break Microsoft into two separate companies. Let Microsoft sell off half the company and keep the money from the sale. But make the two companies split between the Desktop

Operating System and the Server Operating System Markets. All Desktop only applications go with the Desktop company and all Software requiring a server go with the Servers Company. Neither company can have a interest in the other company in any way and neither company can re-enter the other platform operating system market for ten years. API calls can be sold, but all API must be open at the same price to any company that wants to buy them. Since the two companies no longer have a vertical monopoly by having both the server and desktop markets, they will be encouraged to build relationships with other companies in order to survive.

Also define for the new Microsoft Desktop company, that an operation system is only the basic software that produces a user interface to hardware devices. Only applications that are basic desktop utilities can be bundled with the operating system as non removable software. Applications such as email clients, servers os clients, web browsers, news readers and not required for a Desktop Operating system to function and should be a users choice. All existing Microsoft Desktop OS should be version frozen and the next released version of the Desktop OS should allow all the Applications to be uninstalled. They can be sold seperately or bundled free, but they must be uninstalleable so that the applications will not interfere with a competitors application if a user chooses to install it. Most all other Desktop operating systems allow this outside of Microsoft. There is NO engineering or software reason that these applications are required outside that fact that Microsoft designed them to be uninstalleable. Due to security concerns and the fact that I do not need to use certain pieces of Microsoft's Software, I have to hack the Microsoft Operating system to delete certain files that Microsoft claim's are required. They are not user un-installeable, but after fooling the operating system long enough to delete them, I have eliminated security vulnerabilities, and Windows still runs fine, which proves that they are not really required.

If Microsoft really does know how to innovate and are as creative as they claim,

then with it's talents and assets split then it should have no problem continuing to produce original software. But with open APIs and an interest in broading the market since their is not longer a financial advantage in vertical monopoly, both new companies will be encouraged working with other desktop operating systems and other Server back-ends.

Give us in America a choice. DR Dos is Dead, Vines is dead, Netscape is almost dead and has filed their own lawsuit. Let Novell, Macintosh, Lindows, Roxio and other survive. Let them compete on an equal playing field.

I personally use Microsoft. I'm satisfied with their products. They work for me. They enable me to be productive. I'm not a computer geek therefore I have no outrage against Microsoft. I'm not interested in any other software that Netscape would like to publish.

I do have a MAJOR PROBLEM with the US Government, continually hounding MS for the benefit of Netscape, a company that lost their edge early in the browser wars due to sloppy management and presumption of market share they couldn't maintain through innovation. I object to the legislative effort of elected officials mining the pockets of large companies who have MADE THIS COUNTRY PRODUCTIVE through innovative software development and acceptance of risk in the market place!

The federal and state governments made billions from the tobacco prosecution. That money was supposed to go toward health care for children. Politicians squandered that money, using it for everything other than children's healthcare.

The lawyers are the only ones that benefit from these governmental fiasco's. This governmental vendetta is only to persecute a successful company...easy money that will be wasted by politicians!

Anyone who owns a company or earns a salary or wages... the government already is taking more than they need. Your company and your money is at risk. BTW, the liberals already think all the money is their money.

Do not delay the scheduled tax reductions!

Leave Micorsoft alone.

From: Patrick Baltz
 To: Microsoft ATR
 Date: 1/24/02 4:13am
 Subject: Microsoft Settlement

To whom it may concern:

While the proposed final judgement in the Microsoft antitrust case does in general not provide an adequate remedy to Microsoft's abuses, I would like to point out several parts of the judgement that are inadequate. In section III.D, it states that APIs and documentation shall, approximately a year after the release of Windows XP, be provided when a Windows Operating System Product has been distributed to 150,000 or more beta testers. This allows Microsoft to sidestep this requirement through numbers while providing a competitive advantage to develop and market Microsoft Middleware Products and other Microsoft applications before ISVs have even been given access to the APIs and documentation. I would suggest that the APIs and documentation be made available to ISVs at the same time it is made available to Microsoft's own middleware and application development groups. In addition, Microsoft should be required to keep APIs and documentation updated for independent software developers, as updated APIs and documentation are made available for Microsoft's own internal middleware and application developers.

One other issue that the judgement provides no remedy for is the bundling of Microsoft applications and middleware with the Windows Operating System itself. Bundling of applications such as Internet Explorer, Windows Media Player, Outlook Express, and future versions of these programs provides a competitive advantage to Microsoft that puts competitors at a serious disadvantage for adoption of their competing products. These applications should not be bundled with the Windows Operating System itself, but they should instead be made available to consumers independently. This should not however keep non-Microsoft vendors from bundling Microsoft applications with their product in addition to the Windows Operating System if they wish.

Sincerely,
 Patrick Baltz

 Subject: Microsoft Settlement

Dear Ms. Hesse:

I am very concerned about what I've read of the Proposed Final Judgement (PFJ) of the Microsoft anti-trust suit. As written, the Judgement would allow Microsoft to continue to use restrictive licensing terms to keep Open Source applications from running on Windows. This hurts the entire Open Source community, and since Open Source applications are, therefore, predominantly used by competing operating systems, it hurts the users of those systems.

In addition to this, I believe that strong language is needed in the Judgement to prevent Microsoft from continuing to discriminate against small Original

Equipment Manufacturers (OEMs). In short, Microsoft continues to harm those elements of the US information industry that are exactly what built this country. We need—more—OEMs, not fewer. We need to encourage OEMs to stay in business, not to help Microsoft to lay them to rest.

As written, the PFJ allows Microsoft to retaliate against any OEM that ships personal computers with a competing operating system and without Windows. This is exactly the opposite of what, in my opinion, needs to be done. OEMs need to be encouraged to ship competing operating systems—this is what keeps a market open and what offers options to consumers.

I truly hope the PFJ will not be accepted and that Microsoft will face some very strong regulating in the future.

 Date: 1/24/02 4:14am
 Subject: Microsoft Settlement

Dear Justice Dept,

I think the government is wrong in settling with Microsoft. After all this is the justice department I am writing, so justice not expedience should be pursued.

At hand is not just Windows OS, but all the other products that Microsoft sells and utilized their advantage as the OS provider for Intel machines to defeat or bankrupt the competition in many 3rd party programs. To function in today's world and exchange files, one must have Microsoft Software no matter what platform—Wintel or Mac. That is a monopoly that hinders competition and better products. What about all the companies that went under and do not have the financial resources because they are bankrupt now due to anti-competitive practices of Microsoft? Where is there justice. They played fair, but they lost to an unfair player: Microsoft. The first clue that the settlement is bad is does Microsoft like it. First of all they are declared a monopoly by the justice department. They should be reorganized and assessed punitive damages to the companies damaged by their illegal activities to ensure their arrival at the status of monopoly. Judge Thomas Penfield was right—Microsoft needs to be broken up. Their OS, Internet Software, and their productivity programs must become independent and unrelated entities.

This is a U.S. Company and needs to be brought to justice by the U.S. Their monopolistic practices are felt in all countries that have access to technology.

Justice should reconsider and give Microsoft a reason not to function the way they do. Moreover, they have never self-policed nor submitted to injunctions of any kind from the government.

There is more to add, but I will leave it at that.

Sincerely,
 Doug Mitts

 Subject: Microsoft Settlement

Dear Sirs;

Please ensure that Microsoft systems will accept input and provide output to other programs and systems.

This is in my opinion not agreed to in the settlement. To let any monopoly deny interoperability by defining own formats will seriously hinder communication, as lots of people will be unable to buy unnecessarily expensive software. Internet stands poised to open an age of communication, open exchange of ideas to anybody, from anybody, with little hindrance from poverty, position, race, sex or religion.

I am not sure that the American people will benefit from allowing Microsoft unhindered continue its monopolistic practise.

A pity it will be, if the rest of the world are able to freely communicate, while the free world's technological locomotive are derailed in a dark tunnel of monetary and legal censorship.

Sincerely yours,
 Lars Hornfelt.

Please stop this economically-draining witch-hunt.

I am fed up with this unfounded attack on a healthy and vital company in a capitalistic society. This is suppose to be a free-enterprise system. Every body wants to get paid or thinks they are owed something that they haven't worked for these days. What is wrong with this picture? We are heading down the wrong paths straight toward a socialist-welfare state. Let's spend our resources wisely.

 Subject: Microsoft Settlement

Dear Sirs:

After careful consideration of the facts, I think that the proposed settlement with Microsoft is preposterous. The Department of Justice under George W. Bush has simply buckled to the interests of BIG business. Where is the justice?

Over the years Microsoft's business practices have not been just overly aggressive. They have been outright criminal. Microsoft has continually (and illegally) crushed competition and stifled innovation by parlaying their monopoly in operating systems to make themselves the only game in town, not only in operating systems, but increasingly in internet browsers, email programs, productivity software, etc.

Because of its unscrupulous practices, Microsoft controls the desktop PC market and is pushing to make the Internet its sole domain as well. Thanks to your flaccid efforts at pursuing justice, that day is now in the closer than ever. Even more importantly however, once again, as is so typical in the US legal system, a wealthy defendant has apparently purchased the verdict. The lesson learned from this is that, if you're going to be a criminal, be a very successful criminal. Then you won't have to actually pay for your crimes.

Subject: Microsoft Settlement

Hi,

I'd just like to say that as a consumer and web developer for many years my colleagues and I have favoured Microsoft's Internet Explorer from it's very early days.

I have always been free to download and install Netscape Navigator, as indeed I have on several occasions.

My response has always been to return to Internet Explorer because it's a more solid, user friendly product that is backed up by a first class support network and development framework.

I believe that if Navigator was better then people would have stuck with it. Unfortunately the writers did not manage to innovate quickly enough to capture the attention of the end user and as such Microsoft have gained the majority of the market share. This is definitely a good thing as it is encouraging e-Commerce and e-Business to grow over the web at a fast rate. Without Internet Explorer and Microsoft the Internet would be a much less popular place.

Thanks for reading my thoughts on this matter.

Regards
Steve Farrall

Microsoft Settlement U.S. Department of Justice,

Dear Microsoft Settlement U.S. Department of Justice:

The Microsoft trial squandered taxpayers' dollars, was a nuisance to consumers, and a serious deterrent to investors in the high-tech industry. It is high time for this trial, and the wasteful spending accompanying it, to be over. Consumers will indeed see competition in the marketplace, rather than the courtroom. And the investors who propel our economy can finally breathe a sigh of relief.

Upwards of 60% of Americans thought the federal government should not have broken up Microsoft. If the case is finally over, companies like Microsoft can get back into the business of innovating and creating better products for consumers, and not wasting valuable resources on litigation. Competition means creating better goods and offering superior services to consumers. With government out of the business of stifling progress and tying the hands of corporations, consumers—rather than bureaucrats and judges—will once again pick the winners and losers on Wall Street. With the reins off the high-tech industry, more entrepreneurs will be encouraged to create new and competitive products and technologies.

Thank you for this opportunity to share my views.

Sincerely,
poop

MTC-00020390

From: greep@mindspring.com@inetgw
To: Microsoft ATR
Date: 1/24/02 4:32am
Subject: Microsoft Settlement

I believe the Government's proposed judgment against Microsoft is not in the public interest because it is inadequate to remedy the issues raised in the Government's complaint against the company, and does little to address some of the most serious aspects of the company's anti-competitive behavior. In the interest of brevity, I will limit my comments to what I see as the most serious weaknesses in the proposed judgment.

1. Predatory pricing in the form of bundling

Microsoft's attempt to destroy Netscape by giving away a product similar to Netscape's web browser, as mentioned in the Government's complaint against Microsoft, is only one instance of a pattern of anti-competitive behavior on Microsoft's part. Microsoft pushes predatory pricing to an extreme by bundling with each release of Windows various application programs which are by no means necessary for the operation of Windows—i.e. it drops the price of these applications to zero. The only rational explanation for Microsoft's willingness to give away this software, which must cost the company a fair amount to develop and maintain, is that by driving all competition out of business it will eventually be able to raise prices almost without limit. The company's current cash position, and the growth of its available cash (estimated to be over a billion dollars a month), is so large that it can easily continue underpricing (through bundling) even the strongest competitors indefinitely. Antitrust laws were passed to prevent exactly this kind of behavior. The Government's proposed judgment does not address this issue. Even more worrisome is Microsoft's gradual encroachment into the computer hardware business. So far its business has been almost entirely software, but the company could easily leverage its Windows monopoly to take over the personal computer hardware market simply by modifying Windows not to work as well with any competitor's computers. Nothing in the proposed judgment would prevent this. (Microsoft is alleged to have played a similar trick by modifying an earlier version of Windows not to work correctly with a competitor's underlying DOS operating system.)

2. Use of Windows APIs with other operating systems

The Government's complaint prominently mentions the application software barrier to entry for operating systems, but the proposed judgment does not address this issue. A remedy would be to explicitly prohibit Microsoft from acting against anyone who provides an alternative operating system on which Windows applications can run, i.e. an operating system which provides the same APIs as Windows.

3. Open source software as a potential competitor to Microsoft

The wording of section III.J.2 seems almost specifically designed to prevent any open source software from competing with

Microsoft products, even though the open source software movement is one of the most promising developments and appears to be one of the few serious contenders as a Microsoft competitor. Since most open source software is available either free or at a very low cost, customers benefit from the availability of open source alternatives to Microsoft products.

4. Publishing of Windows operating system APIs

Section III.D of the proposed judgment requires Microsoft to publish APIs used by Microsoft Middleware, but makes no mention of other Windows APIs, in particular the operating system APIs ("system calls"). These are not currently published for Windows NT or Windows 2000, although equivalent APIs are published by most other operating system vendors. Microsoft claims that software developers do not need this level of detail because they should be using the published "Win32" API instead. However, there is ongoing suspicion that Microsoft application software has an advantage over competing software because it has access to the more powerful operating system functionality, rather than being limited to the functions provided by the Win32 API. A remedy would be to require Microsoft to publish the operating system APIs. Furthermore, other APIs which are currently published could be changed in future releases of Windows and might then become secret, thus cutting off the ability of competitors to sell applications that depend on the corresponding functionality. A remedy would be to require Microsoft to publish all APIs which are used by any Microsoft applications to perform any Windows function.

5. Description of file formats

Microsoft exploits its Windows monopoly to gain a monopoly in word processing and other "office productivity" software products by keeping secret the description of files created by its software. In particular, the distribution of text documents in Microsoft Word form is so common that many people naively refer to it as a "standard", even though the file format is not published and has never been sanctioned by any standards body. The effect is to require many people to buy not only Windows but also Microsoft Word just so they can read documents sent to them by other people. The result is that Microsoft's operating system monopoly allows it to monopolize the word processing business as well. A remedy would be to require Microsoft to publish the technical specifications of the file formats used by Microsoft Word and any similar products.

6. Definition of operating system

In defending its anti-competitive behavior regarding applications software, Microsoft plays word games by defining "operating system" to include more and more application software. The company has even tried to present its web browser as a necessary part of an operating system—an absurd claim, since operating systems preceded web browsers by decades. Microsoft can circumvent the sections of the proposed judgment regarding middleware simply by defining this as part of the operating system.

7. No punishment for violating the law

It is very disappointing that the proposed judgment imposes no penalties on Microsoft for its past violations of antitrust law. The unmistakable message is that crime pays; the worst that happens is that committing the same crime in the future becomes a bit more difficult, and even that only after years of delay.

Subject: Microsoft Settlement

If Microsoft can tightly control access to technical information under a court approved plan, or charge fees, and use its monopoly power over the client space to migrate users to proprietary interfaces, it will harm the development of key alternatives, and lead to a less contestable and less competitive platform, with more consumer lock-in, and more consumer harm, as Microsoft continues to hike up its prices for its monopoly products.

The current settlement proposal has numerous holes that will allow Microsoft to continue its monopolistic practices.

Please reconsider the proposal before implementing.

To whom it may concern,

I just wanted to have one more point go against Microsoft. They have killed off so many great projects, programs, technologies and entire companies using their strong arm tactics. They are a disease to the computer industry, a digital anthrax.

I've spoken with numerous people (clients/friends/etc) that have said they would use competing products if they could, but because of the control Microsoft has on how some technologies work (among other reasons), they can't.

I'll give you an instance of a problem I have regarding one of their products. I have my default browser set to Omniweb, a beautiful browser native only to MacOS X. However, when I choose a link in AOL Instant Messenger or many other places, Internet Explorer comes up. One might tell me to delete IE if I didn't like it, but I can't. I have to keep it around for those web pages that aren't viewable in anything else but IE, and unfortunately there are many. So even when I choose a competing product, I still get stuck with Microsoft. Is this really providing choice to the consumer? I'd say no.

Microsoft's settlement is not only a joke, but an insult. Even if they were to give \$1 Billion in cash (instead of software/etc) to schools, it would not make up for the damage they have done. I agree 100% with Judge

Jackson's ruling to split up the company, in fact, I think it should have gone beyond that. Microsoft's power needs to be limited so they cannot break the law again. I believe the only way to accomplish this is to break them up into 2 pieces, perhaps more. Even then there should be rules so the new parts don't collaborate in ways that would undermine the purpose of breaking them up.

Thank you for your time,
Chad Kay

Subject: Microsoft Settlement

I believe this is where I can comment upon the legal settlement of the anti-trust case between the DOJ and Microsoft.

My comment is this:

Given the extent to which Microsoft has behaved unlawfully, is the "punishment" really in proportion to the degree of law-breaking? Of course not. Will the settlement prevent Microsoft from gaining entry into other markets by exerting its monopoly of the operating system market? Of course not. By bundling extra "reebies" (although the price of its OS has jumped significantly) into its operating system it can enter any software market it sees fit, and still "massage" its operating system into running its own software better.

In my opinion, the only remedy is to create "Chinese walls" between the operating system kernel, the browser+windowing system, and the applications. This effectively creates 3 sub-companies within Microsoft, but avoids the embarrassment for Microsoft of being "split up". All technical and strategic communication between those three groups must be in the public domain, giving software companies a level playing field to develop software and components for the operating system. Monitors must be put in place with access to every communication between the groups, and judge the relevance of these communications to third parties.

My other opinion is this: I don't think the American legal system is up to the job of dealing justice to Microsoft, especially since there seems to be some "lobbying" to Capitol Hill. I don't think international opinion of the American justice system is particularly high.

Calum

Subject: Microsoft Settlement

Morning,

Don't know if my opinion weighs in any way, me being European and all. However, I do feel that the outcome of this case will directly affect me. I really don't think that the remedies as agreed will change the competitive landscape one iota. The opening of the API's has been written so that only for-profit companies can access them, which directly stops them being used in any open-source solution. As Microsoft deem open-source in general and Linux in particular as "Threat number 1", this remedy is paltry at

best. Giving \$1billion of restored computers and software to needy schools is a way of leveraging Microsoft into a market that they weren't previously the incumbent. At the very least, they should hand over the money and let the schools decide what to do with it, what to buy and what OS to run.

January 8, 2002
Attorney General John Ashcroft
U.S. Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

I am writing today to congratulate you on the settlement that was reached with Microsoft in the antitrust case. Stand firm behind this settlement and do not allow for another day of legal action at the federal level. Microsoft is one of Americas??? most important companies and a very large employer. This company has spent enough time in court.

The settlement is fair and equitable. It gives Microsoft???s competition ample room to maneuver, and does so by broad, strong impositions on Microsoft, such as universal licensing agreements for hardware makers, contingent only on bulk sales, and limitations on contracts that guarantee a certain percentage of software sold.

Regrettably, opponents of the settlement portray this agreement as a concession to Microsoft. This portrayal is wrong. This settlement is very thorough and will require Microsoft to share more intellectual property information with competing companies than has ever been given out by a software company before. After three years in court, having spent millions of dollars and countless man-hours, Microsoft deserves to be let alone, especially since a good settlement is on the table.

Your work on behalf of the settlement and ending this case is greatly appreciated by many Americans. Thank you very much.

Sincerely,
Louise N. Deveney

The proposed settlement is undoubtedly the best way to move forward, way too much

time, energy and dollars have already been spent on this case and further prolonging the case with litigation is unnecessary. It's incredibly unfortunate that 9 states have decided that they know better than the Federal Govt as well as consumers and business who continue to buy Microsoft products not because they are being forced to but because they want to

Date: 1/24/02 5:05am
Subject: Microsoft Settlement

The proposed settlement is a TURKEY!

If the government really wants to end Microsoft's monopoly, why doesn't it simply stop accepting correspondence in Microsoft's "secret" proprietary file formats? If the US government simply declared that it will no longer accept any email attachments in .DOC, .XLS, or .PPT format, people would learn very quickly how to use the "Save As" function. The chief barrier to the adoption of alternative software (ie: compatibility) would be removed, and the monopoly would crumble quite rapidly.

In short, the US/DOJ are being hypocritical, if not duplicitous! How can you claim to be "fighting" this monopoly while you simultaneously REINFORCE it by your use of Microsoft file formats for data storage and communication?! Don't the terms "transparency in government" or "freedom of information" mean anything? The term "Microsoft Tax" becomes much more than a metaphore when government documents are stored and transmitted in proprietary formats! <http://www.osopinion.com/Opinions/JohnDiedrichs/JohnDiedrichs1.html>

Please scrap this so-called "settlement" and DO THE RIGHT THING!

Sincerely,
John R. Diedrichs

Subject: Microsoft Settlement (Geoffe Elias)

To the US Department of Justice,

I have read the proposed settlement between the Justice Department and Microsoft Corporation. I believe that such a settlement not only fails to stifle the business practices that have brought Microsoft to court in the first place, but also creates a dangerous precedent in which in the future, companies like Microsoft may be allowed to use their dominant positions in industry to shut out competition.

I have been a Microsoft User since Windows 3.11. It was during sophomore year in High School, that I got a computer to use for my schoolwork and computer game play. This was the year 1992.

Now it is 10 years later in 2002. During those past 10 years, I have found that being a customer of Microsoft had been unnecessarily expensive. How? 2 reasons: As a customer, I have had to constantly upgrade to keep my computer able to play current

software, and in the case of MS Office, to maintain file compatibility with other people using MS Office.

The other reason is that Computer makers will always include the latest version of Windows in their products without providing the consumer a choice in Operating Systems from other companies.

Upgrade Cycle:

I had started with Windows 3.11. From then on, I have purchased boxed copies of Windows 95, Windows 98, and Windows ME. In terms of MS Office, I have purchased Office 95, Office 97, and Office XP. In the case of the operating system, I worry that support of previous versions of the operating system will cease as Microsoft lends its support and focus on the latest operating system (currently Windows XP). In the case of MS Office, file formats written in MS Office change between each release of MS Office. Thus, I feel pressure to upgrade to the latest version of MS Office in order to maintain file compatibility with my fellow students.

As Microsoft proponents have explained, it is important to have industry standards such as file standards (standards: a common set of rules by which to design a file so that devices or applications following such rules will be able to successfully interact with such a file). Yet, Microsoft uses *proprietary* standards where those rules are hidden from the public. Thus, only Microsoft applications can use this secret standard and also, Microsoft is able to use their dominant position in industry to push their standards as the only standard available for use.

**It would be nice if such standards were public so that any company can make software for files written with such public standards . . .

FORFEITURE OF CHOICE

MS Windows is installed on every new computer built by a computer company whether the consumer wishes it or not. For example, I had bought a new laptop computer from Dell (Dell Corporation). At the time, the only choices for operating systems to be installed in that computer were either Microsoft Windows 2000 or Microsoft Windows ME. It is interesting to note that the choice to buy a laptop without any operating system installed was absent. Thus, as a consumer buying from Dell Corp. the choices were limited to: buying a computer with Microsoft Windows installed, or buying no computer at all.

Due to what I see as inherent instability, lack of control, and bloat (excessive programming code that makes a program run slower) of Microsoft Windows design, I decided to switch to Linux. However, as a Linux user, if I want to install new hardware (such as a TV Card, Sound Card, etc) into my desktop computer, I must first do research to see if the open source (public) community has created drivers (software designed to make a piece of hardware work under a given operating system) and applications (software designed to allow for the use of the given hardware) for that piece of add-on hardware. The fact is that a significant number of companies only provide driver and software support for only Microsoft. This condition in the marketplace where there is little

hardware vendor support for operating systems besides those of Microsoft provides another unnecessary pressure to consumers to use Microsoft products.

I realize that this letter only provides complaints without proposing solutions. However, I feel that the current settlement does little to change the business practices that have led to a lack of choice for consumers regarding their software solutions.

I would also like to point out that any solution that requires an overseer (a group or person to look over the future business practices of Microsoft and make corrections as necessary) would be an abrogation of responsibility by the US Department of Justice in dealing with the problems that Microsoft's business practices have created. Any solution that is made must itself prevent future attempts by Microsoft to use their dominant position in industry to lessen competition. An overseer would and should not replace the court in deciding what punitive and corrective actions should be applied to Microsoft.

Thank you for your attention.

Subject: Stop the economically draining witch-hunt against Microsoft!

Renata B. Hesse
Antitrust Division
U.S. Department of Justice
601 D Street NW
Suite 1200 Washington, DC 20530-0001

Dear Ms. Renata B. Hesse,

Please put a stop to the economically draining witch-hunt against Microsoft. This has gone on long enough.

The attorneys general insist that by prosecuting Microsoft for building an Internet browser into their Windows operating system they are somehow helping consumers. Yet the Microsoft suit has been a disaster for consumers, investors, and taxpayers. If the attorneys general prevail, consumers will be forced to pay higher prices for software and lose the benefit of an integrated operating system. Investors—who make up nearly half of all American households—have watched their portfolios plummet. And taxpayers have been forced to subsidize the attorney generals' quixotic three-year legal odyssey. Courts in eight

states have already recognized the flawed nature of the case and thrown out private antitrust suits against Microsoft.

The only benefit of the Microsoft case is that it has exposed the naked ambition of the attorneys general. They should realize that the emperor has no clothes before they do further damage to our economy and legal system.

Therefore, please put a stop to this travesty of justice now. Thank you.

From: Allen Davis Malony
To: Microsoft ATR
Date: 1/24/02 5:15am
Subject: Microsoft Settlement

Dear Renata B. Hesse,

The Department of Justice's tentative settlement with Microsoft of the United States vs. Microsoft antitrust lawsuit is a very poor solution to curtailing the well-documented anti-competitive nature of Microsoft's obvious monopolistic practices. This settlement IS NOT upholding either the antitrust laws for controlling monopolies that prevent other companies from fairly competing, or the spirit of those laws to have fair competition spur technological advancement. Indeed, Microsoft has demonstrated in its aggressive actions towards competitors, wielding its monopolistic weight and power, that it is ONLY concern with maintaining its dominant position for business profit. Its elimination of competitive products while assimilating, with reservation, their technological ideas (if not directly stealing their intellectual property) goes far to explain its lame argument of being an "innovator."

As the tentative settlement stands, it represents a complicity and an approval on the part of the Department of Justice to Microsoft's monopolistic behavior. The precedent that would be set by this settlement is disturbing from the point of

view of the Justice Department's and the White House's role in U.S. business.

Clearly, there is a problem with Microsoft as a monopoly, and this problem continues even now. Please don't be part of the problem. I admonish you not to approve this tentative settlement. Furthermore, I urge you to "do the right thing" and to treat Microsoft as severely as you would any company with so clear and damning evidence against them.

Sincerely,
Allen D. Malony

I have read the Proposed Final Judgment (PFJ), and I am strongly against it in its current state.

—The PFJ doesn't take into account Windows-compatible competing operating systems

—The PFJ contains misleading and overly narrow definitions and provisions

—The PFJ fails to prohibit anti-competitive license terms currently used by Microsoft

—The PFJ fails to prohibit intentional incompatibilities historically used by Microsoft

—The PFJ fails to prohibit anti-competitive practices towards OEMs (Original Equipment Manufacturers)

—The PFJ, as currently written, appears to lack an effective and meaningful enforcement mechanism. The PFJ, as written, will allow and offer no substantive reduction of anti-competitive practices, will delay emergence of competing Windows-compatible operating systems, and thus not in the public interest.

It should not be adopted without substantial revision to address these shortcomings.

The proposed Microsoft anti-trust settlement is completely unsatisfactory. Why? Because again, and again Microsoft has willfully demonstrated its disdain for past injunctions and legal settlements with the US Justice Department. The record and documentation is quite clear else I would recite it once again in this mailing.

It will be a travesty of justice if the current proposal becomes the settlement. Almost as bad, would be the wasted millions in tax dollars that the government has spent to finally get Microsoft "on the ropes", and now have this administration "roll over", allowing MS to get off w/ little more than a slap on the wrist. This will only serve to tell MS that it can get away w/ what ever it likes.

From: dave@cranefamily.f9.co.uk@inetgw
To: Microsoft ATR
Date: 1/24/02 5:25am
Subject: Microsoft Settlement

Dear Sirs /Madams,

I'm writing to express my concern about the leniency of the proposed settlement of the antitrust case against Microsoft. I am not a US citizen, but I believe that this is an issue of global importance. I believe the public comment period is open until 28 Jan, so here are my comments. Microsoft has been rightly found guilty of abusing its position as a monopoly player. Since the first round of hearings were concluded, it has not tempered its activities.

—With the "Passport" scheme, it is looking to place itself as a central broker in all economic transactions occurring over the internet.

—With .NET subscription technologies and revised pricing models, it is looking to tie users of its software into continually paying.

—With restrictive, non-public OEM licenses on bootloaders, it continues to artificially keep alternative operating systems such as Linux and the now-defunct BeOS from establishing market share, and restrict the freedom of choice of those purchasing computers to Microsoft or Microsoft.

Let me elaborate on that final point. As I understand it, a Microsoft operating system is provided at low cost to a hardware manufacturer on the proviso that they use the Microsoft "bootloader" to launch the operating system when the machine is switched on—despite the fact that other programs not owned by Microsoft (and some freely available) can also accomplish this task just as reliably. The Microsoft bootloader

license allegedly prohibits any other operating system from being launched at the same time, preventing a hardware manufacturer from offering a system that can run Microsoft Windows AND an alternative operating system. I note that no such machines are available on the market in either the US or Europe, and that such a purchase would be both very attractive to many buyers, and the easiest way to gain familiarity with alternative operating systems while still being able to use Windows as well.

In the case of Linux, which is freely available, there would be minimal per-unit cost to the manufacturer in offering this alternative either. The restrictions placed by the Microsoft OEM licenses effectively keep the majority of computer users locked into their state of ignorance about alternatives to Microsoft.

So long as Microsoft controls the only desktop operating system in town (bar Apple, I admit) vendors of application software are forced to play by their rules or else suffer the fate of Netscape. In a world where a diversity of operating systems are prevalent, it would be much harder for Microsoft (or any other single interest) to pitch the rules in its favour in competition between application vendors. A comprehensive solution must begin at the operating system. The increased freedom to compete will then bubble up to the applications, office suites, web browsers, etc.

Personally, I have felt motivated to investigate alternative computing platforms simply to sever any reliance on a company that seems so intent on milking its users as much as it can. I am fortunate in being technically adept enough to do so, despite the unnecessary difficulty of this process arising from the way in which Microsoft has manipulated the market. Freeing the hardware manufacturers from shipping only Microsoft-enabled boxes would extend the freedom that I enjoy to many other computer users.

Please, take real measures to promote diversity in the future of computing. I would single out the bootloader restrictions as the most critical issue to be addressed here, and urge you to:

- prevent any operating system manufacturers from brokering such restrictive deals outside of the public gaze
- prevent any operating system manufacturers from fostering the development of closed hardware standards that will lock out competitors

Thus far, Microsoft's power has been concentrated within the IT arena. Once I switch my machine off, I needn't worry about them. But the influence of IT is becoming more pervasive, and in many ways I see benefits in this, so long as the public retains some control on how information is used. I do not look forward to a situation in which I am forced to license software from a specific vendor in order to be able to shop for my groceries, use the transport system, or other basic aspects of daily life. Such a prediction may sound alarmist, but I do believe it is a distinct possibility. The way in which this settlement is reached will provide a clear signal to Microsoft and other large players in this emerging market as to the

extent to which the US government is willing to concede its role as an international safeguard of human rights and freedom to closed commercial interests that are willing to cynically flaunt the established rules of business, whether that interest be Microsoft or anyone else.

Thank you for listening.

Hi. I go to school at Kent State University and I have a troubling situation to share with you.

I registered for a class which was described as a course to learn about modern computers. Nowhere in the course description were the words Apple or Microsoft ever mentioned. I assumed it would be a general course about surfing the web, learning to use a word processor, a history over computers, et cetera. In reality, the class extensively teaches how to use Microsoft Excel, Word, and Windows 98.

When I asked the teacher if I could use a Macintosh and Office X for Mac OS X, he said there shouldn't be any problems. This is hardly the case. As a class, we were told that we could purchase Office XP from the campus book store for the modest sum of \$20. I assumed that this meant I could also purchase the Macintosh version of the same software for the same amount. In reality, I can't. In fact, if I want to buy Office X for Mac OS X, the academic price is \$200.

Furthermore, the class website is designed to work only with Windows computers running Internet Explorer 5.5. When I try to use my Macintosh to view the website, parts refuse to load. This leaves me completely unable to accomplish my classwork on my relatively new Apple G4 computer.

Draw your own conclusions.

I am writing with respect to the proposed Microsoft settlement and I am against it because it does not go far enough to curb the anti-trust abuses that Microsoft has been and is still engaged in. The browser war has entered into a new chapter with Opera (www.opera.com). A few weeks ago I was able to use the Microsoft web site using

Opera but when I tried a few days ago there were delays other problems. Reminds me of the Netscape browser war a few years back. I have read news reports that Microsoft is actively blocking Opera on other web sites as well such Hotmail.com.

I find it ironic that Microsoft does not feel the pressure to write programs that conform to published Internet standards—the Request for Comments (RFC's). Hotmail.com and Microsoft Outlook for years have not been compliant with the email address standards. Other companies scramble to fix these kinds of bugs but Microsoft does nothing—is this not monopolistic behavior?

Microsoft has now dropped support for Java in the latest release of the browser but Java is growth is phenomenal. Would not a truly competitive company continue support for Java? Other browsers such as Netscape, Opera and Konqueror all support Java. Why does Microsoft not feel competitive pressure?

Please abandon the US DOJ proposed settlement. Please join the alternative settlement proposed by the other nine states that actually will punish Microsoft and does more to create a level playing field.

Sincerely,
Bill Nugent

Please—abandon the current settlement proposal

Sir/Madam,

There's probably not much more to say than has already been said by many others—Microsoft practices clearly damage the industry and consumers. An unaccountable amount of damage has already been done, but it is not too late to put a stop to this.

MS plans for XP, .NET, Xbox will *not* benefit users because they do not provide useful public standards for services. Competition is healthy and necessary and exploitation of a uniquely inherited position to the detriment of society (the impact of all this goes well beyond the IT industry) is plainly unfair in any civilized arena.

It is also ironically unpatriotic to the American ideal and reliance on a single closed standard will make society very vulnerable due to the lack of choice and alternatives.

It must be your duty as guardians of justice to put a stop to this. Millions of people are trusting you to perform your duty and restrict anti-competitive practices, and compensate

those who have suffered because of MS unfair exploitations.

Subject: Microsoft Settlement

Dear Sir,

After hearing of the the proposed Microsoft anti-trust settlement, I've been moved to express my thoughts on the matter... I very idea that Microsoft would "pay" for its anti-competitive errors by "giving" it's own software to schools, to me is an insidious and dangerous .

This action would give Microsoft and helping hand to pillage the one market that they do not yet dominate. What will happen when it's to UPGRADE this software that Microsoft gives our schools? Obviously Microsoft knows that these systems will need to updated at some point and they are betting that a flood of money will return to them, locking out any and all competition.

I've also read from Microsoft press realizes that it defends it's actions as "The freedom to innovate". From every exp that I have ever had with their products, I an attest that they have done very much less than innovate. For every product that Microsoft makes I can name a non-Microsoft vendor who makes a product of the same category which is superior in function to it's Microsoft brand counterpart. Yet the Microsoft product still dominates.... How can that be? Granted, company's are in business to make money and that is the American way. So is fairness and honesty & competition.

Concerned,
Christopher Lease,

From: Sten Sundblad
To: Microsoft ATR
Date: 1/24/02 5:37am
Subject: Settle with Microsoft now

Microsoft is a young company, founded as late as in 1975. It's also a much smaller company than most people assume, employing no more than (I believe) about 30.000 people all over the world. While a number to be respected, it doesn't make Microsoft into anything like a giant. Even though Microsoft is far from being a giant, the company has had an enormous impact on the lives of a very large part of the world population. Microsoft has indeed put computers running Microsoft software on almost everybody's desk, at home and in the office, at least in developed democracies. With products like Microsoft Office, the company has created a de-facto standard, thereby making it possible for people of all nationalities and all races to exchange electronic nicely formed information with each other without hassle. By aggressively supporting Internet standards such as HTML, HTTP, XML and the SOAP protocol, they're rapidly increasing the chance for people to connect over the Internet and exchange information at an even higher level. The cost for computers and for Microsoft software has been kept incredibly low. This must be an indisputable fact, because if it wasn't so, users would have selected other products or possibly even rejected the use of computers in their homes.

Now Microsoft is threatening companies like Oracle and Sun. They do so by going in on domains where these companies have before been able to work with very high prices and profit margins for "enterprise level" IT products. We can already see that

companies start to run their business critical software on Microsoft Windows 2000 with Microsoft SQL Server rather than with Sun's operating systems and Oracle's databases. The reason is cost effectiveness. This means that companies are going to be able to reap the same kinds of benefits with Microsoft products that individuals have already done. Of course, this does not sit well with Microsoft's competitors, but it sits very well with consumers.

The situation for companies competing with Microsoft is now becoming even worse. The new .NET initiative promises a new and even more cost effective world of computing for consumers of the world, be they individuals or businesses. It's now in your power to work against consumers and for back-striding companies that can't keep up with the pace Microsoft is setting. If you select to support these back-striding companies by not settling with Microsoft in a reasonable way now, you won't only work against consumers but also against the majority of IT vendors that do not share the hostility towards Microsoft demonstrated again and again by Sun and Oracle now and Netscape before AOL bought the company.

To conclude, Microsoft is a threat to a very small number of IT vendors with high prices and high profit margins, but not to consumers. Please support the consumers of America and the rest of the free world by giving Microsoft the peace they need to innovate. The world needs that!

Subject: Microsoft Settlement

Dear Madam, Dear Sir,

As a contributor to many IT magazines, including MacDirectory in the USA, I feel it is my responsibility to contribute to the settlement of the Microsoft case by seizing the opportunity you offer to users. I can remember the time when I was a strong advocate of Microsoft as an application software vendor, when their position did not endanger competition. I insist that in this time, Microsoft was still a company that regularly introduced inventions, thus helping the whole industry to go forward. In my

opinion, it has now been a long time since this happened. My current work, and the jobs of many people in the USA and in the world depend directly from computer products, among which Microsoft product still hold a considerable importance. Everyone I know uses Microsoft at work. We defend Microsoft as a software application company as much as we deplore that they could legally reach such a hegemony in the OS industry.

Therefore I am strongly opposed to the simple payment of a fine. Fines are a penalty for the poor, not for the rich. It is that simple. The other reason is, the application to Microsoft of very clever antitrust laws can only save jobs in the long run, AND make the industry go further, faster and in a more efficient way.

The people who designed Word and Excel are not the same as those who design unsecure, unstable and proprietary operating systems. Laws allow you to part them for the best: excellent multi-platform software applications on one side, and operating systems confronted in a fair market to a clever competition on the other side.

The main goal is supposed to be customer satisfaction. Aforementioned suggestions, no different from those indicated by the law, are an obvious gain to everyone. I'm looking forward to seeing fairly competing Baby Mikes challenge Apple, Oracle, UNIX integrators and many other companies who do compete fairly on the common ground of quality.

Many thanks for allowing users to express their opinion.

About five years ago in Ireland almost every PC builder and re-seller signed a petition and gave it to Microsoft objecting to their anti-competitive & monopolistic behaviour. Everyone has known about this for a long time. Freedom in America has allowed Bill Gates to become the richest man in the world. He is now using his money to take that freedom away from anyone whom he feels may become a threat to his crown. Give the next Netscape it's freedom and split Microsoft up.

Subject: Microsoft Settlement

I believe that the proposed settlement is one of the worst mistakes in the history of antitrust cases. Microsoft is a monopoly, this is a fact. The proposed settlement will do nothing to change that. Microsoft is sitting on one of the largest piles of cash ever held by a corporation. They have control of most of the technology industry. They have control of the OS, they have control of key applications, they are trying to gain control of handhelds, video game systems and cable boxes. Where does it stop? How can anyone compete with a company that has billions in cash to spend taking over new markets?

The settlement as proposed is a mistake.

To Whom it May Concern:

I do not agree with this agreement. You have a company that has done everything in its power to control the PC market. The government has found them in violation of the law two prior times and has come to an "agreement" with them. The company has willfully and blatantly violated both of those agreements. So we are going to draw up another similar agreement?

This settlement seems to be nothing more than a slap on the wrist. To say such treatment is patriotic during these times is garbage. Seems to me, the patriotic thing to do would be to obey the law, not discard it when convenient to do so.

Thank you for your time.

Subject: Microsoft Settlement

Software systems are fundamentally different to hardware systems—ostensibly in their ability to replicate without consuming

resources, and their further capacity for self-(re)definition. That the software industry continues to use a metaphor derived from the era of industrial revolution does not mean that it will last. As a researcher at the cutting edge of Large-Systems construction it is patently apparent that this is so.

The restrictions being placed on the market place, and on the entire conceptual view of "what computer systems are" by microsoft will become the single greatest limitation on the evolution of organisational support systems—which in essence is what large information systems are.

Given that our self-organisation is the basis of our species evolution (it is the only thing we have evolved in thirty thousand years, look at the collective impact and capabilities of our species now), and given that modes of political and social orientation are centrally dependent upon our capacity to organise in novel ways, I would go so far as to say that the monopoly of microsoft is not simply industrial, but intellectual and ideological.

In the terrain of software development Microsoft is so absurdly adept at obliterating any signs of competition precisely because it is able to apply, with great coordination, its myriad departments and products in such a way that they re-shape the commercial terrain pre-emptively before initially under-priced targetting products are used like daisy-cutters.

The single most important thing to do is to prevent Microsoft coordinating its forces. This is the necessary first step. This is precisely what the DoJ is not doing.

Subject: Microsoft Settlement

Dear Sir/Madam,

As a user of both Microsoft and Netscape software in the UK, I wish to comment on the proposed settlement of the above case. I will keep this short and only comment as a user of computer software. The terms of the settlement proposed would appear, to the "ordinary man in the street" to be a sudden capitulation by Government to big business, and is effectively allowing Microsoft to walk free without serious penalty or inhibiting it from future offences. This is incredible, after proving that Microsoft was guilty of monopolistic and anti-trust behaviour.

Such a capitulation will ultimately be to the detriment of both industry and the consumer.

Specifically, from my perspective as a user, Microsoft destroyed the Netscape Company and the Navigator browser software and also encouraged the use of unique web server software code configurations, which, to this day makes it difficult to receive Microsoft server data on a Netscape browser, and obliges (forces) the user to use the Microsoft program.

The the user, the very minimum believable remedy would be to oblige Microsoft to separate the operating system software (Windows) from the application software (Internet Explorer, Office etc), which is not difficult.

By this I mean at the software program level—any separation of the Microsoft business activities would be a bonus, by virtue of the additional protection afforded to the consumer of future anti-competitive behaviour.

This settlement is a roll over by the DOJ—written by Microsoft, for Microsoft. Somebody at the DOJ should stand up for the rule of Law. This is a disgraceful cave in, and political pandering of the very worst kind.

Much worse than simply profiting from it's monopoly, Microsoft continues to strangle innovation in the cradle. What Microsoft can not steal it kills. This had caused untold harm to consumers, who have been deprived of quality products for years by this predatory monopolist's tactics. It is now the DOJ itself that has been perverted by this case. My faith in the American Legal system is solely in the hands of the Judge, if she supports this settlement, then America truly does have the best legal system money can buy.

Justice needs to be seen to be done, and at the moment Microsoft has been abusing the process by serial delaying tactics while it decimates the opposition. I find this grossly disrespectful of the legal system. Legal practice needs to be a whole lot faster if it is not going to be abused in this way. Less juries, more clued up judges. The present (proposed) settlement is a slap on the wrist. It implies an embarrassingly weak judiciary with a heavy Republican hand on its shoulder. Microsoft have been convicted of

destroying other companies by abusing a monopoly. They have probably caused more damage to the US economy and its development than 11/9, but have done it by stealth and obfuscation.

Microsoft have a cash pile of 3bn. Take it, and then divide them as was in the initial plan. They will continue to thrive, but stand more chance of doing so fairly.

Tom Hughes

Dear Sir,

I would like to express my dismay that a proven monopoly such as Microsoft, with a history of manipulation, has been "let off lightly" by the DoJ and will now be able to effectively carry on with its monopolistic pursuits unhindered.

Microsoft makes a LOT of money from giving people no choice but to run its software, perhaps it is time to let the people have their choice by being able to buy PC's with the software they would like to run, not the software that Microsoft dictates they should run. Here in Europe, computer stores cannot sell PC's without Windows on them as Microsoft does not allow it.

Thankyou
Mat Diss.

To whom it may concern,

Firstly I am not an American citizen but do have to suffer the constant barrage of poor products from Microsoft (It is my profession to alleviate the problems other people have

with Microsoft software). We constantly see America being portrayed (by yourselves through your media) as a land of truth, justice and democracy. America is the torch bearer for the concept that a free economy can heal all the worlds ills. Your decision has shown that all these claims are totally unfounded, money comes before all else and nothing will get in it's way, the end result of a free economy is corruption, consumers/ citizens are only there to be exploited, technology is to be exploited, not for the further advancement of the humanity but for the financial enrichment of a company at the expense of the advancement of humanity.

You have done yourselves proud.

Subject: Microsoft Settlement

To Whom It May Concern,

I feel that the proposed settlement will not do enough to correct Microsoft's anticompetitive practices. Microsoft's Windows Win32 API has become the de-facto operating system API for personal computers. The only way to restore competition in the market is to turn support for the Win32 API into a potential area of competition. Microsoft should have to publish the complete Win32 API so that other operating systems could gain the same level of application support that Windows currently enjoys.

Microsoft should be barred from including language in their other product licenses that prohibit the use of their product on non-Microsoft operating systems.

Hardware vendors should be free from retaliation from Microsoft if they choose to sell systems without any Microsoft operating system pre-installed. Microsoft should be heavily penalized in the event of any future discoveries of code in any of their other products that goes beyond the Win32 API specification to verify that it is running on a Microsoft operation system rather than another vendor's implementation of the API.

Thank you for your time,

Richard Harris

Subject: Microsoft Settlement

Microsoft's attitude seems to be like that of an old Imperialist justifying England's Colonial Expansion. "Sure, we might have enslaved a few million, yes we may have held a few economies back and stolen other countries resources to benefit our own so that we didn't have to work too hard, byt he, at least we can all speak English, right?"

Microsoft program and OS writers have proved themselves lazy and incompetent. Having done good some initial work on a GUI, they then generated feature-rich and security poor software over the past seven years, with a disastrous EULA, all in the name of screwing more money out of customers.

Was there a need for WinXP or Me so soon after Win2K? No. There was a need for a secure Win2K, with no Internet Explorer code in the OS code AT ALL!!!

Most of the hacking exploits that Microsoft OSes are prone to are enabled by IIS server code or Internet Explorer Code or simply crappy application code handling of buffer overflows or the damned "interoperability" between Outlook/Outlook Express and other proggies. Microsoft wanted the Internet to itself so it wasted Netscape. It wants its users to remain clueless so it made things so easy

that every two-bit hacker could exploit holes in its badly written OS and applications code. It wants .Net enabled on all systems so it can "rent" applications and "look after" other peoples information [the Hotmail EULA put paid to that...]

Integration of Server and IE code into the OS doesn't just bring the internet to your fingertips, it brings every malicious cracker to your hard drive! Leasing applications and storing information using the internet means the crackers don't even have to get into your hard drive, just the relevant microsoft server, and we've all seen how secure Microsoft are in the last twelve months! Microsofts quest for domination has exposed private and public users and government departments the world over to using insecure installations for sensitive data.

Not only is the Microsoft Settlement flawed, it is illegal in my opinion, the DoJ failing to discharge its duty to the benefit of all consumers which is to encourage free trade and competition. A judgement which limits Microsoft to providing ONLY the Operating System [OS] AND which prevents any sister company the DoJ might set up to produce applications benefitting unfairly from knowledge of the source code is what it needed. That way companies making sucessfully products such as browsers might flourish once again.

But even if the DoJ do nothing, Microsoft's halcyon days are numbered. Apple sought market exclusivity and profiteering by sticking to the hardware like glue. Microsoft has tried to achieve the same thing by bullying and sticking to the Operating System like glue. Nor will Microsoft's quest to dominate the Net last for too long, I'm afraid. Nor will any restrictive approach will work, long term. Open Source and the GPL are here to stay.

Yes, ironically I'm using a Microsoft Operating system with an old version of Netscape to running on it to send this message. I will probably invest in Win2K for a while, but this year makes the changeover to Linux, prolly either SuSE or Mandrake [or both!] and I don't expect to be looking back over my shoulder too often. Star Office /Open Office, with Opera as a browser, here I come!
Michael O'Neill.

Subject: Microsoft Settlement

Dear Sirs:

It seems AOL is trying to revive a putrefied corpse. There is no question that a separate browser apart from IE would never have reached the seamlessness and efficacy of the present system. And even to this date, if one wants, there are several browsers out there that one can download, install and use as an alternate browser. Some of these browsers do serve special needs and I use Opera from time to time.

But to change the venue for competition to the courts from the marketplace is, if anything, uncompetitive. If AOL has a better browser, let it offer the item as a package deal with AOL service to its customers.

At one time I was also an AOLie, when they came out with an easy interface for Windows3.1. However they did not offer internet acces. That was in the days of the net before the web. But I switched to Netcom because I wanted to have Internet access rather than be limited to AOL content and to their restrictive policies (the so-called "Terms of Service". I did not go back to AOL after that. While with Netcom, I had a shell account, and I had perforce to learn how to set up my shell and a bunch of UNIX comlands to get around on the net (no web then). All downloads were by FTP to my shell account and then had to be xmodemed / ymodemed / zmodemed to my hard disk. I am glad that I had the opportunity to learn how to work UNIX, FTP and the x, y, and z modem protocols as well as ARCHIE, VERONICA, and the mailreaders, newsreaders and wordprocessors of the UNIX shells.

And when the web came along, I initially used SlipKnot to access the web through my shell account. Then I used the PPP emulator that originated in Australia. It had to be placed in my shell account and compiled to make it active. I forget its name but I probably still have it on one of my numerous floppies that have long been collecting dust.

With the PPP emulation, I did use the Netscape browser but I never felt it right to have to cough up cash for what I thought should be an integral part of the system: I got the PPP emulator for free. The coming of the internet Explorer changed the situation; the efficiency or lack thereof of the PPP emulator led me to subscribe to a PPP account at Netcom.

Ofcourse Netcom was bought up by ICG and then by MindSpring which merged with Earthlink, and there is where it stands today. I am grateful to Microsoft for making it possible to do things more easily; I reject AOL as an ISP since I want my ISP to be pure conduit and no content. (That's the reason why I do not go with MSN).

I say get off Microsoft's back. Go back to the market and do what you can do. The courts are not a substitute for the market when one falis in the market. We have a good thing going with Microsoft's products and services. AOL did not and does not cut the mustard, at least with those who care to do better.

Dear Madams and Sirs,

I am writing to let my opinion as a citizen known about the Microsoft antitrust case. As a person who depends on computers for my job, you might imagine that I have strong opinions about this case. Over the past 12 years or so, I have noticed two clear trends in the "WinTel" computer industry:

1) computer hardware has become more reliable, faster and cheaper with more choices

2) computer software has become less reliable, less affordable, and with less choices

Economically—as a consumer and computer user—Microsoft's (now found to be) illegal business practices have hurt me this way. While the hardware market seems rife with cost-savings, innovation and competitive diversity, the software market is expensive, stagnant and utterly without innovation. And—of course—without robust software, the best hardware in the world is as useful as a door-stop.

It seems that anytime someone comes out with a new software concept that could truly return aggressive competition and new ideas to the software side of the equation (i.e., Java, QuickTime, OpenDoc, RealAudio, Netscape, Novell, etc.), Microsoft uses its illegally gained Monopoly to "embrace, make proprietary, or buy-out" such technologies.

I find it quite frustrating that Microsoft—which used illegal business practices to achieve much of its software dominance—is casually using such ill-gotten gains to achieve dominance in far-reaching markets such as News and Media, Entertainment and Gaming, and Cable/Telecommunications. I must urge the DOJ to finally and permanently put a stop to the way in which Microsoft does business: mainly, using monopoly power in one market to create emerging monopolies in other markets.

Like any other guilty criminal entity, I would hope to see Microsoft punished and restrained from acting in a criminal manner in the future in order to bring balance and progression back to the U.S. Software industry. I am very concerned that the current settlement proposed by the DOJ is completely and woefully inadequate in this regard.

Thank you for allowing my input.

I am appalled at the proposed Microsoft Settlement. Allowing a monopoly to give away its product is no way to help competition. I am not a US citizen but this settlement affects all computer users. A /far/ better solution is suggested at: <http://www.gnu.org/philosophy/microsoft-antitrust.html>

In short the points are:

- Require Microsoft to publish complete documentation of all interfaces between software components, all communications protocols, and all file formats.
- Require Microsoft to use its patents for defense only, in the field of software.
- Require Microsoft not to certify any hardware as working with Microsoft software, unless the hardware's complete specifications have been published, so that any programmer can implement software to support the same hardware.

This would allow truly free competition.

 Date: 1/24/02 6:14am
 Subject: Microsoft Settlement

Dear DoJ,

For years I have followed closely—or as closely as I can from here in the UK—the antitrust case brought by DoJ and sundry US States against Microsoft.

I realise that, in making a legal case, it can be important to limit the areas of dispute, and to fight on grounds which are reasonably assured. So I am aware that the case brought by the plaintiffs against Microsoft was specific and limited.

As the evidence presented to the initial presiding judge (Judge Thomas Penfield Jackson) accumulated in public view, it became manifest to the common man that the case against Microsoft was simply overwhelming. Judge Jackson himself, in his Findings of Fact, set a new precedent for the clarity of assessment of complicated technical argument. Microsoft had been found demonstrably guilty as charged; all that was required was a punishment fit for the crime.

It was no surprise that Microsoft should choose to appeal Thomas Jackson's judgement, and it was (of course) regrettable that Thomas Jackson, by some of his own ill-advised actions, strengthened the grounds for the appeal. Nevertheless, regardless of any propaganda interpretation, the simple fact remains: the appeal court substantially upheld Jackson's judgement. Microsoft, on appeal, had still been found guilty as charged; all that was required was a punishment fit for the crime.

It falls to you to deliver that punishment; and to make such remedial changes as are needed to prevent that crime from ever being repeated. In drafting the punishment and remedy, it is important to consider the context of the crime. Microsoft's criminal behaviour, as proven by the antitrust case, is not a temporary aberration. Rather it is a chronic condition. There are numerous other examples of anticompetitive behaviour from Microsoft which might equally well have formed the basis of a provable case. For example: actions taken against the product

DR-DOS more than ten years ago; the undermining of Apple Computer's business by withdrawing applications support at the time of the launch of Windows 95; the propaganda campaign to undermine the OpenDoc standard, when it was perceived as a threat to Microsoft's maintenance of the applications barrier to entry. The examples are legion. The effect has been clear. Over more than a decade Microsoft has built a monopoly business by illegal means, and has then sought to protect that monopoly by further illegal means. The damage is felt worldwide. These actions have harmed the interests of consumers, business and the computer industry in general. Because of these actions the world's IT is over-priced, which means that throughout the world products cost more than they need to, schools can afford fewer facilities, hospitals can afford less medical care, and ultimately more people perish from ill-health, malnutrition and starvation. Microsoft is rich because, through its illegal monopoly, it has siphoned money away from everyone else. That, ultimately, is the crime the DoJ has to punish, and the yoke which the DoJ must lift from future generations.

The year 2001 has seen some spectacular demonstrations of the cost to the world of the Microsoft monopoly. Email viruses like SirCam have brought business to its knees. Security experts confirm: these are direct consequences of the world's enforced dependence on shabbily insecure Microsoft products.

I would like to believe that you are up to this awesome responsibility, and are poised to deliver appropriate punishment and necessary remedy. Alas, I don't think you are. From all that I have read about the details of the proposed final settlement it looks like a spineless cave-in. The guilty criminal will go unpunished, and the criminal behaviour will carry on, to plague the next generation as it has plagued this one. This is a time in history when you can make a difference. Are you Makers of Difference? History, I think, will judge Thomas Jackson well. At least he had guts.

How history judges the DoJ's final settlement is unknown. Gutless? We shall see.

 To Whom It May Concern:

I wish to state my sentiments on the antitrust case against Microsoft. As a frequent computer user, Microsoft has given my family and me a great variety of choices and types of applications. I can and do use other programs, including Netscape, but I have been more than pleased with Microsoft products. The truth is that Microsoft products are very high quality, and therefore, the public benefits by using them. Punishing them for having a corner on the software market is simply punishing creativity and enterprise, and the customer is the one who suffers in the end. We as customers can

choose other products if we wish—just because Microsoft products are packaged with a new computer does not mean that every person will choose to use them. Providing a good service to new users for a good price is not a crime, and should encourage the competitors to try to improve their products to attract more customers. Please bring this suit against Microsoft to an end, and allow consumers to have the full range of choices we have enjoyed to this point. Thank you.

MTC-00020483-0001

Dear Sir/Madam,

I have decided to write you in relation to this case against Microsoft and add my voice to the millions of other computer users who use the Windows Operating System and want to be able to have a choice.

To make my point blunt and to the point. I want the choice to be able to use another operating system. I also still want to be able to use products that can run on windows as they hold the monopoly. Whether I use Macintosh or Linux, I still need to be able to use Windows products because, everyone else has to too.

I live in Australia. And everything that happens in the United States affects everyone in the world. I respect Microsoft's right to be able to make a product, and make a profit. But I do not respect a company that holds 90% of the desktops around the world, but doesn't let their source code out to the public so all operating systems may be compatible. And that, is where I think my argument comes to its final point.

Microsoft's monopoly would not mean as much if their source code was open to the public. The Company would not have to be split up. If another company out there was allowed to make a word processor that could read Microsoft Word .DOC Documents etc as well as every other file extension or file name..., then every operating system and program could be made compatible and you would have true competition.

Please, Take this last point as the most serious of this letter.

Dear Sir/Madam,

I will keep this brief as you have no doubt had many e-mails that already make many of the points I would have normally put forward. However, there is one issue that I would like for you to take into consideration and that is the impact on computing globally if this mockery of a settlement is allowed to proceed. Microsoft has an even greater stranglehold on the majority of non-US computing markets than the one it has in the US. If this settlement, which is so pathetically feeble it beggars belief, is followed through, it will effectively enable MS to dominate the world even more than it does now. So, please take this into consideration when deliberating on your

decision—it affects many, many more people than just the US population.

Yours sincerely,
Jonathan Tyzack

Hello,

It seems the time is coming close to the settlement date. I would like to protest that Microsoft is getting away without any major changes. They should be broken up, they have hindered the free market too long with their monopoly.

Having one company control 99% of the software and Operating systems market is just not fair on other companys. MS embrace new technology and then modify it so it is incompatible with other companys competing product. Using their Monopoly of the Desktop they are now forcing their way into other areas such as "online media players" and "online chat clients".

Please do the right thing and split MS up. Other companys have been hindered for too long.

Yours sincerely
Jonathan Grant

Subject: Microsoft Settlement

It was a shock to hear the settlement proposed by the DOJ in the sense that no significant retribution was handed out to Microsoft in addition to a lax control on future business practices. Microsoft has shown time again that it has no regards to anybody, consumers, competitors, the government and the law of the land. Even as it was going through the legal problems, it continued to do the very things that necessitated the suit in the first place. It seems anything is good as long as it will increase the profit of Microsoft. Whether it is lies and FUD against competitors, irrespective of how little they are, relentless draining of consumer's income because they have very little choice.

In the past several years, the average price of computers went from about \$2,000.00 to \$900.00. This was because of the competition that Advanced Micro Devices was able to build against Intel. If anyone else could build the same competition in the software arena against Microsoft, the average price will drop

further down, where the majority of the populace can afford a decent computer. As a matter of fact Microsoft is the only one that has increased the price of the computer's operating system—Windows's XP.

What may happen eventually is that we will all be charged if we don't use MSN as our ISP. What right do we have to run Windows and not use the ISP of the company that put Window's on your desk top. I am sure they are working on this through the "Passport" or by eliminating all other ISP choices. It worked with Word Processor and the Spreadsheet, after all.

Sincerely
C.U.

Subject: Microsoft Settlement

While I am from the EU, I think I can still lodge my complaints about the MS Anti Trust settlement.

I use unix at work, with netscape. MS is trying to dominate the web with its new .NET initiative which means that by sheer market forces, I will no longer be able to browse a large amount of .NET based web sites, and since MS do not release their software for Unix, I will either have to choose between the WWW or using a Microsoft product. This is unlawful abuse of monopoly.

I also wish to buy a laptop. I don't need a new OS for it (my old laptops screen went). So why do I have to buy another version of Windows for it?

I might even install linux on it instead. Yet I still have to pay for it?

I have long since bought factory built PCs because they've forced me to rebuy my operating system each times (I have 2 windows 95 license, and 2 Windows 98 licenses already, I do not want to own 2000/ME/XP or any future MS Operating system). Why should I have to buy all the components to build my PC, rather than buy a pre built one? Because otherwise MS will make me pay for something I do not want or require.

The current toothless settlement of the Anti trust case changes neither of these things, and gives Microsoft leeway to march completely over the rest of the small computer software companies in the world. The settlement has given us a future:

"Either sell your company to Microsoft, or be eradicated".

And I see that as your fault.
John

Gentlemen,

Just a quick note during this public comment period to voice support for Microsoft, and for ending this action once and for all.

I believe the DOJ's case was marked by significant misunderstandings of the general business environment, the needs of consumers, and the technology-related questions in the case. This was further tainted by the very poor quality of testimony provided by members of academia and actions by Microsoft's competitors in what amounts to using the government to further their own business goals.

The government has wasted enough time and money on this ridiculous action, which in my opinion should have never seen the light of day in the first place.

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future.

Similar to the settlement against AT&T, Microsoft should become a government regulated Monopoly, until its market share drops to an acceptable level (40%, for example, assuming one of its competitors is now also at 40%). This must be true for all Microsoft product lines, before regulation is lifted.

Even after being found guilty of being an illegal monopoly, Microsoft's behavior has not changed.

Regulation of their behavior, with the threat of severe criminal penalties for failure to comply, is the only remedy that I can see will curtail them. The market must be able to return to a state of competition.

Subject: Microsoft Settlement

I do not think the proposed Microsoft settlement is in the best interest of the American consumers. They have been thumbing their nose at the court through the entire proceeding and will continue to if this settlement goes through. Some examples:

They appear to have been using their monopoly power to inflict the inferior (a widely held opinion) Windows Media Technology on the public: Even though superior, standards based technologies existed long before Microsoft even looked at streaming media on the Internet. They are rumored to have used monopoly influence over OEM computer manufacturers to force them to remove dual boot software that would allow the computers they shipped to run either BeOS or Windows. This kept the manufacturer of BeOS from even giving it away as a promotion! This is just what I happen to know about.

Oh, and they touch enough of the computer industry that most professionals are probably afraid to comment publicly on the settlement (out of fear of retribution or blacklisting). I'm certainly nervous about it. [They have no direct way of getting at me, now, but fortunes often change quickly in this industry—and they are driving just about everybody else out of business.]

I'd like to register my dissatisfaction with the DoJ-Microsoft Settlement as it currently stands. I've been a personal computer user for 25 years and an instructor for eight and I've seen countless examples of how Microsoft has acquired and then abused its monopoly power in operating systems. Microsoft's actions have clearly, in my view, hindered, not advanced the cause of innovation. Microsoft has not created but flouted computing and networking standards, to its own individual advantage. It appeared ample evidence of this was presented at trial.

What we are seeing in the current proposed settlement is not "justice," but money at work.

Microsoft should be assessed substantial penalties for its behavior and should be prevented by a fair settlement from continuing to abuse its market position, something it shows, at present, every evidence of meaning to continue.

From: Martin Kiewitz
 To: microsoft.atr(a)usdoj.gov
 Date: 1/24/02 12:40pm
 Subject: Microsoft Settlement
 Dear DOJ,

I'm a german software developer, so I'm not an american citizen. I don't know, if this matters, but I want to say something about the proposed Microsoft Settlement.

I read a comprehension on another site and I read the whole one.

I noticed that the settlement does not mention the sabotage that Microsoft did some years ago, when releasing Microsoft Windows 95. Those days, they wanted to rule the DOS world. Several other competitor DOS versions were out. Just to mention one: Caldera DOS.

Because Windows 95 was actually running *under* DOS, Microsoft installed a little extra API. I mean, API is a huge word. They actually implemented about 400 Bytes of Code (!) that's really tiny in size, to detect MS-DOS 7.0. If this was not found by Windows 95, it gave error messages, as if the underlying DOS wouldn't be able to run Windows 95.

In fact it was. Caldera wrote a little TSR (means a software program that stays in memory and is able to implement another API or fix one) that enabled Caldera DOS users to run Windows 95 under their DOS.

So Microsoft was actually connecting their MS-DOS 7 to their Windows 95, so that other competitors would get out of business and actually they succeeded. Caldera sued Microsoft for this and here is the result:

<http://www.kegel.com/remedy/archive/final4.html>

Quote: "Caldera has presented sufficient evidence that the incompatibilities alleged were part of an anticompetitive scheme by Microsoft."

The PFJ as currently written does nothing to prohibit these kinds of restrictive licenses and intentional incompatibilities, and thus encourages Microsoft to use these techniques to enhance the Applications Barrier to Entry, and harming those consumers who use non-Microsoft operating systems and wish to use Microsoft applications software.

I have another example of mine. I developed a multi-boot-loader, which means an exchange software program that is loaded prior to the Operating System. Currently it's still Public Beta, but that's not the point.

In the last version release, someone tried it out on Windows 2000/NT, but it didn't work. The strange thing was that it works with all Operating Systems available (including BeOS, OS/2, eCS, Microsoft Windows 95/98/ME, All DOS Versions).

Now I found out that their Operating Systems based on the NT-line (which means NT/2000/XP) look for a specific operation code *AT* the location of the boot-loader.

It's difficult to explain that one to non-technical experienced people. In fact they check for the first operation code issues in the boot-loader for CLI. CLI disables interrupts on x86 computers and it's of no use.

First I thought that this would be "crazy" and couldn't be. Then I tried it out by inserting that CLI into my programs code and Windows 2000/NT didn't go crazy, but they worked.

This CLI-checking is not listed anywhere. It was found by other boot-loader programmers. Actually it has the only purpose to make it harder for custom boot-loader writers. It's another of those incompatibilities.

The standards of that space on the harddrive is defined and the CLI was not included. If you want to check for yourself, here is the address to download my boot-loader: <http://kiewitz.ath.cx/KiewitzSoft>.

I can send you a program that simply removes the CLI and you could see Windows 2000 going berserk, which actually means it will Load and Save the profile in an endless loop. This behaviour is not in any way related and can not be related directly to the CLI. If I execute the CLI one operation code later, the whole mess isn't changing, so it's really actual checking for this opcode.

These are things that Microsoft does the whole time and I don't want them to continue with that behaviour.

Thank you for reading.

Pathetic settlement. The 9 states have it right. I object to the settlement, as it does NOT go far enough, and actually opens the new market of schools to the monopoly that is Microsoft.

If we must do a settlement, which I read as a political buy out, at least invest in Open Source (GNU/Linux and the LGPL BSD's) for about 10%, use 20% for infrastructure support, and spend 70% on hardware. Microsoft pays only money, not products.

Microsoft mandates hardware and software upgrades very often, as that is the nature of

a greedy monopoly, to require the consumer to spend more money, often. Microsoft products are bulky, insecure, and contain weaknesses not present, or long since rectified in the Open Source products.

Do your job, and serve the greater need of education, and the public, by encouraging the competitive environment through support of the Open Source movement.

 RE: Microsoft Settlement

For the sake of our future, please pursue the Microsoft situation vigorously.

While its roots lie in the good soil of hard work and competition, Microsoft has since become overgrown and now depends on the thorns of predatory practices to overcome those who would hope to compete fairly. Many fine companies, and, worse, many talented individuals, have been crushed by Microsoft's willingness to undermine the prices charged by even the most modest competitors; to preemptively strike at consumer and investor confidence in potentially competitive products; and to bully those who survive its other tactics out of the marketplace.

Microsoft did much in the past to help create and build the technology industry, but has since turned from innovation to reaction,

often adopting and ultimately controlling the intellectual developments of others rather than competing on the basis of its own creativity. The dreams of those who might be inspired to develop competing products languish under the pall of Microsoft's demonstrated willingness to prevent competition. The future of the industry, and perhaps of those who depend on it, is in jeopardy if the free market continues to be negated by Microsoft's monopolistic practices.

Subject: Microsoft Settlement

I do not agree with the proposed settle that Microsoft has been sentenced to pay. In reality it is not punishment at all. It will only allow Microsoft to tighten its hold on the education market. Many Schools are trying to move to Open Source because of the draconian practices of Microsoft.

What Microsoft needs to do it pay (CASH) large sums of money to a foundation that will properly distribute it to schools that need it. Doing this will allow districts to purchase the hardware and software that they NEED and want.

Look at the schools that are already having problems with Microsoft. For many they are having to pay large fines for "piracy". The piracy is simply a result of not being able to afford the packages Microsoft offers or not being supplied appropriate assistance in using the applications correctly. The country's school systems are bad enough without corporate lawyers breathing down the back of their necks.

I am completely disgusted with the way that Microsoft has acted over their years of play, so before this feedback period expires I'd like to get my oar in, have my say as it were . . . split em up! here's why I think that Microsoft should be chopped up
—"nobbling" other DOS systems back in the day (the alpha/beta windows that was fixed so it wouldn't run on a competing, better DOS)
—selling the most compromised, insecure server software on the planet—with

enough disclaimer legislation to cover their backs so they don't even need to make it any more secure

—trying to kill JavaScript by bringing out "Microsoft Jscript"—LAME!
—making J++ compiled code unusable in other operating systems
—killing poor old Nutscape Navigator, just cos they wanted an internet based OS (they knew they'd be sued later)
—adding all those non-standard features to FrontPage and Iexplore that other browsers couldn't read—effectively making the web harder to browse on non M\$ platforms
—leaving all those ports open for attack on home systems—why o why?
—making licensing laughable by providing home users with 50 page UELAs—I mean, who actually reads that stuff any more? (I USED to)
—making HOME USERS have to pay separate licenses for each home m\$ xp installations . . . now that is a joke—they expect ppl to respect this?
—killing my Amiga and all the other better os's than windows (ok perhaps this is a personal grudge)
—they should be chopped for ms c++ alone—making a simple dll file from 2,000 bytes of code is 300,000 bytes long—same code in Borland c++ is 30,000 bytes.
—the price of m\$ office, and the incompatibilities with any/all other office packages. this is unacceptable.
there's a million reasons, this is just the ones that irritate me the most. m\$ are unfair, money grabbing scum. I don't care if they rip businesses off, specially if they can afford it—its when they apply the same tactics to home users that really gets my back up thx for hearing this
Gareth

Dear Ms. Renata Hesse:
Please put a stop to the economically-draining witch-hunt against Microsoft. This has gone on long enough.

Microsoft has already agreed to hide its Internet Explorer icon from the desktop; the fact is, this case against Microsoft is little more than "welfare" for Netscape and other Microsoft competitors, with not a nickel going to those supposedly harmed by Microsoft: the computer user.

This is just another method for states to get free money, and a terrible precedent for the future, not only in terms of computer technology, but all sorts of innovations in the most dynamic industry the world has ever seen.

Please put a stop to this travesty of justice now. Thank you.

After hearing of the AOL lawsuit against Microsoft, I decided to send you a few comments. I have been on the internet for a few years now through AT&T World Net service. When I applied I was given a choice of browsers, either Netscape or Internet Explorer. At that time I chose Netscape. While surfing the Internet later I learned that I could also use Internet Explorer to connect through World Net. After using both browsers for an extended period of time, it became evident that the Internet Explorer browser by Microsoft was more dependable and seemed to be more flexible to use. I have been using it for the past two years. My point is that given open competition, Microsoft has proven to be the more superior browser, and I feel that AOL has filed a frivolous lawsuit.

This is to register a negative opinion on the proposed Microsoft settlement. Most non-Microsoft employees would agree, that as long as any one company retains Microsoft's current monopoly-scale market share in any one of the following industry sectors:

- 1) Office Productivity Suites
- 2) Operating Systems
- 3) Internet Software (Explorer, IIS)
- 4) Programming Languages (Visual Studio Suite)

. . . That company will, under any marginally competent CEO, be able to quickly re-leverage monopoly control of the entire computer industry. For more detailed commentary on the more egregious ways in which the current proposed settlement is completely ineffective, please refer to www.kegel.com/remedy/letter.html.

I do not feel that the penalty phase of the trial adequately addressed the severity of the crime committed.

I do feel that Microsoft is continuing to engage in the same behavior with the bundling of Windows Media Player, et al, in Windows.

I do feel that the penalties from this trial should include a very significant fine for past transgressions and a means to prevent Microsoft from acting in a similar manner in the future.

Give the penalty phase some teeth. Please. Free us from this innovation-stifling corporation.

Thank-you.

Subject: Microsoft Settlement

Your Honor:

Microsoft is an American success story, the same kind of American success story found in the Horatio Alger tales, which used to be so popular in America. Mr. Gates overcame tremors adversity to make a better "mousetrap." All of us are the richer because of it.

Are we to now seize this man's property, either through outright confiscation of his business or by means of fines, limitations and regulations??? Mr.

Gates—has not forced anyone—to buy his product. People have chosen the MS OS because *it is better*—easier to use, relatively stable, supremely flexible, cost effective, etc.—than anything offered by the competition (who, instead of fairly and freely competing with Microsoft, have chosen to complain to the government).

Because of that, Mr. Gates was able to introduce his internet browser, MSIE, to millions of people. Mr. Gates—once again—*did not force anyone* to use his browser. We the consumer —chose— to use it because, once again, it was *overwhelmingly superior* to the competitions". Placing MSIE in his Windows OS amounted to *an option*—not a command—.

Such "options" are what allows the consumer a choice; such "options" are the products of innovation, which we have held as an American virtue since this republics inception, proudly referring to it as "Yankee ingenuity."

Are we to now punish Mr. Gates for that? Are we to now listen to those who, for lack of vision or for want of ambition, could not successfully compete with Microsoft?!

If so, then this is no longer the country of Horatio Alger. This is no longer the nation that lauds achievement; a nation that is no longer the land of opportunity where men and women can "beat a path to the door" of those who make a better mousetrap.

It is no longer a nation of laws that defends the rights of all, —including— the rich; it has become, instead, a nation that rewards the incompetent by looting his superior; that denigrates achievement in the name of envy; a nation that, in short, has come to be ruled by men who, seeking the fruits of men's labor, violate the rights of the rich in the name of the poor—thereby destroying the rights of all, rich *and* poor alike.

I am not in any way religious, but I pray to whatever god there may be that you have both the wisdom and the courage to uphold the Jeffersonian principles of our republic and dismiss the case against Microsoft. If you do not, we will all be, not only poorer because of it, but also—and most importantly—no longer free.

Very truly yours,

From: Howard Allen Cohen
To: Microsoft ATR
Date: 1/24/02 6:57am
Subject: Microsoft Settlement

I do not think that the Microsoft Settlement remedies, or will prevent a reoccurrence of, some of Microsoft's business practices that cause the most harm to its competitors and the public. Microsoft should be required to publicly release the APIs to all current versions of Windows and enough of the source code to permit competitors to write computer programs that:

1. Can compete with Microsoft products on a level playing field if they run under Windows. For example, I fear that Microsoft's application programmers get advance or more detailed knowledge of "hooks" or hidden features in Windows so they can optimize their programs better than the competitors.

2. Can run under other operating systems in order to run programs originally written to be run under Windows under those other, non-Windows operating systems. For example, Linux users should be able to run most Windows application programs with the help of Wine (Wine is a project that makes it possible to run Windows application on Linux and is being developed by open source developers—see <http://www.winehq.com/>).

Currently, Microsoft conceals information needed to most effectively do this. And the Digital Millennium Copyright Act (DMCA) may even make attempting to reverse engineer Windows to discover this information illegal.

Also, I note that the trial court's findings of fact define "API" to mean the interfaces between application programs and the operating system, while in the settlement, this term means only the interfaces between Microsoft Middleware and Microsoft Windows, excluding Windows APIs used by other application programs. For instance, the PFJ's definition of API might omit important APIs such as the Microsoft Installer APIs which are used by installer programs to install software on Windows. The court's definition should be used in order to implement the suggestion in my paragraph 2 above.

If you have any questions or comments, do not hesitate to call me. Thank you for your consideration.

Dear Ms. Renata Hesse:

Please put a stop to the economically-draining witch-hunt against Microsoft. This has gone on long enough.

Microsoft has already agreed to hide its Internet Explorer icon from the desktop; the fact is, this case against Microsoft is little more than "welfare" for Netscape and other Microsoft competitors, with not a nickel going to those supposedly harmed by Microsoft: the computer user.

This is just another method for states to get free money, and a terrible precedent for the future, not only in terms of computer technology, but all sorts of innovations in the most dynamic industry the world has ever seen.

Please put a stop to this travesty of justice now. Thank you.

Subject: Microsoft Settlement

I think the current Microsoft settlement does little or nothing to guarantee that Microsoft will no longer be a predatory

monopoly. I am not an expert in any area of computer science, but it is patently obvious to me that the settlement is woefully inadequate; the current settlement does nothing but endorse Microsoft's current attitude. This case is not about what has happened in the past... It is about what will happen in the future, and suggesting that Microsoft's past actions merit anything but an exemplary punishment bodes ill for the future.

I am a US citizen, but have lived overseas most of my life, and I must say that this kind of a settlement puts the US judicial system in a very poor light. From a foreigner's perspective it seems like Microsoft is above the law.

From: James Massingill
To: Microsoft ATR
Date: 1/24/02 7:30am
Subject: Microsoft Settlement

Dear Sirs,

I am writing this short letter in order to give a small sample of what the general American Public thinks about the Microsoft anti-trust suit. First of all, I want to make it clear that I am not a big fan of Microsoft, nor do I completely agree with all its tactics. However, Microsoft as a company has a right to give it's customers innovative new software.

The fact that it's operating systems are integrated with a web browser should be a non-player in the lawsuit filed against them. Their goal to have the Operating System and the Internet as one seamless integrated technology is innovative and brilliant as are most of the "forward thinking" the company has come up with. Since their are other Internet Browsers and tools on the market which can be and are purchased separately, there is no real problem here. To build an anti-trust case on this premise is a farce.

As an Operating System, Microsoft does have it's competitors. These competitors include Macintosh, Several Brands of Linux, and Sun OS to name a few. One can not maintain that Microsoft has a monopoly, because this is simply not true. In actuality Linux has been gaining in popularity over the last several years and is a top seller in the software market. Therefore, states do not have a leg to stand on when stating Microsoft is a monopoly.

In the software arena, such as games, utilities, etc Microsoft does not even have huge chunk of sales.

There are many companies and competitors out there and I seriously doubt that Microsoft really wants to edge everyone out of that business, it would be impossible. Realistically, I, as a consumer, believe that the states in this suit do not have a very good case at all. I also believe this suit should end as soon as possible. I believe the states involved should stop trying to punish a company for being innovative, and stop using hard earned tax money for causes such as this.

sincerely,
James Massingill

A comment on the proposed settlement—
I personally firmly think that the Government is being far to soft on Microsoft. That company has done more from it's position of power to limit growth in the PC industry and slow (or stop) the introduction of innovative, better, technology solutions then anyone can ever imagine ... even with what's come out in the trial. No one company should be in such a position, not to mention that the industry, the US economy, and my shares of MS stock would be far better off if they were broken up into several businesses.

MTC-00020569

From: Terry Lambert
To: Microsoft ATR
Date: 1/24/02 7:37am
Subject: Microsoft Settlement

Microsoft is already in violation of stipulation 2 with regard to H. of the REVISED PROPOSED FINAL JUDGEMENT with its shipment of Windows XP.

Specifically, it is not possible to deinstall all Microsoft Internet Explorer middleware components from a Windows XP system, since this middleware is used in order to force user registration with Microsoft of the computer, including disclosing information about the computers configuration, and other private information of the user.

A Windows XP system with these components removed will operate for a period of thirty (30) days, after which it will cease operation.

This is clearly non-compliant with Section III.H.1. (removal of Microsoft Middleware by the user) and Section III.H.2. (Substitution of non-Microsoft Middleware by the user).

Hi there,

just a voice to add to many: Microsoft bundle useless and resource grabbing components to an operating system which shouldn't happen, these "add ons" should be optional extras in any sane world. The Netscape issue is disgusting, Internet Explorer is part of the operating system and whatever is said can't be removed, only upto 98me have you any chance of having a windows free of IE or it's drivers, for that you must purchase 3rd party software even then some shadow of it's install still rears it's ugly head.

If Microsoft are not to be broke up you are sorely failing in your jobs, where are we supposed to get legal support against these coporate monopolies forcing no choice amongst people, yes you can install an alternative media player into windows to play your media clips but media player is still installed and booted up forcing "the operating system" to load all it's drivers and codecs (wasting system resources),

once again this is another element of monopolisation. After the anti trust trials we now have windows XP with everything and it's brother embedded into the operating system, just look now you have cd writing software aswell embedded into the operating system, surely Microsoft are now taking the mick out yourselves because they can. Did they listen at all?

I now have no faith at all with the law, it seems you have far to much power against the person with nothing yet allow corruption in high places, next job maybe you will tell the RIAA to go and jump with their ridiculous demands and also sort out the mindfield of intellectual property which at the moment is pointless and also do nothing except cost people more money see Microsoft patenting years old ideas for their own gain and charging ridiculous licenseing fees, I think not, the corporations make you scared don't they, far to much power and money to pay for fancy word weasels.

regards John

Subject: Microsoft Settlement

The proposed settlement is a slap in the face of the supposed ideal of the fairness of justice. Turning around and giving Microsoft the legal blessing to force themselves into a market where they're not currently dominating is not a punishment; it's a reward. Hurt them financially and hurt them hard, by making them: —pay real money, not useless software which doesn't cost them anything to give away. —divorce their operating systems division from the rest of their software enterprises.

If this were a telephone company, they'd have been long gone by now.

Yours truly,

Michelle A. Hoyle

Subject: AOL Bullshit ! Typical

The only reason that I am writing this letter is due to the fact that I can not stand AOL! I have used AOL before and found it to be nothing but a money-grubbing over rated search engine. There are many search engines out there that are a much better service and they are free! If the DoJ wants to go after a company that clearly looks after one thing and it is not the consumer, it's themselves! They overcharge for a service that is not as good as they like to project. The last time that I used AOL I downloaded their program onto my computer and used it for a while. I did not like the way it worked and quit the service, at least I thought I did. For months

after I left the program they tried to charge me for services I never used and never would have used. I tried to get their program out of my computer and it took 8 months and several trips deep into my hard drive to find all of the little cookies and things embedded. I had to go to a computer specialist to finally get all of it removed from my HD. I have heard this same story from many of my friends and customers of my business.

I believe in the free enterprise system. I own my own company. I have always believed that a company has to EARN the profits that it goes after not have it given to them from the government. Honest, fair trade, consumer confidence, are words of the free enterprise system that generate a successful business. AOL does not do that. They are losing their customer confidence, honest business practices is not in their game plan and fair trade is a concept that never passes through the front doors at AOL. Any time a company tries to do a little competition with AOL they either buy them out or try to destroy them or as with the Microsoft affair, they hit the courts first with all of the legal crap to blind everyone to just what they are really up to. I think that the good ol' paid off government officials need to really do the job they were elected into by the tax payers and start looking the other direction. Look right at AOL and the other companies like AOL. Leave Microsoft alone and let them get back to doing what they do- develop software!

