

FSARs, FSAR updates, and in emergency preparedness and fire protection documents, which had previously been presumptively withheld by the NRC.

- To recommend a format for submission of FSAR updates for nuclear power reactors. Research and test reactors and other non-power production and utilization facilities are not required to update their facility FSARs, unless applying for renewal of the facility license. Licensees have two submission format options regarding FSAR updates: (1) Electronically on a total FSAR replacement basis, as described in 10 CFR 50.4(b)(6), or (2) on a paper replacement page basis, as described in 10 CFR 50.71(e). Electronic submission of updates on a total FSAR replacement basis would save billable staff hours since time would not be taken to manually reconstruct sections of the FSAR for various staff reviews. Therefore, the NRC recommends that licensees voluntarily submit updates electronically (via CD or Electronic Information Exchange) on a total FSAR replacement basis. Submission of FSAR updates in this manner will also assist the NRC in its emergency response function by ensuring that recently-updated, total FSARs are available to NRC emergency response teams.

Integrated Safety Analysis Standards for Acute Uranium Exposure of Workers

AGENCY: Nuclear Regulatory Commission.

ACTION: Interim staff guidance; issuance.

SUMMARY: The U.S. Nuclear Regulatory Commission (NRC) is issuing Interim Staff Guidance (ISG), FCSE ISG–14, “Acute Uranium Standards for Workers,” dated June 15, 2015. The ISG provides guidance to the NRC staff when reviewing licensee-proposed standards in the Integrated Safety Analysis Summary for determining worker uranium exposures that would result in high or intermediate consequences consistent with the general definition of these events in NRC regulations.

DATES: The ISG is available September 25, 2015.

SUPPLEMENTARY INFORMATION:

I. Discussion

The purpose of this ISG (ADAMS Accession No. ML15147A682) is to identify acute uranium intake values that will be acceptable to the staff for classifying acute worker exposure events as high or intermediate consequence events consistent with the general definition of the terms presented in § 70.61 of Title 10 of the *Code of Federal Regulations* (10 CFR). This guidance has been approved by the Division of Fuel Cycle Safety, Safeguards, and Environmental Review management (ADAMS Accession No. ML15147A680) and is available on the NRC's Web site as well as in ADAMS.

In a **Federal Register** notice published on September 17, 2014 (79 FR 55834), the NRC requested public comments on

the draft ISG. In response, Janet R. Schlueter on behalf of the Nuclear Energy Institute (NEI) provided comments by letter dated November 12, 2014 (ADAMS Accession No. ML14322A698). The NRC also received an anonymous comment (ADAMS Accession No. ML14345A747). The final ISG includes clarifications in response to these comments. The specific changes made in the final ISG were described in a letter to the Division of Fuel Cycle Safety, Safeguards, and Environmental Review management (ADAMS Accession No. ML15147A683)

II. Backfitting

The NRC is issuing interim guidance for the NRC staff regarding acute uranium intake values for classifying acute worker exposure events. Issuance of the ISG does not constitute backfitting as defined in 10 CFR 70.76 (the Backfit Rule). The NRC's position is based upon the following considerations.

1. *The ISG positions do not constitute backfitting, inasmuch as the ISG is internal guidance to NRC staff.*

The ISG provides interim guidance to the staff on how to review an application for NRC regulatory approval in the form of licensing. Changes in internal staff guidance are not matters for which applicants or licensees are protected under 10 CFR 70.76.

2. *The Backfit Rule does not protect current or future applicants.*

Applicants and potential applicants are not, with certain exceptions, protected by the Backfit Rule. This is because the Backfit Rule was not intended to apply to every NRC action that substantially changes the expectations of current and future applicants.

III. Congressional Review Act

This action is a rule as defined in the Congressional Review Act (5 U.S.C. 801-808). However, the Office of Management and Budget has not found it to be a major rule as defined in the Congressional Review Act.

Dated at Rockville, Maryland, this 17th day of September, 2015.

For the Nuclear Regulatory Commission.

Robert Johnson,

*Branch Chief, Fuel Manufacturing Branch
Division of Fuel Cycle Safety, Safeguards,
and Environmental Review Office of Nuclear
Material Safety and Safeguards.*
