The Exchange also believes that its proposed fees for Bats Connect provide for the equitable allocation of reasonable dues, fees and other charges among members and other persons using its facilities. First, the Exchange charges a connectivity fee to subscribers utilizing Bats Connect to route orders to other exchanges and market centers that are connected to the Exchange's network, which varies based solely on the amount of bandwidth selected by the subscriber. The proposed increased connectivity fees remain reasonable and competitive as compared to similar fees charged by other exchanges. For purposes of order routing, the Exchange proposes to now charge \$500 for 1 Mb, \$1,000 for 5 Mb, and \$1,250 for 10 Mb. The New York Stock Exchange, Inc. ("NYSE") currently charges \$300 for 1 Mb, \$700 for 5 Mb, and \$900 for 10 Mb.¹⁴ In addition, the proposed rates continue to be less than what a subscriber would pay to connect directly to another exchange.¹⁵ The Exchange notes that, overall, the connectivity fee for routing of orders to other market centers proposed by the

¹³ See Nasdaq Rule 7034(b) and the Co-Location section of the NYSE Arca fee schedule available at https://www.nyse.com/publicdocs/nyse/markets/nyse-arca/NYSE_Arca_Marketplace_Fees.pdf (dated December 2, 2016).

¹⁴ See Section 3.6.1 of NYSE's SFTI Americas Product and Service List available at <http://www.nyxdata.com/docs/connectivity>.

¹⁵ See e.g., Nasdaq Rule 7034(b) and the NYSE Arca fee schedule available at https://www.nyse.com/publicdocs/nyse/markets/nyse-arca/NYSE_Arca_Marketplace_Fees.pdf (dated December 2, 2016).

Exchange is similar to that charged by the NYSE.

Second, with regard to utilizing Bats Connect to receive market data products from other exchanges, the Exchange only charges subscribers a connectivity fee, the amount of which is based solely on the amount of bandwidth required to transmit that specific data product to the subscribers. The Exchange believes it is necessary to increase the rates for select market data feeds as described herein to address changes in bandwidth necessary to receive such feeds. The increased fees will also enable the Exchange to continue to cover the increased infrastructure costs while also enabling it to continue to maintain and improve the service.

The amounts of the connectivity fees continue to be reasonable as compared to similar fees charged by other exchanges. For example, for market data connectivity, Nasdaq charges \$1,412 per month for CQS/CTS data feed, and the Exchange proposes to charge \$1,400 per month connectivity for CQS/CTS data feed.¹⁶

The Exchange believes it is reasonable to offer such discounted pricing to subscribers who purchase connectivity to a bundle of market data products as it would enable them to reduce their overall connectivity costs for the receipt of market data. The Exchange is not required by any rule or regulation to make Bats Connect available; nor are subscribers required by any rule or regulation to utilize Bats Connect. Accordingly, subscribers can discontinue use at any time and for any reason, including due to an assessment of the reasonableness of fees charged. Moreover, the Exchange believes the proposed fees are reasonable and equitable because they continue to be based on the Exchange's costs to cover the amount of bandwidth required to provide connectivity to the select bundle of data feeds. The proposed fees will continue to allow the Exchange to recoup this cost, while providing subscribers with an alternative means to connect to the select bundle of data feeds at a discounted rate.

Lastly, the Exchange believes the proposed fees are reasonable and equitable because they are based on the Exchange's costs to cover hardware, installation, testing and connection, as well as expenses involved in maintaining and managing the service. The proposed fees allow the Exchange to recoup these costs, while providing subscribers with an alternative means to

connect to other exchange and market centers. The Exchange believes that the proposed fees are reasonable and equitable in that they reflect the costs and the benefit of providing alternative connectivity.

(B) Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act. As discussed above, the Exchange believes that fees for connectivity are constrained by the robust competition for order flow among exchanges and non-exchange markets. The Exchange does not believe that the proposed changes represent a significant departure from previous pricing offered by the Exchange or pricing offered by the Exchange's competitors.