I am one of a quite large group that remember what happened back when cable TV came over the horizon and tried to make it where there was not going to be any more free TV. Congress finally said that the tax payers had years invested in the system and they had a right to free TV. So free TV stayed around. We believe the same thing. The consumers (taxpayers) have invested years and many dollars in the phone lines, cable lines, telephone poles, those fancy little things floating around up there in space that help TV and Telephone and cell phones around the world. We are working for the need of free internet service, congress will need a little help to realize this as they needed help on the TV issue.

AOL makes very nice profits. They need to have a little good old fashioned competition. Learn how to cut back in the proper areas to make profit work in their favor. Not go out and use the government and the fools in the government to remove their competition so that they can have a government induced monopoly. As a Tax Payer and consumer and small business owner, I am very sick and tired of these Billion dollar companies crying and whining about losing money because another company is just competing against them. These Billion dollar companies get the government to take away their competitors, so they can make more profits. They get millions from the government in subsidies to help them make more profits.

They get the government to force the consumer into a corner so the consumer is forced to buy their products at very inflated prices.

All I am trying to get across to you in the DoJ is look the other way. Start looking at AOL and the others that forced the suit against Microsoft.

Thanks

A concerned and frustrated tax payer

The proposed "remedy" will do nothing to improve the situation. If the DOJ prosecuted accused terrorists like the are prosecuting Microsoft, they'd create a solid and unassailable case proving that the accused are guilty, then recommend that they be let go, as long as they promise to only blow up half as many buildings. MS is a monopoly. Treat it like one and protect the citizens of the United States from their illegal and anti-competitive practices. Or, to phrase it differently, do your job instead of being a Microsoft patsy.

It is time you, our government start letting our society operate as it was intended by the signers of the Constitution.

You now need to stop finding ways to penalize and tax business like microsoft because they were making money.

The justice department has stepped over the line by trying to make laws that the only reason is to add money to the coffers.

To honestly be able to do that, it needs to be able to show us the population where every dollar taxed went. It could very easily reduce itself by two percent a year for the next ten years and, still give the same services given now. What is being said is that the government is way out of whack and, it is the corrupt entity here.

 Subject: Microsoft Settlement

To Whom It May Concern,

I am not a big fan of the findings of fact in the Microsoft case. However, the proposed settlement does not address the issues that brought the case to trial, and it does not address the findings of fact. I do not know if Microsoft is truly a monopoly, but I do know that the proposed settlement has the effect of negating the courts previous findings. In essence, if the settlement is allowed to go forward, it will not change the situation any more than if the higher courts had reversed the lower courts ruling. To address the ruling that Microsoft used its monopoly status to unfairly harm competition, it should be forced into two actions. First, Microsoft must make their OS source code available to everyone, without restrictions, at the same time it makes the source code available to the application programmers within its own company. Second, it must agree to bundle anyone's software in the same virtual location that they bundle their own, for any software developer who requests it. In other words, if MS wants to bundle their IE browser on the desktop with the release of their new OS product, then anyone who wishes, such as Netscape for example, must be given the opportunity to include their browser on the desktop as well. This way, any competing product will have the same chance as the MS product. If MS fails to comply, it must either pay damages to the company that was left out of the release or pay the reasonable expenses for advertising that would allow the competing product to gain an equivalent advantage to being bundled with the OS.

The issue at hand only deals with products that are not a part of the core OS. As such, MS would not be harmed by making the non-

competing portions of their OS available to the public. By allowing all developers the same access to the operating system, and equal access to the consumer on the desktop, Microsoft will be stymied in any further attempts to use its position as a monopoly to discourage competition.

From: Rick Robino
To: Microsoft ATR, rrobino@
wavedivision.com@inetgw
Date: 1/24/02 7:51am
Subject: Microsoft Settlement
To whom it may concern:

I am writing this letter to you from a Windows computer, as a computer professional. My qualifications provide me with an insight that might not be common among the general public, yet I believe they

are pertinent to the case settlement pending for Microsoft.

In the interest of brevity, I will state my comment briefly: Microsoft has broken the spirit of many of our laws with it's implicit and consciously strategized monopolistic practices, and where there is no law yet in areas of emerging technology they have taken advantage of their absence, to the detriment of users, businesses, and government. Microsoft has managed to escape all responsibility for the weak Security it has created.

Microsoft apparently believes it is above the law and too influential to be prosecuted. A settlement that involves the U.S. government in aiding Microsoft to expand and continue these practices by eliminating the competition which has heretofore kept their products from leading in the Education market would be an absolute shame. Microsoft has hurt the advance and prosperity of every other business in the computer industry, simultaneously forcing the choices of nearly every computer user in the U.S. towards their own products. Our country depends on innovation and competition, and our citizens depend on government to ensure a truly free marketplace for the benefit of all. Our country has the technological upper-hand for the moment, among all of the other countries in the world. However, all of those countries realize that their future, whether or not they will be prosperous, is staked on technological superiority. Stagnated competition in one country will give an edge to other countries wherein competition still provides the impetus to improve the quality, availability, and price of technology products.

I urge you to consider these factors and punish Microsoft for abrogating competition, especially through the very proceedings brought about to deal with their behavior. Please act in a way that encourages a varied landscape of technology, especially computing, by at least requiring that interfaces (not the actual source-code) to the Windows operating systems be made available to all, where both the content and price are the same for all parties—Microsoft included. A break-up of the company where the operating system only is developed by a single company, and other products are developed in other Microsoft companies with no more access to the API's than any other competitor would promote this idea. Please, in no case create a settlement which aids and abets the decline of competition, security, privacy, and diversity in the U.S. technology market. Rewarding Microsoft by giving them a strong foothold in the Education sector, at the expense of Apple, Sun and others, is clearly not the correct course.

I hope that your organization remains without corruption and remembers that the U.S. government is by, with and for the —people— of this country. We are counting on your agency as our representatives to be firm and truly fair, for this is a critical moment in regard to our collective future.

Sincerely,
Richard T. Robino

Dear Ms. Renata Hesse:

Please put a stop to the economically-draining witch-hunt against Microsoft. This has gone on long enough.

Microsoft has already agreed to hide its Internet Explorer icon from the desktop; the fact is, this case against Microsoft is little more than "welfare" for Netscape and other Microsoft competitors, with not a nickel going to those supposedly harmed by Microsoft: the computer user.

This is just another method for states to get free money, and a terrible precedent for the future, not only in terms of computer technology, but all sorts of innovations in the most dynamic industry the world has ever seen.

Please put a stop to this travesty of justice now. Thank you.

Sincerely,
Clark Fuller

I believe that the settlement allows Microsoft far too much latitude in defining the terms of their settlement (IE what a "bundled" application is). It further provides no firm means of enforcing the vague rules imposed on Microsoft.

Subject: Microsoft Settlement

Dear Sir/Madam, I feel that the Microsoft settlement is unfair to the taxpayers and the corporations of the U.S. To allow a monopolist such as Microsoft to have complete control over its own marketplace is simply wrong.

A free market economy does not exist merely to allow everyone to do as they please. A free market economy requires the rule of law to allow freedom of entrance and exit to markets. It requires transparency of information, something which the current settlement does not require of Microsoft.

As a practical matter, the government's fumbling has allowed Microsoft to establish a monopoly over a segment of the economy that is crucial not only to the economy as a whole, but to national security. If they were at least competent at writing software, we wouldn't have the current level of insecurity with respect to computer security. Not only has the government allowed its antitrust laws to be violated, it has even allowed them to be violated by a company whose software is dangerous. And then to allow this company to lie in a federal court and construct a settlement with no teeth after the company has been convicted leads one to suspect there is collusion between Microsoft and the government. And it is your fault.

The settlement should at the very least break Microsoft up so that it can no longer threaten the software industry. Its officers should held in contempt charges before U.S. courts for lying to a federal court. The Justice dept has become a laughing stock among those of us familiar with technology and not in thrall to Microsoft, and that again is your fault.

You ought to be ashamed of yourselves, the rest of the technology industry certainly is.

It would be a positive settlement for everyone to get this behind the DOJ. While there is certainly some truth in allegations against MS, it is akin to the tobacco settlement and prosecution which, while altruistic in public scope, was really not much more than a way for states and lawyers and the Gov. to get extra money to balance their budgets.

Please understand that most people think that it has gone far enough and that there are probably more relevant things with which to concern yourself at the DOJ.

From: Steve Sielaff
To: Microsoft ATR
Date: 1/24/02 7:55am
Subject: Microsoft Settlement

I have worked in the technology field for years. I have seen Microsoft crush the choices out of the industry. They have such a strong share of the market that the prices have gone through the roof for operating systems and programs. Now Microsoft is intentionally losing millions to start taking over the home entertainment industry through the X-box which costs \$100 more to produce then they are selling it for. I have seen the majority of dangerous and costly viruses attacking the worlds computers because the Microsoft programs are not secure, until it hurts market share.

I have seen Microsoft try to squash any movement of the people that may move the country into a position of having choices. For example I have read articles on how they sent internal memos out to destroy java as a programming language.

I have also witnessed Microsoft's tactics of not conforming to standards if they are the owners of a product that is predominating in the market so they can further crush competition. For example internet explorer does not conform to all the html standards and Microsoft continually tried to institute new and Microsoft only coding standards for web sites. At the same time they have publicly criticized America Online for not creating and following strict standards making sure they can take over the instant message programs by including it in the operating system.

Microsoft is a giant that destroys competition. If they can do it with a good product, well that is free enterprise. But it is my personal feeling that they destroy competition through all means, legal and otherwise. I feel that the economy will suffer long term if Microsoft is not broken up. Also I think that flooding out schools with Microsoft computers only ensures that they will have much more future sells and is no good deal for the American people.

Subject: Microsoft Settlement

Public Comment:

To Whom It May Concern at the Justice Department:

As a citizen 70 years old arriving in cyberspace about 8 years after retiring, I suggest the settlement with Microsoft be as stringent upon them as much as the law will allow. If the evidence supports the charges as made, the maximum penalty should be issued and enforced. As a relatively new comer to the use of computers, I became aware of their absolute monopoly very early in simply trying to decide whether or not my first computer should be an Apple or a "IBM PC" type. I did a little research for the available software and found the variety, cost and quantity of programs available to me for purchase to be in a non scientifically estimated ratio of about 8 to one in favor of

Microsoft products. In my opinion this could not have happened if Microsoft had not intentionally cut corners in the applicable law concerning buying and selling by making illegal arrangement with certain software manufacturers. They cornered the market on software and once done with that, proceeded to tighten and enlarge the scope of their control by tying up manufacturerers to the extent that as a novice and new purchaser, any machine I bought came fully equipped with factory installed Microsoft programs which if given a choice (probably denied by agreements and conditions of sale between Microsoft and the leading hardware mfgs) I might have , could have , etc. decided on a competitive product . Case in point "Netscape Navigator" browser rather than "Internet Explorer". I bought and paid for Netscape Navigator because I was sore at being forced to except not only Internet Explorer for openers, but other MS programs throughout the then present time and following years-that list of pre loaded MS programs grew to include such programs as "works, Money, and later AOL connections, etc. all of which became "monster" widely used programs particularly by new users which were increasing at exponential rates every year. Further, these programs could not be deleted and they consumed most of the available hard drive space. As far as I was and am concerned, this literally was a fraud committed on the public by a company committed to commanding the market by any means possible. I say, if you have the facts which according to facts made public-they should fined or "punished" to the applicable limits of the law in the most practical way possible on behalf of the millions of consumers so thoroughly screwed by these people. The money fines should be turned over to the Treasury and EARMARKED (not spent for anything else such as Congressional pork barrel projects-and huge gifts made to, let me suggest the Salvation Army and the United Appeal and the Federal disaster relief fund /FEMA organization.

I hope someone actually reads these comments and seriously takes them into consideration.

Sincerely,
Edward G. Robinson

From: Warren Beck
To: Microsoft ATR
Date: 1/24/02 8:05am
Subject: Microsoft Settlement
Re: the Tunney Act

In my opinion, the proposed Microsoft settlement is not acceptable. Microsoft has and continues to act in a predatory manner that damages competition in nearly all areas of high-technology/computing. It continues to work towards a comprehensive stranglehold over all areas of software, including desktop productivity (word processing, spreadsheets, presentations, databases, email and scheduling) and operating systems. Small software companies that are truly innovative (for instance, Netscape in its initial form) are either squelched or acquired. Further, the software

that Microsoft sells in its currently monopoly-like state is bug-ridden and full of security problems that compromise the work of the consumer in a broad range of professions that depend on Microsoft's software (being that there is essentially only one supplier). Microsoft has no incentive due to competition to fix the bugs in its software, and it uses the promise of fixing bugs as an incentive to the consumer to purchase upgrades. In short, without valid and vigorous competition in all areas of software development/sales, Microsoft will eventually harm the economy through its malevolence and incompetence.

Accordingly, the proposed settlement must be rejected.

Thank you,
Warren Beck

I believe the US Government has expended large sums of money in a wasteful manner chasing Microsoft in what is obviously a competitor induced legal travesty—not even considering the new AOL suit (just jumping on the bandwagon). Everyone concerned should be interested in accepting the pending settlement, telling the other states AGs to "do something worthwhile and forget Microsoft" and allow the DoJ to concentrate on things that really matter, like anthrax, terrorist, airline and infrastructure safety. I really doubt that anything Microsoft might do could compare to the 9/11 attacks, so please put your emphasis where it will do some good for citizens, not Oracle, Sun Microsystems, and AOL.

Thank you.

Dear Department of Justice,

I realise as a UK resident, my opinions probably mean nothing to you, however, I would appreciate it if you would hear me out. How the "final solution" to Microsoft's monopoly position is played out will have a crucial effect on the future of computing. No matter what Microsoft may claim, they have never "innovated" anything—almost every single product of theirs can trace roots back to a former rival. Unless drastic action is

taken, Microsoft will be in a position to continue this behaviour—and in the future it will be with the DOJ's implied blessing. There are fewer competitors to Microsoft now than there were 15, 10 or even 5 years ago. If things carry on in this vein, it is conceivable (though I pray to God unlikely), that *every* vaguely computer-oriented device on the planet—every mobile (cellular) telephone, every PDA, every PC, every server, every games console, every cable decoder, every Internet-enabled fridge, even the computer built into your car—will rely on Microsoft software within 10 years.

Please consider this when you finally agree the nature of the solution.

As an ex-employee of Microsoft, I'm still staggered at how you have let the company off the hook.

The incredibly predatory and arrogant way that Microsoft goes about trying to kill off any competition surely has to be stopped. I was at the company when the "Kill Novell", "Kill NetScape", "Kill Oracle", ad infinitum, emails were flying around. No matter what your role was within the company, you were tasked to focus on how you could hurt the competition. Not a nice environment to be working within, especially as working in The Channel, I had a number of close friends working for those companies. Is it not to the benefit of the customer that there are at least 2 companies/vendors/manufacturers working in any given area? This breeds competition, and ensures that the product/s is/are constantly reviewed and improved upon. It also gives the customer choice. Is that not the fundamental basis of democracy?

It is sad to see, from this side of the pond, that you, the government of the leading capitalist country in the world, cannot take to task one of your own that has clearly operated in such an illegal manner for 25 years. I look forward to some good finally coming from these proceedings, that have frankly taken far too long already.

Please do not publish my name attached to these comments. I still have friends that work at Microsoft, and they would be mortified if they knew what myself and fellow ex-employees really thought of the company that they serve.

Dear Ms. Renata Hesse:
Please put a stop to the economically-draining witch-hunt against Microsoft. This has gone on long enough. Microsoft has already agreed to hide its Internet Explorer icon from the desktop; the fact is, this case against Microsoft is little more than "welfare" for Netscape and other Microsoft competitors, with not a nickel going to those supposedly harmed by Microsoft: the computer user.

This is just another method for states to get free money, and a terrible precedent for the future, not only in terms of computer technology, but all sorts of innovations in the most dynamic industry the world has ever seen.

Please put a stop to this travesty of justice now. Thank you.

Sincerely,

I am against the proposed Microsoft antitrust settlement. The settlement does little to address and correct Microsoft's anticompetitive monopolistic practices. The settlement should require Microsoft to make redress for damages done and should guarantee future software interoperability. Also, that product tying (e.g., Internet Explorer and Windows) does not continue in the future.

From: Ken Spencer
To: Microsoft ATR
Date: 1/24/02 8:05am
Subject: Microsoft Settlement

Dear Sirs,

I have been appalled at the way the government has handled the Microsoft case for 4 years now. The case was trumped up against Microsoft and played out with resources that I as a tax payer pay for when those resources could have been used to stop 9/11 or many other things.

I am a business person in the computer industry. I have ran a small company for over 10 years and worked with companies such as IBM, Oracle, Sun, Microsoft, and more. Who has the most underhanded tactics that are hurting the competition? In my book, its Sun and Oracle. I refuse to work with them because of the low down tactics and business practices.

On another note, if it were not for Microsoft, we would be paying many times more for operating systems and software today. In fact, there would not be PCs in most peoples homes because they could not afford the software. Don't take my word for it, just do the research on software prices from the days before Microsoft entered the field and became successful with Windows and Office.

It saddens me in this time and economy to see resources wasted on this case. Especially when the people pushing it are doing it for monetary gains for their companies (Oracle / Sun) or for political gain for themselves (Sen Hatch).

Settle this case and lets get back to business before you destroy the economy.

Subject: Microsoft Settlement
Hello,

I am writing to voice my opposition to the Proposed Final Judgment for the Microsoft antitrust case. I feel that the PFJ does little to encourage competition, in some parts, even further hurts competition, lacks any true enforcement mechanisms, and does not in any way punish Microsoft for its already established anti-competitive practices. If true competition in the computer industry is to ever return, a new punishment and enforcement plan must be determined.

Sincerely,
Pete Toscano

MTC-00020655

From: Tim Utschig
To: Microsoft ATR
Date: 1/24/02 8:10am
Subject: Microsoft Settlement

Hello, my name is Tim Utschig. I am a student studying Computer Information Systems from Campbell, California. I would like to submit to you my comments on the revised proposed Final Judgment in the antitrust case against Microsoft Corporation.

It is my opinion that section III.J can be used by Microsoft to be exempt from III.D and III.E. Microsoft would claim security concerns in any circumstance and avoid releasing documentation necessary to develop an interoperable product. Also III.D and III.E do not go far enough to open up documentation for Microsoft's secret APIs and Protocols. Without documentation of all APIs and all protocols, Microsoft's illegal monopoly will remain entrenched, continue to gain power and eliminate all possible competition.

Without free, open, public standards for communication protocols Microsoft will continue to put their secret protocols in place of those that are public until there are only two choices; Use Microsoft software, or cease to communicate.

Microsoft did exactly that with their MSN internet service, and with 500,000 subscribers of the ISP Qwest last November. The Qwest subscribers were given two options. Start using Microsoft Outlook for E-Mail, or find a new ISP. This is due to the introduction of Microsoft's secret "Secure Password Authentication" into MSN's and Qwest's E-Mail servers. Use of which is mandatory if you want to read your E-Mail. Only Microsoft E-Mail clients know how to use this secret authentication mechanism. The Final Judgment should be revised to ensure that this, and any future such mechanism will have free, public documentation.

It should be made clear that security does not come from keeping the algorithm a secret. Security comes from a secure design, and making that design public does not compromise its security. Security through obscurity is not security at all. Making the design free and public encourages competition, and that is why Microsoft avoids it.

I hope, for the sake of the economy, that some good comes out of this antitrust case. Many competing companies employ significantly more people than a single company with a monopoly.

Sincerely,
Tim Utschig

To whom it may concern:

I am writing to tell you that I, as a taxpayer in good standing in this wonderful country, am tired of the government and most especially the supposedly Justice Department, going after Microsoft and Bill Gates.

If it weren't for men like Mr. Gates, we wouldn't have the user friendly format known as Windows and the amount of revenue he has generated for this country. Yes, he made money for himself, but I thought that was the American way. He also gives away more money than just about anyone in this country also.

This entire lawsuit is about sour grapes and I wish you people would find better things to do than chase after a legitimate entrepreneur. If Mac can't make it against Microsoft, oh well! That's the breaks of doing business.

Please find another horse to flog....this one is deader than the proverbial doornail.

Dear Ms. Renata Hesse:

Please put a stop to the economically-draining witch-hunt against Microsoft. This has gone on long enough.

Microsoft has already agreed to hide its Internet Explorer icon from the desktop; the fact is, this case against Microsoft is little more than "welfare" for Netscape and other Microsoft competitors, with not a nickel going to those supposedly harmed by Microsoft: the computer user.

This is just another method for states to get free money, and a terrible precedent for the future, not only in terms of computer technology, but all sorts of innovations in the most dynamic industry the world has ever seen.

Please put a stop to this travesty of justice now. Thank you.

Sincerely,
Gregory Salamon

MTC-00020663-0001

Ladies and Gentlemen of the US Department of Justice, This is a long one, but please stick it out to the end. As an IT professional I come into contact with both Microsoft and other vendors' software every day.

I have both a Windows 2000 and a Red Hat Linux desktop computer on my desk. I use third-party software for both.

In the past year, I have kept an eye out for security alerts for both sets of software, and, obviously, spotted trends relating to both. I have seen the various issues relating to the trial in the news on a variety of sources, from cnn.com to slashdot.org, encountered pretty much the entire spectrum of feelings about the case, from pro-MS to alt.bin.billgates.die.die.die—there's a lot of strong opinions out there.

In my job I have to liaise with several companies who produce hardware and software. Some work with MS, some against them, most, both with them and against them.

Never, in any dealings with any vendor, have I encountered one so awkward, monomaniacal, unhelpful, unrepentant and secretive as Microsoft. They produce, in my experienced, half-baked products, rich in features stolen from other places, and generally tie their software into their operating systems to create a mesh of lock-in. They have leveraged their overwhelming desktop monopoly to subvert web standards, forcing intermediate devices to conform lest their owners receive a wealth of complaints about broken service. Let me give you an example. Many users complained that, using our dial-in service, a particular website was broken. This spread until a whole range of websites seemed to be broken—if, and only if, a user dialled in through our service. Some investigation turned up that all of these websites ran new versions of IIS. A little investigation, into only a small set of the users, revealed that all of the users who answered were using IE 5, new at the time.

Our dial-in service uses proxy servers, and the ones quoted as ‘working’ didn’t. So clearly it was our proxy servers and we approached the proxy vendor about this. Investigation by them yielded the following result. IIS served, in some circumstances, broken (ie, against the HTTP standard) responses to some requests that involved an object having been moved. IE5 expected this broken behaviour. The proxy server, in the middle, noticed this broken behaviour and corrected it. IE5 then didn’t understand the answer. So users complained to us that ‘our’ service (standards compliant) was broken. The users don’t know the difference and, due to 00020663—0002 extensive marketing from Microsoft, are disinclined to believe that IE is at fault, and certainly would never believe that Microsoft conspired—or just happened to—break IIS standards compliance and then stick with that broken behaviour in IE.

The resolution was an ugly hack in the proxy—if IE was talking to IIS, allow standards to be broken—which, while on the surface seemingly harmless is perhaps a distinct case of the ‘rot’ setting in Now, Netscape users going to these sites would have, at the time, found the site broken. They would complain to the site admin, or, more likely, their ISP. But using our dialup service, they would find the site worked, because the proxy gave Netscape behaviour it expected. But Microsoft could simply point out that most normal sites worked in both browsers, and some sites didn’t work in Netscape, therefore use IE.

This is the sort of insidious tactic that is a constant in MS products. Never before have we seen this sort of power, wielded in this sort of way. Other companies have held monopolies for sure, and held customers and governments to ransom. But the computer market is a more dangerous battleground because such a great deal of normal everyday functions are coming to depend on them. And while this battle is painful enough for those opposing the giant now, in 5 or 10 years it will be *much, much* worse.

So those who have had demonstrated to them the duplicitious, greedy and disagreeable nature of MS in the trials to date—I note that the first finding of fact stated both a monopoly and the use of the monopoly to exclude Netscape’s product, and the fact that MS were caught lying in court (their demonstrations were later shown to be rigged, as I recall) - should now take what is probably the last opportunity that will arise to prevent MS becoming even more arrogant and even more domineering. While I would not begrudge a company the right to either success or to protect its interests, when you are dealing with the new mode of communication for people around the world, this is not territory to divvy up. When there’s other ways, when there’s alternatives, *that’s* something worth fighting over. But when the position has been reached that most users are unable to avoid Microsoft, that they have entangled themselves in the industry to such a degree that, like an alien parasite they cannot be removed with killing the patient, a company like that must start to demonstrate a sense of responsibility.

It is as though MS had almost made themselves ‘the government of the desktop computer’. They can control what you can put on it, unless you ‘emigrate’—hard work and likely to cut you off from your friends, with whom you can no longer share documents. With the upcoming Windows XP they can coerce you to their will through their updates system—simply by 00020663—0003 bundling a necessary security update with some other change *they* wish to make and you don’t.

Yet they do not accept this responsibility. Imagine if the US military gave up its responsibilities and started acting like Microsoft. They would go round to people’s homes, wave guns and them, and suggest that the people might want to make a ‘contribution’ in order for them to take risks to guard that citizen’s home. Else a stray round might go that way, know what I mean, gov’nor? They would decide it wasn’t profitable to protect Florida, all that way, stuck out on a limb, needs lots of men to guard basically beaches and swamps... barely worth it. And the people of Florida? Small minority, not worth the business.

It has been said that politics is about pettiness but leadership is about greatness. Sadly, you must not only endure but *win* the pettiness in order to gain leadership—where you somehow have to put aside years of pettiness and wheel out the greatness you have been storing up. But likewise, capitalism encourages bitter fighting amongst companies, lowering prices, bundled packages, promises of security and interoperability in the case of computers. However, it runs on the premise that there will not be one monopoly and a bunch of little players, springing up only to be roundly killed off by the giant. There is no significant competition—therefore no market forces.

So, Microsoft has exited the period of pettiness and competition and now entered the realm of leadership, but not shown any signs of having thrown away that pettiness in favour of greatness.

That is why the DoJ has to step in. If they will not act like leaders, then the only power

that stands above them must *make* them behave responsibly. And if that is not permitted, then only one option remains. The monster exists, and exerts its influence. By lobbying, contributing, all the things that help make politicians decide they aren’t an issue, MS sees to it that it cannot be killed. So it must be tamed, and other companies must be given the chance to re-introduce the market forces that keep everything in balance.

MS does not have the great products they claim. Their products are at best mediocre. The number of security alerts alone denies greatness. But they did have smart marketing, and introduced lock-in early on, and did subvert standards to their own ways, and did hide the open interoperability information from other companies, and did specifically block out competitors’ products. Ask IBM about that. So, break them up. Their OS division, without the ability to interoperate so secretly with their software division, would find it more profitable to open up their API’s so that other third-party software worked better. 00020663.0004

Many people buy an OS because it runs a particular application—it now benefits MS—OS to work with all applications. Similarly MS—SW, it’s profits are maximised by working better with all operating systems, not just Windows.

Break the giant—into pieces which each have competitors which can influence them. Break them into a number of pieces, perhaps OS, browser, Office, Hardware, Other.

Don’t accept this ridiculous solution they offer—let’s see, in penance for monopolistic behaviour we’re going to give Windows to one of the few segments of society that cannot afford (yet) to buy it—poor kids. How stupid do they think we, and you, are? Fining them is no good—fining companies is rarely any good. No-one has the guts to levy a 10 or 20 billion dollar fine, enough to force a break-up and major changes. While this case is nominally about browsers, what exists is the one chance the government will get to stop what has happened. History will look back at this and wonder how it came to pass that most people were held in sway by one company, forced to accept the sub-standard products that result from the company still frantically working to deadlines, putting nice, GUI widgets before basic operation, making sure they shut out every possible competitor.

Microsoft has said that it takes security most seriously now. And of course, this isn’t just another marketing ploy. Honest. No really. So, naturally they will put their core code up for peer review, as pretty much everyone who is serious about security does... I don’t think it’s worth us holding our breath until that moment. Well, let them fix the problems with their products. After all—that means better products. But if they are broken up, their products will have to compete on a level playing field (for the first time for many of their products) and then we’ll see how much work they have to put in on security, stability, etc.

You know what you have to do. All that remains is for you to summon up the courage to do it, in the face of what will be bitter and underhanded resistance from Microsoft. This isn’t about the law. The law is just the means.

This is about creating a suitable environment for the computing industry to advance. Everyone, including Microsoft in whatever form(s) they take, will benefit from that. 00020663—0005

No-one benefits from the continued existence of a monopoly whose self-preservation is best served by lock-in, secrecy about problems, and success marketing. The DoD runs military operations on computers. The Treasury calculates the budget on computers. The State Department maintains records on Americans on computers—social security, etc. The DoJ maintains criminal records on computers.

How will it be in 10 years time, when MS is more or less free to do anything, and still does not have the greatness to do the hard work to make good, value-for-money products that are secure. How will it be when serious compromises of every government department are weekly news—because no secure OS's are easily interoperable. Will we use firewalls? How about Cisco firewalls, which are secure 'because only 12 people have seen the source code'. Cisco is another large company, with growing market share, but that's not the problem today. Their day will come, in both senses.

No, this case provides opportunity to do what would otherwise be impossible—MS would make enough legal noise that no-one could break them up without having caught them at something major, and I doubt they'll be stupid enough to get caught like this again. They've learned—learned to hide things better.

Now is the time. You know what to do.

I am writing to voice my concern over the proposed Microsoft settlement. There are so many things wrong with it that I won't be able to list them all here. The worst part is that it does absolutely nothing to stem the growing abusive monopoly that is Microsoft. Computing has become one of the most important aspects of our Nation. It affects everything we see and do. Lack of competition, and having a single product forced down our throats, flies in the face of what America stands for. Was not America founded so that people can live their life free from the monopolistic powers of the church and monarchy? Where will we turn when we are all forced to worship at Microsoft's feet. And will our government be nothing more than Bill Gates' lackeys? Please hear our voice and make Microsoft responsible for their power.

Thank you,
Bobby Hays

Subject: Microsoft Settlement

Good morning,

My feeling about any settlement or judgement against Microsoft in the anti-trust case is a simple one. They have been found guilty of abusing their monopoly to drive other companies out of business. They have appealed and the appeals court found that they were indeed guilty of abusing their monopoly to drive companies out of business.

Microsoft needs to face a penalty which will put a stop to this behavior. It would be nice if somehow all of the small businesses which have been driven out of business as a result of their tactics could be brought back and their employees and owners compensated. However that is probably impossible. Instead Microsoft needs to face a penalty which will keep them from doing this in the future. Anything which doesn't result in them behaving in an ethical manner is a waste of every penny spent prosecuting them over the last few years.

I don't have any suggestions as to what an appropriate penalty should be. However if talking about the penalty does not result in Microsoft turning on it's propaganda machine, sending large quantities of fake "grass-roots" letters such as this one, buying advertising, etc.... in opposition against the penalty then it isn't harsh enough.

Subject: Microsoft Settlement

Dear D.O.J.:

Concerning the Microsoft Settlement I firmly believe Microsoft should be lauded with praise for a company that has brought vast innovation to the marketplace and consumers. Through Microsoft's efforts we now have more affordable options in computing that we did not have before Microsoft. These efforts have made the consumer and businesses more productive and increased our standard of living.

Microsoft has excelled at what they do and should not be punished for it by government antitrust laws. The good should not be punished for being good. Microsoft plays tough and that is that and there is nothing inherently wrong with that fact regardless of what envious competitors want.

Sincerely,
David Withington

Dear Ms. Renata Hesse:

Please put a stop to the economically-draining witch-hunt against Microsoft. This has gone on long enough.

Microsoft has already agreed to hide its Internet Explorer icon from the desktop; the fact is, this case against Microsoft is little more than "welfare" for Netscape and other Microsoft competitors, with not a nickel

going to those supposedly harmed by Microsoft: the computer user.

This is just another method for states to get free money, and a terrible precedent for the future, not only in terms of computer technology, but all sorts of innovations in the most dynamic industry the world has ever seen.

Please put a stop to this travesty of justice now. Thank you.

Department of Justice United States of America

Hello,

Please stop your actions against Microsoft. Today in America, even the dead can sue. The fact that AOL can sue Microsoft on behalf of Netscape long after AOL bought Netscape, promotes open season suing in the courts by anybody, against anybody for any reason.

A prudent court, and governing body, should end this legal licentiousness instead of promoting it. As for some moral stand presumed necessary against Microsoft's dominance of operating systems, the concept of "restoring competition in the marketplace," is dead wrong in principle, and an excuse for also rans to avenge themselves against winners.

A prudent court should not promote the use of government force, fines, threats of imprisonment, or enforced dismemberment of companies based on an arguable and contradictory set of rules. This is America, Land of the Free, Home of the Brave.

To pursue a remedy against Microsoft promotes the ascension of naked, brute power over argument, force over reason, barbarity over rule of law. Unclear, arguable law is by nature an oxymoron. Law is principle. Principles are simply stated and immediately grasped by reasonable men. Sherman Antitrust does not qualify.

Microsoft, headed by Bill Gates, helped to spark the boom of the last quarter century in this country. What thanks we give to his achievements by destroying the very tool that created wealth for our and future generations.

Put a stop to this US sanctioned encouragement of legalized destruction, please.

Sincerely,
Bob Tancredi

Hi,

I'm from Switzerland, but you my be interested in our comments...

- 1st, we do not like Micro\$oft and their policy, those gays have NEVER invented anything, they just rub other company and pay in the court, but still make 90% of profit.

- 2nd, when they say that they invented something, it's because they bot the company who invented, if I have money, I can do the same

- 3rd, we think here in Europe, if MS get a monopole, which they have, this will be a very bad thing for any computer business, and in the futur for any business

- 4st, we don't know any MS products without bugs, security, etc... So if MS still keep those monopole, nothing in the

computer world can be protected against Hacker

- 5th, MS have never done anything for the Internet, just made it very difficult for the developer around the world, they want to impose the way to do, you can see many complain about this

- 6th, we think that all this is only a question of money, almost of the US Government is corrupt, if MS is here to day it's because they pay for it, only this, so if you want to give to anyone the same chance, STOP Micro\$oft and their monopole, then we can think that the write Justice have been made

- 7th, you can see the last month that MS laugh about you and the justice, they made a new Game Machine (XBox), bot more that 10 company, try to get larger monopole by buying SGI licence (Microsoft Trying to Kill OpenGL, Microsoft has acquired key 3D patents from SGI), etc... etc...

- 8th, there is not one day without you can read that MS is going to court for seeking damages... "an attempt to get justice." from those company, you should think about this... (only bad people go's to court every day), so what you waiting for ???

- 9th, if you do not stop MS today, the future of the world will be very bad, MS will have more power as any government in this world

- 10th, etc... etc... we can talk about this day's

- 11th, please fix Micro\$oft

Best regards

David

Subject: Microsoft Settlement

Dear Department of Justice,

I am writing to you to express my total disapproval at the way that this case is being handled by your department.

I am a Manager of Information Technology, for a small firm and was wrongfully believing that now that my government has stepped into this fray, my rights as a consumer and an American would be protected. Apparently we must change our name to United States of Microsoft. I cannot understand how your organization can go on insisting that the Microsoft organization is broken up to a settlement that reminds me of swiss cheese.

Everything I have read so far, shows me how this administration has basically told your department to go easy on Microsoft. How can I come to this conclusion? Pretty simple, prior to our new President taking office, your office was seeking the breakup of the company and would not settle for anything so "slap on the wrist" as what your seeking now. Making Microsoft a legal monopoly would only enhance their ability to squash competition. Have you forgotten that they have been reprimanded before and like a small child they returned to their previous practices within months. Your job is to protect us, the American citizen. I understand that you also must consider the right of the corporation, but this should never be at the expense of the consumer.

If your looking for examples of how Microsoft believes the technology world should function, just look at their recent activities with regards to Linux. First they begin by releasing to the public outright lies and scaring programmers into believing that using Linux or free software will allow everyone to use their software free of charge. When that didn't give them the results they were looking for, they then made it illegal for a programmer to use any Microsoft product to create free software. Now they are attempting in making it illegal for a programmer to release software free of charge (see the recent changes to UCITA). Microsoft has not been known to advance technology but actually to hold technology back. If their is a product that is better than what they currently offer, their general response is either to purchase the company or give away their version until the competitor goes belly up.

I do not feel that the remedies proposed in your settlement go far enough to protect the

American consumer. You should return to the pre-Bush proposals, break the company up into different entities so that the people of America are given the choice to decide whether they want Microsoft or not. I fear that if we continue in this direction, we will end up not only isolated from the rest of the World, but a country that technologically speaking belongs to a corporation.

Sincerely
Carlos S. Del Castillo

MTC-00020700

From: Arona Ann Pearlstein
To: Microsoft ATR
Date: 1/24/02 8:21am
Subject: Microsoft Settlement

Hello.

My name is Arona Ann Pearlstein and I am a computer programmer.

This e-mail regards the Proposed Final Judgment in the Microsoft Anti-Trust lawsuit. As per the Tunney Act comment process, I am providing comments about this settlement.

The proposed settlement is, simply put, a bad idea. In reviewing the proposed settlement, two issues stand out the most:

1) According to the settlement, Microsoft cannot retaliate against vendors (OEMs, ISVs and IHVs) who support or develop alternatives to Windows. But, the settlement does not provide any assistance to these vendors. Providing assistance to these vendors would encourage healthy competition in the Intel-compatible operating system market.

Even worse, the vendors are restricted to writing software whose sole purpose is to interoperate with the Windows operating system. They are thus effectively prevented from writing operating systems that can interoperate with Windows programs.

2) The proposed final judgment does not provide any means for enforcement. While there are suggestions for a technical committee and such, no enforcement plan of action has been developed.

The proposed final judgment must have some legitimate plan for enforcement; it is not enough to leave the job up the legal system. If no enforcement plan is provided, the judgment's affect upon Microsoft will be negligible at best, a proverbial slap on the wrist.

Although I currently live overseas in Geneva, Switzerland, this issue is extremely important to all American citizens, as well as to anybody (regardless of his or her nationality) involved in the computer industry. Switzerland's neighbors in the European Economic Union (EEU) are currently discussing similar legal action against Microsoft. They are no doubt examining the proposed final judgment carefully.

Thank you for your time.
Sincerely,
Arona Ann Pearlstein

From: Ryan Layton
To: Microsoft ATR
Date: 1/24/02 8:19am
Subject: Microsoft Settlement

Dear Sirs,

The proposed Microsoft settlement is much way too lenient for a case of this magnitude. Microsoft was found guilty and the punishment must fit the crime. You need to go ahead with the original proposal to break Microsoft up so that it will no longer be able to leverage its monopoly for pure greed and profit.

Microsoft is still brazenly indulging in these anticompetitive practices even though it has been embarrassed and exposed—capitalism can only go so far. Make the computer field a more level playing field for others in the market. Windows isn't the best operating system out there, yet it is the most popular. Microsoft reached this market dominance through unethical and unfair business practices. This must stop.

As a citizen of the United States of America, I request you to do all you can to ensure Microsoft is punished in a manner that will make them think twice about indulging in monopolistic and greed-motivated practices in the future. Force them to sell a version of Windows without a web browser, split up the company, and so forth. Don't let them walk away from this, or they will just get WORSE.

Thank you,
Ryan Layton

From: Dave Solon
To: Microsoft ATR
Date: 1/24/02 8:20am
Subject: Public Comment on MS Settlement

Let my comments state that I think the current settlement in the Microsoft case is an absolute farce. The current settlement simply helps Microsoft get more of a footing into another market that they want to "rule": education. Proposing that MS give equipment and software to schools is like rolling out a red carpet and letting them walk right in with absolutely no competition. This settlement only perpetuates their abhorrent behavior of squashing the "little guy" with unlawful business practices. If this settlement goes

through, it only shows that our government is more concerned with the welfare of big business and that they don't really care about the consumer.

If MS really wants to help education, let MS give them the cash and let educators decide what type of computer and operating system they want to purchase to help their schools and students. Don't limit their creativity by imposing even more MS products on them.

Thank you for the opportunity to comment.

601 D Street NW, Suite 1200
Washington, DC 20530-0001

Dear Ms. Renata Hesse:

Please put a stop to the economically-draining witch-hunt against Microsoft. This has gone on long enough.

Microsoft has already agreed to hide its Internet Explorer icon from the desktop; the fact is, this case against Microsoft is little more than "welfare" for Netscape and other Microsoft competitors, with not a nickel going to those supposedly harmed by Microsoft: the computer user.

This is just another method for states to get free money, and a terrible precedent for the future, not only in terms of computer technology, but all sorts of innovations in the

most dynamic industry the world has ever seen.

Please put a stop to this travesty of justice now. Thank you.

Sincerely,
Maurice Knudsen

Date: 1/23/02 10:12pm
Subject: Microsoft Settlement

I am writing you to encourage that you re-evaluate the proposed Microsoft settlement terms.

I am not really anti-Microsoft. I work with their products every day and feel that many of their products offer a good value, are smartly designed, and frequently do more than I ask of them. It would be easy for me to say that if it weren't for Microsoft, my job would be much harder.

An operating system to a computer is like paper is to a book. Without paper, it would be difficult to publish a book. The paper really has little to do with the content of the book or, what the book is used for but it is a necessary and integral part of the book. Paper manufacturers are free to make paper however they wish. Some use cotton, others use rags, most use wood. But they all need to make the paper so that it can be handled by the machines that make the book and they need to concern themselves with how the paper works with the ink, the presses, and the shears that cut the paper.

Their recipe for how they make the paper may be a secret but, they meet the specifications demanded by the industry that uses their product and they publish the specifications of their paper. This is where my analogy fails and where Microsoft has failed the industry. Their failure has stifeled creativity and given them unfair advantages over other companies. They have played the game but held the choicest cards back for themselves. This has helped them gain market share against competitive products (Like Netscape Navigator, Lotus SmartSuite and countless others). Their dominance in the market has allowed them to bully not only their competitors but their business partners as well. A computer manufacturer would have a hard time selling a computer without being able to offer Microsoft Windows and everyone knows it. Microsoft's reach is long, they supply the tools to developers and administrators as well.

Recently, Microsoft filed suit against a small start up company that is using the name "Lindow's." For some reason, Microsoft feels that name is too close to their trademark "Windows." Their claim is that the term is confusingly similar. I am not a lawyer, I may be wrong, but I see a clear difference and can not see how someone would confuse the two names. What I see is a company that has clearly not learned it's lesson. They are still playing the bully and will use their considerable clout and fortune to hurt a company that they see as a threat in a manner that I find morally and ethically repugnant. How can we not expect them to interpret the settlement in a similar fashion? I already

expect that they will find loophole after loophole and will exploit each and every one of them. I do not expect that they will fully publish every hook that their other applications use to the operating system nor do I expect that they will provide the necessary support documentation available that would make this information beneficial to developers (and in some cases, the public). They will continue to build their monopoly and abuse the public's trust.

Microsoft has all but destroyed one of the most innovative companies to come along in a long time. They did this by giving away their browser which was the product Netscape made popular. This shows the depth that they will sink to to destroy anyone who tries to garner a piece of their market. Any settlement that the DOJ reaches with Microsoft must without a doubt require proof from Microsoft that they are in total compliance with the agreement and that they will permit external auditors to verify this. Any agreement with Microsoft must contain provisions that will severely restrict their business practices should they be found in non-compliance. Any agreement with Microsoft should require Microsoft to internally separate its operating systems development from other development teams. This is the only way that Microsoft can truly prove that they will comply with the agreement.

From: Erika Chang
To: Microsoft ATR
Date: 1/24/02 8:32am
Subject: Microsoft Settlement

Dear Sir or Madam,
Re: the settlement between the US Department of Justice and Microsoft
I believe the settlement is woefully inadequate and will continue to allow Microsoft to penalize consumers like me who are dissatisfied with Microsoft products, but are forced by the Microsoft monopoly to use them nonetheless.

The Microsoft monopoly also encourages most businesses to discriminate against me if I choose not to use Microsoft products. For example, many web sites will not be accessible if I am not using Microsoft Windows operating system and Microsoft Internet Explorer web browser.

Additionally, I'm forced to purchase Microsoft products against my will, as in when I purchase a new computer I am not allowed to purchase one that comes with alternative operating systems or even without any operating system at all (so I can install my own choice of operating system).

While Microsoft may argue that the close integration of its various technologies and its insistence on being pre-installed on new computers benefits the consumers in "ease of use", fact is I have no say in what is considered easy to use and I lose control of my computer to Microsoft.

I cannot easily chose a competitive products that suit me better to use instead of Microsoft's products, because Microsoft's tight integration of its products prevents me from removing some of Microsoft's products without damaging the Microsoft operating system. I also have to pay for product that I don't want to use and I am not free to choose competitive products.

I believe Microsoft is extremely anti-competitive and deserving of severe restriction on its operations. It should not be allowed to continue with tight integration of its products without opening the source up to competitors so that they too could implement better integration with the dominant Microsoft operating system. No Microsoft products should be allowed unfair advantages over their competitors by virtue of being part of the company that owns the dominant operating system.

If the Department of Justice fails to curtail Microsoft's anti-competitive, anti-consumer practice, then it has failed the capitalist system and our democracy. Please do not let Microsoft get away with its anti-competitive and anti-consumer practices.

Thank you for your attention to this matter.
Sincerely,
Erika W.L. Chang

Subject: Microsoft Settlement

I am not sure if the Tunney Act applies to non-US citizens so if it does I apologise for wasting your time. This issue concerns me because Microsoft holds a global monopoly which is just as bad here in Australia as other parts of world. No monopoly could be worse than Microsoft.

Using APIs, File Formats and Networking Protocols Microsoft is effectively locking any potential competitors out of the Market. The only real solution that I can see to stop this is to break the company up into different parts. If I had my way then they would be broken up into three parts. Operating Systems, Applications and Internet Services (MSN, Hotmail etc).

Consumers need a choice in which operating system and applications they can

use. They shouldn't be locked into using particular software because it's the only way they can communicate with others. My main concern with the proposed Settlement is that it explicitly denies access to individuals, not-for-profit organisations and government organisations for API, Documentation and Communications Protocols. This information should be available to the public at no charge. Preferably on the web.

The following examples have been quoted from: <http://www.pbs.org/cringely/pulpit/pulpit20011206.html> 'Section III(j)(2) contains some very strong language against not-for-profits. Specifically, the language says that it need not describe nor license API, Documentation, or Communications Protocols affecting authentication and authorization to companies that don't meet Microsoft's criteria as a business: ". . . (c) meets reasonable, objective standards established by Microsoft for certifying the authenticity and viability of its business, . . ." "Section III(D) takes this disturbing trend even further. It deals with disclosure of information regarding the APIs for incorporating non-Microsoft "middleware." In this section, Microsoft discloses to Independent Software Vendors (ISVs), Independent Hardware Vendors (IHVs), Internet Access Providers (IAPs), Internet Content Providers (ICPs), and Original Equipment Manufacturers (OEMs) the information needed to inter-operate with Windows at this level. Yet, when we look in the footnotes at the legal definitions for these outfits, we find the definitions specify commercial concerns only.'

This conditions mentioned would limit the ability of open source projects such as WINE and Samba to take off. Open source is the best way to give users choice.

Thank you for your time,

To Whom It May Concern,

I would like to express my opinion regarding the antitrust suit against Microsoft Corp. I fully support Microsoft. There plenty of option for consumers to choose from and the choice they usually make is Microsoft. They do this because Microsoft makes the best products. They have created countless jobs and opportunity for millions of people and I shudder to think what might have been if the government had clipped the wings of Microsoft in it's early stages. Please leave Microsoft alone and let them continue to be a leader in their industry.

Thank you.

Sir

The proposed settlement with Microsoft will perpetuate a vicious monopoly that has already cost IT consumers billions of dollars in lost productivity from poorly coded software and severely restricted their choices of tools in the workplace.

Microsoft's behavior in court, its willingness to evade, deceive, bully and cajole is identical to its behavior in the marketplace. The settlement currently proposed by the Department of Justice will send a message to Microsoft and its peers that this kind of behavior is not only acceptable, but profitable. If this settlement goes through, the damage done will be incalculable. I strongly urge you to send a vibrant message to the entire computer industry by holding Microsoft strictly accountable for its illegal, anticompetitive actions: scrap this settlement and pursue the course that the dissenting states have adopted. Anything less is woefully inadequate.

Dear Ms. Renata Hesse:

I couldn't agree with you more about the Microsoft situation. This outfit, with slick Willy Gates at the head, has done more to stifle competition and try to take over the world of PC software. They have bribed and threatened computer manufacturers with varying degrees of non-support should someone want to purchase a system without the Microsoft OS. All you need to do is go to a computer store or a manufacturer and try to buy a home system with OS/2 or Linux or Unix or whatever operating system you want. You just can't get it and it isn't because Microsoft has the best OS. It's because all the manufacturers and resellers have a deal with Microsoft. . . . not because they want to but because they have to or they won't get the MS OS at the same cost as the other dealers. Keep up the good work

Washington, DC 20530-0001

Dear Ms. Renata Hesse:

Please put a stop to the economically-draining witch-hunt against Microsoft. This has gone on long enough. Microsoft has already agreed to hide its Internet Explorer icon from the desktop; the fact is, this case against Microsoft is little more than "welfare" for Netscape and other Microsoft competitors, with not a nickel going to those supposedly harmed by Microsoft: the computer user.

This is just another method for states to get free money, and a terrible precedent for the future, not only in terms of computer technology, but all sorts of innovations in the most dynamic industry the world has ever seen.

Please put a stop to this travesty of justice now. Thank you.

Sincerely,

Robert Lokar

Subject: Microsoft Settlement

To whom it may concern,

I must express my doubts about the proposed settlement between Microsoft and the US Department of Justice. Microsoft has for years used a policy of copy and destroy, taking other companies ideas and then propagating their own inferior knockoff through the use of the wide deployment of their operating system. Initially, they are compliant with existing standards, but eventually (and always) come out with their own proprietary "improvement" which then kills competition. In the settlement, they are allowed to decide who they share such proprietary "improvements" with and this is insatisfactory.

The settlement leaves too much power in the hands of Microsoft, and they have shown themselves to be merciless in the welding of such power. To allow an unapologetic monopoly to continue in its actions, largely unchecked, is harmful to the consumers. Because Microsoft does not truly have to compete, they are relaxed in things which should be a priority, the strongest example of which is security. Microsofts security attitude has resulted in billions of dollars of damages because of exploitable holes in products such as internet explorer and outlook express. In part it is the homogeneity of the system which makes such holes especially dangerous. And it is their power as a monopoly which prevents the diversification necessary for growth. They are the potato crop of Ireland and we are now headed for the plague. How many will starve? Only measures allowing true competition and therefore diversification can allow prosperity. It is the government's job to serve the people, and allowing microsoft to continue unchecked, or barely checked as this settlement would do, is an inadequate service.

Subject: Microsoft Settlement

I just want to buy an operating system. According to <http://whatis.techtarget.com/definition/0,289893,sid9-gci212714,00.html>, "An operating system (sometimes abbreviated as "OS") is the program that, after being initially loaded into the computer by a boot program, manages all the other programs in a computer. The other programs are called applications or application programs. The application programs make use of the operating system by making requests for services through a defined application program interface (API). In addition, users can interact directly with the operating system through a user interface such as a command language or a graphical user interface (GUI).

An operating system performs these services for applications:

a.. In a multitasking operating system where multiple programs can be running at the same time, the operating system determines which applications should run in what order and how much time should be allowed for each application before giving another application a turn.

b.. It manages the sharing of internal memory among multiple applications.

c.. It handles input and output to and from attached hardware devices, such as hard disks, printers, and dial-up ports.

d.. It sends messages to each application or interactive user (or to a system operator) about the status of operation and any errors that may have occurred.

e.. It can offload the management of what are called batch jobs (for example, printing) so that the initiating application is freed from this work.

f.. On computers that can provide parallel processing, an operating system can manage how to divide the program so that it runs on more than one processor at a time. "

I don't want any programs on the operating system. This includes Web Browser, Media Players, Mail Readers, Newsreaders, Picture Viewers, Firewalls, Games, etc.. Paint, Notepad, Wordpad and Calculator I can live with as long as they can be uninstalled. Microsoft's Problem is they also put applications on the Operating System and don't let you uninstall them. I don't mind that they are producing these applications but the fact that they are including them for free ALONG WITH the Operating System gives them an unfair advantage with respect to their competitors who also make programs. I don't want to feel like I'm contributing to putting these smaller companies out of business and that's how I feel when I buy Windows. I have used programs such as 98Lite and IEradicator (<http://www.98lite.net/>) and Revenge of Mozilla (see <http://www.webattack.com/get/ros2se.shtml>) all of which REMOVE Internet Explorer from Windows and they work great. Microsoft has put Windows File Protection into Windows

2000 SP2 and Windows XP so that these programs will not work. They don't want the browser uninstalled because they want to use the browser to make money (ie. ".NET"). In XP there are also some folders that you cannot delete from your own hard drive, such as Movie Maker, MSN Gaming Zone, Netmeeting, xerox and Microsoft Frontpage. It's MY hard drive and I should be able to delete anything I want!

Here's a summary of what changes should be made:

1. Release an "operating system" only. It should be free as part of the settlement to anyone who can prove they purchased any previous version of Windows.

2. In this operating system, Windows File Protection must be easily shut off for those who do not wish to use it.

3. This operating system must not include any of the programs such as Internet Explorer, Outlook Express, Image Viewer, etc., etc.

4. Microsoft can include these "extras" on the CD if they want, but they must be installable and useable INDIVIDUALLY and also uninstalleable INDIVIDUALLY.

5. All evidence to Microsoft's web influences must also be removed, such as Online Services, MSN, MSN Gaming Zone...anything where they use the operating system to link to the web to make money.

6. I would like the source code of this basic operating system to be released.

7. The basic operating system must be released for the Windows 98 kernel even though it may soon be "obsolete" and also for the most recent kernel (ie. XP) Any new Windows versions must also be released with the free "light" version (at the same time).

The "light" version must be a "full version" in that it needs not to be installed OVER TOP OF an existing version. For proof that one has owned a previous version of Windows, any Windows CD-ROM issued since Windows 95 can be inserted at the start of the installation and then the Windows Operating System can be installed on a freshly formatted drive.

8. Someone in authority must be able to suspend all sales of the full Windows versions if the "Basic Operating System" version is not compliant or deliberately issued in an unuseable condition or inferior to the full release.

9. The basic operating system version must be released promptly with the threat of suspending all full version sales if not released promptly. I think they should be able to easily do the 98 kernel release within 6 months, the XP kernel release within 6 months, and as I mentioned before any new version of Windows must have the "basic version" released at the same time.

Thank you for your consideration.

J. Harvey

Dear Sir/Madam:

Just thought I would throw my two cents in. I'm sure you've heard this several (thousand) times before, but Microsoft is a monopoly. If you don't believe it, just try to stop using their product in your home or office. It is virtually impossible and not because their products are so great, but because it is "what everyone else uses". So, hardware manufacturers only write drivers for Windows and software manufacturers only write code for the Windows OS.

This isn't necessarily Microsoft's fault, but the fact that they use their power in the market to try to force other people to use their products is their fault.

Getting PC Manufacturers to only ship their operating system, making their websites (msn.com in particular) unavailable to people who aren't using their Browser, forcing people to upgrade their Office suite for the mere sake of compatibility with the latest files....these are all reasons why Microsoft's business practices are less-than-ethical. As if their monopoly wasn't enough, they are now allowed to advertise in U.S. Postal Offices?

<http://www.macintouch.com/postoffice.html>

I think this is going in the wrong direction. I hope my comments have helped in some way. Thanks for the opportunity to share.

Sincerely,
Grant Shearer

Sir,

I am not a lawyer, but I am a computer professional. Microsoft has, since its release of Windows 95, consistently behaved in a predatory, and anti-competitive manner. The sort of slap on the wrist that the Department of Justice is proposing will do nothing to solve the problem, and doubtless will be interpreted by MS as a license to do worse in the future.

Only harsh measures will prevent MS from behaving in a monopolistic manner. Ultimately, I have grave doubts that anything short of a breakup will work. At the very least MS should be prohibited from acquiring any more of their competitors for an indefinite period. Simply demanding that they improve their behavior, with no penalties if they don't, and no checking to ensure that they do, will accomplish nothing.

Thank you for your time,
James Jackson

Subject: Microsoft Settlement

I understand that we are now in the public comment period of the Microsoft Settlement case. I would like to register my informed opinion that finishing this matter as negotiated is the best course for all of us. I work in the technology sector with a range of technologies from IBM, Sun and Microsoft. This matter has distracted a major part of our economy that when left to its own devices produces miracles of innovation. The time has come to move on. I have followed the case since the first and while I don't agree with every turn of events, I do strongly feel that the current proposal is appropriate so long as the matter ends.

As a background I would like to submit one further comment. I am of the opinion that much of this case has from the beginning been the device of strong lobby efforts by a few companies competitive with Microsoft. I served in our armed forces as an Infantry Platoon leader in the Gulf War not to defend the right of lobbyists and lawyers to punish those they can't beat in the market, but to ensure that our country remained free and economically strong. It pains me to see us waste so much time, opportunity and money on the pretenses that have been offered.

From: Mark Osbourne

To: Microsoft ATR
Date: 1/23/02 10:02pm
Subject: Microsoft Settlement
To Whom It May Concern:

I am opposed to the proposed settlement in the Microsoft antitrust trial. The current proposed settlement does not go far enough in punishing the illegal actions of the past, nor does it adequately prevent those actions from being committed in the future.

I am especially concerned by the way that OEMs and competitors is defined which seems to exclude non-profit, not-for-profit and charitable organizations from accessing the information about the application programming interfaces. Microsoft seems to have incorporated into the settlement the ability to block alternative operating systems (for example, Linux, FreeBSD, NetBSD) from providing compatible interfaces.

This settlement, while it reaches a conclusion of the proceedings, does little to penalize Microsoft for their actions, nor will it effectively prohibit them from similar monopolistic actions in the future. As another writer has said: "A wrong that is not corrected is compounded".

 From: vulcan@lightlink.com
 Subject: Microsoft Settlement

The proposed settlement of the Microsoft anti-trust suit is a give-away to Microsoft. It does way too little to stop Microsoft's continuing unfair practices. In particular:

- The settlement as currently written appears to lack an effective enforcement mechanism.
- It allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system.
- Microsoft's enterprise license agreements (used by large companies, state governments, and universities) charge by the number of computers which *could* run a Microsoft operating system—even for computers running Linux! (Similar licenses to OEMs were once banned by the 1994 consent decree.)
- It allows Microsoft to offer discounts on Windows (MDAs) to OEMs based on criteria like sales of Microsoft Office or Pocket PC systems. This allows Microsoft to leverage its monopoly on Intel-compatible operating systems to increase its market share in other areas.
- Microsoft currently uses restrictive licensing terms to keep Open Source applications from running on Windows. Many APIs are only available as add-on SDKs which conventional commercial developers are allowed to ship with their software (and most software includes some of these, it's the cause of the so-called "Windows DLL Hell"), but this is denied to Open Source developers.
- It does not require Microsoft to list which software patents protect the Windows APIs. This leaves Windows-compatible operating systems in an uncertain state: are they, or are they not infringing on Microsoft software patents?
- It fails to prohibit intentional incompatibilities historically used by Microsoft.
- Microsoft currently uses restrictive licensing terms to keep Windows applications from running on competing operating systems.

I urge you either reject the agreement or amend it in light of the above problems.

I wish to comment on the proposed Microsoft settlement. To let Microsoft in any way benefit from their misdeeds would undermine anti-trust legislation, and this is

exactly what would happen if it donated its own software and Windows-running computers to a market that it does not yet dominate. The only equitable method of settling this dispute would be for Microsoft to make any donations in cash (and without any say in how that cash is spent) so that the receiving parties are free to determine the best way to improve their technological situation.

Thank you.

Dear Ms. Renata Hesse:
 Please put a stop to the economically-draining witch-hunt against Microsoft. This has gone on long enough. Microsoft has already agreed to hide its Internet Explorer icon from the desktop; the fact is, this case against Microsoft is little more than "welfare" for Netscape and other Microsoft competitors, with not a nickel going to those supposedly harmed by Microsoft: the computer user.

This is just another method for states to get free money, and a terrible precedent for the future, not only in terms of computer technology, but all sorts of innovations in the most dynamic industry the world has ever seen.

Please put a stop to this travesty of justice now. Thank you.

Sincerely,
 Robert DuFrane

I wish to voice my opinion in this matter. It is *not fair* that a company with the practices that Microsoft has been proven to be engaged in can continue to go on as if no crime has been committed—or eve that a *little* crime has been committed. As a web developer, I see the effects of their 900 pound guerilla tactics everyday—making my job harder, unnecessarily.

Microsoft ought to be broken up into three divisions:

- Operating System (sans browser)
- Business Software (Office, Money, IIS)
- Entertainment software (Browser, Games, Media Player) Sent using the Entourage X Test Drive.

Subject: Microsoft Settlement

Hello,

I'd like to make a quick comment about the government settlement with Microsoft in the Antitrust Case. I think it's a shame that a company like Microsoft can continually illegally practice such deplorable business as they do. To abuse the power of a monopoly, as they surely have, is counter to good of our society. We need fresh competition that can develop a good product over time without getting cut out of the market by a company who can afford to take a multi-year loss or coerce potential supporting technology companies into flying only the microsoft standard. It's bad business for the US and for the world, because we have no choice but to

keep paying microsoft for their continually degrading software, while they have no accountability and no competition to keep them honest. A quick check of the lack of security of the internet through microsoft software has cost companies and individuals billions of dollars in the last few years alone, and is a frightening harbinger of worse things yet to come. Something must be done about it. The settlement with Microsoft is not strict enough. Please do something to help the American public and the world escape the shadow of the monopoly that is Microsoft. Free the intelligent, enterprising individuals that make up our society to compete fairly and openly.

Thank you.

Subject: Microsoft Settlement

I think the proposed settlement is a BAD idea. Microsoft obviously has NOT learned their lesson. Just a week ago they announced how they have managed to get DVD set-top manufacturers to support playback of their highly proprietary WMA (windows media audio) files in lieu of the globally standard MP3 (MPEG Audio Layer 3) format supported by every platform and architecture internationally. Sounds a lot like the original scenario that led to this lawsuit/settlement doesn't it? The settlement does not do enough to reprimand the obviously guilty party.

My tax dollars went to pursue this case of illegal behavior. My tax dollars found them guilty. If you do not take a firm action you will have not only wasted the tax dollars of all Americans but will waste them AGAIN as new lawsuits will emerge for the EXACT SAME illegal behavior. To sum up in a metaphor; it's time we spank our child for being the playground bully. Lectures have failed and a 10 minute timeout is not going to stop a kid that feeds on the pains of others.

I am troubled by the Microsoft-DOJ settlement, as it appears that expediency rather than corrective actions has been the principle concern of the DOJ. It is my opinion that current government computer policy provides preferential treatment for Microsoft. I feel that one way to change Microsoft's behavior and encourage competition is to use the immense purchasing power of the government, at all levels.

I suggest that the DOJ consider banning the sale, use and purchase of Microsoft software and hardware by all federal, state and local governments for an extended period, say 10 years.

I suggest that all contracted products not require the use of Microsoft software. By this I mean that when the government wants to distribute a database on a CDROM, that the viewing of this database require no runtime versions of Microsoft software on that CDROM or in a personal computer.

I also suggest that all data stored at government (all levels) computer sites, all data purchased by all levels of government be stored in generic, non-proprietary, non-Microsoft formats. The use of Microsoft data formats in currently distributed government, such as Access essentially requires the public to purchase a Microsoft product and further solidifies an ever expanding Microsoft monopoly.

To whom it may concern,

I have been following the Microsoft Antitrust case since the beginning. I feel that the settlement reached between the Justice Department, et al, and Microsoft is not in the public interest. I cite the following:

1) The settlement's enforcement mechanism relies on having people paid BY MICROSOFT police its behavior.

2) The settlement leaves loopholes that have the effect of negating the spirit of the agreement.

2) Microsoft was proven to be a monopoly, and also had proven to abuse its status as a monopoly. It should not be dictating the terms by which the law will be enforced.

Dear Sir/Madam:

I have writing software for almost 20 years, much of that time I have been using products from Microsoft. I have attained several of Microsoft's certification levels and I do believe they employ some highly-talented people.

Sadly, it is also evident Microsoft has resorted to business practices that leave a great deal to be desired. I say sadly because I feel their products are more than able to compete and win on merit alone, yet in their

apparent quest and greed for total market domination, they have crossed the over from competitor to tyrant.

I earnestly implore you to consider with great care the impact your decision will have not so much on the present, but on the future. History is rich with examples of too much power consolidated in one place and few of them are pleasant. If others are not given a level playing field to compete upon, then we deserve what we get—no choice but one.

Microsoft should not be prevented from competing; this would be wrong. They should be made to play by the same rules as everyone else and penalized justly—as should anyone else—when they violate the rules.

Sincerely,
Dexter W. Jones

Hello,

Microsoft has a habit of killing alternatives. I don't know if that's allowed or not in the USA. I guess it is; after all, it's their business.

However, they do it with bad practices. One example is this article (<http://www.vcnet.com/bms/features/3d.html>), at the end of which it is clearly explained what is usually Microsoft's strategy, otherwise known as “embrace-extend-extinguish”.

Not only do they often lie, but they also silently work on crushing opposition at the same time (see <http://lindows.com> for example).

I also resent Microsoft's long-practiced FUD (the term means “Fear-Uncertainty-Doubt”): they tell lies to the public, so that we are (or should be) inclined to fear alternatives to Microsoft's products (Windows and others).

A simple example of this is the ever-changing way they talk about Linux, never telling the truth. One day it is nothing, the other day their biggest challenge, and they even dare to tell that Linux (a Unix clone) is not secure (!), and they shamelessly tell that security lies in the usage of their Windows products! They say each version is more secure than the last, whereas last version (XP) “features” a security hole, such as has never been seen before in Windows: you *only* have to connect to the Internet (no need to read mail, connecting is enough) to endanger your PC!

Microsoft products, in my opinion, have the right to exist as any others. I even think that integrating Internet Explorer inside Windows, as they did, is acceptable, in the light of recent computer-desktop evolutions.

What I will never accept, though, and what I think Microsoft should be condemned for, is their way of exercising pressure, and of leveraging their presence on the PC desktops for ensuring their growing monopoly on more and more areas: first operating systems, next web browsers, then web languages (HTML extensions, Javascript different from standard...), then multimedia formats and protocols (streaming protocols...), and now they try the next last two steps: servers (web, mail...) and internet applications (.NET).

Those issues are mostly from the point of view of a simple computer user, which I am.

But I am also an engineer in computer-science, and as such I stay on touch with news regarding MS-related issues. I won't enumerate all the problems Microsoft behaviour is causing, because Dan Kegel did it very well in his petition. That's why I suggest you read his petition (<http://www.kegel.com/remedy/letter.html>), to which I am a co signer.

From: Craig Bellcurren
To: Microsoft ATR
Date: 1/24/02 8:51am
Subject: Microsoft Settlement

I understand that the public are able to comment on the Microsoft case using this address. I would like to briefly summarise my opinions of Microsoft. My name is Craig Bellcurren, I am a self-employed consultant and programmer for government bodies through-out the south-west of the United Kingdom.

I have been using computers for a long time. My mother bought me one for my third birthday, within a couple of weeks I was already learning the programming language, BASIC. I grew up with computers, some may say that my personality reflects this in many ways. Having grown up with the things, I've been able to see the evolution. I've seen them go from technical toys to productive solutions.

Microsoft have been around for a long time. I was aware of PCs and the variants of DOS running on them. I was still stuck in the land of Commodore and BBC Micro though. When Commodore died, it was time to look to a new platform. I used PCs. I used various versions of Unix available to me, I used DOS, and basically it was still a time when computers were only for techies. Then Windows 3.0 came along, soon followed by 3.1. The world was blown away. When Windows 95 came, packing more features and technology, and a better user interface, PCs were finally ready for general consumption.

With each new version of Windows, we see more features, more functionality. There are those that argue that by including all these features, Microsoft makes it harder for competitors to get their product to market. Personally, whenever I see a new feature in Windows, I wonder which lucky company is getting a license fee from Microsoft for inclusion of their technology. I see the integrated features bringing ease of use to the end user. Not everyone grew up with computers like I did, so I don't expect everyone else to find them easy to use. With all the efforts of Microsoft, end users finally are able to reach levels of productivity that were previously unimaginable. The best bit is that they do not need hours, days or months of training. They can teach themselves using the resources supplied with Windows.

Instead of targeting Microsoft for uncompetitive behaviour, I personally would like to thank Microsoft for making computers accessible to the general public.

Thankyou for your time,
Craig Bellcurren

Subject: Microsoft Settlement

Ladies and Gentlemen,
I am writing to express my unhappiness with your settlement with Microsoft.

I have been involved in scientific computing for more than 30 years. During the last eight years, I have found it more and more difficult and expensive to do my job.

I believe this difficulty and expense can be traced directly to Microsoft's effective monopoly in operating systems. For example, I had based a significant amount of work on Digital Research's DR-DOS because of some small, but significant, technical advantages. When I bought it, my Microsoft software, such as Word, worked with it easily. But when I upgraded to newer versions, my new Microsoft software would work no longer.

The Microsoft customer service response was simple: they told me that if I wanted to use their applications, I would have to buy their operating system. At the time, Microsoft explained this as a "technical incompatibility." We now know that Microsoft designed this incompatibility intentionally, with the specific purpose of forcing consumers onto the Windows platform. Microsoft's conduct injured me directly. It certainly increased my cost and reduced my time. I believe it was intentional. I believe it was illegal.

And I know it was disproportionate to the remedy for which you have settled.

To whom it may concern:

First of all, I find it ironic that I needed to go to a British website, www.theregister.co.uk, to find out that my Department of Justice is soliciting comment on this matter. That said, I shall move on to the matter at hand.

The proposed settlement is no more than a slap on the wrist that will do little to introduce competition into the software business. Although cutthroat competition in the hardware arena is resulting in price slashes and improved products, the software business remains at least unchanged, if not worse.

The average consumer is stuck with the software which comes with the computer for any improvements are prohibitively expensive. Not only that, they are usually bundled with other products that are not desired or wanted.

For example, I recently completed library school. For one course I wanted to index an old local magazine in the local library. Since the library uses Access, Microsoft's database program, to index the local newspaper I thought it would be good to do the same. However, my computer came with Microsoft Works, not Office. I had to buy Access if I wanted to do the project. So I went to Staples. I had a choice. I could buy Access as part of the Office package, or I could buy it alone. I ended up doing neither because both were too expensive. What irritated me though, was that Access alone was perhaps half as expensive as the entire Office package. In other words, to buy the components of Office is almost twice as expensive as the entire bundle.

Since I already have the operating system and some Microsoft applications such as Word preloaded into my computer my preference is to get more (for some reason non-microsoft programs are extremely buggy

on Microsoft computers but we won't go there). The bundled pricing of the Office programs makes that preference even stronger, to the exclusion of Microsoft's competitors. I would be more likely to buy the entire package even though I might prefer some other presentation software to Powerpoint, or organizing software to Outlook and so on.

It seems to me that Microsoft has not learned its lesson. For that reason I am opposed to the settlement.

Sincerely,
William Hegarty

Subject: Microsoft case

Attn: Department of Justice,

The fact is, this anti-trust case against Microsoft is little more than "welfare" for Netscape and other Microsoft competitors, with not a nickel going to those supposedly harmed by Microsoft: the computer user. This is just another method for states to get free money, and a terrible precedent for the future. Money sent to the states will be squandered, as we have seen with the tobacco settlements. Our state is just using it to bloat the already bloated bureaucracy.

The Clinton Administration's obsession with this case was a precipitating factor in collapse of the Tech stocks. Bundling a browser into operational software is no different than an automobile manufacturer including a spare tire and jack with each new car. It may be harder to sell aftermarket jacks and spare tires, but that is free enterprise. Netscape does not have some God given right to sell a "spare tire" product without the "car." End this witch hunt. Stop prosecuting Microsoft.

I believe the Microsoft has stifled development by its practices and policies. They have worked hard to put any and all competition out of business. Microsoft should not be allowed to force contracts on other computer makers that requires inclusion of only Microsoft software.

Also Microsoft has a policy of discrimination that needs to be stopped. The discrimination is in the form of FAVORITISM. Primarily of a religious nature. People of a specific religion are allowed special favors that others of different religions are not permitted.

Microsoft publishes RULES people are supposed to adhere to in associating with Microsoft, for instance with their News Groups. This aforementioned discrimination is evident here as well. Since people of a particular religion are allowed to violate these rules on a regular basis by special permission from people of the same religious preference.

If Microsoft is going to publicly publish rules then all people should be required to adhere to them regardless of religious preference.

To Whom It May Concern,

I feel that Microsoft is being treated as if it were a cocaine-snorting celebrity, rather than a multi-billion dollar monopoly.

Federal Judges have found Microsoft to be guilty, and instead of taking meaningful action, which may prevent further abuses, you have decided to ask them, politely, to please refrain from doing that again. This is a travesty. This settlement allows Microsoft to continue its business practices undeterred. At a time when the DoJ should be sending a clear messages that this conduct will not be tolerated by any business, you are sending an engraved invitation for further abuse of power

I urge all the folks at the DoJ to reconsider this settlement. With it you are undermining the faith the American people have put in you, to do what is right. Microsoft needs to be punished, not given a "get out of jail free" card.

Thank you for your time,
John J. Kellems

From: Jeff Harvey
 To: Microsoft ATR
 Date: 1/24/02 8:55am
 Subject: Microsoft Settlement

I would like to add the following to my previously mailed comments: 10. When issuing a basic operating system for previous Windows customers, the operating system MUST NOT have "product activation".

Since it will be free, it can be installed on any number of computers as long as a previous version of Windows can be supplied as proof. 11. Sales of all new PC's with full Windows versions pre-installed must include the "basic operating system" version on CD as a condition of sale.

On Thursday January 24, I wrote: I just want to buy an operating system. According to <http://whatis.techtarget.com/definition/0,289893,sid9-gci212714,00.html>, "An operating system (sometimes abbreviated as "OS") is the program that, after being initially loaded into the computer by a boot program, manages all the other programs in a computer. The other programs are called applications or application programs. The application programs make use of the operating system by making requests for services through a defined application program interface (API). In addition, users can interact directly with the operating system through a user interface such as a command language or a graphical user interface (GUI).

An operating system performs these services for applications:

a.. In a multitasking operating system where multiple programs can be running at the same time, the operating system determines which applications should run in what order and how much time should be allowed for each application before giving another application a turn.

b.. It manages the sharing of internal memory among multiple applications.

c.. It handles input and output to and from attached hardware devices, such as hard disks, printers, and dial-up ports.

d.. It sends messages to each application or interactive user (or to a system operator) about the status of operation and any errors that may have occurred.

e.. It can offload the management of what are called batch jobs (for example, printing) so that the initiating application is freed from this work.

f.. On computers that can provide parallel processing, an operating system can manage how to divide the program so that it runs on more than one processor at a time."

I don't want any programs on the operating system. This includes Web Browser, Media Players, Mail Readers, Newsreaders, Picture Viewers, Firewalls, Games, etc.. Paint, Notepad, Wordpad and Calculator I can live with as long as they can be uninstalled. Microsoft's Problem is they also put applications on the Operating System and don't let you uninstall them. I don't mind that they are producing these applications but the fact that they are including them for free ALONG WITH the Operating System gives them an unfair advantage with respect to their competitors who also make programs. I don't want to feel like I'm contributing to

putting these smaller companies out of business and that's how I feel when I buy Windows. I have used programs such as 98Lite and IEradicator (<http://www.98lite.net/>) and Revenge of Mozilla (see <http://www.webattack.com/get/ros2se.shtml>) all of which REMOVE Internet Explorer from Windows and they work great. Microsoft has put Windows File Protection into Windows 2000 SP2 and Windows XP so that these programs will not work. They don't want the browser uninstalled because they want to use the browser to make money (ie. ".NET"). In XP there are also some folders that you cannot delete from your own hard drive, such as Movie Maker, MSN Gaming Zone, Netmeeting, xerox and Microsoft Frontpage. It's MY hard drive and I should be able to delete anything I want!

Here's a summary of what changes should be made:

1. Release an "operating system" only. It should be free as part of the settlement to anyone who can prove they purchased any previous version of Windows.

2. In this operating system, Windows File Protection must be easily shut off for those who do not wish to use it.

3. This operating system must not include any of the programs such as Internet Explorer, Outlook Express, Image Viewer, etc., etc.

4. Microsoft can include these "extras" on the CD if they want, but they must be installable and useable INDIVIDUALLY and also uninstalleable INDIVIDUALLY.

5. All evidence to Microsoft's web influences must also be removed, such as Online Services, MSN, MSN Gaming Zone...anything where they use the operating system to link to the web to make money.

6. I would like the source code of this basic operating system to be released.

7. The basic operating system must be released for the Windows 98 kernel even though it may soon be "obsolete" and also for the most recent kernel (ie. XP) Any new Windows versions must also be released with the free "light" version (at the same time).

The "light" version must be a "full version" in that it needs not to be installed OVER TOP OF an existing version. For proof that one has owned a previous version of Windows, any Windows CD-ROM issued since Windows 95 can be inserted at the start of the installation and then the Windows Operating System can be installed on a freshly formatted drive.

8. Someone in authority must be able to suspend all sales of the full Windows versions if the "Basic Operating System" version is not compliant or deliberately issued in an unuseable condition or inferior to the full release.

9. The basic operating system version must be released promptly with the threat of suspending all full version sales if not released promptly. I think they should be able to easily do the 98 kernel release within 6 months, the XP kernel release within 6 months, and as I mentioned before any new version of Windows must have the "basic version" released at the same time.

Thank you for your consideration.

J. Harvey

 Date: 1/24/02 8:55am
 Subject: Microsoft Settlement

To Whom It may Concern:

I wish to register my vote AGAINST the current proposed settlement in the Microsoft Antitrust Trial. I have had the chance to read many letters, essays, and articles that are freely available on the web that more than adequately explain the "for" and "against" issues. Many people have adeptly explained the technical issues with how Microsoft can pervert the current settlement to their own ends. I believe that they have very good points and I will not attempt to repeat what has already been so well explained.

I have a few questions for you to consider as you make your judgement on whether or not to alter the proposed settlement:

1. In a country that was founded "by the people" and "for the people", does not the interest of "the people" come before the interest of a corporation? Corporations are made up of people, but a corporation is not a person itself. Is this not a case of the NEEDS of the many outweigh the WANTS of the one?

2. Why does Microsoft continue to lie to the justice department? Microsoft has, in the past and present, attempted to sway both the public and the courts with "astroturf" campaigns (see: <http://www.newsfactor.com/perl/story/13046.html>) where they pay people to influence our government and courts to their ends. Why must they generate a false grassroots movement to push their viewpoint? Would not customers who were satisfied with their products be the ones running such a campaign, not Microsoft?

3. Has not Microsoft continued it's anti-competitive practices during the trial and settlement phases? It seems they have with the introduction of Windows XP and the new

licensing agreements that they are currently trying to enforce on other corporations.

My concern is that Microsoft has become an entity that the current administration and justice department is unwilling (not unable) to control. It seems that our government and judicial system are for sale to the highest bidder by allowing corporations to continue to override the will of "the people". "The people" (a.k.a. consumers) will continue to be at the mercy of Microsoft's monopoly if the current proposed settlement is accepted as-is. Please, do NOT let this happen.

Greetings,
As a Macintosh user and new media developer, I feel I have a certain interest in the Microsoft case. It only goes to show what kind of business practices Microsoft engages

in when they propose a settlement that costs them little (are they really using the retail cost of their software to gauge the value of the settlement?) and gains them more market share. Good heavens! I thought they were supposed to be punished?

If this settlement is allowed to stand, it will be a travesty, pure and simple. I hope that the US justice system will not be so mocked.

As a small business owner, I would like to make sure my voice is heard regarding AOL's (and other party's) poor treatment of Microsoft. This latest suit from AOL Time Warner is a CLEAR indication that they are simply lashing out! The failure of Netscape's browser is related to inferior technology, rather than harmful business practices by outside companies. They opened themselves up for this when they went the route of end-user patching & open source. Time Warner knew full-well what they were buying in AOL... and did this based on the traffic it would bring into their RoadRunner/Cable system. (In fact, Time Warner STILL encourages use of Internet Explorer, based upon the fact that Microsoft's product is better suited to what people really want in a web browser.)

Time Warner received much business through this merger and were in no way harmed by ANY outside company. Microsoft has been MORE than helpful & willing to assist in improving inter-operability of their products with 3rd parties, while companies like AOL have continuously worked (wrongly) to thwart those efforts, in order to protect (and miserly hoard) their private "club" mentality of not allowing their customers free access to the rest of the internet & its related technologies.

It is NOW time to leave Microsoft alone & let them continue their quest of building quality software that helps businesses like ours succeed right along with them... If ANYONE is harming other businesses, it's NOT Microsoft.

Dynamically,

Dear Ms. Renata Hesse:

Please put a stop to the economically-draining witch-hunt against Microsoft. This has gone on long enough. Microsoft has already agreed to hide its Internet Explorer icon from the desktop; the fact is, this case against Microsoft is little more than "welfare" for Netscape and other Microsoft competitors, with not a nickel going to those supposedly harmed by Microsoft: the computer user. This is just another method for states to get free money, and a terrible precedent for the future, not only in terms of computer technology, but all sorts of innovations in the most dynamic industry the world has ever seen.

Please put a stop to this travesty of justice now. Thank you.

Subject: Microsoft Settlement
January 21, 2002
Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

Microsoft and the Department of Justice, after three years in the federal courts, have finally managed to hash out the terms of an agreement and are prepared to settle. I am utterly relieved. This has gone on for long enough, and, while I believe the settlement deals too harshly with the Microsoft corporation, I would rather see it settled now than have it drag on interminably. The competitors of Microsoft appear to be sore losers and are seeking legal remedies to save their failures in the marketplace. Microsoft does not deserve the kind of treatment it has received, especially considering that its actions were not detrimental to the consumer. I am a very satisfied Microsoft consumer and I believe that the DOJ actions has gone on long enough and that it is hurting the economy.

Microsoft has made a number of concessions in the agreement to its competitors. Some of the terms agreed upon extend to policies and products that the Court of Appeals did not find to be in violation of antitrust legislation. The terms themselves are designed to prevent future antitrust infringements and to allow for a greater degree of competition within the technology industry.

Microsoft will, for example, share information with its competitors regarding the internal working of the Windows operating system. This will allow the competitors to place their own programs on the Windows platform and compete on Microsoft's own "turf." Clearly, this settlement is more than just a slap on Microsoft's corporate wrist.

Sincerely,

Please add my comments, as prescribed by the Tunney Act, to the consideration of Proposed Final Judgment in the matter of Microsoft's antitrust settlement.

I do not believe that the PFJ goes one-tenth as far as it needs to in order to bring a semblance of competitive behaviors to the computing marketplace. Without considerably more stringent measures to punish and deter Microsoft from its entrenched tactics, consumers will suffer the effects of a stunted operating system monoculture for the indefinite future. The implications of this monoculture are already staggering, measured by the millions in lost productivity in the past year from the spread of malicious code—exploits of the poor design and ubiquity of Microsoft platforms and applications.

Subject: Microsoft Settlement

Dear Justice:

The Microsoft Anti-Trust case matters to me. I'm worried that the proposed remedy is insufficient medicine for the abuses purported by Microsoft in the past. Microsoft has abused its monopoly power in the OS market, to quench competition in other markets. I know that they will continue to do so, if the remedy lacks *teeth*. Please impose a remedy which truly restricts Microsoft, and returns to the software industry a fair and honest marketplace.

MTC-00020842

From: Tnm252@aol.com@inetgw
To: Microsoft ATR

It is time for the Government to stop hounding Microsoft. The vast amount of monetary resources taken from the U.S. taxpayers can be better utilized elsewhere. The Federal Govt. does not have a Constitutional duty or right to meddle in the free market and to do so hurts the business market which we consumers have to ultimately pay for on top of paying for prosecution. If Netscape can't manage itself for profit than it either needs to change its strategy or leave the browser market and above all, it needs to quit whinnying and blaming others for its incompetence.

From: Jones, Stephen (S.C.)
To: "microsoft.atr(a)usdoj.gov"
Date: 1/24/02 9:12am
Subject: Microsoft Settlement

I am strongly opposed to the proposed DOJ settlement with Microsoft. The original settlement decree by Judge Jackson was in my opinion totally justified. I believe that Microsoft's actions over the past decade including the actions to monopolize the browser have served to cost the American and world public in both economic terms and in reducing the amount of innovation and choice afforded by restricting the number of new products available. By reducing the proposed settlement any from the original severe penalty in both structure of Microsoft and economics constitutes implicit approval of Microsoft's tactics which I cannot accept. Presently Microsoft's integration of products makes them a monopoly in the computer products marketplace, Microsoft must be split up to enable fair competition in the marketplace.

