

of 825 cd. Overall, the testing indicates that due to these normal production variations in low beam lights, in many cases, there will be no exceedance of the combined parking lamp/low beam light maximum candlepower, even with the parking lamp over-voltage. The testing indicated that even in the worst-case measurement locations, with the worst-case low beam lamp sample, there was the potential for only an 11% exceedance of the combined lamp brightness, which is below the human detection threshold.

Mercedes is not aware of any incidents or customer complaints related to the subject noncompliant parking lamps.

Mercedes also notes its belief that NHTSA has granted similar petitions in the past.

Mercedes has informed NHTSA that it has corrected the noncompliance so that all future production vehicles will comply with FMVSS No. 108.

In summation, Mercedes believes that the described noncompliance of its vehicles is inconsequential to motor vehicle safety, and that its petition, to exempt from providing recall notification of noncompliance as required by 49 U.S.C. 30118 and remedying the recall noncompliance as required by 49 U.S.C. 30120 should be granted.