Additionally, Members may opt to disfavor the Exchange's pricing if they believe that alternatives offer them better value. Further, excessive fees for connectivity would serve to impair an exchange's ability to compete for order flow rather than burdening competition.

Lastly, the Exchange does not believe the proposed fees for Bats Connect will result in any burden on competition. The proposed rule change is designed to provide subscribers with an alternative means to access other market centers on the Exchange's network if they choose or in the event of a market disruption where other alternative connection methods become unavailable. Bats Connect is not the exclusive method to connect to these market centers and subscribers may utilize alternative methods to connect to the product if they believe the Exchange's proposed pricing is unreasonable or otherwise. Therefore, the Exchange does not believe the proposed rule change will have any effect on competition.

(C) Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants or Others

The Exchange has not solicited, and does not intend to solicit, comments on this proposed rule change. The Exchange has not received any unsolicited written comments from Members or other interested parties.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A) of the Act¹⁷ and paragraph (f) of Rule

19b-4 thereunder.¹⁸ At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File Number SR-BatsBZX-2016-90 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549-1090.

All submissions should refer to File Number SR-BatsBZX-2016-90. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make

¹⁶ See Nasdaq Rule 7034 (setting forth Nasdaq's connectivity fees for receipt of third party market data products).

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[Investment Company Act Release No. 32420; 812–14627]

Guardian Variable Products Trust and Park Avenue Institutional Advisers LLC; Notice of Application

January 9, 2017.

AGENCY: Securities and Exchange Commission (“Commission”).

ACTION: Notice of an application under section 6(c) of the Investment Company Act of 1940 (“Act”) for an exemption from section 15(a) of the Act and rule 18f–2 under the Act, as well as from certain disclosure requirements in rule 20a–1 under the Act, Item 19(a)(3) of Form N–1A, Items 22(c)(1)(ii), 22(c)(1)(iii), 22(c)(8) and 22(c)(9) of Schedule 14A under the Securities Exchange Act of 1934, and Sections 6–07(2)(a), (b), and (c) of Regulation S–X (“Disclosure Requirements”). The requested exemption would permit an investment adviser to hire and replace certain sub-advisers without shareholder approval and grant relief from the Disclosure Requirements as they relate to fees paid to the sub-advisers.

APPLICANTS: Guardian Variable Products Trust (the “Trust”), a Delaware statutory trust registered under the Act as an open-end management investment company with multiple series (each, a “Subadvised Series”), and Park Avenue Institutional Advisers LLC, a Delaware limited liability company registered as an investment adviser under the Investment Advisers Act of 1940 (the “Adviser,” and, together with the Trust, the “Applicants”).

FILING DATES: The application was filed March 16, 2016, and amended on September 8, 2016.

HEARING OR NOTIFICATION OF HEARING:

An order granting the application will be issued unless the Commission orders a hearing. Interested persons may request a hearing by writing to the

Commission’s Secretary and serving Applicants with a copy of the request, personally or by mail. Hearing requests should be received by the Commission by 5:30 p.m. on February 3, 2017, and should be accompanied by proof of service on the Applicants, in the form of an affidavit or, for lawyers, a certificate of service. Pursuant to rule 0–5 under the Act, hearing requests should state the nature of the writer’s interest, any facts bearing upon the desirability of a hearing on the matter, the reason for the request, and the issues contested. Persons who wish to be notified of a hearing may request notification by writing to the Commission’s Secretary.

ADDRESSES: Secretary, U.S. Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549–1090. Applicants: Richard T. Potter, The Guardian Life Insurance Company of America, Law Department, H–23–G, Suite 300, 7 Hanover Square, New York, New York 10004.

FOR FURTHER INFORMATION CONTACT: Kyle R. Ahlgren, Senior Counsel, at (202) 551–6857, or Holly L. Hunter-Ceci, Branch Chief, at (202) 551–6821 (Division of Investment Management, Chief Counsel’s Office).