MTC-00020844

From: cholmer@ciholmer.com@inetgw
To: Microsoft ATR
Date: 1/24/02 9:00am
Subject: Microsoft Settlement

After reading over much of the documentation on the proposed Microsoft Settlement, I find many disturbing issues, loopholes, and contradictions. I strongly urge the DOJ to have a formal and public review of the entire document. Here are some (definitely not all) of the issues I had while reading the documents.

For example, the definitions used in some of the wording in Part VI of the PFJ differ quite radically from the Findings of Fact and how those terms are used in every day language in technical circles. Being a technology agnostic developer, I find these issues quite disturbing.

For example, the Findings of Fact define 'Application Programming Interface' ('API') to mean the interfaces between application programs and the operating system. This is fairly accurate, but could also include how other programs interact with that program. However the PFJ's Definition A defines it to mean only the interfaces between Microsoft Middleware and Microsoft Windows, excluding Windows APIs used by other application programs. This is crazy, nuts, and way too contorted. A frequently used and widely understood term such as API should either remain the same as the Findings of Fact or be closer to the real world or public definitions of "API". For example www.techtarget.com defines API as:

"An application program interface (API—and sometimes spelled application programming interface) is the specific method prescribed by a computer operating system or by an application program by which a programmer writing an application program can make requests of the operating system or another application.

An API can be contrasted with a graphical user interface or a command interface (both of which are direct user interfaces) as interfaces to an operating system or a program" (<http://searchwin2000.techtarget.com/sDefinition/0,,sid1—gci213778,00.html>)

Another Example would be the definitions of "Microsoft Middleware" and "Microsoft Middleware Product". The Findings of Fact define "middleware" to mean application software that itself presents a set of APIs which allow the users t write new applications without reference to the underlying operating system. This is close to the true meaning of middleware and I guess in the context of the Microsoft case, true.

Definition J of the PFJ in no way shape or form comes even close to this definition. There are many ways that Microsoft could side step this definition and still continue with its practices. If the DOJ was serious about improving Microsoft's conduct, it would not allow such a narrow explication or definition. Defining such a broad term in such a narrow light is laughable and amounts to a mosquito attacking an elephant. This should be reworded to more closely follow the Findings of fact or the more accepted definition:

"In the computer industry, middleware is a general term for any programming that

serves to "glue together" or mediate between two separate and usually already existing programs. A common application of middleware is to allow programs written for access to a particular database to access other databases." (<http://searchwebservices.techtarget.com/sDefinition/0,,sid26—gci212571,00.html>)

The use of such explicit wording of version numbers for "Microsoft Middleware" should be completely dropped. There is no standard or regulation governing the use of version numbers and creates way to large of a loophole. More acceptable would be the use of time instead of version numbers. For example a period of 3 years is closer to reality instead of "the next two versions". What's to prevent them from changing their versioning numbering to sidestep this definition? The use of delivery method should either be dropped or reworded to include all modern methods for delivery of software (for example downloading from the web sites) and other electronic means.

The use of such a restrictive list of "products" in Definition K of the PFJ is also laughable. Given the above definition of "Middleware Products" be subject to the same definition as the rest of the world and not individually listed. If the DOJ was serious about leveling the playing field, it would apply the same definition to Microsoft's other products, that the rest of the programming world. To use the definition found the Findings of Fact, "Microsoft Middleware Products" would be anything that they produce that is not the Windows Operating System. Not just the products listed in Definition K. Thank you for your time and attention in this matter, please feel free to contact me at any time regarding this matter.

Subject: Microsoft Settlement

I believe this has dragged on way too long now and all it is doing is costing we taxpayers money. It is time to tell these other companies like Netscape et al to stop their trying to drain Microsoft to fill their own coffers. They say it is to help the computer users, but they will be the ones to get any money from this, not the computer users. I can see no way that Netscape has been harmed. I used to use Netscape when they had a better program than did Microsoft, but now that the Microsoft program is better I use it. Tell Netscape to get over it and if they want to get back to where they once were, then come up with a better program again. There is nothing that stops people from using Netscape if they want to. I believe they just don't want it. I will tell you right out that I am no big fan of Microsoft as I have just quit their broadband internet service, or as I call it, their Non-service.

From: Lionel Woog
To: Microsoft ATR
Date: 1/24/02 9:02am
Subject: Microsoft Settlement

To whom it may concern:

The Microsoft settlement value was best appreciated by the capital markets, that is as a huge win for Microsoft. It is a travesty of justice to present this settlement as a reasonable answer to Microsoft's monopoly. Nothing will ultimately prevent the company to, among other things:

- Leverage their newly acquired SGI 3D patent portfolio to gain monopoly power in what is now a very competitive field of 3D APIs.

- Continue leveraging gains from Monopoly power to enter the console market with the X-Box, that will cost MS upward of 2 Billion dollars before any profits roll in (isn't that a direct violation of the Sherman Act?)

Those are only minuscule example of what the company is bound to do. We are drifting into a world where consumers will be caught between Microsoft and AOL, a rock and hard place. With this settlement the DOJ will kill innovation in the field, as no one will venture capital to any venture they know will be killed by Microsoft if it grows to any size deemed threatening.

Regards,
Lionel Woog, Ph.D.

Microsoft overcharging? Operating systems cost FAR less now than ever in the past and have much more functionality. Check the prices during the 1990's at SUN, SGI, IBM, etc.

I suspect the monopoly law is badly flawed in the technology based market we now have, but regardless of that, think that the price of MS products is incredibly "fair" and a huge value. Our current technological progress would be severely hampered without this family of products.

My company depends on Linux for it's product line, but when WE want to get work done internally, we use MS products, and are VERY HAPPY with the prices, choices, and capabilities. You get letters at all extremes. My extreme is that DOJ attorneys seems to hate success! Why not focus on companies like Enron that are doing truly bad things to their customers, employees and society?

From: Casey Kolehmainen
To: "Microsoft.atr(a)usdoj.gov"
Date: 1/24/02 8:59am
Subject: Microsoft Settlement

To who it may concern,

I believe the proposed United States versus Microsoft Settlement does not "level the playing field" between Microsoft (the monopolist) and other computer software vendors as any settlement should. I feel that any proposed settlement or court remedy should entail Microsoft:

- > to fully comply with software community open standards in their respective markets.

- > for those Microsoft products where their isn't a community open standard, Microsoft should sponsor in an independent standards organization, a new standards body. Microsoft shouldn't lead such standards body unless the majority of the voting members elect Microsoft without regard to financial or other direct compensation by Microsoft.

By this remedy, I feel the software community in general will have a "level playing field", while yet allowing Microsoft an opportunity to innovate as long as its above and beyond the community open standard. Over time the community open standards will evolve to include new features, of which Microsoft will have to comply, and yet still have an opportunity to innovate by restarting the cycle of incorporating changes that go above and beyond the community open standard.

Thanks for your time.

Subject: Microsoft Settlement

I strongly oppose the proposed settlement. Even if the many loopholes were plugged it does far too little to encourage and restore a competitive market environment, to punish Microsoft and its management for the illegal acts for which they have been convicted, or to discourage Microsoft from further anticompetitive and illegal activity.

Dear Ms. Renata Hesse:

Please put a stop to the economically-draining witch-hunt against Microsoft. This has gone on long enough.

Microsoft has already agreed to hide its Internet Explorer icon from the desktop; the fact is, this case against Microsoft is little more than "welfare" for Netscape and other Microsoft competitors, with not a nickel going to those supposedly harmed by Microsoft: the computer user. This is just another method for states to get free money, and a terrible precedent for the future, not only in terms of computer technology, but all sorts of innovations in the most dynamic industry the world has ever seen.

Please put a stop to this travesty of justice now. Thank you.

From: Ahlstrom, Christopher
(091)Contractor(093)
To: "microsoft.atr(a)usdoj.gov"
Date: 1/24/02 9:05am
Subject: Microsoft Settlement is Shocking

The DOJ's settlement with Microsoft rewards Microsoft for predatory behavior. By allowing them to contribute software and hardware to schools, their monopoly is only cemented more. Bill Gates is sneering inwardly, I'm sure. Steve Ballmer is laughing. Microsoft employees are wearing "Department of Justice: Antitrust Division" T-shirts. Microsoft has made a mockery out of quality. Microsoft has made a mockery out of fair play. All of Microsoft's code needs to be put in the public domain in order to have any hope of having alternative operating systems written by corporations. I'm frankly surprised that Bill Gates isn't seeing any jail time.

Sincerely,
Chris Ahlstrom

MTC-00020856

From: Paul Brown
To: Microsoft ATR
Date: 1/24/02 9:04am
Subject: Microsoft Settlement

The proposed settlement is not sufficient. There are many problems it does not address, but I'm most concerned about lack of protection for interoperability with so-called Open Source software. It appears that Microsoft will be able to block access to interoperability information because Open Source organizations don't operate as conventional businesses (for instance, they don't have business plans).

Open Source software, such as the SAMBA project, is used by hundreds of thousands, if not millions, of users worldwide. It provides essentially free software which would most likely be rendered useless by future generations of Microsoft software. Microsoft has a history of changing protocols simply to block competition.

I strongly disagree with the present settlement, and feel microsoft is geeting off free.

Other companies are watching this closley, to see what they can get away with.

You must send microsoft a strong message, otherwise they will continue to go as business as usual. The consumer should always have a freedom of choice, but that went away when microsoft monopolized the market. There are many users that are Forced to use microsoft products at work, as a company policy, and they use other operating systems at home. I use OS/2, Linux and Windows at home. I have the freedom to choose what to use and I do exactly that.

Hit them Hard, or they will get the last laugh, and continue to break the law.

Attorney General John Ashcroft
U.S. Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

I am writing to you today to express my support for the Microsoft antitrust settlement, which has been a long time in the making. Three years have now passed since this lawsuit was enacted, and during this time an exorbitant amount of taxpayer dollars have

been squandered in funding this lawsuit. Enough is enough.

I would hope that the federal government would not waste any more time over the issue and enact the settlement that was reached in November.

Further, it seems to me that the terms of the settlement are very fair. Microsoft has agreed to disclose the internal interfaces of its Windows system to its competitors. Beyond this, Microsoft will also make the licensing rights to Windows available at a constant rate to its competitors. In addition, Microsoft has also agreed to be monitored by a watchdog group that will make sure that Microsoft complies with the terms of the agreement.

I believe that the best path for the Justice Department is to end this dispute once and for all.

Sincerely,
John Fair

To: Microsoft ATR
Date: 1/24/02 9:12am
Subject: Microsoft Settlement

Microsoft cannot be allowed to continue bullying the software and hardware manufacturers of this country. And this recent settlement that forces Microsoft to give hardware and software to schools is absolutely the stupidest idea I ever heard of! This only ENCOURAGES them to keep doing things "their" way. It also gives them a NEW foothold into areas where they don't already have a demanding lead. If you want to improve schools AND punish Microsoft for their flagrant abuse of their power, make them pay \$1 Billion to each and every state in the Union for the purpose of improving schools HOWEVER THE STATE SEES FIT. If the states want to use the money to build new classrooms, or give teachers raises or buy Apple computers and software for their students, that is up to them. Microsoft should not get any kind of tax deduction from it or any kind of say in what the money would be used for. They need to be punished and I don't mean "minimum security country club federal prison" type punishment either. If the courts aren't going to do the right thing and split up the biggest monopoly since AT&T, then they should penalize them severely.

As a computer user, I am severely impacted by Microsoft's abuse of power and unfair practices. I am not alone. Every computer user in this country is affected the same way.

Clint McIntosh—clintmcintosh@mac.com

To: Microsoft ATR
Date: 1/24/02 9:13am
Subject: Microsoft Settlement

As a consumer, I have found that Microsoft has so monopolized the market that there is virtually no choice but Microsoft products. When a consumer buys a new PC, Internet Explorer is already installed, MSN is usually the default home page, Outlook express is the email program, there are links to Hotmail, MSN messenger is usually set up to automatically start, Windows media player is already installed.

Furthermore, is the office application market, Microsoft has shown that now that they have a lock on that market, they feel they can afford to pump up prices, and make it difficult for the causal user to move applications from one machine to another, but the same measures will do nothing to stop counterfeit applications.

Microsoft is doing everything possible to stifle and stop ALL competition. This is a monopoly and it must be stopped.

Dear Ms. Renata Hesse:

Please put a stop to the economically-draining witch-hunt against Microsoft. This has gone on long enough.

Microsoft has already agreed to hide its Internet Explorer icon from the desktop; the fact is, this case against Microsoft is little more than "welfare" for Netscape and other Microsoft competitors, with not a nickel going to those supposedly harmed by Microsoft: the computer user.

This is just another method for states to get free money, and a terrible precedent for the future, not only in terms of computer technology, but all sorts of innovations in the most dynamic industry the world has ever seen.

Please put a stop to this travesty of justice now. Thank you.

Sir/Madam:

I am opposed to the Proposed Settlement in the Microsoft vs DOJ anti-trust trial.

I cannot be so eloquent as others, especially the Joint Open Letter to the DOJ written by Dan Keigel (to which I have also attached my support), but my reading of the proposed settlement suggests to me that Microsoft is not really being penalized for it's anti-trust actions.

Thank you for your consideration in this matter.

To: District Court Judge, US vs. Microsoft
In the matter of the proposed settlement of the Microsoft antitrust case, I, as an American, and as an Information Technology professional, urge you to waive any and all penalties against the Microsoft Corporation.

All of the evidence to date indicates that the case against Microsoft is unjustified. From my experience using the products of both Microsoft and their competitors, I can state that Microsoft has not competed unfairly, and has in fact created markets which have enabled countless other enterprises to succeed.

And from my personal perspective, it is clear that Microsoft has been only a benefactor to millions of business professionals and home users, more so than any other single American technology organization.

I hope when you examine the facts in this case, you will agree the Microsoft deserves praise, not punishment, for their success.

MTC-00020897

From: Gilbert Ball
To: Microsoft ATR
Date: 1/24/02 9:15am
Subject: Microsoft Settlement
Greetings.

I remember my surprise and shock that the Department of Justice had reached a settlement with Microsoft Corporation. After reading the details of the proposal, I feel it is little more than a slap on the hand.

I am not a fan for breaking up Microsoft. But I do feel that they actively sought out and eliminated any competition to their software products and services. Fortunately there have been a few holdouts that have survived to this day, but Microsoft stills holds almost all the cards.

Over the course of time I have used and supported many operating systems. Some of them still exist and thrive in their smaller markets. But I have watched Microsoft grow and overtake them all. Microsoft didn't do it because it had a better product. In fact, their rise can be summed up with this statement: Crummy product, great marketing. They can sell million dollar oceanfront property in Montana to a bum on the beach in Florida. The browser wars are dead and Microsoft has won. But they didn't win fairly. They systematically suffocated Netscape by undercutting them by giving away Explorer, cutting off distribution channels and strong arming people into putting their software in the premier locations or installations.

Although Apple and Microsoft cozied up together in recent years, Apple has always been really at Microsoft's whim. Microsoft did have the best office product for the Macintosh platform. Without it, the Macintosh with whither and possibly fade away. One little implied threat that they would discontinue Office would definitely bring Apple to its senses and support Microsoft's other software packages over Microsoft's rivals. If I was Apple, it would get me shaking in my boots to lose the Microsoft Office package.

But back to the browsers for a second. I used to use Netscape. It was a superior product. I PAID for it because it was good. Then Microsoft came along with Internet Explorer. It was a piss poor product AND it was preinstalled with Windows. I didn't want it, I didn't like it. I continued to use Netscape. I chose Netscape because it was better, more stable, and had all the features I wanted. But as time went on and Explorer became more and more a part of the operating system, I had no choice. I shake my head as I look at my desktop right now while typing this message. I am running Microsoft Windows 2000, using Internet Explorer and Microsoft's Hotmail service. I used to run so many applications from different vendors.

But they are no longer there. And I wouldn't dare install Netscape on my system as it doesn't coexist with Microsoft products very well anymore. I am not sure if that is by Microsoft's design or the fact that Netscape has been beaten down so much, they cannot afford to make the superior product they used to create.

I urge you to reconsider your mild treatment of Microsoft. It is a MONOPOLY. They have used tactics that date back to the likes of railroad monopolies. It was not acceptable then. It is not acceptable now. We are in a capitalist, Democratic, society. We have freedom to choose where, what, when, how, and why on almost every aspect of our lives. Microsoft took away some of my freedoms. My freedom of choice was taken away. Frankly, that leaves a very bitter taste in my mouth. It is up to you to rectify the situation. You are the law and the guardians of what our forefathers and those after them have put into place. Please do the right thing and scrap this watered down agreement. It does no one in this country and the world any good except for Microsoft.

Thank you very much for your time.

Sincerely,

-gilbert

Re.: Microsoft Settlement

Dear Ms. Hesse:

As a US Citizen that is involved in the IT community, I have been following this case with interest.

I am submitting these comments as my rights under the tunney act.

I have reviewed the proposed final settlement and cannot agree with it. I find that the proposed settlement by the nine states and DC would be a more adequate correction and believe that the citizens of the United States could fully comprehend this action.

If you dicide to the final settlement proposed by the USDOJ then this would be a further stepping stone for Microsoft to implement further monopolistic controls and actions on the citizens of this country and could be the demise of open source software.

Sincerely,

Charles T Mattice

Subject: "Microsoft Settlement"

Dear Sir or Madam:

I'd like to add my comments to the Microsoft Settlement case. As it stands, feel that the current ruling serves no purpose but to help Microsoft gain a larger hold on computers in the schools. I also feel that the state of the economy should not enter into the punishment phase. Some ways I feel that would help stop the monopoly of Microsoft are:

Microsoft should not be able to donate software to schools as part of the settlement. If they want to, they can contribute cash so that school administrators can chose their own operating system. In actuality, it costs Microsoft next to nothing to push out the CD's, and of course, they would be getting a tax reduction for the retail price.

They win on both sides of the coin.

Microsoft file formats for their products be opened up for open source systems or proprietary systems.

The price of Windows should not be part of a computer purchase. Computers should be available without an operating system, and if the consumer wants it pre-installed, it should be at the same price for all consumers.

Microsoft should open the Windows application programming interface (API) to allow other vendors to write applications on an equal footing with Microsoft.

All networking protocols should be published fully and approved by an independent network protocol body.

Thank you for your time,

Nicholas P. Holowaty

Subject: Microsoft Settlement

Dear Sirs/Madams—

It appears that only Microsoft (a very capable firm, obviously) has the power to turn a trust-busting suit to its own advantage.

Having read that Microsoft wanted to compensate the world for its misdoings by giving away free software/hardware to schools, I was flabbergasted. I have no doubt that this software would not be targeted to schools that already use Microsoft software but to those that use someone else's (Apple's, perhaps?) A schoolchild could figure out where this would lead. My understanding is that this "remedy" has been quashed, or at least I hope so.

Unfortunately, this is only the tip of the iceberg. You know the details, but allowing Microsoft free rein to dictate standards which they will control, especially over something as open and powerful as the internet, is a folly of unbelievable proportions (and one with a host of unforeseeable consequences to go with the foreseeable ones). Even outside of the United States (I am currently working in Sierra Leone), the reach of Microsoft is basically absolute. My own head office tried to forbid my use of non-Windows software simply because "we use Windows," they said. This even though my overseas office uses compatible Microsoft Word and Excel, but on Macintoshes. Obviously Microsoft's reach and influence already exceed all bounds of reason. Please do not allow them even greater control over the oxygen that every organization breathes: information and its movement.

Subject: Microsoft Settlement

I personally am disappointed with the settlement.

Big business needs some definitive.

I have a computer business and run into numerous things while building systems that smack of Microsoft's explicit efforts to discourage non-Microsoft installations.

Obviously they aren't capable of providing an open product in their near-monopolistic hold on the industry. That's where I hope the government can maintain at least the handholds to permit competition. If nothing else the licensing and cost of Microsoft products is oppressive to small businesses and homeowners as evidence of Microsoft's stranglehold on the industry.

I applaud Microsoft's standardization of our software industry, but we need to permit avenues for competition for the likes of Netscape, Linux, Corel and other struggling competitors.

Subject: Comment on DoJ v Microsoft settlement

To Whom it May Concern:

It seems to me clear that Microsoft has violated the anti-trust laws, and I agree with Thomas Penfield Jackson's original decision to split Microsoft into two companies, one an operating system development company(OSD), the other an applications development company(AD).

If this were done, the AD company would clearly port its applications to all major platforms, including the big Unix players: Linux, Sun, and SGI. This would in turn foster competition among the various operating systems. This is clearly beneficial, not only to the industry, but to the economy as well.

Respectfully submitted,

With the reins off the high-tech industry, more entrepreneurs will be encouraged to create new and competitive products and technologies. While Microsoft has not been perfect they have made computers easier to use for everyone. The cost of software is more reasonable today than it ever was. If other products were better than what Microsoft sells than people would be buying them. We have seen the market drop poor products for good ones over and over again. Just look at the history of products that HAD monopolies in spreadsheets and word processing that are now gone because THE MARKET decided a new product was better. The computer market is working, let's leave it alone.

Thank you for this opportunity to share my views.

From: Jim Mowreader
To: Microsoft ATR
Date: 1/24/02 9:17am
Subject: Microsoft settlement

MTC-00020909-0001

This is a bad settlement. I shall extract a few of the pieces that are especially bad and comment on them:

"Nothing in this provision shall prohibit Microsoft from enforcing any provision of any license with any OEM or any intellectual property right that is not inconsistent with this Final Judgment. Microsoft shall not terminate a Covered OEM's license for a Windows Operating System Product without having first given the Covered OEM written notice of the reasons for the proposed termination and not less than thirty days" opportunity to cure. Notwithstanding the foregoing, Microsoft shall have no obligation

to provide such a termination notice and opportunity to cure to any Covered OEM that has received two or more such notices during the term of its Windows Operating System Product license."

The problem? "Covered OEM." The definition of a Covered OEM: "Covered OEMs" means the 20 OEMs with the highest worldwide volume of licenses of Windows Operating System Products reported to Microsoft in Microsoft's fiscal year preceding the effective date of the Final Judgment. The OEMs that fall within this definition of Covered OEMs shall be recomputed by Microsoft as soon as practicable after the close of each of Microsoft's fiscal years."

No one else is protected by paragraphs containing this phrase. More to the point, the 20 largest OEMs won't need to be affected by this document; these companies are loyal to Microsoft anyway and they sell enough Microsoft product that they can be affected by silly little flings with Linux or Netscape and still make Microsoft vast sums of money. And should one of them happen to start selling enough non-Microsoft product that they fall off the top-twenty list in Redmond, they become a non-covered OEM and thereby lose the protections of this agreement.

"Ensure that a Windows Operating System Product does not (a) automatically alter an OEM's configuration of icons, shortcuts or menu entries installed or displayed by the OEM pursuant to Section III.C of this Final Judgment without first seeking confirmation from the user and (b) seek such confirmation from the end user for an automatic (as opposed to user-initiated) alteration of the OEM's configuration until 14 days after the initial boot up of a new Personal Computer. Microsoft shall not alter the manner in which a Windows Operating System Product automatically alters an OEM's configuration of icons, shortcuts or menu entries other than in a new version of a Windows Operating System Product."

This is missing a few words: "initial boot up *by the ultimate purchaser* of a new Personal Computer." Computers are initially booted up at the factory for quality control purposes. If the 14-day clock starts ticking the moment the machine is booted up at the factory, the purchaser can lose all protection under this paragraph since it can take more than 14 days to get a computer through the supply chain from the factory to the point of purchase and into the hands of the consumer.

"Notwithstanding the foregoing Section III.H.2, the Windows Operating System Product may invoke a Microsoft Middleware Product in any instance in which:

1. that Microsoft Middleware Product would be invoked solely for use in interoperating with a server maintained by Microsoft (outside the context of general Web browsing), or

2. that designated Non-Microsoft Middleware Product fails to implement a reasonable technical requirement (e.g., a requirement to be able to host a particular ActiveX control) that is necessary for valid technical reasons to supply the end user with functionality consistent with a Windows Operating System Product, provided that the technical reasons are described in a reasonably prompt manner to any ISV that requests them."

Subparagraph 2 kills all the previous requirements for Microsoft to publish APIs and so forth. ActiveX is, or at least should be, a published standard. By redesigning Internet Explorer, or Windows itself, so that some of the "functionality consistent with a Windows Operating System Product" is contained in an ActiveX control which only Internet Explorer can invoke—it's not a technically difficult challenge—this agreement guarantees that Microsoft Middleware will always be invoked.

Also, Section VI, Paragraph K (definition of Middleware) states clearly that Middleware is only that software Microsoft issues to upgrade Windows; nothing in this paragraph precludes Microsoft from invoking the non-Middleware version of Internet Explorer which was an integral part of your Windows installation.

"B. Appointment of a Technical Committee

1. Within 30 days of entry of this Final Judgment, the parties shall create and recommend to the Court for its appointment a three-person Technical Committee ("TC") to assist in enforcement of and compliance with this Final Judgment.

2. The TC members shall be experts in software design and programming. No TC member shall have a conflict of interest that could prevent him or her from performing his or her duties under this Final Judgment in a fair and unbiased manner. Without limitation to the foregoing, no TC member (absent the agreement of both parties):

a. shall have been employed in any capacity by Microsoft or any competitor to Microsoft within the past year, nor shall she or he be so employed during his or her term on the TC;

b. shall have been retained as a consulting or testifying expert by any person in this action or in any other action adverse to or on behalf of Microsoft; or

c. shall perform any other work for Microsoft or any competitor of Microsoft for two years after the expiration of the term of his or her service on the TC."

Who will they get? Microsoft's business covers all segments of the computer industry; there is no company in this industry that Microsoft doesn't at least technically compete with. I spent a lot of time thinking of companies who could supply unencumbered TC members, and couldn't come up with one name. Even someone like Siebel, who makes customer relations management, or CRM, applications, could be considered a competitor—Microsoft doesn't make a packaged CRM product, but you can do CRM in Microsoft Access so Siebel is a Microsoft competitor. Not even academia is immune: Microsoft has extensive consulting and advisory contracts with university professors. If Microsoft wants to get nit-picky about this, and they will, then no "expert in software design and programming" will be eligible to sit on the TC.

"C. Appointment of a Microsoft Internal Compliance Officer

1. Microsoft shall designate, within 30 days of entry of this Final Judgment, an internal Compliance Officer who shall be an employee of Microsoft with responsibility for administering Microsoft's antitrust compliance program and helping to ensure compliance with this Final Judgment."

This is like ordering the Medellin Cartel to appoint an internal compliance officer from their own staff to make sure they don't sell cocaine. Or directing the Chicago Mafia to appoint one of its mobsters as an internal compliance officer to ensure they shut down their gambling operations. An internal compliance officer is necessary, but to ensure that this officer ensures Microsoft's compliance with the settlement, he or she must come from outside Microsoft and must not be on the Microsoft payroll. "In any enforcement proceeding in which the Court has found that Microsoft has engaged in a pattern of willful and systematic violations, the Plaintiffs may apply to the Court for a one-time extension of this Final Judgment of up to two years, together with such other relief as the Court may deem appropriate."

Why only a one-time extension? Microsoft has a history of ignoring court orders, consent decrees and other conduct remedies. Allowing only one extension basically invites Microsoft to engage in a pattern of willful and systematic violations right up front, knowing that it can only be hit with one two-year extension. After it receives its two-year extension, the absence of other penalties for non-compliance basically means Microsoft will be free to do whatever it wants.

"Microsoft Middleware" means software code that

1. Microsoft distributes separately from a Windows Operating System Product to update that Windows Operating System Product;

2. is Trademarked;

3. provides the same or substantially similar functionality as a Microsoft Middleware Product; and

4. includes at least the software code that controls most or all of the user interface elements of that Microsoft Middleware.

Software code described as part of, and distributed separately to update, a Microsoft Middleware Product shall not be deemed Microsoft Middleware unless identified as a new major version of that Microsoft Middleware Product. A major version shall be identified by a whole number or by a number with just a single digit to the right of the decimal point."

This screws up the whole "Internet Explorer is Middleware" argument. Internet Explorer is an integral component of Windows; in fact, it's the component of every version of Windows since Windows 98 that provides the Windows user interface.

Subparagraph I is just strange: according to it, the version of Internet Explorer 6 which comes built in to Windows XP is not middleware, but the version of Internet Explorer 6, which does exactly what the built-in version does, is middleware. I believe this line is enough to get the whole agreement thrown out in court, since the Settlement contains no wording upholding the rest of the Settlement should parts of it be found invalid.

Subparagraph 2 is meaningless. Microsoft trademarks everything they make and every distinctively-named component of everything they make.

Subparagraph 3 is circular logic—"Microsoft Middleware does the same thing as Microsoft Middleware." (I never would

have guessed!) Subparagraph 4 is laughable. Very few computer applications put the user interface elements in one program and the functionality elements in another. Wolfram Research's Mathematica (which is designed so that the user can construct a data set on his or her personal computer then transmit it to a large shared computer for processing) and applications used to control industrial machinery are designed this way; no middleware application and certainly no Microsoft middleware application shares this construction. "Functionality that Microsoft describes or markets as being part of a Microsoft Middleware Product (such as a service pack, upgrade, or bug fix for Internet Explorer), or that is a version of a Microsoft Middleware Product (such as Internet Explorer 5.5), shall be considered to be part of that Microsoft Middleware Product."

Unless, of course, it's a service pack for the Internet Explorer you received as part of your Windows installation, and then it's not middleware. This also allows them to continue to bar non-Microsoft middleware from being loaded by their OEMs—if Middleware is distributed separately from Windows, then a clean load of Windows contains no Middleware (because Internet Explorer is an integral part of Windows), and therefore allowing non-Microsoft middleware to be loaded would put Microsoft at a competitive disadvantage since there is no Microsoft middleware on these machines.

"Microsoft Middleware Product" means

1. the functionality provided by Internet Explorer, Microsoft's Java Virtual Machine, Windows Media Player, Windows Messenger, Outlook Express and their successors in a Windows Operating System Product, and

2. for any functionality that is first licensed, distributed or sold by Microsoft after the entry of this Final Judgment and that is part of any Windows Operating System Product

- a. Internet browsers, email client software, networked audio/video client software, instant messaging software or

- b. functionality provided by Microsoft software that—

- i. is, or in the year preceding the commercial release of any new Windows Operating System Product was, distributed separately by Microsoft (or by an entity acquired by Microsoft) from a Windows Operating System Product;

- ii. is similar to the functionality provided by a Non-Microsoft Middleware Product; and
- iii. is Trademarked.

Functionality that Microsoft describes or markets as being part of a Microsoft Middleware Product (such as a service pack, upgrade, or bug fix for Internet Explorer), or that is a version of a Microsoft Middleware Product (such as Internet Explorer 5.5), shall be considered to be part of that Microsoft Middleware Product."

I am confused here. A saw is a product. Cutting wood is a functionality. I can't sell you "cutting wood" except as labor, but I can sell you a saw or wood that has been cut. Similarly, Microsoft can't sell "Internet browsing" but they can sell an Internet browser. Functionality is not a product. A product is a product.

If, on the other hand, "middleware products" are actual products and not "functionalities," this paragraph seems to be another way to circumvent the whole agreement. Since the inbuilt version of Internet Explorer is a

"middleware product" instead of "middleware," they can invoke it then claim that they're following the letter of the agreement—they didn't invoke the clearly defined "middleware" but rather the "middleware product." And they will be right.

Subparagraph b seems to have a lot of "weasel" phrases in it—phrases that are intended to let Microsoft "weasel" the product out of the agreement. To get a product declared "not a middleware product" they need only release it as part of a new Windows release. Microsoft does this regularly—there is not much difference between Windows XP and Windows 2000, for instance. Subparagraph ii goes without saying—Microsoft is not innovative and its products all have functionality similar to non-Microsoft products. Objection to subparagraph iii is the same as before—all Microsoft products and discernible parts of products have trademarked names.

"Microsoft Platform Software" means (i) a Windows Operating System Product and/or (ii) a Microsoft Middleware Product."

This is a strange one indeed. It seems to define Internet Explorer for the Macintosh as Platform Software.

Cut the bull and declare Internet Explorer "middleware" no matter how the user gets it. Not three things—middleware if you download it, middleware product if it's integrated and "platform software," whatever that is. "Personal Computer" means any computer configured so that its primary purpose is for use by one person at a time, that uses a video display and keyboard (whether or not that video display and keyboard is included) and that contains an Intel x86 compatible (or successor) microprocessor. Servers, television set top boxes, handheld computers, game consoles, telephones, pagers, and personal digital assistants are examples of products that are not Personal Computers within the meaning of this definition." The industry is moving toward "computing everywhere"—Microsoft's Xbox video game console, Ultimate TV digital video recorder, PocketPC handheld computers and WebTV set-top box are products Microsoft makes either software or the whole box for, and these are markets for which this settlement does not proscribe anticompetitive behavior by Microsoft in by virtue of this paragraph.

"Windows Operating System Product" means the software code (as opposed to source code) distributed commercially by Microsoft for use with Personal Computers as Windows 2000 Professional, Windows XP Home, Windows XP Professional, and successors to the foregoing, including the Personal Computer versions of the products currently code named "Longhorn" and "Blackcomb" and their successors, including upgrades, bug fixes, service packs, etc. The software code that comprises a Windows Operating System Product shall be determined by Microsoft in its sole discretion."

Giving Microsoft sole discretion as to what comprises a Windows Operating System Product is what got this industry into trouble in the first place. It also eliminates one of the more effective conduct remedies: forcing Microsoft to produce a "bare bones" version of Windows. It will guarantee that Microsoft will continue in its anticompetitive ways.

Subject: Microsoft Settlement

Thanks for this opportunity to comment.

This concerns both the argument that Microsoft is wrong to include various additional programs with operating systems, and that including the Internet Explorer browser specifically is wrong.

- 1) Many vendors very successfully sell software similar to that included by MS—Adobe and Macromedia for graphics, for example Photoshop. These vendors would be out of luck without Windows for their programs to run on.

- 2) The Netscape browser is and has been for years free to download. How their logic works—they can give their browser away, but Microsoft can't—makes no sense.

- 3) Microsoft has been successful due to its own hard work. If the judges really want to understand this, let them try writing a few programs themselves. This is not meant to be disrespectful, rather to provide insight.

- 4) Including various software items with an operating system is like including an automatic transmission, a heater, and a radio with a car.

To whom it may concern,

I would like to register my opinion about the proposed Microsoft settlement. I am frankly appalled that the government would even consider such a weak punishment, if it indeed even constitutes a punishment at all. On the surface it might appear that it is in some small part even handed, but since so much of the final effect depends on implementation, I have less than no faith that it will have any significant impact on the monopolistic practices of Microsoft. This issue is a very large one for me—I believe

that my job depends on reigning in the excesses of Microsoft. Please consider mine a passionate vote for a serious punishment for Microsoft—not what is currently being considered.

Subject: Microsoft Settlement

Dear Department of Justice,

I would like to offer my opinion on the proposed settlement with Microsoft. This settlement gives hardware vendors slightly more freedom to bundle non-Microsoft products. It establishes fair pricing for Windows operating systems for OEM's. It requires that a small handful of software, called "Microsoft Middleware Product" be removable. That's it?

This settlement will provide no relief to competing companies, to consumers, or to businesses who use Microsoft products. It maintains Microsoft's near-monopoly and sends them a strong message that nobody can or will stop them.

I believe in free markets and I think the government should be involved as little as possible. However, this nation has been hurt by the actions of Microsoft. Microsoft has squashed competition and innovation, users have paid inflated prices, consumers have little actual choice in desktop operating systems, and seriously buggy and insecure Microsoft software is now (sadly) the norm. The United States had an amazing lead in computer and software technology which we have essentially thrown away.

In short, this settlement doesn't settle anything. Please reconsider adding some penalties or provisions that will make a positive difference. We, the citizens and consumers of this country, will be worse off rather than better if this settlement is adopted as proposed.

Thank you for your time and attention.

Sincerely,
Paul Miller

To: Microsoft ATR
Date: 1/24/02 8:49am
Subject: Microsoft settlement

Dear Sirs;

I am very unhappy with the proposed Microsoft settlement. It will in no way break the stranglehold that this company exerts on the information technology market, a stranglehold which extends from the first piece of information loaded in the computer at bootup (the "boot sector") to last image on the screen at shutdown. Given the competitive nature of the computer hardware market, I find it implausible that no major vendor has attempted to differentiate themselves from the pack by offering a unique feature such as this: the pre-installation of Linux along with Windows on their computers. A "boot manager" (software which has been widely available for many years) would allow users to choose which operating system to load when they start their computers. This would involve very little added cost to the vendor while offering the consumer a painless way of trying out an alternative operating system which has received considerable popular press. The fact that no major vendor has made such an offer is prima facie evidence of the control exerted by Microsoft by means of the software pre-load agreements it dictates to hardware

vendors. I would propose therefore an alternative settlement: mandate that Microsoft provide other operating systems in addition to their own in a boot manager arrangement. There are a wide variety of operating systems that could be used. Some, such as Linux, are available without direct cost to Microsoft. Others, such as OS/2, would involve financial negotiations with third parties. (There are many other mature and powerful operating systems, e.g., Solaris, BeOS, AmigaOS, and NextStep, whose financial restrictions are unfamiliar to me.) Microsoft has been able to exert undue influence on the software industry through it's control of the boot sector. Breaking this control would be a simple and effective method to bring competition back into this vital sector of our economy.

Sincerely,
Dr. Charles Meins, Jr.

Subject: Microsoft Settlement

Dear Department of Justice,

I would like to contribute to the public comment period on the Microsoft anti-trust settlement. I have been disappointed in the Bush Administration's recent leniency towards Microsoft. I have read about the current settlement and am not in favor of it in its current state. Microsoft's anti-competitive practices have interfered with the free-market ideals this country was founded on. Countless entrepreneurs and small businesses have failed due to Microsoft's misconduct. Innovation and creativity have been hindered not only in the field of computing, but also in other related fields such as art and engineering.

Any settlement conditions offered by the Justice Department should reflect not only the past crimes described in the Findings of Fact, but should also prevent Microsoft from engaging in future misconduct, especially illegally expanding its monopoly.

We as a country can no longer afford the inefficiency produced by the anti-competitive actions of a monopoly. A strong

settlement which punishes past crimes and addresses future conduct is necessary. Litigation should continue in this case if Microsoft does not admit to illegal actions and accept a suitable punishment.

Thank you for your time in reading this letter.

Dear Sirs,

When will this ridiculous harassment against Microsoft end? One would think that September 11 would have taught some lessons of unity and getting all together to fight a common enemy. The consumer has chosen IE over AOL. In democracy that means the people have chosen. Are you going to turn democracy around and find ways for people to pay more for what is available nowadays? Instead of accepting AOL case against Microsoft, why don't you force them to invest more in R&D, to come up with better products, better pricing, etc.?

It's disgusting the impression you are giving to the world of yourselves, your system and, as a whole, the American people. I'm ashamed.

Subject: Microsoft Settlement

Dear Sir/Miss,

I'm a 31-year old Dutch electronic engineer. I spend a lot of time in computers generally and have build up much knowledge of computers. In time I became to love computers and hate Microsoft. In my opinion Microsoft slowed down the computer evolution and made only money of it. I can write many books about Microsoft but I guess you haven't got the time to read that now so here is a short impression how Microsoft became a monopolised. During my education in the 80ies I had a personal computer called an Amiga. That computer could do anything that a PC can do now these days. I chose in 1986 for an electronic engineering education because I thought Microsoft couldn't keep the consumers dumb and I hoped that competitors would come with better marketing plans so that the consumers could see what computers really could do. Al those years Microsoft earned a lot of money by mastering the marketing techniques and keeping the consumer dumb. Microsoft monopolised the computer industry by copying an operating system and pulling all the commonly used software like word-processors and spreadsheets towards them. All the products of Microsoft have many flows (called bugs) in it a specially the operating systems like Windows and on top of all every software of competitors didn't work properly on Windows systems. If this is don on porpoise is not easy to make hard when Microsoft never made the source-code Windows public. In the early days you had the Wordperfect word-processors, Netscape and Opera browser, Lotus123 spreadsheet programs.

Where are those software companies now? In those days I already find that software companies a specially Operating system builders should stay in the terrain the government approved them to operate in.

Like I sad I can write books about Microsoft. With other engineers I can explain this easy but for non-technicians you can only give a simplified example like this: Imagine when a big car company (Microsoft) has all the oil refineries and they could make a kind of petrol (operating system), that nobody know what precisely was in it (millions of line of source code never made public).

Then their cars (application software) would work fine but every other car manufacturers could not make cars that drive properly on their fuel. Then they (Microsoft) could sell expensive tools (design software) and education (Microsoft certificates) to competitor car manufactures. They could easily change the fuel (faster and more stable then before as they say) every year so you will have to buy a new car every year.

For computer users witch the majority of them are non-technical a demonstration on a

15 year old computer will demonstrate quickly how Microsoft didn't gave the users better products or technology but how they only found a perfect way in selling upgrades and "new" products.

I hope that my letter is understood and contributes in setting the software industry on the right track by the government so that the consumers and the industry can profit healthy competition.

Best regards,
Ing. E. Dekkers
Sweelincklaan 250

My first computer came with a copy Digital Research's Operating System and I can testify to the fact that misleading error messages were reported when trying to install Windows 3.1. I found DR-DOS to be a much better operating system than MS-DOS (for instance, unlike DR-DOS, MS-DOS's "undelete" utility would only work on one file per directory). I was much chagrined when I could not get a copy of DR-DOS for my second computer, since I could not find any manufacturer that didn't force a copy of Microsoft's OS on me.

Being a new developer at the time, I tired of the constant rebooting the Microsoft Windows 3.1 required whenever a problem in one of my programs surfaced. On the advice of a workmate, I switched to IBM's OS/2. I couldn't find a system with the OS pre-installed, so I spent 16 hours doing it myself. I was amazed at the stability, intuitiveness and integration of OS/2 compared to Windows. Eventually, I gave up on OS/2 due to the lack of community support.

Now I use Linux. I've learned to build by own computers in order to avoid the MS Tax. I have seen so many excellent technologies literally pushed out of the market by strong-arm tactics, that I refuse rely on MS products. I do have one system that dual boots to Win95 so that my children can play games, but even that was a hassle since MS products will not run unless installed on the first partition. I cannot arrange MY partitions as I like. In other words, even if you build your own computers, anything that touches MS will be corrupted by MS. I still use Netscape, because it is the only browser I have that support multiple platforms. I can use it on OS/2, and now use it on Windows, Linux, and my Sun Workstation at work. MS torpedoed Netscape—killing a strong innovative competitor by dumping an inferior product on the market and then using its OS monopoly to force IE down OEM's throats. MS will continue to torpedo anyone that threatens their monopoly in even the slightest way. The courts must curtail this behavior if any technology company other than MS is ever to survive. I see only one way for this to occur. The courts must:

1) Require Microsoft to publish and make freely available all technical specifications

for default saved data formats. People should not feel coerced into using MS products because only MS products can deal with the documents that the PEOPLE have created. People should be able to share the information they create for themselves with others who choose to purchase from competitors of MS. Most everyone saves their data in the default data format chosen by the program. MS could keep their '.doc' format closed, but make '.rtf' (which is just as capable, but open to all) the default.

2) Remove any restrictive licensing or discriminatory pricing, including volume pricing, that would coerce an OEM manufacturer to only ship MS products.

This includes the 'dual boot' restrictions as well as any other hidden clauses in their 'trade secret' contracts. Once Microsoft has sold the product, it should be out of their hands, just like a physical good. And allowing them to force an OEM out of the market by raising the price of a monopoly product by \$100 (when the profit from a system is \$50) is a total miscarriage of justice.

In short, make MS products play nice with the rest of the world and then let the market decide.

It is impossible to put the market back to where it was when I fell in love with DR-DOS, and OS/2 will probably never come back. But Microsoft cannot be allowed to continue forcing productive, innovative companies out of the market. I still —

I think it's unfortunate that logic and common sense are taking a backseat to dollars and cents in this ongoing travesty. Anyone who's willing to be truly OBJECTIVE can clearly determine from the findings of fact, that Microsoft is guilty as charged. Additionally, if one is willing to go outside of this particular case and look at Microsoft's historical business practice of stifling and/or squashing the competition, there can be no doubt as to their predatory nature.

When any one company dominates a market the way Microsoft dominates the PC industry, they're in a perfect position to control that market and move it in whatever direction they should choose. Far from encouraging competition and innovation, Microsoft is ideally situated to nip it in the bud before it can ever pose a threat to their own proprietary (and quite often inferior) software solutions. NO COMPANY should be able to exercise that kind of power!

Lest you think I'm completely anti-Microsoft, allow me to say that I AM a user and a fan of Microsoft Office. However, I use Office on the Macintosh platform, NOT Windows! Microsoft to it's credit, has established a separate business unit for the exclusive purpose of developing software for the Mac. Although the cynic in me sometimes wonders if that isn't more to appease the Department of Justice than it is to support a competing platform. I don't doubt that Microsoft's support of the Mac is somewhat out of necessity. Were they to withdraw any further development of Mac-compatible software, they would only further paint themselves into the monopoly corner. I implore the powers-that-be to not cave in to special interests on this one. Don't let Microsoft's enormous wealth and influence dictate your decision. This is about justice and free choice. The consumer should have access to the best and most cost effective software solutions available at any given time. That's only going to happen if you step up to the plate and rein in the 800lb Gorilla that is Microsoft!

Dear Ms. Renata Hesse:

As a conservative republican, I'm going to go against my uninformed colleagues, and strongly support any action taken to punish Microsoft. I am also a software engineer. The fact is, that Microsoft has single-handedly and significantly lowered standards for software in the industry. They consistently engage in illegal business practices that stifle innovation. Microsoft doesn't innovate—they

wait for someone else to bring innovative products to market, copy that product (with a low-quality imitation), and then leverage that product with an operating system that was brought to the market in the same way. Anyone who brings an innovative idea into the software market is therefore driven out of business. Bill Clinton and Microsoft prove that competence is unimportant, marketing is much more reliable.

Let these guys settle things in the market place. AOL is just a crybaby. Remember, Time Warner is the company that brought us all those CDs advocating killing cops. From a moralistic point of view—they are the

worst kind of trash. They do not need protection, they need some of their own medicine.

Cheers, David

Subject: Get your fat asses out of the free market !!!

To whom it may concern, The total and unfounded harassment by this increasingly socialist government has got to end. This latest travesty against Microsoft is pure bullshit and will continue to weaken one of the best job creating businesses the country still has. The companies that have pushed to keep harassing Microsoft should get out of the free market system and go to China if they need the government to carry them. If the government is really interested in looking into monopolies, how about starting with the public school system, which is REALLY a monopoly !!!!!

Subject: Microsoft Settlement

To Whom It May Concern:

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future. The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions. Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general. While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for

settlement's sake. A wrong that is not corrected is compounded.

Sincerely,
Hayden Schultz

Subject: Microsoft Settlement
"...exclusionary agreements..."

This is the fundamental argument that the Justice Department claims as the basis for its case against Microsoft. It is pure hypocrisy that a "monopoly" can exist with only, "exclusionary agreements." The D of J is absolutely correct, Microsoft and computer companies "agreed" that in order for those same computer companies to sell Microsoft software they would have to agree to limit their service to other computer companies. They, the computer companies, "agreed." Let's see, every retail industry I know of, food, housewares, home improvement, etc., practices the same exact policy. Why is it, that my corner grocer only carries a couple of specific brands of cereals? When I ask, they state they only "want" to sell the big names because if they bring in competition they could be "dropped" by the big guys, as a distributor. Welcome to America. If you want to have a better operating system, write one, and get the \$\$\$ behind it to get some computer companies to buy it. With PC's being commodity items these days there is no longer any barrier. Any Tom, Dick or Harry can start a PC company and sell PC's...and get into an agreement with another operating system software company. Sure, the odds are against it. Microsoft has done such a good job convincing the public that their software, which is really not that good, is the best. They won at the American game...and now America—more accurately the D of J wants to punish it. The cry babies at Netscape and the other hacks are smart. Why bother trying to be innovative, not just in developing a better mousetrap (operating system), but in packaging and marketing it to the public. It's not necessary. The guilt ridden people in our D or J will lead the way in bringing the rebel Microsoft (the most successful company of all time) and it's lunatic chairman (the greatest philanthropist of all time...measured by \$\$\$ given away) to their knees. Social control of our software industry will clearly bring about better systems for the little people. Hey, Mussolini made the trains run on time.

Thank you.

Under the Tunney Act, we wish to comment on the proposed Microsoft settlement. I agree with the problems identified in Dan Kegel's analysis (on the Web at <http://www.kegel.com/remedy/remedy2.html>), namely:

- * The PFJ doesn't take into account Windows-compatible competing operating systems
- * Microsoft increases the Applications Barrier to Entry by using restrictive license terms and intentional incompatibilities. Yet the PFJ fails to prohibit this, and even contributes to this part of the Applications Barrier to Entry.

- * The PFJ Contains Misleading and Overly Narrow Definitions and Provisions

- * The PFJ supposedly makes Microsoft publish its secret APIs, but it defines "API" so narrowly that many important APIs are not covered.

- * The PFJ supposedly allows users to replace Microsoft Middleware with competing middleware, but it defines "Microsoft Middleware" so narrowly that the next version of Windows might not be covered at all.

- * The PFJ allows users to replace Microsoft Java with a competitor's product—but Microsoft is replacing Java with .NET. The PFJ should therefore allow users to replace Microsoft.NET with competing middleware.

- * The PFJ supposedly applies to "Windows", but it defines that term so narrowly that it doesn't cover Windows XP Tablet PC Edition, Windows CE, Pocket PC, or the X-Box—operating systems that all use the Win32 API and are advertised as being "Windows Powered".

- * The PFJ fails to require advance notice of technical requirements, allowing Microsoft to bypass all competing middleware simply by changing the requirements shortly before the deadline, and not informing ISVs.

- * The PFJ requires Microsoft to release API documentation to ISVs so they can create compatible middleware—but only after the deadline for the ISVs to demonstrate that their middleware is compatible.

- * The PFJ requires Microsoft to release API documentation—but prohibits competitors from using this documentation to help make their operating systems compatible with Windows.

- * The PFJ does not require Microsoft to release documentation about the format of Microsoft Office documents.

- * The PFJ does not require Microsoft to list which software patents protect the Windows APIs. This leaves Windows-compatible operating systems in an uncertain state: are they, or are they not infringing on Microsoft software patents? This can scare away potential users.

- * The PFJ Fails to Prohibit Anticompetitive License Terms currently used by Microsoft

- * Microsoft currently uses restrictive licensing terms to keep Open Source apps from running on Windows.

- * Microsoft currently uses restrictive licensing terms to keep Windows apps from running on competing operating systems.

- * Microsoft's enterprise license agreements (used by large companies, state governments,

and universities) charge by the number of computers which could run a Microsoft operating system—even for computers running competing operating systems such as Linux! (Similar licenses to OEMs were once banned by the 1994 consent decree.)

- * The PFJ Fails to Prohibit Intentional Incompatibilities Historically Used by Microsoft

- * Microsoft has in the past inserted intentional incompatibilities in its applications to keep them from running on competing operating systems.

- * The PFJ Fails to Prohibit Anticompetitive Practices Towards OEMs

- * The PFJ allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system.

- * The PFJ allows Microsoft to discriminate against small OEMs—including regional "white box" OEMs which are historically the most willing to install competing operating systems—who ship competing software.

- * The PFJ allows Microsoft to offer discounts on Windows (MDAs) to OEMs based on criteria like sales of Microsoft Office or Pocket PC systems. This allows Microsoft to leverage its monopoly on Intel-compatible operating systems to increase its market share in other areas.

- * The PFJ as currently written appears to lack an effective enforcement mechanism. I also agree with the conclusion reached by that document, namely that the Proposed Final Judgment, as written, allows and encourages significant anticompetitive practices to continue, would delay the emergence of competing Windows-compatible operating systems, and is therefore not in the public interest. It should not be adopted without substantial revision to address these problems

As a computer professional in the with 15 years experience in the field, I would like to take the time to comment briefly under the Tunney Act on the proposed Microsoft settlement. My computing work today is on a competing product to Microsoft—the Linux operating system. I am concerned that the Proposed Final Judgment as laid out does little to ensure there won't be a strong counterattack against my operating system of choice. Should the Proposed Final Judgment be accepted it would be of little surprise that a free and open operating system would suffer a significant set back because of litigation from a (currently) quite Microsoft. In many places Microsoft has identified this OS as it's number one competitor. Although Linux has strength in numbers it has major weakness in finance. I anticipate its

downfall should the Proposed Final Judgment not be strengthened. The specific area that I would like to see addressed is the use of restrictive licenses to keep Windows applications from running on competitive operating systems. (see <http://www.kegel.com/remedy/remedy2.html#isv.atl>)

I can't believe the proposals that I had heard you were settling for were even being considered. There is no consideration for punishment of illegal activity. Since when does a parolee have any say in who the parole officer is? ... in regards to Microsoft being allowed to have a say in the picking of the panel that will be monitoring their future activity. There are more holes in the agreement (concerning future practices by Microsoft) than there are stars in the sky; an Microsoft knows this, which is why they are so eager to settle. In conclusion, the solutions suggested by the DOJ may as well have been written by Microsoft (assuming that they weren't...) for all of the good they will do in restoring competition to the marketplace. When I see this type of failure in the system that I am supposed to trust to protect me, as a U.S. citizen, consumer, and taxpayer, it makes me wonder where my tax dollars really are going, because they obviously aren't being spent to protect me from predatory corporations.

 Subject: Comment on Microsoft Settlement

I am outraged at Microsoft's offer to buy its way out of its antitrust conviction by giving away Microsoft software. Quite apart from the fact that Microsoft is overstating the value of its products, this action would have the effect of extending Microsoft's monopoly control even farther. My wife graduated college not long ago. She was REQUIRED to take a course in Microsoft Office products as part of her degree program. To me, this proves that Microsoft already has too much influence in the academic world. For Microsoft to give its software to schools would extend this bias even further. There are alternatives to using Microsoft products. Any settlement in the Microsoft antitrust case should have the effect of encouraging competition in the marketplace, not eliminating it.

To the honorable Judge Kollar-Kotally
Dear Your Honor:

I am a US citizen who has been a consumer of Microsoft products since I first began to use computers in 1983. I also work for Oracle Corporation, which is a competitor of Microsoft's. However, my judgments and opinions are my own, and this electronic mail message is not motivated by my employer, but by my technical and social conscience. I strongly feel that the proposed final judgment against Microsoft is thoroughly inadequate and will not effectively achieve the stated goals (to terminate the legally recognized monopoly, to prevent future anticompetitive behavior and to deny the company the use of benefits attained through its illegal activity). I was very concerned when I heard Microsoft's proposal to provide schools with computers and equipment, as this not only provides Microsoft with goodwill from the public (unmeasurable legally) but also allows that company access to a market traditionally held strongly by Apple Computer, a Microsoft competitor. Apple is a company of

substantial technical innovation? in fact, most of Microsoft's successes were first invented or widely distributed as part of Apple's operating systems or software. Further reducing Apple's market share by allowing Microsoft to supply (and thereby influence directly and indirectly) schools would be a painful blow and counterproductive to two of the three goals of the settlement. Microsoft's insistence that the operating system cannot be separated from the browser is pure poppycock. As a software developer with knowledge of Windows in each of its versions from 3.1 onward, this is a manufactured reliance. Current Windows operating systems do not benefit greatly from this new reliance? in fact, it hinders speed and thrusts a Web-paradigm graphic user interface on you that is difficult to suppress and counterintuitive. The concept of settling for icons being placed on the desktop and concern for whether or not Microsoft will allow OEMs and resellers to have their product icons on the desktop misses the essential point. This concern faces on appearances, not function or usability. Truly it only affects those computer users who might not know how to put icons on or off the desktop. I would like my PC to not have the Internet Explorer browser on it at all? but MS has made that impossible, citing it as a requirement when it had not been before.

Microsoft takes the concept of security as a minor concern. Yet their operating systems and Web browsers are incredibly insecure, opening up users to likely harm from external sources. I would like to rid myself of such concerns by removing their buggy browser from my area of concern. I want it off! I don't just want to remove the icon. This has not in the least been addressed. Like it or not, Microsoft's anticompetitive aggressive entry into the browser market crushed the success of thousands of small but efficient Web browsers and reduced the playing field to two six-hundred-pound gorillas. We consumers have suffered. I could write on and on for hours, but please understand that my concern is that the agreement does not punish Microsoft or prohibit them from enjoying the market share or software monopoly they have attained by leveraging their anticompetitive practices, nor are the few remedies proposed easily enforced. Please remember Mr. Gates' obvious scorn for the legal process, and his condescending attitude throughout the process and scurrilous disregard for applying the stated laws to himself and his company. Consider this as you address the binding final judgment, which I urge you to revise more strongly. This is not about the economy. This is about long-standing wrong-doing, unpunished, unrepentant shark-like behavior, and the desire to twist and spin any aspect into a market driver to improve this company's success.

Respectfully,
Samuel H. Besalel
Private citizen, software consumer,
software developer

I think the proposed Microsoft settlement is bad idea. It does no discernable harm to Microsoft. I thought the settlement was meant to punish Microsoft for anti-trade practices and this settlement only helps Microsoft reach deeper into the education market. I disapprove completely.

Dear Ms. Renata Hesse:

Please put a stop to the economically-draining witch-hunt against Microsoft. This has gone on long enough. Microsoft has already agreed to hide its Internet Explorer icon from the desktop; the fact is, this case against Microsoft is little more than "welfare" for Netscape and other Microsoft competitors, with not a nickel going to those supposedly harmed by Microsoft: the computer user. This is just another method for states to get free money, and a terrible precedent for the future, not only in terms of computer technology, but all sorts of innovations in the most dynamic industry the world has ever seen. Please put a stop to this travesty of justice now. Thank you.

To whom it may concern,
Please end the prosecution of Microsoft. It has gone far enough. I am not a Microsoft stock holder, however, I do believe that their ultimate costs, and thus their eventual cost of goods to me, will continue to go up if the government continues to litigate. Instead, please pursue further treasonous actions by the Clinton administration, especially the quid-pro-quo with Loral, Inc. and the transfer

of info to the Chinese. This is far more damaging to the security of the United States than Microsoft ever will be.

Thank you

Subject: As a concerned US citizen and resident of New York, I support the Microsoft

As a concerned US citizen and resident of New York, I support the Microsoft settlement that would provide \$1 billion in software to our nation's schools and finally put this mess behind us. This entire case was clearly contrived by Microsoft's corporate entities who have used the US government and my tax dollars as a tool to improve their competitive position in a market that, I would argue, was moving in the right direction before the government intervened. It is time to finally end this madness and in addition to that, get the 9 state attorneys general who are holding out on board with the settlement—at least the proposed \$1 billion donation will add value to our public schools. This is just my view as a concerned citizen in response to the invitation for public comment. Thank you.

Subject: Microsoft Settlement

Under the Tunney Act, we wish to comment on the proposed Microsoft settlement. I agree with the problems identified in Dan Kegele's analysis (on the Web at <<http://www.kegele.com/remedy/remedy2.html>>), namely: *The PFJ doesn't take into account Windows-compatible competing operating systems *Microsoft increases the Applications Barrier to Entry by using restrictive license terms and intentional incompatibilities. Yet the PFJ fails to prohibit this, and even contributes to this part of the Applications Barrier to Entry. *The PFJ Contains Misleading and Overly Narrow Definitions and Provisions *The PFJ supposedly makes Microsoft publish its secret APIs, but it defines "API" so narrowly that many important APIs are not covered. *The PFJ supposedly allows users to replace Microsoft Middleware with competing middleware, but it defines "Microsoft Middleware" so narrowly that the next version of Windows might not be covered at all. *The PFJ allows users to replace Microsoft Java with a competitor's product—but Microsoft is replacing Java with .NET. The PFJ should therefore allow users to replace Microsoft.NET with competing middleware. *The PFJ supposedly applies to "Windows", but it defines that term so narrowly that it doesn't cover Windows XP Tablet PC Edition, Windows CE, Pocket PC, or the X-Box—operating systems that all use the Win32 API and are advertised as being "Windows Powered". *The PFJ fails to require advance notice of technical requirements, allowing Microsoft to bypass all competing middleware simply by changing the requirements shortly before the deadline, and not informing ISVs. *The PFJ requires Microsoft to release API documentation to ISVs so they can create compatible middleware—but only after the deadline for the ISVs to demonstrate that their middleware is compatible. *The PFJ requires Microsoft to release API documentation—but prohibits competitors from using this documentation to help make their operating systems compatible with Windows. *The PFJ does not require

Microsoft to list which software patents protect the Windows APIs. This leaves Windows-compatible operating systems in an uncertain state: are they, or are they not infringing on Microsoft software patents? This can scare away potential users. *The PFJ Fails to Prohibit Anticompetitive License Terms currently used by Microsoft *Microsoft currently uses restrictive licensing terms to keep Open Source apps from running on Windows. *Microsoft currently uses restrictive licensing terms to keep Windows apps from running on competing operating systems. *Microsoft's enterprise license agreements (used by large companies, state governments, and universities) charge by the number of computers which could run a Microsoft operating system—even for computers running competing operating systems such as Linux! (Similar licenses to OEMs were once banned by the 1994 consent decree.) *The PFJ Fails to Prohibit Intentional Incompatibilities Historically Used by Microsoft *Microsoft has in the past inserted intentional incompatibilities in its applications to keep them from running on competing operating systems. *The PFJ Fails to Prohibit Anticompetitive Practices Towards OEMs *The PFJ allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system. *The PFJ allows Microsoft to discriminate against small OEMs— including regional "white box" OEMs which are historically the most willing to install competing operating systems—who ship competing software. *The PFJ allows Microsoft to offer discounts on Windows (MDAs) to OEMs based on criteria like sales of Microsoft Office or Pocket PC systems. This allows Microsoft to leverage its monopoly on Intel-compatible operating systems to increase its market share in other areas. *The PFJ as currently written appears to lack an effective enforcement mechanism.

I also agree with the conclusion reached by that document, namely that the Proposed Final Judgment, as written, allows and encourages significant anticompetitive practices to continue, would delay the emergence of competing Windows-compatible operating systems, and is therefore not in the public interest. It should not be adopted without substantial revision to address these problems.

Sincerely,

Donald A. Conner, Austin, Texas, Software Engineer, Catalyst Solutions

To whom it may concern,

I have followed the Microsoft case very carefully, and I am very disappointed with the way the case has progressed. I have yet to see any evidence of how consumers were harmed by Microsoft including a Browser with their OS. In fact IBM's Warp OS 2 came out before Windows 95 and it also included a browser. Why wasn't IBM included in the lawsuit? This legal battle was never about the

protecting the consumer, it was about protecting competitors of Microsoft. If there are so many consumers that have been harmed by Microsoft why don't they buy a Mac or use Linux. Even though you have painted Microsoft as a Monopoly they are not the only operating system in town. Let the market decide!!! Stay away from my OS!!!

From: Kent Klaser
To: Microsoft ATR
Date: 1/24/02 9:43am
Subject: Microsoft Settlement
To Whom It May Concern:

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future. The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions.

Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization

is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general. While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded.

Sincerely,
Kent Klaser

From: Howard Uman
To: Microsoft ATR
Date: 1/24/02 9:44am
Subject: Microsoft Settlement

I think that the settlement is absurd. Microsoft has done damage to companies I've worked for and companies I will work for in the future. It's insane to allow a company like Microsoft to leverage Windows and bust up areas of viable business by claiming "extension to the operating system". There are many examples of this:

1. Internet Explorer
2. Media Player
3. CD recording

And the list will continue to go on and on. An operating system, by definition, allows computer software to interact with hardware through some form of user interface. That's it. These other features, while they may be handy, are certainly extraneous to an operating system and are definitely outside of the definition of what Microsoft is selling. This allows them to force other players out of markets and charging more for the "value-add". Thanks for taking the time to consider my opinion in regards to the settlement. Feel free to contact me with any questions or comments.

Sincerely,
Howard Uman ~

Dear Ms. Renata Hesse:

Please put a stop to the economically-draining witch-hunt against Microsoft. This has gone on long enough. Microsoft has already agreed to hide its Internet Explorer icon from the desktop; the fact is, this case against Microsoft is little more than "welfare" for Netscape and other Microsoft competitors, with not a nickel going to those supposedly harmed by Microsoft: the computer user. This is just another method for states to get free money, and a terrible precedent for the future, not only in terms of computer technology, but all sorts of innovations in the most dynamic industry the world has ever seen. Please put a stop to this travesty of justice now. Thank you.

Sincerely,

Subject: Microsoft Settlement

Dear Sir,

I would like to write a note to express my opposition to the proposed Microsoft settlement. I believe the settlement does a poor job of adequately remediating Microsoft's anticompetitive practices. One example of this is Microsoft's practice of charging site licenses (to large businesses) for each computer which could run the Windows operating system, regardless of

whether or not the Windows operating system in fact is installed on all of them. Further, I think the definition of "Windows Operating System Product" spelled out in the Proposed Final Judgement is too limited; and does not include 'Windows XP Tablet PC' or 'Windows CE'. Too, I think the definition of "Microsoft Middleware Product" should be broadened to include Microsoft .NET, C#, Microsoft Outlook, and Microsoft Office. Microsoft should be required to document file formats; file formats are an important barrier to entry for developers of applications. For these reasons and others, I believe the Proposed Final Judgement is bad for consumers and businesses and should be rejected.

Respectfully,
Scott McMullen

To whom it may concern, As a tax payer I am appalled at the litigious fashion in which the Department of Justice is limiting the ability of a company to compete in an open competitive market place. I for one do not feel harmed by Microsoft and its business practices, and feel that their business practice has only succeeded in bringing to the consumer exceptional products at competitive prices. It is a joke that any company that can and has not delivered been able to compete evenly simply files suit again and again.

From: Harmon, Dale
To: 'microsoft.atr(a)usdoj.gov'
Date: 1/24/02 9:46am
Subject: Microsoft Settlement
Sirs:

With respect to any proposed settlement, it is my observation (and the court's) that with respect to PC operating systems, Microsoft has an effective monopoly. As such the most recently released Microsoft operating systems only compete with previously released versions. Microsoft's pricing policy makes this apparent in that there is no discount or reduction in the price of older operating systems. My recommendation is that Microsoft be required to sell previous versions of the Windows operating system at a fixed discount relative to the price Microsoft sets for the most recently released Windows operating system. (I suggest 20%, 40%, & 60%.) Further, if Microsoft chooses to stop selling and/or supporting an older operating system, then that operating software should be considered to be in the "public domain." In summary, first Microsoft should be required to sell older operating system software at a reduced price relative to the most recently released operating system software. Second, if Microsoft no longer wants to sell and/or support older software, then other individuals and/or companies should be able to freely copy and use that software.

Respectfully yours,
Dale L. Harmon

Subject: Microsoft Settlement
To Whom It May Concern:

Please get this misguided effort at courtroom competition over. We have had computers in our home since our first TRS-80 (Radio Shack sale) since 1977. There are plenty of options for the consumer if he so chooses. Personally, I do not want to have to go back to having to buy a different software for each computer because they all become proprietary.

Once upon a time we had a Magnavox system. It had a proprietary OS (not windows-which was available) and proprietary applications (word processing, spreadsheet solution, database manager) Then one day we got a card in the mail saying...too bad folks. We have decided not to support this system anymore. We have been running Microsoft software by choice since then. We could have purchased other software, it was our choice as a consumer. It was painful (the proprietary stuff from Magnavox was not compatible with any other software. All the information had to be rekeyed...not fun) and expensive. There were cheaper alternatives, as well as more expensive ones (IBM). This was our choice. We like millions of other people voted with our dollars. By the way, we run Internet Explorer, Netscape, and several other browsers, although Internet Explorer is our favorite. This witch-hunt is destroying a segment of our economy and hurting the consumer. You have put millions of people's livelihoods at risk by this nonsense. End it. Force the settlement on the States and let the market get back to innovating new stuff for us consumers. The industry nor the

government is responsible for the consumers understanding of software. If a consumer is not informed enough to make a good decision, it is the consumers responsibility to do the research necessary to make the purchase.

MTC-00021027

From: Rick Horowitz
To: Microsoft ATR
Date: 1/24/02 9:46am
Subject: Microsoft Settlement

I would like to comment on the Microsoft settlement based on my over 20 years of experience in the computer, networking, and Internet industries. In my view, the breakup of Microsoft into two companies is mandated—an OS company and a company allowed to sell applications and provide Internet services. Microsoft's domination of the operating system market will likely increase with the introduction of Windows XP because it will eliminate the incompatibilities suffered by their previous lineup of operating systems. Apple's OS-X does not have sufficient market share to draw application developers onto their platform in sufficient numbers to compete with Microsoft in many application areas, hence will likely only garner marginal market share forever, or at least for a long time to come.

Linux is the only operating system that has sufficient mindshare in the developer community to obtain the necessary applications in a broad range of application areas. However, due to the disconnected nature of Linux development (thousands of loosely coupled developers worldwide), the user experience is not nearly as good as Windows or Macintosh. Linux has made significant inroads as a server OS, but has lagged on the desktop for this reason. My own experience with these operating systems

leads me to believe that it will take at least 2 more years for Linux to provide a good enough desktop user experience to allow it to compete with Microsoft on the desktop. At that point it will still have to make the leap from hacker OS to mainstream, something that will probably prove impossible without significant marketing dollars. This funding is unlikely to become available post-Internet bust. Companies such as Redhat have small capital bases on which to draw, and there simply is not enough profit potential in desktop Linux to fund its marketing in a large way—even should Linux mature to the point to which it provides a comparable user experience to Microsoft.

In conclusion, Microsoft has been found to use it OS to unfairly leverage its application and Internet businesses to the detriment of competing companies and users, a finding which I find matches my own experience over 20 years. This practice can be stopped by splitting the company along this line—OS on one side, applications and Internet along the other side, allowing application vendors to fairly compete with Microsoft in the application space. This will lower prices and provide more choice for consumers, as Microsoft's enormous operating margin will most likely be reduced over time to more industry-typical levels.

Subject: End the Monopoly

With all due respect,

I strongly oppose the USDOJ's settlement with Microsoft. The settlement, to my knowledge, does nothing to end this company's monopoly of PC OS software. To truly create competition in operating system software, Microsoft should be forced to reveal its APIs and Windows source code to the extent that programmers can adapt other operating systems to natively run applications designed for Windows in their own OS. This would include UNIX, MacOS, Linux, OS2, and all the other great operating systems that have struggled to survive despite Microsoft's anticompetitive monopolistic practices. As for Microsoft's other misdeeds, the company should be forced to release software that gives the user more control over what components are part of Windows. For example—I hate Internet Explorer and want it off my computer. I despise IE and the hidden index.dat files that it saves in my Temporary Internet Files/content.ie5 and History/history.ie5 hidden folders, and I want the option of removing this extraneous software that I consider malicious code. I also believe that the authorization component for Windows XP should be removed because ***I should not have to tell a software company if I am uninstalling software from one computer and installing it on another***—this is a blatant violation of my privacy and a betrayal of a "captive audience," namely the computing public. Please bring this company to justice and end its monopoly.

January 14, 2002 Attorney General
John Ashcroft US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

I am writing to express my support for Microsoft's antitrust settlement with the federal government. Microsoft's willingness to settle this ordeal and save the taxpayer money should be commended. The terms of the settlement are more than fair to Microsoft's competitors. Microsoft will share information with competitors about the internal workings of Windows, which will allow the other companies to more easily place their own software on the operating system. Also, Microsoft will be bound by a uniform price list when licensing Windows out to the largest twenty computer makers in the nation. Clearly, this is more than just a slap on Microsoft's wrists.

I think this settlement is fair and equitable, and I hope it is quickly approved. Thank you for your time and consideration.

To whom it may concern,

As a daily user of Microsoft products I need to let you know how I feel about their services. I work in an office of about 80 in NY and 250 globally. We all have Microsoft products on our machines and use the products willingly and eagerly. If the products were not cutting edge and extremely useful, we would have no use for them.

The fact that the DOJ feels it should "protect" me from Microsoft is abhorrent. Both my workplace and my family have decided to deal with Microsoft as consumers. Microsoft is not in the business of coercion. If they were, they would not last in the marketplace. The fact that so many people willingly purchase Microsoft products is evidence that they are a successful business, not some kind of predator.

The only monopoly involved in this situation is the government monopoly on the use of force. A proper monopoly on the use of force which has no place in business. The US Government is in the business of protecting Americans, not attacking them. Please keep it that way. The government must not be involved in private business when both parties deal with each other through trade. Microsoft's success should not be destroyed, but commended.

Sincerely,
Jon Jurik

Subject: AOL Files Private Suit against Microsoft

Hi, I just wanted to express my feelings on the new law suit filed by AOL against Microsoft. I hope that the court throws the suit out. Microsoft has not hurt AOL/ Netscape. I use Microsoft products because I like the look and feel of their products and I know that they are out to make my life better. If AOL came out with a better product, I would use it. I have friends who use AOL and that is ok by me. When Microsoft hooked up their version of Instance Messenger to work with AOL's Instance Messenger, my friends and I were very excited. AOL on the other hand was not and modified their software to not work with Microsoft. AOL did not think about the benefit of allowing my friends and I talk, they only wanted to create their own monopoly and they went out of their way to make sure that their software would not work with Microsoft. AOL is trying to force the American people to use AOL where Microsoft is providing products that working to integrate with AOL and provide a better user experience. When AOL modified their software so that it would not work with Microsoft Instance Messenger, this move cost AOL some of my friends support. AOL instead of looking out for the consumer's welfare thinks only of themselves.

They had plenty of opportunity to work with Microsoft and they choose not to. They could work on creating user friendly products but instead of trying to compete in the market, they try to destroy Microsoft through the court system. I find it very appalling that the DOJ has taken sides with companies such as AOL against the American people. Not only are companies like AOL trying to destroy Microsoft so that they do not have to create products of value, but by the consent of DOJ, companies such as AOL and the DOJ are draining money from Microsoft that could have been directed at making better products for the world. Over the years, the US Justice System has gone down hill and it is about time that somebody worked on a reform. When the whole world is crashing around our ears and the DOJ continues to work with companies such as AOL, Sun, and Oracle to destroy a company who's makes better products then they do is flat out wrong. To allow people that are filled with hate (and yes, the word is not even close to strong enough), let me repeat, HATE Microsoft, they are not out for the welfare of the American people, they have only one addenda in mind and that is to destroy Microsoft. Please do not let this happen. If nothing else, a class action law suite needs to be brought against companies like AOL, Sun, and Oracle for the harm they have done to Microsoft and the American people by using the courts instead of producing a better and affordable product in the market place.

Microsoft has NEVER forced me to use their products. It is very easy to install any product on my system that I need / want to use. AOL on the other hand, not only is trying to force people to use their product in order to talk with their friends, but they are actively trying to destroy the concept of free enterprise. Please stop the madness. Please quit hurting the American people and kick these cases out of the court.

Thanks for your time,
George

Subject: Microsoft Settlement

To Whom it may concern:

I am a member of the IT community and am writing to you today to make my feelings known on the Microsoft Settlement proposed on November 06, 2001. As I stated, I am a member of the IT community and work for Duke University in Durham, NC. Everyone else in my department uses Windows for their desktop Operating System; I use Red Hat Linux. I do this because I have a boss who understands the importance of choice and because I realize there are alternatives available to me. Unfortunately, I don't believe everyone has the same luxury.

I don't believe that Microsoft Outlook is the number one email client or that Internet Explorer is the number one web browser because they're the best. I believe that they're number one because of questionable business practices, including tactics to ensure customers aren't aware of alternatives, leading to the building and maintaining of a monopoly by Microsoft. Fortunately, the Courts agreed and have found Microsoft guilty.

Following the verdict finding Microsoft guilty, I have read the proposed settlement. Although I believe the settlement tries to go in the right direction, I feel that, in its present wording, it is unable to effectively prevent Microsoft from continuing its monopoly. I ask that you reconsider the conditions and the wording in the settlement, and ensure that Microsoft does not continue its anti-competitive practices. I know that we are all ready to put this behind us, however, I strongly believe that there are better solutions out there than Microsoft, and by leaving the settlement conditions as they stand now, you are ensuring that people will continue to be denied the knowledge of these choices. Thank you for your time in this matter.

Sincerely,
M. Brian Johnson

Subject: Microsoft Settlement

To whom it may concern,

I write to air my feelings on the subject of the Microsoft Settlement. Unfortunately, I am not a US citizen and therefore it is very probable that my opinions are entirely irrelevant; however, I am an IT consultant and currently completing a University postgraduate degree in human-computer-communication. I am very aware that the actions of Microsoft are likely to determine the nature of the technology with which I

work daily, due to their almost total domination of the industry. This, therefore, is a global issue, and I feel that I have a right to speak out. I am not entirely satisfied with the settlement terms that I have so far seen. In my opinion, the most important points to keep in mind are:

1 * INDEPENDENTLY documented standards for communication protocols should be required.

2 * Documentation should not be withheld for any reason whatsoever, be it a question of security or any other subject.

3 * Proprietary extensions should stay optional. ActiveX is not indispensable—it is therefore not a "reasonable technical requirement", as Microsoft would claim, but a "luxury". Adaption of common protocols is to some extent reasonable, but it should be understood—and I'm sure it is—that Microsoft seldom act with the good of the customer in mind. The same thing can be achieved with non-proprietary standards that are equally secure/whatever, if less pretty. Both methods are acceptable, but neither should reduce interoperability with the other. ActiveX is one of Microsoft's favourite excuses. I expect the wonderfully centralised Passport to develop into another—and I expect that Microsoft will deny interoperability to, for example, free software developers on the grounds that they cannot satisfy so-called "reasonable technical requirements". Just more unfair business practice.

To expand on these issues:

1: No communication protocols (TCP/IP, windows networking, etc etc) should be extended with proprietary extensions unless Microsoft agree to submit a complete description of such protocols for interoperability purposes.

2: Documentation for APIS, communication protocols, etc etc, is NEVER a security risk. Any software company who claims this to be the case is simply acting to "preserve their intellectual property" and they are not telling the truth. Any security risk that appears from documentation appears because the software is ALREADY badly designed and weak. Of course this is often true in the case of Microsoft software—as acknowledged by Gates, quite recently, in the press—but I do not believe that the US DOJ really wishes to allow Microsoft to preserve their "security through obscurity" purposes. Leaving out documentation merely impairs Microsoft's competitors from fair business practices. It does not make it any more difficult for a malicious hacker/virus writer/etc, who is perfectly capable of seeking out security holes without any help from documentation. Do not allow Microsoft to close their APIs or documentation, or communication protocols, for /any reason/. Force them to open them. Let the best software win, not the largest company—or they will stifle the desktop PC industry. Indeed I feel that software such as Passport, which will eventually be an important element in e-commerce, should be documented, checked and audited before use. To do otherwise is to invite disaster.

Finally: a plea—

So much is possible with software that we have as yet barely begun to scratch the

surface; our creativity should know no bounds but imagination. Closing APIs, withholding communications protocols, etc, requires those of us with the ability to realise our dreams of new software to go through years of extra effort—and most of us just don't bother. Forcing the computer user to see the world through Microsoft-coloured eyes is something like censorship—ultimately, the result is the stifling of creativity and freedom, and the eventual stagnation of the industry.

Yours sincerely,

E Tonkin

Dear Ms. Renata Hesse:

Please put a stop to the economically-draining witch-hunt against Microsoft. This has gone on long enough. Microsoft has already agreed to hide its Internet Explorer icon from the desktop; the fact is, this case against Microsoft is little more than "welfare" for Netscape and other Microsoft competitors, with not a nickel going to those supposedly harmed by Microsoft: the computer user. This is just another method for states to get free money, and a terrible precedent for the future, not only in terms of computer technology, but all sorts of innovations in the most dynamic industry the world has ever seen. Please put a stop to this travesty of justice now. Thank you. And let the industry developing the American dream without stupid government meddling!

Dear Ms. Renata Hesse:

Please put a stop to the economically-draining witch-hunt against Microsoft. This has gone on long enough. What is the difference if you make it easy for people to launch free software, or have people download the free software? Microsoft provides a service by bundling the I.E.. AOL/TimeWarner offers Netscape for free as well, the difference is you download it. As a reseller, I am licensed to bundle Netscape with my own Banners etc, and any computer manufacturer/seller can pre-install the Netscape browser also. There is no conflict with having both, I use them both simultaneously. Further, when you buy a branded computer, you have all of their pre-installed links, icons, and software favorites as well. Microsoft has already agreed to hide its Internet Explorer icon from the desktop; the fact is, this case against Microsoft is little more than "welfare" for Netscape and other Microsoft competitors, with not a nickel going to those supposedly harmed by Microsoft: the computer user. This is just another method for states to get free money, and a terrible precedent for the future, not only in terms of computer technology, but all sorts of innovations in the most dynamic industry the world has ever seen. What it boils down to is this. Mr. Gates refused to provide the CIA with an open code so that foreign countries who use the MS-Operating system could unknowingly be hacked or spied upon by the CIA, and this agency wanted Bill Gates to provide them with a back door for covert operations. While Mr. Gates is a patriot, he felt that it would place

a serious mistrust in all of the software used around the world. It would cause the enemies of this country to do more innovative security measures making it more difficult to spy than it currently is. Mr. Gates didn't want to play the good ol boy game and they came down on him. What about Time Warner/AOL/ Netscape? How big does a monopoly have to get before they are brought to their knees? With all the global mergers, National Mergers, who is looking at the competitive disadvantages of the big Communication/oil conglomerates like Gulf Western etc. Or is this just another attempt by the socialist democrats to level a little more wealth? Put a stop to this travesty of justice now. Thank you.

Subject: Microsoft Settlement

Dear Judges-

For a long time this country has trumpeted the concepts of free press, free enterprise and democracy as its cornerstones, when all of the time these three concepts, like everything else in our society, are for sale. Now comes the most important question, "Are you for sale?". As long as you continue to support a legal system where large companies can pollute the environment or sell cancer-causing cigarettes and slip away from true accountability in "settlements" where the findings are never revealed to the public, you judges are all shameful and put your own integrity in doubt. So, will Microsoft continue to be able to sell products which as they are installed prevent or destroy competing products? Will you judges continue to be mired in insignificant technicalities rather than recognizing common sense? How would you react if Toyota or Honda sold only cars which caused your Chevrolet to evaporate when you drove into the garage for the first time? How would you respond if the Ford Motor Company told you that you can no longer get parts or repairs done on your three-year-old Ford because they are now selling a newer Ford, which runs slower, requires more space, and is breaks down more often?

If Microsoft's principal product is now being replaced by an operating system which was created by thousands of volunteers in reaction to what they saw as abuse from Microsoft, are you able to sense the significance of that? I worry that our society's principles have been so corrupted that a small country like Singapore may out-perform and out-produce us by using less valid but uncorrupted principals: for example if their government (using benevolent despotism) decreed that all computers use a Linux operating system.

I worry that our bright volunteers will embarrass Microsoft right out of business, before you judges understand that once you allow Microsoft to dominate (essentially control) the business of repairing or supporting their operating system, they have no reason to create one that doesn't need repair. I remember when there were a dozen American corporations manufacturing cars and no one dominating. The rate of innovation was greater then.

If the US is to compete in the global technology race, we want a dozen pioneering software companies and none large enough to both dominate and drag its feet to make more money at the same time!

Sincerely,
Arthur M. Weber

Subject: Microsoft Settlement

To Whom It May Concern:

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future. The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions.

Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general. While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded.

Dear Sir

Please be advised that I am very upset by the resort to litigation by AOL. The country is being torn apart by the artificial insertial of legal decrees that have nothing to do with the required settlements needed. I request that you facilitate the allowing the companies to work together or else, we will have another situation as in the asbestos, tobacco, pharmaceutical, and Dow silicone situations where major companies are allowed to be destroyed. When are you going to provide leadership and stop this morass of litigation. There will be no companies left if we follow the current legal approach championed by congress supporting the trial lawyers and in the case of MicroSoft supporting state treasuries.

Please do not facilitate the lawyers —STOP IT—Let the 2 companies work it out. We don't need another ENRON!!!

