

specific Closure Module and then fill the tanks with grout.

In parallel with tank closures, DOE will evaluate and consult with SCDHEC on closure methods and regulatory revisions that will allow accelerated closure and reduction of risk associated with the HLW tanks. DOE remains committed to closure of the HLW tanks in accordance with the approved General Closure Plan.

DOE has selected the Stabilize Tanks—Fill with Grout alternative for several reasons. First, DOE has confidence in the method due to the demonstrated performance of the reducing grout and the successful waste removal and closure process employed for Tanks 17 and 20. On the basis of the analysis in the EIS, the selected alternative is superior to the Fill with Sand and Fill with Saltstone options in terms of binding residual waste in the tanks and thereby preventing future environmental contamination. This alternative would likely require the least tank cleaning of any alternative and would therefore minimize worker exposures and waste management concerns while meeting the performance objectives. In addition, this alternative was found to be the environmentally preferable alternative.

As described in the EIS, bulk waste removal has been demonstrated to remove about 97 percent of the radioactive material content, measured in curies, from a HLW tank. Spray water washing has been shown to remove slightly less than an additional one percent and generates additional wastewater that requires processing. DOE will employ spray water washing or an enhanced cleaning method only if it is necessary to meet the performance objectives.

In accordance with the General Closure Plan, DOE must demonstrate whether residual waste (that is, waste that will remain in the tank following any necessary cleaning, and that will be immobilized in the grout used to stabilize the tank) is low-level or transuranic waste in accordance with the Waste Incidental to Reprocessing provision in DOE Order 435.1. However, because DOE must meet overall performance standards in any case, the regulatory status of the residual waste does not affect the assessment of environmental impacts.

#### Mitigation

DOE is committed to environmental stewardship and to operating the SRS in compliance with all applicable laws, regulations, DOE Orders, permits, and compliance agreements. In addition to good engineering practice, closure of the

HLW tanks will follow the approved Industrial Wastewater Closure Plan for the F- and H-Area High-Level Waste Tank Systems, known as the General Closure Plan, and the individual Tank Closure Modules required by the General Closure Plan. This process will serve to ensure that risks are minimized and the environmental and health and safety impacts of tank closure are within the bounds described in the Final EIS. DOE considers this process to be standard operating procedures that do not require a mitigation action plan under 10 CFR 1021.331(a).
