

An Environmental Assessment (EA) was originally prepared for the proposed study that analyzed the impacts of the proposed experimental fishery on the human environment. The EA analyzed the impacts of the proposed experimental fishery on the human environment including the month of December. The EA concluded that the activities proposed to be conducted under the requested EFPs are consistent with the goals and objectives of the FMP, would not be detrimental to the well-being of any stocks of fish harvested, and would have no significant environmental impacts. The EA also concluded that the experimental fishery would not be detrimental to essential fish habitat, marine mammals, or protected species. The "Finding of No Significant Impact" contained in the EA was signed by the Assistant Administrator for Fisheries on March 8, 2005.

Through this notice, NMFS informs the public that the end date contained in the September 27, 2004, **Federal Register** notification (69 FR 57676) contained an error. The document should have identified the end date as December 2005. NMFS also informs the public that NMFS intends to re-issue EFPs containing the correct end date. However, because the original **Federal Register** document contained the incorrect end date that may have caused confusion, NMFS is inviting comments on the revision to the EFPs. Should NMFS receive substantive comments on EFPs, NMFS may reconsider whether issuance of, modification to, or rescission of the EFPs would be appropriate.

Therefore, on page 57676, column 3, last full paragraph, the end date provided in the sixth line remove "November 2005" and in its place insert "December 2005".

The Corps of Engineers and City/Zone 9 prepared the Draft EIS/EIR evaluating the potential environmental impacts of the proposed San Luis Obispo Creek Watershed Waterway Management Plan (Program). The Program is a combination of policies, programs and plans proposed to address flooding and flood control along San Luis Obispo Creek and its tributaries on a regional or watershed-wide basis. Project planning for activities and development within and affecting the stream corridor has historically been managed or guided by policies of various agencies with little coordinated effort at consistent management techniques. The Program is comprised of a Waterway Management Plan (WMP), Stream Maintenance and Management Plan (SMMP), and Drainage Design Manual (DDM), which represent a consolidated effort to provide a consistent management