To: Microsoft ATR
Date: 1/24/02 9:54am
Subject: Microsoft Settlement

To Whom It May Concern:

I am vehemently opposed to the proposed settlement with Microsoft. My primary concern is with sections III(D) and III(f)(2), which single out non-profit organizations as the only ones to which 1) it need not describe nor license API, Documentation, or Communications Protocols affecting authentication and authorization and 2) it need not disclose information regarding the APIs for incorporating non-Microsoft "middleware." The Open Source software community is arguably realm where the most software design innovation is occurring. Interoperation with Microsoft products is an important part of any software product, whether it come from a commercial or non-profit organization. Without the above-mentioned disclosures, innovation within the Open Source software community and the community's ability to produce software that can interoperate with Microsoft products will be snuffed out. Open Source software is the backbone of the Internet and provides people with the most choices for what to do with computers. Taking away the Open Source community's ability to compete in the marketplace will irreparably damage innovations in software development. The Open Source community chooses to make its money with software differently than the "commercial" vendors, by charging for services and distribution instead of licensing. That doesn't make them an invalid player in the marketplace.

MTC-00021071

From: David Straub
 To: Microsoft ATR
 Date: 1/24/02 9:56am
 Subject: Microsoft Settlement

The microsoft settlement is not in the public interest because it permits anti-competitive practices to continue, thereby forcing consumers to spend more money than they should for inferior software.

SUBSTANTIATION:

Q1. If Microsoft is so innovative, why do Access 97 databases need to be changed to backwards incompatible Access 2000 databases?

A1. Because they can force you to get the newest version of their software.

1 COMMENTARY: There was a time when new applications offered great improvements and it was worth upgrading. Even so, upgrading should be an option to the user rather than a "have to" because once a co-worker or business associate upgrades, you have to due to incompatibility issues. In contrast, the HTML file format—from the beginning—was upgrade neutral. A version 1 browser could, in theory, read HTML 4 and an HTML 4 browser could read HTML version 1.

Q2. If Microsoft wants to add things to their operating system to improve it (i.e. with Internet Explorer), why has Wordpad never been updated with Word?

A2. Because Microsoft has a monopoly in the word processing market and doesn't need to drive anyone out of business.

2 COMMENTARY: Wordpad has been in Windows from the beginning, yet has not improved at all. Yet Microsoft somehow claims that they had a right to integrate the browser into the operating system while ignoring the word processor.

Q3. Why does Microsoft come out with new versions of their operating system rather

than releasing free service packs to augment the old one?

A3. Because Microsoft has a monopoly in the desktop OS market and a new OS is their license to print money.

3 COMMENTARY: little has changed from windows 95 to xp while there has been 98, 2000 and ME in-between. Perhaps they finally got it better with xp, but are the successive versions worthy of new names or should they have been free upgrades? Is there really that much of a difference between 95 and XP?

Q4: If Microsoft is such an innovator, why have they never come out with an innovative product in their history?

A4. Because they are in the business of extending their monopoly, not writing great software.

4 COMMENTARY: The first program was a copy of basic. They bought DOS from another company. Excel was a copy of Lotus 123. Word was a copy of Wordperfect. Word GUI was made at the request of Apple. Windows was a copy of Apple's OS (which was designed at xerox parc) They had to buy a database program, foxpro, since dbase owned that market. Powerpoint was a copy of Harvard Graphics. We all know what they had to do with the Internet market to catch up, especially with browsers.

Q5: Why doesn't the price of Microsoft operating systems drop over time and why do they become unavailable?

A5. You don't have to change your pricing and policies when there is no competition.

5 COMMENTARY: I have had an occasion to want to buy an old operating system. Perhaps I have some old crummy computer and would like to add an OS for next to nothing. Why can't I buy windows 98 for \$20 today? Why does the price of Windows 2000 stay the same when hardware prices drop every month? Especially considering the fact that—once you make your money back—it is far easier to drop the price on software.

REMEDIES:

1. Bundle Microsoft office with the operating system including selling Windows 98 with office '97 for \$97.50 or less.

2. Require all Microsoft office documents to be forward and backward compatible.

3. Require all Microsoft OS code to be entered into the public domain two years after their initial release and grandfather in programs already released.

4. Require Microsoft to sell programs for 10 years from their initial release.

Sincerely,
David Straub

Settling the Microsoft in the manner determined by the Court of Appeals is the best thing for consumers like me. I don't want to see Microsoft split into pieces, they have created too many good products and services for the average consumer. They don't hurt the average US citizen, they enable them and continue to innovate to make our lives easier and the economy better with their technological leadership.

Hello—

I think the proposed settlement with Microsoft is a bad idea. I think having Microsoft resolve the "monopoly" problem by "putting computers in to schools" is *outrageous*. Okay, so let me get this straight: We have a company that is anticompetitive, and you are *rewarding* them business accounts (Schools) and *locking them in* to an operating system which we've deemed is anticompetitive???? Perhaps you should have them fund installing Macs into the classrooms!! Or linux!!! Anything other than Windows.

Sincerely, I believe the present proposed settlement is an egregious example of backwards thinking.

Respectfully,
Todd L. Lamothe

Subject: Microsoft Settlement

To whom it may concern,

I, for one, am opposed to the proposed settlement with Microsoft for a variety of reasons. Most of them are very eloquently explained by Dan Keigel at <http://www.keigel.com/remedy/remedy2.html>

I especially agree that something should be done to prevent Microsoft from further limiting the choices available to consumers. When AT&T was broken up, many (Myself included) thought that it was a bad move. Hindsight being 20-20, we now know that this allowed the Telco industry to flourish (even though increased competition forced tighter operations by the Long Distance Telco providers). Now every Telco is eager to implement new technologies in order to beat their competition to it. Microsoft has a monopoly, therefore they have no competition, therefore they are more interested in making sure they maintain that monopoly than in actually improving their products. For one example, just look at the slew of security holes in their products which have allowed viruses to spread across the Internet costing businesses Billions of dollars. For another example see the "Microsoft Halloween paper" at <http://www.scripting.com/misc/halloweenMemo.html> Especially look the section titled "Blunting OSS attacks" where the author states.... "Generally, Microsoft wins by attacking the core weaknesses of OSS projects. De-commoditize protocols & applications OSS projects have been able to gain a foothold in many server applications because of the wide utility of highly

commoditized, simple protocols. By extending these protocols and developing new protocols, we can deny OSS projects entry into the market" One of the protocols the author recommends that Microsoft "De-Commoditize" is DNS which they have since incorporated into Active Directory. Since they are tying ALL of their server based applications into Active Directory, this would tie all of their applications into using a Microsoft version of DNS.

This paper also states that

Middleware control is critical. Obviously, as servers and their protocols risk commoditization higher order functionality is necessary to preserve margins in the server OS business. and... Long-Term Commitments Release / Service pack process. Just look at their new licensing schemes for Windows XP. This document, which was written in 1998, with 20-20 Hindsight we see that Microsoft not only thought about undermining standard protocols, they have done so. We see that Microsoft has not only thought about using Middleware to exclude competition, they have done so. They not only thought about modifying the Release and Service pack agreements, they have done so.

When will the US Government realize that there IS A PATTERN HERE???? PLEASE, PLEASE put a stop this. PLEASE come up with a better settlement. One which is more in the interest of the public than the stockholders of Microsoft.

Subject: My comment on the Microsoft settlement.

Dear Sirs,

I am not going to go into the reasons why I think the settlement that was reached by the Dept. of Justice and Microsoft should not be used. But I will go as far as to say that I do not believe that the settlement reached will do anything but seed further entrenchment that Microsoft binds us to their software. I therefore, are very much opposed to the settlement offering and wish the Dept. of Justice to seek the full remedy the court system can impose on them whatever that maybe. Until we impose a full remedy to this they will continue to behave in this manner, as I believe a study of current software EULA will show nothing has changed. Also the abuse of Microsoft to adopt open source technologies into their system os and not abide by the license agreement further troubles me that they are taking content from the open source community and on the other hand doing everything in their power to limit and destroy that same community. If we are to gain anything from this whole judgment, we need to effect a remedy that will bolster the innovative competition to level the playing field. I am also in favor of a quick settlement, the longer this drags on the longer Microsoft has to pile up funds to fight this judgment.

From: Paul Smith
To: Microsoft ATR
Date: 1/24/02 10:01am
Subject: Microsoft Settlement

There are many reasons why the microsoft settlement is currently weak to move

forward, most important is the interoperability of Independent Software Vendors(ISV) to create competing products that will be able to run the same software.

Section III.H.3. of the PFJ requires vendors of competing middleware to meet "reasonable technical requirements" seven months before new releases of Windows. We need to remove this limitation as Microsoft has the ability to change these requirements while the middleware will remain locked out.

Microsoft must unlock all Api's for its windows products, we must lift all unreasonable restrictions on the use of the released documentation. And why is Microsoft only required to be fair to the top twenty(20) OEM's, thats just plain wrong, many small companies that offer competing products will be open for Microsoft's abuse!

We must stop Microsoft from discriminating against ISVs who ship Open Source applications or for applications running on competing operating systems.

Please make sure Microsoft will be a responsible business in the future, the agreement as it stands leaves many items open for Microsoft to continue its anticompetitive practices.

Dear Sirs,

It has recently come to my attention that following the lengthy and expensive proceedings which ultimately found Microsoft guilty of being an illegal monopoly, you as the justice department have chosen to consult with the guilty party in an attempt to find a punishment which would prevent an appeal attempt. I also understand that you have chosen this option under the direct suggestion of President Bush. As a registered voter I suggest that you reconsider the current plan. Your current plan does little to remedy the situation and in many cases

provides Microsoft more ammunition to attack the open source community (one of its only potential competitors) by preventing them from using Microsoft protocols without receiving their blessing as being secure. Additionally the problems found with Microsoft warrant far more supervision than a three party council that is partially determined by Microsoft itself. In all I have found these proceedings to be an almost laughable derailing of the justice system, and if these problems are not corrected and Microsoft truly punished, I will seek remedy with my vote. I also in general find that it to be very discouraging that a corporations deep pockets could grant them so much power over duly elected and chosen representatives.

January 11, 2002

Attorney General John Ashcroft
U.S. Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft,

The antitrust suit against Microsoft has been an inconvenience to the technology field since its conception. The antitrust suit involving Microsoft has driven stock values down, driven software prices up, and driven public money to litigation—all at the expense to the consumer and the taxpayer. Microsoft has been a victim of a witch-hunt.

Fortunately, the U.S. Justice Department has reached a settlement regarding the suit. This settlement is planned to give the consumer more choices and provide Microsoft competitors with compensation for their alleged losses. The settlement instructs Microsoft not enter any contract that would require a third party to sell or promote a fixed percentage of Windows technology. Microsoft also cannot enter into contracts that prevent software developers from developing or promoting software that competes with Windows. All action that is taking place at the federal level must be stopped. This suit has only been detrimental to our financial position. It has gone too far, and too long. Microsoft must be allowed to return to Washington State, and leave Washington, DC.

Sincerely,
Ken C. Ross

Subject: Microsoft Settlement

As much as I think the settlement is blatant extortion, unjustly screwing over microsoft to benefit inferior companies who, nonetheless,

waged a superior lobbying campaign, I think that it's the least unjust thing that we can hope for at this point.

Please, please just leave this company alone. I'm not going to go into all the common law practices that argue for such a decision, since you probably know of them already.

I'm not going to discuss the philosophy behind personal property rights and free trade, since 1)it's doubtful you have time to read it, and 2)a discussion of that depth does not lend itself to a single email. So all I can do is tell you that a young person, married, out of college but not making much money, would like the government to just back off. I do not work for microsoft; indeed, I work for a company whose product competes with some of MS's.

However, I know injustice when I see it, and extortion from a successful business on these grounds is a prime example.

You can reach me at this address, or at jared.hansen@bta-usa.com . My daytime telephone number is 312.494.1530, evening 773.529.4651.

I am going to be an attorney (I've been accepted into Georgetown for Fall 2002 already; I await replies from Yale, University of Chicago, Northwestern and Columbia), and it is my goal to one day dismantle the monstrosity that is this country's antitrust system. I only mention that so that, in the event that I actually accomplish this goal, whoever read this email might remember it.

Cheers
jeh

Subject: Microsoft Settlement

I think microsoft should be forced to open all API's to anyone who wants them and further that any major change in how the operating system deals with hardware or the software run on it should be presented to any developer who wants it as soon as Microsoft has decided on that direction. Attempts to mislead developers or to withhold information should result in punitive damages of at least \$100,000,000 to any company affected. That way if Microsoft wanted to play games they would end up financing the very companies that they want destroyed. The slap on the wrist you gave them is a total insult to everyone that has been affected by Microsoft's monopoly.

MTC-00021106

From: Jobertito Cuaresma
To: Microsoft ATR
Date: 1/24/02 10:04am
Subject: Microsoft Settlement

To Whom It May Concern:

I am a network administrator from the University of Illinois, and I feel from a consumer and IT person point of view that the settlement does not adequately address

the indiscretions of Microsoft properly. Because of the scope of the case, I will limit my complaint concerning the release of OSes and Microsoft's practice of licensing/selling of software.

From the interpretation of the of settlements, there is no safe guards of Microsoft bundling software with their OS in the future. Although an OS can be released without certain programs installed, there is nothing stopping them from using the internet to install middleware software via automatic updating after its release. It is also my concern that there will not be an unbiased body that will be able to determine what part of the OS is not essential. For example, Microsoft claimed that Internet Explorer was essential to Windows 98 and cannot be uninstalled which ultimately killed Netscape as a competitor. For this to become fair and competitive, it will be necessary to define what parts make an OS and what are essential components. This decision and definition needs to happen from a group larger and outside of Microsoft. Hence, the "free" bundling of MS products has given the company an unfair advantage over other competitors. Their business practices with computer vendors have also prevented other OSes to have the opportunity to prosper or dominate. Prior to Windows becoming standard (because there was no other real consumer alternative), companies that produce alternative OSes such RedHat, Geoworks, and Dr Dos were not allowed to be distributed with new machines due to Microsoft's strict vendor agreements. Hence, Microsoft has a monopoly. From this monopoly, Microsoft does not have the benefit of competition to keep their pricing schemes and licensing practices in check. As already seen, while all other software and hardware vendors prices go down, Microsoft's prices have skyrocketed. Why is it that Microsoft Windows XP Home edition costs \$300 while the hardware capable of running it costs \$500 bundled? Since Microsoft makes much of it's money through vendor agreements and it's OS is pretty much the only choice for vendors, it does not need to be competitive in pricing with consumers. Due to the pricing scheme, consumers are forced to buy new machines bundled with Windows rather than buy the new OS and upgrade cheaply the few components. Microsoft has made their 3 billion dollar a month profit from flexing their monopolistic power. Just last year, Microsoft has written to many businesses of their new higher pricing schemes, while also threatening to audit software compliance. With an economic recession occurring, it would be nice to finally have this case closed and everyone move on with life. But, if the US government does not settle this case properly to directly protect the consumer, then millions of taxpayers money spent and the hard work of the civil servants are lost. Due to lack of choice, Microsoft has bullied its way into the computer industry as integral part with billions extremely dependant on its products. Nothing can be done now to level the playing field, and the actions of the settlement does little to alleviate this. Therefore, provisions have to be set in place in order to protect consumers and businesses from high pricing

and unchecked licensing schemes since competition cannot be restored.

From my personal viewpoint, this settlement does little to reflect the efforts of the civil servants involved in the case. It upsets me that stall tactics can derail justice. For this case to go this far and last thing long after finding the company guilty, the terms of the settlement does very little and disheartens this American citizen of the integrity of the judicial system.

From: Ned Ulbricht
To: Microsoft ATR
Date: 1/24/02 10:07am
Subject: Microsoft Settlement

This public comment is solicited under the Tunney Act regarding the proposed Microsoft / US DoJ anti-trust settlement. My understanding of that act is that the US DoJ, as an arm of the federal government, is automatically presumed to be acting in the "public interest" unless the settlement is

reached under the pall of bribery, corruption, or undue political influence.

Here is a list assembled from FEC records of some of Microsoft's more recent "donations":

10/17/2001 \$25,000 RNC/Repub National State Elections Cmte
09/27/2001 \$10,000 RNC/Repub National State Elections Cmte
09/26/2001 \$20,179 NRSC/Building Fund
08/21/2001 \$50,000 RNC/Repub National State Elections Cmte
06/27/2001 \$10,000 DNC/Non-Federal Corporate
06/25/2001 \$5,000 NRCC/Non-Federal Account
06/25/2001 \$5,000 NRCC/Non-Federal Account
06/18/2001 \$10,000 DCCC/Non-Federal Account 1
06/08/2001 \$50,000 DSCC/Non-Federal Corporate
06/04/2001 \$25,000 NRSC/Non-Federal
06/04/2001 \$25,000 NRSC/Non-Federal
05/23/2001 \$40,000 2001 President's Dinner/Non-Fed Trust

Taking that last item for example, nowhere else in the world would a company's "donation" of \$40,000 for "dinner" to the chief executive of an administration suing that company for a violation of the nation's laws be seen as anything other than an act of cheap bribery. This settlement is most emphatically not in the "public interest."

Date: 1/24/02 10:05am
Subject: Microsoft Settlement
Dear Sir or Madam:

I am opposed to the Microsoft Settlement in its current form. Computers and software are part of my life; they are the tools with which I make a living and how I communicate with others. Microsoft creates good software—I have been using the software for many years. I am opposed to the level of control that they exert on hardware and software professionals. Software innovation and development was once common on the Microsoft platform, but the company has begun to lock down all of the channels of access to widely available hardware and software platforms. Distribution channels which have been funded and created by the government for the public good are now becoming controlled by Microsoft for the benefit of Microsoft, and to the detriment of all other parties, including independent software and hardware developers.

In particular, I am distressed that the Settlement does little to address the strong-arm anticompetitive practices that Microsoft engages in with OEMs. If these practices are not made illegal, or otherwise limited, Microsoft will continue to manipulate and control 95% of the computing world, and use this power to extend into new technology markets. Failure to address these issues now will result in an imbalance in competition that will affect technology and innovation for generations to come.

Respectfully,
Ed O'Connor

MTC-00021116

From: Rob Clarke
To: Microsoft ATR
Date: 1/24/02 10:06am
Subject: Microsoft Settlement

Dear Sir/Madam,

I am writing to express my dissatisfaction with the proposed final judgment in the DOJ/Microsoft Antitrust Trial. The remedies suggested do not go far enough in protecting the consumer and OEMs from being subjected to Microsoft's anti-competitive practices in future. As a result of the terminology used and omissions in the proposed remedies, Microsoft are granted a great deal of scope to continue their current anti-competitive behaviour. By way of an example, allowing Microsoft's EULAs to discriminate against software released under Open Source licenses (such as the GPL and MPL) clearly has the potential to cause inordinate harm to competitors and end users, and is completely unjustifiable, and stifling to both innovation and competition.

It is my belief that the PFJ needs to be significantly strengthened if it is to be regarded as a fitting reparation to end users, and a fitting punishment for Microsoft's repeated unlawful activities.

Yours Faithfully,
Rob Clarke

MTC-00021119

From: Alan

To: Microsoft ATR
Date: 1/24/02 10:04am
Subject: Microsoft Settlement

I am a software engineer with more than 20 years experience in software development. I have developed software on Microsoft, Unix (various vendors), Linux, and other less popular operating systems. I would like to comment on the Proposed Final Judgement in *United States vs. Microsoft*.

I am deeply troubled and firmly convinced that the remedies proposed will not halt the anti-competitive behaviors of Microsoft. I support and am a signatory of the open letter <http://www.kegel.com/remedy/letter.html>.

While I support and defend any software manufacturer's right to improve and develop new software, this right does not include intentional efforts to limit the marketplace from providing improvements and extensions. The Settlement includes definitions that are so specific as to limit the effective timespan of the remedies. Specifically, "Windows Operating System Product" and "Microsoft Middleware Product" only apply to Microsoft's current operating system products. "API" is limited to stated Windows Operating System and Microsoft Middleware Products. Microsoft can evade these definitions by developing new products such as .NET, based upon new API's. Furthermore, the definitions do not include a broad enough coverage of Microsoft's products.

I want the Settlement to include any operating system sold by Microsoft, now and in the future, that uses, supports, or refers to "Windows" technology. I want the definition of the operating system confined to the minimal set of software necessary to enable Current Off The Shelf (COTS) products to function. The operating system does not include any software capable of productive value; It is a service-enabling and application-enabling product only.

I want the notion of "middleware" to be discarded. The middleware products in the settlement are applications. Microsoft has chosen to bundle applications in its operating system products. None of those applications are necessary to the function of the operating system. I want Microsoft to agree to sell and price the operating system separately from the applications. This does not limit Microsoft from also selling bundled application packages at no extra cost.

I want Microsoft to not prohibit in license or execution its products or associated redistributable components from being executed other than with a homogeneous Microsoft platform. For example, Microsoft may choose to not support Outlook from executing on Linux, but it shouldn't prohibit a license holder from doing so. I want Microsoft to publicize API changes no later than making available any version of application or operating system that supports or uses that API. I want the definition of API to include file formats that are supported by more than one Microsoft middleware(sic) or application product. I want for Microsoft to publicize all API's created or changed for any middleware(sic) or application software it makes widely available. I want for Microsoft to publicize which software patents relate to which of its products. I am restricted from

safely exercising my software development skills because I do not know when I am allegedly violating a patent.

I want Microsoft to stop its practice of relating software licenses for different products. An application product's license should not specify how the operating system product license may be used or which license must also be purchased—one product, one license.

I want Microsoft to be restricted from collecting product data loaded on a computer when validating its operating system or application software licenses.

I want Microsoft to be restricted from making its software products unuseable or limited without license validation.

The enforcement of the settlement does not support small businesses for whom a long legal battle will destroy the business. I want a fast-track review of complaints with a quick arbitration and settlement. Microsoft should pay for this for the next five years.

The public interest is not served by yet another ineffective settlement with Microsoft. The Proposed Final Judgement will be ineffective.

I believe that the proposed Microsoft—DOJ settlement is a sell-out to Microsoft (hereafter called MS). The proposed settlement doesn't achieve much at all. It doesn't punish MS sufficiently for its proven monopolistic, illegal behavior. It doesn't call for any serious remedies that would preclude MS from doing

all sorts of monopolistic behaviors. It allows them to do whatever they want, however they want, whenever they want.

The only good result is that now MS is known as an illegal monopoly. Please rethink the proposed settlement to put some real teeth in it.

Dan Girton

MTC-00021122

From: Regal, Robert
To: "microsoft.atr(a)usdoj.gov"
Date: 1/24/02 10:10am
Subject: Microsoft Settlement

Hello Doj people,

First of all, I'd like to congratulate you on dealing with such a difficult case where there are undoubtedly vast amounts of behind the scenes plotting going on. However, in regards to the propose settlement, I would like to ask you to reconsider your stance on it. Please do not allow Microsoft to dominate the OS market anymore. As I'm sure you are aware, Microsoft does promote a standard platform which the majority of the world uses. Is this beneficial to the consumer, you must've asked? I do not believe that it is. The interoperability promoted by a world OS is a nice benefit of their monopoly, but is not worth the cost in innovation, security and quality. Microsoft has effectively squished numerous operating systems into niches each of which actually offer demonstrable technological advantages over Windows. I guess the real question is, has Microsoft used its monopoly to dominate other markets unfairly. This is obviously a yes. Why, because to gain a market share for any given product, all Microsoft has to do is integrate that product with their OS and they suddenly have an installed base of 90% of American computers. I find it suspicious that the OS industry is not differentiated into an oligopoly like the car industry, fast food industry or even other software sectors like accounting software (There are 3 or 4 dominant home accounting programs but none is remotely as dominant as Microsoft is).

Please reconsider,
Robert Regal

Also, don't allow that injection of Microsoft products into an environment not yet completely dominated by Windows. Competition is good. Microsoft does not promote this.

I seriously doubt any strong consideration is being given to letters sent to this address. If the DoJ or anyone else with government influence were truly concerned with the thoughts of the American public, or most critically the educated American public, this issue would have been laid to rest some time ago with far heavier consequences levied against Microsoft. None the less I'll continue with the lingering hope that continued comments might serve the public interest despite the government concerns with corporate profit over our welfare. There are three operating systems in the world, Mac OS, Linux, and windows. Unless you're running Mac hardware, a minority of the population, the Mac OS is meaningless. Which leaves us with Windows and Linux. Today, Linux is just beginning to reach a stage where it can be installed onto a system in under 5 hours due to its complexity. Lets add to this that drivers for most hardware is still difficult to find and that the Media giants have stepped in with law suits preventing Linux operators from viewing DVD's the rightfully own. Funny how this little seemingly unrelated topics further assist Microsoft.

Microsoft has absolutely no incentive to improve their software. They force new upgrades on the public, leverage application upgrades in the business sector, which then eventually forces the public to upgrade applications as well. They stomped out Netscape, generally considered to be the superior browser. Today there is no Netscape. Sure it exist, but no one uses it, there is no strong incentive to improve or market it, and now for all practical purposes we're stuck with a browser that has as many problems and failures as the OS.

MS has also managed to take huge market share from AOL. Now that in itself isn't bad. AOL should be forced to defend its turf just like any other American corporation. But MS isn't likely to stop. The OS market gives them the chance to do to AOL what they did to Netscape. AOL might be a bigger target and a harder bare to kill, Netscape never really had that much cash to burn, but MS has more cash in the reserves than the US government. Without enforcement of antitrust laws, AOL will fall to. Eventually we get to the Xbox. Now MS has done nothing wrong here. But anyone with the slightest awareness of history has to expect MS to start leveraging power in the home video gaming arena. How will they do, I wouldn't care to guess, there's plenty of methods. The key here is that antitrust laws have no teeth. There has been no punitive action taken against Microsoft. And the government has clearly said its better to break the law and ask for forgiveness later. There is nothing but incentive for MS to continue its current behaviour. MS is a corporation and will behave in the manner which garnishes the most returns. The government must clearly make it unprofitable to break the law, else why have the laws at all.

In closing, this entire process has been made into a joke. All technically educated people not profiting from Microsoft are frustrated over the government's incompetence. Even the media, the spearhead epitome of the uneducated masses has started to catch on. So far the only thing this settlement has done is prove the greatest American tragedy of all, "MONEY BUYS EVERYTHING!"

Subject: Microsoft Settlement

Hello,

This is a public comment on the proposed settlement between the DOJ and Microsoft. I disapprove of the settlement because it does not punish Microsoft nearly enough for their past wrongdoing and does not prevent them from continuing their habitual anticompetitive practices in the future. Microsoft has a proven track record of extending their operating system monopoly with anticompetitive practices. Andrew Schulman published a book titled "Undocumented DOS" in the 1980s that exposed particular practices that Microsoft used to make their application programs run better than competitors' programs. By deliberately hiding information and programming APIs from anyone outside of Microsoft, while internally publicizing that information, they guaranteed their programs an (unfair) advantage over their competitors'.

As a professional programmer for more than 12 years, I am firmly convinced that the

innovations of the computer industry that Microsoft takes such public credit for, would be much, much further advanced had the company been broken up or regulated back in the days when it was extending its monopoly from the base of the DOS operating system. Many years later, it's hard to restore the balance that was lost, but we must try. They have been a damping influence on computing advancements for many years because of their tremendous size and influence, and their extreme aggressiveness and arrogance. They have proven over time, that they must be actively policed and have the threat of __significant__ punishment brought to bear or they will continue their business in their usual illegal manner.

Thank you for your consideration,
Warren Dodge

I do not support the proposed settlement because I do not think it provides sufficient punishment to balance Microsoft's offenses, nor sufficient incentive to prevent them from doing the same in the future. Furthermore, the idea of punishing a monopoly by requiring them to extend their monopoly into the US educational system is incomprehensible.

Dear sirs,
 I am writing to ask that any settlement to be made with Microsoft ensure that monopoly of the operating system market is not used in future to extend control over successively greater portions of the computer environment. As I sit now, to perform my job of network administration, I am compelled to use an MS operating system, MS Office applications, MS web browser, MS e-mail client, etc. This company has grown so powerful it may be a threat to national economic stability, subject to their management decisions. Please keep this in mind, and further remember that previous consent decrees have been easily circumvented if not outright violated by Microsoft. They are more dangerous than they might appear.

Thank you for providing this opportunity to speak.

I Do not agree with the proposed settlement of the Microsoft v. US DOJ. I does not punish Microsoft for its past sins. Nor does it give adequate assurance that a proven monopolist will modify its behaviour to foster a more competitive environment. A de facto standard's API and other interface and file format interchange information must be freely and widely available without auditing or editing by any Microsoft dominated or influenced organization. If in any way restricted is becomes a club to force the world to comply to Microsoft's view of the proper order of things. And it has been proven in a court of law and upheld on appeal that Microsoft's actions demonstrate that its view of the market place in through a monopolistic lens.

I would like to make a comment against the current settlement agreement between the DOJ and Microsoft.

I speak from an experience of developing software and firmware for the past 17 years. I have witnessed many innovative ideas and whole companies get ruined due to the ogreish juggernaut known as Microsoft. This company has been able to get out from every restriction/correction the US Justice department has placed on it.

This latest judgement shows a fundamental lack of effectively stopping Microsoft from continuing its monopolistic practices in the PC/Intel market.

In the future, what business (not necessarily Microsoft) will have any fear of the US antitrust laws if this settlement is approved. The erosion of the effectiveness of the Sherman Antitrust Act is the real loss to the American public.

 Subject: Microsoft Settlement

The settlement that would be in the best interest of the people, is to make the data formats used for Microsoft Word and Excel files be public domain. This would allow other alternatives to Microsoft to be developed that support business and government. Currently various government offices allow documents to be submitted in Word or Excel formats, which provides further justification for making these formats public domain. The settlement would have to limit Microsoft's ability to upgrade formats and eliminate competition. Public control of these formats would slow the frivolous development of office tools that require expensive retooling every few years. Few businesses, government offices, and schools can afford to upgrade software every two years at more than \$200 a seat. Microsoft can continue to improve its software, but not at the expense of others trying to do the same.

 Subject: Microsoft Settlement

As a concerned citizen, voter, taxpayer and long time user of Microsoft products, I would like to express my opinion that there has been quite enough litigation. As a consumer, I do not feel that I have been harmed by Microsoft. I clearly remember my first computer (before the IBM PC and DOS) and have been involved with computers both professionally and personally since that time. Despite all the complaints from those who don't understand what computing was like 20 years ago, I firmly believe that Microsoft products have improved things for consumers. It is very unlikely that there would be computers in so many homes, schools and libraries that are used by non-high tech individuals without the products and vision Microsoft has provided. There has always been choice in software—people have chosen to use Microsoft products. To this day there are still alternatives. If I want to I can run a Linux, Unix or Apple operating system—with that there are several competitors to Office that use the same file formats so they can be exchanged with other users. As far as I am concerned as a consumer, that IS competition.

Please finish this settlement and let everyone get back to writing better software instead of spending way too much time and money in courtrooms. (If you really want to look at anti-competitive behavior—investigate AOL!)

From: Sean Reilly
 To: Microsoft ATR
 Date: 1/24/02 10:00am
 Subject: Microsoft Settlement

To Whom it May Concern,

I am writing to express my objection to the terms of the tentative settlement reached by the DOJ and Microsoft. The limitations applied to Microsoft's behavior with regard to OEM's do not adequately limit the retaliatory options open to Microsoft. It is ridiculous that this settlement does not protect OEM's who install non-Windows operating systems unless they also install Windows on the same computer.

The proposed settlement also does not seem to keep Microsoft from withholding Windows licenses to OEM's that install certain third party icons, menu items, or programs.

I believe that if this settlement is approved, it will have little to no effect on Microsoft's atrocious abuse of its monopoly power to put competitors out of business. Microsoft has been shown to be capable of easily getting around these types of restrictions (witness the 1995 consent decree), and I believe that this settlement will not cause Microsoft to stop abusing its monopoly power in any meaningful way. In addition, this settlement attempts to limit Microsoft's unlawful behavior by specifying what Microsoft is restricted from doing. This does absolutely nothing to keep Microsoft from engaging in other types of anti-competitive actions in the future. There are many other ways that

Microsoft can take advantage of its PC operating system monopoly that the court has not yet witnessed. Is the Department of Justice going to bring Microsoft to court for every new monopoly abuse that has not already been explicitly mentioned in a settlement agreement? Isn't it better to solve the problem at its root rather than repeatedly treat the symptoms at great cost?

Splitting Microsoft into an applications company and an operating systems company (and possibly a third company for Internet services) is the fairest, most effective solution. This would not impact Microsoft's ability to innovate in any of the areas in which they operate. It would also force them to compete on level ground with competitors in the operating systems, applications, and internet services markets. In conclusion, I ask that you reject the proposed settlement and produce a solution that will actually have the effect of limiting Microsoft's behavior.

Sincerely,
Sean Reilly

Dear Ms. Hesse:

I wish to comment on the proposed settlement with Microsoft. As a developer and engineer of 18 years experience, I have closely watched the industry, and seen Microsoft repeatedly extend its illegal monopoly. Now, they have been caught violating the law, and the government proposes essentially to ignore it (this is the opinion of no less an authority an authority than Robert Bork). Judge Bork says that the proposed settlement clears the way for Microsoft to extend its monopoly to most if not all areas of the industry. This is unacceptable.

The proposed settlement would be a very bad thing for the country. Currently, I am a security engineer. Microsoft treats security as a public relations, rather than a technical, problem. The implications for the country's infrastructure to be at the mercy of a merciless and security-incompetent company are frightening. Do you want Russian mobsters reading your email? Well, don't worry, Microsoft will hire public relations people to help you feel better about it.

There is the larger issue of justice. This company has done wrong, and the government, after an exhaustive effort to prove it, proposes letting them get away with it. Laws that are not enforced are worthless. Please strengthen the remedies against Microsoft.

I have the following specific comments:

1) The PFJ lacks effective enforcement. Microsoft should be forced to pay for enforcement against itself. It should post a significant bond against this eventuality.

2) The PFJ provides for increased technical disclosure, but this provision is flawed in the following ways:

- a) it fails to require advance notice of technical requirements
 - b) the provision for releasing API information is not timely enough for competing vendors to adapt their products to meet the requirements of section III.H.3
 - c) several important APIs would remain undocumented
 - d) unacceptable restrictions would be placed on the use of released documentation
 - e) file formats would remain undocumented
 - f) Windows patents covering APIs would remain undisclosed
- 3) Microsoft is allowed by the proposed settlement to continue to discriminate against companies that pose any threat to its illegal monopoly.

a) Section III.A.2. allows Microsoft to retaliate against any OEM shipping competing OSes without a Microsoft OS. This effectively requires OEMs to ship Microsoft always.

b) Section III.B. allows Microsoft to retaliate against smaller OEMs.

c) Microsoft is allowed to discriminate against ISVs who ship open source software. Since open source is the only competitive option on the desktop, this is clearly a monopolistic practice and should be prohibited

d) Microsoft is allowed to discriminate against ISVs who target Windows compatible Microsoft OSes.

The proposed settlement is seriously flawed, and as written constitutes license for Microsoft to destroy more good companies and extend their illegal monopoly.

Please address these issues.

Sincerely,
James R. Hurst

Subject: Public Comments on the Microsoft Settlement

Dear DOJ,

I have been closely following the antitrust case against Microsoft. I am a software engineer. For the last 15 years I have been writing software for Windows, Unix, Linux, VxWorks, Psos, etc.

The settlement that you have reached with Microsoft is inadequate. Every judge that has read the facts has found Microsoft guilty. The only controversy was over a judge's behavior, not over Microsoft's behavior. Microsoft abuses their power in the market place to the detriment of the consumer. We are heading towards a time where you can own a computer, but you cannot use it in your own home without paying Microsoft \$200 or \$300 every year. You can own it, but you cannot use it.

I am a capitalist, I believe in the free market, I believe in competition. There is no competition when a market segment is controlled by one monopolist.

I have seen the settlement document. What a load of legalistic bull. It is so convoluted as to be meaningless. It is clear that the Microsoft lawyers wanted it confusing so that they could argue over it in court while the company continues its monopolistic practices. A simple, readable document would be too easy to enforce.

Shame on you. Shame on all of you. Shame on you for falling for the line that the economy would be hurt by furthering competition. Shame on you for not looking out for the little guy, the consumer. If your mothers knew what you have done, they would be embarrassed.

At a minimum the settlement should:

Prohibit different pricing policies for different customers, although pricing can include volume discounts.

Require prices to be posted on a web site available to the public.

Require that Microsoft products be sold for 3 years after a newer version has been introduced.

Require that Microsoft provide service, fixes, and patches for 3 more years after a product is no longer for sale.

Require that computer manufacturers offer the customer a choice of any operating system still available for sale.

Prohibit Microsoft from charging computer manufactures based on number of computers sold. Only charges based on the number of Microsoft products sold.

Require that Microsoft publish its APIs to its middleware, operating systems, and authentication services.

Prohibit Microsoft from using any secret API for its products that interface with its middleware, operating systems or authentication services.

Require Microsoft to publish the APIs 6 months before a new version of middleware, operating system or authentication service is offered for sale.

Establish an independent testing body that will create tests for new Microsoft middleware, operating systems, or authentication services to test that the published APIs in fact are correct for the middleware or operating systems. Product release could be held up if the API does not match what was documented.

Prohibit Microsoft from requiring product registration over the web, that phone-in registration must be supported in a timely and convenient manner.

Sincerely,

From: David Lawrence Ramsey
To: Microsoft ATR
Date: 1/24/02 10:12am
Subject: Microsoft Settlement

The proposed settlement for the Microsoft antitrust case is a very bad idea, given its current state. It is full of potential loopholes due to vague and/or excessively narrow wording in many areas, which give Microsoft an advantage, effectively rewarding it instead of punishing it. Furthermore, some of the conditions in it will exclude competitors' software from working with Microsoft; for example, it only is required to provide information on API's to "reasonable businesses," the definition of which is first left up to Microsoft (effectively allowing it to arbitrarily exclude whichever competitors it wants by claiming them not to be reasonable businesses), and which does not include free software or open source software, including Linux and software written for Linux that helps interface with proprietary Microsoft protocols and/or file formats. Also, there is no provision to prevent it from patenting everything it controls, including software technologies, in order to lock out other operating systems from using similar technologies. (For example, note Microsoft's recent acquisition of some of SGI's three-dimensional graphics patents; it could prevent competitors using OpenGL or similar software from using them anymore.)

Given that Linux is one of its few true competitors simply due to its nature (it cannot be bought out or beaten price-wise by Microsoft due to its free downloads; and it cannot be completely crushed due to its programmers being scattered around the globe, i. e. its decentralization; etc.), it and similarly free operating systems must be allowed to interface with it in order to keep a foothold in the market. Denying them that will eventually remove them as competitors, allowing consumers no alternative other than Microsoft.

A good settlement must level the playing field, so to speak. It must allow for interoperability between Microsoft and other operating systems; it must allow other operating systems to gain more than tiny fractions of the desktop market, and to keep and/or gain in the server market; in short, it must allow the most superior technology, rather than the technology with the most market share, to triumph with consumers. If this is not done, those consumers may be stuck with inferior technologies and have no alternatives to them. Also, not doing so would imply that if a company is rich enough and powerful enough, they can do whatever they wish and escape all negative consequences should they ever incur any; what does that say to other businesspeople?

To reiterate, the current settlement with Microsoft is no true punishment; it must be expanded so that it truly will allow competing technologies, if superior to Microsoft's, to gain true footholds and become standards. Technological standards

must not be dictated by the highest bidder, but rather by the strength and superiority of the technology. Microsoft is not hindered by the current settlement; it could just exploit whatever loopholes it finds and ignore whatever provisions it disagrees with, as it did with the 1994 antitrust ruling against it. Do not let history repeat itself; Microsoft has broken laws, and must truly be punished for it.

I believe that the current proposed settlement against Microsoft is a travesty in action. If anyone can claim to look closely at the current state of computing and see Microsoft as anything other than a monopoly than they are lying to at least them selves. If the DOJ doesn't believe that MS is acting in the wrong, it would be Better to work to repeal the anti-trust laws than to act as if MS is not violating. —

I am opposed by the proposed judgement. Although Microsoft is an example of the American dream in some ways. Microsoft is even more an example of that dream coming true and the power that comes with that

dream coming true being abused. Too many times in the past Microsoft has wiped out producers of products that would be nice additions to their Operating System. Just look back into the "Stack" case, the disc compressor program.

Following that, currently the Internet is suffering a lot because of Microsoft Internet Information Server Worm Viruses. These Viruses are possible because of a bad design of software promoted to the world with a lot of financial power. Of course Microsoft made it money, but the world is paying! First for a products of disputable quality. Second for the serious problems this product allowed to bring in the world. Allowing Microsoft to buy their way out of this would be a very bad example of American justice.

Thanks!

I will keep this short and to the point.. I fail to see how the proposed settlement will, in any real way, punish Microsoft for past bad acts.. or prevent it from continuing the same illegal behavior. Considering the size and financial resources of Microsoft there must be an appropriately strong remedy if any change in behavior is to be expected. If it were my choice to make... I would split the company into three sections: Operating Systems, Applications, and Network Ventures. Only through such separation can the monopoly leverage of "bundling" be stopped. In my view.. the IE browser would be an application along with the Office suite and other standalone software products. IIS and other network server software, including streaming media, would fall under Network Ventures because of the necessary backend integration required for network services. This would prevent the dominance of the Operating System from being used as a vehicle to spread limitlessly into other areas such as online media format and content control.

Subject: Microsoft Settlement

Dear Maam or Sirs,

I have read the documents related to the Anti Trust case. Both the finding of fact and the proposed settlement. I am enraged so that I feel it is necessary to generate this note. It is apparent from the findings of fact that

Microsoft regularly (and with malice aforethought) did indeed engage in grossly anti-competitive practices for a number of years.

The proposed settlement is the corporate equivalent of saying to a juvenile delinquent "Don't let me catch you doing that again". This "settlement" is patently absurd in its omissions. Microsoft has made it unprofitable for an entire industry to develop anything for any other operating system.

I am not an anarchist. It is my belief that any company should be allowed to succeed with a better, faster, cheaper, or more easy to use product. That means playing on a level field and winning "fair and square". Microsoft did do this to some extent with Windows by placing an "easy to use" handle on the technical task of operating a computer thereby allowing a larger number of people to use them and get work done. This is very commendable and I do not deny Microsoft the right to make a reasonable profit doing just that. The starting point at which Microsoft started to gain its monopoly standing was when Windows was introduced. For a number of years prior to that WordPerfect was the absolute leader in Word Processing software. It was only unseated as the leader when Microsoft created Word for Windows. Microsoft Word for DOS was never able to overcome WordPerfect in the DOS arena as it was not a better product. The integration into the Windows operating system is the only reason Word moved ahead of WordPerfect. Lotus 123 dominated the spreadsheet market for many years until Microsoft integrated Excel (later) into the Windows OS. The list goes on and on. Try to imagine the number of companies that either died trying to compete or never came to be.

This "integration" in and of itself is not unexpected and certainly not an anti-competitive practice. It just shows that the public expected that when the applications are "integrated" with the OS, things will be better, and they probably were slightly better. This is clearly a case of "perceived value" that is not unusual. It is the leveraging out of other applications and making it difficult to impossible to use competing applications that is the true "crime" here.

As an employee of Xerox which was the firm that benevolently "gave away" Ethernet, PostScript, the Graphical User Interface, and the mouse in the spirit of furthering computing in general, I am somewhat surprised that Microsoft (or Apple Computer before it) would take this philanthropic act and permute it to their own ends and then use it as a weapon to keep competitors at bay. This is certainly not what Xerox had in mind and goes against the statements that Mr. Gates has made of what his company is about. To further emphasize my point I will make this analogy. At this point in time in this country, if a person were to cause a company to give them large sums of money and force them to stay in a given place for long periods of time, you would call that extortion, blackmail, or kidnapping. Microsoft has done the equivalent of that from a software perspective by deliberately interlinking, causing to be proprietary exclusive, and creating interdependant OS

and applications so as to allow individual companies no viable alternatives, all the while charging them basically whatever they wish. Microsofts prices are not competitive because they do not have to be. Now to the point. As part of the settlement I feel it would be fair to have the following:

1. Mr. Gates issue at the minimum a sizable press release (my preference would be a vey apologetic TV commercial in prime time) which details some of his companies most heinous acts of monopoly preservation. Then the United States public could decide if these acts warrant them altering their OS purchase decisions for the future. I believe many Americans are too busy to even know what has transpired and this would inform them.

2. Cash damages in some proportional amount should be paid into a fund that would allow for schools to purchase non-Microsoft software to allow part of the educational process to demonstrate that there are alternatives. If UNIX/Linux were at least shown at schools, children would be exposed to the underlying foundation of computing and make them more technically literate for the future. This is not only good "playing field-leveling" activity but would make for a smarter workforce down the road for America which is something we sorely need.

3. The TC (Technical Committee) should be forewarned and monitored so that in the "field of potential gold" they would be strolling through, none of the "dust" would end up in their pockets. Ask Congressmen and Senators how often PACs and other groups offer to provide "perks" and other inducments to "encourage" legislation (or lack thereof). Severe penalties for violations by Microsoft and the members of the committee should be set and explained up front so there is no misunderstanding.

4. The five year limitation should be extended to such a date when it is deemed by the TC (or another impartially appointed body) that there is a viable alternative to Microsoft products in the OS and Applications market that is readily available. This would then foster real competition and would benefit the American public by keeping prices down and the features of the software improving.

So, here is my "counter proposal" which is additive to your settlement. I urge you to consider all points and provide more than a "hand slap" to Microsoft. America and the world would benefit. My apologies for the length of this note, but it is an issue that weighs heavily on my sense of fair play.

Subject: Microsoft Settlement

Dear US Justice Department,
I am a small business owner and wish to make a simple comment about the Microsoft Settlement. The penalty must be strong and not allow Microsoft to use their own products as payments.

Cash for the full amount, plus on-going support costs must be provided, for at least 10 years. My company has been directly damaged by Microsoft due to poor software quality, viruses and forced upgrades. The penalties for Microsoft must include the support of third party software. I suggest that Microsoft be required to fund the Free Software Foundation to the tune of \$100 Million per year for a period of at least 10 years. This money must go into a "blind trust" so that Microsoft can not control the money.

I also think that the settlement does not fully recognize the Linux movement. Open source and "free" software must explicitly benefit from the settlement. For example, a good item would be to require a port of Microsoft Office to Linux.

As an individual, I would like to see at least \$100 for each copy of Windows, I have had to buy pre-installed on my computers.

I still think a break-up is the best for the consumer and, as a stockholder of Microsoft stock, I prefer that settlement method as it gives me the most value. I agree with the content of Ralph Nader's and James Love's letter to the Court (<http://www.cptech.org/atms/rnj12kollarkotellynov501.html>).

Thank you.

I think that Microsoft's proposed settlement is a travesty. They want to use the penalty imposed for their monopolistic practices to cram their product into the one market they —don't— already have a stranglehold on: education.

If they want to donate to education as a settlement, fine. But make them donate cash, that the education systems can use to buy and/or support technologies that work, such as open source, not force them to buy from MS and increase their already monopolist market share.

Subject: Microsoft Settlement

Dear Sirs:

I hate to think of the sums that have been wasted in the DOJ attempt to give MS competitors an opportunity to pick its bones clean. It seems all a company has to do to get nailed by you guys is to succeed and have some competitors seek legal assistance instead of market support.

I have been a MS customer since the company was founded. I have read Gates's book "The Road Ahead," I have owned stock in the company because I believed they had superior products and a marketing team that was aggressive. Being a business man myself, I know you can't expect to win in the business world unless you go after market share like a bulldog after a cat. To punish a company for succeeding in catching the cat is anti competitive and anti consumer. You don't get better share of market by not offering the right product at the right price. It just doesn't happen.

What DOJ seems to be doing is making it impossible for MS to continue to sell its products. You won't even let the company give them away to the schools. What's the matter with you? Are you crazy? Would it hurt the children to have access to better information, well delivered and simply accessed at no cost? I must be missing something. Or is your mission to hurt the consumer, cripple MS, enrich some states' coffers at the expense of the stock holders and employees of MS, assist MS competitors so they can sell inferior products at higher cost? If that is your mission, then I strongly object to having tax payer money expended on such a pernicious, unpatriotic and destructive undertaking.

Please give MS a break. Now especially when our nation is in the throes of the most serious recession since 1929. Don't you think its time to find another target? While MS has competitors how can DOJ say it is a monopoly? When I played the game I nobody else had a piece of "Park Place." It was all mine.

Sorry if this letter seems curt, but I do think enough is enough.

Sincerely,
John Rhein

Subject: Microsoft Settlement—(Netscape issue)

U.S. Department Of Justice,

I am disgusted by Netscape / AOL's move to sue Microsoft, over allegations that Microsoft's Internet Explorer illegally "harmed" Netscape's (browser product). This is getting insane. I find it curious that AOL decided to buy Netscape DURING the existing DoJ trial, when it was no secret that the success of Internet Explorer was and is based on IE's merit, usability, compatibility and overall superiority to Netscape's browser, and not on any virtue of "market share" on the part of Microsoft or IE. AOL / Time Warner needs to cut the cry-baby crap, and quit hiding behind litigation to protest Microsoft's success. Bill Gates and his team enjoy success (albeit against continual interference from lawyers and the government) ? because Bill Gates produces superior and affordable software. End of story.

As a Web Site developer, I (am compelled) to run a current version of Netscape (Navigator) alongside my copy of Internet Explorer; to work-out "incompatibility" issues with the Sites I write. Hands-down, I have no problems with IE, yet Netscape refuses to display certain graphics and such. Point being made again ? I, and may people CHOOSE to use IE because it is a better product.

In closing, I request that the DoJ give credence to the spirit of Free Enterprise and NOT grant AOL's greedy lawyers any (judgment or penalty) against Microsoft. Leave the world's best software-maker alone, so they can continue their mission of creating innovative and desirable software.

Some of my colleagues prefer the Netscape product, and that's great, too... People need to be free to make their own decisions based on what works, and what works for them. Let the market be dictated by the quality and merit of a product ? not by lawyers or courts. Thank you.

Sincerely,
BRUCE MURPHY

Subject: Microsoft Settlement
To the D. O. J.

Let's get this case over with. I think the settlement is indeed in the public interest. And while we're at it ... I wish someone would chastise AOL-Warner for buying Netscape for the sole purpose (in my humble opinion) of having another way to bring litigation against Microsoft ... thereby attempting to stifle the innovative developments that would benefit Computer end users worldwide, instead of competing in a fair and open market.

Sincerely,
Chris Jackson

Under the Tunney Act, I wish to comment on the proposed Microsoft settlement. I agree with the problems identified in Dan Kegel's analysis (on the Web at <http://www.kegel.com/remedy/remedy2.html>), namely:

The PFJ doesn't take into account Windows-compatible competing operating systems Microsoft increases the Applications Barrier to Entry by using restrictive license terms and intentional incompatibilities. Yet the PFJ fails to prohibit this, and even contributes to this part of the Applications Barrier to Entry.

The PFJ Contains Misleading and Overly Narrow Definitions and Provisions The PFJ supposedly makes Microsoft publish its secret APIs, but it defines "API" so narrowly that many important APIs are not covered.

The PFJ supposedly allows users to replace Microsoft Middleware with competing middleware, but it defines "Microsoft Middleware" so narrowly that the next version of Windows might not be covered at all.

The PFJ allows users to replace Microsoft Java with a competitor's product—but Microsoft is replacing Java with .NET. The PFJ should therefore allow users to replace Microsoft.NET with competing middleware.

The PFJ supposedly applies to "Windows", but it defines that term so narrowly that it doesn't cover Windows XP Tablet PC Edition, Windows CE, Pocket PC, or the X-Box—operating systems that all use the Win32 API and are advertised as being "Windows Powered".

The PFJ fails to require advance notice of technical requirements, allowing Microsoft to bypass all competing middleware simply by changing the requirements shortly before the deadline, and not informing ISVs.

The PFJ requires Microsoft to release API documentation to ISVs so they can create

compatible middleware—but only after the deadline for the ISVs to demonstrate that their middleware is compatible.

The PFJ requires Microsoft to release API documentation—but prohibits competitors from using this documentation to help make their operating systems compatible with Windows. The PFJ does not require Microsoft to release documentation about the format of Microsoft Office documents.

The PFJ does not require Microsoft to list which software patents protect the Windows APIs. This leaves Windows-compatible operating systems in an uncertain state: are they, or are they not infringing on Microsoft software patents? This can scare away potential users.

The PFJ Fails to Prohibit Anticompetitive License Terms currently used by Microsoft Microsoft currently uses restrictive licensing terms to keep Open Source apps from running on Windows. Microsoft currently uses restrictive licensing terms to keep Windows apps from running on competing operating systems. Microsoft's enterprise license agreements (used by large companies, state governments, and universities) charge by the number of computers which could run a Microsoft operating system—even for computers running competing operating systems such as Linux! (Similar licenses to OEMs were once banned by the 1994 consent decree.)

The PFJ Fails to Prohibit Intentional Incompatibilities Historically Used by Microsoft

Microsoft has in the past inserted intentional incompatibilities in its applications to keep them from running on competing operating systems.

The PFJ Fails to Prohibit Anticompetitive Practices Towards OEMs The PFJ allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system.

The PFJ allows Microsoft to discriminate against small OEMs—including regional "white box" OEMs which are historically the most willing to install competing operating systems—who ship competing software.

The PFJ allows Microsoft to offer discounts on Windows (MDAs) to OEMs based on criteria like sales of Microsoft Office or Pocket PC systems. This allows Microsoft to leverage its monopoly on Intel-compatible operating systems to increase its market share in other areas.

The PFJ as currently written appears to lack an effective enforcement mechanism. We also agree with the conclusion reached by that document, namely that the Proposed Final Judgment, as written, allows and encourages significant anticompetitive practices to continue, would delay the emergence of competing Windows-compatible operating systems, and is therefore not in the public interest. It should not be adopted without substantial revision to address these problems.

Dear DOJ,
Please do not ratify the proposed Microsoft settlement. This settlement does not go far enough to be effective in preventing Microsoft from continuing with its blatant anti-competitive behavior. In addition to the immediate problems Microsoft causes in the computer software industries, its anti-competitive strategies cause widespread harm to U.S. productivity, thanks to the number of people who use Microsoft's inferior products only because of the difficulty they have finding viable ways to work around its monopoly. Please make sure that any settlement addresses these problems; the current proposal does not.

From: Brett Holt
To: Microsoft ATR
Date: 1/24/02 10:20am
Subject: Microsoft Settlement

As provided for under the Tunney Act, I would like to comment on the proposed Microsoft settlement. As a consumer, I am concerned about the consequences of allowing Microsoft to continue to restrain fair competition, resulting in far less choice and lower levels of innovation to the users of computer products.

Although there are numerous objections which should be raised, including the lack of any substantive penalties for past misconduct, I would like to focus on only one reason which I feel is of particular importance as we move forward from this case.

The best part of the settlement is its attempt to address the unfair monopolistic advantage Microsoft achieves by making it difficult for competing vendors to build software that interoperates with Microsoft's operating systems and applications. While desiring to remedy this problem is certainly good, the proposed remedies are not likely to be effective.

The proposed settlement allows Microsoft to exclude all but the very largest software vendors from access to the technical information needed to build interoperable programs. This has an unfair effect on both

small software vendors and developers of open source software. The greatest potential for future innovation rests on precisely that portion of the marketplace that is excluded in this settlement. A far better remedy would be to require Microsoft to make this technical data publicly available. The cost of compliance need not be significantly greater than it would be if only large competitors were allowed access, due to the relative ease with which such information can be made available over the Internet. I am convinced that this would be one of the best ways to protect the interests of consumers and to promote innovation over the long term.

MTC-00021197

From: Cris Flagg
To: Microsoft ATR
Date: 1/24/02 10:23am
Subject: Microsoft Settlement

The prohibited conduct suggested in the settlement does little to restrict microsoft. The final caveat whereby "This agreement lets Microsoft keep secret anything having to do with security or copy protection" is already leveraged against the spirit of the settlement. IN a recent press release from Microsoft "Microsoft's co-founder called on the industry to acknowledge that the solutions to security and privacy challenges, which are often comingled in the minds of consumers"

Future circumvention of the spirit of this or any agreement will be based on the requirements of "security" rather than integration, as was the internet explorer/ netscape case.

I do not believe this settlement punishes microsoft in any meaningful way nor does it force microsoft to act in an anti-competative manner. Even with the light treatment Microsoft is receiveing it is already setting the groundwork to avoid the restrictions of this settlement.

Subj: Comments for the public record US DOJ v Microsoft

To the Honorable Kollar Kotelly, January 24, 2001 I appreciate this opportunity to submit my thoughts and comments concerning the Department of Justice's Anti-Trust case against Microsoft. I was motivated to write after reading recent rulings in the DOJ v Microsoft case. I realize what I am about to say may be described as "closing the barn door after the horse got out." Yet, I ask for your patience and indulgence as you listen to my comments, for that kindness I thank you in advance.

Who am I to comment on such a case? And, what qualifications, if any, do I bring to the debate? Both are fair and reasonable questions to ask. I am a multi-system technology professional, adapt inside of the Microsoft technology world and outside of it as well. I am well trained enough to make a living as an Independent Consultant and have been doing so since the mid 1990's. In addition, my total experience in the technology profession dates back to 1972. It's my belief I have the necessary background and life experience to understand these recent rulings within the context of the law as well as the industry I've been privileged to work in these last 30 years.

When we compare this case to the one that established the benchmark (Standard Oil) for Anti-Trust legislation we do not see the logical components to support the DOJ's position (to take Anti-Trust action against Microsoft.) By this I mean, in the Standard Oil case it was clear behavior by Standard Oil impeded competition and hindered the free market system; by the direct result of actions taken by Standard Oil the consumer was put at risk, e.g., by the effective blocking of competition from the well-head, through production, to the gas pump, the consumer could not benefit by the free-market. It is clear that Microsoft does not, nor did it ever, have this kind of control over the free market. Hence, my first point is, this case does meet the test for Anti-Trust action.

This leads me to my second point—who benefits from any Anti-Trust ruling against Microsoft? I believe any Anti-Trust ruling against Microsoft actually promotes the kind of behavior we intend to stifle via Anti-Trust legislation. How so? It's my belief that the companies who helped initiate the legal action are being rewarded for bad business practices. What am I talking about?

MTC-00021198—0002

Business decisions. Here is where my experience and technical background forces me to disagree with any ruling that subscribes to the notion that Microsoft is a monopoly. The primary reason for Microsoft's success has more to do with others' poor business decisions than anything else. The idea that there are insufficient resources available for the free-market to produce a remedy is false—it is simply untrue. Companies like Apple, IBM, Compaq, HP, and Dell, to name a few, have the capacity to produce a competitive Desktop Operating System and roll it out within a year. That's correct, I said one year. How is this so?

u Apple Computer Corporation: had, at one point, an x86 project that ported the Mac OS to the x86 chip. Though it was already in

Beta but for "business" reasons Steve Jobs killed the project. Another interesting business decision by Apple was the pulling of the Mac clone licenses. One of its major vendors, a company called PowerComputing, was starting to roll out Mac clones with a newly developed OS called the BeOs. The BeOs was designed to run on multiple CPU architectures, i.e., both the x86 and the Apple PowerPC chip. Question, why did Apple pull the license? Answer, a business decision.

Using the DOJ's logic, could this not be construed as Anti-Trust behavior, stifling competition for the PowerPC chip? IBM and OS2 Warp. Clearly IBM is a company that has the financial resources to go toe-to-toe with Microsoft and did not, why? Consider its joint venture with Apple and Motorola that produced the next generation CPU, the PowerPC chip. A Swedish technical team ported the Mac OS to IBM's RS-6000 computer system, and did it in 6 months! So we know from experience that IBM can roll out a competitive OS that will run on multiple CPU architecture in a relatively short period of time. Additionally, IBM already has an OS that runs on the x86 chip, it's called OS2. Why not ask IBM, who, with its R&D clout and a true 32 bit OS already in production, how come it abandoned the Desktop OS arena? Answer, business decision.

u Windows is not a dominant OS. The Windows Operating System may be the dominant Operating System (OS) in the United States, however, depending on which country you are in it may not be. For example, in Canada the Macintosh OS has a dominant footprint in the business community, as it does in Europe and the Asian-Pacific basin. Apple, after-all, is a multi-billion dollar a year company, someone, somewhere, is buying its Mac OS over the Microsoft OS.

The aforementioned are only a couple of examples of many. I could site similar stories for companies like Sun, Compaq, HP, and of course what about the hardware vendors like Dell who have the financial resources to port already existing OS's to their platforms. The question begged by my examples is why not? The answer is simple, "business decision." And therein lies my concern; any Anti-Trust ruling against Microsoft actually rewards these companies for making bad decisions that have negatively impacted the consumer.

When one examines the facts, looks at the benchmark for Anti-Trust, one is forced to conclude that the DOJ's case against Microsoft has been at the outset an effort to reward those, who for their own personal business reasons, refused to compete in the free-market system, which of course, is their choice, however, I argue we ought not to reward that kind of behavior. I respectfully submit that the DOJ's Anti-Trust case against Microsoft should be dismissed. Thank you for this opportunity to share my thoughts, I remain,

Sincerely yours,
Theodore A Isabella

To whom it may concern;

Though I am a laymen regarding this trial, I have been following it avidly in the media, and I have been watching the settlement process with horror. In spite of the courts' findings that Microsoft is a monopoly which has abused its monopolistic powers, a settlement is being reached which does virtually nothing to deal with either their past crimes or to keep them from committing future crimes.

From my point of view, Microsofts monopoly combined with its unwillingness to provide information about its products which many consumers have no choice but to use due to the fact that Windows is the only operating system which will work with certain commercial software which may be necessary for the completion of a task, especially by those not intimately familiar with computers and the methods to program and configure them, has significantly harmed the market.

Their willingness to alter their API and drivers models, often without providing full details on their modification makes it difficult for developpers to create software or drivers which they know will be compatible with future versions of windows. Yet at the same time, Windows ME, 2000, and to an even greater degree, enforce compliance with these not fully disclosed and arbitrary driver models or "warn of impending doom" if the user attempts to install drivers which have not been certified and digitally signed by microsoft as being compliant.

It is my opinion, that at the very least, Microsoft should be forced to avoid many of these past transgressions by providing full disclosure. I am not an extremist and do not advocate some peoples suggestion that Microsoft should be forced to expose the source code of Windows, however, I do strongly support forcing Microsoft to fully document its APIs, driver models, and file formats.

Sincerely
Timothy Wiseman
TAW.

Dear Ms. Renata Hesse:

Please put a stop to the economically-draining witch-hunt against Microsoft. This has gone on long enough.

Microsoft has already agreed to hide its Internet Explorer icon from the desktop; the fact is, this case against Microsoft is little more than "welfare" for Netscape and other Microsoft competitors, with not a nickel

going to those supposedly harmed by Microsoft: the computer user. This is just another method for states to get free money, and a terrible precedent for the future, not only in terms of computer technology, but all sorts of innovations in the most dynamic industry the world has ever seen.

Please put a stop to this travesty of justice now. Thank you.

Microsoft is doing nothing wrong but running an efficient and profitable business. Something most software companies that publish titles for the common household PC cannot accomplish. Therefore, they blame the largest marketshare holder as the reason instead of their substandard competitive offerings. The proposed settlement will do nothing to help those whom cannot compete with inferior development. The fact that alternate operating systems DO exist clearly prove no monopoly is present.

Dear Ms. Renata Hesse:

Please continue to enforce anti-trust laws. Microsoft has consistently violated many provisions of the law, and should be held accountable for its actions.

Computer technology has been the prime force behind productivity increases in the American and world economies, particularly in the last 10 years. Small companies with innovative ideas are at the mercy of the predatory practices of Microsoft, and enforcement of anti-trust laws will help to ensure that the astounding productivity improvements which have fueled economic growth in the recent past are not strangled.

I am writing in opposition to the current terms of the proposed Microsoft/DOJ settlement.

Although there are many aspects of the proposed settlement, a particularly glaring omission is the format of files/documents created by Microsoft Office products will remain hidden and proprietary.

These files, which are essentially the intellectual property of the person/user who wrote them, cannot then be reliably used, except with the aid of a Microsoft product.

This would include letters and spreadsheets, even though undocumented Microsoft file formats form part of the Applications Barrier to Entry, described in the "Findings of Fact", paragraphs 20 and 39.

MTC-00021228

From: OhiKennedy@aol.com@inetgw
To: Microsoft ATR
Date: 1/24/02 10:25am
Subject: Microsoft Settlement

I do not agree that the proposed settlement is sufficient remedy for Microsoft's monopolistic practices, and I do not feel it serves the public interest. As a software applications specialist, I have a keen interest in the present and future state of software for both Macintosh and Intel-compatible computers. I also worked as a mainframe operator in the past, so I know a little about that aspect too. In all of these areas the

proposed final judgement in the Microsoft case doesn't cover enough or go far enough.

In particular, the proposed settlement:

—doesn't address Microsoft's current prohibitions and restrictions on useful, currently-available freeware, shareware, add-ons and competitors' software and firmware;

—does nothing to prevent Microsoft licenses from "locking out" competing software developers simply by changing the name or minor technical requirements of existing or new software;

—is so narrowly worded that Microsoft's own next-generation software and current licenses aren't even covered, even though its anti-competitive practices are certainly still in use;

—doesn't address Microsoft's proven technique of adding incompatibilities to punish and discourage users of non-Microsoft operating systems (evidence presented in the 1996 *Caldera v. Microsoft* antitrust lawsuit); and

—doesn't address Microsoft's restrictive and anti-competitive licenses for very large end-users ('enterprises').

I've used many kinds and sizes of computers and computerized equipment since 1981. In those two decades I've seen a dramatic decrease in the number of operating systems available, in the availability of competing software for office and home tasks, and ultimately in the types of computers available. I believe this has been a direct result of Microsoft's growing stranglehold on computer OEMs and software developers and users, and it has not resulted in better software or more choices for consumers!

The proposed final judgement in the Microsoft case chiefly serves Microsoft's interests, as written. The indecorous haste with which it was revised and released, without the support of the DoJ's own staff who have worked with the case for years, presents the appearance of a "promise bought and paid for" and opens the American civil justice system to criticism by the entire world.

Subject: Microsoft Settlement

Hi,

Here are my comments on the Microsoft anti-trust case:

1. Surely Microsoft has far too much influence over the computer manufacturers. If Microsoft force them to sell PC's which only have Windows installed, or are Not allowed to sell Windows on their PC's at all, that prevents fair competition at the most important point.

2. In the "Internet age" product security features are essential. If PC's can be hacked, that poses a grave threat to National Security because these vulnerable systems can be used to crash Government mail servers. Microsoft should be held accountable for this. One viable option is to make them offer a "bounty" for each vulnerability discovered, without allowing them to impose punitive non-disclosure terms.

3. In view of this, should Microsoft be made to audit all the program code in their Windows operating systems within a reasonable period. This is essential in the "home user" environment where trained support personnel are not available, and there are no firewalls to stop hackers. Updates would not always be performed by users who didn't understand the importance of the security issues involved.

4. To promote fair competition in the software development market, Microsoft should be required to disclose, in full, the network protocols and programming functions used in their products. They should also be made to fully disclose all future network protocols and other

"application interface" features such as the Hotmail "HTTP mail retrieval" protocols, for "fair competition" purposes and security audit.

Regards,
Adrian

Sirs!

What I have seen/heard of the proposed settlement appears to legalize rather than correct Microsoft's abusive monopolistic behavior. I don't see where any of the proposal will increase competition and benefit the small consumer. You should at least force unbundling of the software from hardware.

Subject: Tunney Act—PFJ—My Two Bits

Hello,

I am writing because I believe the PFJ in the Microsoft Antitrust Case is severely lacking in several areas. The key areas I am concerned with can be found outlined at the following internet url: <<http://www.kegel.com/remedy/letter.html>>

Please look at these points and reconsider what you feel is the appropriate action. I worked for CompuServe and was there for the merger with AOL. One of the things I didn't understand is how the government would go to AOL/CompuServe for a definition of what an online service is. Somehow AOL/CompuServe convinced the Antitrust Division that they were an "internet service provider" and had plenty of competition. This point was key to getting the approval to merge.

This couldn't have been farther from the truth. AOL/CompuServe are online community providers that also happen to provide access to the internet. There wasn't any comparable service of any size at that time. Now AOL has the market cornered as an Online Community Provider and the CompuServe "brand" is dying a slow quiet death.

The PFJ looks like the Antitrust Office is making the same mistake again by allowing a technical company to use smoke and mirrors to negotiate an outcome that will have little to no long lasting effect on Microsoft and doesn't halt their monopolist practices one iota.

Thank you for your time,
Raymond L. Haines

Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue,
Washington, DC 20530
Dear Mr. Ashcroft:

As a long-standing professional member of my community, I have been and still am outraged by the government's unending pursuit of a successful corporation such as Microsoft. I attribute the exponential surge in the economy of the 1990's and the technical advancements of the last fifteen years to the Microsoft product line and their innovation. This all being said, I am relieved that the Department of Justice has finally agreed to settle this judicial debacle with Microsoft and allow all parties to move on.

Some people have made the mistake of seeing Shunt's work as a load of rubbish about railway timetables. This settlement, three years and three months to late, provides for increased competition, the fostering of innovation and while not needed, a greater sense of accountability. According to the settlement, Microsoft must submit its software and business records to a government oversight committee. The role of this committee is to ensure Microsoft's compliance with the settlement. While I do not agree that this is necessary, the fact that Microsoft has agreed to it shows that their highest interest is the public and ending this action.

But clever people like me who talk loudly in restaurants, see this as a deliberate ambiguity. A plea for justice in a mechanized society.

The settlement offers an opportunity to revitalize our economy, and we should take it. Furthermore, I would suggest that you encourage the several states not following this settlement to change their minds. When Shunt says the 8:15 from Paddington he really means the 8:17 from Paddington. The places are the same, only the time is altered.

Ecce homo ergo elk. La Fontaine knew his sister, and knew her bloody well.

Sincerely,
William Hunt

Subject: WHY HASN'T MICROSOFT
COUNTERSUED OVER AOL'S INSTANT
MESSENGER MONOPOLY?

AOL's refusal to cooperate on developing an open standard for instant messaging proves they are using their position in the market to maintain their monopoly. Why do I have to have unfriendly AOL software on my computer that has compatibility problems with other software because they refuse to

work with other companies? Instant Messenger type software has become a primary reason to own a computer and may shortly overtake the importance of browsers.

It seems AOL has become the most monopolistic of all and no one in Washington cares (or they own too many AOL shares to care).

I believe that the DOJ has taken a very soft approach to the Microsoft settlement, that the public will continue to pay for with reduced innovation and poorly designed products. I have been a student of the industry for years and find it hard to think of one real major concept that Microsoft was a true innovator. The company puts out marginal products that would not be successful in a true competitive environment.

It is also clear to me the Netscape's browser was a victim of Microsoft's predatory practices and I feel that the DOJ has caved on this case.

Subject: Microsoft Settlement
Sir or Madam:

To put it simply, the proposed settlement of the Microsoft Antitrust Suit is weak in restrictions and lacking in the realm of enforcement. Instead of being a solution, it simply perpetuates the problem. Microsoft has consistently shown itself to be in contempt of the DoJ, and of any agreements it has made with that entity. Do you really believe that they, for a second, intend to abide by this agreement. Do you truly believe that Microsoft fears another legal battle with the DoJ after having twice now fought you to a stalemate?

What needs to be required of Microsoft is a capitulation of Microsoft of the part of what types of software they own and develop. Microsoft owns and develops games, operating systems, web browsers, office suites, and many other software tools. It is time for Microsoft to relinquish some of the markets it has dominated for so long.

Subject: Microsoft Settlement
Sirs:

I would request the DOJ to re-visit and re-work the Proposed Final Judgment settlement for the following reasons:

The PFJ Fails to Prohibit Anticompetitive License Terms and Anticompetitive Practices currently used by Microsoft

I am most concerned with Microsoft's actions towards OEM's that ship PC (and other computing devices) with competing Operating Systems and Application software. I wish for a level playing field when selecting PC's and PDA, for instance. I don't think that the OEMs are receiving neutral treatment if they consider other sources than Microsoft. (Pressure on Dell for shipping Linux boxes for example.)

And finally, the PFJ as currently written appears to lack an effective enforcement mechanism. Needs better teeth.

To whom may be concerned,
I strongly favor a settlement between US Government and Microsoft Corporation. We have waste a lot of money and time going for a litigation instead of channeling our resources toward innovations that are going to put our nation ahead of foreign competitions. Somehow in our legal mass we have forgotten that there are plenty of competitions outside our country. I believe that our government is smart enough to lead us into 21th century that is going to encourage innovations rather than protect the losers in the market.

Sincerely,
Chung

Under the Tunney Act, I wish to comment on the proposed Microsoft settlement.

I feel that the conditions of the United States v. Microsoft Settlement fails to properly reprimand Microsoft for it's anti-competitive behavior. The conditions of the settlement do not call for an opening of the windows file formats. I consider this a critical omission.

The opening of the windows file formats must be combined with effective documentation of API's. Microsoft should be required to release information about Windows interfaces. The definitions of "Microsoft Middleware Product" and "API" is too narrow, and provides loopholes for Microsoft to avoid any meaningful enforcement.

Definition U should be amended to read: U. "Windows Operating System Product" means any software or firmware code distributed commercially by Microsoft that is capable of executing any subset of the Win32 APIs, including without exclusion Windows 2000 Professional, Windows XP Home, Windows XP Professional, Windows XP Tablet PC Edition, Windows CE, PocketPC 2002, and successors to the foregoing, including the products currently code named "Longhorn" and "Blackcomb" and their successors, including upgrades, bug fixes, service packs, etc. Section E should be amended to read ... Microsoft shall disclose to ISVs, IHVs, IAPs, ICPs, and OEMs, for the purpose of inter-operating with a Windows Operating System Product or with application software written for Windows, via the Microsoft Developer Network ("MSDN") or similar mechanisms, the APIs and related Documentation that are used by Microsoft Middleware to inter-operate with a Windows Operating System Product ...

III. A. 2. of the Proposed Final Judgment should be amended to read
2. shipping a Personal Computer that (a) includes both a Windows Operating System Product and a non-Microsoft Operating System, or (b) will boot with more than one Operating System, or (c) includes a non-Microsoft Operating System but no Windows Operating System Product; or ...

In 1996 Caldera v. Microsoft the judge in the case ruled that: "Caldera has presented sufficient evidence that the incompatibilities alleged were part of an anticompetitive scheme by Microsoft."

The concern here is that, as competing operating systems emerge which are able to run Windows applications, Microsoft might try to sabotage Windows applications, middle-ware, and development tools so that they cannot run on non-Microsoft operating systems, just as they did earlier with Windows 3.1. The actions of Microsoft's executives in court (they appeared to make misrepresentations under oath), combined with Microsoft's previous actions (1996 Caldera v. Microsoft), should effect the severity of Microsoft's punishments for it's behavior.

The current settlement provides to many loop-holes for Microsoft to wiggle through. A more restrictive settlement is necessary, but I feel proper restrictions will only come from a judgment. Anything that Microsoft *agrees to* is not severe enough. Larry Kopenkskey, Caledonia, Michigan; Electrical Engineer, Hardware and IC Design Engineer; Member IEEE.

Subject: Microsoft Settlement

OK, so let me see if I'm reading the Final Judgement right:

- Microsoft doesn't have to admit to being a monopoly, or to being guilty of anything, in spite of the fact that they —have— been judged to be one.

-Retaliation against OEMs is prohibited, but impossible to prove, given the way things are set up. On the other hand Microsoft can cancel a licensing contract with any OEM, whenever they feel like it, so long as they give them written notice and the supposed reason for the cancellation.

-They can't prevent OEMs from installing and/or displaying icons, shortcuts, or menu entries for non-MS middleware...unless they make changes in the Windows Documentation; sure, they'll have to prevent their own middleware from working, but that's OK, they can charge whatever they want for the OS and sell the middleware

separately, plus they don't even have to document it if they do the beta testing right (see below)...

-MS can't prevent ISVs from competing with them, or advertising competing products...unless it's written into a contract they have with them (and if it isn't and they compete, you can be sure MS will do everything in their power to make sure things don't work, then claim IP protection allows them to do so, thanks to the clause right afterwards). Not to mention that if you don't have a contract with MS, they can easily punish the ISV by forcing incompatibilities through new “features” (see the part on ActiveX controls) or by implementing some sort of proprietary security measures (see the part on APIs and Communications Protocols), whose workings they then cannot disclose (so sorry)...

-MS can't force vendors to support their OSs whether they want to or not...unless it becomes apparent that the vendors could conceivably sell more non-MS products than MS products, thereby (god forbid) encouraging some semblance of competition...ah, the free market at work...

-MS can't prevent non-MS middleware from loading...unless they come up with a new “eature” involving ActiveX controls that the non-MS middleware is incompatible with; not that they would —ever— do something like that. Yes, they have to tell the ISV, and they will, at the last possible moment, delaying as much as possible, until that particular bit of MS middleware is either very well established or can be claimed as “a necessary part of the OS”, or somesuch thing.

-MS has to disclose how their APIs and Communications Protocols work...unless those things relate in some vague, unspecified way, to some sort of security issue dealing with “anti-piracy, anti-virus, software licensing, digital rights management, encryption or authentication systems, including without limitation, keys, authorization tokens or enforcement criteria”. So in other words, all they have to do is build encryption into all of their Communications Protocols, for instance, and no matter how bad or ineffective it is, no one can ask how it works, thus allowing them to continue abusing their monopoly power.

-A technical committee will be formed to ensure that MS is doing what they're supposed to be doing, according to the settlement, will also take complaints from whomever wishes to complain, and make recommendations as to what to do about them...but the findings of the TC will never make it inside a courtroom! So much for trusting the experts...

...not to mention the fact that MS gets to pick one of the members of the technical committee, who in turns helps to pick the third!

Why on —earth— would you give the people who have been judged to be at fault in this case have —any— power over the enforcement of their own punishment? You can be sure that whoever they pick will be biased, pro-Microsoft, and the restrictions on how long it's been since the person worked at Microsoft are pathetic; someone could've quit MS at the start of the anti-trust proceedings and already be ready to go for the committee...

-NONE of this applies to —anything— other than x86-compatible PCs!! So handhelds that run Windows CE, game stations like the X-Box, and any other machines that can run Windows are exempt from any of this— Because of course Microsoft would —never— attempt to abuse those markets as well. Why on earth should the settlement be limited in this way?

-MS can go about its business, making no disclosures about its middleware, so long as their beta tests involve less than 150,000 testers!! Why should they —ever— go above this number, then? That's enough to test —anything ...

-MS gets to decide, at its sole discretion, what qualifies as an operating system, giving them enormous power to modify the impact of this judgement on future products.

...not that it matters, since this “remedy” is only good for five years, seven tops if the courts decides to extend based on some sort of systemic violations found in Microsoft's behavior.

In summary—This “Final Judgement” will NOT remedy the situation !!! The consumers will —still— suffer due to abuses of power by the Microsoft monopoly, just as they had before, but if this settlement is made, the states who settled (not to mention the federal government) will lose their legal ability to —do something— about this illegal monopoly for many years to come!!! This is patently absurd; anyone who takes a little time to read this can point out, as I just have, many, MANY holes in the judgement; it will force Microsoft to change its ways in order to find new ways to do what it's always done, but the basic pattern of behavior will not change. This is not justice, it's ludicrous. There is no free market so long as these sorts of abuses are allowed to occur, and without competition they will continue to occur. The computer—hardware— market has shown itself to be a hotbed of competition, and as a result, we have gone, just a few years ago, from computers with 100 MHz processors to ones 20 times faster in clock speeds along— Not to mention the amazing advances in flat panel monitor and 3-D graphics processing technology, realistic 3-D sound, enormous, ultra-fat hard drives, and much more. Now, compare that to the operating systems market. We have a lot of very intelligent peoppe working there as well, and working hard. But on the freedom to innovate? Innovate already, —please—!! I'd love to see that happen, but in the same amount of time that I described, we've gone from Windows 95 to Windows ME and XP. They're somewhat more stable than 95, yes, not to mention slower, requiring more processing power and resources to do the exact same things we used to do on our old machines, now obsolete in part due to the ridiculous idea that every “feature” is a good one, even if that's not what the user wants, and that sloppy, unoptimized code is OK because we'll just patch it later, people will buy faster computers, and after all, who —else— are you going to get your software from?? This message was typed on a machine that runs Microsoft Windows, and I'll hazard it will be received by a machine that runs Microsoft Windows. If it's read at all, it will probably be read by people who use Microsoft

Windows. And when those people go home from their jobs, they will come home to computers that most likely run Microsoft Windows. And the next computers they buy will —also— run Microsoft Windows. And the next, and the next... This may not be true for 100% of the population, but 90% is good enough for me, and this is the real test—Look at Microsoft's market share. Will this judgement have —any— impact on it? Or will Microsoft remain a monopoly? Who will make the next piece of software —you— buy? And how much money have you sent them already? Does this bother you at all? Do you think it needs to change? Do you think this judgement will really have the sort of impact that's needed?

This isn't going to change anything; and in that respect, Microsoft has clearly —won—.

Microsoft is guilty of anti-competitive tactics. The settlement of these charges should result in a penalty to the guilty party. Instead of allowing Microsoft to benefit from the proposed settlement (increasing their market share in the one industry where they aren't as competitive), why not penalize them? Force Microsoft to purchase and distribute Apple Macintosh computers to schools. That would have the double effect of penalizing their anticompetitive practices, as well providing for a more competitive environment.

Please do the right thing. We American people are counting on you.

Subject: Stop all suits against Microsoft
Dear Sirs or Madames:

I am outraged by all the suits and claims against Microsoft. No one has given them the credit they deserve. They have brought the

computer world to the highest level. All the others are just jealous of their talent. I am proud of this great American Company and all that they have done. You have bothered them long enough. Leave them alone....

It shows all youth that they can start something in a garage or basement and build it up to be a large company. Look at all the jobs they have created. Look at all the help they have given "users" of the computers....

I beg you to leave them alone....let them create—not fight the government.

I heard that negotiations over the Microsoft antitrust suit are at a critical pass. The Dept. of Justice is asking for public comment.

Microsoft has already agreed to hide its Internet Explorer icon from the desktop; (WHY? They should have the credit...and it is easier for the public to find the area...) the fact is, this case against Microsoft is little more than "welfare" for Netscape and other Microsoft competitors, with not a nickel going to those supposedly harmed by Microsoft.

"This is just another method for states to get free money, and a terrible precedent for the future," states the AOCTP, "not only in terms of computer technology, but all sorts of innovations in the most dynamic industry the world has ever seen." This economically-draining witch-hunt has gone on long enough. We need to let the Department of Justice know how we feel about the Microsoft Settlement.

Again, PLEASE let Microsoft get back to work making new computer technology and innovations....LEAVE THEM ALONE.....!!!!

Pursuant to the Tunney Act, the period for public comment ends January 28, 2002.

Please advise me on your decision.

Sincerely,
Marian Pedersen

Subject: Comments on the proposed Microsoft Settlement

I am writing to express my vexation with the proposed settlement of the antitrust case against Microsoft.

It strikes me as indefensible that the Department of Justice, having successfully found Microsoft guilty of illegally wielding and bolstering their monopoly status, is willing to allow the company to simply agree to minor behavioral restrictions. While I have long thought a structural remedy would be best, I appreciate the arguments against and accept that such remedy may well be unworkable. Therefore, given the need for a behavioral remedy, I believe the following measures, at minimum, would be appropriate:

1) A substantial fine. While I claim no expertise on setting fine valuations, I suggest 33% of Microsoft's gross profits for the years 1994-2000 inclusive.

2) A complete vacation of agreements with PC vendors which specify any control at all by Microsoft on the presentation of the Windows desktop, and the prohibition of any further such agreements.

3)The enforced publication (opening) of the file formats used by the Microsoft Office suite.

These measures would be above and beyond those specified in the proposal, altho those measures need some adjustment on their own. For instance, the language in section III(J)(2) and III(D) specify that the APIs and protocols need to be disclosed only to businesses; in some cases, specific businesses. This is nonsense: the information needs to be published, openly, for use by any and all interested parties—including, it should be noted, government, non-profit and open-source and free-software concerns.

I call upon the arbiters of the proposed settlement to reject and demand the Department of Justice make a new proposal which will actually impose punishment on Microsoft. The company will not fail because of it, and with sufficient restraints on its overweening power, perhaps other companies will have a chance to actually put a product into the market without having it crushed by the behemoth.

Thank you for your attention.