SUPPLEMENTARY INFORMATION: The following is a summary of the application. The complete application may be obtained via the Commission’s Web site by searching for the file number, or an applicant using the Company name box, at <http://www.sec.gov/search/search.htm> or by calling (202) 551–8090.

Summary of the Application

1. The Adviser will serve as the investment adviser to the Subadvised Series pursuant to an investment management agreement with the Trust (the “Investment Management Agreement”).¹ The Adviser will provide the Subadvised Series with continuous investment management subject to the supervision of the Trust’s board of trustees (the “Board”). The Investment Management Agreement permits the Adviser, subject to the approval of the Board, to delegate to one or more sub-advisers (each, a “Sub-Adviser” and collectively, the “Sub-Advisers”) the responsibility to provide the day-to-day portfolio investment management of each Subadvised Series, subject to the supervision and direction of the

¹ Applicants request relief with respect to the Applicants, any existing or future series of the Trust (the “Series”), and any Subadvised Series. For purposes of the requested order, “successor” is limited to an entity that results from a reorganization into another jurisdiction or a change in the type of business organization.

Adviser. The primary responsibility for managing the Subadvised Series will remain vested in the Adviser. The Adviser will evaluate, allocate assets to and oversee the Sub-Advisers, and make recommendations about their hiring, termination and replacement to the Board, at all times subject to the authority of the Board.

2. Applicants request an exemption to permit the Adviser, subject to Board approval, to select certain Sub-Advisers² pursuant to sub-advisory agreements (each, a “Sub-Advisory Agreement” and collectively, the Sub-Advisory Agreements”) and materially amend Sub-Advisory Agreements without obtaining the shareholder approval required under section 15(a) of the Act and rule 18f–2 under the Act. Applicants also seek an exemption from the Disclosure Requirements to permit a Subadvised Series to disclose (as both a dollar amount and a percentage of the Subadvised Series’ net assets): (a) The aggregate fees paid to the Adviser and any Wholly-Owned Sub-Advisers; (b) the aggregate fees paid to Non-Affiliated Sub-Advisers; and (c) the fee paid to each Affiliated Sub-Adviser (collectively, “Aggregate Fee Disclosure”).

3. Applicants agree that any order granting the requested relief will be subject to the terms and conditions stated in the application. Such terms and conditions provide for, among other safeguards, appropriate disclosure to Subadvised Series’ shareholders and notification about sub-advisory changes and enhanced Board oversight to protect the interests of Subadvised Series’ shareholders.

4. Section 6(c) of the Act provides that the Commission may exempt any person, security, or transaction or any class or classes of persons, securities, or transactions from any provisions of the Act, or any rule thereunder, if such relief is necessary or appropriate in the public interest and consistent with the protection of investors and purposes

² The requested relief will extend to certain advisers that meet the definition of “wholly-owned subsidiary” in section 2(a)(43) of the Act (“Wholly-Owned Sub-Advisers”) and certain other advisers that are not “affiliated persons” (as such term is defined in section 2(a)(3) of the Act) of the Series or the Adviser, except to the extent that an affiliation arises solely because the sub-adviser serves as sub-adviser to one or more Series (each, a “Non-Affiliated Sub-Adviser” and collectively, the “Non-Affiliated Sub-Advisers”). The requested relief will not extend to any sub-adviser, other than a Wholly-Owned Sub-Adviser, who is an “affiliated person” (as such term is defined in section 2(a)(3) of the 1940 Act) of the Subadvised Series or of the Adviser, other than by reason of serving as a sub-adviser to one or more of the Subadvised Series (each, an “Affiliated Sub-Adviser” and collectively, the “Affiliated Sub-Advisers”).

¹⁹ 17 CFR 200.30–3(a)(12).

fairly intended by the policy and provisions of the Act. Applicants believe that the requested relief meets this standard because, as further explained in the application, the Investment Management Agreement will remain subject to shareholder approval, while the role of the Sub-Advisers will be substantially equivalent to the role of individual portfolio managers, so that requiring shareholder approval of Sub-Advisory Agreements would impose unnecessary delays and expenses on the Subadvised Series. Applicants believe that the requested relief from the Disclosure Requirements meets this standard because it will improve the Adviser's ability to negotiate fees paid to the Sub-Advisers that are more advantageous for the Subadvised Series.

