

the Paperwork Reduction Act of 1995, for opportunity for public comment on proposed data collection projects, the National Cancer Institute, the National Institutes of Health (NIH) will publish periodic summaries of proposed projects to be submitted to the Office of Management and Budget (OMB) for review and approval.

Proposed Collection: Title: Cancer Risk in U.S. Radiologic Technologists: Fourth Survey (NCI). *Type of Information Collection Request:* Reinstatement with change of a previously approved collection (OMB No. 0925-0405, expiration 02/28/2011). *Need and Use of Information Collection:* By conducting a fourth cohort follow-up survey in an ongoing cohort study of U.S. Radiologic Technologists (USRT), updated information will be collected

on cancer and other medical outcomes, personal medical radiation procedures, and other risk factors from all participants, plus detailed employment data from subgroups of participants who performed or assisted with fluoroscopically-guided or radioisotope procedures. Researchers at the National Cancer Institute and The University of Minnesota have followed a nationwide cohort of 146,000 radiologic technologists since 1982, of whom 110,000 completed at least one of three prior questionnaire surveys and 23,454 are deceased. This cohort is unique because estimates of cumulative radiation dose to specific organs (e.g. breast) are available and the cohort is largely female, offering a rare opportunity to study effects of low-dose radiation exposure on breast and

thyroid cancers, the two most sensitive organ sites for radiation carcinogenesis in women. The fourth survey will be administered by mail to approximately 93,000 living and located cohort members who completed at least one of the three previous surveys to collect information on new cancers and other disease outcomes, detailed work patterns and practices from technologists who worked with radioisotopes and interventional radiography procedures, and new or updated risk factors that may influence health risks. New occupational and medical radiation exposure information will be used to improve radiation dose estimates. The annual reporting burden is reported in Table 1. There are no capital costs, operating costs and/or maintenance costs to report.