Subject: Microsoft Settlement

I believe this settlement is a fair and reasonable compromise. This antitrust case needs to end now. I also believe that our economy is in the shape that is in now because of this case. If we don't settle this case now our economy is going to get worse because the market does not like any kind of uncertainty. I also believe that Microsoft did not really do anything wrong. It's being punished for being a really good company and having good products. This antitrust case was not about protecting the consumers as it should have been. It was all about protecting Microsoft's competitors! This is not what our government should be doing!

I'll see what I can fit in this tiny little comment area. The gist is that the government should stay out of how companies do business and let the markets take care of bad business practices. If a company makes an operating system and an office suite good for them also good luck to them, as an individual it is MY decision whether to use those products or not not the governments. My biggest beef is all the tax money it took to pay for the case(s) as well as the Microsoft money that it took which eventually comes out of the pocket of every Microsoft customer. Govt regulation leads to Socialism which in every nation in history doesn't work!

TO: DOJ Government Officials

This latest lawsuit by AOL against Microsoft is such a sham, and should be thrown out immediately it appears that AOL is probably just trying to recoup their initial purchase of Netscape (which I think was a mistake in the first place).

Microsoft continues to do more for the software world (both for PC and MAC) than any other company in the world. Try to imagine where we would be in computer technology today if it hadn't been for Microsoft clearly the Apple Corp (MAC) hasn't made the giant-steps that have brought us to our highly technical position—only Microsoft.

I currently have AOL as my ISP (Internet Service Provider), but after this new lawsuit was filed I can no longer continue using them, and will get another ISP within the month. AOL may be the largest ISP, but their level of service continues to deteriorate and there is very lousy customer support or attempts to speed things up.

I'm sure the current Administration has some very conservative opinions about this lawsuit, and it should be dismissed !! sincerely, John Darr

To: "microsoft.atr(a)usdoj.gov"
Date: 1/24/02 10:33am
Subject: Microsoft Settlement

I believe you must allow the current settlement proposed for the Microsoft antitrust case.

Microsoft has shown itself to be a ruthless predator in the industry. They unfairly used their operating system monopoly (acquired by taking advantage of IBM) to force other companies out of application businesses. The reason office became a leader was due to bundling the application with every copy of Windows sold. A clear example of trying to force competitors out of business is Netscape but there are many smaller examples. Now Microsoft is trying to force themselves into other platforms, such as the handheld computer industry, via their monopoly position on the desktop. In the case of both Netscape and Palm, an established leader in their space was threatened by Microsoft leveraging their monopoly on the desktop.

The whole computer industry suffers from this monopoly because it stifles competition and stops diversity in the industry. Consequently, the operating systems do not move forward and we do not get creative and new applications.

The alternative settlement proposed by the nine dissenting states is a much better remedy to this problem.

Thank you for your time.

I think the government should stay out of the technical development area. Technology does not need to be restrained in order for the States to maintain leadership in this arena. I think Microsoft got a bad rapt.

There is no other company at the present time that can develop the technology and get it to market like Microsoft. This is not to say that other software companies can't if they would just focus on development and forget the competition. All involved have spent to much on the legal proceedings that should never have been initiated.

I think it is atrocious to allow a company such as Microsoft to allow them to business as usual. There products are inferior yet they have a superior marketing department. I think at the very least if they are allowed to continue to sell their bug laden, tripe they should at least hold some accountability for it. Microsoft has made its insecure junk software so much of an influence strictly by its politics and public relations. It definitely isn't do to the superiority of there products. If I produced and sold you a car and told you up front that it leaked water, wouldn't drive on bumpy roads and would only run for 2 hours at a time before needing to be jump started, would you still buy those cars? On top of that say a clause in the purchase contract was that you could never repaint the car because they were painted with advertisements for people who had paid the manufacturer to put them there. Would you still buy that car at a premium price. On top of THAT per the contract you didn't own the car you were purchasing but in fact the Manufacturer retained ownership and would just let you drive it as long as you never repainted it or let any one else drive it and agreed to hold the manufacture harmless in whatever ill driving the car brought you!

I think it is obvious to most who have watched this that there are some behind the scenes politicking going on with this case, and I think its a damn shame! Hitler said it best:

What good fortune for those in power that people do not think.

 It is time for the US economy to get back on top. Part of that process is to stop diverting resources to a lawsuit against a company that epitomizes our way of life. Microsoft needs to get back to concentrating on its goods and services and the Justice Department and the several states Attorneys General need to find some other cause celebre. They ve milked this one about as much as they can. In this country the weaker competitor loses because they have inferior products NOT necessarily because they have been unfairly and illegally thwarted in the marketplace. It s time for the whiners like AOL Sun Netscape et al to stand up compete like Americans and stand on their own merits rather than on the strength of their lawyers. Enough is enough. Let s get on with it already. Settle this damnable lawsuit and get the US back on it s economic footing. The untold economic damage caused by this whole fiasco probably can never be recovered at this point. Tell the states not agreeing to settle to shut up and go home.

A good critique of the agreement can be found at <http://davenet.userland.com/2001/11/02/theMicrosoftSettlement>. Please read this in preparation for your deliberations. It disturbs me that many of the Attorneys General (AG s) have not gotten on board with the settlement. While I don t wish to see the case dragged out Microsoft will not voluntarily submit to cessation of marketing practices that have brought this issue. Those AG s who hold the most radical views on either end of the spectrum should be weeded out leaving a moderate core the majority of whom should agree on the settlement. Microsoft cannot be forced to divest itself of Software it has created based on its own research and development. Sufficient remedy seems to be available to those who brought the suit in that bundled middleware (Internet Explorer media players etc.) will be replacable at the end user s discretion. This solution doesn t force Microsoft to break its code (a specious argument from my viewpoint as a developer) and allows the consumer to choose a different provider. Microsoft should not be allowed to provide the Windows operating system to the educational community. Their thinly veiled offer gives them inroads into another market segment for which they lust. They should donate hardware and the schools should have the choice of operating system (Red Hat has offered software and support). Thank you for allowing me to express my opinion.

 Your Honor: I have read the judgement and find that our federal government is again extending its reach beyond the bounds which constitutional authority allows. All federal jurisdictions are determined by the foundation of federal law which is the constitution. Legislation which is not founded on this base of authority is illegal in nature and illegitimate in its foundations.

The free market has its own corrective actions for companies which attempt to monopolize any particular sector. The rail system was first attacked by the federal government and then became the protectorate of the federal government.

Many of the attempts of the federal government to legislate fairness in the market place have done just the reverse. The monopoly laws in the rail industry actually began to support the existing rail companies and inhibit the free market. The result is a rail system that comes in last place in the industrialized world.

Federal mandates in the automotive industry have made impossible the entrance of new automotive startups to compete with existing manufacturers thus enforcing existing monopolies. Only companies unencumbered by our federal mandates were able to enter the automotive industry via more friendly free market environments on foreign soil. Without foreign competition the American automotive sector would be little improved from the technology that was in place 30+ years ago when the Japanese first gained entrance to our market with the low cost fuel efficient subcompact cars. As a resident of the state of North Carolina the place of my birth I do not share in my states plaintiff position nor do I expect that illegitimate jurisdiction of the federal government in the free market

Ms. Renata B. Hesse, Antitrust Division
601 D Street NW, Suite 1200
Washington, DC 20530-0001

Dear Ms. Renata Hesse:

Please put a stop to the economically-draining witch-hunt against Microsoft. This has gone on long enough.

Microsoft has already agreed to hide its Internet Explorer icon from the desktop; the fact is, this case against Microsoft is little more than "welfare" for Netscape and other Microsoft competitors, with not a nickel going to those supposedly harmed by Microsoft: the computer user.

This is just another method for states to get free money, and a terrible precedent for the future, not only in terms of computer technology, but all sorts of innovations in the most dynamic industry the world has ever seen.

Please put a stop to this travesty of justice now. Thank you.

Sincerely,

Michael Sturtz

I have to side with Microsoft. Tandy used to sell prepackaged software (Deskmate). How many others have had packaged software? You get a successful business that produces a product that sells and the competition gets jealous. That's all it is. Microsoft products are innovative state of the art competitively priced offer Internet based upgrades etc. If more software companies would spend as much time working on their products rather than time and money complaining about the competition maybe they would hold a better place in the market. As far as government intervention I think it is an American shame that politicians want to tell someone what they can and can't do when that company is a legal business that offers an Operating System that is easy to use for all ages. My mother just started using her first P/C on mother's day of 2001. She has the Windows O/S. She is 73 years old. She is on the Internet as well.

Thanks to Microsoft she is living her elder years without boredom because of a product she can work with so easily. I could go on and on but as for me I praise Gates and his crew for what they have accomplished.

Regarding Microsoft. The monopolistic pursuits of the company need to be stopped. I fully favor disceding the company into smaller less harmful units. Exploiting consumers and ever increasing the areas of control are a pattern of business by a company lacking self control. Settling the case with merely monetary fines is not solving the true problem. Sincerely Alex Jegotka

TechLeaderShip.ORG is definitely a Microsoft Company trying to gain the support of people who have no clue what-so-ever about the actual issues with MS vs. US. While I do agree to some degree with limiting the control of the gov t when it comes to the internet and advancement in technology. This issue that the gov t is pushing and trying to resolve is a valid pursuit. I remember the many stupid e-mails I received from Microsoft. Microsoft Propaganda that told lies about its actual capabilities. Much like

this techleadership postcard I got and the phone call that followed suit. Brainwashing people who haven't a clue that the gov't is wasting tax payer money when this was all a calculated risk by Microsoft. So who was really responsible for wasting tax payer money? While I admit MS has a right to grow its business to the limits but what they are doing is anti competitive and will stagger and has staggered the growth of technology. MS has not had made any advancement in the OS industry. DOS which is a product they never made is still the most stable OS they ever sold. MS—masters in marketing. Nothing else . GO U.S.A.!!! Go U.S.A.!!!

Microsoft may be have the lions share of the market but they have achieved this without trying to invoke any undue pressure on their customers to purchase their products. It should also be noted that despite their advantage in the market place they have continued to innovate and improve their products responding to the consumers needs while maintaining very fair and competitive pricing. It is un American and contrary to the core principle of free enterprise to penalize any company for achieving success. Rather the government should encourage innovation through tax credits and encourage smaller companies to achieve leadership status in their respective fields. A comprehensive settlement has been reached and it is time for our nation to look toward solving our economic problems rather than continuing this costly suit against one of our country's most successful companies.

Once Again the Greedy Business world has devised a way for the consumer to have to pay for someone else's problem. We are just fine living alone when someone (SUN Netscape Intel) doesn't get enough of our money and decides to shut down other company's cash cow. Well guess what the consumer will pay for all of this litigation and compliance to a certain extent this affair compares with taxation without representation . Get over it everyone put an end to this mess and don't cost the taxpaying consumer anymore money than you have already done. Most people still don't realize that software and information technology runs the world along the same commodity lines as crude oil being the only energy source in the world. Without good cheap and innovative software at a reasonable price there would be no quality of life or standard

of living. Know it looks like that will cost the consumers again. Everyone gets rich but the consumer.

I am not in favor of the current Microsoft anti-trust settlement. I think Microsoft got off too easy. Considering Microsoft's reach and power given its tremendous wealth the company never admits fault. If the company had admitted some responsibility for its actions in trying to create a monopoly climate for browsers and related products. As I stated earlier Microsoft did financial punish those who spoke out against the company or supported platforms using other browsers. I think Microsoft should be forced to go back to court or work out a settlement that definitely prevents similar actions in the future backed up by really stiff penalties or fines.

Washington, DC 20530-0001

Dear Ms. Renata Hesse:
Please put a stop to the economically-draining witch-hunt against Microsoft. This has gone on long enough.

Microsoft has already agreed to hide its Internet Explorer icon from the desktop; the fact is, this case against Microsoft is little more than "welfare" for Netscape and other Microsoft competitors, with not a nickel going to those supposedly harmed by Microsoft: the computer user.

This is just another method for states to get free money, and a terrible precedent for the future, not only in terms of computer

technology, but all sorts of innovations in the most dynamic industry the world has ever seen.

Please put a stop to this travesty of justice now. Thank you.

Since I never thought the case had any merit to begin with I welcome an end to it. It has always been about whiner company ceos and state attorney generals who couldnt achieve their selfish ends in the market and instead chose the tyrannical powers of the state to suport them. Those people are the real criminals deserving of prosecution not Microsoft. If the Bush Administration really believed the rhetoric they spout on the campaign trail about freedom and markets they would have dismissed this whole bogus case on day one. Instead they opt for this settlement that continues to penalize Microsoft unfairly.

Subject: Microsoft Settlement

As the legal actions continue to pile up against Microsoft it becomes clear that Microsoft's competitors seek to gain competitive advantage by putting "legal" restraints on Microsoft. It seems amazing that they can be in court for undercutting in one case, while defending themselves for overcharging at the same time on another case. Had Netscape (now AOL Time Warner) bothered to upgrade its 16 bit browser to a 32 bit browser when the user community switched over to 32 bit operating systems, maybe they would have stayed ahead of Microsoft. There are choices; we don't have to buy MS products. Apple, Linux, and other UNIX systems are there competing. If one looks objectively at where prices are today, it is obvious that they have dropped dramatically. Windows XP does more today than the mainframe systems of the "80. Many businesses could not afford those systems which were leased for thousands a month. Today the same features are available for under \$300, and you own it. Home users don't have an IT Staff to handle the operating system as was needed on the mainframe operating systems. The point is, there has been a lowering of the cost of software, hardware, and software development due to

the innovation of Microsoft. It is no coincidence that the economy downturn started with this action against Microsoft. What we are doing as a Nation is penalizing a company for being successful, and rewarding those who are unable to compete because they didn't have the vision (certainly AOL has the funds to compete). This action puts our whole software industry at risk if we further shackle one of our main technology drivers. It is interesting to note that it is not the consumer who is complaining, rather Microsoft's competitors and a group of lawyers claiming to represent consumers who once again are after a large settlement fee. It is time to put a stop to this and let us get back to work on driving the economy rather than throwing America's software technology dominance away.

Subject: Microsoft Settlement

I believe it is important to break up Microsoft and to separate the commercial software and operating systems into two separate companies. When I started using computers DOS was the operating system of choice. We had several flavors of DOS including Microsoft's all a little different some better, some worse. We could then add-on to DOS with file managers and utilities in effect making the computer a truly "personal" computer. Today that is not as easy. Not only is the browser imbedded into the operating system, but email, media players, file managers and system utilities. Even the way my directories are arranged are controlled by Microsoft, "My Documents", "My Pictures" etc all interfere with the way I want to organize my files. I believe that having an operating system that is stripped down to it's basic functions and then embellished as the "user" sees fit from whoever they wish to do business with is the only way that we can have a personal computer in it's truest since.

Thank-you

I ve worked with M.S. products since DOS 2.2 and have been the I.S. director for an engineering firm in Toledo Ohio for a number of years. Based on my experiences with M.S. I have no doubt they have consistently worked to stifle and destroy their competitors where ever they can. I firmly believe they will attempt to continue to do so by any means they can. I DO NOT feel the proposed settlement goes far enough and amounts to little more than a slap on the wrist! If this settlement goes through as currently proposed MicroSoft will continue to work to maintain its illicitly gained dominance and further erode competition and innovation in the software marketplace.

Subject: Microsoft Settlement

I think the proposed settlement is misguided and does not adequately address the biggest problem: Microsoft's abusive business practices. As a repeat offender in

this regard, an appropriate solution would be to put in place a watchdog group with representatives from across the industry, to meet regularly and report to the DOJ on Microsoft's behavior. Failure to meet the guidelines of the group should result in additional, progressive fines. Microsoft is just not going to change their behavior if treated lightly or inexpensively.

From: Kris Courter
To: Microsoft ATR
Date: 1/24/02 10:41am
Subject: Microsoft Settlement

I have to say, I'm utterly displeased with his proposed settlement. I work in the IT industry and see many good products stifled and consequently smashed due to Microsoft's anticompetitive behavior. It's one thing to be on top because your products are top notch. It's another to produce mediocre products, squash the competition through slander, libel, and purposeful incompatibilities between MS and third party vendors. Recently, Novell sued Microsoft for spouting lies about Novell dropping support and development for NetWare and saying they should jump ship to Microsoft instead.

Microsoft has repeatedly broken antitrust law and needs to be punished accordingly. I find the "school settlement" horrible. Giving software to these schools costs Microsoft virtually nothing, yet you use the street value as a factor in the fine.

Maybe they should be broken up. AT&T was broken up several times, sometimes involuntarily and other times voluntarily, and it's doing just fine. At any rate, something more extreme needs to be done other than this slap on the wrist and saying "Bad Microsoft. Don't do it again."

Perhaps if Microsoft is forced to be competitive, we can get better products from them, and other alternatives such as Linux can flourish. Protecting Microsoft's monopoly with this settlement will not do the public any good, and only further hamper competition in the IT marketplace.

 Subject: Microsoft Settlement
 I am outraged by the proposed settlement of the Microsoft Anti-trust case. The settlement does nothing but end the case without resolving the core issue: restoring competition to the internet browser market. The simple fact of the matter is I can not go into a store and choose a computer configured as I want it. Instead, I must take whatever is thrown on there. This on its own is not a huge issue, provided I can remove the features I don't want. Unfortunately, this is not the case for the Internet Browser "Bundled" with Windows. True, there is probably little market for a computer shipping without a browser, but there is a market for a computer shipping with a browser other than Internet Explorer.

Hello—

I wish to inform you that I firmly believe that the Microsoft Antitrust settlement does not go anywhere near far enough to address a convicted party of their misdeeds. I find it difficult to accept that 8 judges finding Microsoft guilty, can lead to the kind of settlement reported to the American public by the Justice Department. Being a software engineer by trade, I have watched as Microsoft practiced it's predatory nature, watched as company after company decides not to compete with Microsoft's unfair advantages and anti-competitive nature.

Thank you for listening.

 Subject: Microsoft Settlement

Dear Sirs/Madams:

I am a software developer that uses a variety of operating systems and machine platforms. I am aware of the recent settlement attempts involving Microsoft and wish to add my two cents worth. Microsoft has made some very nice applications software. As a developer there is a problem with developing software for Microsoft and that is the difficulty obtaining information about the underlying system. Microsoft claims that by publishing their application programming interfaces (API's) they are in effect an open standards operating system. The problem is that when internal software incompatibilities exist, it is next to impossible to determine whether the problem is one you have caused or one that is occurring because of incomplete information about the underlying system. This gives an unfair advantage to Microsoft

developers that have access to the internal details of the underlying operating system.

I respect Microsofts attempts to earn an honest profit upon their hard earned dollars. The problem is that with many undocumented features, developers outside the Microsoft corporate umbrella are at a big disadvantage developing software for their platforms. Apparently this is an attempt to effectively corner the market in software development. An example of this is Microsofts owner Bill Gates statements that "he wants hardware developers to get out of the business of writing hardware drivers." If this desire is implemented, most hardware applications for Unix like systems such as Linux will be incapable of communication through the hardware to the OS. The reason I believe this to be the case is that most corporations enter financial agreements when they develop software for another vendor. As such, Microsoft will have the hardware specifications for all new peripheral devices and their proprietary nature will make it a process of reverse engineering the devices to make them compatible with Free BSD, Linux and other P.C. based Unices.

I believe a fair settlement that would sponsor competition in the market would be to either remove the advantage Microsoft desktop developers have by requiring the corporation to split. I have no problem with Bill Gates continuing to own it all, I just resent the advantage Microsoft developers have in information access. The other most palatable solution to all parties would be to require Microsoft to develop its desktop application for other operating systems than just windows and the macintosh operating system. This would increase the competition in operating systems dramatically, improve communications capability between corporations using different operating systems and make Unix like systems an attractive alternative to the Windows platform.

Sincerely,
John M. Resler

Subject: Microsoft Settlement

To Whom It May Concern:

I have followed the Microsoft antitrust case as well as I could for the last few years. I understand that they may have kept the computer software marketplace from being as competitive as it could have been. However, I feel that they have a superior product and do not feel like I was hurt by their market dominance. I understand that the court documents show otherwise. But in the spirit of "life goes on", I think this case should be resolved soon, as it has gone on long enough for the general public.

The settlement that has been worked out by the Department of Justice, etc. seems to be a fair settlement which does penalize Microsoft somewhat, but gives the other computer manufacturers more leeway with their products. A number of states have approved of this settlement, and it would be helpful for the economy and the taxpayers to

bring this aspect of the settlement to a close, with the agreed upon resolutions.

Regarding the January 2002 AOL lawsuit, the fact that they are starting this now that this case is finally closer to settlement, and, also, that AOL only purchased Netscape after this DOJ investigation was up and running may attest to the fact that AOL does not want, so much, to compete with Microsoft, as to block Microsoft from getting back to its main business. I hope that this newest lawsuit will be seen as only self-serving.

Thank you,

Subject: Microsoft Settlement

United States Department of Justice, Under the Tunney Act, I wish to comment on the proposed Microsoft settlement. I firmly believe that the proposed Microsoft settlement is bad idea because it does very little to stop known monopolistic practices of Microsoft.

I have been professionally developing software for over 10 years and have seen Microsoft use leverage from one aspect of their business to crush competition in others. They have a long history of going beyond capitalism and into monopolistic practices. Left unchecked, this will continue into the future with their .net initiative.

An example of how the current settlement proposal lacks substance is the issue of APIs. The Findings of Fact define "API" to mean the interfaces between application programs and the operating system. However, the PFJ's Definition A defines it to mean only the interfaces between Microsoft middleware and Microsoft Windows, excluding Windows APIs used by other application programs. For instance, the PFJ's definition of API might omit important APIs such as the Microsoft Installer APIs which are used by installer programs to install software on Windows.

Subject: Microsoft Settlement

To whom it may concern:

I am writing to comment on the Proposed Final Judgment (PFJ) in the case of United States v. Microsoft. I am a professional software developer, active in software design and creation since the early 1980s. I have worked on projects for a variety of platforms including Windows, Linux, Unix, and Macintosh.

The PFJ is flawed in that it allows many anticompetitive and exclusionary practices on the part of Microsoft to continue. In particular, I am concerned that it is insufficiently strong with regard to the relationship between Microsoft and Independent Software Vendors (ISV). III.D, for example, requires the disclosure of APIs and related documentation for Windows Middleware, but only for the purpose of interoperating with a Windows Operating System Product. In fact, Microsoft should be required to disseminate this information and allow it to be used also for the purpose of interacting with application software written for Windows Operating System Products. Similarly, III.E proposals should be broadened to require the availability of Communications Protocols for use in interoperating with application software. The use of these protocols should also extend to client software for any operating system interoperating with a Microsoft server, as well as any server software interoperating with client application written for Windows.

In conclusion, the PFJ begins to address anticompetitive and exclusionary practices of Microsoft, but, unfortunately, stops short of either redressing past damages or actually

preventing future abuses. I urge reconsideration of the proposed settlement.

Thank you for your attention in this matter.

From: Kirk Kerekes
To: Microsoft ATR
Date: 1/24/02 10:44am
Subject: Microsoft Settlement—a national security issue

The core problem is both similar to, and different from the "Ma Bell" breakup, which is the only exemplar of comparable scope in recent history. Similarities:

1. Microsoft dominates the operating systems market not through overwhelming competence, but through sheer size. Others have demonstrated superior competence at operating systems software (eg; Apple). Because of this, there is no way to logically argue that MS's dominance is "natural" or "good". It is, instead, a product of freak conditions and aggressive marketing. This is not just a consumer issue—it is a national security issue. Due to the Microsoft hegemony, military and security computer systems are being implemented using grievously insecure Microsoft products instead of superior (but lesser known) alternatives. This is a Bad Thing.

2. Microsoft shows signs of aging badly—it's recent Wintel offerings have been ill-considered and ill-implemented. Much like the old "Ma Bell", MS has institutionalized its incompetence and arrogance.

Differences: There are meaningful alternatives to Microsoft products available now, and there is no physical infrastructure element that needs to be divided.

Solution: To dilute the effects of the accidents of history and predatory practices of Microsoft, the only acceptable and workable solution is to genuinely divide the company into separate and isolated corporate entities: An operating systems division, and an applications division.

These divisions must be physically separate, and must be prohibited from privately communicating with each other. The applications division must proceed with its operations using the same information that is available to independent software

developers. Any other solution is just smoke and mirrors.

Subject: MICROSOFT

Sirs:

I would ask that you refrain from any further persecution of the Microsoft Corp and Bill Gates. It has become nothing more than a witchhunt; and will only serve to hurt those that depend on them for internet access, employment, and livelihood. Your attempts to demolish Microsoft are little more than a welfare program for some of the less popular competitors and will accomplish nothing in the way of aiding those allegedly "injured" by Microsoft; the computer users. It may make the states a little wealthier, but no one else. The inconvenience of it to the vast majority of users will be unfathomable however. If the other systems were as good they would be sold off the shelves, not crying for the Government to shore up their inferior products.

Does it not seem strange to you as a responsible, intelligent individual that so many millions have been spent to persecute a company that supports families, pays taxes, and is generally a very viable part of the American economy; while so little if any monies had been spent to protect these same people from the likes of Osama Bin Laden and other terrorists. Had they not taken out the World Trade Center we may not yet be doing anything to destroy them and their groups in spite of proir knowlege and proof of their ill intent. Instead we continue to attempt to destroy the American sector with Government interference, suits and red tape.

I would ask you to as a fellow American then to stop the persecution of the Microsoft Company; they are also Americans. Use our money more wisely to give us a chance against foreign agressors, not against those that employ us. When a better mousetrap is built it will sell, but so far there are none.

From: James D. Saint
To: 'microsoft.atr(a)usdoj.gov'
Date: 1/24/02 10:53am
Subject: microsoft settlement

Please consider the importance of competition in our society. Regardless of the arguments made, it is clear that Microsoft has, and continues, to use its dominant operating system to force consumers to buy its other products, and to push competitors out of the market. Nothing goes more against the basis tenents of our economic system. The leaps in computer technology and ease of use have slowed dramatically since Microsoft's dominance has become monopolistic.

In the 1980's Atari, Commodore, and Apple in the US, and Sinclair and Apricot in Europe, and even Microsoft, provided innovation development in the industry, with rapidly declining prices. Today, a new operating system merely means the incorporation of a copy of somebody else's innovative product into Windows, and an increased price. Soon, other companies will have no incentive to develop software that Microsoft may someday be interested in dominating.

America is competition, not monopolistic. Our economy and our society has thrived on competition, please do not abandone the principle now.

Subject: Microsoft Settlement public comment

The currently proposed settlement in this case does not remedy the gross distortions of the market that Microsoft's practices have created and continue to create. The proposed settlement allows Microsoft to put this affair behind them at a relatively low cost (for them), while not resolving any of the outstanding fundamental issues at the heart of the case.

Microsoft claims that this is about the freedom to innovate. If the currently proposed settlement goes forward and Microsoft continues its established pattern of behavior (which it shows every indication of doing), Microsoft will be the only one who will benefit from the freedom to innovate, while continuing to stifle that same freedom among its competitors. I agree that there should be a freedom to innovate, but I argue that this freedom should be available to all, and that the marketplace should decide which innovations thrive, not one company with the monopoly power to squash competitors or crush them in its embrace.

I urge the DOJ to abandon the currently proposed settlement and continue work on concluding the case in a manner that protects the interests of United States citizens and promotes a fair, competitive marketplace. The current settlement only protects established corporate interests, and will allow these interests to continue to prevent competitors from establishing their own foothold in a rapidly changing market. Thanks for the opportunity to comment on this.

The current proposed final judgement on the Microsoft antitrust case is inadequate. Terms used in the document (such as "API" or "Windows OS") are either misdefined or poorly defined. It also falls short on such crucial aspects as remedies if Microsoft fails to keep its promises, removal of artificial barriers to entry into the operating system software business, and proper protection of Open Source authors. A proper final judgement should address all of these concerns.

Hello,
I wish to state my opinion of the proposed Microsoft settlement. I think it is fair and a good thing to do. It is good that the government have only limited oversight of business. The government should not protect weaker firms simply because they are weaker. If we did not allow the auto companies to innovate and put radios, heaters and the like in their autos in order to protect the radio and heater makers that would have been a crazy thing to do. Fortunately the government leaders did not do that many years ago. The auto industry was stronger for it. We should keep the software industry strong.....the strongest in the world. I vote to approve the settlement.

Thank you,
David Bloch

The MS Settlement is shameful! Not only does it fail to actually hold Microsoft accountable for its blatantly (and court-proven) anti-trust behavior, but its weakness effectively condones the corporate bullying practices that allowed Microsoft to extend its OS monopoly to other markets in violation of the Sherman Anti-Trust Act. That the DoJ bowed-out of the case with such a pitifully weak set of consequences has destroyed my faith in the Bush administration-led DoJ to hold corporations fully accountable under the law.

From: George Hartogensis
To: Microsoft ATR
Date: 1/24/02 10:47am
Subject: Microsoft Settlement

Justice Department: I am vigorously opposed to the proposed settlement in the Microsoft. As an IT professional, I find that it does not even begin to redress Microsoft's past behavior, nor does it inhibit them from continuing to use their monopoly position to keep out competition. One of the areas where it is weakest is that of the issue of the Applications Barrier to Entry.

The settlement requires that Microsoft open up its APIs to its middleware, then it very narrowly defines middleware. First, the APIs to the OS itself should be opened up, and secondly, this provision should be expanded to cover MS Office and Microsoft's .NET technology, which it does not.

Another Applications Barrier to Entry issue that the settlement ignores is the changing file format issue. Undocumented file formats were part of the "Findings of Fact" against Microsoft. Government's job is to provide an

infrastructure within which businesses can compete. If one player becomes huge, then the playing field is no longer even. It is government's duty to level the field. In this way, consumers are given the widest choice at the lowest prices, and the industry itself is able to flourish.

Please do not snatch defeat from the jaws of victory,

Subject: Anti-trust suit

Netscape was indeed harmed by Microsoft anti-trust monopolistic business practices. Also, I believe the public was very likely over-charged for Windows operating systems because of inclusion of "middle-ware" in the system.

Microsoft should be broken up into three different organizations:

1. Operating systems.
2. All other Microsoft software.
3. Joint business ventures with other companies.

We need a level playing field because free competition drives developmental evolution, even MS needs that. The whole world is counting on you. All of our futures depend on you, please don't let us down.

Please force MS Windows to SHIP with support for open cross platform formats such as JAVA and Mpeg4. MS stopped "out-of-the-box" support for JAVA. Though support can be added by the end user it is enough to deter developers and users from exploring further. Many companies are involved is some ground breaking products built on these technologies.

Go see below.

My two cents worth.

There really is a difference between aggressive business practices and ones that are predatory. Microsoft's fall squarely into the latter. The proposed remedy as I understand it will allow Microsoft to do nothing more than give away software, services, and some refurbished PC's to schools. Does anyone not see the problem with this? Apple computer's last stronghold is the educational market. If you allow Microsoft to give the software and PC's away to schools, then you will be doing the same thing as driving nails into Apple's coffin. A better remedy, would be to take the one billion dollars and make Microsoft buy Apple Macintosh computers with it. This will accomplish two things. 1st, it will allow a company that is a real competitor to gain more of a foothold and possibly even have a better chance of competing with them. 2nd, this will cost Microsoft the full one billion dollars. If you allow them to give away software, this costs them nothing. Hit them where it hurts and give another standard a chance to flourish.

Hello-

I am writing to voice my opinion that the proposed settlement in the Microsoft case is grossly inadequate. In its present form, it will do little to nothing to curtail Microsoft's anti-competitive behavior nor punish it for its illegal efforts to protect its monopoly. The proposals are written such that it will be quite easy for Microsoft to subvert and avoid the intention of those proposals. At a minimum, the proposals recommended by Dan Kegal's Open Letter (www.kegel.com/remedy/letter.html), of which I am a co-signer, or those of Ralph Nader and James Love (www.cptech.org/at/ms/)

mjl2kollarkotellynov501.html) should be incorporated into any settlement.

Frankly, I think the only way to prevent Microsoft from abusing its monopoly is to break the company up, where the applications part is separate from the operating system part. All other solutions rely to heavily on Microsoft simply behaving itself, something it has shown no inclination to do.

Subject: Microsoft Settlement

Dear Sir:

During this period of public comment, I would like to add my opinion on the Microsoft Anti-Trust Settlement which is based on my experience in the use of both Netscape Navigator and Internet Explorer.

I have been a user of both Windows 95 and Windows 98SE. Both packages were bundled with Netscape Navigator and Windows Explorer. I found Netscape Navigator to be buggy, difficult to use, and to lack the desirable features which Internet Explorer contained. After about four months of use I deleted the Netscape Navigator in favor of Internet Explorer which I found to be a superior program. During the time which I used Netscape Navigator I downloaded an update to the program version which I had and found no material improvement in its use or capability. I am glad that Microsoft made both programs available so that I could compare them both through actual use.

I see no difference between Microsoft's action and the actions of two hotels: one hotel offering free services to its customers for which a second hotel charges. I believe that the current litigation simply rewards competitors for inferior products, provides unearned income for state government, and punishes the computer users. Since Microsoft has agreed to remedy any technical violation of the law, then I believe that further punishment is unwarranted and the suit should be closed.

Subject: DOJ vs Microsoft Settlement Terms

Dear Judge Kollar-Kotelly

I have read with interest the proposed terms of settlement between the Microsoft and the Department of Justice.

Acceptance of these terms would send an irrevocable message to the people of both the United States and those in the rest of the world who suffer under Microsoft's immoral and (now proven) illegal practices:

Let the Punishment Fit the Crime.

The 'civilized' world objectively enforces laws on individuals when their behaviour is unacceptable in society, yet Microsoft has been able to sustain illegal business practices over many years without fear of commensurate punishment.

Respect for the Law

Although I applaud the Department of Justice in bringing Microsoft to trial these settlement terms reveal a lack of willingness or courage to apply justice when faced by a powerful opponent. How can individuals be expected to respect the law when Americas largest corporation does not?

Morality Applies only to People

Harming others is OK, so long as it's in the name of business? I work in the IT industry and am all too aware of the detrimental effect of Microsoft's business practices on many individual's livelihoods and families.

And Finally

If you have read this far: Thank You. All we (the IT community) ask, is that you seize this last opportunity to reign in a corporation that has forgotten how to behave in a civilized manner. Acceptance of these settlement terms would be an endorsement of immoral and illegal behaviour.

Yours respectfully

Philip Fletcher

Subject: Antitrust case

I've heard that you folks have been looking for commentary with regard to the recent Microsoft antitrust case. If true, I'm sure you've been inundated. Well, here's my \$.02:

First, a little history.

Way back in 1977 a fellow named Gary Kildall developed a common operating system for the Intel family of microcomputers, he called it "Control Program for Microprocessors" or CP/M. Prior to the introduction of the product there were probably a hundred different companies making Intel (8080 chip) based microcomputers, most of which had proprietary control programs and were incompatible—i.e. any application had to have a different version for each company. CP/M changed that, with its introduction—and it was designed to run on any 8080 based machine—application programmers had to write only one version. Kildall formed a company called "Digital Research Inc." (DRI) to develop and produce CP/M.

In the late 1970's/1980 time frame, Intel designed an improved microprocessor chip it called the 8086. Digital Research developed a version of CP/M for that chip called CP/M-86.

IBM designed its original Personal Computer around that chip. But while IBM had many operating systems, it did not have one for the PC. IBM first went to Digital Research to have them develop the operating system. There are many versions of what happened, most likely IBM reps "dropped in" on Kildall and he wasn't in. In any case, the IBM reps left Digital Research and flew to Seattle to talk to Microsoft. At the time, Microsoft's product line consisted of a BASIC interpreter called MBASIC, an assembler and linker called M80 and L80 respectively.

IBM asked Gates if he could come up with an operating system for the soon-to-be-released PC. Gates said "sure" and signed on to do it. After IBM left, he went across town to a company called "Seattle Computer Products" and purchased the rights to their 8086 operating system called QDOS, for "Quick and Dirty Operating System," for about \$50,000. This is the product that became PC-DOS and MS-DOS (for PC clones not built by IBM).

When IBM released their PC, it was a box with 256KB of RAM and two floppy disk

drives. With a monitor and keyboard it would set one back about \$2,500. No operating system was included. IBM would also sell you PC-DOS for an additional \$40, or it would sell you CP/M-86 for \$240. Both worked, but note the price difference.

A tidbit of information that was never publicised is the fact that Gary Kildall noted that Microsoft's product contained code that he had written, copied without permission or license (whether by Seattle Computer or by Microsoft is irrelevant, the code was stolen). Kildall chose not to confront Microsoft but to try to coexist with them, he was also worried about his relationship with IBM.

In the mid 1980s, after the PC market got away from them, IBM decided to try to recapture it by bringing out a whole new proprietary line of Intel based computers with a whole new operating system. This was to be called the Personal System/2 or PS/2. IBM contracted with Microsoft to form a 50/50 partnership to develop a whole new operating system for its new microcomputer line, that was to be called "Operating System /2" or OS/2. Microsoft, however, pursued an additional and very different strategy. While delaying development of OS/2, it pushed development of its own graphical user interface very hard, and got it out before OS/2 was ready. That program was called Windows. And, of course, since it was solely a Microsoft product, Microsoft didn't have to split any revenues from it with IBM.

IBM finally "fired" Microsoft from the OS/2 project around 1990 and completely reworked the product. This became OS/2 version 3, or "Warp," and was released in early 1994. Unfortunately, Microsoft already owned the market for operating systems on Intel based machines by then, and people and companies were reluctant to switch to OS/2, which was (and remains) clearly a superior system. OS/2 version 3 is also superior to the vaunted Windows 95 (which, incidentally, contains concepts and ideas Microsoft adopted from the OS/2 project).

Another reason for customers' reluctance to switch at the time was Microsoft's lock on the hardware manufacturers with its "processor" licensing contracts, which discouraged manufacturers from furnishing competing software products with their hardware. Microsoft lost a lawsuit over this practice years ago and supposedly doesn't do it any more.

The bottom line is that Microsoft has *never* competed fairly since it got into the operating system business back around 1980/1981. ————— Something else that's been lost in all of the dust and hoopla surrounding the Microsoft case is exactly what an operating system is. A computer operating system exists to manage the hardware, perform input/output (read/write) operations and perform calculations, period. The operating system also handles the interface between the application and the hardware (and, in multiprogramming systems—systems that run more than one application at a time—it keeps the applications from interfering with one another). That's all. The Graphical User Interface is an application, as are file (web) browsers (the web is after all is just a very large filing system), music players,

communications software, etc. Microsoft chooses to integrate many applications into its operating system, some it purchases (DoubleSpace), some it licenses (SpeedDisk, from Norton), some it steals (Stacker, from Stac Electronics, which sued and won), and some it clones (Media player, which competes with Real Audio).

What to do about it? Breaking up the company has already been rejected, any fines would just be passed along to Microsoft's customers. My favored solution is to require Microsoft to provide all of its customers with all of its software products and services, one bundle, one price. Whether its for a low end personal Digital Assistant or a high-end server doesn't matter, they all get everything. Perhaps tack on a tax of \$100 or so per copy/license of the product. Microsoft should also be required to place their operating system's "Applications Program Interface" or "API" in the public domain, so that other operating systems such as Linux or OS/2 can be modified to run programs written for the Windows operating system.

As I said at the top, it's just my \$.02.

I am the Vice President of a software company that develops Windows compatible products. I also am a developer of both Windows software and browser based software.

I have reviewed the documents provided by the DOJ. It seems that the DOJ and courts have got the facts wrong. Netscape failed because it was and remains an inferior product. When Netscape first came out in the

mid 90's I attempted to obtain information needed to write a Netscape "plug-in" to make it possible for the output of my software to be viewable by a Netscape user. I quickly found that Netscape provided no documentation and demanded hundreds of dollars in prepayment for unspecified documentation and support. After several weeks of effort that went nowhere, I gave up on ever obtaining the needed information.

What is interesting is the fact that Netscape required extra effort on the part of developers to make the output of their software visible to Netscape users. To me this seemed to be more of a scam aimed at ripping off software developers. This integration with the browser has always been automatic with Internet Explorer and remains so today. Developers of standard Windows programs who properly register their file types with Windows do not have to go to any extra effort to have their files displayed via a link from the Internet Explorer browser.

It is very sad that the DOJ got pulled into this ridiculous lawsuit by people who ran their own companies into the ground by making bad decisions. We have been a developer of Windows based products since 1989 and are a direct competitor of Microsoft. Microsoft has never been anything other than an excellent software company and honest competitor.

I truly hope that we will see the end of DOJ meddling in the software business.

Sincerely,
Don Elder,

To: Microsoft ATR
Date: 1/24/02 10:55am
Subject: Microsoft Settlement

To Whom It May Concern,

I am writing to voice my opinions and concerns about the ongoing litigation against the Microsoft Corporation.

From the very beginning, it has been clear to myself and to most of the public that the suit was initiated by the companies who compete against Microsoft rather than by the consumer. It is my understanding that the antitrust laws were designed to protect the consumer and not to protect the competition. As a consumer, I have seen Microsoft regularly improve the quality and content of its products while keeping their prices extremely reasonable and affordable. I am sure you would agree that the American consumer is a shrewd and frugal one, and that if we felt that some "big, bad, ruthless monopolist" were "ripping us off," it would be the consumer who would choose a better and cheaper product as they have done throughout our history. Many so called monopolists such as the Ford Corporation have been naturally "reigned in" by their competition who produced a more attractive or cheaper product which the consumer chose to purchase. Should the Walmart Corporation be sued by the Kmart Corporation for forcing it into bankruptcy because the consumer chose to shop at Walmart where prices were cheaper and goods more available?

The current suit by AOL against Microsoft is just as ridiculous. If I felt that the Netscape Browser was the superior product, believe me when I say that my family would be using it right now. I have tried that browser and found it to be more confusing and not as user friendly than the Microsoft browser. That is the reason I continue to use Microsoft's browser and not because my computer came with it! Believing that is to insult the intelligence of the American public. Whether Microsoft is or is not a monopoly is not the issue. If it is, it became that way naturally because we prefer its products and prices over its competition. Why should our government be wasting our taxes pursuing a company whose products its citizens want?

With all the other issues facing this country, especially since 9/11/01, it is time to put this case behind us and accept the proposed settlement as is. It would benefit the consumer and the country as a whole and especially the schools whose students would greatly benefit from the materials Microsoft has agreed to provide them with. The amount of litigation in this country has become nauseating and is paralyzing individuals and corporations from conducting their lives and businesses because of the fear of being sued. Even my 9 year old is encouraging me to "sue" anytime I express dissatisfaction with something. Is this the message we are communicating to the next generation?

Please settle this case immediately and send the message to our children that we cannot "sue" our way to success. End these suits and settle the case once and for all. If the competition truly want to punish Microsoft, let them develop products that we will want to buy and use instead of Microsoft's, and at a cheaper price. Walmart understood this and has "harmed their competition," to the benefit of it's consumers.

I don't see anyone suing them..... yet!!!
Sincerely,

Dear Microsoft Settlement U.S. Department of Justice:

The Microsoft trial squandered taxpayers' dollars, was a nuisance to consumers, and a serious deterrent to investors in the high-tech industry. It is high time for this trial, and the wasteful spending accompanying it, to be over. Consumers will indeed see competition in the marketplace, rather than the courtroom. And the investors who propel our economy can finally breathe a sigh of relief.

Upwards of 60% of Americans thought the federal government should not have broken up Microsoft. If the case is finally over, companies like Microsoft can get back into the business of innovating and creating better products for consumers, and not wasting valuable resources on litigation. Competition means creating better goods and offering superior services to consumers. With government out of the business of stifling progress and tying the hands of corporations, consumers—rather than bureaucrats and judges—will once again pick the winners and losers on Wall Street. With the reins off the high-tech industry, more entrepreneurs will be encouraged to create new and competitive products and technologies.

Thank you for this opportunity to share my views.

Sincerely,
Ralph A Webb

Dear Ms. Renata Hesse:

Please put a stop to the economically-draining witch-hunt against Microsoft. This has gone on long enough. Microsoft has already agreed to hide its Internet Explorer icon from the desktop; the fact is, this case against Microsoft is little more than "welfare" for Netscape and other Microsoft

competitors, with not a nickel going to those supposedly harmed by Microsoft: the computer user.

This is just another method for states to get free money, and a terrible precedent for the future, not only in terms of computer technology, but all sorts of innovations in the most dynamic industry the world has ever seen.

Please put a stop to this travesty of justice now. Thank you.

Subject: Microsoft Settlement

As a Network Manager for 8 years and a Technical Support person for 4 years prior to that, I can tell you that I have seen Microsoft have a neagative impact on the market in the following ways: -they would buy competitors (like FoxPro databases) only to eventually kill that product line and force customers from that former competitor to "upgrade" to Microsoft technology.

The whole thing with Internet Explorer ... they basically bought the rights to Mosaic's browser as I understand and basically killed Netscape by offering IE for FREE Java—a wonderful effort to create write-once-run-many apps. What did Microsoft do? They tried to sabotage it so it would only run on Windows.

Apple—I don't have to tell you what happened here with the whole "we'll sell Office for Mac if you kill QuickTime" Even in their settlement offer! they tried to increase market share by giving away Microsoft products in an effort to cut off competitors like Apple

It is extemely dangerous for ANY industry, a nation and world for that matter, to be SO dependent on ONE company. It is a national security issue given how easy it is for hackers and cyber terrorists since they can target their attacks for only 1 operating system and one messaging system, Outlook. We've put all our eggs in 1 basket and we are at risk.

They are dangerous because they are not the real "Innovators" in the personal computer realm. They are replicators and predators. There is only ONE solution. Microsoft must be broken up into two or more companies. One will be ONLY operating system(s) NOT including integrated web browser technology from IE. They can rip it out. The other company(ies) will be Apps. Microsoft Office. Their database products should ALSO be separate from their Office Apps because they also have a dangerous monopoly there with Office and MS SQL Server they try to exploit.

Much has been stated by Microsoft to the effect that altering the company will have an adverse economic impact on the nation.

Let me tell you what already has had a negative impact:

Sys Admins dealing with a never ending flood of virus and security problems for Windows. I forgot the last time I had a serious concern with our Macs.

the ever increasing licensing issues ... where we have to pay tithe to gates and co. to upgrade to the latest version of their software that's supposed to be more stable and secure.

Hi,

I know you'll have heard this time and time again, but you'll hear it once more from me: splitting MS up would probably be the best solution for all. They could then get back to writing software products rather than marketing "software solutions."

Above and beyond anything else, far from promoting innovation in the software industry, they have stifled it, time and time again. So many of their supposed innovations were actually developed by others and either bought up or simply stolen outright. This is a company with a sick philosophy. Time to remind it that it doesn't have outright control of everything.

Yours sincerely,
Aram Simon

 To whomever this concerns,

It is widely believed by those familiar with the case that the proposed settlement is completely inadequate. It will do little to punish Microsoft for its plainly illegal conduct in the past, and virtually nothing whatsoever to prevent future violations of antitrust law. I urge all parties involved to reconsider the proposed settlement. Microsoft deserves more than a slap on the wrist for its destructive abuse of its monopoly power. More importantly, American consumers need to be protected against future abuses.

 Subject: Comments

United States Department of Justice;
 The anti-trust case against Microsoft is wrong. Consumer choice has put Microsoft where it is today. If a consumer does not want Microsoft products they don't have to buy them. If it is packaged on a computer then they can choose to buy a different computer. The computer manufacturers are installing Microsoft operating systems because that is what the consumers want and if they don't they will lose sales. No one has

a right to tell Microsoft what they can and can not put into any of their proprietary products.

No one is forcing any consumers to buy Microsoft products at the point of a gun. I have run Windows, converted to Linux and now I am running on Mac OS X...because I chose to.

Sirs,

As a small businessman whose livelihood is based on the development of software, I feel that I am in as good a position as anyone to remark on the business practices of the Microsoft Corporation. Microsoft is not simply an "aggressive competitor". Microsoft is a monopolist that repeatedly has employed unfair and illegal practices to quash its competitors and manipulate the marketplace to their advantage and the loss of the consuming public.

Despite their "spin" rhetoric, the contempt that Mr. Gates and his executives have for their customer base and competitors, and their cavalier disregard for the law of the land, is legendary within the industry. These realities are often masked by the fact that the consuming public is virtually powerless against the Microsoft Windows juggernaut, and competitors fear the wrath of a company who has proven time and again that it can, and will, do virtually anything to insure its dominance of the software marketplace.

I cannot sufficiently emphasize that I feel that the currently purposed DOJ settlement with Microsoft is highly inadequate in terms of both remedies for those many parties who have been harmed by this unfair competitor, and future protections for software developers and the consuming public.

Hello,

Paragraphs 1–3: Former Consumer of Microsoft's public operating system (read—non business) software rant

Paragraph 4–7: Re-defining a Monopoly while keeping within the standard definition (I hope)

Final Questions and Statements

Any company that would put out products such as Windows 95, 98, Millennium and XP (the last two are based on my father and brother's experiences) should be put in a deep, dark, hole.

They are bug ridden operating systems internally incompatible (Win 95 and 98 both require DOS which is a 16 bit platform. They hid this in the 32 bit platform of an upgraded Windows 3.1 which they called Win 95 History lesson done).

Put upon a public with no other true OS options but to purchase Unix or Linux (both server software really) or Microsoft's business operating systems which seem to work within normal glitch parameters. The public could do as I did and by Apple software... but that means total abandonment of nearly all previous software and the purchase of all new hardware.

If the above is not enough to burn them how about this:

A Monopoly. I see Microsoft (and others to be fair) as attempting not to monopolize the computer Operating System and related software realm, but, trying to monopolize how we Communicate.

Microsoft bundles it's browser which is made to work perfectly with their os. Competitors do not get full os specs so their browsers do not function properly. Microsoft then starts MSN, their own video console game platform—the Xbox.

The last really caught my attention. Console platforms will soon be internet capable... what better way to extend MSN's influence. As I noted briefly above Microsoft is not the only one I see trying to limit my tele-communication choices: AOL-Time Warner, Disney-ABC and AT&T just merged with someone (damn sloppy of me not to have the facts... sorry) and a few others I can not recall, again, sorry.

All of them working on internet-cable/television-telephone operations, or some combination thereof. If we stick with the top three only is that competition? Are we really getting the best price for our choices?

No. Yet, I was speaking of Microsoft. With the melding of communications over the last few years the merging of companies the idea of a monopoly must move beyond the oil and railroad standards set a hundred years ago. A broader view must be taken. It can be taken while still using present law (mostly). Especially for the Communications arena.

Microsoft is in a position to be the software company for anything computer/internet/video gaming, whatever allows one to communicate...they have the position and the potential to corner the market.

Does the law require that a monopoly be present in order to bring the punishment to bear? Or is the potential enough?

If it is an Anti-trust suit brought by business, does that not also mean the anti-trust is affecting my family and those around me? Are you thinking of the public's future stake in the above? Or only the businesses involved?

Microsoft is a menace. I have software which I shall never be able to use because the new software sucks and old hardware and software is very difficult to come by (and usually much to degraded to be very useful). New hardware is to fast for my old software and Windows software does not work on Apple products without bridging software... like I need to learn a third computer language.

Mostly it is the company's potential to take over various portions of the communications arena. It is a subtle and very slow process. Like a company with many like subsidiaries (Time Warner owns DC comics and many other book houses), Microsoft links up with various computer and communication areas. Nothing to arouse overt suspicion... Oh, they have an internet browser bundled for free! Wow! They even have their own internet service!

How long before the Windows OS allows 'special' features for their other software (Word, Office, Internet Explorer) that say Apple's Os cannot give (Apple has versions of Word, Office and IE)? How long before that free browser allows "special" features for MSN? How long before Microsoft's in house games for the Xbox are available only through MSN and over the internet for half or a third the total price as a game created by an outside company? How long before the Xbox becomes more popular for tele-communications then even a personal computer and Microsoft starts demanding payment from Dell and Gateway for all those things which were once free?

Frightening in a paranoid sort of way... is it not? (OK... this went on waaaay to long...)

Look at all the areas which Microsoft could walk into. See the potential gains they could make at the expense of the consumers choice.

Thankee,
RC Hagy Stamford,

Subject: Microsoft Settlement

I applaud the actions taken against Microsoft, but I feel that the settlement being talk about is way too lenient. The issue is not simply that Microsoft has an unfair advantage because of their many different product lines. The issue is the tactics that Microsoft employed to make Windows the dominant operating system.

Back in the early Windows 95 days, Microsoft would not sell any copies of Windows to computer makers, unless they agreed to sell a copy of Windows with every PC. This forced buyers to purchase Windows, even if they wanted to use another Os like OS2, which was a much better operating system. Obviously this prevented the fair competition of other operating systems. This case should be about punishment for the wrongs of the company, not simply an attempt to keep the company from doing more wrongs.

Thank you for your time.

Subject: Microsoft Settlement

I am writing to offer complaint against Section III.D of the proposed final judgment. Section III.D reads as follows:

D. Starting at the earlier of the release of Service Pack 1 for Windows XP or 12 months after the submission of this Final Judgment to the Court, Microsoft shall disclose to ISVs, IHVs, IAPs, ICPs, and OEMs, for the sole purpose of interoperating with a Windows Operating System Product, via the Microsoft Developer Network ("MSDN") or similar mechanisms, the APIs and related Documentation that are used by Microsoft Middleware to interoperate with a Windows Operating System Product. In the case of a new major version of Microsoft Middleware, the disclosures required by this Section III.D shall occur no later than the last major beta test release of that Microsoft Middleware. In the case of a new version of a Windows Operating System Product, the obligations imposed by this Section III.D shall occur in a Timely Manner.

The requirements laid forth in this section are insufficient to promote equality in

competing offerings' time to adapt their products in time to compete with new releases of Microsoft Middleware or to support a new version of Windows. Section III.H.3 also states the competing middleware can be locked out of competition by failing to meet "unspecified" technical requirements seven months prior to the the final beta test of a new version of Windows. Why are the requirements unspecified? This opens up opportunities to set demands too taxing for competitors to meet in the shortened time frame made available to them by the fact that they are introduced to the APIs related to new versions of Windows only after said new version has been released to 150,000 beta testers. Microsoft has, under this ruling, the full capability to "plan" development such that they can maximize the probability that competitors will be unable to meet said "unspecified" technical requirements prior to the final beta test. There is no requirement for Microsoft to announce planned beta release dates, so in effect the seven months requirement is unnecessary. You might as well make it one day. A more stringent and fair requirement would be to require Microsoft to publish proposed beta release dates and adjust the time requirement to meet the "unspecified" technical requirements to the date of the beta release. This would provide a more equitable environment, one in which Microsoft still maintains its competitive advantage, but one that gives competitors an opportunity to compete. The current proposal offers Microsoft the chance to erase competition without ever having to compete.

Subject: Microsoft Settlement

I am in support of Microsoft, and believe that Microsoft has done very little to hurt the industry, and has done a lot to help. Standardizing the basics has made things much better, and it is now cheaper and easier to purchase the OS, then it was to purchase the parts and pieces and deal with the issues to get it running. You are doing an injustice and doing nothing more than hurting the economy and a company that has done a lot for the country and industry that it is in. As a network Engineer Microsoft has made my life much easier, and my family loves the easy of use and functionality and integration of components.

From: jm@mandrake.prospeed.net@inetgw
To: Microsoft ATR
Date: 1/24/02 12:05pm
Subject: Microsoft Settlement

Dear Sir or Madam;

I am writing in opposition to the proposed anti-trust settlement with Microsoft.

Please excuse my need to state my qualifications so that you understand the reasons for my opposition. I am a graduate of MIT (1983) in Computer Science with 18 years of industry experience, so I feel competent to offer informed comments on the technical aspects (e.g., what qualifies as "innovation") of the case. I am also an owner of a 45 person, Subchapter S software company which develops for both Microsoft operating systems and various UNIX (e.g., Linux) operating systems, so I feel competent to offer informed comments on the economic aspects of the case.

With regard to technical matters, no company has acted more aggressively to quash technical innovation in the computer field. It is particularly surreal to hear Microsoft stay "on message" about "innovation," yet be unable to state clearly a single technical innovation they have produced (rather than bought or imitated).

If there is a single point I would have you understand, it is this: Microsoft acts only to defend its dominant market share. It does NOT proactively innovate. It REACTIVELY identifies innovative threats. It then leverages its market dominance to kill the innovation/threat by any means necessary, whether via dumping software, via secret contracts, via lobbying, and at least once via sabotage. To wit:

(1) Threat: the Netscape platform. It is well-known how Microsoft cost-shifted from their OS and office suite monopolies and "dumped" their browser on the market, and made it impossible for consumers to avoid it, and made it impossible for PC makers to include Netscape. As you know, Netscape is now irrelevant as a browser.

(2) Threat: the "write once, run anywhere" Java platform. Microsoft made incompatible changes to the platform, and they now refuse to ship a Java implementation, and they make it hard for consumers to receive the Sun one via PC manufacturers or via download (it is a huge download). They also cost-shifting from its monopolies and dumping a Java-like "C#" programming platform on the market.

(3) Threat: increasingly powerful game platforms from Sony and Nintendo. Microsoft

is cost-shifting from its monopolies to subsidize the "XBox" and drive these consoles from the marketplace.

(4) Threat: competitive DOS implementations, sabotage for which is described in detail at: <http://www.ddj.com/documents/s=1030/ddj9309d/9309d.htm>

While I urge you in the strongest possible way to take the time to read a single, simple web page describing such an egregious abuse of market power, I shall summarize. Microsoft wrote code in Windows 3.1 to try and detect any competitor's underlying DOS, and then notify the user that there is a "Non fatal error" so as to discourage use of a perfectly serviceable alternative. They covered their tracks by encrypting the code and disabling breakpoints (use of a debugger) so their act would not be exposed to the world for the anti-competitive act it is. As you know, these competitors were eliminated.

(5) Threat: the DOJ. Please forgive me if I have my facts wrong, but it is my understanding that Microsoft lobbied to have the DOJ budget cut after the anti-trust action began. I have read this in many sources, but here is one for your convenience: <http://zdnet.com.com/2100-11-501473.html?legacy=zdnm> No one can protect us consumers but you. It is the function of government to protect citizens from threats both external and internal. This is a dire internal threat to the health of the software market. I offer the following comments, suggestions, and pleas:

(1) Such anti-competitive, anti Free Market, and thus anti-consumer behavior must not be allowed to continue.

(2) Microsoft must not be allowed to continue to enjoy the market advantages and other economic benefits (e.g., approximately \$35 Billion in cash on hand) resulting from its illegal activities, and be able to leverage them to quash threats/innovations. To do so is unjust. I fail to understand how this is different from letting a convicted serial burglar keep all his ill-gotten goods when it is known exactly from whence they came. By themselves, "conduct" remedies on future behavior will not remove the illegally-obtained market and economic dominance of Microsoft.

(3) Neither will the lack of punishment for past illegal acts provide any deterrent whatsoever to future anti-competitive acts. Microsoft boasts about its "hard core" tactics, and the "hard core" way to think about conduct remedies is that they will continue to be able to benefit from illegal acts—they just might not be able to repeat them.

(4) Given that Microsoft has upwards of a 90% market share, there is NO competition left in the marketplace. Competition must be restored to protect consumers. Conduct remedies on future behavior will not restore competition.

(5) Many technical innovations come from venture-funded startups. Few VCs will now fund start-ups that will innovate if the innovation in any way threatens Microsoft's monopolies (they know what I said above—in order to survive, you must not be seen by Microsoft as a threat): <http://seattlepi.nwsource.com/venture/29375-vc29.shtml> You must act to restore

innovation by stopping this anti-competitive, anti-innovation behavior and restore faith in the free markets by those who help make free markets. Any penalty must be severe enough to do so. The current settlement does none of these things.

I apologize for the length of this message, but even so, it is ruthlessly abbreviated. Please, please feel free to call me if there is anything I can do to provide further information.

Very Truly Yours,
John Morrison

Subject: Microsoft Settlement—against

I think the proposed settlement in the Microsoft antitrust case will not dissuade nor prevent Microsoft from taking monopolistic actions in the future.

In particular, the settlement does not:
—prevent Microsoft from using its current monopolies to gain future monopolies in new areas. For example, Microsoft currently seems to be attempting to use its windows operating system monopoly to push the WMA digital music encoding standard instead of MP3.

—open APIs within the operating system, such as the file system driver APIs.

—open Middleware APIs.
david.

From: Steve Sinnott
To: microsoft.atr(a)usdoj.gov
Date: 1/24/02 11:06am
Subject: Microsoft Settlement

I would like to voice my objections to the proposed Microsoft Settlement, as proposed by the Department of Justice. On the surface, this appears to be a valid settlement. As they say, though, the devil is in the details. The qualifiers that have been placed on the

settlement would make it essentially useless in and of themselves, and make the settlement fatally flawed when combined with the lack of a valid dispute mechanism. It will not limit Microsoft's actions, it will not open Microsoft to competition, and it does not punish them; indeed, it makes their monopoly a defacto government-sanctioned one.

A single example of this is in section J1: "No provision of this Final Judgment shall:
1. Require Microsoft to document, disclose or license to third parties:
a) portions of APIs or Documentation or portions or layers of Communications Protocols the disclosure of which would compromise the security of anti-piracy, anti-virus, software licensing, digital rights management, encryption or authentication systems, including without limitation, keys, authorization tokens or enforcement criteria; or
(b) any API, interface or other information related to any Microsoft product if lawfully directed not to do so by a governmental agency of competent jurisdiction."

The restrictions of (a) are such that Microsoft is not required to disclose anything that they do not wish to, just as the existing case is an outgrowth of poor grammar and definitions of the Consent Decree.

This particular section would, in fact, serve to maintain Microsoft's Operating System monopoly in and of itself. In modern offices, the capability of sharing files is arguably the single most important use of servers.

Microsoft Operating Systems use a common protocol, called "SMB", for the file sharing, as does almost every other Operating System. However, Microsoft added an authentication system to their clients, so that their Operating Systems can only share files with servers running Microsoft Server Operating System software, unless non-trivial changes are made to the configuration of the Operating System of the client. This effectively prevents companies from moving to non-Microsoft Servers in their offices. Several of the alternatives to Microsoft have requested information on the APIs and Authentication systems that Microsoft uses, and Microsoft has refused to provide the data in a useful manner. Under this settlement agreement, Microsoft would be specifically allowed to not provide the data necessary to open the server market up to non-Microsoft servers.

This specific example, and with the lack of a reasonable dispute mechanism whereby Microsoft's interpretation of the proposed settlement agreement can be over-ridden, combine to make the settlement effectively useless in terms of restricting, much less punishing, Microsoft's behavior. The proposed settlement is far from being in the national interest, and rejection of it is amply supported by the trial record, the appeals court judgement, and the other comments submitted to the court.

Thank you,
Stephen Sinnott

Ms. Hesse:

The proposed Microsoft (MS) anti-trust settlement does NOT remedy the problems with this company. Splitting the company into 2 companies, one a SYSTEM software company [Windows] and the other strictly an APPLICATIONS software company [Office, Internet Explorer, etc.], would solve most of the problems because MS [System Software/Windows] would then have to open up the system software to their APPLICATIONS company [Office, Internet Explorer, etc.] as well as to other COMPETING software applications companies.

As it stands now, MS is currently violating previous orders of the court. MS cannot be trusted. By separating MS into at least 2 companies, they are forced into "playing fair".

Dear Ms. Renata Hesse:

Please put a stop to the economically-draining witch-hunt against Microsoft. This has gone on long enough.

Microsoft has already agreed to hide its Internet Explorer icon from the desktop; the fact is, this case against Microsoft is little more than "welfare" for Netscape and other Microsoft competitors, with not a nickel going to those supposedly harmed by Microsoft: the computer user.

This is just another method for states to get free money, and a terrible precedent for the future, not only in terms of computer

technology, but all sorts of innovations in the most dynamic industry the world has ever seen.

Please put a stop to this travesty of justice now. Thank you.

Sincerely,
Frank Santoro

RE: Proposed MICROSOFT Antitrust Settlement

I am submitting these comments regarding the November 01, 2001 proposed settlement between Microsoft and the Department of Justice ("DOJ"). For the following reasons, I think the settlement is NOT in the public interest and should be rejected. Furthermore, I think the DOJ should pursue Judge Jackson's remedy of breaking MICROSOFT into 2 companies. I have divided my comments into 2 sections: General and Specific Objections. My General Objections address the proposed settlement in general. My Specific Objections parse the proposed Final Judgment line by line.

GENERAL OBJECTIONS

The proposed Final Judgment defeats the DOJ's goal in settling this case. Allegedly the DOJ is settling this case to devote more time and resources to the September 11, 2001 terrorist attacks (see "Circumstances Had Role in U.S.-Microsoft Deal" at <http://www.washingtonpost.com/ac2/wp-dyn/A32665-2001Nov2?language=printer>). However, the proposed Final Judgment requires more time and resources to implement than Judge Jackson's remedy of splitting MICROSOFT into 2 companies. This proposed Final Judgment requires the DOJ to monitor MICROSOFT'S compliance with this proposed Final Judgment and prosecute MICROSOFT when it fails to comply with this proposed Final Judgment. Monitoring MICROSOFT'S compliance with this proposed Final Judgment and prosecuting MICROSOFT when it fails to comply with this proposed Final Judgment will require the DOJ to devote additional time and resources to this case. Splitting MICROSOFT into 2 companies does not require the DOJ to monitor MICROSOFT'S compliance with this proposed Final Judgment and prosecute MICROSOFT when it fails to comply with this proposed Final Judgment. Since splitting MICROSOFT into 2 companies does not require the DOJ to monitor MICROSOFT'S compliance with this proposed Final Judgment and prosecute MICROSOFT when it fails to comply with this proposed Final Judgment, splitting up MICROSOFT does not

require the DOJ to devote additional time and resources to this case. Since this proposed Final Judgment requires the DOJ to devote more time and resources to this case than Judge Jackson's remedy of splitting MICROSOFT into 2 companies, this proposed Final Judgment defeats the DOJ's goal in settling this case.

The proposed Final Judgment fails to protect competition. The goal of United States' Antitrust Law is to protect competition. Some means of protecting competition from the antitrust violations of a monopolist like MICROSOFT are:

- * punishing the monopolist
- * deterring other parties from violating the law.

This proposed Final Judgment fails to accomplish any of these means.

First, this proposed Final Judgment fails to punish MICROSOFT. This proposed Final Judgment does not require MICROSOFT to pay a fine. Nor does it require MICROSOFT to reimburse purchasers of WINDOWS 98 upgrades for the \$40 monopoly tax that it imposed on these customers (see Paragraphs 63-65 on Pages 32-33 of Judge Jackson's FINDINGS OF FACT at <http://www.dcd.uscourts.gov/ms-findings2.pdf>). Nor does it require MICROSOFT to pay restitution to NETSCAPE (now a division of AOL) for the harm it inflicted on NETSCAPE's Web Browser (see Pages 177-190 of Judge Jackson's FINDINGS OF FACT). Nor does it require MICROSOFT to pay restitution to SUN MICROSYSTEMS for the harm it inflicted on SUN's JAVA software (See Pages 190-202 of Judge Jackson's FINDINGS OF FACT). Nor does it require MICROSOFT to disgorge its unlawfully obtained profits from these antitrust violations (a corporation enjoying a Rate of Return over 30% is generally considered a monopoly. Thus, MICROSOFT should be required to pay the government all of its profits exceeding a 30% Rate of Return starting from the filing date of this case). Nor does it prevent MICROSOFT from leveraging its monopoly in the PC market into other markets, like the Server Market, the Handheld Computer Market, the Television Set Top Box Market, the game console market, the PDA Market, the Telephone Market (particularly the Cell Phone Market), or other markets. Nor does it prevent MICROSOFT from bundling its web browser, streaming media player, or other software into its operating systems.

Nor does it prohibit MICROSOFT from adding proprietary extensions to open standards like KERBEROS to prevent interoperability with other operating systems. Furthermore, every restriction in this proposed Final Judgment contains an exception that allows MICROSOFT to continue its current business practices unchanged (See, for example, "States Scorning U.S.-Microsoft Deal" at <http://www.washingtonpost.com/ac2/wp-dyn/A27205-2001Nov1?language=printer>, "Accord Called Win For Software Giant" at <http://www.washingtonpost.com/ac2/wp-dyn/A27196-2001Nov1?language=printer>, "Settlement is 'a reward, not a remedy'" at <http://news.cnet.com/news/0-1003-202-7763195.html>, "Friends, foes see no change"

at <http://www.boston.com/dailyglobe2/306/business/Friends—foes—see—no—changeP.shtml>, “MS-DOJ Pact Disappoints” at <http://dailynews.yahoo.com/hx/zd/20011109/tc/ms-doj—pact—disappoints—1.html>, and “Not even a slap on the wrist for bully Microsoft” at <http://www0.mercurycenter.com/premium/opinion/columns/lenard8.htm>). For example, III.H.2. allows end users or OEMs to designate a Non-Microsoft Middleware Product to be invoked in place of a Microsoft Middleware Product. However, VI.N. defines “Non-Microsoft Middleware Product” as software “... (ii) of which at least one million copies were distributed in the United States within the previous year”. Since almost *no* non-MICROSOFT software (except possibly AOL Instant Messenger) had a distribution of at least one million copies in the United States within the previous year, III.H.2. does not require MICROSOFT to change their current practice of preventing end users and OEMs from designating Non-MICROSOFT Middleware Products in place of MICROSOFT Middleware Products.

Finally, this proposed Final Judgment does not even require MICROSOFT to allocute to the charges brought against it. Since this proposed Final Judgment does not punish MICROSOFT *in any way*, this proposed Final Judgment does not protect competition.

This proposed Final Judgment does not deter other parties from violating the law. A judgment should encourage parties to obey the law. However, this proposed Final Judgment has the opposite effect; it encourages parties to violate the law. Since this proposed Final Judgment does not punish MICROSOFT *in any way*, other monopolists are encouraged to violate United States Antitrust Law, knowing that they too will not be punished. Since this proposed Final Judgment will encourage other monopolists to violate our antitrust laws, it does not deter other parties from violating the antitrust laws. Since this proposed Final Judgment does not deter other parties from violating the antitrust laws, this proposed Final Judgment does not protect competition. Further, this proposed Final Judgment encourages crackers (malicious programmers who break into other people's computers) to violate the law and crack computers running MICROSOFT software. If caught, they can defend themselves by claiming they cannot obtain justice from MICROSOFT in a court of law. Also, other nations will refuse to honor extradition treaties with the United States to extradite crackers who attack our computers, citing this proposed Final Judgment as evidence that their citizens cannot obtain a fair trial in the United States. Since this proposed Final Judgment will encourage crackers to crack computers running MICROSOFT software and other nations to dishonor extradition treaties with the United States, this proposed Final Judgment will encourage persons and companies to violate our laws.

Finally, this proposed Final Judgment is an illusory and ineffective remedy because, in practice, the DOJ will not enforce it. As stated above, this proposed Final Judgment requires the DOJ to monitor MICROSOFT'S compliance with this proposed Final

Judgment and prosecute MICROSOFT when it fails to comply with this proposed Final Judgment.

Also as stated above, allegedly, the DOJ is settling this case to devote more time and resources to the September 11, 2001 terrorist attacks. Since the DOJ is settling this case to devote more time and resources to the September 11, 2001 terrorist attacks, the DOJ does not want to expend any more time and resources on this case. Furthermore, President Bush is a Republican. Republican Presidents and administrations historically are pro-business and do *not* enforce the antitrust laws.

The fact that the DOJ surrendered the remedy of splitting MICROSOFT into 2 companies, combined with the DOJ's capitulation to this proposed Final Judgment, indicates that the Bush administration will not enforce the antitrust laws, or this proposed Final Judgment. Since the DOJ does not want to expend any more time and resources on this case, and the Bush administration will not enforce the antitrust laws, or this proposed Final Judgment, the DOJ will not enforce it against MICROSOFT. Since the DOJ will not enforce this proposed Final Judgment against MICROSOFT, this proposed Final Judgment is an illusory and ineffectice remedy.

Since this proposed Final Judgment does not accomplish the DOJ's goal in settling this case or protect competition, and is in practice an illusory and ineffective remedy, this proposed Final Judgment is not in the public interest. Since this proposed Final Judgment is not in the public interest, this proposed Final Judgment should be rejected. Instead the DOJ should pursue, and the Court should uphold, Judge Jackson's remedy of splitting MICROSOFT into 2 companies.

MICROSOFT has consistently violated United States Antitrust Law.

MICROSOFT has illegally tied licenses of its operating systems to OEMs' sales of processors in computers (i.e., “per-processor” licenses. See THE MICROSOFT FILE: THE SECRET CASE AGAINST BILL GATES by Wendy Goldman Rohm, Times Business, copyright 1998, at Pages 41–42, 67–68, 73, and 83–85). When the first antitrust case settlement in 1995 prohibited per-processor licenses, MICROSOFT switched to illegally tying licenses of its operating systems to OEMs' sales of computer systems (i.e., “per-system” licenses. See THE MICROSOFT FILE at Pages 190–191 and 203–206). MICROSOFT has continually engaged in “vaporware” to kill competing products (See MEMORANDUM OPINION of February 14, 1995, by Judge Stanley Sporkin, Page 35, at <http://www.usdoj.gov/atr/cases/f0100/0102.htm>).

MICROSOFT has also engaged in predatory pricing by illegally tying/bundling its Middleware Products with its Operating System Products to kill competing products (MICROSOFT illegally tied sales of WINDOWS to MS-DOS; see THE MICROSOFT FILE at Pages 114 and 192–198.

MICROSOFT illegally tied sales of WINDOWS to MICROSOFT OFFICE SUITE; see THE MICROSOFT FILE at Page 159. MICROSOFT illegally tied its web browser, INTERNET EXPLORER, with its Operating

System, WINDOWS 98, to kill the competing web browser, Netscape COMMUNICATOR; see THE MICROSOFT FILE at Pages 268–269 and 274–275. MICROSOFT illegally tied its streaming media player, WINDOWS MEDIA PLAYER, with its Operating System, WINDOWS XP, to kill the competing streaming media player, Real Networks REAL PLAYER). By committing these acts, MICROSOFT has consistently violated the Antitrust Laws.

MICROSOFT violated the first antitrust settlement. MICROSOFT provoked this antitrust case by violating the first antitrust settlement.

MICROSOFT used its monopoly power in the PC market to coerce the computer industry to use MICROSOFT's web browser, INTERNET EXPLORER, and not the competing web browser, Netscape COMMUNICATOR. Specifically, MICROSOFT used predatory pricing (by illegally tying its web browser with its operating system to force Netscape to give away its web browser for free. See THE MICROSOFT FILE at Pages 268–269 and 274–275) and exclusionary contracts requiring IHVs, ISVs, IAPs, ICPs, and OEMs to use INTERNET EXPLORER and not COMMUNICATOR. By using its monopoly power in the PC market to coerce the computer industry to use MICROSOFT's web browser, INTERNET EXPLORER, and not the competing web browser, Netscape COMMUNICATOR, MICROSOFT violated the first antitrust settlement. MICROSOFT will violate this proposed Final Judgment and continue violating the antitrust laws. MICROSOFT's illegal concentration of monopoly profits make it the most highly valued corporation in the world. Since MICROSOFT's illegal concentration of monopoly profits make it the most highly valued corporation in the world, MICROSOFT can drag out any enforcement action that the DOJ brings against MICROSOFT for violating this proposed Final Judgment. In other words, MICROSOFT can simply outspend the DOJ and thereby avoid punishment for violating the antitrust laws. Since MICROSOFT can drag out any enforcement action that the DOJ brings against MICROSOFT for violating this proposed Final Judgment, MICROSOFT can, and will, violate this proposed Final Judgment.

To stop MICROSOFT from violating the antitrust laws, it must be split into 2 or more separate companies. As stated above, MICROSOFT's illegal concentration of monopoly profits allow it to violate the antitrust laws with impunity. Since MICROSOFT's illegal concentration of monopoly profits allow it to violate the antitrust laws with impunity, the only way to stop MICROSOFT from violating the antitrust laws is to disperse its illegal concentration of monopoly profits. And the only way to disperse MICROSOFT's illegal concentration of monopoly profits is to split the company into 2 or more separate companies. Thus, the only way to stop MICROSOFT from violating the antitrust laws is to split it into 2 or more companies. Since the only way to stop MICROSOFT from violating the antitrust laws is to split it into

2 or more companies, the remedy in this case should be splitting MICROSOFT into 2 or more companies.

SPECIFIC OBJECTIONS

1. Proposed Final Judgment, paragraph 2:

The second paragraph is too lenient to MICROSOFT. The second paragraph states:

AND WHEREAS, this Final Judgment does not constitute any admission by any party regarding any issue of fact or law; Judge Jackson in his Findings of Fact and Conclusions of Law found that MICROSOFT was a monopoly and that MICROSOFT did abuse its monopoly power to violate United States antitrust law (see FINDINGS OF FACT at <http://www.dcd.uscourts.gov/ms-findings2.pdf> and CONCLUSIONS OF LAW AND ORDER at <http://www.dcd.uscourts.gov/ms-conclusions.pdf>). Furthermore, the Circuit Court of Appeals for the District of Columbia upheld these findings and conclusions. Since both the District Court and the Court of Appeals held that MICROSOFT was a monopoly and did abuse its monopoly power, the least that the DOJ should do is require MICROSOFT to allocute to these facts and conclusions of law. Optimally, MICROSOFT should allocute to all of the facts and conclusions of law contained in the DOJ's original complaint which initiated this case. Allowing MICROSOFT to settle this case without admitting that it is a monopoly which abused its monopoly power is like settling with Osama bin Laden and not requiring him to admit that he bombed the World Trade Centers. Since both the District Court and the Court of Appeals held that MICROSOFT was a monopoly and did abuse its monopoly power, allowing MICROSOFT to settle this case without allocuting to the facts and conclusions of law is too lenient to MICROSOFT.

For this proposed Final Judgment to be in the public interest, MICROSOFT should be *required* to allocute to Judge Jackson's Findings of Facts and Conclusions of Law. Since MICROSOFT should be *required* to allocute to Judge Jackson's Findings of Facts and Conclusions of Law, the second paragraph should state:

AND WHEREAS, this Final Judgment constitutes an admission by MICROSOFT of all facts contained in Judge Jackson's Findings of Facts and all conclusions of law contained in Judge Jackson's Conclusions of Law;

2.III.Prohibited Conduct, A. First Paragraph

The first paragraph of III.A. is incomplete and thus ineffective as written. III.A. prohibits MICROSOFT from retaliating against OEMs for using Non-MICROSOFT software. However, III.A. does not prohibit MICROSOFT from making its software incompatible with Non-MICROSOFT software. Specifically, III.A. does not prohibit MICROSOFT from making its software prevent the use of other operating systems or middleware running on a PC. In the past, MICROSOFT has written Windows NT (later Windows 2000 and now Windows XP) to prevent OEMs and end users from installing LINUX or the BSD operating systems (FreeBSD, OpenBSD, and NetBSD) on the same hard drive and/or computer. Furthermore, MICROSOFT wrote its

Windows 98 upgrade to break the Dynamically-Linked Libraries for competing middleware (like WordPerfect Office Suite) so that the competing middleware would not work. Since MICROSOFT has previously written their Windows Operating Systems Products to prevent Non- MICROSOFT operating systems and middleware from working on the same hard drive and/or computer, and continues to do so with Windows XP, this proposed Final Judgment should prohibit MICROSOFT from writing its software to prevent Non-MICROSOFT operating systems and middleware from working on the same hard drive and/or computer. Since this proposed Final Judgment does not prohibit MICROSOFT from writing its software to prevent Non-MICROSOFT operating systems and middleware from working on the same hard drive and/or computer, III.A. is incomplete and thus ineffective.

For the first paragraph of III.A. to be in the public interest, the DOJ should rewrite it to expressly prohibit MICROSOFT from writing its software to prevent Non-MICROSOFT operating systems and middleware from working on the same hard drive and/or computer. In particular, MICROSOFT should be prohibited from making its software incompatible with LINUX, the BSD operating systems, Netscape COMMUNICATOR, the OPERA Web Browser, AOL Instant Messenger and related software, SAMBA, and any other Non-MICROSOFT software which runs on a PC. 05_____

3.III.Prohibited Conduct, A. Second Paragraph (from Page 4) The second paragraph of III.A. is incomplete as written. III.A. second paragraph (continuing from Page 4 onto Page 5) states in part:

...Microsoft shall not terminate a Covered OEM's license for a Windows Operating System Product without having first given the Covered OEM written notice of the reasons for the proposed termination and not less than thirty days" opportunity to cure. ...

As stated above in OBJECTION 1. regarding the second paragraph, both the District Court and the Court of Appeals found MICROSOFT a monopolist which abused its monopoly power. Since both the District Court and the Court of Appeals found MICROSOFT a monopolist which abused its monopoly power, the DOJ and the District Court should monitor MICROSOFT's future behavior very carefully for compliance with this proposed Final Judgment. In particular, this proposed Final Judgment should require MICROSOFT to provide the DOJ and the District Court with copies of any such notice of non-compliance sent to a Covered OEM. Furthermore, these notices should be published in the FEDERAL REGISTER to provide the public with notice of these events. Since this proposed Final Judgment does not require MICROSOFT to provide the DOJ and the District Court with copies of any such notice of non-compliance sent to a Covered OEM, it is incomplete.

For the second paragraph of III.A. to be in the public interest, it must require MICROSOFT to provide the DOJ and the District Court with copies of any such notice of non-compliance sent to a Covered OEM. Thus, the second paragraph of III.A. should be rewritten as follows:

...Microsoft shall not terminate a Covered OEM's license for a Windows Operating System Product without having first given the Covered OEM written notice of the reasons for the proposed termination and not less than thirty days" opportunity to cure. Microsoft shall provide the DOJ and the District Court with copies of this written notice, which shall be published in the FEDERAL REGISTER.

4.III.Prohibited Conduct, A. Third Paragraph

The third paragraph of III.A. contradicts the first paragraph of III.A. The first paragraph of III.A. prohibits MICROSOFT from retaliating against an OEM for using Non-MICROSOFT software. The third paragraph allows MICROSOFT to reward OEMs based on "the absolute level or amount of that OEM's development, distribution, promotion, or licensing of that MICROSOFT product or service". However, OEMs have a limited amount of money. Since OEMs only have a limited amount of money, an OEM can only increase its promotion/usage of MICROSOFT products and services by decreasing its promotion/usage of Non-MICROSOFT products and services. Since an OEM can only increase its promotion/usage of MICROSOFT products and services by decreasing its promotion/usage of Non-MICROSOFT products and services, the third paragraph of III.A. allows MICROSOFT to reward OEMs who only use MICROSOFT products and services. By rewarding OEMs who only use MICROSOFT products and services, MICROSOFT punishes OEMs who do not use only MICROSOFT products and services. Thus, the third paragraph of III.A. allows MICROSOFT to retaliate against OEMs who use/promote Non-MICROSOFT products and services. Since the third paragraph of III.A. allows MICROSOFT to retaliate against OEMs who use/promote Non-MICROSOFT products and services, and the first paragraph of III.A. prohibits MICROSOFT from retaliating against OEMs who use/promote Non-MICROSOFT products and services, the third paragraph of III.A. contradicts the first paragraph of III.A.

For III.A. to be in the public interest, the third paragraph of III.A. should be deleted from this proposed Final Judgment.

5.III.Prohibited Conduct, C. First Sentence The first sentence of III.C. is incomplete and thus inadequate to protect competition. The first sentence of III.C. states:

Microsoft shall not restrict by agreement any OEM licensee from exercising any of the following options or alternatives: ...

This sentence is incomplete because it does not prohibit MICROSOFT from restricting an OEM licensee's options or alternatives by preferential treatment of an OEM licensee's competitors. For example, MICROSOFT might inform an OEM licensee like COMPAQ that if COMPAQ puts the AOL icon on its Windows desktop that MICROSOFT will offer COMPAQ's competitors a discount on MICROSOFT's products and services. Since MICROSOFT can restrict an OEM licensee's options or alternatives by threatening to offer preferential treatment to an OEM licensee's competitors, in addition to restricting an OEM licensee's options or alternatives by

agreement, the first sentence of III.C. is incomplete and therefore inadequate to protect an OEM licensee from exercising the options and alternatives of III.C.

For the first sentence of III.C. to be in the public interest, it should be rewritten as follows:

Microsoft shall not restrict by agreement *or by any other means, including but not limited to, offering preferential treatment to an OEM licensee's competitors*, any OEM licensee from exercising any of the following options or alternatives: ...

_____PAGE .

06_____

6.III.Prohibited Conduct, C. 1.