For the Commission, by the Division of Investment Management, under delegated authority.

Eduardo A. Aleman,

Assistant Secretary.

[FR Doc. 2017-00628 Filed 1-12-17; 8:45 am]

BILLING CODE 8011-01-P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-79761; File No. SR-BatsEDGX-2016-75]

Self-Regulatory Organizations; Bats EDGX Exchange, Inc.; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Modify Fees for Connectivity and Its Communication and Routing Service Known as Bats Connect

January 9, 2017.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act"),¹ and Rule 19b-4 thereunder,² notice is hereby given that on December 27, 2016, Bats EDGX Exchange, Inc. ("Exchange" or "EDGX") filed with the Securities and Exchange Commission ("Commission") the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the Exchange. The Exchange has designated the proposed rule change as one establishing or changing a member due, fee, or other charge imposed by the Exchange under Section 19(b)(3)(A)(ii) of the Act³ and Rule 19b-4(f)(2) thereunder,⁴ which renders the proposed rule change effective upon filing with the Commission. The Commission is publishing this notice to solicit

comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange filed a proposal to amend the fee schedule applicable to Members⁵ and non-members of the Exchange pursuant to EDGX Rules 15.1(a) and (c) to modify its fees for its equity options platform ("EDGX Options") for physical ports and for the use of a communication and routing service known as Bats Connect.

The text of the proposed rule change is available at the Exchange's Web site at www.bats.com, at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in Sections A, B, and C below, of the most significant parts of such statements.

(A) Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend the fee schedule for EDGX Options to modify its fees for physical ports and for the use of a communication and routing service known as Bats Connect. Each of these proposed changes are described below.

Physical Ports

A physical port is utilized by a Member or non-Member to connect to the Exchange at the data centers where the Exchange's servers are located. The Exchange currently maintains a presence in two third-party data centers: (i) The primary data center where the Exchange's business is primarily conducted on a daily basis, and (ii) a secondary data center, which is predominantly maintained for business continuity purposes. The Exchange

currently assesses the following physical connectivity fees for Members and non-Members on a monthly basis: \$2,000 per physical port that connects to the System⁶ via 1 gigabyte circuit; and \$4,000 per physical port that connects to the System via 10 gigabyte circuit. The Exchange proposes to increase the fee per physical port that connects to the System via a 10 gigabyte circuit from \$4,000 per month to \$6,000 per month in order cover its increased infrastructure costs associated with establishing physical ports to connect to the Exchange's Systems and enable it to continue to maintain and improve its market technology and services. The Exchange does not propose to amend the fee for a 1 gigabyte circuit, which will remain \$2,000 per month.

Bats Connect

The Exchange proposes to increase select fees related to the use of Bats Connect. Bats Connect is offered by the Exchange on a voluntary basis in a capacity similar to a vendor.⁷ In sum, Bats Connect is a communication service that provides subscribers an additional means to receive market data from and route orders to any destination connected to the Exchange's network. Bats Connect does not provide any advantage to subscribers for connecting to the Exchange's affiliates⁸ as compared to other methods of connectivity. The servers of the subscriber need not be located in the same facilities as the Exchange in order to subscribe to Bats Connect. Subscribers may also seek to utilize Bats Connect in the event of a market disruption where other alternative connection methods become unavailable.

The Exchange charges a monthly connectivity fee to subscribers utilizing Bats Connect to route orders to other exchanges and broker-dealers that are connected to the Exchange's network via unicast access. The amount of the connectivity fee varies based solely on the bandwidth selected by the subscriber. Specifically, as set forth under the Unicast Access—Order Entry section of the fee schedule, the Exchange charges \$350 for 1 Mb, \$700 for 5 Mb, \$950 for 10 Mb, \$1,500 for 25 Mb, \$2,500 for 50 Mb, and \$3,500 for 100 Mb. The Exchange proposes to

⁶ The term "System" is defined as "the automated trading system used by EDGX Options for the trading of options contracts." See Exchange Rule 11.16(a)(59) [sic].

