SUPPLEMENTARY INFORMATION:

I. Background

The National Compensation Survey (NCS) is an ongoing survey of earnings and benefits among private firms, State, and local government. The NCS is currently the integration of the sampling, collection, and processing for the Employment Cost Index (ECI) and the Employee Benefits Survey (EBS) into a single, unified program of compensation statistics. This integration improves data for policymakers and researchers, reduces respondent burden, improves the utilization of BLS

resources, and enhances the published measures of compensation.

Data from the integrated program include estimates of wages covering broad groups of related occupations, and data that directly link benefit plan costs with detailed plan provisions. The integrated program’s single sample also produces both time-series indexes and cost levels for industry and occupational groups, thereby increasing the analytical potential of the data. Benefits of the integrated sample include: Improved measures of trends; better integration of benefit costs and plan provisions; data for narrow occupations; and broad regional and occupational coverage. The NCS employs probability methods for selection of occupations. This ensures that sampled occupations represent all occupations in the workforce, while minimizing the reporting burden on respondents. Data from the NCS are used for setting Federal white-collar salaries, determining monetary policy (as a Principal Federal Economic Indicator), and for compensation administrators and researchers in the private sector.

The survey collects data from a sample of employers. These data will consist of information about the duties, responsibilities, and compensation (earnings and benefits) for a sample of occupations for each sampled employer.

Data will be updated on a quarterly basis. The updates will allow for production of data on change in earnings and total compensation.

II. Current Action

Office of Management and Budget clearance is being sought for the National Compensation Survey.

The NCS collects earnings and work level data on occupations for the nation. The NCS also collects information on the cost, provisions, and incidence of all the major employee benefits through its benefit cost and benefit provision programs and publications.

The Administration’s final approved budget for fiscal year 2011 called for an alternative to the Locality Pay Survey (LPS), which was the part of the National Compensation Survey that provides occupational wage data by industry and specific geographic areas. The alternative to the LPS uses data from two current BLS programs—the Occupational Employment Statistics (OES) survey and the ECI program. In this new approach, OES data provides wage data by occupation and by area, while ECI data are used to specify grade level effects. This new approach is also being used to extend the estimation of pay gaps to areas that were not included