III.C.1. contains an exception which allows MICROSOFT to continue its illegal business practices. The exception in III.C.1. states:

...except that Microsoft may restrict an OEM from displaying icons, shortcuts and menu entries for any product in any list of such icons, shortcuts, or menu entries specified in the Windows documentation as being limited to products that provide particular types of functionality, ... Although this exception requires MICROSOFT's restrictions to be non-discriminatory with respect to Non-MICROSOFT software, in practice MICROSOFT will claim that every Non-MICROSOFT software product that MICROSOFT wishes to destroy does not provide the requisite *particular type of functionality*. For example, MICROSOFT claimed that its Internet Explorer web browser was an integral part of Windows 98, providing a particular type of functionality that could not be separated from the operating system and the competing web browser, Netscape COMMUNICATOR, could not provide. MICROSOFT claimed this to destroy the competing web browser, Netscape COMMUNICATOR. Furthermore, MICROSOFT has bundled its streaming media player software with Windows XP to destroy Real Networks Real Player streaming media player. The fact that MICROSOFT has already claimed that a Non-MICROSOFT software product that MICROSOFT wished to destroy does not provide the requisite particular type of functionality, and continues to do so, indicates that they will use this exception to negate the prohibition of III.C.1. This exception allows MICROSOFT to destroy any competing software by modifying the Windows documentation to state that the corresponding MICROSOFT software provides a particular type of functionality. Since this exception allows MICROSOFT to destroy any competing software by modifying the Windows documentation to state that the corresponding MICROSOFT software provides a particular type of functionality, this exception allows MICROSOFT to continue its illegal business practices.

In practice, the condition placed upon this exception will not be enforced. III.C.1. places the following condition upon the above-stated exception:

...provided that the restrictions are non-discriminatory with respect to non-Microsoft and Microsoft products.

This condition is only effective if the DOJ polices MICROSOFT's business practices and prevents MICROSOFT from applying

discriminatory restrictions on OEM licensees. In theory, the DOJ will police MICROSOFT's business practices and prevent MICROSOFT from applying discriminatory restrictions on OEM licensees. However, the fact that the DOJ has surrendered the remedy of splitting MICROSOFT into 2 companies, combined with the DOJ's acceptance of this proposed Final Judgment, indicates that the DOJ will not police MICROSOFT's business practices and prevent MICROSOFT from applying discriminatory restrictions on OEM licensees. Furthermore, as stated in the GENERAL OBJECTIONS, the DOJ does not want to expend additional time and resources on this case. Since the DOJ will not police MICROSOFT's business practices and prevent MICROSOFT from applying discriminatory restrictions on OEM licensees, this condition will not be enforced. Since this condition will not be enforced, it is illusory and thus ineffective.

For III.C.1. to be in the public interest, the exception must be deleted. In other words, III.C.1. should be rewritten as follows:

Installing, and displaying icons, shortcuts, or menu entries for, any Non-Microsoft Middleware or any product or service (including but not limited to IAP products or services) that distributes, uses, promotes, or supports any Non-Microsoft Middleware, on the desktop or Start menu, or anywhere else in a Windows Operating System Product where a list of icons, shortcuts, or menu entries for applications are generally displayed. .

7.III.Prohibited Conduct, C. 2.

As discussed above in OBJECTION 6. about III.C.1., III.C.2. contains an exception that allows MICROSOFT to continue its illegal business practices. The exception in III.C.2. states:

... so long as such shortcuts do not impair the functionality of the user interface.

As stated above in OBJECTION 6. about III.C.1., in practice MICROSOFT will claim that every Non-MICROSOFT software product that MICROSOFT wishes to destroy impairs the functionality of the user interface. The Internet Explorer web browser is an example of this behavior. Another example occurred in August 2001, when MICROSOFT allowed OEMs to place whatever icons they chose on the Windows XP desktop. COMPAQ, a MICROSOFT OEM licensee, subsequently placed the AOL icon on the Windows XP desktop in place of the MSN icon. MICROSOFT thereupon reversed its policy and stated that any OEM placing a Non-MICROSOFT icon on the desktop must place the corresponding MICROSOFT icon on the desktop as well. Thus, MICROSOFT's past behavior indicates that they will claim that every Non-MICROSOFT software product that MICROSOFT wishes to destroy impairs the functionality of the user interface.

Also, as stated above in OBJECTION 6. about III.C.1., the DOJ will not police MICROSOFT's compliance with III.C.2. Since the DOJ will not police MICROSOFT's compliance with III.C.2., MICROSOFT is free to prevent OEM licensees from installing or displaying Non-MICROSOFT desktop shortcuts. Since MICROSOFT is free to prevent OEM licensees from installing or

displaying Non-MICROSOFT desktop shortcuts, this exception allows MICROSOFT to continue its illegal business practices. For III.C.2. to be in the public interest, the exception must be deleted. In other words, III.C.2. should be rewritten as follows:

Distributing or promoting Non-Microsoft Middleware by installing and displaying on the desktop shortcuts of any size or shape.

8.III.Prohibited Conduct, C. 3.

As discussed about III.C.1. above, III.C.3. contains an exception that allows MICROSOFT to continue its illegal business practices. The exception in III.C.3. states: ... provided that any such Non-Microsoft Middleware displays on the desktop no user interface or a user interface of similar size and shape to the user interface displayed by the corresponding Microsoft Middleware.

As stated above in OBJECTION 6. about III.C.1., in practice MICROSOFT will claim that every Non-MICROSOFT software product that MICROSOFT wishes to destroy does not display a user interface of similar size and shape to the user interface displayed by the corresponding MICROSOFT Middleware. For example, MICROSOFT inserted code in Windows 3.1 that detected if a user was running DR-DOS (a competitor to MS-DOS). Upon detecting DR-DOS, Windows 3.1 would warn the user that DR-DOS *might be incompatible with Windows 3.1* and the user should upgrade to MS-DOS (See THE MICROSOFT FILE: THE SECRET CASE AGAINST BILL GATES by Wendy Goldman Rohm, ISBN 0-8129-2716-8, copyright 1998, Times Books, at pages 102-104, 113-114, and 116-118). Since MICROSOFT will claim that every Non-MICROSOFT software product that MICROSOFT wishes to destroy does not display a user interface of similar size and shape to the user interface displayed by the corresponding MICROSOFT Middleware, this exception will allow MICROSOFT to prevent OEM licensees from launching automatically Non-MICROSOFT Middleware at the conclusion of the initial boot sequence or upon connection/disconnection to the Internet. Since this exception will allow MICROSOFT to prevent OEM licensees from launching automatically Non-MICROSOFT Middleware at the conclusion of the initial boot sequence or upon connection/disconnection to the Internet, this exception allows MICROSOFT to continue its illegal business practices. Also, as stated above in OBJECTION 6. about III.C.1., the DOJ will not police MICROSOFT's compliance with III.C.3. Since the DOJ will not police MICROSOFT's compliance with III.C.3., MICROSOFT is free to prevent OEM licensees from launching automatically Non-MICROSOFT Middleware. Since MICROSOFT is free to prevent OEM licensees from launching automatically Non-MICROSOFT Middleware, this exception allows MICROSOFT to continue its illegal business practices.

For III.C.3. to be in the public interest, this exception must be deleted. In other words, III.C.3. should be rewritten as follows:

Launching automatically, at the conclusion of the initial boot sequence or subsequent boot sequences, or upon connections to or disconnections from the Internet, any Non-

Microsoft Middleware if Microsoft Middleware that provides similar functionality would otherwise be launched automatically at that time.

9.III.Prohibited Conduct, C. 5.

The exception in III.C.5. allows MICROSOFT to continue its illegal business practices. III.C.5. states:

Presenting in the initial boot sequence its own IAP offer *provided that the OEM complies with the reasonable technical specifications established by Microsoft, including a requirement that the end user be returned to the initial boot sequence upon the conclusion of any such offer*.

As stated above in OBJECTION 6. regarding III.C.1., in practice MICROSOFT will claim that every Non-MICROSOFT IAP offer that MICROSOFT wishes to destroy does not comply with MICROSOFT's reasonable technical specifications. As stated above in OBJECTION 8. III.C.3., MICROSOFT inserted code in Windows 3.1 suggesting to users that DR-DOS does not meet MICROSOFT's technical requirements. Further, after negotiations between MICROSOFT and AOL broke down in August 2001, MICROSOFT made Windows XP incompatible with AOL's internet software. The fact that MICROSOFT has made their Windows Operating System Products incompatible with competing products indicates that MICROSOFT will use the exception in III.C.5. to claim that competing IAP offers from AOL, other IAPs, or OEMs does not meet MICROSOFT's reasonable technical requirements. Since MICROSOFT will use the exception in III.C.5. to claim that competing IAP offers from AOL, other IAPs, or OEMs does not meet MICROSOFT's reasonable technical requirements, this exception allows MICROSOFT to continue its illegal business practices.

Also, as stated above in OBJECTION 6. about III.C.1., the DOJ will not police MICROSOFT's compliance with III.C.5. Since the DOJ will not police MICROSOFT's compliance with III.C.5., MICROSOFT is free to prevent OEM licensees from presenting their own IAP offers in the initial boot sequence. Since MICROSOFT is free to prevent OEM licensees from presenting their own IAP offers in the initial boot sequence, this exception allows MICROSOFT to continue its illegal business practices. For III.C.5. to be in the public interest, this exception must be deleted. In other words, III.C.5. should be rewritten as follows:

Presenting in the initial boot sequence its own IAP offer .

10.III.Prohibited Conduct, D.

The deadline stated in the first sentence for MICROSOFT to release its APIs and related Documentation to third parties is too long. The first sentence of III.D. states in relevant part:

Starting at the earlier of *the release of Service Pack 1 for Windows XP or 12 months after the submission of this Final Judgment to the Court*; Microsoft shall disclose to ISVs, IHVs, IAPs, ICPs, and OEMs,

... the APIs and related Documentation that are used by Microsoft Middleware to interoperate with a Windows Operating System Product. Currently, the computer industry is operating on Internet time. In

Internet time, 3 months is considered equivalent to a normal year. Since MICROSOFT, like its competitors in the computer industry, operates on Internet time, allowing MICROSOFT up to 12 months to disclose their APIs and related Documentation is equivalent to giving MICROSOFT a 3 year head start in developing Middleware for Windows XP and its successors. Furthermore, MICROSOFT's Middleware programmers already have access to these APIs and related Documentation prior to the release of these Windows Operating System Products. Since MICROSOFT's Middleware programmers already have access to these APIs and related Documentation prior to the release of these Windows Operating System Products, and allowing MICROSOFT up to 12 months to disclose their APIs and related Documentation is equivalent to giving MICROSOFT a 3 year head start in developing Middleware for its Windows Operating System Products, this deadline effectively prevents third parties from developing competing Middleware for MICROSOFT's Windows Operating System Products. Since this deadline effectively prevents third parties from developing competing Middleware for MICROSOFT's Windows Operating System Products, the 12 month deadline for MICROSOFT to release its APIs and related Documentation is too long. Since the 12 month deadline for MICROSOFT to release its APIs and related Documentation is too long, this 12 month deadline should be shortened to 3 months. For this part of III.D. to be in the public interest, this deadline should be changed from 12 months to 3 months. In other words, the first sentence of III.D. should be rewritten as:

Starting at the earlier of the release of Service Pack 1 for Windows XP or *3* months after the submission of this Final Judgment to the Court,

11.III.Prohibited Conduct, D. The condition placed upon releasing MICROSOFT's APIs is too lenient to MICROSOFT. The first sentence of III.D. states in relevant part:

... Microsoft shall disclose to ISVs, IHVs, IAPs, ICPs, and OEMs, for the sole purpose of interoperating with a Windows Operating System Product, ...

As stated above in OBJECTION 1 regarding the second paragraph, MICROSOFT lost this case. Both Judge Jackson and the Court of Appeals held that MICROSOFT was a monopoly and that it abused its monopoly power. Furthermore, as stated in the GENERAL OBJECTIONS, MICROSOFT has consistently violated the antitrust laws. Since both Judge Jackson and the Court of Appeals held that MICROSOFT was a monopoly and that it abused its monopoly power, and MICROSOFT has consistently violated the antitrust laws, the DOJ should not be appeasing MICROSOFT by limiting the scope of use of MICROSOFT's APIs and related Documentation. Since the DOJ should not be appeasing MICROSOFT by limiting the scope of use of MICROSOFT's APIs and related Documentation, this limitation on third parties' right to use MICROSOFT's APIs and related Documentation is too lenient to MICROSOFT.

For this part of III.D. to be in the public interest, the scope of use of MICROSOFT's APIs and related Documentation should be unconditional. In other words, III.D. should be rewritten as:

... Microsoft shall disclose to ISVs, IHVs, IAPs, ICPs, and OEMs, ... the APIs and related Documentation

12.III.Prohibited Conduct, D.

The scope of disclosure of MICROSOFT's APIs and related Documentation is too narrow. The first sentence of III.D. states in relevant part: ...

Microsoft shall disclose... *the APIs and related Documentation* that are used by Microsoft Middleware to interoperate with a Windows Operating System Product. ...

MICROSOFT has consistently withheld APIs from third party developers so that MICROSOFT Middleware would interoperate better with its Windows Operating System Products than with third party Middleware. In particular MICROSOFT has withheld APIs and functions regarding:

* DOS (see UNDOCUMENTED DOS by Andrew Schulman, Addison-Wesley, ISBN 0-201-57064-5 and UNDOCUMENTED DOS 2nd Edition by Andrew Schulman, Addison-Wesley, ISBN 0-201-63287-X)

* Windows 3.1 (see UNDOCUMENTED WINDOWS by Andrew Schulman, Addison-Wesley, ISBN 0-201-60834-0)

* Windows 95 (see UNAUTHORISED WINDOWS 95 by Andrew Schulman, IDG, ISBN 1-56884-169-8)

* Windows NT (see UNDOCUMENTED WINDOWS NT by Prasad Dabak, Sandeep Phadke, Milind Borate, Hungry Minds, Inc., ISBN 0-764-54569-8)

* Windows 2000 (see UNDOCUMENTED WINDOWS 2000 SECRETS: A PROGRAMMER'S COOKBOOK by Sven B. Scheiber, Addison-Wesley, ISBN 0-201-72187-2)

Furthermore, MICROSOFT has also withheld information regarding their File Formats (see WINDOWS UNDOCUMENTED FILE FORMATS: WORKING INSIDE 16- AND 32- BIT WINDOWS by Pete Davis, Mike Wallace, CMP Books, ISBN 0-879-30437-5). The fact that MICROSOFT has consistently withheld APIs and related Documentation (and information about their File Formats) indicates that they will continue to withhold APIs and related Documentation from Third Party developers. Since MICROSOFT will continue to withhold APIs and related Documentation from Third Party developers, the scope of disclosure required of MICROSOFT in III.D. is too narrow.

Furthermore, III.D. does not explicitly require MICROSOFT to disclose *all* APIs and related Documentation used by MICROSOFT Middleware to interoperate with a Windows Operating System Product. Since III.D. does not explicitly require MICROSOFT to disclose *all* APIs and related Documentation, MICROSOFT will always argue that this proposed Final Judgment does not require it to disclose *all* APIs and related Documentation used by MICROSOFT Middleware to interoperate with a Windows Operating System Product. Since MICROSOFT will always argue that this proposed Final Judgment does not require it to disclose *all* APIs and related

Documentation used by MICROSOFT Middleware to interoperate with a Windows Operating System Product, the scope of disclosure required of MICROSOFT in III.D. is too narrow.

In addition, III.D. does not state who determines which APIs and related Documentation MICROSOFT must disclose. Since III.D. does not state who determines which APIs and related Documentation MICROSOFT must disclose, MICROSOFT will claim that they have the right to determine which APIs and related Documentation it must disclose. Furthermore, as stated in the above GENERAL OBJECTIONS, the DOJ will not expend additional time and resources on this case. Since the DOJ will not expend additional time and resources on this case, they will not contest MICROSOFT's right to determine which APIs and related Documentation MICROSOFT must disclose. Since MICROSOFT will claim that they have the right to determine which APIs and related Documentation it must disclose, and the DOJ will not contest this claim, III.D. basically allows MICROSOFT to determine its punishment. In other words, III.D. allows MICROSOFT to determine which APIs and related Documentation it will disclose. The fact that MICROSOFT is already determining which APIs and related Documentation it will disclose, and is withholding APIs and related Documentation, indicates that MICROSOFT will continue to withhold APIs and related Documentation. Since MICROSOFT will interpret III.D. to allow MICROSOFT to continue withholding APIs and related Documentation, the scope of disclosure in III.D. is too narrow.

Also, as stated above in OBJECTION 6. about III.C.1., the DOJ will not police MICROSOFT to ensure that MICROSOFT discloses all of the APIs and related Documentation used by MICROSOFT Middleware to interoperate with a Windows Operating System Product. Since the DOJ will not police MICROSOFT to ensure that MICROSOFT discloses all of the APIs and related Documentation used by MICROSOFT Middleware to interoperate with a Windows Operating System Product, MICROSOFT is free to continue withholding APIs and related Documentation used by MICROSOFT Middleware to interoperate with a Windows Operating System Product. Since MICROSOFT is free to continue withholding APIs and related Documentation used by MICROSOFT Middleware to interoperate with a Windows Operating System Product, III.D. does not deter MICROSOFT from continuing to withhold APIs and related Documentation used by MICROSOFT Middleware to interoperate with a Windows Operating System Product.

For III.D. to be in the public interest, III.D. must require MICROSOFT to disclose the complete source code to all of their Windows Operating System Products. As stated above, MICROSOFT has consistently withheld APIs and related Documentation from Third Party Developers. Since MICROSOFT has consistently withheld APIs and related Documentation from Third Party Developers, the only way to ensure that MICROSOFT discloses all of the APIs and related

Documentation used by MICROSOFT Middleware to interoperate with a Windows Operating System Product is to require MICROSOFT to disclose the complete source code of its Windows Operating System Products.

Furthermore, MICROSOFT must disclose the compilers used to compile the binary files for its Windows Operating System Products. MICROSOFT has history of altering its source code to prevent competitors from writing compatible software. In the mid-1990s, MICROSOFT consistently rewrote its Windows 3.1 source code to ensure that IBM's OS/2 operating system remained incompatible with Windows 3.1. More recently, during the trial of this antitrust case, MICROSOFT altered the code of Windows 98 in an attempt to impeach government witness Edward Felten (see "A Tangled Web" at <http://www.vcnet.com/bms/departments/dirtytricks.shtml> and "MS-DOJ: Microsoft on the retreat?" at <http://www.zdnet.com/filters/printerfriendly/0,6061,2175958-2,00.html>).

The only way to know if MICROSOFT has disclosed the complete source code of its Windows Operating System Products is to compile the source code and compare these compiled binaries with the binaries that MICROSOFT ships to OEMs and end users. Since the only way to know if MICROSOFT has disclosed the complete source code of its Windows Operating System Products is to compile the source code and compare these compiled binaries with the binaries that MICROSOFT ships to OEMs and end users, III.D. must require that MICROSOFT disclose the compilers it uses to compile binaries of its Windows Operating System Products' source code. Thus, III.D. should be rewritten as follows:

... Microsoft shall disclose... *the complete source code of its Windows Operating System Products, together with the compilers used to compile the source code of the Windows Operating System Product*

13. III.Prohibited Conduct, D. The means of disclosure of MICROSOFT's APIs and related Documentation in III.D. is inadequate. The first sentence of III.D. states in relevant part: ..Microsoft shall disclose... *via the Microsoft Developer Network ("MSDN") or similar mechanisms, the APIs and related Documentation...

MICROSOFT has made their websites unavailable to Non-MICROSOFT web browsers. In 1998, MICROSOFT inserted code in their MICROSOFT Office update website such that persons using Non-MICROSOFT web browsers got a warning message stating that they need to upgrade their web browser to Internet Explorer 4.01 to access the full edition of the update at the website (See "Use Internet Explorer or...?" at <http://www.vcnet.com/bms/departments/dirtytricks.shtml>). In October 2001, MICROSOFT altered their websites so that Non-MICROSOFT web browsers, like OPERA, could not view any webpages at MICROSOFT's website (See "New look MSN turns away non-MS lovers" at <http://www.theregister.co.uk/content/6/22441.html>, "The Browser Wars are back: Opera smacks MSN" at <http://www.theregister.co.uk/content/4/22618.html>, and "Opera tolerating MSN.co.uk goes live" at <http://www.theregister.co.uk/content/archive/22714.html>). The fact that MICROSOFT has made their websites unavailable to Non-MICROSOFT web browsers indicates that they will continue to do so. Since MICROSOFT will continue to make their websites unavailable to Non-MICROSOFT web browsers, requiring MICROSOFT to disclose their APIs and related Documentation on the MSDN, or any MICROSOFT website, means that these APIs and related Documentation will not be available to Non-MICROSOFT web browsers, the means of disclosure of MICROSOFT's APIs and related Documentation in III.D. is inadequate.

Also, as stated above in OBJECTION 6. about III.C.1., the DOJ will not police MICROSOFT to ensure that MICROSOFT does not block Non-MICROSOFT web browsers from accessing its websites. Since the DOJ will not police MICROSOFT to ensure that MICROSOFT does not block Non-MICROSOFT web browsers from accessing its websites, MICROSOFT is free to continue blocking Non-MICROSOFT web browsers from accessing its websites. Since MICROSOFT is free to continue blocking Non-MICROSOFT web browsers from accessing its websites, III.D. does not deter MICROSOFT from continuing to block Non-MICROSOFT web browsers from accessing its websites.

For III.D. to be in the public interest, MICROSOFT must be required to publicly disclose its APIs and related Documentation in Non-MICROSOFT websites like SLASHDOT (<http://slashdot.org>) and FRESH MEAT (<http://www.freshmeat.org>). In other words, III.D. should be rewritten as follows: ...Microsoft shall disclose... *via Non-MICROSOFT websites, including but not limited to, SLASHDOT (<http://slashdot.org>) and FRESH MEAT (<http://www.freshmeat.org>), the APIs and related Documentation... .

14.III.Prohibited Conduct, D. The deadline for disclosure of MICROSOFT Middleware may be illusory and thus ineffective. The second sentence of III.D. states

...In the case of a major new version of Microsoft Middleware, the disclosures required by this section III.D. shall occur no later than the last major beta test release of the Microsoft Middleware.

MICROSOFT is currently moving towards a subscription-based model for its software. A subscription-based model for new software means that MICROSOFT may not release any more "new" software. Instead, MICROSOFT will simply update a user's current software every month or so. Since MICROSOFT will simply update a user's current software every month or so, MICROSOFT will not be releasing any new major versions of their Operating Systems or Middleware. Since MICROSOFT will not be releasing any new major versions of their Windows Operating

System Products or Middleware, MICROSOFT will not be required to release the APIs and related Documentation for these Windows Operating System Products or Middleware. Since MICROSOFT will not be required to release the APIs and related Documentation for these Windows Operating System Products or Middleware, this deadline may be illusory.

To summarize, the requirements of III.D. are too narrow and thus inadequate. For III.D. to be in the public interest, the first sentence of III.D. must be rewritten as follows: Starting at the earlier of the release of Service Pack 1 for Windows

XP or *3* months after the submission of this Final Judgment to the Court, Microsoft shall disclose to ISVs, IHVs, IAPs, ICPs, and OEMs, *via Non-MICROSOFT websites, including but not limited to, SLASHDOT (<http://slashdot.org>) and FRESH MEAT (<http://www.freshmeat.org>), the complete source code of its Windows Operating System Products, together with the compilers used to compile the source code of the Windows Operating System Product and related Documentation*.

15.III.Prohibited Conduct, E.

For the same reasons stated in OBJECTION 10. regarding III.D., the deadline for releasing Communications Protocols in III.E. is too lenient to MICROSOFT. III.E. allows MICROSOFT to wait *9 months* after the submission of this proposed Final Judgment before disclosing its Communications Protocols. As stated above in OBJECTION 10. regarding III.D., MICROSOFT and its competitors operate on "Internet time", where 3 months comprises an "Internet year". Since 3 months comprises an "Internet year", the deadline of 9 months for MICROSOFT to disclose its Communications Protocols is too long. For the deadline of III.E. to be in the public interest, it must be shortened to 3 months. In other words, III.E. should be rewritten as follows:

Starting *3* months after the submission of this proposed Final Judgment to the Court,...

16.III.Prohibited Conduct, E.

The terms of disclosure are too lenient to MICROSOFT. As stated above in OBJECTION 1. regarding the second paragraph, MICROSOFT lost this case at the District Court and Appellate Court levels. Since MICROSOFT lost this case at the District Court and Appellate Court levels, the DOJ should not concede anything to MICROSOFT, including the terms of disclosing MICROSOFT's Communications Protocols. III.E. states in the relevant part:

...Microsoft shall make available for use by third parties, *for the sole purpose* of interoperating with a Windows Operating System Product, *on reasonable and non-discriminatory terms* (consistent with Section III.I.), any Communications Protocol that is, on or after the date this Final Judgment is submitted to the Court, (i) implemented in a Windows Operating System Product installed on a client computer, and

(ii) used to interoperate natively (i.e., without the addition of software code to the client or server operating system products) with Windows 2000 Server or products

marketed as its successors installed on a server computer.

First, since MICROSOFT lost this case, the scope of disclosure of these Communications Protocols should not be limited to *the sole purpose of interoperating with a Windows Operating System Product*. Third Parties should be free to make whatever use of these Communications Protocols that they choose. Allowing MICROSOFT to limit their use to *the sole purpose of interoperating with a Windows Operating System Product* simply gives MICROSOFT the opportunity to deny disclosing these Communications Protocols by claiming that the Third Party is not using them for *the sole purpose of interoperating with a Windows Operating System Product*. Since limiting their use to *the sole purpose of interoperating with a Windows Operating System Product* simply gives MICROSOFT the opportunity to deny disclosing these Communications Protocols by claiming that the Third Party is not using them for *the sole purpose of interoperating with a Windows Operating System Product*, this limitation is too restrictive.

Second, *reasonable and non-discriminatory terms* is legalese for royalty-bearing terms. By allowing MICROSOFT to charge Third Parties royalties for disclosing its Communications Protocols, III.E. allows MICROSOFT to discriminate against Open-Source developers, who generally cannot afford to pay royalties. Since III.E. allows MICROSOFT to discriminate against Open-Source developers, who generally cannot afford to pay royalties, III.E. is too restrictive.

Third, the scope of disclosure in III.E. is inadequate because III.E. does not require MICROSOFT to disclose *all* Communications Protocols. III.E. limits MICROSOFT's disclosure to Communications Protocols that are:

(i) implemented in a Windows Operating System Product installed on a client computer, and

(ii) used to interoperate natively (i.e., without the addition of software code to the client or server operating system products) with Windows 2000 Server or products marketed as its successors installed on a server computer.

Since III.E. limits MICROSOFT's disclosure to only Communications Protocols meeting these requirements, III.E. does not require MICROSOFT to disclose all Communications Protocols which are necessary for Third Party developers to make their software interoperate with MICROSOFT's Windows Operating System Products as well as MICROSOFT's Middleware does. Since III.E. does not require MICROSOFT to disclose all Communications Protocols which are necessary for Third Party developers to make their software interoperate with MICROSOFT's Windows Operating System Products as well as MICROSOFT's Middleware does, III.E. allows MICROSOFT to continue withholding Communications Protocols that allow its Middleware to interoperate with MICROSOFT's Windows Operating System Products better than Third Parties' Middleware. Since III.E. allows MICROSOFT to continue withholding Communications Protocols that allow its Middleware to interoperate with

MICROSOFT's Windows Operating System Products better than Third Parties' Middleware, the scope of disclosure in III.E. is too narrow.

Furthermore, VI.B. of this proposed Final Judgment defines Communications Protocols too narrowly. The last sentence of VI.B. states:

...Communications Protocols shall *not* include protocols used to remotely administer Windows 2000 Server and products marketed as its successors.

Thus, III.E., when read in light of VI.B., further limits MICROSOFT's disclosure to only those Communications Protocols that are not used to remotely administer Windows 2000 Server and products marketed as its successors. Since III.E., when read in light of VI.B., further limits MICROSOFT's disclosure to only those Communications Protocols that are not used to remotely administer Windows 2000 Server and products marketed as its successors, the scope of disclosure in III.E. in light of VI.B. is too narrow.

For III.E. to be in the public interest, all of these limitations on MICROSOFT's disclosure of its Communications Protocols must be deleted. In other words, III.E. should be rewritten as follows: Starting *3* months after the submission of this proposed Final Judgment to the Court, Microsoft shall make available for use *on royalty-free terms* by third parties, *all* Communications Protocols used by *all* Microsoft software.

Furthermore, the last sentence of VI.B., excluding protocols used to remotely administer Windows 2000 Server and products marketed as its successors, must be deleted.

17.III.Prohibited Conduct, F. 2.

The exception of III.F.2. negates the restriction placed on MICROSOFT.

The exception states:

...except that Microsoft may enter into *agreements that place limitations on an ISV's development, use, distribution, or promotion of any such software* if those limitations are reasonably necessary to and of reasonable scope and duration in relation to a bona fide contractual obligation of the ISV to use, distribute or promote any Microsoft software or to develop software for, or in conjunction with, Microsoft.

MICROSOFT will use this exception to avoid the restrictions of III.F.2., always claiming that the limitations are reasonably necessary to and of reasonable scope and duration in relation to a bona fide contractual obligation of the ISV to use, distribute or promote any Microsoft software or to develop software for, or in conjunction with, Microsoft. As stated above in OBJECTION 4. regarding III.A., ISVs have a limited budget. By requiring ISVs to spend that budget distributing and/or promoting MICROSOFT software, MICROSOFT can prevent ISVs from developing, using, distributing or promoting any software that competes with MICROSOFT software. Since MICROSOFT can prevent ISVs from developing, using, distributing or promoting any software that competes with MICROSOFT software, MICROSOFT will use this exception to avoid the restrictions of III.F.2. Since MICROSOFT will use this exception to avoid the restrictions of III.F.2., the exception negates

the restriction that III.F.2. places on MICROSOFT.

For III.F.2. to be in the public interest, the exception must be deleted. In other words, III.F.2. should be rewritten as follows:

Microsoft shall not enter into any agreement relating to a Windows Operating System Product that conditions the grant of any Consideration on an ISV's refraining from developing, using, distributing, or promoting any software that competes with Microsoft Platform Software or any software that runs on any software that competes with Microsoft Platform Software. .

18.III.Prohibited Conduct, G.1. The prohibition of III.G.1. is too narrow because it excludes Governments, Educational Institutions, Standards Setting Organizations and Non-Profit Organizations. III.G.1. states in relevant part:

Microsoft shall not enter into any agreement with:

1. any *IAP, ICP, ISV, IHV or OEM*...

Microsoft has been doing, and continues to do, business with:

- * Local, State, and National Governments
- * Standards Setting Organizations
- * Non-Profit Organizations
- * Educational Institutions like Universities and Public Schools

Since Microsoft has been doing, and continues to do, business with these groups, they should be included in the prohibition of III.G.1. Since these groups are not included in the prohibition of III.G.1., III.G.1. is too narrow.

For III.G.1. to be in the public interest, it must include these other groups. In other words, III.G.1. should be rewritten as follows:

1. any IAP, ICP, ISV, IHV, *OEM, government, educational institution, standards-setting organization, or non-profit organization*....

- 19.III.Prohibited Conduct, G.1.

The exception in III.G.1. negates the restriction placed upon MICROSOFT in III.G.1. The exception states:

...except that Microsoft may enter into agreements in which such an entity agrees to distribute, promote, use or support Microsoft Platform Software in a fixed percentage whenever Microsoft in good faith obtains a representation that it is commercially practicable for the entity to provide equal or greater distribution, promotion, use or support for software that competes with Microsoft Platform Software,...

MICROSOFT has a monopoly in the PC market. MICROSOFT's only competition comes from LINUX, which is available for free. Since LINUX is available for free, every company/entity will *always* be able to represent that it is commercially practicable for the entity to provide equal or greater distribution, promotion, use or support for software that competes with Microsoft Platform Software. Since every company/entity will *always* be able to represent that it is commercially practicable for the entity to provide equal or greater distribution, promotion, use or support for software that competes with Microsoft Platform Software, this exception allows MICROSOFT to continue requiring companies/entities to distribute, promote, use or support Microsoft Platform Software in a fixed percentage. Since this exception allows MICROSOFT to

continue requiring companies/entities to distribute, promote, use or support Microsoft Platform Software in a fixed percentage, this exception negates the restriction that III.G.1. places upon MICROSOFT.

For III.G.1. to be in the public interest, the exception in III.G.1. must be deleted. In other words, III.G.1. must be rewritten as follows:

1. any IAP, ICP, ISV, IHV, *OEM, government, educational institution, standards-setting organization, or non-profit organization* that grants Consideration on the condition that such entity distributes, promotes, uses, or supports, exclusively or in a fixed percentage, any Microsoft Platform Software*, or .

20.III.Prohibited Conduct, G. The exceptions ending III.G. negate the restrictions that III.G. 1. and

2. place upon MICROSOFT. The exceptions state:

Nothing in this section shall prohibit Microsoft from entering into:

- (a) any bona fide joint venture or
- (b) any joint development or joint services arrangement with any ISV, IHV, IAP, ICP, or OEM for a new product, technology, or service, or any material value-add to an existing product, technology, or service, in which both Microsoft and the ISV, IHV, IAP, ICP, or OEM contribute significant developer or other resources, that prohibits such entity from competing with the object of the joint venture or other arrangement for a reasonable period of time.

This Section does not apply to any agreements in which Microsoft licenses intellectual property in from a third party.

These exceptions allow MICROSOFT to avoid the restrictions of III.G. by calling this prohibited conduct a joint venture, joint development, or joint services arrangement (Note that exception (b) does not prohibit *MICROSOFT* from competing with the object of the joint venture or other arrangement for a reasonable period of time, only MICROSOFT's partners) or by claiming that it is licensing intellectual property in from a third party. Since these exceptions allow MICROSOFT to avoid the restrictions of III.G. by calling this prohibited conduct a joint venture, joint development, or joint services arrangement or by claiming that it is licensing intellectual property in from a third party, these exceptions negate the restrictions that III.G. 1. and 2. place upon MICROSOFT.

For III.G. to be in the public interest, these exceptions must be deleted from III.G.

21.III.Prohibited Conduct, H.

The deadline in III.H. for MICROSOFT to conform to the restrictions is too long. As stated above in OBJECTION 11. regarding III.D., MICROSOFT and its competitors operate on "Internet time". Three months is a year in "Internet time". Since 3 months is a year in "Internet time", and MICROSOFT and its competitors operate on "Internet time", the deadline in III.H. should be *3* months, not *12* months. Since the deadline in III.H. is 12 months, the deadline is too long.

For the deadline in III.H. to be in the public interest, it must be shortened to 3 months. In other words, the first sentence of III.H. should be rewritten as follows:

Starting at the earlier of the release of Service Pack 1 for Windows XP or *3*

months after the submission of this Final Judgment to the Court, Microsoft shall: 22.III.Prohibited Conduct, H.

The restrictions that III.H. places upon MICROSOFT are illusory in light of VI.N. III.H. allows end users and OEMs to select Non-MICROSOFT Middleware Products in place of MICROSOFT Middleware Products. However, VI.N. defines "Non-MICROSOFT Middleware Products" as a non-Microsoft software product running on a Windows Operating System Product ... and (ii) of which at least *one million copies* were distributed in the United States in the previous year.

Very few Non-MICROSOFT software products have a distribution of 1 million copies in the United States in the previous year. Only AOL's software and perhaps Adobe PHOTOSHOP meet this requirement. Furthermore, this requirement excludes practically all Open-Source software. Since very few, and practically no Open-Source, software products meet this requirement, III.H. actually reads as follows:

MICROSOFT shall allow end users and OEMs to select AOL and Adobe PHOTOSHOP in place of the equivalent MICROSOFT Middleware Product. In other words, VI.N. renders the restrictions of III.H. illusory. Since VI.N. renders the restrictions of III.H. illusory, VI.N. must be rewritten to delete requirement "(ii)". In other words, VI.N. should be rewritten as follows:

"Non-Microsoft Middleware Product" means a non-Microsoft software product running on a Windows Operating System Product that exposes a range of functionality to ISVs through published APIs and that could, if ported to or made interoperable with, a non-Microsoft Operating System, thereby make it easier for applications that rely in whole or in part on the functionality supplied by that software product to be ported to or run on that non-Microsoft Operating System. .

23.III.Prohibited Conduct, H.1.(a)

The exception in (a) of III.H.1. negates the restriction that III.H.1. places upon MICROSOFT. The exception states: ...except that Microsoft may restrict the display of icons, shortcuts, or menu entries for any product in any list of such icons, shortcuts, or menu entries specified in the Windows documentation as being limited to products that provide particular types of functionality, provided that the restrictions are non-discriminatory with respect to non-Microsoft and Microsoft products; ...

MICROSOFT will always claim that competing software that MICROSOFT wishes to destroy does not provide particular types of functionality. For example, MICROSOFT integrated their web browser, Internet Explorer, into their Operating System, Windows 95/98, and then claimed that Netscape's web browser did not provide similar functionality. MICROSOFT also integrated their streaming media player software, WINDOWS MEDIA PLAYER, to preclude OEMs installing Real Networks's streaming media player, REAL PLAYER. This past August MICROSOFT allowed OEMs to place Non-MICROSOFT icons and shortcuts on the Windows XP desktop. COMPAQ then announced that it was placing the AOL icon

and shortcut on the Windows XP desktop. MICROSOFT immediately changed its policy to requiring OEMs to place MICROSOFT icons and shortcuts alongside Non-MICROSOFT icons and shortcuts of similar functionality. The fact that MICROSOFT has integrated software into their Windows Operating System Products to preclude competition and required OEMs to place MICROSOFT icons and shortcuts alongside Non-MICROSOFT icons and shortcuts indicates that MICROSOFT will use the exception in III.H.1.(a) to claim that competing software that MICROSOFT wishes to destroy does not provide particular types of functionality. Since MICROSOFT will use the exception in III.H.1.(a) to claim that competing software that MICROSOFT wishes to destroy does not provide particular types of functionality, this exception negates the restriction that III.H.1. places upon MICROSOFT.

The DOJ will not stop MICROSOFT from using the exception in III.H.1.(a) to claim that competing software that MICROSOFT wishes to destroy does not provide particular types of functionality. As stated above in OBJECTION 6. regarding III.C.1., the DOJ will not police MICROSOFT to ensure that MICROSOFT complies with this proposed Final Judgment. Since the DOJ will not police MICROSOFT to ensure that MICROSOFT complies with this proposed Final Judgment, MICROSOFT is free to use the exception in III.H.1.(a) to claim that competing software that MICROSOFT wishes to destroy does not provide particular types of functionality. For III.H.1.(a) to be in the public interest, this exception must be deleted. In other words, III.H.1.(a) must be rewritten as follows:

(a) displaying or removing icons, shortcuts, or menu entries on the desktop or Start menu, or anywhere else in a Windows Operating System Product where a list of icons, shortcuts, or menu entries for applications are generally displayed*; and .

24.III.Prohibited Conduct, H.1.(b)

The restriction in III.H.1.(b) is incomplete and allows MICROSOFT to circumvent the restriction. III.H.1.(b) requires MICROSOFT to allow end users and OEMs a "separate and unbiased choice" for enabling/disabling MICROSOFT software and automatic invocations of MICROSOFT software.

However, this language is vague and allows MICROSOFT to circumvent this restriction. As mentioned above in OBJECTION 8. regarding III.C.3., MICROSOFT inserted code into Windows 3.1 warning DR-DOS users not to use DR-DOS with Windows 3.1. Currently, MICROSOFT has released Windows XP, which contains the Passport software. Passport includes code that causes a pop-up window to appear at least 5 times a day until a Windows XP user opens a Passport account. Furthermore, MICROSOFT refuses to provide technical support to Windows XP users who do not have a Passport account. Since MICROSOFT has inserted code in their Windows Operating System Products to coerce users to use MICROSOFT software and/or open accounts with MICROSOFT to obtain technical support, III.H.1.(b) should restrict MICROSOFT from engaging in this behavior as well. Since III.H.1.(b) does not restrict MICROSOFT from inserting code in

their Windows Operating System Products to coerce users to use MICROSOFT software and/or open accounts with MICROSOFT to obtain technical support, III.H.1.(b) is inadequate. For III.H.1.(b) to be in the public interest, it must be rewritten to prohibit MICROSOFT from engaging in the above-mentioned acts. In other words, III.H.1.(b) must be rewritten as follows:

... The mechanism shall not include warnings of incompatibilities warning the user to switch to MICROSOFT software, nor shall the mechanism require confirmation from the user more than once, nor shall the mechanism initiate requesting that the end user install or use MICROSOFT software. ...

25.III.Prohibited Conduct, H.2.

For the same reasons stated above in OBJECTION 23. regarding III.H.1. (a), III.H.2. is inadequate. III.H.2. requires MICROSOFT to allow end users to designate a Non-MICROSOFT Middleware Product in place of a MICROSOFT Middleware Product. However, III.H.2. allows MICROSOFT to require confirmation from the end user to making this change. As stated above in OBJECTION 24. regarding III.H.1.(b), MICROSOFT has used this confirmation technique to harass end users into using MICROSOFT software and opening accounts with MICROSOFT. Since MICROSOFT has used this confirmation technique to harass end users into using MICROSOFT software and opening accounts with MICROSOFT, III.H.2. must prohibit MICROSOFT from using these techniques. Since III.H.2. does not prohibit MICROSOFT from using these techniques, III.H.2. is inadequate. For III.H.2. to be in the public interest, it must be rewritten to prohibit these harassing techniques. In other words, III.H.2. must be rewritten as follows:

... (via a mechanism which may, at Microsoft's option, require confirmation from the end user. *However, this confirmation shall not include warnings of incompatibilities warning the user to switch to MICROSOFT software, nor shall the mechanism require confirmation from the user more than once, nor shall the mechanism initiate requesting that the end user install or use MICROSOFT software.*)...

26.III.Prohibited Conduct, H.3.

For the same reasons stated above in OBJECTION 23. regarding III.H.1. (a), III.H.3. is inadequate and should be rewritten to prohibit MICROSOFT from engaging in the above-listed harassing techniques.

27.III. Prohibited Conduct, H.

The 2 exceptions ending III.H. negate the restrictions that III.H. places upon Microsoft. The first exception allows MICROSOFT's Windows Operating System Products to invoke a MICROSOFT Middleware Product if the Middleware Product is invoked solely to interoperate with a server maintained by MICROSOFT. MICROSOFT's current .NET strategy is to have end users run their software from the Internet through a server maintained by MICROSOFT. In other words, MICROSOFT is modifying their Middleware Products so that they will be invoked solely for use in interoperating with a server maintained by MICROSOFT. Since

MICROSOFT is modifying their Middleware Products so that they will be invoked solely for use in interoperating with a server maintained by MICROSOFT, MICROSOFT's Middleware Products will completely avoid the restrictions of III.H. Since the first exception ending III.H. allows MICROSOFT to completely avoid the restrictions of III.H., the first exception negates the restrictions of III.H.

The second exception ending III.H. similarly negates the restrictions of III.H. The second exception allows MICROSOFT's Windows Operating System Products to invoke a MICROSOFT Middleware Product if a Non-MICROSOFT Middleware Product does not meet MICROSOFT's *reasonable technical requirements*. As stated above in OBJECTION 12. regarding III.D., MICROSOFT has consistently withheld APIs and related Documentation about their Windows Operating System Products to gain an unfair advantage over their competitors for Middleware Products. The fact that MICROSOFT has consistently withheld APIs and related Documentation about their Windows Operating System Products to gain an unfair advantage over their competitors for Middleware Products indicates that it will continue to do so. Furthermore, the fact that MICROSOFT will continue to withhold APIs and related Documentation indicates that MICROSOFT will withhold the reasonable technical requirements that competitors need to make their Middleware Products interoperate with Windows Operating System Products. By withholding the reasonable technical requirements that competitors need to make their Middleware Products interoperate with Windows Operating System Products and then claiming that Non-MICROSOFT Middleware Products do not meet MICROSOFT's reasonable technical requirements, MICROSOFT can preclude users from invoking Non-MICROSOFT Middleware Products and thereby avoid the restrictions of III.H. MICROSOFT can successfully withhold reasonable technical requirements in violation of this Final Judgment because the DOJ will not police MICROSOFT. As stated above in OBJECTION 6. regarding III.C.1., the DOJ will not police MICROSOFT to ensure that MICROSOFT complies with this Final Judgment. Since the DOJ will not police MICROSOFT to ensure that MICROSOFT complies with this Final Judgment, MICROSOFT will not comply with this Final Judgment. In other words, MICROSOFT will withhold reasonable technical requirements from their competitors to prevent them from making Middleware Products that meet MICROSOFT's reasonable technical requirements.

Since these 2 exceptions ending III.H. negate the restrictions of III.H. they should be deleted from the proposed Final Judgment.

28. III. Prohibited Conduct, I.2.

The scope of the license for MICROSOFT's Intellectual Property Rights ("IPRs") in III.I.2. is too narrow. III.I.2. states in relevant part:

...the scope of any such license (and the intellectual property rights licensed thereunder) need be no broader than is necessary to ensure that an ISV, IHV, IAP, ICP or OEM is able to exercise the options

or alternatives expressly provided under this Final Judgment...

As stated above in OBJECTION 6. regarding III.C.1., MICROSOFT has consistently withheld APIs and related Documentation from their competitors. The fact that MICROSOFT has consistently withheld APIs and related Documentation from their competitors indicates that they will consistently withhold IPRs from their competitors to prevent their competitors from making Middleware Products that can truly compete with MICROSOFT Middleware Products. Since MICROSOFT will consistently withhold IPRs from their competitors to prevent their competitors from making Middleware Products that can truly compete with MICROSOFT Middleware Products, limiting the scope of the license of MICROSOFT's IPRs to "no broader than necessary to ensure that an ISV, IHV, IAP, ICP or OEM is able to exercise the options or alternatives expressly provided under" this Final Judgment..." is too narrow.

Once again MICROSOFT can successfully withhold IPRs in violation of this proposed Final Judgment because, as stated above in OBJECTION 6. regarding III.C.1., the DOJ will not police MICROSOFT. Since the DOJ will not police MICROSOFT to ensure that MICROSOFT complies with this proposed Final Judgment, MICROSOFT will not comply with this Final Judgment. In other words, MICROSOFT will not grant their competitors the IPRs necessary to make Middleware Products that can truly compete with MICROSOFT's Middleware Products. Since MICROSOFT will not grant their competitors the IPRs necessary to make Middleware Products that can truly compete with MICROSOFT's Middleware Products, the scope of the license of MICROSOFT's IPRs under III.I.2. is too narrow. For III.I.2. to be in the public interest, it must be rewritten to grant all software developers a license to all of MICROSOFT's IPRs. Furthermore, this license should be royalty-free for Open-Source Software developers (who generally lack the money to pay royalties). In other words, III.I.2. should be rewritten as follows:

2. MICROSOFT shall license all of its IPRs to ISVs, IHVs, IAPs, ICPs or OEMs. Furthermore, MICROSOFT shall grant a royalty-free license of its IPRs to Open-Source Software developers.

29.III.Prohibited Conduct, I.5.

The requirement of III.I.5. is too lenient to MICROSOFT. As stated above in OBJECTION 1. regarding the second paragraph, MICROSOFT lost this case in the District Court and the Court Appeals. Since MICROSOFT lost this case in the District Court and the Court Appeals, the DOJ should not concede anything to MICROSOFT, especially allowing MICROSOFT to require software developers to license back IPRs they developed from licensing MICROSOFT IPRs. Since the DOJ should not concede anything to MICROSOFT, they should not allow MICROSOFT to require software developers to grant back their IPRs developed from licensing MICROSOFT's IPRs. Since III.I.5. allows MICROSOFT to require software developers to grant back their IPRs developed from licensing MICROSOFT's IPRs,

III.I.5. is too lenient.

For III.I. to be in the public interest, III.I.5. should be deleted from the proposed Final Judgment.

30.III. Prohibited Conduct, J.1. III.J.1.(a) allows MICROSOFT to avoid most of the prohibitions of this Final Judgment by claiming they are related to anti-piracy measures. III.J.1.(a) states:

No provision of this Final Judgment shall:
1. Require Microsoft to document, disclose or license to third third parties:

(a) portions of APIs or Documentation or portions or layers of Communications Protocols the disclosure of which would compromise the security of anti-piracy, anti-virus, software licensing, digital rights management, encryption or authentication systems, including without limitation, keys, authorization tokens or enforcement criteria;...

III.J.1.(a) allows MICROSOFT to withhold APIs and related Documentation from competitors by claiming these APIs and Documentation relate to anti-piracy, anti-virus, software licensing, digital rights management, encryption or authentication systems. This concession to MICROSOFT is a joke, as MICROSOFT has the worst, bar none, record for security in the computer industry. Instead of allowing MICROSOFT to withhold APIs and related Documentation based on these grounds, this proposed Final Judgment should require MICROSOFT to disclose these APIs and related Documentation because MICROSOFT has no credible anti-piracy, anti-virus, software licensing, digital rights management, encryption or authentication systems. Since III.J.1.(a) allows MICROSOFT to withhold APIs and related Documentation from competitors by claiming these APIs and Documentation relate to anti-piracy, anti-virus, software licensing, digital rights management, encryption or authentication systems, III.J.1. (a) allows MICROSOFT to avoid most of the prohibitions of this Final Judgment.

III.J.1.(b) is a tautology and is thus superfluous to this proposed Final Judgment. If a governmental agency of competent jurisdiction lawfully directs MICROSOFT not to release APIs or related Documentation, then this Court cannot order otherwise. Since if a governmental agency of competent jurisdiction lawfully directs MICROSOFT not to release APIs or related Documentation, then this Court cannot order otherwise, III.J.1.(b) simply restates the law. Since III.J.1.(b) simply restates the law, it is a tautology and thus superfluous to this proposed Final Judgment.

For III.J. to be in the public interest, III.J.1. must be deleted from this proposed Final Judgment.

31. III. Prohibited Conduct, J.2.

III.J.2. is too lenient to MICROSOFT. III.J.2. allows MICROSOFT to condition licensing any API, Documentation, or Communications Protocol related to anti-piracy systems, anti-virus technologies, license enforcement mechanisms, authentication/authorization security, or third-party intellectual property protection mechanisms of any MICROSOFT product to any person or entity. As stated above in OBJECTION 30. regarding III.J.1.,

MICROSOFT's security is practically non-existent. Since MICROSOFT's security is practically non-existent, no harm can come from licensing these APIs, Documentation, Communications Protocols, etc. Since no harm can come from licensing these APIs, Documentation, Communications Protocols, etc., III.J.2. is too lenient to MICROSOFT. Furthermore, the conditions that III.J.2. allows MICROSOFT to place upon licensees are vague and thus subject to abuse. III.J.2. states these conditions as:

(a) has no history of software counterfeiting piracy or willful violation of IPRs,

(b) has a reasonable business need for the API, Documentation or Communications Protocol for a planned or shipping product,

(c) meets reasonable, objective standards *established by Microsoft* for certifying the authenticity and viability of its business,

(d) agrees to submit, at its own expense, any computer program using such APIs, Documentation or Communications Protocols to third-party verification, *approved by Microsoft*, to test for and ensure verification and compliance with Microsoft specifications for use of the API or interface, which specifications shall be related to proper operation and integrity of the systems and mechanisms identified in this paragraph.

(b) contains the vague phrase "reasonable business need". (c) contains the vague phrase "reasonable, objective standards". (d) contains the vague phrase "verification and compliance with Microsoft specifications".

III.J.2. is also troubling because it allows *MICROSOFT* to determine these conditions. (c) and (d) explicitly state that MICROSOFT shall determine the standards. (c) states "reasonable, objective standards established by Microsoft". (d) states that the program shall be submitted to a third party *approved by Microsoft*. (a) and (b) implicitly allow MICROSOFT to determine the condition. (b) does not explicitly state who determines whether a licensee has a reasonable business need, but given the leniency shown to MICROSOFT in III.J. as a whole, MICROSOFT will argue that it has the right to determine this condition. Likewise with (a). As stated above in OBJECTION 1. regarding the second paragraph, MICROSOFT lost this case; the District Court and Court of Appeals both held that MICROSOFT was a monopolist and abused its monopoly power to maintain its monopoly. Since these Courts held that MICROSOFT violated the law, MICROSOFT should not be the party determining these conditions. Furthermore, since MICROSOFT is computer-security challenged, MICROSOFT should not be allowed to condition the license of these IPRs on these, or other, conditions.

For III.J. to be in the public interest, III.J.2. should be deleted. To be more precise, III.J. should be deleted in its entirety.

Furthermore, this proposed Final Judgment should prohibit MICROSOFT from making software relating to anti-piracy systems, anti-virus technologies, license enforcement mechanisms, authentication/authorization security, or third-party intellectual property protection mechanisms until a jury of its peers (SUN MICROSYSTEMS, AOL, and IBM, for example) determines that

MICROSOFT is capable of making secure software. 32. IV. Compliance and Enforcement Procedures, A.1.

IV.A.1. allows MICROSOFT to continue violating the antitrust laws.

IV.A.1. states:

1. The United States shall have *exclusive responsibility* for enforcing this Final Judgment.

In other words, IV.A.1. deprives the States of their concurrent jurisdiction in this case and the corresponding right to enforce this Final Judgment. As stated above in OBJECTION 6. regarding III.C.1., the DOJ will not enforce this proposed Final Judgment. Since the DOJ will not enforce this proposed Final Judgment, the States will have to enforce this proposed Final Judgment. However, IV.A.1. ensures that *no one* will enforce this proposed Final Judgment by granting *exclusive responsibility/ jurisdiction* to the United States/DOJ. Since IV.A.1. grants exclusive jurisdiction to the United States/DOJ, and the DOJ will not enforce this proposed Final Judgment, IV.A.1. allows MICROSOFT to continue violating the antitrust laws.

For IV.A.1. to be in the public interest, it must grant concurrent jurisdiction to the States to enforce this proposed Final Judgment. In other words, IV.A.1. should be rewritten as follows:

1. The United States, and the individual States, shall share jurisdiction for enforcing this Final Judgment.

33.IV.Compliance and Enforcement Procedures, A.2.

IV.A.2. is an illusory and thus ineffective remedy. IV.A.2. allows the United States/DOJ to inspect MICROSOFT's documents, premises, and employees for compliance with this proposed Final Judgment. As stated above in OBJECTION 6. regarding III.C.1., the DOJ will not enforce this proposed Final Judgment. Since the DOJ will not enforce this proposed Final Judgment, the DOJ will never inspect MICROSOFT's documents, premises, or employees for compliance with this proposed Final Judgment. Since the DOJ will never inspect MICROSOFT's documents, premises, or employees for compliance with this proposed Final Judgment, this right to inspect is illusory and thus ineffective.

34.IV.Compliance and Enforcement Procedures, A.3.

IV.A.3. is too lenient to MICROSOFT.

IV.A.3. states in relevant part: The United States shall *not* disclose any information or documents obtained from Microsoft under this Final Judgment *except for the purpose of securing compliance with this Final Judgment*, in a legal proceeding to which the United States is a party, or as otherwise required by law, *provided* that the United States must provide ten days' advance notice to Microsoft before disclosing in any legal proceeding (other than a grand jury proceeding) to which Microsoft is not a party any information or documents provided by Microsoft pursuant to this Final Judgment which Microsoft has identified in writing as material...

As stated above in OBJECTION 1. regarding the second paragraph, MICROSOFT lost this case. Since MICROSOFT lost this case, the DOJ should not be making any concessions

to MICROSOFT, including withholding evidence from the public. Furthermore, the United States' taxpayers paid for this litigation. Since the United States' taxpayers paid for this litigation, they have a right to see what they paid for. In particular, the public have a right to see the documents that MICROSOFT produced pursuant to this litigation. Since the public have a right to see the documents that MICROSOFT produced pursuant to this litigation, and the DOJ should not concede anything to MICROSOFT, IV.A.3. is too lenient to MICROSOFT.

For IV.A.3. to be in the public interest, IV.A.3. should be rewritten to *require* the United States to disclose the documents and other evidence it obtained from MICROSOFT pursuant to this litigation. In other words, IV.A.3. should be rewritten as follows:

The United States shall disclose all information and documents obtained from MICROSOFT pertaining to this litigation, including but not limited to publishing this information and documents in the FEDERAL REGISTER and on the DOJ's website.

35.IV.Compliance and Enforcement Procedures, A.4.

IV.A.4. is too lenient to MICROSOFT.

IV.A.4. requires the United States to allow MICROSOFT "reasonable opportunity" to cure alleged violations of this proposed Final Judgment before seeking a court order to enforce this Final Judgment. However, this proposed Final Judgment does not define the term "reasonable opportunity". Since this proposed Final Judgment does not define the term "reasonable opportunity", MICROSOFT can prevent the United States from enforcing this proposed Final Judgment by claiming that "reasonable opportunity" means 5 years. Or, more likely, MICROSOFT can file consecutive motions delaying the United States from enforcing this proposed Final Judgment by claiming that they are "working on the problem and need more time" and thus extend indefinitely the "reasonable opportunity" to cure the alleged defect. Since IV.A.4. allows MICROSOFT to prevent the United States from enforcing this proposed Final Judgment, IV.A.4. is too lenient to MICROSOFT.

IV.A.4. also allows MICROSOFT to claim that its attempt to cure the defect is a defense to enforcement of this proposed Final Judgment.

IV.A.4. states in relevant part:

...provided further that any action by Microsoft to cure any such violation shall not be a defense to enforcement with respect to any *knowing, willful or systematic* violation. Proving a *knowing, willful or systematic* violation is extremely difficult. In fact, a lot of prosecutors will not prosecute fraud or other crimes requiring "knowing, willful or systematic violations" precisely because proving "knowing, willful or systematic violations" is so difficult. Furthermore, as stated above in OBJECTION 6. regarding III.C.1., the DOJ does not want to enforce this proposed Final Judgment. Since proving "knowing, willful or systematic violations" is so difficult, and the DOJ does not want to enforce this proposed Final Judgment, *in practice* MICROSOFT will *never* be charged with a *knowing,

willful or systematic violation of this proposed Final Judgment. Since *in practice* MICROSOFT will *never* be charged with a *knowing, willful or systematic violation* of this proposed Final Judgment, MICROSOFT will always be able to use their actions to cure an alleged violation as a defense against enforcement of this proposed Final Judgment. Since MICROSOFT will always be able to use their actions to cure an alleged violation as a defense against enforcement of this proposed Final Judgment, IV.A.4. is too lenient. For IV.A.4. to be in the public interest, the term "reasonable opportunity" should be replaced with "30 days". Furthermore, the phrase "knowing, willful or systematic" must be deleted from IV.A.4. In other words, IV.A.4. should be rewritten as follows:

...provided, however, that the United States shall afford Microsoft *30 days* to cure alleged violations of Sections III.C., III.D., III.E. and III.H., provided further that any action by Microsoft to cure any such violation shall not be a defense to enforcement with respect to any violation.

36.IV.Compliance and Enforcement Procedures, B. The Technical Committee ("TC") described in IV.B. is an illusory and thus ineffective remedy. IV.B.2. describes the qualifications of the Technical Committee as:

The TC members shall be experts in software design and programming.

No TC member shall have a conflict of interest that could prevent him or her from performing his or her duties under this Final Judgment in a fair and unbiased manner. ...no TC member (absent the agreement of both parties):

a. shall have been employed in any capacity by Microsoft or any competitor to Microsoft within the past year, nor shall she or he be so employed during his or her term on the TC;

b. shall have been retained as a consulting or testifying expert by any person in this action or in any other action adverse to or on behalf of Microsoft; or

c. shall perform any other work for Microsoft or any competitor of Microsoft for two years after the expiration of the term of his or her service on the TC.

Practically every "expert in software design and programming" has been employed by Microsoft or its competitors either as a programmer or as an expert in this antitrust trial. Since practically every "expert in software design and programming" has been employed by Microsoft or its competitors either as a programmer or as an expert in this antitrust trial, no expert qualifies for the TC. The problem here is that, as stated above in OBJECTION 6. regarding III.C.1., the DOJ will not enforce this proposed Final Judgment. Since the DOJ will not enforce this proposed Final Judgment, MICROSOFT is free to pick a TC member biased towards MICROSOFT without the DOJ objecting under IV.B.2. Furthermore, MICROSOFT will object to every expert that the DOJ selects that is biased against MICROSOFT. For example, in the contempt proceeding in early 1998 preceding the present case, Judge Jackson appointed a technical expert to educate the court in computer software, operating systems, and

web browsers. This expert had made one off-hand comment about his APPLE computer. MICROSOFT objected to Judge Jackson appointing this expert based upon this 1 off-hand comment. The fact that MICROSOFT objected to Judge Jackson appointing this expert based upon this 1 off-hand comment indicates that MICROSOFT will object to *any* expert that the DOJ selects who is biased against MICROSOFT. Since MICROSOFT will object to every expert that the DOJ selects that is biased against MICROSOFT, and the DOJ will not enforce this proposed Final Judgment, the DOJ will ultimately select a TC member that is also biased towards MICROSOFT. Thus, both MICROSOFT and the DOJ will select TC members who are biased towards MICROSOFT. These 2 TC members will then select a third TC member. Since both MICROSOFT and the DOJ will select an expert biased towards MICROSOFT, this third TC member will also be biased towards MICROSOFT. Since all 3 members of the TC will be biased towards MICROSOFT, they will always find MICROSOFT in compliance with this proposed Final Judgment. Since the TC will always find MICROSOFT in compliance with this proposed Final Judgment, this Technical Committee is an illusory and thus ineffective remedy.

For IV.B. to be in the public interest, IV.B.2. and 3. must be rewritten to remove any input from MICROSOFT. MICROSOFT must be prohibited from selecting or having the right to object to *any* member of the TC. Furthermore, *none* of the TC members must have been employed or retained by MICROSOFT at any time. Finally, instead of MICROSOFT choosing a TC member, *MICROSOFT's competitors* should choose a TC member who, together with the DOJ's choice, choose the third TC member. In other words, IV.B.2. and 3. should be rewritten as follows:

2. ...The TC members shall be experts in software design and programming. No TC member shall have a conflict of interest that could prevent him or her from performing his or her duties under this Final Judgment in a fair and unbiased manner. ...no TC member:

a. shall have been employed in any capacity by Microsoft within the past year, nor shall she or he be so employed during his or her term on the TC;

b. shall have been retained as a consulting or testifying expert by any person in this action or in any other action on behalf of Microsoft; or

c. shall perform any other work for Microsoft for two years after the expiration of the term of his or her service on the TC.

3. Within 7 days of entry of this Final Judgment, the United States and MICROSOFT's competitors shall each select one member of the TC, and those two members shall then select the third member. ...

a. ..., the United States and MICROSOFT's competitors shall each identify the members it selects.

b. As soon as practical after their appointment by the Court, the two members selected by the United States and MICROSOFT's competitors shall identify the person they propose to select as the third member of the TC.

c. The United States shall apply to the Court for appointment of the person selected by the Standing Committee Members. .

37.IV.Compliance and Enforcement Procedures, B.6.

The exception in IV.B.6. is too lenient to MICROSOFT. IV.B.6. requires MICROSOFT to compensate the TC members for their employment and expenses. However, IV.B.6. contains an exception that allows MICROSOFT to contest payment of the TC members. The exception in IV.B.6. states: ...except to the extent that such liabilities, losses, damages, claims, or expenses result from misfeasance, gross negligence, willful or wanton acts, or bad faith by the TC member.

In November 1998, shortly after this antitrust case was filed, MICROSOFT lobbied Congress to cut the DOJ's budget. Furthermore, in December 2001, MICROSOFT again lobbied Congress to kill a Senate Judiciary Committee Hearing questioning this proposed Final Judgment (see "Experts Question Microsoft Action" at http://dailynews.yahoo.com/hx/ap/20020111/tc/microsoft_antitrust_12.html). The fact that shortly after this antitrust case was filed MICROSOFT lobbied Congress to cut the DOJ's budget, and that MICROSOFT recently lobbied Congress to kill the Senate Judiciary Committee Hearing questioning this proposed Final Judgment, indicates that MICROSOFT will refuse to pay the TC members if they do not find MICROSOFT in compliance with this proposed Final Judgment. Since MICROSOFT will refuse to pay the TC members if they do not find MICROSOFT in compliance with this proposed Final Judgment, the exception in IV.B.6. is too lenient to MICROSOFT.

For IV.B.6. to be in the public interest, this exception must be deleted. In other words, IV.B.6. should be rewritten as follows:

... Microsoft shall indemnify each TC member and hold him or her harmless against any losses, claims, damages, liabilities, or expenses arising out of, or in connection with, the performance of the TC's duties. The TC Services Agreement shall include the following: ...

38.IV.Compliance and Enforcement Procedures, B.8.c.

The first sentence of IV.B.8.c. is too lenient to MICROSOFT. The first sentence of IV.B.8.c. starts:

The TC shall have access to Microsoft's source code, *subject to the terms of Microsoft's standard source code Confidentiality Agreement*

As stated above in OBJECTION 1. regarding the second paragraph, MICROSOFT lost this case. Since MICROSOFT lost this case, the DOJ should not concede anything to MICROSOFT. Furthermore, as stated above in OBJECTION 12. regarding III.D., MICROSOFT should be *required* to disclose the entire source code and compilers used to compile the binaries for their Windows Operating System Products to comply with the prohibitions of this proposed Final Judgment. Since the DOJ should not concede anything to MICROSOFT, and MICROSOFT should be *required* to disclose the entire source code and compilers used to compile the binaries for their Windows Operating System

Products to comply with the prohibitions of this proposed Final Judgment, the TC's access to MICROSOFT's source code should *not* be subject to *any* Confidentiality Agreement. Since IV.B.8.c. conditions the TC's access to MICROSOFT's source upon agreeing to MICROSOFT's standard source code Confidentiality Agreement, IV.B.8.c. is too lenient to MICROSOFT.

For IV.B.8.c. to be in the public interest, IV.B.8.c. must grant the TC access to MICROSOFT's source code without being subject to MICROSOFT's standard source code Confidentiality Agreement. In other words, IV.B.8.c. should be rewritten as follows:

The TC shall have access to Microsoft's source code. The TC may study, interrogate, ...

39.IV.Compliance and Enforcement Procedures, B.8.c.

IV.B.8.c. is incomplete and thus inadequate for the TC to perform its duties. IV.B.8.c. states in relevant part:

... The TC may *study, interrogate, and interact* with the source code in order to perform its functions and duties, including the handling of complaints and other inquiries from non-parties. However, IV.B.8.c. does not *explicitly* grant the TC the power to compile the source code. As stated above in OBJECTION 12. regarding III.D., the only way to ensure that MICROSOFT is complying with this proposed Final Judgment is to compile the source code and compare the resulting binaries with the binaries that MICROSOFT ships to OEMs. Since the only way to ensure that MICROSOFT is complying with this proposed Final Judgment is to compile the source code and compare the resulting binaries with the binaries that MICROSOFT ships to OEMs, the TC needs the power to compile the source code of MICROSOFT's software. MICROSOFT will claim that since the proposed Final Judgment does not explicitly grant the TC the power to compile the source code, that the TC does not have the power to compile the source code. Furthermore, as stated above in OBJECTION 6. regarding III.C.1., the DOJ will not enforce this proposed Final Judgment. Since MICROSOFT will claim that this proposed Final Judgment does not grant the TC the power to compile the source code, and the DOJ will not contest MICROSOFT's claim, MICROSOFT will prevent the TC from compiling the source code. Since the TC needs the power to compile the source code of MICROSOFT's software to determine if MICROSOFT is complying with this proposed Final Judgment, and MICROSOFT will prevent the TC from compiling the source code, IV.B.8.c. is incomplete and thus inadequate for the TC to perform its duties.

For IV.B.8.c. to be in the public interest, IV.B.8.c. must *explicitly* grant the TC the power to compile the source code of MICROSOFT's software. In other words, IV.B.8.c. should be rewritten as follows:

... The TC may *study, interrogate, compile, and otherwise interact* with the source code in order to perform its functions and duties, including the handling of complaints and other inquiries from non-parties.

40.IV.Compliance and Enforcement Procedures, B.8.i.

IV.B.8.i. is too lenient to MICROSOFT. IV.B.8.i. allows MICROSOFT to object to the reasonable expenses and fees of the TC. Specifically, IV.B.8.i. states:

... Microsoft may, on application to the Court, object to the reasonableness of any such fees or other expenses. ...

As stated above in OBJECTION 1. regarding the second paragraph, MICROSOFT lost this case. Since MICROSOFT lost this case, the DOJ should not concede anything to MICROSOFT, including the right to object to the expenses and fees of the TC. Since the DOJ should not concede anything to MICROSOFT, including the right to object to the expenses and fees of the TC, IV.B.8.i. is too lenient to MICROSOFT.

For IV.B.8.i. to be in the public interest, MICROSOFT's right to object to the fees and expenses of the TC must be deleted. In other words, IV.B.8.i. should be rewritten as follows:

The TC shall account for all reasonable expenses incurred, including agreed upon fees for the TC members' services, subject to the approval of the United States. [END OF IV.B.8.i.]

41.IV.Compliance and Enforcement Procedures, B.8.

IV.B.8. is incomplete and thus inadequate for the TC to perform their duties of ensuring MICROSOFT's compliance with this proposed Final Judgment. IV.B.8. does not grant the TC the power to enjoin MICROSOFT from releasing products which violate this proposed Final Judgment. Without this power, this proposed Final Judgment is ineffective. As stated above in OBJECTION 6. regarding III.C.1., the DOJ will not enforce this proposed Final Judgment. Furthermore, IV.A. grants the United States exclusive jurisdiction to enforce this proposed Final Judgment, so the States cannot enforce this proposed Final Judgment. Since the DOJ will not, and the States cannot, enforce this proposed Final Judgment, the TC is the only body positioned to enforce it. Since the TC is the only body positioned to enforce this proposed Final Judgment, they should have the power to enjoin MICROSOFT from releasing products that violate this proposed Final Judgment. Since IV.B.8. does not grant the TC the power to enjoin MICROSOFT from releasing products that violate this proposed Final Judgment, IV.B.8. is incomplete and thus inadequate for the TC to perform their duties of ensuring MICROSOFT's compliance with this proposed Final Judgment. For IV.B.8. to be in the public interest, it must grant the TC the right enjoin MICROSOFT's products which do not comply with this proposed Final Judgment. In other words, IV.B.8. should include an additional part "j." as follows:

j. The TC shall have the power to enjoin the release, sale, or other transmission of any MICROSOFT software or products which do not comply with this Final Judgment.

42.IV.Compliance and Enforcement Procedures, B.9.

IV.B.9. is too lenient to MICROSOFT. IV.B.9. prohibits the TC from disclosing any information obtained in the course of performing his or her duties to anyone other

than MICROSOFT, the United States, and this Court. As stated above in OBJECTION 1. regarding the second paragraph, MICROSOFT lost this case. Since MICROSOFT lost this case, the DOJ should not concede anything to MICROSOFT, including the public dissemination of information that the TC learns in the course of performing his or her duties pursuant to the proposed Final Judgment. Furthermore, the United States taxpayers paid for this antitrust trial. Since the United States taxpayers paid for this antitrust trial, they have a right to know what the TC learn in the course of performing their duties pursuant to this proposed Final Judgment. Since IV.B.9. prohibits the TC from disclosing any information obtained in the course of performing his or her duties to anyone other than MICROSOFT, the United States, and this Court, IV.B.9. is too lenient to MICROSOFT. For IV.B.9. to be in the public interest, it must *require* the TC to publicly disclose all information that it discovers in the course of performing their duties. In other words, IV.B.9. should be rewritten as follows:

The TC shall publicly disclose, in the FEDERAL REGISTER and any other forum deemed necessary, all information obtained in the course of performing their duties pursuant to this Final Judgment.

43.IV.Compliance and Enforcement Procedures, B.10.

IV.B.10. is too lenient to MICROSOFT, for the same reasons as stated above in OBJECTION 42. regarding IV.B.9. For IV.B.10. to be in the public interest, it must *require* the TC to make public statements relating to the TC's activities. In other words, IV.B.10. should be rewritten as follows:

Each member of the TC shall be required to make public statements relating to the TC's activities.

44.IV.Compliance and Enforcement Procedures, C.1.

The qualifications of the MICROSOFT Internal Compliance Officer in IV.C.1. are illusory and thus ineffective. IV.C.1. requires MICROSOFT to designate an Internal Compliance Officer who shall supervise MICROSOFT's activities in complying with this proposed Final Judgment. However, IV.C.1. states that this Internal Compliance Officer "...shall be an employee of Microsoft...". MICROSOFT has consistently violated the antitrust laws of the United States and the European Union, among other jurisdictions (for details, see THE MICROSOFT FILE: THE SECRET CASE AGAINST BILL GATES by Wendy Goldman Rohm, Times Business, copyright 1998, ISBN 0-8129-2716-8). MICROSOFT's employees have worked to make these antitrust violations possible. Since MICROSOFT's employees have worked to make these antitrust violations possible, MICROSOFT's employees have a conflict of interest in administering MICROSOFT's program for complying with this proposed Final Judgment. To be more precise, MICROSOFT's employees have *no interest or incentive* to comply with this proposed Final Judgment. Since MICROSOFT's employees have *no interest or incentive* to comply with this proposed Final Judgment, they will *not*

ensure that MICROSOFT complies with this proposed Final Judgment. Since MICROSOFT's employees will *not* ensure that MICROSOFT complies with this proposed Final Judgment, designating a MICROSOFT employee as Internal Compliance Officer is an illusory and thus ineffective remedy.

For IV.C.1. to be in the public interest, the qualifications of the Internal Compliance Officer must require that the Officer *not* be an employee of MICROSOFT. Furthermore, IV.C.1. must require that the Officer be selected from MICROSOFT's competitors, specifically SUN MICROSYSTEMS, AOL, and/or IBM. In other words, IV.C.1. should be rewritten as follows:

Microsoft shall designate, within 30 days of entry of this Final Judgment, an internal Compliance Officer who shall be an employee of SUN MICROSYSTEMS, AOL, or IBM with responsibility for administering Microsoft's antitrust compliance program and helping to ensure compliance with this Final Judgment.

45.IV.Compliance and Enforcement Procedures, C.3.d.

The warning contained in the certification that MICROSOFT officers and directors must sign is inadequate and thus ineffective. IV.C.3.d. requires MICROSOFT's officers and directors to sign a certification that he or she:

- (i) has read and agrees to abide by the terms of this Final Judgment; and
- (ii) has been advised and understands that his or her failure to comply with this Final Judgment may result in *a finding of contempt of court;

The officers and directors of MICROSOFT control the actions of MICROSOFT. Since the officers and directors of MICROSOFT control the actions of MICROSOFT, the actions of the officers and directors of MICROSOFT should be imputed to MICROSOFT. To be more precise, the failure of MICROSOFT's officers and directors to comply with this Final Judgment should be considered a *knowing, willful or systematic violation* of this proposed Final Judgment. Furthermore, punishing an officer or director does not stop MICROSOFT from continuing to violate the antitrust laws. Since punishing an officer or director does not stop MICROSOFT from continuing to violate the antitrust laws, the warning of IV.C.3.d. is not adequate to deter MICROSOFT from continuing to violate the antitrust laws. Since the warning of IV.C.3.d. is not adequate to deter MICROSOFT from continuing to violate the antitrust laws, it is ineffective.

For IV.C.3.d. to be in the public interest, the warning in the certification must be rewritten to impute the officer or director's failure to comply with this proposed Final Judgment to MICROSOFT. In other words, IV.C.3.d. should be rewritten as follows: obtaining from each person designated in Section IV.C.3.a. above...

- (ii) has been advised and understands that his or her failure to comply with this Final Judgment comprises a knowing, willful or systematic violation of this Final Judgment;

46.IV.Compliance and Enforcement Procedures, D.3.a. IV.D.3.a. renders this proposed Final Judgment an illusory and ineffective remedy. IV.D.3.a. states in

relevant part: ... the United States may submit complaints related to Sections III.C., III.D. III.E., and III.H. to the Compliance Officer

*whenever doing so would be in the public interest. In other words, IV.D.3.a. allows the United States to abdicate responsibility for enforcing this proposed Final Judgment to MICROSOFT. As stated above in OBJECTION 6. regarding III.C.1., the DOJ will not enforce this proposed Final Judgment. Since the DOJ will not enforce this proposed Final Judgment, the DOJ will seize any opportunity to abdicate enforcing this proposed Final Judgment. Since IV.D.3.a. allows the DOJ to abdicate responsibility for enforcing this proposed Final Judgment to MICROSOFT, and the DOJ will seize any opportunity to abdicate enforcing this proposed Final Judgment, the DOJ will in fact use IV.D.3.a. to claim that letting MICROSOFT resolve these complaints is in the public interest. Since MICROSOFT has no interest in resolving these Complaints, MICROSOFT will ignore these Complaints and continue violating this proposed Final Judgment (Note that MICROSOFT's customers will be submitting the exact same complaints to MICROSOFT's technical support department. Since MICROSOFT's customers will be submitting the exact same complaints to MICROSOFT's technical support department, MICROSOFT will already know about these complaints. Since MICROSOFT will already know about these complaints, they can resolve these complaints without the DOJ submitting the complaints to MICROSOFT). In fact, allowing MICROSOFT to resolve these Complaints is like asking the fox to guard the hen house. Since MICROSOFT will ignore these Complaints and continue violating this proposed Final Judgment, IV.D.3.a. renders this proposed Final Judgment an illusory and ineffective remedy.

For IV.D.3.a. to be in the public interest, the DOJ must be prohibited from allowing MICROSOFT to resolve complaints submitted to the DOJ. In other words, IV.D.3.a. must be rewritten as follows:

a. Third parties may submit to the Compliance Officer any complaints concerning MICROSOFT's compliance with this Final Judgment. [END OF IV.D.3.a.]

47.IV.Compliance and Enforcement Procedures, C.4.d. IV.D.4.d., in practice, prevents the DOJ from ever enforcing this proposed Final Judgment. IV.D.4.d. states:

No work product, findings or recommendations by the TC may be admitted in any enforcement proceeding before the Court for any purpose, and no member of the TC shall testify by deposition, in court or before any other tribunal regarding any matter related to this Final Judgment.

In other words, should the TC find evidence that MICROSOFT is violating this proposed Final Judgment and refers this evidence to the DOJ, the DOJ cannot use this evidence to enforce this proposed Final Judgment against MICROSOFT. Furthermore, as stated above in the GENERAL OBJECTIONS, the DOJ does not wish to spend any more time and resources prosecuting MICROSOFT. Since the DOJ does not wish to spend any more time and resources prosecuting MICROSOFT, the DOJ

will not make any effort to discover this evidence through additional depositions or discovery requests against MICROSOFT. Since the DOJ will not make any effort to discover this evidence through additional depositions or discovery requests against MICROSOFT, and IV.D.4.d. prevents the DOJ from using the evidence the TC discovers, IV.D.4.d. has the practical effect of preventing the DOJ from enforcing this proposed Final Judgment against MICROSOFT.

As a sidenote, IV.D.4.d. stands the Federal Rules of Civil Procedure on their head. The Federal Rules of Civil Procedure prevent an *opponent* from discovering and/or using a party's work product. Here, the TC is representative of the DOJ. Since the TC is a representative of the DOJ, the TC and the DOJ are in a sense the same party. MICROSOFT is the DOJ's opponent. IV.D.4.d. prevents a party from using its own work product to prosecute an opponent. In other words, IV.D.4.d. prevents the DOJ from using its own work product against its opponent, MICROSOFT.

Since IV.D.4.d. prevents the DOJ from using its own work product against its opponent, MICROSOFT, IV.D.4.d. stands the Federal Rules of Civil Procedure on their head. For IV.D.4.d. to be in the public interest, it must be rewritten to *require* that the work product, findings, and recommendations of the TC and testimony of the TC be admissible evidence in *any* legal proceeding, in this or any other country or region like the European Union. In other words, IV.D.4.d. should be rewritten as follows: The work product, findings or recommendations by the TC shall be admitted in every enforcement proceeding before the Court for any purpose, and all members of the TC shall testify by deposition, in Court and/or before every other tribunal that calls upon the TC for testimony, regarding every matter related to the Final Judgment.

48.V.Termination, B. V.B. is an illusory and thus ineffective remedy. V.B. allows the Court to extend this proposed Final Judgment when MICROSOFT is found to have engaged in "a pattern of *knowing, willful and systematic violations*". As stated above in OBJECTION 35. regarding IV.A.4., proving a *knowing, willful or systematic* violation is extremely difficult. Furthermore, as stated above in OBJECTION 6. regarding III.C.1., the DOJ does not want to enforce this proposed Final Judgment. Since proving "knowing, willful or systematic violations" is so difficult, and the DOJ does not want to enforce this proposed Final Judgment, *in practice* MICROSOFT will *never* be charged with a *knowing, willful and systematic violation of this proposed Final Judgment. Since *in practice* MICROSOFT will *never* be charged with a *knowing, willful or systematic violation of this proposed Final Judgment, this Court will never find MICROSOFT to have engaged in "a pattern of *knowing, willful and systematic violations*". Since this Court will never find MICROSOFT to have engaged in "a pattern of *knowing, willful and systematic violations*", V.B. is an illusory and thus ineffective remedy. As a sidenote,

the inclusion of V.B. is kind of amusing. As detailed in the above 47 OBJECTIONS, this entire proposed Final Judgment contains so many exceptions that allow MICROSOFT to continue violating the antitrust laws that MICROSOFT will probably never be in violation of it. Furthermore, the DOJ's reluctance to oppose MICROSOFT's demands in any way indicates that the DOJ will probably never enforce this proposed Final Judgment against MICROSOFT. Thus, given the extreme unlikelihood that this proposed Final Judgment will ever be violated, let alone enforced, including a provision to extend this proposed Final Judgment appears farcical. For V.B. to be in the public interest, the conditions for extending this proposed Final Judgment should be changed to *any* violation of Local, State, National, or International law. In other words, V.B. should be rewritten as: In any enforcement proceeding in which the Court has found that Microsoft has violated any Local, State, National, or International law, the Court shall extend this Final Judgment for at least two years, together with such other relief as the Court may deem appropriate.

49.VI.Definitions, B. As stated above in OBJECTION 16. regarding III.E., VI.B. defines Communications Protocols too narrowly. Since VI.B. defines Communications Protocols too narrowly, VI.B. should be rewritten as explained in OBJECTION 16. regarding III.E. In other words, VI.B. should be rewritten as follows:

"Communications Protocol" means the set of rules for information exchange to accomplish predefined tasks between a Windows Operating System Product on a client computer and Windows 2000 Server or products marketed as its successors running on a server computer and connected via a local area network or a wide area network. These rules govern the format, semantics, timing, sequencing, and error control of messages exchanged over a network. [END OF VI.B.]

50.VI.Definitions, J.1. The definition of "MICROSOFT Middleware" is too restrictive. Specifically, VI.J.1., VI.J.2., and the conjunctive ending VI.J.3. are too restrictive. VI.J.1. states:

"Microsoft Middleware" means software code that

1. Microsoft distributes separately from a Windows Operating System Product to update that Windows Operating System Product;

J.1. is too restrictive in requiring that the software code be distributed separately from the Windows Operating System Product. MICROSOFT has a history of bundling Middleware into its Windows Operating System Products to destroy competing Middleware. For example, MICROSOFT bundled Internet Explorer into its Windows 98 operating system product to destroy the competing Netscape COMMUNICATOR web browser. MICROSOFT subsequently bundled its streaming media player, WINDOWS MEDIA PLAYER, into its Windows XP operating system product to destroy the competing Real Networks' REAL PLAYER streaming media player. Since MICROSOFT has a history of bundling Middleware into its Windows Operating System Products to

destroy competing Middleware, MICROSOFT can avoid the requirements of VI.J.1. by bundling all of its Middleware into its Windows Operating System Products. Since MICROSOFT can avoid the requirements of VI.J.1. by bundling all of its Middleware into its Windows Operating System Products, VI.J.1. is too restrictive.

