SUPPLEMENTARY INFORMATION:

I. Background

The standard 30 CFR 77.1900 was enacted in 1971 and was amended in 1982 and again in 1995. The standard requires underground coal mine operators to develop a prudent engineered design plan to develop a slope or shaft whenever an operator decides to open such a coal mine. The plan is required by the standard and is to be reviewed and approved by MSHA before the actual hazardous work begins.

II. Desired Focus of Comments

Currently, the Mine Safety and Health Administration (MSHA) is soliciting comments concerning the proposed extension of the information collection related to Slope and Shaft Sinking Plans. MSHA is particularly interested in comments that:

- Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
- Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
- Enhance the quality, utility, and clarity of the information to be collected; and
- Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submissions of responses.

A copy of the proposed information collection request may be viewed on the Internet by accessing the MSHA Home Page (<http://www.msha.gov>) and selecting "Rules and Regs" then "Paperwork Reduction Act Supporting Statements", or by contacting the employee listed above in the **FOR FURTHER INFORMATION CONTACT** section of this notice for a hard copy.

III. Current Actions

The 78 slope or shaft development plans that MSHA receives on an annual basis, are reviewed to ensure that the required work is performed in a safe manner, and it protects those miners

performing the work. Prudent engineering design does evolve along with improved machinery to perform the work, but there has not been any revision to the requirements for such a plan. Currently, the Mine Safety and Health Administration (MSHA) is soliciting comments concerning the proposed extension of the information collection related to Slope and Shaft Sinking Plans.