⁷ See Exchange Rule 13.9.

⁸ The Exchange's affiliated exchanges are Bats EDGA Exchange, Inc. ("EDGA"), Bats BYX Exchange, Inc. ("BYX"), and Bats BZX Exchange, Inc. ("BZX").

¹ 15 U.S.C. 78s(b)(1).

² 17 CFR 240.19b-4.

³ 15 U.S.C. 78s(b)(3)(A)(ii).

⁴ 17 CFR 240.19b-4(f)(2).

⁵ The term "Member" is defined as "any registered broker or dealer that has been admitted to membership in the Exchange." See Exchange Rule 1.5(n).

increase those fees as follows: \$500 for 1 Mb, \$1,000 for 5 Mb, and \$1,250 for 10 Mb. The proposed increases are designed to cover increased costs related to hardware, installation, and testing, as well as increased expenses involved in maintaining and managing the service. The Exchange does not propose to increase the fees for the 25 Mb, 50 Mb and 100 Mb connections as

those fees will remain \$1,500, \$2,500, and \$3,500, respectively.

Bats Connect also allows subscribers to receive market data feeds from the exchanges connected to the Exchange's network. In such case, the subscriber pays the Exchange a connectivity fee, which are set forth under the Market Data Connectivity section of the fee schedule and vary based solely on the

amount of bandwidth required to transmit the selected data product to the subscriber.⁹ The proposed connectivity fees currently range from no charge to \$11,500 based on the market data product the subscriber selects. The Exchange proposes to increase select connectivity fees for market data as follows:

Data feed	Current fee	Proposed fee
UQDF/UTDF/OMDF	\$650	\$1,200
CQS/CTS	1,000	1,400
OPRA	3,500	4,500
Nasdaq TotalView	1,300	1,500
Nasdaq BX TotalView	650	1,000
Nasdaq PSX TotalView	350	750
NYSE Integrated	11,500	14,500
NYSE ArcaBook	1,000	1,250
NYSE MKT OpenBook Ultra	150	500
NYSE Alerts	250	500
NYSE Imbalances	100	500
NYSE Arca Trades	250	500
BBDS/TDDS	100	500

The proposed increases are designed to allow the Exchange to cover the increased costs related to the amount of bandwidth required to provide connectivity to receive market data as well as the costs of maintaining that infrastructure.

The Exchange also charges a discounted fee of \$4,160 per month for subscribers who purchase connectivity to a bundle of select market data products, known as the U.S. Equities Select + SIP Bundle. The following market data products are included in the bundle: UQDF/UTDF/OMDF, CQS/CTS, Nasdaq TotalView, Nasdaq BX TotalView, Nasdaq PSX TotalView, NYSE ArcaBook, NYSE MKT OpenBook Ultra, and BBDS/TTDS.¹⁰ Absent the discount, a subscriber purchasing connectivity through Bats Connect for each of these market data products would currently pay a total monthly fee of \$5,200. Instead, a subscriber who purchases connectivity to each of the above market data products is charged a monthly fee of \$4,160, which represents a 20% discount. The Exchange proposes to add NYSE OpenBook Ultra to the bundle. Also, in light of the proposed changes outlined above, the Exchange proposes to increase the discounted rate of the bundle to \$5,910 per month, which would now represent a 40% discount from the rate of \$9,850 a subscriber purchasing connectivity through Bats

Connect for each of these market data products would be charged under the proposed rule change.

Lastly, the Exchange proposes to charge a discounted fee of \$6,390 per month for subscribers who purchase connectivity to the OPRA, UQDF/UTDF/OMDF, and CQS/CTS data feeds. Absent the discount, a subscriber purchasing connectivity through Bats Connect for each of these market data products would pay a total monthly fee of \$7,100. Instead, a subscriber who purchases connectivity to each of the above market data products is charged a monthly fee of \$6,390, which represents a 10% discount.