For VI.J.1. to be in the public interest, the requirements of VI.J.1. should be changed to software code that competitors distribute or that was not bundled into previous Windows Operating System Products. In other words, VI.J.1. should be rewritten as follows:

1. competitors distribute as a Middleware Product or that was not bundled into previous Windows Operating System Products;

51.VI.Definitions, J.2. The requirement of VI.J.2. is too restrictive. J.2. states: "Microsoft Middleware" means software code that ... 2.is trademarked;

Whether or not software code is trademarked is irrelevant to whether or not the code is Middleware. For example, MICROSOFT did not own the trademark to INTERNET EXPLORER when it released the product. Since MICROSOFT did not own the trademark to INTERNET EXPLORER when it released the product, INTERNET EXPLORER arguably did not qualify as MICROSOFT Middleware under J.2. Since trademarking software code is irrelevant to whether or not the code is Middleware, VI.J.2. is too restrictive.

For VI.J. to be in the public interest, VI.J.2. should be deleted. 52.VI.Definitions, J.3. The conjunctive ending VI.J.3. is too restrictive. VI.J.3. states: "Microsoft Middleware" means software code that ...

3.provides the same or substantially similar functionality as a Microsoft Middleware Product; *and* The conjunctive "and" is restrictive, requiring software code to meet all 4 criteria listed in VI.J. to qualify as "Microsoft Middleware". As stated above in OBJECTION 1. regarding the second paragraph, MICROSOFT lost this case. Since MICROSOFT lost this case, the DOJ should not concede anything to MICROSOFT, including the definition of "Microsoft Middleware". In other words, the DOJ should define "Microsoft Middleware" as broadly as possible. To define "Microsoft Middleware" as broadly as possible, VI.J. should use the conjunctive "or", which requires software code to meet only 1 of the 4 criteria listed in VI.J. to qualify as MICROSOFT Middleware. Since VI.J. does not use the conjunctive "or" to end VI.J.3., the conjunctive ending VI.J.3. is too restrictive.

For VI.J.3. to be in the public interest, the conjunctive ending VI.J.3. should be changed from "and" to "or". In other words, VI.J.3. should be rewritten as follows:

3.provides the same or substantially similar functionality as a Microsoft Middleware Product; *or* 53.VI.Definitions, J. The paragraph ending VI.J. is too restrictive and too lenient to MICROSOFT. The last paragraph of VI.J. states:

Software code described as part of, and distributed separately to update, a Microsoft Middleware Product shall not be deemed Microsoft Middleware unless identified as a new major version of that Microsoft Middleware Product. ...

In other words, this paragraph allows MICROSOFT to avoid designating software code as MICROSOFT Middleware by not identifying it as a new major version of a MICROSOFT Middleware Product. Since this paragraph allows MICROSOFT to avoid designating software code as MICROSOFT Middleware by not identifying it as a new major version of a MICROSOFT Middleware Product, this paragraph is too restrictive as to what qualifies as MICROSOFT Middleware.

As stated above in OBJECTION 52. regarding VI.J.3., the DOJ should define "Microsoft Middleware" as broadly as possible. To define "Microsoft Middleware" as broadly as possible, the last paragraph should be deleted. Thus, for VI.J. to be in the public interest, the last paragraph of VI.J. should be deleted.

54.VI.Definitions, K.2.b.ii. The definition of "Microsoft Middleware Product" in VI.K. is too restrictive and this too lenient to MICROSOFT. Specifically, the conjunctive ending VI.K.2.b.ii. and VI.K.2.b.iii. are too restrictive. VI.K.2.b.ii. states:

ii. is similar to the functionality provided by a Non-Microsoft Middleware Product; *and* For the same reasons stated in OBJECTION 52. regarding III.J.3., the conjunctive ending VI.K.2.b.ii. should be changed from "and" to "or". In other words, for VI.K.2.b.ii. to be in the public interest, it should be rewritten as follows:

ii. is similar to the functionality provided by a Non-Microsoft Middleware Product; *or* 55.VI.Definitions, K.2.b.iii. The requirement of K.2.b.iii. is too restrictive for the same reasons stated in OBJECTION 51. regarding VI.J.2. For K.2.b. to be in the public interest, K.2.b.iii. should be deleted.

56.VI.Definitions, N. The definition of "Non-Microsoft Middleware Product" in VI.N. is too restrictive for the reasons stated in OBJECTION 22. regarding III.H. For VI.N. to be in the public interest, requirement "(ii)" of "Non-Microsoft Middleware Product" must be deleted. In other words, VI.N. should be rewritten as follows:

"Non-Microsoft Middleware Product" means a non-Microsoft software product running on a Windows Operating System Product that exposes a range of functionality to ISVs through published APIs and that could, if ported to or made interoperable with, a non-Microsoft Operating System, thereby make it easier for applications that rely in whole or in part on the functionality supplied by that software product to be ported to or run on that non-Microsoft Operating System. [END OF VI.N.]

57.VI.Definitions, P. For the same reasons stated in OBJECTION 52. regarding VI.J.3., the definition of "Operating System" in VI.P. is too restrictive. For VI.P. to be in the public interest, the conjunctive ending VI.P.(ii) must be changed from "and" to "or". In other words, VI.P. should be rewritten as follows:

"Operating System" means the software code that, inter alia

(i) controls the allocation and usage of hardware resources such as the microprocessor and various peripheral devices) of a Personal Computer,

(ii) provides a platform for developing applications by exposing functionality to ISVs through APIs, *or*

(iii) supplies a user interface that enables users to access functionality of the operating system and in which they can run applications. .

58.VI.Definitions, Q. The definition of "Personal Computer" in VI.Q. is too restrictive. In particular, the second sentence of VI.Q. exempting certain devices from the definition of "Personal Computer" is too lenient to MICROSOFT. The second sentence of VI.Q. states:

... Servers, television set top boxes, handheld computers, game consoles, telephones, pagers, and personal digital assistants are examples of products that are not Personal Computers within the meaning of this definition.

As stated above in the GENERAL OBJECTIONS, the purpose of an antitrust action is to stop monopolizing behavior and to prevent future monopolizing behavior. Here, MICROSOFT is leveraging their monopoly in the Personal Computer ("PC") market to monopolize the markets for these other products. By excluding these other devices from the definition of PC, VI.Q. allows MICROSOFT to continue leveraging their monopoly in the PC market to monopolize the markets for these other products. Since the purpose of an antitrust action is to stop monopolizing behavior and to prevent future monopolizing behavior, and MICROSOFT is here using their current monopoly to pursue future monopolies in these other markets, VI.Q. defeats the purpose of this antitrust action. Since VI.Q. defeats the purpose of this antitrust action, VI.Q. is too restrictive.

In addition, the first sentence of VI.Q. is too restrictive. The first sentence of VI.Q. defines a PC as a computer containing an Intel x86 compatible processor. Since APPLE computers contain Motorola processors, which are not x86 compatible, VI.Q. excludes APPLE computers from the definition of PC. However, MICROSOFT sells software that runs on APPLE computers, such as MICROSOFT Office Suite and Internet Explorer. Furthermore, as explained in Judge Jackson's Findings of Facts, MICROSOFT conditioned continued releases of its Office Suite on APPLE only using Internet Explorer as the web browser for their computers. Since MICROSOFT conditioned continued releases of its Office Suite on APPLE only using Internet Explorer as the web browser for their computers, MICROSOFT's monopolizing behavior has affected the software market for APPLE computers. Since MICROSOFT's monopolizing behavior has affected the software market for APPLE computers, the definition of PC should include APPLE computers. Since the definition of PC in VI.Q. does not include APPLE computers, VI.Q. is too restrictive.

For VI.Q. to be in the public interest, the definition of PC must include APPLE computers and all other electronic devices for which MICROSOFT sells software. In other words, VI.Q. should be rewritten as follows:

"Personal Computer" means any computer configured, or which can be configured, to run MICROSOFT software, including but not limited to, computers containing an Intel x86 processor or a Motorola processor, servers,

television set top boxes, handheld computers, game consoles, telephones, pagers, and personal digital assistants.

59.VI.Definitions, S. For the same reasons stated in OBJECTION 52. regarding VI.J.3., the definition of "Top-Level Window" in VI.S. is too restrictive. For VI.S. to be in the public interest, the conjunctive ending VI.S.(b) must be changed from "and" to "or". In other words, VI.S. should be rewritten as follows:

"Top-Level Window" means a window displayed by a Windows Operating System Product that (a) has its own window controls, such as move, resize, close, minimize, and maximize, (b) can contain sub-windows, *or* (c) contains user interface elements under the control of at least one independent process.

60.VI.Definitions, U. The definition of "Windows Operating System Product" in VI.U. is too restrictive. As stated in OBJECTION 58. regarding VI.P., MICROSOFT is leveraging their monopoly in the PC market into other product markets. Since MICROSOFT is leveraging their monopoly in the PC market into other product markets, VI.U. should define "Windows Operating System Product" to prevent MICROSOFT from leveraging their monopoly in the PC market into other product markets. Since the definition of "Windows Operating System Products" in VI.U. does not include MICROSOFT operating systems for servers, television set top boxes, handheld computers, game consoles, telephones, pagers, and personal digital assistants, VI.U. is too restrictive.

For VI.U. to be in the public interest, the definition of "Windows Operating System Product" in VI.U. must include *all* of MICROSOFT's operating systems. In other words, VI.U. must be rewritten as follows: "Windows Operating System Product" means the software code that MICROSOFT distributes for use with *any electronic device*.

61.VI.Definitions, U. The second sentence of VI.U. is too lenient to MICROSOFT. The second sentence states:

The software code that comprises a Windows Operating System Product shall be determined by Microsoft in its sole discretion. As stated above in OBJECTION 1. regarding the second paragraph, MICROSOFT lost this case. Since MICROSOFT lost this case, the DOJ should not concede anything to MICROSOFT, including the definition of what comprises a Windows Operating System Product. Since the DOJ should not concede the definition of what comprises a Windows Operating System Product, VI.U. should *not* allow MICROSOFT to determine what comprises a Windows Operating System Product. Since VI.U. allows MICROSOFT to determine what comprises a Windows Operating System Product, VI.U. is too lenient to MICROSOFT.

For VI.U. to be in the public interest, the second sentence of VI.U. must be deleted. For the above reasons stated in the General and Specific Objections, I respectfully submit that this proposed Final Judgment is *not* in the public interest. I further submit that even if this proposed Final Judgment is rewritten as the above SPECIFIC OBJECTIONS recommend, it still will not be in the public

interest because the DOJ will not enforce it. Since the proposed Final Judgment will not be in the public interest even if rewritten as the above SPECIFIC OBJECTIONS recommend, I respectfully submit that the DOJ and the Court should reject this proposed Final Judgment and adopt Judge Jackson's remedies.

Sincerely yours,

Dear Ms. Renata Hesse:

Please put a stop to the economically-draining witch-hunt against Microsoft. This has gone on long enough.

Microsoft has already agreed to hide its Internet Explorer icon from the desktop; the fact is, this case against Microsoft is little more than "welfare" for Netscape and other Microsoft competitors, with not a nickel going to those supposedly harmed by Microsoft: the computer user. This is just another method for states to get free money, and a terrible precedent for the future, not only in terms of computer technology, but all sorts of innovations in the most dynamic industry the world has ever seen.

Please put a stop to this travesty of justice now. Thank you.

Sincerely,
Jeff Richter

Subject: Microsoft Settlement

Dear Sirs and Madams,

I wanted to respond to the proposed Microsoft Settlement. Through the course of my career in computer programming, Microsoft has been both an ally and a competitor, so while I don't think that I'm unbiased I believe that I have some insight into both sides of the case. Microsoft has always been a fearsome competitor because of their control of the operating system and their ongoing ability to leverage that control to create other business opportunities, like giving users simple and easy access to MSN and Hotmail over other competing alternatives. Going forward, I think that this is just the first small vision of what we'll see in the long term, where Microsoft's power enables them to dominate significantly larger parts of our lives. While this isn't technically illegal, it does give me pause, because too much power concentrated in one location can easily create tyranny.

Without being too long-winded, the solution that I wanted to mention for your consideration is this: make Microsoft convert their "Office Suite" of programs to run on

other operating systems. Inasmuch as Office already runs on the Macintosh, I expect that they would be able to make it run on the open-source Unix environments like OpenBSD, FreeBSD, NetBSD, and Linux, all of which are quite similar in terms of their interoperability. These operating systems would benefit greatly from having a solid, professional suite of office productivity applications, and would somewhat mitigate Microsoft's ability to dominate the operating system market going forward and hence reduce the concentration of power they now have.

I realize that this proposal would require considerably more thought before implementation, but I wanted to bring the idea up for your consideration. I hope that whatever settlement does eventually get approved does take into consideration not just remedies to correct past wrongs, but also creates mechanisms which will create a free marketplace and reduce the opportunity for dominance by a single entity.

Best of luck, I'm expect that you'll need a fair bit of it before the process is complete!

Patrick Wyatt

Subject: Microsoft Settlement
January 24, 2002
Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft

We currently use Microsoft products and are also concerned Microsoft stockholders. The purpose of this letter is to express our opinions regarding the settlement made between Microsoft and the Department of Justice. As tax payers and Microsoft stockholders, we feel that to continue litigations would simply be a waste of time and money. Microsoft has agreed to many terms and conditions, which should allow other companies to compete with Microsoft effectively.

For instance, Microsoft has agreed to design future versions of Windows, beginning with an interim release of Windows XP, to provide a mechanism to make it easier for computer makers, consumers, and software developers to promote non-Microsoft software within Windows. This mechanism will make it easy

to add or remove access to features built into Windows or non-Windows software.

Overall, we feel that Microsoft has done all, if not more than it should have. The settlement should be finalized and all litigations ended.

Sincerely

William H. and Janet E. Leth

Subject: Microsoft Settlement

To Whom It May Concern,

I am writing to support settlement made between DoJ and Microsoft. I learnt that the settlement is now in the Tunney Act review period. I am therefore writing to state that making the settlement stayed "as-is" is in the public interest.

The whole law-suit between DoJ and Microsoft might have started with good intention. Unfortunately, time has changed, the industry has changed, companies' attitude have either changed or revealed its true self. In particular, the private suit filed against Microsoft in the last few days is simply a demonstration of corporate greed rather than the interest of the public. Please do not be distracted in any way by this stupid suit which is nothing but another demonstration of the abuse of the American legal system, tax-payers' money, and time & resource of government officials that can be better spent on the more pressing issues like terrorism.

Once again, I believe that the settlement made will meet the public interest. The time of our society should be spent on other matters that are more meaningful.

Thank you for the attention to this communications.

Yours truly,

Patrick Yu

To whom it may concern,

I am shocked and appalled at the laxity of this proposed settlement. As a former U.S. Marine and Gulf War veteran I have friends who were wounded in combat, and even died on foreign soil fighting for what this country stands for. If they saw that *this* insulting mockery of (alleged) justice was what they fought and died for, I'd hate to see how they

would feel. It's a joke and a slap in the face to all law-abiding citizens to see this megalithic juggernaut get away with the crime of the century just because it has the deepest pockets, the most market power, and the most "juice on the beltway". I know that it is a matter fact that large companies, like Microsoft, contribute money to both sides of the political fence as a way of hedging their bets and ultimately getting their fat pulled from the fire when the "merde" hits this "ventilateur", but I am urging you not to let Microsoft turn our justice system into "the best that money can buy".

Respectfully,
 Jeff A. La Grua, Corporal

MTC-00021606

From: Mike Graessle
 To: Microsoft ATR
 Date: 1/24/02 11:14am
 Subject: Microsoft Settlement

As a computer user for the last 10 years, I have watched Microsoft stomp on every perceived threat or competitor. I would like it boycott Microsoft but that isn't an option. I have no choice but to use Microsoft products and the proposed settlement will do nothing to change this.

A just penalty, I continue, would at barest minimum include three additional features: Any remedy seeking to prevent an extension of Microsoft's monopoly must place Microsoft products as extra-cost options in the purchase of new computers, so that the user who does not wish to purchase them is not forced to do so. This means that for the price differential between a new computer with Microsoft software and one without, a computer seller must offer the software without the computer (which would prevent computer makers from saying that the difference in price is only a few dollars). Only then could competition come to exist in a meaningful way.

The specifications of Microsoft's present and future document file formats must be made public, so that documents created in Microsoft applications may be read by programs from other makers, on Microsoft's or other operating systems. This is in addition to opening the Windows application program interface (API, the set of "hooks" that allow other parties to write applications for Windows operating systems), which is already part of the proposed settlement.

Any Microsoft networking protocols must be published in full and approved by an independent network protocol body. This would prevent Microsoft from seizing de facto control of the Internet.

Thank you.

From: Bill Baker
To: Microsoft ATR
Date: 1/24/02 11:15am
Subject: Microsoft Settlement
To the Department of Justice,

I am grateful that the Tunney Act requires the acceptance of public comment on a case such as Microsoft's.

This particular comment focuses on Microsoft's behavior with respect to the Java programming language. In summary, I believe that any settlement agreement must strictly require Microsoft to either support cross-platform compatibility standards, or to assist third parties in developing support for them, in Microsoft Windows, and to allow their inclusion, in fully-functioning and fully-compatible form, on newly purchased computers running Windows. A few examples of such standards are Posix, Java, TCP/IP, .NET, Open/GL, Kerberos, and NFS.

Summary: As a professional programmer, I have been dismayed at the results of Microsoft's oppressive response to Java. When Bill Gosling and a team of engineers at Sun Microsystems invented Java, they created a foundation for software that could run on any operating system, transparently, without recompilation. Microsoft appears to have seen this as a threat and has tried to both fragment and debilitate Java, using the leverage of its operating system monopoly. Microsoft's attacks have limited Java's potential to make computing easier and more universal, and appear to have been motivated not by any technological motivation, but merely by the desire to maintain a monopoly on operating systems.

Java's Potential: Java is a language that simply takes modern computer language principles, implements them elegantly and simply, and uses them to provide a means to write software that will run on virtually any computer. Microsoft was one of its first adopters. Microsoft licensed Java from Sun Microsystems and quickly developed, for Windows, one of the best environments to develop and run Java programs. At the same time, many other companies had developed or licensed Java environments, including IBM and Netscape.

Microsoft's Actions: In addition to building a fantastic Java system for Windows, Microsoft also immediately snubbed its license contract with Sun, by removing certain parts (Java Native Interface, or JNI) of the Java language from its own implementation and substituting its own (Component Object Model, or COM). The effect was to make Microsoft's Java subtly but very deliberately incompatible with Sun's standard. Full compatibility would have been

required if Java was to become an OS-neutral platform. When Sun protested, Microsoft simply refused to comply with the contract it has previously agreed to. A long court battle ensued, with the result that Microsoft ceased active development on Java, ultimately disabling it by default in Windows XP. There appear to have been no technological reasons for Microsoft's actions. It is understandable that Microsoft would want to add extensions to Java to connect it to Windows (COM), but that extension could have been added

1.without breaking compatibility with Sun's standard (in fact, it has been added in such a fashion by other software companies as Java-COM bridges), and

2.without modifying an important part of Sun's specification for Java (JNI).

Recourse: I believe that since Microsoft has a monopoly on desktop operating systems for Intel x86 architecture computers, and since it is in the public interest that those computers be as fully functional as possible, and not artificially limited in functionality solely to allow Microsoft to retain its monopoly, Microsoft Windows should be strictly required to interoperate with cross-platform standards. Interoperability need not be the sole responsibility of Microsoft, but I believe that Microsoft must 1.provide the documentation necessary to achieve interoperability, and 2.not hinder interoperation by compromising standards or by restricting deployment of software on new computers.

Sincerely,
Bill Baker

The Microsoft settlement is indeed in the public interest, for the past ten years I have worked in the IT world. I have seen Microsoft products get better cheaper and easier to maintain. This has led to the ability of even small business to reap rewards from new technologies without having a full time IT staff.

I use other products (SUN/Linux/Oracle) but I see these companies as failing to invest as heavily in the type of R&D that brings us the improvements that MS gamers.

Companies such as AOL, Netscape, Sun, Oracle seem to be asking for some court room help for their inability to compete.

Sun & Oracle for years had an iron grip on the consumer, companies I worked for paid extremely high licensing fees for products that were at best cryptic to use and maintain. Now that MS has brought us better products at for much less they should be rewarded not punished.

I only hope that MS is left to it's own means to innovate and continually bring us better and cheaper products. Thanks, W. Cox

 Attorney General John Ashcroft
 US Department of Justice
 950 Pennsylvania Avenue, NW
 Washington, DC 20530

Dear Mr. Ashcroft:
 I write you in reference to the recent settlement between Microsoft and the Department of Justice. I have been opposed to the government's intervention in Microsoft's success from the very beginning. It seems ridiculous to have the government

protesting against the whole aspect of free enterprise, when free enterprise is exactly what America has been founded on. More than this, it is puzzling to see, even after Microsoft has complied with the settlement, that there may be even more delays in this process.

I urge you to support this settlement in its current form, and hope you will stop any further actions against this agreement. As our economy weakens, it is evident that we have to support our technology industries. As our IT sector stands by and waits for the government to allow this process to move forward, the global market is sailing past us. That is why if we allow the terms of this agreement to speak for themselves, then we would benefit the consumer, the technology industry, and our economy as a whole.

Let's not be the ones to slow down the growth of our own economy. Let's make sure that this agreement is pushed forward and allowed to take hold. Thank you for your support.

The settlement proposed for the M\$ antitrust suit is a sham! You aren't seeking remedies that would punish or curb the monopolistic behavior of Microsoft. Clearly, you would ask that the browser be removed from the Operating system if you were seeking even the minimum amount of recourse for their transgressions.

No, you apparently have caved to the wishes of big money in politics by choosing to ignore all evidence. They took a separate software product and started to irreversibly place it in their OS product. This is illegal, and the purpose of the Sherman antitrust laws. Yet you ignore the basics of this case. Clearly your department is not of Justice, rather more like the SS of a new fascist regime. Was it the legislative losers that take large sums from companies like Microsoft that asked you to ignore the evidence?

Or is it as all would conclude, that the new administration stuck it's nose in and said, "Give old Billy Gates and his goons the green light for consumer raping." Either way you should in no way settle for the lopsided, loop-hole riddled "settlement" that you are seeking comment on.

Subject: Microsoft Settlement

Greetings,

I am distressed by the weakness of DOJ's "proposed final judgment" with Microsoft (US vs. Microsoft). Microsoft's offenses have been firmly and clearly established in findings of fact as well as by numerous third parties not financially influenced by the settlement terms. This settlement, despite its rhetoric, is fundamentally a full concession to Microsoft that does a disservice both to the American justice system and to consumers.

Despite Microsoft's claims to the contrary, the public is never served well by monopoly. If Microsoft's products are as good as they claim, then they should not need privileged access to the operating system based on secret APIs in order to win customers. Certainly Microsoft should be disallowed from using coercive tactics against original equipment manufacturers to bundle Microsoft products with their own—yet Sections III.A-B. clearly permit this practice: one of the primary and most egregious offenses that initiated this lawsuit in the first place.

Microsoft has squelched far more innovation in computer hardware and software than it has enabled. This lawsuit has the potential to structure the playing field so that Microsoft can compete fairly on its merits, without the temptation or ability to "cheat" based on its financial and political power. The present PFJ ensures that this will not occur, and should be rejected in favor of a strong, clearly enforceable statement restricting Microsoft's behavior, punishing their scorn for the Justice Department's inquiry, and creating a strong, stable playing field that will foster innovation from a diversity of companies and individuals, including

Microsoft.
Sincerely,
Dr. Thomas A. Cleland

I take issue with the proposed settlement issue of Microsoft donating software to the public school system.

Microsoft has been found guilty of being a monopoly, and has been found guilty of harm thru monopolistic actions. Significant and measureable harm.

Harm to an essential engine of American industry.

Offering Microsoft a settlement by allowing them to essentially "print money" (thru the donation of their software products to parties that wouldn't otherwise purchase the products anyway) at cents on the dollar is absurd, and cynical. This smarmy collusion between government and corporate interests offers up a mighty stink that everyone can recognize, from the common Joe to the corporate executive.

If the government really wanted to cook up a deal with some teeth involving Microsoft products, I would suggest this:

A government-wide free site license (in perpetuity, or for a significant number of years) of Microsoft products.

Microsoft would see significant impact on their bottom line, and the American taxpayer would see significant relief thru a drop in Government spending on software.

Dear Sirs,

In regards to the litigation between AOL and Microsoft, I firmly believe AOL is way out of line. The founders of Microsoft were people who followed the American dream. They used their knowledge and talent to build a company that has forever lead the world market in computer programs, operating systems and yes, the Internet Explorer browser.

America was founded on competition. We strive economically on competition. But if one builds, designs and markets something better than another, why knock him down and drag him through court from it? Do Ford and GM design, build and market their cars and trucks competitively and then drag each

other down and through the courts when one offers better deals, service or incentives? I personally have used each of the two web browsers and Internet Explorer does offer a better experience to the user in most all ways one could compare them. My personal views. But as AOL forces it's users to be advertised to, as it does, in order to use it, AOL advertising intergration into AOL is no different than Microsoft intergrating IE into it's Operating Systems. You have the choices to buy/use or not. It is how they each have chosen to do for their own reasons. I feel that "Windows" really does benefit from the way IE is made apart of it. As I do have the choice to add Netscape to my system and use it and not IE to browse, then Microsoft has not made Netscape any less of a product or hindered it a choice to use. Netscape is just not as good as Internet Explorer!

Creative design and marketing should be encouraged and praised. Even if a fortune and empire is built from it. All AOL-Time Warner needs to do is develop a better operating system and then make Netscape apart of it. They were founded on selling products and advertising, not technology to better the american way of life through computers as Microsoft had done. You slap Microsoft down for what AOL wants and you slap down the American Dream in all of us. Microsoft became what it is today because it lead the "world" in design and marketing while making it affordable for all of us to have. What's AOL done but create a private community for it's users and placed them into a world of "forced" advertising to be apart of it. Case closed.

Sincerely yours

To Attorney General

While I believe free markets are the best way to move technology forward, I also believe that for this to occur that one player cannot be allowed to use its power to suppress competition unless others have the power to act in concert to overcome or suppress that single player. If the gloves are to be off for Microsoft then they should be off for Netscape, Apple, Redhat, Adobe, IBM, AOL, Omni etc. Allowing Microsoft as part of an antitrust settlement to suppress competition further by giving software and computers to poor schools seems unfair because those who abided by the law and their customers have already been damaged. Poor schools are not the only ones damaged by MS, everyday consumers have also been damaged. It would seem more equitable to give consumers or if need be poor schools a voucher redeemable only for non MS products.

Sirs/Mesdames:

I read with dismay that Netscape, really its parent AOL, has initiated a lawsuit against Microsoft. Certainly everyone knows that the timing of the lawsuit during the hearing process was intentional and not in the best interests of justice.

AOL and Microsoft have battled for many years. This latest move is just another example of the extent to which AOL and other competitors of Microsoft will go to cause a hardship to Microsoft.

Foremost in everyone's mind should be how much Microsoft has done for the consumer, for the country and for the world and how much they have improved the education of our children. Petty fights about Instant Messaging and the like show that AOL is not objective and is more concerned with their corporate success than they are with the good of the country.

I hope that the DOJ does not allow corporate politics to influence justice.

 January 24, 2002

Dear Judge Kollar-Kotally,

Proposed Settlement would Expand Microsoft Monopoly. I urge you to carefully consider Connecticut's position opposing the settlement of the Microsoft antitrust case. In a lengthy and widely publicized trial, a court found that Microsoft illegally monopolized the market for computer operating systems. The Department of Justice proposed settlement, in the view of many, would permit Microsoft to expand its monopoly powers.

The Threat to Users of Windows. Objections to an antitrust settlement may seem arcane—but the practical implications are far reaching. An economist recently testified in the private antitrust hearing that Microsoft used its monopoly power to overcharge the consumer by 85 billion for Windows. Other economists have suggested higher figures.

Proposed Settlement is too Weak. What does this have to do with the proposed Microsoft settlement? The settlement attempts to protect other producers of software from Microsoft's use of its monopoly position in the Windows operating systems. However, it unfortunately falls far short. As Attorney General Blumenthal stated, "the settlement simply has too many gaps and ambiguities that undermine the remedies necessary against substantial violations of law found by two federal courts." In the details, there are so many limitations that it will be business as usual for Microsoft. Additionally, the enforcement mechanism is not supervised by the court, as

it should be, but by a committee of limited powers reporting to the Department of Justice. The enforcement is really so weak as to be almost non-existent, especially in view of Microsoft's past history of pushing the law to, and perhaps beyond, its limits. Lastly, if you or I were to have broken the law, we would expect some punishment. There really is nothing in the settlement which addresses the issue of redress for the proven past illegal monopolization.

Greatest Loss is Loss of Choice to the Consumer. Freedom of choice is important. In its new XP version of Windows, Microsoft has or will including programs to provide directories and facilitate internet credit verification. Potentially, if everyone used these two programs, Microsoft could become the "gatekeeper" for commercial transactions on the internet, taking a little piece out of every transaction. A fabulous business to be sure but if this happens, it will mean that Microsoft has been able to use one monopoly to create another. With the weak provisions of the proposed Microsoft antitrust settlement, consumers are almost certain to lose that choice. Four years from now, there will be another Microsoft antitrust case. We will have gotten nowhere. We deserve an agreement which is fair to all parties.

Respectfully submitted
 00021642-0002

This is a copy of the letter I submitted to americans for technology leadership. Since I doubt they will forward it to you, I am doing so myself.

You probably will not like nor use this message, but I am glad to express myself. After 20 years of being at the mercy of Microsoft and watching and being involved in their high-handed tactics for doing away with the competition—an usually unfairly—I am disgusted at the hand slap they got. When a company can completely dominate an industry because they have deep pockets, it goes against everything we Americans believe in. And who is Microsoft and her allies kidding—most innovation and competitiveness in American business comes from small business, not large money-hungry corporations.

Give me a break! Microsoft as a hero? Come on! They have been stifling and killing the competition for years. Many of my favorite programs and/or features of common applications have either disappeared or become almost non-entities because of Microsoft's aggressive competitive stance and deep pockets. In their place, we have Microsoft telling us what we want—not usually what we need.

Score: 0 for free enterprise
 1 for monopolies

 Gentlemen:

I oppose the Microsoft settlement agreement. This is a large, subtle, multi-faceted issue about which one could write volumes. I will state my objections as succinctly as possible.

The agreement provides no penalty for the misbehavior that the courts have found. The agreement provides for only weak oversight for enforcement of the agreement.

The agreement contains enormous loopholes which would enable Microsoft to work around the spirit of the agreement and therefore to bypass the weak remedies provided.

The agreement offers inadequate safeguards against Microsoft's monopoly power.

Subject: Your Honour,
 Your Honour,

In accordance with the Tunney Act, I would like to say the following: Microsoft is an illegal monopoly. Bill Gates and Microsoft are trying to get away with what Rockefeller and Standard Oil achieved at the end of the last century in the oil business: a vertical and horizontal monopoly that controls all aspects of the industry and inhibits competition which not only hurts the economy but the public.

In the last twenty years the buzzword in government and the private sector has been deregulation. Fine. That is why Bell Telephone was broken up into AT&T and Sprint and MCI were allowed access to the market. Microsoft makes new operating systems stillborn by threat, coercion and bullying.

Microsoft has shown nothing but contempt for the consumer and government since day one of this case. If the solution pushed by the Ashcroft is set into place, then Microsoft wins and they get to expand their monopoly. When I took economics in college, everything I read said this was bad and this is the reason we have antitrust legislation.

I do not personally begrudge Microsoft a red cent of profit. They produced a product and people buy it. However, if I must buy the product because I am forced to purchase Microsoft programs because other programs which are better will not run on an O/S of my choice, then is this the market place freedom this country is famous for?

Please take the open letter by Dan Kegel seriously as well as Scott Rosenberg's article.

 Sir,

I am a user of Microsoft products and developer in Microsoft technologies.

I would like to say that Microsoft has done the greatest benefit to the American Industry by consistently bringing out the best products at most reasonable prices.

Just look at Word, Excel, Outlook, Project and such products. They beat the competition hands down.

They were never bundled with the computer and were never given free.

Just because one product—Explorer was given free and was bundled with the computer—it is no reason to hold Microsoft as using unfair trade practices. Netscape could have given Netscape browser free if it wanted to compete? Netscape could have entered into agreement with computer manufacturers to put its Browser on the computers. Why did it not? Did it try doing it for even those computers which were in agreement with Microsoft?

If the Software industry is where it is today it is in a great part because of Microsoft. Please give them accolades and awards instead.

Thanks.
 Alok

I believe it is a very poor choice to accept the current settlement in the Microsoft case, as nothing has been done to remove the ability of Microsoft to abuse its monopoly, something that has been judged to be true. Basically, the current settlement allows Microsoft to continue to exhibit the behavior that has been found to be illegal, with merely a slap on the wrist. A solution needs to be found that will help consumers and other companies more freedom to do with their computers as they wish, and not what Microsoft has forced other companies to do with computers.

 Subject: Microsoft Settlement
 To whom it may concern.

I'm writing to say that I am deeply worried about the settlement the US Justice Department made in the antitrust case against Microsoft. The settlement does virtually nothing, neither to correct the unfair state of the software market today, nor nothing to punish Microsoft for their un-competitive and illegal actions in the past years in the software and PC industries. The question in this case is on one hand: "What is a monopoly?"—My definition on a monopoly is: "A situation where people have no choice other than to deal with one party on a specific matter" and this is exactly the state in the PC industry regarding Operating Systems today.

The strangle hold Microsoft holds on the market consists mainly of API (Application Programming Interface—the tools developers use to make programs) blocks that prevents other players to enter the Operating System market and therefore to compete on healthy grounds with Microsoft on both the OS and general Applications front.

In my opinion a good way to resurrect the competition on the OS market could be if the government would some how mandate Microsoft to open up some parts of its API's (most specifically Win32/MFC). In this way there could finally be an opportunity for new players to enter the OS market. Up to this day all attempts to enter this market have failed and there are numerous examples (OS/2, BeOS and Linux—which has only gained share in server applications but not on users desktops). The Macintosh platform stays alive although it holds only about 4-5% market share of personal computers. It could be argued that Microsoft keeps the Mac platform barely alive (by giving away

versions of its Internet Explorer and Windows Media Player and producing its Office suite etc.) to make its case of monopoly in Operating Systems more convertible to the antitrust case.

There are already attempts to "reverse engineer" the Windows API's and the one that has come furthest is an open-source project called "Wine" (<http://www.winehq.com>) but that project has still a lot to go. The government could make sure the Windows API's are kept open for some time in cooperation with this project as this project is open-source and therefore accessible to everyone, either commercial vendors or individuals. The government could ensure that Microsoft publishes the API's in question and makes sure there are open implementations (i.e. Wine) that are sufficiently compatible to run most Windows applications. Another way could be to fine Microsoft a considerable amount and use the money to found a non-profit organization that would provide an open-source implementation compatible with the Windows API's and make users run Windows applications (including Microsofts own) on other platforms than Windows.

In my opinion it is very important that the US government does something about the situation because if Microsoft's progression continues as it has it could have even more damaging effects for users of information technology in the world. The impending risk is that Microsoft would extend its monopoly from the OS software (as it has already done with Office software) to the Internet and could take control of many commercial services on the Internet and gain access to personal information on every Windows user (this is part of the upcoming .Net, Passport and Hailstorm projects from Microsoft). Users could do little other than participating as almost all other people would continue to use Windows and therefore .Net.

TUNNEY ACT COMMENT ATTACHED

MTC-00021655-0001

January 23, 2002
 From: Scott Bolden
 3902 5th Street N Apt. 3
 Arlington, Virginia 22203
 To: Judge Coleen Kollar-Kotelly
 United States District Court for the District of Columbia
 Antitrust Division
 Department of Justice
 Re: Tunney Act Comments for the Microsoft Settlement Agreement U.S. District Court, District of Columbia Civil Action No. 98-1232 (CKK)

My name is Scott Bolden and I am writing in my own capacity as a user of Microsoft Corporation's ("Microsoft") Operating System ("OS") products, as a consumer, and as a citizen. I believe the Revised Proposed Final Judgment in United States v. Microsoft Corp. ("the agreement") should be rejected because it is fundamentally flawed and usurps the remedies it was intended to provide. First, the agreement contains several vague provisions that are open to interpretation and will likely be exploited by Microsoft. Particularly troubling is the fact that the provisions are so broad that they allow Microsoft to define and control the terms of the agreement. Second, Microsoft has a proven history of violating the antitrust laws and a prior agreement with the Justice Department. Finally, the agreement takes few steps to restore competition and may significantly hinder true competition in the operating system market. The proposed agreement does not punish Microsoft, does not restore competition, and harms consumers. Accordingly, I urge the court to reject the agreement in its entirety.

I. The Agreement is Vague and Gives Too Much Power to Microsoft

The agreement is lacking in several critical aspects. Although a thorough analysis of this agreement is beyond the scope of this comment, I have highlighted a few areas of general and one area of specific concern.

The first area of general concern is the agreement's provisions that include the clause: "...for the sole purpose of interoperating with a Windows Operating System Product..." This clause is extraordinarily restrictive, especially considering that Microsoft has violated the Sherman Antitrust Act in the OS-market for x86-architecture computers. In essence, Microsoft will be "forced" to divulge key information (such as APIs) to the designers of application programs that use Microsoft's OSes. Microsoft already provides much of this information to application designers in an effort to encourage the creation of a wide variety of applications for its OSes. The restrictive clause merely sanctions conduct beneficial to and already performed by Microsoft, and does not aid competitors and

consumers. Therefore, this clause should be removed.

Another troubling clause that is often employed is: "...specified in the Windows documentation...particular types of functionality "See III.C.1; III.H.1. As opposed to the previously discussed clause, this open-ended clause is virtually meaningless. Allowing Microsoft to restrict the agreement's remedies based on its own documentation gives Microsoft the power to control the terms of the agreement.

Although I do not disagree with the general provisions regarding the Technical Committee, see IV, I do disagree with the provisions that eschew public disclosure in favor of nondisclosure. The agreement is drafted to avoid all public disclosure throughout each stage of enforcement. This is an unconscionable result, and effectively allows a company who acted against the public interest to shield any future misconduct from the public. At the very least, the reports of the Technical Committee should be available to the public for review.

The time periods listed in the agreement are a final area of general concern. The five-year length of the agreement is wholly inadequate to remedy Microsoft's anticompetitive behavior. See V.A. In addition, the "one-time extension of [the agreement] of up to two years" is laughable. V.B. Microsoft does not even have to release any APIs before 12 months from the entry of this agreement, see III.C. 1, so this agreement is effectively a four-year agreement. The effective length of the agreement is curtailed further by the generous (and undefined) provision that gives Microsoft a "reasonable opportunity" to fix any violations of the agreement, before submitting to a lengthy closed arbitration process for continued violations. IV.A.4. A more appropriate remedy would be to enlarge the length of this agreement to seven years, and remove the limitation on the number of extensions available in the future "when the Court [finds] that Microsoft has engaged in a pattern of willful and systematic violations." V.B.

The area of specific concern is section III.J.2 of the agreement. This section allows Microsoft to condition the release of information to a licensee that, inter alia: (b) has a reasonable business need for the API, Documentation or Communications Protocol for a planned or shipping product, (c) meets reasonable, objective standards established by Microsoft for certifying the authenticity and viability of its business... Id. (emphasis added)

Again, this section allows Microsoft to control the terms of the agreement. By allowing Microsoft to define the phrases "reasonable business need" and "meets reasonable, objective standards," this agreement forecloses competition in the OS market by denying information to Microsoft's only potential competitor: the open-software community.

II. Microsoft Has a History of Anticompetitive Behavior

Microsoft has an anticompetitive history, and its past conduct evidences a disregard for the law. The Government first filed suit against Microsoft for antitrust violations in

1994, obtained a consent decree against the company in 1995, and filed suit against Microsoft for violations of the consent decree in 1998. Microsoft's misconduct during the trial court phase is legendary (but was overshadowed by the conduct of Judge Jackson). In addition, representatives of the company have often demonstrated an attitude that borders on contempt for the law and the judicial system. This past conduct is not cause alone for punishing Microsoft, but it compels caution and strict oversight in enforcing antitrust remedies.

III. The Agreement Harms Competition

Finally, and most importantly, the flaws of the agreement and Microsoft's actions in and out of court mandate the view that this agreement will harm competition. Many of the agreement's provisions give Microsoft too much control, permitting the company to avoid disclosure, act anticompetitively, and harm competitors and consumers. The Court of Appeals warned against this result when it stated: "[I]t would be inimical to the purpose of the Sherman Act to allow monopolists free reign to squash nascent, albeit unproven, competitors at will particularly in industries marked by rapid technological advance and frequent paradigm shifts." Unfortunately, the proposed agreement permits Microsoft, a proven monopolist, to continue its anticompetitive behavior against third-party OSEs and middleware. Accordingly, I urge the Court to reject this agreement in its entirety.

Sincerely,
Scott Bolden

Dear Ms. Renata Hesse:

Please put a stop to the economically-draining witch-hunt against Microsoft. This has gone on long enough.

Microsoft has already agreed to hide its Internet Explorer icon from the desktop; the fact is, this case against Microsoft is little more than "welfare" for Netscape and other Microsoft competitors, with not a nickel going to those supposedly harmed by Microsoft: the computer user.

This is just another method for states to get free money, and a terrible precedent for the future, not only in terms of computer technology, but all sorts of innovations in the most dynamic industry the world has ever seen.

Please put a stop to this travesty of justice now. Thank you.

Subject: Microsoft Settlement

Dear Sirs;

In the anti-trust settlement between the DOJ and Microsoft I feel the responsibility to be heard.

I am not a supporter of the proposed settlement. I have been in the IT / Computing, and particularly Computer Software industries for all my professional life, some 30 years, and I'm appalled with what Microsoft has done to our industry and is allowed to continue to do. They have hurt our economy immensely by being allowed to indiscriminately and unfetteredly enforce their predatory and monopolistic practises. They have inflicted grave damage to the American Industry and citizens.

Innovation has been crushed—the innovators can never make any money from their contributions. Because of the monopoly Microsoft holds no other product has a chance in the marketplace and all those working in the competing industry disappear as a tax base for the American government.

Microsoft continues to give away software until they gain a monopolistic beach-head and then gouge for their software. Their practices have destroyed superior products, or so severely eliminated their revenue streams so that they can no longer afford to maintain a competitive product in the marketplace. Netscape, Lotus, RealAudio, WordPerfect and others are prime examples of fantastic products that Microsoft alone destroyed by being allowed to freely enforce monopolistic practises.

Microsoft should be held accountable. But more importantly, they should be stopped from continuing their practises. They continue to display a total disregard for the laws of our great nation and any code of ethics. They have stolen or bought most of their products and actually innovated nothing unless its the method of getting away scott-free with anti-trust activities.

The Open Source movement is the last bastion against Microsoft. The world over programmers are working *FOR FREE* because a) there's no chance of selling a product that doesn't come from Microsoft and b) because that's the only way to get a product that is any good in many areas. Microsoft has a stranglehold on computing in general, and software development in particular because no one can ever get a return from their software development investment in this environment.

Please don't let this thievery and suppression of proud American engineers, users and industry continue unrestrained.

Thank you,
Gary Heller.

DOJ

I have to say that the resolution you proposed is far from adequate. It seems you missed the Appeals Court finding. Microsoft is still doing harm to competitors and needs to be controlled. Please re-examine your proposed settlement. It is insufficient and we will all be back at this again if you don't lasso Microsoft while you have the court findings to back up a much stronger settlement. Every day, I find the Microsoft OS to be inadequate and yet only Linux at this time has any hope of competing with Microsoft. And that is because its free. Any bonafide competitor has no chance against a monopoly that keeps its monopoly by anti-competitive behavior.

Dear Sir/Madam,
This letter presents my response to the revised proposed Final Judgement to resolve the United States' civil antitrust case against Microsoft, which is currently up for public review. I am a citizen of the United States, and a resident of rome, ny.

I. Critique of Proposed Final Judgement
The proposed Final Judgement that the US and Microsoft agreed to on November 6th appears to have the best intentions, and addresses many of the major issues raised by the case. Unfortunately, I feel that it falls short of being an effective remedy.

I agree with many of the points in the following critique of the proposed final judgement, and it is more complete than my own statement will be.

Please review the statement on the antitrustinstitute.org website at:

<http://www.antitrustinstitute.org/recent/149.cfm>

There is much to consider in that document, the points in the proposed final remedy that I consider most important to review are that:

1) it makes no attempt to address "ill-gotten gains" garnered by microsoft through its anticompetitive practices. This is a serious shortcoming because the company's illegal tactics have placed it in a very advantageous position in the industry. In order to make anticompetitive behavior unprofitable, there must be substantive punishment that reduces those gains.

2) the anti-retaliatory clause is insufficient. Section 3.A.1 specifies that Microsoft shall not retaliate against and OEM for "developing, distributing, promoting, using, selling, or licensing any software that competes with Microsoft Platform Software or any product or service that distributes or promotes any Non-Microsoft Middleware;"

Section 6.L defines Microsoft Platform Software as "(i) a Windows Operating System Product and/or (ii) a Microsoft Middleware Product."

As I read this clause, it still allows retaliation against OEM's for developing, distributing, promoting, using, selling, or licensing, software that competes with other Non-Platform Microsoft Products, such as Office, .Net, and other applications. This opens an important window for Microsoft to continue its anticompetitive practices.

3) the api disclosure provision in section 3.D is impossible to enforce.

The only way to ensure that microsoft isn't hiding undocumented API's is to audit the source code. No body with sufficient manpower has been appointed to do this. A more appropriate solution would be to require disclosure to API's AND source to ISVs, IHVs, IAPs, ICPs, and OEMs. They could then audit suspect code themselves, and present an informed complaint to the Technical Committee, which could verify and investigate.

4) The only punitive measure specified to discourage Microsoft from non-compliance is a 2 year extension of the terms of the judgement. If Microsoft is not complying with the judgement anyway, this is an extraordinarily ineffective punishment.

II. Support for Plaintiff Litigating States' Remedial Proposals
(December 7, 2001)

The proposal filed by the state on December 7th, 2001 is a much more complete remedy. The proposal is available on the web at:

http://www.naag.org/features/microsoft/ms-remedy_filing.pdf

1) It addresses the Microsoft's ill-gotten gains in section H by Open Sourcing the code to Internet Explorer. The Court's Findings of Fact, issued on 11/5/99, state that Microsoft successfully used its monopoly power to increase the market share of Internet Explorer. These findings of fact can be found on the US Department of Justice webpage at: <http://www.usdoj.gov/atr/cases/f3800/msjudex.htm#vh> By Open Sourcing the code to Internet Explorer, Microsoft is deprived of the gains associated with their anti-competitive behavior.

Additionally, consumers and the entire computing industry benefit by augmenting the publically available software infrastructure of the internet.

2) Section E offers a stronger anti-retaliatory clause which covers all microsoft products, and not just Platform Products.

3) Section C offers an API Disclosure provision that is enforceable. ISV's, OEM's, etc are provided access to source as well as API documentation.

This will allow them to inspect suspicious code and present well informed complaints to the Technical Committee.

4) Section O offers excellent punitive measures in the event that Microsoft does not comply with the judgement. Additionally, section L of this document provides excellent protection against Microsoft co-opting and breaking standards compatibility, as the findings of fact show it did with the JAVA standard. This topic is not addressed in the Proposed Final Judgement.

III. General suggestions

Unbundling microsoft middleware/products/services is a superior solution than requiring alternatives be bundled as well. The latter has the effect of favoring a small number of well established middleware/products/services by creating large barriers of entry to new middleware/products/services that are not included in the OS distribution.

Mandating that Microsoft offer licenses to third-party companies to port its applications to alternative Operating Systems is a superior solution than requiring that Microsoft maintain ports of particular products to particular OS's. Determining whether a port of a given application to a given platform can be profitable is difficult and should be decided by the market. Microsoft should not be allowed to lock-out existing markets by not porting applications and not allowing others to do so. However, is it not feasible to expect Microsoft to port every application to every platform. There is not always a demand.

There should be a reward in the event that microsoft makes every effort in good faith to comply with the judgement. Perhaps make the judgement applicable for 10 years, with an option to terminate the measures in 5 if microsoft makes efforts in good faith to comply.

Subject: the proposed settlement isn't just

I don't feel adequate to express myself, but I will try. There are smarter people than I, hopefully they are also writing on this issue.

Microsoft has been found guilty of illegally using a monopolistic position to further its market in other areas. They have done the same thing in the past, if allowed they will do the same thing in the future.

The settlement only seems to allow for profit companies to seek a license (going from memory here) to use protocols that MS has modified. Protocols that were originally developed as public protocols thus making the internet possible. MS has made slight modifications to the protocol and called the result proprietary extensions. Legal, yes, just, no.

Specifically, the SMB protocol that MS uses for file transfers(?). This has been reverse engineered to allow non-Microsoft systems to inter-operate with Microsoft based systems. The reverse engineering was done as non-profit by individuals with a need to inter-operate with Microsoft systems. My reading of the proposed settlement would allow Microsoft to declare the use of such free tools to be illegal. As a consumer, I need to be able to work among different systems, but since I don't operate a company that markets such a product, I would be prohibited from using free software that does. Also, Microsoft would have the ability to prohibit companies to essentially stop marketing a product by denying them the ability to use Application Program Interfaces (API's). Again, would it be legal? Yes, would it be just? No.

Take care

Wayne D.

Subject: Microsoft Settlement

I am writing to express my disagreement with the proposed Microsoft anti-trust settlement. After reviewing the proposal, it is my belief that it is insufficient to curtail Microsoft's unethical business practices which are hurting the computer industry.

One particular change I recommend is that Microsoft be required to publicly release on the Internet full documentation for all of its API's and file formats, such as those used by Microsoft Office. This would allow competitors to create software that is compatible with Microsoft's.

Sincerely,

Joshua D. Sholes

The need to consider the state of the US economy must be an important consideration in any decision regarding govt vs business litigation. This lawsuit against Microsoft creates great uncertainty —made worse by others—tobacco, asbestos, the 9–11 deaths, Enron, Etc. There is a growing, and general feeling that no firm's financial situation can be counted upon or understood in what to most of us non-lawyers or non-regulators appears to be an out-of-control litigation feast. I suggest that a high priority be to settle this matter as quickly as possible on mutually acceptable terms rather than continuing litigation.

In my humble opinion the witch hunt of Microsoft has gone on far too long. Let the marketplace take care of them. The rapid move to Linux shows that MS does not in fact hinder other companies efforts. We have one PC using Windows and another using Mandrake Linux. Linux is somewhat harder to grasp than Windows. Let's allow the free market to work. Many people are using Windows because Linux is harder to install and use.

I am disappointed by the Department of Justice's cave-in on the ruling of Microsoft's Anti-trust case. Once again, the government panders to big business at the expense of the ordinary citizen and a free-market economy. A product should fail or succede on the overall value not by the marketing and strongarm tactics of the company pushing the product.

Microsoft's paractices as taught to me by our school system are in the same vein of anti-competitor and monopoly as the Vanderbilts and the IBM of old. Once again the case of do as we say and not as we do

is enforced by the system. The case of money makes right is spoken to the new generations of American children by your ruling. Thank you for making me disbelieve the American Justice even more than before.

Subject: Microsoft Settlement

To whom it may concern,

I am writing to express my complete disapproval of and total disillusionment with the Microsoft/United States Department of Justice (DOJ) Settlement. Furthermore, I implore you to recommend that this settlement be soundly overturned.

In my opinion, this settlement does not address the most flagrant aspects of Microsoft's previous anti-competitive behaviour. Furthermore, it does little, if anything, to prevent future antitrust violations. I cannot determine if the DOJ agreed to this settlement due to collusion with Microsoft or sheer incompetence. However, there are a number of blatant oversights in this settlement. The most glaring of these oversights is the specification of Microsoft's competitors as being exclusively for-profit enterprises. This definition completely ignores Microsoft's single biggest competitor and threat: the OpenSource and Free Software communities. These two communities, respectively, are completely non-profit entities and comprise of volunteer programmers writing code in their spare time. They have produced, among many other excellent free and Open Source software, the Linux and FreeBSD operating systems, which their users are free to distribute, modify and copy to whatever extent they choose, in stark contrast with Microsoft's closed source and expensive operating system: Windows. Microsoft will not be required to adjust its behaviour with respect to these communities in this settlement. Therefore, consumers' greatest hope of seeing competition, and thus lower prices and better software, in the software and operating systems markets is not being helped in any way, shape or form by this settlement.

Microsoft was found guilty of illegally integrating its Internet Explorer browser with its Windows operating system in a vain and ultimately successful attempt to defeat the rival Netscape Communicator browser. This settlement does next to nothing to punish this anti-competitive behaviour, nor does it seek to prevent similar behaviour in the future or to restore competition in the browser market. Consumers will suffer greatly because of this.

Microsoft is guilty of entering into exclusive arrangements with computer original equipment manufacturers (OEM's), the sellers of personal computer (PC) systems, to not only distribute Windows to the exclusion of all other operating systems, but to FORCE computer consumers to buy Windows with each new system. There is no option for consumers to buy a "naked" PC,

that is, a PC without an operating system installed, unless they do business with one of the smaller, independent, less known computer retailers. This agreement has the same effect as a mandatory tax on PC consumers, because if a user wanted to install another operating system, such as Linux, that consumer would have to pay for the Windows license in addition to the cost of the alternative operating system, whether or not that user chose to use it.

Furthermore, upon the purchase of the system, the user is not allowed to sell his or her copy of Windows if he or she chooses not to install it. There is very little in this settlement that addresses this inequitable, semi-regulatory system by a non-governmental entity. Microsoft has illegally leveraged its operating system monopoly to force competitors out of business, many of whom were making better products than Microsoft. For example, when Microsoft introduced its Office productivity suite, it charged a mere \$40 for the entire package, using the profits from its Windows and DOS monopolies to cross-subsidize the scheme, an option not available to its competitors. Its competitors had no other sources of revenue but from their primary products (productivity applications), so Microsoft had an unfair advantage in leveraging its Windows monopoly to put its competitors out of business.

This is exactly the kind of behaviour that antitrust laws are designed to prevent.

Microsoft chairman Bill Gates was found to have perjured himself on the stand, denying the existence of an email that the DOJ had later reproduced in court. Why has he not been personally punished for this crime?

Where are the provisions preventing Microsoft from future behaviours not covered by the settlement, such as Microsoft's exclusion of Java software in its latest operating system, Windows XP? This is despite the fact that a large percentage of web sites run Java applets on their sites. Nothing in this settlement will prevent Microsoft from continuing this practice, which clearly goes against consumers' wishes. In conclusion, I urge you strongly to push for a complete rejection of this highly flawed and totally ineffective settlement. Thank you for your attention in this matter.

Subject: Microsoft Settlement

I don't think the proposed settlement has enough teeth to do any good. Microsoft has a clear history of circumventing, undermining and lying. It needs to face a significant penalty and damages if more law-abiding companies are to be able to have a fair chance of competing against them. The

cost of Microsoft abuses to other Americans who are law-abiding is very high. The proposed settlement is a cave-in by the DOJ which smacks of political or other interference.

From: Rev. Randell E. Tonn
To: Microsoft ATR, Activist@conservativehq.com@inetgw
Date: 1/24/02 11:28am
Subject: Microsoft Settlement

To those concerned:

In total departure from the rabid comments being furthered by the "conservative" Sixty Second Activist, I write to ENCOURAGE the Department of Justice to aggressively pursue its legal actions against the predatory, monopolistic corporation known as Microsoft which has repeatedly and consistently used its monopolistic situation to produce upgrades which often function less productively and efficiently than their predecessors while charging unconscionably, ridiculously and ludicrously high prices for this "bloatware" while computer hardware manufacturers find it necessary to produce ever faster and larger equipment (without significant improvement in through-put) It is high time that the full faith and authority of the federal government and the state governments (in which the predatory and monopolistic Microsoft does business) be brought to bear upon the best interests of the consumer.

The strident voice of the Sixty Second Activist to the contrary notwithstanding, the Microsoft suit is not a waste of taxpayers' tax dollars, it is a fundamental purpose for which government exists—the protection of its citizens from those who would use monopolistic and quasi terroristic threats (ala the most recent release of the XP Windows) in which a corporation seeks to infiltrate and exercise its control over the citizen's computer.

It is my fervent plea, prayer and hope that the Department of Justice will find the moral courage to pursue the high ground of idealism by repudiating the strident Sixty Second Activist and actively pursuing the break-up of Microsoft in the interest of pursuing its primary function, i.e., the protection of its citizens.

Thank you.

Date: 1/24/02 11:29am
Subject: Microsoft Settlement
Dear Sirs;

I did not realize until this morning that I could submit comments related to the Microsoft Settlement, but I've been fuming about this case since it began.

As a 20+ year computer professional, I've been in this business as long as Bill Gates, and I am ever amazed at the degree of audacity, arrogance, and underhanded behavior displayed by Microsoft.

Microsoft is a convicted abuser of the American version of the Free Enterprise System. Moreover, and more to my point: they have not repented— if anything, they continue the very behavior that there conviction is supposed to put an end to. For example, they are up to their old ways with their .Net initiative, their Windows [instant] Messenger, and they are trying to crush Palm inc. in a manner similar to Netscape. They continue to bully their customers with questionable end-user-license-agreements (ELUAs), and now they are infringing in individuals free-use rights with their XP product-activation policies.

Letting Microsoft off the hook will only encourage more of this kind of behavior. And for Microsoft, delay is victory because once they take-over an area there is no undoing the damage; they will readily pay a fine later if it means capturing a market now.

Generally I'm for less government in the affairs of people, but Microsoft as a major problem and they need to be punished appropriately (read: harshly).

Thanks for your time, consideration, and opportunity to speak-out.

MTC-00021690

From: Mark Nahabedian
To: Microsoft ATR
Date: 1/24/02 11:29am
Subject: Microsoft Settlement

To Whom it May Concern:

I am writing concerning the proposed settlement in the Microsoft antitrust case.

I have been working professionally as a software developer since 1983 and, I feel, am well qualified to distinguish between operating system and application software capabilities. At no time during my working career have I been employed by any of the numerous companies which have fallen victim to Microsoft's anti-competitive practices. I have no reasons to bear Microsoft any enmity other than for the consistent substandard quality of their products or their heavy-handed anti-free-market business

practices. Such practices harm us all, not just those in direct competition with Microsoft.

In 1994 Microsoft resolved earlier antitrust allegations by signing a consent decree. It's clear from the court's findings in the antitrust case which Microsoft is now battling that they have not moderated their monopolistic behavior since 1994. It is also clear from the manner of their recent entry into the online messaging market that the current case has also not encouraged them to alter their behavior. The only possible remedy that will prevent such egregious behavior in the future is to break up the company, thus denying them the means to engage in future monopolistic practices.

Microsoft should be divided into three separate companies, one for the operating system, one for applications, and one for network services. I'll refer to these entities as OS (Operating Systems), AS (Applications Software) and NS (Network Services) respectively. These companies must operate according to the following rules: No person can serve in a management position or as a director of more than one such entity at a time. No technical consultant shall be employed by more than one company at a time.

There can be no communication among these entities concerning technical issues surrounding their products unless such communication is made publicly and is available to all companies involved with similar development efforts. For example:

OS can not add any functionality that is already available from another software vendor except by broad industry consensus. If such functionality is already provided by another vendor to run under an OS provided operating system, such functionality should be considered to be application software. Applications software may be developed by AS but not OS.

If AS requires a new feature from OS, it must request it publicly. When OS alters or extends the behavior of the operating system, it must document the changes publicly.

Any protocol which OS or AS software employs to communicate with NS services must be publicly documented at least six months prior to the public distribution of such software by OS or AS.

In addition to the above outlined breakup, Microsoft should pay all fines which have accrued as a result of violation of the previous consent decree.

If the Justice Department lets Microsoft off the hook with anything short of these terms, it is violating its public trust. Any DoJ associates responsible for such compromise are not fit to serve in a government agency.

Do the right thing.

Subject: Microsoft Settlement and AOL law suit

It seems to me that we have more important things to solve in this country than frivolous corporate badgering.

What laws did Microsoft violate? Fine them or quit this charade. AOL-Time Warner is a greater threat! They are creating confusion with a frivolous court case that gives "the law" its bad reputation for using legal gymnastics to solve marketplace failures.

AOL has no justified claim! I have used the Internet daily for ten years. I looked at Netscape—in no way was I deprived from accessing it. I didn't like it and therefore I don't use it. There is no other reason than that for any non-user.

Is this a free market or not? If consumers decide not to use a product must our tax dollars be used to force us to use it? All of this lawsuits will RAISE PRICES TO CONSUMERS—which AOL is already doing!

From: Julian Shapiro
To: Microsoft ATR
Date: 1/24/02 11:30am
Subject: Microsoft settlement

To Whom It May Concern:

I would like to suggest a remedy for the case against Microsoft. Neither the current proposal (a lame slap on the wrist) nor huge monetary fines nor Judge Jackson's breakup scheme will actually benefit the consumer. They are all negative proposals that will hurt Microsoft's stock price but accomplish little else.

Instead I propose that Microsoft be required to provide complete documentation, as well as free technical support 24 hours a day, 365 days a year for all of their products for any licensed customer.

This will cost Microsoft a great deal but the consumer would be the direct beneficiary. Microsoft, for its part, could only reduce its burden by improving the software and the documentation, or by getting out of a particular area of software development—making room for competition. Again, the consumer would benefit.

It has been suggested to me that this proposal would hand Microsoft a monopoly in the "help desk" business. That might be true but the requirements of this proposal would be so huge that Microsoft would have to outsource the work to every "help desk" company it could find.

Thank you for taking this under consideration

Dear Sir:

I don't agree!

I think the proposed USDOJ "settlement" is little more than a capitulation to Microsoft. During the original trial, there were hundreds and hundreds of pages of original testimony proving beyond doubt that Microsoft has strong-armed companies—even companies as large as IBM—into doing its will. The proposed DOJ agreement almost completely ignores this mountain of evidence! Microsoft also made a deliberate attempt to raising the entry barrier into the operating system industry to achieve a monopolistic position.

Walter F. Metcalf

MTC-00021697

From: John B. Proffitt
 To: Microsoft ATR
 Date: 1/24/02 11:28am
 Subject: Microsoft Settlement

Dear DOJ,

Thanks for undertaking a legal battle against Microsoft on behalf of the American nation. You fought a good fight, but it looks as though Microsoft will emerge essentially unscathed. Microsoft may have lost the judgement, but no effectively punitive measures are forthcoming as a result of the antitrust action. Considering the cost of the case to the taxpayer, one might fairly characterize the outcome as a Pyrrhic victory.

Note that I am in no way personally opposed to Microsoft Corporation. I use their software products daily at home and at work. Through long habituation I have come to prefer the Wintel computing environment over available competition. Yet I believe it may be time to bring Microsoft to heel.

There are negative aspects of Microsoft's business practices that you chose not to address in your brief. But more than this, there is the general condition that corporations wield too much power in this country. They abuse their customers, bamboozle their investors and thumb their nose at governments. When called to account for their actions they simply hire more lawyers and disburse more campaign contributions. Justice, apparently, is for sale in the United States. If we are to reverse this trend, there is no better place to start than with Microsoft.

Our leaders must be able to see through an incessant deluge of advertising. They must be capable of resisting the lure of short-term capital gains. If we, the people, cannot regain control of the tiller of the ship of state, if we cannot assert our will to govern with fairness and wisdom, then it will be time for a second American Revolution. The first one will have failed.

 Microsoft Settlement U.S. Department of Justice

Dear Microsoft Settlement U.S. Department of Justice:

The Microsoft trial squandered taxpayers' dollars, was a nuisance to consumers, and a serious deterrent to investors in the high-tech industry. It is high time for this trial, and the wasteful spending accompanying it, to be over. Consumers will indeed see competition in the marketplace, rather than the courtroom. And the investors who propel our economy can finally breathe a sigh of relief.

Upwards of 60% of Americans thought the federal government should not have broken up Microsoft. If the case is finally over, companies like Microsoft can get back into the business of innovating and creating better

products for consumers, and not wasting valuable resources on litigation.

Competition means creating better goods and offering superior services to consumers. With government out of the business of stifling progress and tying the hands of corporations, consumers—rather than bureaucrats and judges—will once again pick the winners and losers on Wall Street. With the reins off the high-tech industry, more entrepreneurs will be encouraged to create new and competitive products and technologies.

Thank you for this opportunity to share my views.

Sincerely,
 Michael R. Pierce

 Dear DOJ,

I must make my thoughts known regarding the proposed Microsoft settlement. It is simple, Microsoft illegally kept the makers of personal computers from controlling their own choice of computer operating systems. This behavior was and continues to be predatory and anti-competitive. American's belief in opportunity, competition, and fair play have routinely been trampled by the self sustaining tactics of this industry giant.

Therefore, any settlement or resolution should insure that Microsoft cannot continue its anti-American behavior. I believe that the current settlement does not meet this criteria and implore you to consider more appropriate measures to this end.

 Subject: Microsoft Settlement

I think the settlement you people in the government have come up with is a joke. Anyone, even an average computer user, can see that this will in no way deter Microsoft from continuing their monopolist practices. If you do not crack down on them now, they will feel free to continue to produce buggy, insecure bloatware at will without fear of competition. I personally agree with the holdout states that Microsoft should make a version of windows that does not contain a browser, media player or word processor and leave those choices up to the individual consumer. Many of us are smart enough to get around Microsoft's pigeonholing us on applications but it is not always easy. By

them consistently adding more and more "functionality" to their operating system, it is allowing them to little by little squeeze out other utility companies.

The new XP version comes with a built in browser, media player, scanner and digital camera, and printer drivers that are normally supplied by other companies. This is allowing MS to leverage these other companies out because they are creating the operating system these drivers are installed into. I for one think it is high time the government stepped in and really did something for the PEOPLE that it is supposed to represent instead of big business.

Dear Ms. Renata Hesse:

Please put a stop to the economically-draining witch-hunt against Microsoft. This has gone on long enough.

Microsoft has already agreed to hide its Internet Explorer icon from the desktop; the fact is, this case against Microsoft is little more than "welfare" for Netscape and other Microsoft competitors, with not a nickel going to those supposedly harmed by Microsoft: the computer user.

This is just another method for states to get free money, and a terrible precedent for the future, not only in terms of computer technology, but all sorts of innovations in the most dynamic industry the world has ever seen.

Please put a stop to this travesty of justice now. Thank you.

Sincerely,

Subject: Microsoft Settlement

To whom it may concern,

I'd like to express my outrage at the offer laid upon the table by Microsoft. Once again a Microsoft is playing a shell game. "Now you see us, now we own you."

The idea that a corporation could design its own punishment is laughable. Especially considering this so called punishment actually will benefit Microsoft. If this is really going to be a punitive decision, Microsoft should put up the money for purchases and buy equipment and software that they have no financial relationship with. Now that would actually be punishment.

With the settlement previously reached by the DOJ regarding Microsoft's monopoly and anti-competitive tactics, I would, however, believe that true justice will not be achieved and Microsoft will, yet again, benefit from their so called punishment.

Sincerely,
William T. Randall, Jr.

To Whom It May concern,

I am opposed to the current settlement that is being pursued in the Microsoft Antitrust Case. Another concern I have is the sudden change in my governments stance on this case. Why is Microsoft now being let off with less then a slap on the wrist?

The current settlement is not sufficient to compensate for what has been done or to keep it from happening again. I am a Networking Specialist and I work with a multiple operating systems including those offered by Microsoft. I have been in the field for over 15 years now and have watched and am watching a number of good software products get obliterated by Microsoft. I have also watched as the price tag on Microsoft products goes up and up. If something is not

done to correct Microsoft's business practices, there soon will be only one vendor option at an exorbitant prices.

The reason I work on multiple vendor platforms and software packages is that the products from different vendors have different strengths and weaknesses. I like having this choice and variety. It pushes the vendors to make the best product possible and come up with new ideas. I also like that the competition between vendors keeps the price down.

From: Fleming, Grant
To: "microsoft.atr(a)usdoj.gov"
Date: 1/24/02 11:27am
Subject: microsoft settlement

I must say, I have been tremendously disappointed by the Microsoft anti-trust settlement. I don't pretend to admit that I have the legal knowledge to propose what should be done in this case, but I think any professional in the IT industry that is not directly affiliated with Microsoft (or in their pockets) knows that the giant in Redmond is as much of a monopoly as the world has today. It devours other companies, crushes competition, envelops the industry, represses innovation and is putting us in the position where we all have to neatly line up and use

their mediocre products or be "left in the dark". They have ingrained themselves in so many aspects of the industry that these days you would be hard pressed not to have many of their products on your machine..and if you are one of those who actually manage that, you are constantly "swimming upstream" and wrestling to be able to function in the Computer Society. One company should not have that sway and domination....especially not one who is known to turn out substandard, vulnerable and unreliable products. If Microsoft had achieved their market dominance through superior software, superior support and superior service, I would hold them in high regard. I know...and I'm sure you know....this is not the case.

Thus, much like I have heard from others, I view the settlement as more of an endorsement of their practices than anything else.....and I consider it a travesty. I'm sure deciding what should be done in the case is an incredibly difficult issue and I don't pretend to have the answer. I just know what is proposed is NOT it.

From: Troy Folger
To: Microsoft ATR
Date: 1/24/02 11:30am
Subject: Microsoft Settlement

I think that the proposed settlement will have little or no effect on Microsoft's business practices, and therefore should be rejected. The most telling point is this: the only viable competition to Microsoft operating systems are FREE ones. OS/2, Netware, BeOS, and other operating systems offered for the Intel hardware platform have been crushed by Microsoft's stranglehold monopoly. Linux and other free unix variants survive only because millions of people worldwide are donating their time and talent to the projects.

In addition, Microsoft has not used their monopoly position to strengthen their products. Instead, they have added utilities and features designed to crush competition outside the operating system category (utilities, browsers, media players, etc). Meanwhile, their products suffer from security flaws so outrageous that the public would reject Microsoft products outright—except that there is no alternative.

Any settlement must address the fundamental issue: Microsoft has been found to be a monopoly, and consumers will continue to suffer, more and more, unless an effective barrier to Microsoft's monopolistic

practices is erected. The proposed settlement contains no such barrier.

Subject: Microsoft Settlement
Attorney General John Ashcroft
The Department of Justice
Washington DC 20530
Dear Mr. Ashcroft,

Since the suit was brought up, three years ago, the market went down and it never recovered. Let say that Microsoft is like a good quarterback, and the industry is the team. The team (industry) wants to hurt its quarterback (Microsoft), and when the team succeeds in causing harm to its quarterback, it wonders why did not do so well. So this suit is like a losing game for the industry. Carrying on litigation against Microsoft causes harm to the industry. Thus the settlement reached between Microsoft and the Justice Department must be finalized so the team (industry) can get back to scoring.

The settlement might be a 15-yard penalty, but not to settle would mean forfeiting the game altogether. The settlement instructs Microsoft to make all future versions of its Windows OS to be compatible to non-Microsoft software. Moreover, Microsoft has also agreed not to retaliate against any computer makers that would want to ship software that would compete with Windows, such as products from AOL.

As fan of Microsoft and the industry, I must urge you to referee this case fairly. I recommend that you make certain that this settlement is confirmed, and the nation turns to focus on other pressing issues.

Sincerely,
Krmo Salem

Dear Sirs,
My firm has been an unwilling "hostage" of Microsoft's monopoly for 7 long years, and it is our sincere conclusion that the more we pay for "buggy" software and upgrades, the less we actually get!

We will now finally make the transition to wonderful, trustworthy LINUX as opposed to Microsoft, who makes unreliable, unpredictable, and expensive "bloated" software. When complaining about numerous "bugs" and annoyances, they have the nerve to claim they are actually "wonderful features". This would not be possible, if there was some competition on the desktop, and not only on the server market. We do believe Mr. Gates & Co. have made a tremendous destructive impact on the software market, and they should be severely punished for falsifying evidence in court. (Contempt for court.)

Yours sincerely

From: Steve Burbeck
To: Microsoft ATR
Date: 1/24/02 11:39am
Subject: Microsoft Settlement

First, let me be clear that my views do not represent those of my employer, IBM, in any way.

I read the proposed final judgement in its entirety the day after it was published, and yet again today. It is an artful document. I do not have the legal expertise to appreciate the many subtle uses of legal terms of art presumably put in by the DOJ to place real restrictions on Microsoft's future conduct. But, in the end, this settlement is about how the software industry works. I am enough of a software industry "expert" to see many artful ways that Microsoft has virtually neutered its usefulness in redressing past distortions or in preventing further distortions in the software industry caused by their illegal use of their monopoly

position. Here are the three I find most egregious:

1) The restrictions on who can be on the three member technical committee or its supporting staff rule out most competent participants in at least two ways. First, each must be a software design and programming expert. That is a peculiar requirement in this increasingly networked world. Expertise is also needed on networking and Web issues, yet many such experts do not necessarily qualify as software designers and programmers. Restricting all of their support staff to be software designers or programmers is too limiting. I have lived and worked with "design and programming" experts for more than twenty years (and am one myself). Few of them also understand the business, Web, and Internet subtleties that Microsoft wields so well. Second, the restrictions on employment rule out most viable candidates. Of those that meet the technical requirements, nearly all either have recently or soon will work for Microsoft or one of its competitors (note that Microsoft is a competitor of nearly every kind of software firm, not to mention ISP's, banks, travel software providers, game manufacturers, the news media, and many others). The few that have not and do not intend to work in the software industry (e.g., those who do are retired, independently wealthy, or work for military, the steel industry, university, or perhaps some other nonprofit organization) typically have very little understanding of how the software industry works. Between these two restrictions, the Technical Committee will likely not be of very high quality. Microsoft has proven to be very good at fooling those who try to restrict its ambitions. This committee is designed to be easy to fool.

2) The definition of "Microsoft middleware" and "Microsoft middleware products" is both vital to the settlement (since much of the settlement is specific to middleware), and quite peculiar, especially from the perspective of an "expert in software design and programming" such as those who will populate the TC. And Microsoft has demonstrated willingness to manipulate such definitions when they converted IE from a stand-alone product to an integral part of the operating system. Nonetheless, the TC experts must use this contorted definition instead of their own understanding. Many others have analyzed the middleware definitions and found them wanting as well. All I can say here is that when I first read the definition it was clear to me that Microsoft has won enormous flexibility to determine what is, or is not, middleware. It reminds me of the loophole Microsoft foisted on Ann Bingaman and the DOJ in the "95 settlement that turned out to virtually emasculate that settlement. That blunder did not help the DOJ's reputation. Nor will this one.

3) Even if the above issues are solved, five years is too short a period of oversight. The two year extension for bad behavior does not materially affect the issue. It will take at least ten years.

Steve Burbeck

To whom it may concern, which is everyone!

My husband and I are dismayed at the amount of time and money spent to ruin a successful American company that is providing jobs, helping the economy, etc. It appears we have been pulled in to favor competitors. This is not governments job.

As other companies are developing software etc. it appears to even us as novices that they aren't going to be the dominating force in the market. Settle. Let everyone get on with business and life.

We can not help wondering if we paid as much attention to our foreign policy as we do to stopping an American business company if we wouldn't be a lot better off.

Pouring money and most of their efforts into law suits can ruin any company. And why? Let's settle and move on.

Thank you for your help in this matter.

Hi, I would like to add my opinion that the proposed final judgment in United States vs Microsoft case is insufficient and lacks many corrective actions especially in the area of use of monopoly power to control a market. Microsoft is and has been reacting to the growing use and popularity of Java and cross-platform Java tools to squelch its use by creating incompatible knock-off versions that break the “write once and run anywhere” (multi-OS) support, leveraging their 95 desktop OS market monopoly to create market dispersion and trying to kill any form of competition against their OS/Application monopoly. Microsoft could take Java and make it better and run faster on their OS/platform (Intel) without breaking compatibility which would represent some amount and form of goodwill towards the overall computing market being the huge monopoly that they are today. Instead they are sore losers and are leveraging every ounce of energy they have to preserve their monopoly by pushing, through their huge marketing voice, that they have a better computing methodology (so what if it only runs on our OS), stifling competition and steering the market into a Microsoft and MS partners only environment.

Usually, the open market that the US has proudly built takes care of monopolistic activities such as what Microsoft is doing with Java and their OS/Application integration but it is sometimes a slow process. Hopefully, with minor thoughtful action by the USDOJ in this case the ground

work will be laid to feed continuing innovation in the computing and high-tech markets in relation to monopolistic powers and allow the open market to correct itself. Regards,

Subject: Microsoft Settlement

To be as blunt as possible; Microsoft has proven itself time and again that they cannot be trusted. They’ve been caught lying in court, they’ve already exploited loopholes in remides from previous law suits (referring to the 1995 case) and they even attempt to craft remides that seruptiously benefit themselves (referring to the on-going case concerning the 100 or so school districts). Microsoft is evil. They aggressively pursue an anti-competative business strategy that hurts the computer industry. Their anti-competative acts, in the long run, hold back progress and innovation in the computer industry. For these reasons the Sherman Act was created, and rightly so.

I believe Judge Jackson saw exactly this, that Microsoft is evil and untrustworthy, and concluded that the only real way to protect the computer industry is to break-up Microsoft. It is my belief that a broken-up Microsoft would not only protect the computer industry but protect Microsoft as well. Without any true competition Microsoft products would stagnat, and some believe that this is already happening. In the end, competition not any individual company, is the true innovator.

Thank you,

Hi!

I simply wanted to state that in my opinion the proposed settlement in the MS case is absolutely unacceptable. It doesn't take into consideration the constant threat MS has posed and is posing against its competition, and it will instate MS's suppressive

monopolistic behaviour as an acceptable economic outcome in this market segment. This suppresses innovation, because innovation has to be a chance given to everybody instead to only one large company (which in fact hardly ever innovates but uses its monopolistic and financial power to stifle anyone else's innovative thoughts or products). Let's give Microsoft the same treatment they have given everyone else in the last 10 years; control their every move (as you did when IBM had its monopoly back in the 60s and 70s) and force them to play by the rules which they otherwise will surely be not. They've always found some backdoor, and this settlement is full of backdoors already!

With regards,
Phil

To Whom It May Concern:

I am responding to the recent law suit filed by AOL, through their Netscape deviation. This law suit alleges that microsoft brought unfair business practices to the browser market place. I consider this nonsense and an attempt on AOL's part to further disrupt Microsofts ability to develop new products and run its business effectively. The bottom line is that Microsoft was much more aggressive in the market place and infact had a better product for the user. AOL, is part of the group who influenced the investigation by the Justice department. This kind of corporate behavior using the legal system to bring down a competitor is very disruptive to our American corporate way of life and to the consumer. It is costly and counter productive.

Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

As a resident of South Carolina, I am writing to express my support of the settlement between Microsoft and the Justice Department. After three years of litigation, Microsoft and the government have settled a suit that has profound implications for all software developers and the rest of the IT industry.

For example, Microsoft has agreed not to retaliate against computer makers who ship software that competes with anything in its Windows operating system. The company has also agreed to document and disclose for use by its competitors various interfaces that are internal to Windows' operating system products.

Furthermore, a technical committee will be in place to make sure Microsoft is in compliance with the settlement, and aid in dispute resolution. I urge that you back off your pursuit of Microsoft, and go after companies like Wal-Mart who are destroying our communities.

Sincerely,
James A. Wood Jr.

MTC-00021756

From: Bill Y.
 To: Microsoft ATR
 Date: 1/24/02 11:43am
 Subject: Microsoft Settlement

Sirs:

I would like to comment on the proposed settlement in the Microsoft antitrust suit.

I find the proposed settlement both insufficient and unenforceable. Here are some justifications for that statement.

A) Not-for-profits fail to be represented. This essentially disenfranchises the second-largest operating systems group in the world (that being Linux) as well as the single most common web server software (that being Apache) as well as the most common file server (that being Samba). III(j)(2) specifies that non-profits need not receive API, Documentation or Communications Protocols, the proposed "relief from monopoly" actually—encourages—further monopolistic practices on the part of Microsoft.

B) Section III(d) allows Microsoft to determine who is to be permitted access to interoperability data (thereby allowing Microsoft to freeze out any up-and-coming competitor), thus ensuring that Microsoft will—continue—to be a defacto monopoly.

C) The final issue, enforceability, is due to the penalty clause should Microsoft violate the terms of the agreement. Simply stated, the sole penalty is that Microsoft would suffer, should they violate the terms, is to have the time duration of the agreement extended.

This would imply that Microsoft could accept the agreement in court, the judge could bang the gavel and close the case, and then Microsoft could literally rip up the agreement on the court house steps, because the only—penalty—for disobeying the agreement is to have the agreement extended in duration- which, if you're disobeying the agreement in the normal course of doing monopoly business, is no impediment to the monopoly business at all. That's no penalty at all.

Having followed the original trial case with great interest, I would recommend a far more severe penalty for Microsoft, including adding the following penalties: 1) adding significant fines (on the order of 10% of the total market value of Microsoft) 2) requiring, within 2 years, forced divestiture of the following business segments from Microsoft's core (operating system) business: -optional and office software -network / ISP services -mass media, entertainment services, entertainment devices 3) adding a penalty

that bars Microsoft from bidding on any government sales when in violation of the current agreement. 4) opening an investigation as to whether any of the responsible individuals at Microsoft committed actionable acts.

I would recommend the following documents as interesting commentary on the proposed Microsoft settlement. —An activist site- written by lawyers for the lay public:

<http://www.cciinet.org/papers/ms/sellout.php3> -Robert Cringely (noted computer commentator on P.B.S. and all-around smart guy): <http://www.pbs.org/cringely/pulpit/pulpit20011206.html>

From: Chris Dalla
 To: with a subject of "Microsoft Settlement"
 Date: 1/24/02 11:47am
 Subject: Microsoft settlement

As an individual who has been involved in the field of personal computing almost since its inception, and as a U.S. Citizen who believes that the unbiased administration of justice, above all else, should be the primary end goal of our court system, I would like it known that it is my firm belief that the proposed settlement in the case of the United States v. Microsoft does not levy sufficient punitive action against Microsoft. One of the founding precepts of our nation is that all citizens or entities will be treated equally and dispassionately in the eyes of the law. The market influence, bankroll, and corporate size associated with Microsoft and Bill Gates should in no way except them from just punishment for wrongdoing. For years, Bill Gates and Microsoft have been leeching the vitality out of the field of personal computing, unfairly wielding their market influence to the detriment of their competitors, and conducting business in a manner that is not in the best interest of the public. The time is now to send a message, not only to Microsoft and Bill Gates, but to big business everywhere that the sort of bullying, whiny business practices which Microsoft has established as its standard operating procedure are unacceptable. Acceptance of this settlement does nothing more than send a clear signal to big business, and to the world in general, that our court system is really interested in nothing more than finding in favor of the highest bidder. Furthermore, I feel that this settlement is likely to set a precedent which is could easily to hinder the court's ability to hand down a strong judgement in the future, should a similar case arise in the months or years to come.

Thank you for your time.

MTC-00021762

From: Tim Poschel
 To: "microsoft.atr(a)usdoj.gov"
 Date: 1/24/02 11:47am
 Subject: Microsoft Settlement

My experience of Microsoft is a company that provides tools and business agreements that encourage smaller companies to endeavor to create new technologies and new markets. Unfortunately, when those markets begin to reach a status that would truly be economically advantageous to smaller companies and their shareholders, Microsoft apishly integrates inferior versions of the technology into there operating systems and declare them "innovation". Whether the motivation is malice or fear, the impact is the same.

I've not been closely following the details of the DOJ's case against Microsoft. While I agree with the findings of the District and Appellate courts that Microsoft engaged in illegal practices, I believe the proposed final judgment in the case is weak and ineffective. I comment here with reservation, as I typically embrace a free trade stance in which government has an extremely limited roll in the function of business. Truly, I believe governments prosecute monopolies because they want to eliminate their own competition. As it is, the previous administration's handling of the case was a root cause in the burst of the .com bubble effectively committing one of the largest destructions of personal wealth in modern history. Although the decline in technologies may have been inevitable and warranted, I don't believe the government should have been the trigger.

As the lines between networking and operating system continue to blur, however, I believe the government has a roll in enabling free trade in the computer technology arena. Specifically, the proposed final judgment should include the following remedies:

(1) Microsoft should be mandated to provide at no fee, open source licensing of all operating system code including networking and middleware protocols, device drivers, etc.

(2) Compliance should be monitored and enforced by external independent audit. Operating systems—specifically networking and middleware stacks—comprise a "software bus" structure that enables real innovation and competition to occur.

Requiring Microsoft to release these would be similar to requiring the AT&T of old to publish standards on transmission voltages, switch requirements, dial tones frequencies, etc. As to compliance, I frankly don't trust Microsoft to self-police; not out of malice, rather out of incompetence.

Thank you for allowing me to comment,
 Timothy Poschel

I completely oppose the settlement proposed by the States against Microsoft because:

a) It is purely driven by the personal goals of the companies rather than the needs of the consumers. I being a consumer, feel, I have all the choices in the market to run any OS I want or any applications I want

b) Killing Microsoft is just going to create another one in its place under government sanction

c) All is fair, in Love, Business and War.

d) This will set a bad precedence, as any unsuccessful company, can gain market share by suing the market leader.

Please consider SUN, AOL, ORACLE, IBM. Their track records aren't any better than Microsoft.

Thanx for giving the opportunity to voice our opinions.

A Happy Consumer.

 Subject: Microsoft Settlement

I would like to state my disapproval of the Microsoft Anti-Trust Settlement:

1) With Regards to Microsoft settling by giving computers and software to schools:

A) Allowing Microsoft to buy it's way out by getting a wedge into a market where it has been unsuccessful in the past is not a good Idea in my opinion

B) At the least, Microsoft should be forced to give Money instead of forcing the schools in question to use Microsoft or gain no benefit from the settlement

2) So long as their "Dubious business practices" are more profitable than "playing

fair" they will continue to use their monopolistic advantage to force out competitors in all fields that they choose to enter.

A) Example: Windows XP. XP, due to it's design is almost like a petri dish for internet viruses. The TCP/IP Stack is completely open, allowing anything from the standard Microsoft attacking viruses to ones that allow a cracker(the malicious type of Hacker) to copy everything off of your computer and take complete control of it (I believe that this sort of virus may already exist, but I think they mostly require that a Trojan program(a program that claims to be one thing but does something else instead, like a word processing program that actually formats the hard drive) to be run before they can work properly. With XP, I would expect that this could easily be incorporated in a worm like the "I Love You" virus. While I have not ever written a virus, I am quite familiar with scripting and network protocols, and a whenever you make something easier for the naive user, you also make it much easier for the malicious user, That would be why there are so many more Windows viruses as compared to Unix/linux viruses(in addition to the greater installed Windows base) I have even heard many claims that the vulnerabilities in XP are designed to make the Internet as it is today(Primarily using the TCP Protocol on top of IP(TCP/IP)) untenable due to virus proliferation. This could pave the way for Microsoft to introduce their own proprietary Protocol to go on top of TCP or even IP that would basically divide the internet into two pieces, Those systems running on a Microsoft Operating System, and those that are not, and those that are not could not access anything that was on a system running a MS OS.

The only reason that I would suspect that this is not indeed a Microsoft plot to force everyone on-line to use a Microsoft Operating system, is the fact that Microsoft uses Linux for their own web servers(Probably having found their own operating systems too fragile/bulky/high-maintenance for any serious/vital/mission-critical usage) This is not the first time Microsoft has tried something of this nature, and it won't be the last, unless they are shown that they cannot treat computers as their own private domain.

 Subject: Microsoft Settlement
 From: Philip Oliver

To whom it may concern,

Speaking personally as a self taught programmer of over 20 years—and seeing firsthand the computer industry rise from virtually non-existent to the powerhouse that it is today—I can safely say that Microsoft has been enormously productive and enormously —good— in this industry. It is safe to say that without Microsoft there

wouldn't be a PC software industry worth talking about. (No, I do not work for them.)

The success of Microsoft was not due to coercion. That is the realm of the government. Its success was due to simple marketplace success and the fact that its products, for whatever their faults, generally work very well and aid hundreds of millions of people globally, every day, in doing their jobs better, or to state it more dramatically, in doing their jobs period. Those who whine that they couldn't compete are overlooking two simple facts—(1) There are plenty of companies, an entire industry—, which—does— compete with Microsoft—(2) Microsoft has no moral obligation to “help out” those who cannot compete. This is business. Competitive products are a fact of life. So is making a profit, if a company wishes to survive.

It is not however all about competition.

My business, and the business of hundreds of thousands if not millions of other programmers, ultimately depends on the existence of widespread standards which facilitate our ability to work on any one of an enormous number of projects. The operating systems and office application software produced by Microsoft have provided such de-facto standards. It is a safe bet that the very software used by the government to attack Microsoft was written by Microsoft itself! Think about the meaning of that.

In short, the real question here is why the U.S. government is attacking one of America's greatest success stories. I say, personally, as an American citizen: I absolutely do not support any government anti-trust action against Microsoft, and I find it morally repugnant that any such action was ever taken. While the terrorists of the world conspired and successfully took the lives of thousands of Americans, and plunged the American economy into chaos in the process, the U.S. government was spending untold millions of dollars attacking its own companies. Rather than focusing on its actual job of protecting Americans, it showed itself completely incompetent to the job and is, in actual fact, aiding the very work the terrorists wish to accomplish: the undermining of America. This is a monstrously evil inversion of priorities on the part of the U.S. government, and the fact that it suffered grievously itself in the attacks is actually justice, rewarding it for its own inaction and incompetence. It's quite easy to attack Bill Gates, you know where he works and where he lives, and he probably doesn't even own a gun.

Where's Osama bin Laden?

In short—there are plenty of real threats against this country that ought to be taking 100% of the attention of its government. Stop attacking the lifeblood that makes the country worth defending in the first place. If there were such a thing, Bill Gates deserves a medal for the enormous good he and his company have achieved in a scant 27 years of existence.

Subject: Microsoft Settlement,
NO!

This settlement is not in the public interest. It is bad for competition in software by not placing protections in place for competing businesses. It does not properly prevent predatory practices by Microsoft because of its narrow definitions and generous provisions. It does not help improve competition in the software world (or for any other business Microsoft decides to get into) because it fails to prohibit Microsoft from using restrictive license terms. It does not protect consumers, because Microsoft can continue to make their product even more incompatible over time, requiring users to upgrade. It also fails to prevent Microsoft from punishing OEMs who attempt to provide consumers additional services or choices that are not in Microsoft's interests or that compete with Microsoft products.

Subject: Microsoft Settlement

I would just like to take a moment to voice my displeasure with the current settlement / remedy against Microsoft. The proposed settlement lets Microsoft off with no real punishment for using and abusing their desktop monopoly. Microsoft has leveraged their monopoly to unfairly stop competition. This can be seen in many different areas from the boot loader (restrictions against allowing other operating systems to be able to load with or instead of Windows, BeOS being a good example, through their OEM contracts), the browser (Internet Explorer and prohibitions against bundling Netscape in contracts with OEM manufacturers and even with Apple.

Another recent example is attempting to artificially lock out non-Microsoft browsers from MSN), add on products (Windows Media Player, the built-in DVD player on XP, the MP3 ripper on XP, all of which are inferior products to those sold by independent vendors, but because of their inclusion in the OS will likely cause consumers to put up with the limitations inherent to the included products rather than finding the superior replacements), default application preferences (Windows uses various methods to define what the default application will be for a given file extension, and it is often extremely difficult to change or remove the preference of using a Microsoft application over any alternate program, Programming API (Microsoft maintains

closed Application Programming Interfaces for its products, but the greater problem is the frequency with which they are willing to change underlying code to leverage monopoly power, this was seen with Dr. DOS, with Internet Explorer, and frequently crops up as incompatibilities between OS versions, which force users to upgrade to keep their programs running), file formats (the proprietary and constantly changing file formats for Excel, Word, and Powerpoint, which frequently force upgrades to Microsoft Office since the newer versions are incompatible with earlier versions [note that this has been less true since Office 97]), and version upgrades (Windows 95, 98, 98SE, ME, NT, 2000, and XP. Most of these have simply been bug fixes of the previous versions, and in most cases it was impossible to obtain these bug fixes without upgrading to the newer version which typically introduced new features along with the bug fixes which would create further instability in the system. Additionally Microsoft has canceled service packs for systems in order to force upgrades. Service Pack 7 for NT was canceled, leaving many to apply hundreds of hot-fixes to achieve a secure/stable system). Given the numerous and varied ways that Microsoft is using and perpetuating its monopoly a much stronger judgment should be created. I see a whole host of options from not allowing Microsoft to further integrate other applications into their OS, and in fact forcing them to strip out many of their current add on products, open sourcing their APIs or forcing them to keep their APIs open to vendors who would like to create compatible products, forcing continued maintenance of OS releases, splitting the company to keep the integration for allowing Microsoft to be the single source for all computer programs, limiting their ability to lock out other vendors with OEM contracts. Given Microsoft's proven guilt in this case and non-compliance with previous anti-trust violations I can only hope that this time a more serious punishment will be tendered. Microsoft should be allowed the freedom to innovate, but they should actually have to be innovative as opposed to simply leveraging out their competition.

I thought the purpose of the anti-trust laws was to protect U.S. consumers from harmful practices by businesses. I also thought the

beauty of our system was that companies would battle head-to-head for markets based on the quality and price of their products. The consumer would then benefit from these "fair fights". It seems to me that it is not in accord with this spirit that one company can gain an advantage over another, who is beating it in the marketplace by offering superior products and prices, by unleashing a barrage of lawyers. It also seems to me that is what has happened in the Microsoft case. Microsoft should not have been punished for being innovative and offering good products at good prices. But that is what happened. To end the matter, the company agreed to terms which should be acceptable to all but their competition. Surely, the competition would prefer to have the market to themselves, and will continue to press any advantage to harm Microsoft. The government should not be a party to such business antics. For the record, own both Microsoft and AOL-TW stock...and more of the latter than the former. But fair is fair, and I think the ultimate aim of our elected officials should be that they are fair to all citizens. Thanks for the opportunity to comment.

Under the Tunney Act, I wish to comment on the proposed Microsoft settlement.

I agree with the problems identified in Dan Kegel's analysis on the World Wide Web at <http://www.kegel.com/remedy/remedy2.html>. I also agree with the conclusion reached by that document, namely that the Proposed Final Judgment as written allows and encourages significant anticompetitive practices to continue, would delay the emergence of competing Windows-compatible operating systems, and is therefore not in the public interest. It should not be adopted without substantial revision to address these problems.

I fully support the settlement. I think it gives the small amount of justice that was needed and still allows Microsoft to develop great software. Microsoft has been bogged down now for a couple years working on this lawsuit that never should have happened anyway. Microsoft is a good company and is providing great solutions for many customers. The fact that their product is better and more people use it should not be case for litigation. It is time for the Government and Microsoft to be done with this, as there are more important things in the world to accomplish right now, like supporting the war on terrorism.

MTC-00021792

From: Todd Perumal

If microsoft were split up into two companies that would be great for the economy. Office is still a well selling product and with the success with office v.x for mac os x, it can easily be seen that if office didn't have to worry about cutting into profits for windows, it could be ported to every platform out there and thus stimulate the large market for productivity software where

microsoft is king. This is the same for other products that microsoft produces. Also, since windows would now be separate, it could compete with other operating systems. I do feel that first something needs to be done to even the playing field. Microsoft has been stealing ideas for the past 20 years from other companies and getting rich through bully tactics. It is time to give something back...like maybe having microsoft make windows open sourceall the other os'es are open source. Whatever the choice is, the industry will be much better if it were not dominated by one company.

Subject: Microsoft Settlement

Under the Tunney Act, I wish to comment on the proposed Microsoft settlement.

I agree with the problems identified in Dan Kegel's analysis (on the Web at <<http://www.kegel.com/remedy/remedy2.html>>), namely: *The PFJ doesn't take into account Windows-compatible competing operating systems *Microsoft increases the Applications Barrier to Entry by using restrictive license terms and intentional

incompatibilities. Yet the PFJ fails to prohibit this, and even contributes to this part of the Applications Barrier to Entry. <<http://www.kegel.com/remedy/remedy2.html>>

*The PFJ Contains Misleading and Overly Narrow Definitions and Provisions

*The PFJ supposedly makes Microsoft publish its secret APIs, but it defines "API" so narrowly that many important APIs are not covered. <<http://www.kegel.com/remedy/remedy2.html>>

*The PFJ supposedly allows users to replace Microsoft Middleware with competing middleware, but it defines "Microsoft Middleware" so narrowly that the next version of Windows might not be covered at all.

<<http://www.kegel.com/remedy/remedy2.html>>

*The PFJ allows users to replace Microsoft Java with a competitor's product—but Microsoft is replacing Java with .NET. The PFJ should therefore allow users to replace Microsoft.NET with competing middleware.

<<http://www.kegel.com/remedy/remedy2.html>>

*The PFJ supposedly applies to "Windows", but it defines that term so narrowly that it doesn't cover Windows XP Tablet PC Edition, Windows CE, Pocket PC, or the X-Box—operating systems that all use the Win32 API and are advertised as being "Windows Powered".

<<http://www.kegel.com/remedy/remedy2.html>>

*The PFJ fails to require advance notice of technical requirements, allowing Microsoft to bypass all competing middleware simply by changing the requirements shortly before the deadline, and not informing ISVs.

<<http://www.kegel.com/remedy/remedy2.html>>

*The PFJ requires Microsoft to release API documentation to ISVs so they can create compatible middleware—but only after the deadline for the ISVs to demonstrate that their middleware is compatible.

<<http://www.kegel.com/remedy/remedy2.html>>

*The PFJ requires Microsoft to release API documentation—but prohibits competitors from using this documentation to help make their operating systems compatible with Windows.

<<http://www.kegel.com/remedy/remedy2.html>>

*The PFJ does not require Microsoft to release documentation about the format of Microsoft Office documents.

<<http://www.kegel.com/remedy/remedy2.html>>

*The PFJ does not require Microsoft to list which software patents protect the Windows APIs. This leaves Windows-compatible operating systems in an uncertain state: are they, or are they not infringing on Microsoft software patents? This can scare away potential users.

<<http://www.kegel.com/remedy/remedy2.html>>

*The PFJ Fails to Prohibit Anticompetitive License Terms currently used by Microsoft

*Microsoft currently uses restrictive licensing terms to keep Open Source apps from running on Windows.

<<http://www.kegel.com/remedy/remedy2.html>>

*Microsoft currently uses restrictive licensing terms to keep Windows apps from running on competing operating systems.

<<http://www.kegel.com/remedy/remedy2.html>>

*Microsoft's enterprise license agreements (used by large companies, state governments, and universities) charge by the number of computers which could run a Microsoft operating system—even for computers running competing operating systems such as Linux! (Similar licenses to OEMs were once banned by the 1994 consent decree.)

<<http://www.kegel.com/remedy/remedy2.html>>

*The PFJ Fails to Prohibit Intentional Incompatibilities Historically Used by Microsoft

*Microsoft has in the past inserted intentional incompatibilities in its applications to keep them from running on competing operating systems.

<<http://www.kegel.com/remedy/remedy2.html>>

*The PFJ Fails to Prohibit Anticompetitive Practices Towards OEMs

*The PFJ allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system.

<<http://www.kegel.com/remedy/remedy2.html>>

*The PFJ allows Microsoft to discriminate against small OEMs—including regional "white box" OEMs which are historically the most willing to install competing operating systems—who ship competing software.

<<http://www.kegel.com/remedy/remedy2.html>>

*The PFJ allows Microsoft to offer discounts on Windows (MDAs) to OEMs based on criteria like sales of Microsoft Office or Pocket PC systems. This allows Microsoft to leverage its monopoly on Intel-compatible operating systems to increase its market share in other areas.

<<http://www.kegel.com/remedy/remedy2.html>>

*The PFJ as currently written appears to lack an effective enforcement mechanism.

<<http://www.kegel.com/remedy/remedy2.html>>

I also agree with the conclusion reached by that document, namely that the Proposed Final Judgment, as written, allows and encourages significant anticompetitive practices to continue, would delay the emergence of competing Windows-compatible operating systems, and is therefore not in the public interest. It should not be adopted without substantial revision to address these problems.

Sincerely,
J. David Suminsky

Subject: Microsoft Settlement

I am an Electrical Engineer with 20+ years in hardware and software designing. I have seen the birth of both the MSN browser and

the Netscape browser. The computer market has and is supported by customers that like friendly and intuitive computers. Early computers were very unfriendly and not intuitive. They intimidated the user. Software developers have been known to say the user is a dummy when really they were the dummies. Why software designers are. The control mechanism of the computer is the software which the software person designs, and we the user try to logically use the computer. If the mind of the software designing person is logical the logical mind of the user can easily use the computer. Consequently, the software designers mind or the computer user's mind is not logical. Which one is illogical? Through many reasons job security is not high inside Corporate America. Therefore, the designer adds complexity in his design to prevent other designers from taking their jobs away. Then only the original designer has the life long support of the design. Through Corporate America lay offs a very inexperienced new illogical designer must take over support of the old illogical design, and the logical mind of the computer user, we, must tolerate to be connected and use the computer. I received the following message by e-mail the other day: Some days this story rings true! An unemployed man goes to apply for a job with AOL or Microsoft as a janitor. The manager there arranges for him to take an aptitude test (Floors, sweeping and cleaning). After the test, the manager says, "You will be employed at minimum wage, \$5.15 an hour. Let me have your e-mail address, so that I can send you a form to complete and tell you where to report for work on your first day. Taken aback, the man protests that he has neither a computer nor an e-mail address. To this the MS manager replies, "Well, then, that means that you virtually don't exist and can therefore hardly expect to be employed. Stunned, the man leaves. Not knowing where to turn and having only \$10 in his wallet, he decides to buy a 25 LB flat of tomatoes at the supermarket. Within less than 2 hours, he sells all the tomatoes individually at 100% profit. Repeating the process several times more that day, he ends up with almost \$100 before going to sleep that night. And thus it dawns on him that he could quite easily make a living selling tomatoes. Getting up early every day and going to bed late, he multiplies his profits quickly. After a short time he acquires a cart to transport several dozen boxes of tomatoes, only to have to trade it in again so that he can buy a pick-up truck to support his expanding business. By the end of the second year, he is the owner of a fleet of pick-up trucks and manages a staff of a hundred former unemployed people, all selling tomatoes. Planning for the future of his wife and children, he decides to buy some life insurance. Consulting with an insurance adviser, he picks an Insurance plan to fit his new circumstances. At the end of the telephone conversation, the adviser asks him for his e-mail address in order to send the final documents electronically. When the man replies that he has no e-mail, the adviser is stunned, "What, you don't have e-mail? How on earth have you managed to amass

such wealth without the Internet, e-mail and e-commerce? Just imagine where you would be now, if you had been connected to the Internet from the very start!" After a moment of thought, the tomato millionaire replied, "Why, of course! I would be a floor cleaner at AOL or Microsoft!" ;;;Moral of this story: ;;; 1. The Internet, e-mail and e-commerce do not need to rule your life. 2. If you don't have e-mail, but work hard, you can still become a millionaire. 3. Because you got this story via e-mail, you're probably closer to becoming a janitor than you are to becoming a millionaire. 4. If you do have a computer and e-mail, you have already been taken to the cleaners by AOL and Microsoft. I would like to see Corporate America stop laying off and firing their workers for making more money and saving themselves from becoming the next EMRON. Corporate America needs to work together, especially AOL & Microsoft. Take the best of the best designs and work on them together. Otherwise, a new and smaller company will win favor over the computer user and job security at AOL & Microsoft will become reality... I have never used the Netscape browser that much, but have used the MSN browser a lot. The truth is I like what I've used and know best MSN. I don't like Netscape a change I would have to learn new things. My world is very busy. Therefore, say "I do" and get hitched the Netscape and MSN browser. It should be required that this integrated browser be in compliant to, none other, a window type operating system. I believe AOL will be the first to disagree and Microsoft will agree. It is time for some attitude adjustments from AOL. Microsoft has been a good sport, and I'm sure Bill Gates will do what best for science and technology. We all want a logical world to live in and work in. Design out all complexities by taking the extra time to simplify. Give the working people sense of job security, and will be more open to simple designs they can share with management.

Subject: AOL accusations

As a subscriber to AOL I must submit comments in defense of Microsoft. For the last several versions, certainly AOL6.0 and 7.0 their Netscape browser has been conspicuously absent from the scene. Earlier versions queried the user as to which browser they wished to use—Microsoft Internet Explorer or Netscape. Also Netscape appeared as an icon on the desktop. The last two AOL versions do not offer the choice. As a result I end up using Internet Explorer, as it is available with the basic Windows package. It is a fine product and I am happy with it. There are numerous aspects of AOL that I and many others do not like and products from Microsoft would serve the user better if AOL would offer the option, such as a decent word processor. It seems strange that AOL would file a suit when they fail to promote their product. Or is this a ploy to serve a basis for suit against Microsoft. The question you, DOJ, should be addressing is what the benefit is to the consumer not wining companies that are in search of a

quick buck for themselves and their attorneys! Maybe that's too much to ask a government agency.

Subject: Microsoft Settlement

Dear DOJ authorities, All through this long and drawn out court action involving Microsoft and their business practices, I must say, I have been thoroughly and utterly appalled at the way in which it has been used to do one thing. Bring down Microsoft. Period. It makes me ashamed of the way this countries judicial system has been used and abused to further the ends of Microsoft's direct competitors. No one is denying that Microsoft's strategies aren't aggressive in the market place, but did they do something illegal that warranted this crusade to bring them down. NO. I don't think so for a minute. We, the people, created and molded the economic structure that a retailer has to contend with. From childhood on up, we learn about this arena... look for the best bargain, get the most for your money, "shopping" is the catch word of our free enterprise. The american public as consumers are demanding and voracious in their expectations of retailers to "give" them reason to give them their business. It is this consumer attitude that is driving this whole issue.

You ask a grandparent, or better yet, a great-grandparent, about the market place in their day. You'll hear about quality products, good service, friendly, neighborly relations, and something that is all but extinct now, loyalty. Even I can remember a time when my dad would do business with one retail establishment, and continue to do so as long as they gave him a fair and honest deal.... out of loyalty. Many consumers did the same. This generation has been taught loyalty to one thing...getting the MOST for their money. Never mind if the offer of a retailer IS a quality product, if it MEETS their needs, or is at a FAIR price. They want "Added Value", and they "shop" for it. Literally, pitting retailer against retailer to "battle" for their patronage.

I can give you a very distinct example. Look at the photocopier/office equipment industry. I entered it as service technician in '89. At that time, sales was the bread-winning component of the business. Sales made a very tidy revenue, while service was much a necessary by-product of selling. In a very competitive market, the customers

demanding more to give their business, each company dropped sales prices to beat out their competitors. Only problem is, did consumers stop at a "fair" price? No way. They knew the position they had the retailers in, and squeezed. By about "92, office equipment companies were selling equipment for almost no profit. So, what to do? The customer's appetite for "added value" didn't stop or wane. Service rates and quality picked up the baton. Companies started offering "competitive" rates for service, and that worked. For a while. A company would sell, place, a copier, or very little profit, and look to service to make the revenue. But, once again, the consumers didn't relent. More. More. Until, the companies are now selling, and servicing machines for relatively so little that they barely stay in business. Why do I go to length to describe this? Because, like all retailers, this is the arena in which Microsoft deals. Just like everybody else in business today. Including, Sun, Oracle, AOL, and the rest. What did Microsoft do? They gave "added value" to the customer. NO different than any other retailer has, and is, doing. When you go to the grocery store, and buy a bottle of soda, and it is offered at "buy one, get one free". They gave you something more, something free, to entice you to buy. When the car dealer, "throws in" an option, say, sporty wheels, or the racier interior, at no extra cost, to entice you to buy. So, Microsoft gave customers something extra, at no extra cost, a browser, to entice them to buy.

HOW IS THAT DIFFERENT?! For crying out loud, there is a tire store retailer who gives the customer \$100 in free BEEF to get their business. Microsoft is larger, and more successful than a lot of companies.... yes. That is not a crime. Microsoft could afford to do it. That is not a crime. No doubt, it had the desired affect. It drew customers. The competitors, then, had a choice. Like any other retailer, in any other industry, they needed to innovate, strive to find ways to make their product more appealing than Microsoft's. Or, not. No doubt, it is a hard position to be in. Exactly, like my illustration of the copier industry. Microsoft didn't create the consumer/retail game, but like all others, they learned to play in it. But now, the competitors found a third choice. To use the judicial system to do something they were failing to do in the market place. Beat Microsoft. I could go on. But, enough.

The retail arena Microsoft, and all other companies, deal in every day is not an easy, lackadaisical one. It is very competitive to say the least. Microsoft did nothing that no one else is not doing. The main difference may just be that Microsoft is larger than many, and so was more effective because of it. But, being successful, and growing, is what the american dream is all about. What? Is there now a limit put on it? Oh, you have grown enough now...stop and don't do it anymore..... Nothing Microsoft did, is anywhere near deserving harsh judgement, or much less, anything on the scale of "breaking them up". Get these competitors out of the courtrooms, and send them back to their drawing rooms. If they spent more time there. Maybe. Just maybe. They might "make" or "sell" their products better, and win in the

marketplace that way.... Gain back the dignity of our Judicial system. Stop catering and listening to biased, vengeful retailers with less than honorable agendas! Thank you. Brian Riel MSN Photos is the easiest way to share and print your photos: Click Here

Subject: Microsoft Settlement
To: microsoft.atr@usdoj.gov
Subject: Microsoft Settlement

I wish to comment on the proposed Microsoft settlement. First, I whole-heartily agree with the long list of problems with the settlement which have been identified by Mr. Dan Kegel. Mr. Kegel's analysis of the Proposed Final Judgment (PFJ) is on the Web at <http://www.kegel.com/remedy/remedy2.html>. In particular, I agree that as written the PFJ, ? Contains misleading and

overly narrow definitions and provisions, ? Fails to prohibit anticompetitive license terms currently used by Microsoft, ? Fails to prohibit intentional incompatibilities historically used by Microsoft, ? Fails to prohibit anticompetitive practices towards OEMs, and ? Appears to lack an effective enforcement mechanism. Second, I believe the settlement will actually help increase Microsoft's monopolistic dominance in the desktop Operating System environment—by actively placing a great many additional Microsoft platforms into the education field, one of the few areas where Microsoft does not currently maintain an overpowering monopoly. Allowing Microsoft to flood the education field with copies of their software is not a significant, punitive measure—as the real dollar cost to Microsoft will be only a small portion of the claimed “market value” of this software, and more importantly, it will only serve to solidify Microsoft's market stronghold—making it that much harder to curb the anticompetitive practices that brought about the lawsuit in the first place! In summary, I feel that the Proposed Final Judgment allows and encourages significant anticompetitive practices to continue and is therefore not in the public interest. It should not be adopted without substantial revision to address these issues.

Please see that is forwarded to the Offices of the states attorneys general involved in the case. Microsoft is a dishonest company, and we should all think long and hard before doing business with them. From “DOS ain't done ‘till Lotus won't run”, to the stealing of Stac's patented algorithms in order to run them out of business, to putting code in the Windows 3.1 beta to detect if it was being run under anything other than MS-DOS and spit out an error message in order to drive a competitor out of business, to marking the opening of a new e-greeting card service by releasing a version of Outlook that sorted Blue Mountain e-greeting cards into the trash so users never saw them, they have shown they are untrustworthy. They also claim to have invented in-house every technology which they have copied from somewhere else, have payed people to write “independent” pro-Microsoft opinions to editors of newspapers and magazines and to Usenet, have created phoney “grassroots” groups (including “members” from non-existent towns and real but deceased people) to push for dropping the anti-trust case, and

have used the Business Software Alliance as a club to force copyright-infringing companies to switch all their Novell software to NT. They continue to pay computer science professors to exclusively teach Microsoft tools, fake evidence in a court of law, forbid OEM customers of Windows from buying and loading another company's third party software under threat of losing their Windows license (Netscape specifically), forbid OEM customers from developing competing software under threat of losing their Windows license (IBM OS/2, and HP OpenMail specifically), lay out plans to defeat hobbyist software by noting that it generally complies with accepted Internet standards so Microsoft can break these standards to prevent hobbyist software from inter operating with theirs. They charge OEMs the cost of a Windows license for each processor shipped, and once shipped a version of Kerberos that refuses to log into any but a Microsoft Kerberos implementation. They create misleading “Can Your Palm Do That?” ads referring to features that Palms have by default and are costly add-ons to WinCE devices, and appended an advertisement written in the first person (I recently..) to MSN users’ outgoing email's without their knowledge. They have also required that corporations purchasing computers with Windows licenses must purchase additional licenses to reinstall these same computers with the corporate standard desktop, as well claiming that the default install of NT 3.51 met C-2 security standards when the rating is only made for a single physical installation and the installation which earned the rating had no network connection or removable media. They later claimed that NT4 met C-2 standards when it had not been tested simply because they had said NT3 met the standards. In the past they claimed that you do not need a trained network administrator to run a Windows-based network, claimed that DOS 6.0 was completely stable and didn't crash like DOS 5.0, claimed that Windows 95 was completely stable and didn't crash like DOS 6 and Windows 3.1, claimed that Windows 98 was completely stable and didn't crash like Windows 95, claimed XP is secure despite enabling by default a known security hole. Microsoft has shown itself to be untrustworthy. Over and over again. But then you know that, because Bill Gates lied under oath, to a judge, and submitted faked video as court evidence. Microsoft does not need to be fined. Nor do they need to be split into 2 or more companies. They need to be abolished, destroyed, disbanded and the major executives banned from working in the tech sector until after 2025. Your “settlement” is a joke and travesty. Pretend you are representing the people long enough to finish this case.— “There won't be anything we won't say to people to try and convince them that our way is the way to go.”—Bill Gates.

Dear Ms. Renata Hesse:

Please put a stop to the economically-draining witch-hunt against Microsoft. This has gone on long enough. Microsoft has already agreed to hide its Internet Explorer icon from the desktop; the fact is, this case against Microsoft is little more than "welfare" for Netscape and other Microsoft competitors, with not a nickel going to those supposedly harmed by Microsoft: the computer user. This is just another method for states to get free money, and a terrible precedent for the future, not only in terms of computer technology, but all sorts of innovations in the most dynamic industry the world has ever seen. Please put a stop to this travesty of justice now. Thank you.

Sincerely,

Betty Jean Gobin

Subject: Microsoft Settlement

Dear Sir or Madam,
The settlement achieved between Microsoft, the Department of Justice, and a bipartisan group of State Attorneys General in the original antitrust case against Microsoft is in the interest of consumers and the high-tech industry. I ask that it be accepted by the Court. At a specific level the Revised Proposed Final Judgment ("RPFJ"), represents over 5 weeks of dialogue between Microsoft, the United States, and the plaintiff States undertaken at Court's own instruction that the parties "steadfast in their efforts to reach a mutually agreeable resolution." According to neutral experts, this effort culminated in a RPFJ that goes considerably further than the Court of Appeals' decision could be reasonably said to warrant. For example, the RPFJ offers relief on the issue of "client-server interoperability", which was not addressed either at trial or by the Court of Appeals. At a general level, continuing litigation in this case or similar ones, such as that filed by AOL on Tuesday, January 22, are a detriment to consumers and the high-tech industry because they require that massive

resources be diverted from market place competition and cooperation. It is engagement in these two situations that advances the rich benefits technology brings to our lives both at home and work. I would welcome the opportunity to discuss this with you or to respond to your inquiries. I may be reached by phone at work: (513) 745-2157 or home: (513) 941-3680 or by e-mail: lenb@gasullivan.com.

Subject: Microsoft Settlement

Hi,
I have been following the Microsoft hearings for the past few years and the proposed settlement would do nothing to curve the activities of the software giant. In fact, parts of the proposed settlement would actually help Microsoft ensure their market dominance. This is neither fair to competition or in the interest of the antitrust laws. Microsoft has proven time and time again that they cannot conduct themselves in a law-abiding and ethical manner, for which they must be punished for. They need to realize that they cannot do anything they wish because they own the largest market share. There are several alternative operating systems that millions of people use everyday which deserve to be used with full confidence that they will work with the rest of the computing world. If Microsoft had their way everyone would be forced to use their products without being given a choice. One example of this is their recent lobbying to get the Music industry to use the Microsoft Media Player file format for all audio CDs. This would ensure everyone who buys a CD would install the Media Player application on their computer, forcing out competing products. There is absolutely nothing wrong with the current AIFF audio file format that CDs come in today, which is an open format that hundreds of applications support, not a proprietary format that only Microsoft supports. There are literally hundreds of cases like this where Microsoft uses their market dominance to ensure their competition is unfairly stifled. Please make Microsoft accountable for their illegal actions and police them in the future, since they are obviously unable to do it themselves.

Subject: Microsoft Settlement

Dear Sirs,

I'm writing to say how appalled I am by the DoJ's proposed settlement with Microsoft. As far as I know, all of the findings of fact were upheld so why are you capitulating to Microsoft like this?!? You act like the DoJ was the loser here, not Microsoft! Haven't you paid ANY attention to what Microsoft has been doing with Windows/XP and their ".Net" plans? They're working hard to extend their monopoly and to shut out all other companies.

I recently upgraded my Internet Explorer browser to version 5.5 and I found even MORE examples of Microsoft promoting its monopoly. I mis-keyed the web address for a website I was wanting to look at. Instead of bringing up the old "Cannot find..." screen, it took me to an MSN screen where I could search for the website I was trying to find. I've never used MSN to look up websites before so there's no reason why IE 5.5 should have taken me there.

This is just another way that Microsoft is trying to extend their monopoly by forcing everyone on the Internet to use their services. Windows/XP is even worse. Microsoft is forcing people to use drivers that THEY approve. How easy it is for Microsoft to simply refuse to approve drivers for competing devices and services (or to simply delay them for long periods of time to give themselves a big advantage in time)! They should NOT be allowed to force only using their approved drivers. Or, if there's a valid reason why only approved drivers can be used, there should be an independent group that provides this approval but, no, we've got the fox guarding the henhouse here! And you're just encouraging them by giving them this weak slap on the wrist. Now that they know that they have nothing to fear from the DoJ, I'm worried about what Microsoft will do to extend their monopoly next!

I tend to think that even the opposing states' proposed remedies to the Microsoft settlement don't go far enough. Still, it's MUCH better than the DoJ's proposal. I think that the opposing states' remedies should be considered the absolute minimum agreement that should be considered! I still wouldn't be happy with it but at least it wouldn't stink to high heaven like the DoJ's capitulation does. You'll ignore this note, just like you'll ignore all of the other notes that disagree with your subservience to Microsoft, but I had to at least voice my opinion.

I guess the thing that disappoints me the most about this is that I've voted for Attorney General Ashcroft in every election where I COULD vote for him. I've met him and campaigned for him in a few different elections. I was thrilled when he was nominated for Attorney General, all the way up until I heard about the DoJ's capitulation to Microsoft. Maybe he isn't the person who is making all of these decisions about giving in to Microsoft but I know that he could right this wrong if he chose to do so. I know that he's a man of integrity so I am totally baffled why he would let Microsoft get away with electronic murder (of Netscape) here. There are certainly other matters which are more important than this. Nevertheless, this is important enough to me that if this proposed

settlement gets enacted as is then I'll never be able to vote for Governor/Senator/ Attorney General Ashcroft again with a clear conscience and will have to consider campaigning for his opponents. I'm so disappointed in him...

Sincerely and sadly,
Glen Guenther

MTC-00021831

From: Tucker, Chad
To: Microsoft ATR
Date: 1/24/02 12:02pm
Subject: Microsoft Settlement

To whom it may concern:

I am writing to express my extreme displeasure with the Department of Justice's antitrust case against Microsoft.

As a professional economist, I can state unequivocally that the products manufactured by the Microsoft corporation contribute immensely to my productivity and to the productivity of my coworkers. I use Microsoft software everyday, and the forecasts and reports I produce are much better off as a result. None of the software in competition with Microsoft's Office Suite, and none of the operating systems in competition with Microsoft's Windows, are capable of achieving the results that I must have in order to satisfy my company's clients.

As a professional economist, I can also state unequivocally that the antitrust laws are based upon a profound misunderstanding of the factors that govern the economy. Unless the government grants a monopoly to a corporation, that corporation cannot become a monopoly. Microsoft's large market share is not due to any "restraint of trade" or anything else of which the DoJ is accusing it, but rather it is due to its superior products. Microsoft sells many copies of its software because consumers of software recognize that its products are worth buying, and for no other reason. The DoJ suit threatens to punish Microsoft for no reason other than because Microsoft excels at giving its customers what they want. Its customers will be hurt to precisely the same extent as Microsoft itself if antitrust action is taken against it.

And, based on my knowledge as a professional economist, I can state unequivocally that the Microsoft antitrust suit is odious in another area: morality. The products produced by Microsoft, and the company itself, are the rightful property of its shareholders and of no one else. The Department of Justice has no right to abrogate the rights of the owners of the Microsoft corporation in demanding that it change its

products or be split into separate companies. That the products of a man's mind (in this case, Bill Gates' and Microsoft's programmers' minds) are rightfully his, is not only the very basis of American society; it is the exclusive basis of a just and moral society. The DoJ lawsuit against Microsoft undermines the most fundamental underpinnings of American capitalism, and it is a slap in the face to anyone who has ever produced anything of value.

And thus, as a professional economist, I urge you to reconsider your antitrust case against Microsoft. Don't punish Bill Gates for having created something of great value to the vast majority of computer users; rather, commend him for a job well done.

Sincerely,
Chad Tucker

Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

The antitrust case against Microsoft has been resolved, and I want to give my support to this agreement. It has gone on far too long, and should never have happened in the first place. I cannot believe Microsoft had a suit brought against them. Bill Gates, through Microsoft, has done so much for this country. Microsoft has provided thousands of jobs directly, and correspondingly, auxiliary jobs. Our government is trying to find ways to rebound from the recession, yet punishes the one company that is the major engine of our economy. Further, competitors of Microsoft, not consumers, instigated this suit. I could go on and on, but I want to reiterate my support of this agreement so we can get back to business. Microsoft has also agreed to a great many demands of the Department of Justice. Microsoft has agreed to terms that extend well beyond the products and procedures that were actually at issue in the original suit. Microsoft has agreed to document and disclose for use by its competitors various interfaces that are internal to Windows' operating system products—a first in an antitrust settlement. Give your approval to this agreement. It is time to go forward and quit second-guessing judicial decisions.

Sincerely,
Viola Abraham

From: JimMiller@bluecrossmn.com@inetgw
 To: Microsoft ATR
 Date: 1/24/02 12:02pm
 Subject: Microsoft Settlement

I am writing to object to the proposed Microsoft settlement. To date, Microsoft has used unfair and illegal tactics to garner the vast market share of several software arenas, including operating systems, web browsers, and office software. In doing so, they have made their products the de facto standard in these areas. The proposed settlement does nothing to remedy these problems. In fact, by not forcing full sharing of APIs, file formats, and other key information, the settlement will further solidify Microsoft's monopoly on the industry. I strongly recommend that the settlement as outline NOT be accepted, and an alternative found that will "level the playing field".

 Microsoft Settlement U.S. Department of Justice

Dear Microsoft Settlement U.S. Department of Justice:

The Microsoft trial squandered taxpayers' dollars, was a nuisance to consumers, and a serious deterrent to investors in the high-tech industry. It is high time for this trial, and the wasteful spending accompanying it, to be over. Consumers will indeed see competition in the marketplace, rather than the courtroom. And the investors who propel our economy can finally breathe a sigh of relief.

Upwards of 60% of Americans thought the federal government should not have broken up Microsoft. If the case is finally over, companies like Microsoft can get back into the business of innovating and creating better products for consumers, and not wasting valuable resources on litigation. Competition means creating better goods and offering superior services to consumers. With government out of the business of stifling progress and tying the hands of corporations,

consumers—rather than bureaucrats and judges—will once again pick the winners and losers on Wall Street. With the reins off the high-tech industry, more entrepreneurs will be encouraged to create new and competitive products and technologies.

Thank you for this opportunity to share my views.

Sincerely,
 Roger L. Haler

MTC-00021837

From: Eric Schatzberg
 To: Microsoft ATR
 Date: 1/24/02 12:05pm
 Subject: Microsoft Settlement

I wish to express my strong opposition to the proposed settlement agreement to the antitrust action by the Department of Justice against the Microsoft Corporation. This agreement completely fails to prevent the strengthening of Microsoft's monopoly in software, let alone reduce it.

Microsoft's dominance of the operating system market is a perfect example of market failure resulting from path dependence effects and the economics of increasing returns, a phenomenon whose significance has been explained by the economist W. Brian Arthur. Microsoft clearly owes its market dominance to these effects, and not to the quality of its products, which are widely criticized by independent software experts.

Microsoft's interests are simply not identical with those of computer users. Users need simple, user-friendly software that does not require professional instruction and hours of frustration to master. Microsoft, in contrast, produces bloated, complicated, expensive and buggy software. Take word processing, for example. While the price/performance ratio of computer hardware has fallen by more than an order of magnitude in the past ten years, Microsoft Word has maintained its high price. I use a version of Word last updated in 1992, as well as the current version. Nine years of innovation have failed to improve usability, while adding a host of secondary features irrelevant to 90 percent of Word users. If there had been real competition in word processing software, I'm convinced that price would have decreased and usability would have increased. The economic consequences of this market failure are tremendous. Numerous studies have documented the failure of information technologies to increase productivity in any degree close to their potential. It is very difficult to quantify the economic losses caused by bad software, but every computer user knows the wasted hours spent getting such software to work properly. The original remedy, breaking up Microsoft into separate companies, at least would add some competition back into the software industry.

To: Microsoft ATR
Date: 1/24/02 12:02pm
Subject: Microsoft Settlement is bad for the country and the software industry.

Dear Renata Hesse, Trial Attorney,
The current settlement with Microsoft is unacceptable. The current proposed settlement would strengthen Microsoft's monopoly and that is in spite of the fact that Microsoft has been found GUILTY of maintaining its operating system monopoly in violation of section 2 of the Sherman Act. I would suggest at least the follow penalties for Microsoft as proposed by Dennis E. Powell in the article "Speak Now or Ever After ... Regret Your Silence". "Any remedy seeking to prevent an extension of Microsoft's monopoly must place Microsoft products as extra-cost options in the purchase of new computers, so that the user who does not wish to purchase them is not forced to do so. This means that for the price differential between a new computer with Microsoft software and one without, a computer seller must offer the software without the computer (which would prevent computer makers from saying that the difference in price is only a few dollars). Only then could competition come to exist in a meaningful way.

The specifications of Microsoft's present and future document file formats must be made public, so that documents created in Microsoft applications may be read by programs from other makers, on Microsoft's or other operating systems. This is in addition to opening the Windows application program interface (API, the set of "hooks" that allow other parties to write applications for Windows operating systems), which is already part of the proposed settlement.

Any Microsoft networking protocols must be published in full and approved by an independent network protocol body. This would prevent Microsoft from seizing de facto control of the Internet.

I then point out that if the national interest is at issue, as I believe it is and as the judge has suggested it is, it is crucial that Microsoft's operating system monopoly not be extended, and in this I quote the study released a year ago by the highly respected Center for Strategic and International Studies, which pointed out that the use of Microsoft software actually poses a national security risk. In closing, I say that all are surely in agreement that the resolution of this case is of great importance, not just now but for many years to come. This suggests a careful and deliberate penalty is far more important to the health of the nation than is a hasty one."

The recent suit by AOL regarding Netscape is a travesty. AOL purchased Nestscape at a very low cost, lwith full knowledge that Microsoft had the dominant position for a browser.

This move by AOL, on top of the cases being presented by the nine states that have not agreed with the settlement between the U. S. Government and the other states, is just another example of the bad faith that these parties have brought to the attempt to reach a fair and reasonable settlement. It is not in the best interests of the people of the world to prolong this debacle. Micorsoft has been a stabilizing force which allowed the entire world to communicate in a common language. The integration of the Microsoft Browser into Windows is a basic integration tool for the user. Much more effort is needed

by the computer user to use Netscape in conjunction with text programs and spreadsheets.

The entire case of the dissenting nine states, as published in the newspapers is clearly an attempt to gain competitive advantage for companies with strong political ties in the dissenting states.

I am neither a microsoft employee, nor am I a Microsoft stockholder.

Subject: Microsoft Settlement

As a concerned citizen it boggles my mind that the DoJ can even think that the current proposed settlement with regards to Microsoft's illegal use of a monopoly has even a chance at terminating that illegal monopoly and denying the defendants the illegally acquired market dominance that they have obtained. This proposal doesn't even take any direct measures to reduce the Applications Barrier to entry faced by any new entrant into the markets that Microsoft has already monopolized.

The court of appeals confirmed that Microsoft has a monopoly on x86 based PC OS's, and that the company's market position is protected by a serious barrier to entry, as well as that Microsoft was liable under the Sherman Act for maintaining it's monopoly via licensing restrictions placed on OEM's IAP's, ISV's and Apple Computer (re: JVM.) From these practices, licensing, etc Microsoft managed to strengthen the barrier to entry into its markets and weakened its competition (those that weren't put out of business.) Doesn't the judgement have to find a direct way to reduce those barriers to entry and increase competition to be meaningful?

Some examples of problems with the PFJ. Section III.A.2 allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system. Basically this lets Microsoft impose a PC tax on everybody who buys computers from large OEM's since no large OEM can afford to ship all their machines without windows on it.

Section III.B allows Microsoft to do anything they want to smaller OEM's. Don't the small OEM's deserve the same protection as the 20 largest? Is there something special about being 20th vs 21st? This section must give the same protection to all OEM's regardless of size. Also this section would allow Microsoft to continue leveraging its monopoly by offering "Market Development Allowances" (basically a discount) to OEM's based on the number of copies of X product sold by that OEM.

Sections III.F and III.G don't put an end to several of Microsoft's exclusionary practices towards ISV's. The Microsoft Windows Media Encoder 7.1 SDK EULA doesn't allow it to be distributed with any software that contains, or is derived in any manner (in whole or in part) from any software that is distributed as free software, open source software or similar licensing or distribution models. The EULA goes on to list anything licensed under GPL, LGPL, Artistic License, Mozilla Public License, Netscape Public License, Sun Community Source Public License. Should Microsoft be able to dictate that anyone who uses this piece of their software cannot also distribute other software? Almost every Windows API is shipped as an add-on SDK with associated redistributable components. Anything that wishes to use that API is effectively banned by the EULA from utilizing any free software and this penalizes all companies that chose to use Open Source as a method to distribute their program. This also harms products like Netscape 6 and StarOffice. On top of this the Microsoft Platform SDK makes it illegal to run programs generated by Microsoft Visual C++ on a non Microsoft Windows-compatible operating system.

We should also regulate how Microsoft licenses its products to non OEM's. This includes site licenses or "enterprises" and "enterprise licensing" as well as end user consumer licensing. Most of the "enterprise license" agreements have a strong semblance to per-processor licenses which were prohibited by the 1994 consent decree, in which Microsoft gets money for every computer that could possibly run a Microsoft OS not just the ones that are running it. These agreements are anticompetitive because they remove the financial incentive for individuals or departments to run non Microsoft software since you already have to pay for it. It's like insisting that everybody that has a car buy 4 Goodyear tires, even if you want to use somebody else's tires the Goodyear tires are paid for and you have to pay for them. How many people do you think would go buy the Pirelli tires then? The same is true with these licenses. End user license issues can be shown from MSNBC's NewsAlert software, which has a EULA which says "MSNBC Interactive grants you the right to install and use copies of the

SOFTWARE PRODUCT on your computers running validly licensed copies of the operating system for which the SOFTWARE PRODUCT was designed [e.g., Microsoft Windows(r) 95; Microsoft Windows NT(r), Microsoft Windows 3.1, Macintosh, etc.]. This makes it illegal to try running the software under WINE for instance which can run some windows programs under Linux. Yet the EULA states that this is illegal, hence the only legitimate way to use this software is to own a copy of Microsoft Windows of some form— they mention Macintosh, yet there isn't a mac version of this software.)

Isn't this practice anticompetitive? Why has no court fully examined information from the 1996 Caldera vs Microsoft antitrust suit, which clearly showed that there was sufficient evidence that Microsoft intentionally created incompatibilities in their Windows 3.1 product to discourage competition.

I think for the final judgement to be in the public's best interest we need to have the following.

1) ALL Microsoft API's, software hooks, etc must be public, and must be given to the public at least 6 months prior to release.

2) All Microsoft file formats must be also given to the public 6 months prior to use in a product.

3) All OEM's should be under the same restrictions, not just the top 20.

4) All Microsoft software licensing must allow for the software to be run on any validly licensed machine regardless of what OS is running on it. If the machine can run the software it shouldn't be prohibited from doing so by a EULA. Basically instead of Windows/Microsoft OS should be any Windows compatible OS.

5) Any "middleware" product should be replaceable by another competing "middleware" product. The ability to replace Java with Sun's Java is meaningless after .NET comes about. We must be able to replace .NET with another competing middleware.

6) Windows should include ANY machine that uses any part of the Win32 API (including X-Box, Pocket PC, Windows CE, etc.)

7) There must be an advance notice requirement with regard to ISV's regarding middleware. As it stands Microsoft could simply change the requirements just before the deadline and not inform the ISV's.

8) Competitors must not be prohibited from using the API documentation to build Microsoft compatible Operating Systems.

9) Microsoft must be required to list which software patents protect the windows APIs if any. Non disclosure on said patents should be considered the same as the granting of the actual patent to the public domain.

10) OEM's must be allowed to ship machines in any number with any OS on them without fear of retaliatory pricing on the part of Microsoft.

11) Microsoft discounts should not allow monopoly leveraging in any way shape or form. In other words any discount Microsoft chooses to offer must only be linked to the product being bought, and must be offered to any and every OEM.

12) There must be an active and effective enforcement mechanism (one that will also

make Microsoft want to fix their problems.) And no a fine of a million dollars a day isn't sufficient. That would be like fining Michael Jordan a dollar a day because of his Nike affiliation. Do you think he'd care about the dollar? Also there must be an effective monitoring system put into place to observe Microsoft's behavior, review all license agreements, review all OEM agreements, etc.

These things are necessary to protect the consumer. Real remedies must be implemented on a company that has blatantly broken the law. Real insurances must be made that they cannot continue to break the law.

Subject: Microsoft Settlement

Gentlemen:

I am a firm believer in free enterprise, but abuses of the system simply don't further free enterprise. Microsoft has engaged in tactics which are restrictive of markets and are bad for competition. As a principal in a web development firm, I have watched initiative after initiative which Microsoft has promoted as "progress" which have resulted in customers having less choice and being committed to inferior software and solutions. Its latest attempts, .NET and Passport, threaten to undermine the open standards of the web which have made it such a successful communications medium. .NET and Passport are closed technologies which, like EDI in the past, will restrict information flow in a costly and non-productive manner.

I urge you to reject the proposed Microsoft settlement.

Thank you.

Subject: Microsoft Settlement

To Whom It May Concern:

I feel the settlement regarding this case is much too lenient. It still allows for the preservation of the company's monopolization tactics. This was not the purpose of the suit. I feel ashamed to be living in a country where a large company's monopolistic market hold and tactics are considered outside the laws that affect all other companies. If the government cannot reign in this beast, then who can?

By not punishing this behemoth with more than what amounts to the court costs, there is no real punishment. Please reconsider your decisions before we are pledging allegiance to a flag with a Microsoft logo in each corner.

Signed,
John Folk

From: JB Bock
To: "microsoft.atr(a)usdoj.gov"

Date: 1/24/02 12:13pm
Subject: Microsoft Settlement
To whom it may concern;

The Proposed Final Judgment against Microsoft does not adequately address their monopolistic behavior. It does not stop them from "bolting" their applications as part of their software bundle, it does not require them to be penalized for their past monopolistic behavior and it does not offer a break-up or convincing regulation to stop their monopolistic behavior. A regulation team with 1/2 of the team represented by Microsoft is not going to sway their past behavior.

As someone who is involved in the technology industry and very well one day could be looking to start a company that competes with Microsoft, the thought is rather daunting if Microsoft is not permanently altered. Microsoft inherently is monopolistic in order to maximize profits. It has the ability and willingness to crush its competitors, quash America's entrepreneurial spirit and forever change the landscape of the software industry.

I think the proposed Microsoft settlement is not adequate because it fails to remove from Microsoft the gains made from its illegal activities, and it will be very difficult to implement, as opposed to such a structural remedy as separating Microsoft's browser development activities from the rest of the company (a relatively simple remedy that would have a dramatic effect on the competitive landscape). In the absence of such a strong remedy, Microsoft will clearly continue on its path, even if adjusts a little, and will damage consumer choice.

Stop all these Lawsuits. AOL is the pot calling the kettle black and is continuing the disruption of an economic recovery! Create your rules and pardon what ever violations you think Microsoft committed. The consumers are being hurt by these Companies using the Justice system to destory one another so they may take control of the market. Throw out the AOL case immediately. I have stock in both companies and use AOL as you can see by my email address. Microsoft has not inhibited my ability to choose a browser! AOL wants to only be compensated for their own poor judgement in purchasing Netscape and wants to disrupts the competition for broadband. These lawsuits are bad for the consumer, the stock holders and the Country. The only people who win are the lawyers!

I believe that Microsoft is and has done a great service to the advancement of the personal computer in it's usage by the general public. The inclusion of Microsoft's Internet Explorer teamed with Outlook Express has made life much easier for me. My 84 year old responses are not as capable as are my grandkids, who can even work with AOL.

Recently I tried AOL and then Worldnet on a new laptop with disgusting results. After a great deal of effort they both worked in a very sloppy manner. When I tried to uninstall them I found that they had corrupted my Microsoft files so badly that I now must reinstall my Microsoft programs in order to function. This, I think, is a deliberate attack on Microsoft.

Both these companies would rather cry than compete—why do you help them in there attempt to destroy competition?

 Subject: Microsoft Settlement

I would like to express my disappointment in the DOJ's meaningless deal with Microsoft. The DOJ under Ashcroft seems much to eager

to settle this matter with no serious changes to Microsoft or even financial penalties for abusing their monopoly power.

Microsoft holds way too much power in the computer world. They keep bringing out new products with new features, thus crushing any competing software providing the same services. But as anyone knows, they do not fix the tens of thousands of bug's in their software. Nor do they address their serious security issues, until after the damage is done. In a competitive market place, a company would not stay in business if they had a track record like Microsoft's. The consumer would stop buying a shoddy product and use something else. But the fact of the matter is that Microsoft has no real Competition, so consumers are left with no other Choice.

At first Bill Gates thought nothing of the internet, even as Netscape was happily turning out new versions of Navigator. Then a light went on in Gates head. People can shop on the internet! People can pay for services like news sights. If Microsoft did not create a program to compete with Netscape, MS would not control the internet and web commerce like they do with the desktop OS space.

So MS created explorer. Then they gave it away for free, in order to gain market share against the established Netscape. But that did not give them the kind of market share they needed. So they decided to merge their OS which has no rivals with their poorly adopted Web browser, thus giving the OS monopoly to the web software. Netscape could no longer compete against a product that was included in an OS.

Which brings up another point. What company or investor would put money in a project that would try to challenge Microsoft in the computer operating system? How would you get distribution from the big computer makers like Dell, when Microsoft charges a TAX for every machine sold whether or not it has Windows loaded on it. A small company called Be tried to gain market share for their OS, but could not get distribution or bundled with the Major Pc makers. Even the FREE linux is not readily available from the Major pc makers.

Microsoft now wants to charge a subscription fee for their software. Why? Because many users are not upgrading their software every time Microsoft releases a new version. So MS is having a hard time sustaining their huge growth. So you make them pay whether they want to upgrade or not, thus becoming a "utility" like service.

I believe that if MS is not made to play fair, they will become unstoppable. I see a future in which MS will have their own bank, and their own credit cards for Windows users. So when you shop on line with a windows computer, you will buy things from MS owned sites, with MS credit cards, using MS banks. All that's really left for MS is to start a shipping service! Thus MS would be stepping on the toes of Big Banks and using their monopoly power in the desktop space to steal the business of well established industries that can not compete because they do not own the desktop OS monopoly.

It is clear that MS abused their Monopoly power, continues to do so, and will not stop

until they are forced to! They Have caused Billions of dollars of damage to users, business, and the government by having such gaping security holes that allow devastating email viruses like "I Love you", "Love Bug", and "Melissa" to shut down and cause havoc for millions of Windows users. They should be liable for damages for these security issues. IF they were, they would fix the problems!

If MS is split up, they would then Have to be more concerned with fixing all the bugs and security issues with their operating system instead of trying to integrate every feature under the sun into their core operating system, because this would no longer be an option.

Please do not let MS have the ability to continue to stifle the computer industry and control how many business that thrive off it operate. Split them up and let new Competition begin. Please stop them before it is too late.

Ben

From: Tom Dyess

To: Microsoft ATR

Date: 1/24/02 12:12pm

Subject: Microsoft Settlement

Dear Sir,

As a software developer, I am deterred from creating any type of software because of the Microsoft Corporation. Let me explain. If I were to create a software product and release it, one of two things could happen.

First, it would be a great hit, thousands of customers would purchase my company's software boosting the bottom line. I would be thoroughly interested in reinvesting the monies earned from sales into a larger, more robust product, a larger sales force, a larger customer service technician force, and a larger accounting and MIS department to coordinate it all. This would be a wonderful scenario except one thing: if Microsoft saw that it was making money, or saw that it was in any way a threat to their hegemony, they would force me to sell at a depreciated price or threaten to crush the company, putting all my work to rest and all my employees out of work. Under normal circumstances, this would be competitive, but in Microsoft's case it is not.

Similar to Rockefeller, Microsoft takes earnings from one branch of their company, lets say Office or Windows and allocates them to a new branch. Rockefeller executes similar techniques when he took the profits from one town to undercut his competition in another, this eliminating the competition. Once the competition in the new geographic location was removed, he could then raise his prices in that location. This has been done to stiffen competition from their Internet Explorer, Windows Media Player, and other products.

Second, I could purposely retard marketing and promotion in the hopes that I could keep my software "under the radar" of Microsoft so I could keep my company. Unfortunately without a well planned and executed marketing campaign, I cannot hire the new developers, new sales force, new customer service representatives and new accounting and MIS teams. Microsoft already has these teams in place and would hire much fewer if any new employees.

Furthermore, since my company was either bought out or purposely reined, other companies would not form to support my

software. No new companies to make plugins would form, I could not offload the documentation to a third party, and I would be too small to hire outside consultants to improve my software.

Much of the innovation has been decapitated in this way. Software visionaries, even with a brilliant product that would branch off the technology sector with a totally new discipline would eventually face the obstacle of Microsoft "competing" as they call it for the niche. The rhetorical question of "Why bother?" comes to mind. Why exerting the blood, sweat and tears of building a company when it will just be bought out at a huge discount, or merely squashed into a quickly fading memory by a company who discovers that this new niche can make money.

Restricting Microsoft will, in the short term, harm the technology sector, but to use an analogy, if you cut a flower off a branch properly, two will grow in it's place. There is no doubt that Microsoft has done wonders for the technology sector, but their wonders are now self-fulfilling. Their only interest is making money, and they no longer need to accomplish that through innovation, which would make money for the entire industry rather than a single company.

Thank you for your interest,

Tom Dyess

From: Jason Gilbert

To: Microsoft ATR

Date: 1/24/02 12:13pm

Subject: Microsoft Settlement

I think the proposed settlement is completely inadequate to prevent further monopolistic abuse from Microsoft. However, in order to not just provide negative without some positive suggestion, here is my remedy.

(1) Force Microsoft to not change file formats in Office products to force consumer upgrades. How many users would actually upgrade if they didn't have to be compatible with other users/companies that had upgraded.

(2) Make the file formats publicly available and any changes must go through a public review process. The file formats have (for better or worse) become a defacto standard interchange format. They should most likely be controlled by an existing standards body.

(3) Microsoft must ship Office products with the default save format being the standard format and every attempt should be made to keep the user from inadvertently saving in a non-standard format.

Aside from these issues, forcing the release of a windows 2000/XP based OS that only provides the core OS (no IE, IIS, etc) would be advantageous. It might actually be an OS we could use.

Hoping this doesn't go into an abyss,

jason

Dear Sir or Madam,

I've been using computers for more than 20 years and was one of the first to use Internet Browser. I have never paid a penny for a browser even when Netscape was the only company that made production version browser.

I don't think it's right for Netscape and then AOL to go to our government to seek legal remedy for their bad business strategy. I think an internet browser should always be free as File Explorer has always been because with the current technology trend they are indistinguishable. Imagine paying extra for DIR command on DOS or ld command on Unix.

In my conclusion, I wish that AOL lawsuit will not interfere with the current Microsoft Settlement and the lawsuit will be dismissed.

Sincerely yours,
Steven The

To whom it concerns,
I strongly disagree with the proposed final judgement in the Microsoft Antitrust trial. There are many anticompetitive practices that would be permitted to continue if this judgement is accepted.

A few of the concerns that I have are as follows.

APIs directly to the operating system and some critical middleware would not be given.

File formats could still remain hidden and proprietary.

The provisions still do not allow for competitors in the operating system field. For instance, competing operating systems could not be developed that would run microsoft applications.

I cannot say at this time that these are my only concerns, but in my brief initial scan of the proposal, these were a few of the main concerns that immediately grabbed my attention.

In conclusion, I feel that if this proposal were to be accepted, competition would see no significant improvement in the software market.

Thank you for hearing my Concerns,

MTC-00021897

From: Sheila
To: Microsoft ATR
Date: 1/24/02 12:14pm
Subject: Anti Trust Restitution

Your Honors:

I work in computer sales and have a front seat to the issues that the end users are up against. This is an industry truly in its infancy. Our homes and businesses are flooded with computers and many users who barely understand just what it is that piece of equipment is capable of doing or how it performs. The Virtual world of the internet is hard for many to understand and their own vulnerability is something I discuss with them at purchase. Microsoft and its recent claim two days ago of making security foremost in development is very sad. Billions have been already lost due to careless and irresponsible software authoring by them. Now that Microsoft is in court and in the limelight it is timely of Mr. Gates to profess security. Software production is tedious and much more so when the software is written with security in mind from the very beginning.

Today when a Microsoft product is purchased duplication is illegal and prosecution is real for the end user. In the beginning Microsoft distributed the product for little or no cost and encouraged duplication to blanket the market. Pirating became the norm and they were successful. With that premise Microsoft's responsibility to the public has grown exponentially and abuse of that power is dangerous to millions of people world wide. In this industry's infancy if laws are developed now and enforced strongly we can all enjoy the experience that computers have brought into our lives. Without strict guidelines the

industry will cause great harm to businesses and private citizens.

Microsoft's donation of one billion dollars to the schools would be fine if any product other than Microsoft or Microsoft driven equipment could be purchased. I am tired of trying to explain to my children why so many high profile crimes are lessened and no punishment is given. We owe our children an answer. When customers ask why Microsoft is in trouble I give them a very simple analogy: Imagine most of the country drove Chevrolets and you drove a Ford and the only parts you can find are Chevrolet parts. Those parts will not work with your Ford and Chevrolet will not modify or make available parts that will work with vehicles other than theirs, forcing the market their way. Microsoft's decision to not allow their customers a choice and actually forcing the market is why they are in court.

Embedding their browser software so deeply in the operating system that removal of it is next to impossible is direct proof, choice with Microsoft is out of the question. I don't want Microsoft or any company delegating or restricting the software I use on my computer. If they are allowed to continue in this fashion all choice is gone. Mr. Gates understands the power of the computer industry and has blatantly abused that power. He understands code writing and knows his company has failed to protect the public but did it anyway. I admire business leaders that have built businesses and gave something back to those that have supported them. I don't admire unethical businesses that have violated the public trust and have damaged what so many of us work for everyday. I love my job and enjoy helping my customers understand the computer industry and all of its possibilities. Microsoft's punishment/restitution is pivotal to the future of this industries development and the way business will be conducted in the coming years. Set the precedent now, please.

Dear Ms. Renata Hesse:
Please put a stop to the economically-draining witch-hunt against

Microsoft. This has gone on long enough.

Microsoft has already agreed to hide its Internet Explorer icon from the desktop; the fact is, this case against Microsoft is little more than "welfare" for Netscape and other Microsoft competitors, with not a nickel going to those supposedly harmed by Microsoft: the computer user.

This is just another method for states to get free money, and a terrible precedent for the future, not only in terms of computer technology, but all sorts of innovations in the most dynamic industry the world has ever seen.

Please put a stop to this travesty of justice now. Thank you.

Sincerely,

Subject: Microsoft Settlement

The proposed settlement between the Department of Justice and Microsoft is insane. It does little if anything to address the egregious transgressions of Microsoft against developers in the software community. What about Netscape and it's browser? What about DR-DOS? What about Java? What about the myriad of other companies that innovate only to have Microsoft strong-arm them, threatening sell to us at our price or will build a competing product and give it away for free.

Embrace, Embellish, Extinguish. That is the mantra of Microsoft, all under the guise of competition.

The proposed settlement does little to nothing to address these past problems and basically allows Microsoft to continue in its errant business ways. Giving poor schools money to buy only computers that run Microsoft products provides a lock-in to a new market and excludes other system vendors. Is the "punishment" to provide Microsoft with additional revenue streams? What about those other companies that were injured?

I could go on but I am bitter and cynical that the US government would just throw away a solid case and worse, establish a precedence.

In closing, I'll just say that the browser is not part of an operating system.

RE: MICROSOFT SETTLEMENT

I cannot accurately speak to all my specific concerns about the pending Microsoft case because I am not technically proficient enough to do that. Some of my concerns relate to problems I am having using a Macintosh computer from home, which I have only been doing since the end of November, 2001. Clearly, some of my problems arise from the fact that my new computer is not a Microsoft product. I am just beginning to see some of the problems I am having that may be related to the fact that Microsoft has such rigid control of the home computer market.

I have had this computer for less than two months, but have encountered various problems because it is not a Microsoft product. I have difficulty sending and receiving some kinds of e-mail. AOL, my Internet service provider tells me that the problem exists because my version of AOL cannot perform certain functions for the Mac. Attempts to download various files over the Internet have also been thwarted because either the Internet site or AOL cannot accommodate an interface with my Mac.

I know that I could buy a software package from Microsoft that would allow my computer to emulate a Microsoft product, but I find that solution irritating and unsatisfactory. Why shouldn't the Internet sites and service providers be totally compatible with both Microsoft and Macintosh products? Is it because 90% of their clients use Microsoft?

I made the choice of a Macintosh partly because the first small computers that I ever

used (in the early 1980's) were Apples. They were efficient, easy to use, and I was familiar with them. Just over four years ago, when I changed jobs, I had to adjust to Microsoft computers because those were the computers that were available in my new workplaces.

When purchasing my Macintosh computer for home this past fall, there were only three possible vendor choices within a twenty-mile radius of my home. I began at the closest location, a Circuit City. In that store, the particular model in which I was interested was disconnected from any power source, making it unavailable for me to try out. Attempts to flag-down a sales person were fruitless, and I decided to try to find a store that would be more helpful for me.

I ultimately had to go to a store that I hoped to avoid, that was a twenty mile drive from my house. I hoped it would be worth the drive and the trouble and that the staff would seem more knowledgeable and available to help me.

Had I not been so determined to buy an Apple product, I'm sure I could have gone to any number of closer locations to purchase a Microsoft computer. I am thinking about buying a new mouse and an external disk drive for my computer. Were they Microsoft brand, I would have many options at the Circuit City store about 8 miles from my house. I could probably even buy the components from an office supply store.

When people hear about the problems I have encountered, I feel sure that they will be even more likely to avoid buying non-Microsoft computer equipment. They will not want to be bothered with these kinds of things. The fact that Apple has a smaller share of the current market will probably only prove to ensure that their market share will continue to decrease with time unless something is done to turn this situation around.

I don't know how this can be done, but to continue to allow Microsoft to run as they are currently running, will do nothing to encourage competitive companies to even try to come to market. As long as Microsoft continues to dominate the market for small computers, vendors will continue to ignore the handful of us non-Microsoft users. We will be left to purchase Microsoft programs to assist us.

The Microsoft Corporation doesn't seem to realize that they have been charged with operating unlawfully as regards the antitrust laws of the nation. Have they yet even attempted to make any recompense for those violations beyond an offer to extend their corporate influence further into disadvantaged schools by furnishing those schools with refurbished Microsoft equipment? Why did they not offer instead to purchase Macintosh equipment for those schools, in the interest of lessening their dominance in the market?

Unless Microsoft's operating system and applications systems are separated, and unless more technical information about the operating system is made available to those who wish to promote competing products, Microsoft will continue to increase its grip on the computer purchasing public and to increase its influence on the access to the Internet.

I hope that the initial promise we saw at the dawn of the computer age will not diminish. We need to encourage creative minds to feel rewarded for innovation, growth, and development. We want to continue to see true expansion of communication in all directions, not limitations and obstructions imposed by a small controlling group.

I put my trust very firmly behind Richard Blumenthal, Connecticut's Attorney General. I hold out hope that he will be able to help us to determine what is the right thing to do. He has become an uncompromising champion of THE PUBLIC INTEREST. He is reluctant to let Microsoft off the hook for their blatant disregard of antitrust law and their continuing arrogance and abuse of monopoly power. I know that he will bring many urgent concerns to your attention.

Subject: Microsoft Settlement

Dear DOJ,

As a concerned american, consumer, and professional who uses computers in my daily work, I believe that it is crucial that the Department of Justice follow through with this long drawn out process of rendering justice for the americans who have been harmed by Microsoft's monopolistic behavior. Microsoft should not be allowed to get through this without more than a slap on the wrist and a pat on the back, as the current proposed settlement would do. Letting them give away their own technology and to our schools is not going to remedy the harm they have done to consumers and to technology innovators in the past 15 years. This would not only be a negligible monetary punishment (in comparison to what they've made off of us all), but would instead encourage their choke-hold on school children and consumers alike. Microsoft is thumbing its nose at the american justice system, and I would hope that this administration will not ignore the sins of big business, and instead protect the rights of american people and foster competition in business and technology.

A big problem with Microsoft is that they offer mediocre software. And everyone is force to use it because it is the de-facto standard. One appropriate remedy would be to put Microsoft on probation: to have their software checked by an appointed outside panel of government technology experts—examining potential security issues (for which Microsoft is notorious) and in terms of further monopolistic behavior (ie creating its own standards to control media)—BEFORE they can ship it. This probation should last 5 to 10 years, with a possibility for a "parole" for good behavior. Microsoft can improve their software and competitors can more easily flourish.

Microsoft would create (and replenish yearly, based upon its profits) a large

endowment to fund all levels of education. Not by giving away software, or making any ads for their products, but supporting public schools throughout the country to encourage math, science and artistic programs, or school enhancement where they are needed most. That would make an impact, be fair to other tech companies, and give Microsoft a better name.

Thank you. I trust you will serve justice in this case.

Sincerely,
Roland Gauthier

Subject: Microsoft Settlement

To Whom It May Concern:

As part of the Tunney Act comment process, I wish to inform you that I am strongly opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor does it in any real way inhibit their ability (or desire) to commit similar actions in the future.

The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions.

Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general.

While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded.

To whom it may concern

It is disappointing to me that the proposed settlement does little to penalize Microsoft for the vast amount of destruction and abuse that they have caused.

There is nothing in the settlement to prevent further abuse, nor are the penalties enough to even be noticed.

I believe that Microsoft was shown to be a monopoly, and that is from my understanding illegal.

Dividing the company and preventing them from crating their virtually exclusive OEM licensing are the answers.

I am not optimistic that public comment really matters. The decision was purely political.

I am a strong Republican, but this is blatantly political. Microsoft will never agree

to anything that will truly disrupt their current business practices.

It would be refreshing to see some moral strength from the DOJ by having this proposed settlement rejected, and pursuing a course that would prevent this from happening again. These problems are the same ones that existed at least as early as 1993.

It is sad to say that I do not believe that the public is being served.

Good Afternoon:

The object of this message is to protest the legal perambulations against Microsoft via court challenges. As settlement finally appeared imminent in the Government case, now new allegations have been put forth against the company (Microsoft) by a competitor, AOL (America Online). This is corporate harassment! Indeed, by permitting the "sniping away at success," our legal system condones the restriction of corporate creativity and innovation. Elements that made this country truly great. Freedom is the keystone of our American way, and just as it is for our citizens, so too should it be for business.

Under the Tunney Act, I am writing today in order comment on the proposed Microsoft settlement.

I wish to voice my strong opposition to the settlement as it now stands, as I believe it does not address many of the anti-competitive practices that Microsoft employs against any potential competitors. Not only is the proposed settlement an ineffective solution to Microsoft's burgeoning monopoly, it actually helps Microsoft extend its reach by providing it entry into the few areas that it does not currently dominate (education, for example).

I urge that this settlement be scrapped, and a solution that effectively breaks Microsoft's stranglehold on the software industry be adopted.

Thank you,
Steve Madancy

Subject: Microsoft Settlement

Here are a few opinions I have about this settlement...

1. I don't think that it goes far enough. I don't think that Microsoft should be broken up but something should be done about the bundling of applications. I just installed Windows XP Pro and I can not even remove Internet Explorer or MSN Messenger. I do not want to use MSN Messenger but I have to have it on my PC. Same goes with the new Microsoft Movie Maker.

2. Microsoft should be made to provide Office for competing OS's. If Office was available for Linux and so forth there would be more competition. The first thing most people say when asked why the don't change Operating Systems it is because of Office.

3. Microsoft should also be made to not only make there products available to other Operating Systems but make them work the same. I run Mac OS X and I have Windows Media Player installed on my Mac. Half the stuff on www.windowsmedia.com does not even work through Windows Media Player for Mac. These are just a few thoughts about the situation. I believe that the settlement is a good thing but it did not nearly go far enough.

The Clinton Administration started this action against Microsoft to help out their political buddies at Netscape, as well as some others. Everything that has happened so far has hurt the consumer and Microsoft and benefited these FOB's.

It does not hurt the consumer to have Internet Explorer on their computer, and it is easy to delete the icon if you don't want to see it there. It does not cost the consumer anything. It is, like so many other technology based products, a feature you can use or not use depending upon your particular needs.

On the other hand, all of this litigation has cost Microsoft a lot of money and goodwill. The result is that Microsoft's products are now becoming more restrictive, less compatible, and more intrusive than they were before this litigation began. Your continued prosecution will probably result in more and more inconvenience for the users of Microsoft products. It is time to stop it now.

Subject: Microsoft Settlement

To whom it may concern,

I recently had an opportunity to review the proposed settlement in the Microsoft antitrust trial. I have been developing software for Microsoft operating systems (including nearly every released version of Windows) for nearly 20 years now.

On numerous occasions going back to the Windows 95 days, I encountered issues with various Windows APIs which would have allowed software I was writing to function significantly better in the Windows environment, yet these APIs were either completely undocumented, or their documentation was incomplete. Asking Microsoft for more details on these APIs invariably failed to get that information—Microsoft always had some excuse not to release the information to us, although we've noted that certain 3rd party developers who do not directly compete with Microsoft have received such information.

Many of these APIs fell into two categories:

The first category are undocumented APIs which were part of the operating system as released, but were clearly used by Microsoft application packages. Since these APIs were undocumented, Microsoft's applications had a clear competitive edge by using them.

The second category were APIs which were added into the operating system when installing a Microsoft application package, such as Office, or Intellimouse. These types of APIs were added into system DLLs replaced by the application package, thus enhancing the OS. It is fairly common for Microsoft to enhance their OS in this fashion, giving their own applications exclusive access to the new APIs, before later rolling them into the next OS release. Interestingly, the documentation of these APIs usually is not available until well after they are merged into the OS release, again giving their own applications a longer competitive edge.

I bring this up because, in reading through the proposed settlement, Section VI-A, it appears that it would only require Microsoft to document APIs in use between Windows and various Middleware packages, NOT those APIs which are used by Microsoft

application programs. In my opinion, any settlement which fails to require Microsoft to document *all* Windows and Middleware APIs being used by any Microsoft application or middleware program will be completely ineffective in preventing further abuses.

Also, I believe that the specification of what consists of Microsoft Middleware in Section VI-J and K is limited in that it does not include any mention of .Net, does not make allowance for additional types of middleware which may appear in the future, and could easily be bypassed by making name changes or changes in how version numbers are reported. These are the most glaring problems with this settlement—there are many others I will not go into. Overall, it appears to me that this settlement as written will have little if any effect on Microsoft's future behavior, given the number of loopholes it leaves for Microsoft to slip through. Further, it makes little effort to redress the damages Microsoft has done in the past.

While I understand the desire for a settlement on this issue, I'm afraid that this is neither an appropriate nor sufficient settlement, and register my strong objections to it at this time.

Sincerely,
Steven A. Bennett

I am neither a law school student nor an attorney. However, as a member of the public invited to comment on the Revised Proposed Final Judgment, I must object.

As a private citizen who has followed the Federal Government's complaint against Microsoft, I have long believed Microsoft to be a monopoly. In my opinion, Judge Thomas Penfield Jackson's Memorandum and Order, dated June 7, 2000, was correct, and His Honor's Final Judgment, also dated June 7, 2000, was correct and appropriate.

Furthermore, I object to and believe to be entirely inappropriate the Revised Proposed Final Judgment. As I read the Judgment, it includes no provisions for the altering of the corporate structure of Microsoft Corporation, most certainly not on the scale of those provisions in Judge Thomas Penfield Jackson's Final Judgment.

In closing, I most strenuously object to the language in Section III, Paragraph J. In my opinion, this paragraph's explicit language of non-restraint against Microsoft Corporation

severely limits the punitive effect of this Revised Proposed Final Judgment, giving it the effect of a verbal reprimand or slap on the wrist, when what is called for is a far more severe penalty.

Respectfully,
Brian Donnelly

Subject: Microsoft Settlement
To whom it may concern:

I write to voice an opinion regarding the Microsoft Settlement currently being considered. In my opinion, this "remedy" does not deserve the name, as it does little to restrain the practices that have led to the current situation, and promises little real reform for the future. I wish to take a positive approach, however, and discuss two requirements that would represent a real improvement in the current situation. It is clear from some of the documents available as a result of the case and an examination of Microsoft's practices generally that there are two methodologies for "fixing" the playing field that could quite easily be remedied. These are documentation of the interactions between Windows and other software and hardware, and blocking Microsoft's strategy of using patents to restrain competitors who would otherwise be able to produce competitive software. The first would involve require Microsoft to make open and available to anyone all interfaces between software components, all communications protocols, and all file formats. This is not particularly difficult, and could easily be enforced: a court could simply require Microsoft to answer questions raised by any incomplete documentation. In particular, however, two arguments should not be allowed to impinge upon this remedy: nondisclosure agreements and security concerns. It would be trivial to circumvent such an order if Microsoft could simply say in response to such a court order that they could not answer it owing to nondisclosure agreements, which they could indeed require from other firms for exactly this purpose. As to security concerns, even if everyone knows the interfaces involved with Windows, it is unlikely that this actually raises the level of security risk. On the one hand, it makes it possible for standard solutions to any security issues to be promulgated much more quickly and efficiently; on the other, it is doubtful that much of the community attacking security vulnerabilities (including those commonly known "script kiddies") actually possess the technical knowledge to make significant use of this information. As to patenting, there is no intention here to keep Microsoft from sharing in the bounty their intellectual property creates. It is simply that some remedy must be found to keep them from patents for "innovations" that exist primarily not to solve software problems, but to block access to technologies from competitors. I am not a patent lawyer (I am in fact a software developer, and use both Microsoft and competing products), but am sure that there are persons in that profession with sufficient

expertise to advise the court on appropriate provisions.

In sum, I would strongly voice my opinion against the current settlement, and I offer these improvements as a way to assist in fashioning a better one.

Thank you for your attention.

Dear Sirs,
As the owner of a small business I feel compelled to comment.
The idea that funding education efforts to "make up" for gross corporate bad behavior seems odd to me. No problem with funding education—but how does that help the businesses that have been at a disadvantage due to the strong armed mafia—like tactics of microsoft?

So...
How about a cash award to the businesses that have had good product unjustly squelched?
Go ahead and let them fund education, too. Cash only to the school districts themselves, to spend on what THEY determine they need. Not warmed over hardware and microsoft software!

Open up their Code. Now we can see some competition open up, to good effect.
Allow customers to buy only the software components they want.
Thank you,
Peter Kull

FYI,

I think that open sourcing Internet Explorer will be a really bad idea... Why this would allow for hackers to create even more Virus's for PC and in todays days of security risks this would be a disaster for customers and organizations.

It is really interesting to research where hacking comes from and you find out that allot or based on Unix/linux style errors...Open source means that hackers can change to code to break rules and if so this can lead to extreme problems

Is trying to sue/break up Microsoft really a bad thing, look at AOL/Time warner of the years—In sometimes they are worst—Like my parents stuck on AOL because they don't know better... At least Microsoft is not trying control content to make it better for its own companies...

Of course these are my opinions as a costumer and a developer not associated with any of companies evolved.

To Whom It May Concern,
I feel that the current settlement offer by the Department of Justice is too lenient on Microsoft. It does not do enough to punish Microsoft for their past transgressions and isn't strong enough to prevent them from operating in exactly the same manner in the future. I also find it odd that Microsoft should be allowed to choose one member of the oversight committee and have veto power over the second member. They are the ones who are supposed to be punished. They shouldn't get to choose who punishes them.

From: Paul Levitt
To: Microsoft ATR
Date: 1/24/02 12:28pm
Subject: Microsoft Settlement

Dear Sir or Madam,
I am writing to register my opposition to the proposed antitrust settlement between Microsoft and the Department of Justice. I believe that, rather than providing a remedy for Microsoft's illegal conduct, will enable them to continue that conduct and exacerbate its impact on computer users, software developers and a wide variety of other businesses.

Others, with more specific technical and legal expertise than I possess, have detailed the many shortcomings of the settlement, so I will confine my remarks to a top level, user oriented view. Microsoft, as the "findings of fact" make clear, after obtaining a monopoly on computer operating systems, used that monopoly power to obtain an effective monopoly on the application software used for the vast majority of business functions. These two monopolies are used to re-enforce each other: the OS monopoly enables Microsoft to maintain barriers to entry for developers of competing office applications, and their applications monopoly prevents vendors of competing operating systems from establishing a significant presence in most businesses. The most well documented examples of this are Microsoft's refusal to develop a Linux version of its Office product, and it's threat to end development of the Macintosh version of Microsoft Office. Since the ability to support Office has become a mandatory requirement for the majority of businesses and government agencies (most U.S. government proposals require submittal in Microsoft-proprietary formats), the threat to drop Office gives Microsoft the power to determine whether a competitor survives. It has been widely reported that this threat has been a major factor in Apple Computer's reluctance to port it's operating system to the Intel processor architecture, which would make it a viable competitor to Windows.

Microsoft has also been shown to use these paired monopolies to attack standards based, openly available, cross-platform applications, file formats and programming languages, such as Quicktime, Java and MP3, replacing them with proprietary equivalents.

The end result of these illegal practices has been to restrict the choice available to consumers and to stifle innovate technologies and concepts. Far from being an "innovator" , as they claim, Microsoft has acquired most of their products by buying the company that originally developed them. Microsoft not only continues its illegal practices, but has acted aggressively to expand them and use its monopoly power to dominate new markets. They continue to deny their guilt, even after conviction, and have mounted a fraudulent campaign of letter writing and op-ed pieces with company funds. They have even

directly attacked the antitrust division of the justice department by lobbying to reduce its budget.

Given the current state of affairs, any settlement must effectively address and reverse Microsoft's dual monopolies in operating systems. It must also be enforceable and define specific, structural remedies that will enhance competition and eliminate barriers to entry in both the operating system and applications markets. Barriers to entry should be eliminated for existing companies, new companies and non-profit entities, such as the open source community.

An enforcement mechanism that provides clearly defined and meaningful penalties is essential. The mechanism must be completely independent of Microsoft influence, and must be equipped with a full array of technical and legal powers necessary to overcome Microsoft's institutional history of evading and subverting previous settlements and remedies. In addition to the many specific features described by others who have commented (include the Massachusetts Attorney General and Ralph Nader) I believe that it is essential that several specific actions be implemented:

?Microsoft should be required to publish, in open source form, all file formats and APIs, with all supporting documentation.

?Microsoft should be required to produce versions of all its Windows applications for Linux and the Macintosh OS, with full implementation of features and equivalent performance.

?Bundling of the MS Office applications should be prohibited. The current bundling practice supports both the OS and Application monopolies—e.g. why buy a competing spreadsheet or database product when it's cheaper to but the entire Office suite than any two components ?

Thank you for your attention in this matter, Paul Levitt

Is the government insane?? Why let Microsoft off the hook for its high-handed

monopolistic practices by allowing them to give computers to schools. All that does and trust me Microsoft understands this is increase their stranglehold on our way of life. If you have computers in the schools you have a foot in the door for the future. This will INCREASE Microsoft's strength rather than forcing them to participate on a level playing field. Look at Netscape. Do they have a chance when Microsoft makes it so difficult to use it from within their OS? Who is next Palm? What should be done is to force them to unbundle all of their software to pay cash through the nose to government schools etc who have been forced to see things their way.