Implementation Date

The Exchange proposes to implement this amendment to its fee schedule on January 3, 2017.

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with the objectives of Section 6 of the Act,¹¹ in general, and furthers the objectives of Section 6(b)(4),¹² in particular, as it is designed to provide for the equitable allocation of reasonable dues, fees and other charges among its Members and other persons using its facilities. The Exchange also notes that it operates in a highly-competitive market in which market participants can readily direct order flow to competing venues if they deem fee levels at a particular venue to

be excessive. The proposed rule change reflects a competitive pricing structure designed to incent market participants to direct their order flow to the Exchange. The Exchange believes that the proposed rates are equitable and non-discriminatory in that they apply uniformly to all Members. The Exchange believes the fees and credits remain competitive with those charged by other venues and therefore continue to be reasonable and equitably allocated to Members.

The Exchange believes that the proposal represents an equitable allocation of reasonable dues, fees, and other charges as its fees for physical connectivity are reasonably constrained by competitive alternatives. If a particular exchange charges excessive fees for connectivity, affected Members and non-Members may opt to terminate their connectivity arrangements with that exchange, and adopt a possible range of alternative strategies, including routing to the applicable exchange through another participant or market center or taking that exchange's data indirectly. Accordingly, if the Exchange charges excessive fees, it would stand to lose not only connectivity revenues but also revenues associated with the execution of orders routed to it, and, to the extent applicable, market data revenues. The Exchange believes that this competitive dynamic imposes powerful restraints on the ability of any

⁹ Subscribers pay any fees charged by the exchange providing the market data feed directly to that exchange.

¹⁰ The Exchange also proposes to correct a typographical error in referencing BBDS/TTDS in its description of the U.S. Equity Select + SIP bundle.

¹¹ 15 U.S.C. 78f.

¹² 15 U.S.C. 78f(b)(4).

exchange to charge unreasonable fees for connectivity.

Furthermore, the proposed rule change is also an equitable allocation of reasonable dues, fees, and other charges as the Exchange believes that the increased fees obtained will enable it to cover its increased infrastructure costs associated with establishing physical ports to connect to the Exchange's Systems. The additional revenue from the increased fees will also enable the Exchange to continue to maintain and improve its market technology and services.

Physical Ports

The Exchange believes that the proposed fees for a 10 gigabyte circuit of \$6,000 per month is reasonable in that they are less than analogous fees charged by the Nasdaq Stock Market LLC ("Nasdaq") and NYSE Arca, Inc. ("Arca"), which range from \$10,000—\$15,000 per month for 10 gigabyte circuits.¹³ The Exchange believes that the proposed rates are equitable and non-discriminatory in that they apply uniformly to all Members and non-Members. Members and non-Members will continue to choose whether they want more than one physical port and choose the method of connectivity based on their specific needs. All Exchange Members that voluntarily select various service options will be charged the same amount for the same services. As is true of all physical connectivity, all Members and non-Members have the option to select any connectivity option, and there is no differentiation with regard to the fees charged for the service.

Bats Connect

The Exchange also believes that its proposed fees for Bats Connect provide for the equitable allocation of reasonable dues, fees and other charges among members and other persons using its facilities. First, the Exchange charges a connectivity fee to subscribers utilizing Bats Connect to route orders to other exchanges and market centers that are connected to the Exchange's network, which varies based solely on the amount of bandwidth selected by the subscriber. The proposed increased connectivity fees remain reasonable and competitive as compared to similar fees charged by other exchanges. For purposes of order routing, the Exchange proposes to now charge \$500 for 1 Mb, \$1,000 for 5 Mb, and \$1,250 for 10 Mb.

¹³ See Nasdaq Rule 7034(b) and the Co-Location section of the NYSE Arca fee schedule available at https://www.nyse.com/publicdocs/nyse/markets/nyse-arca/NYSE_Arca_Marketplace_Fees.pdf (dated December 2, 2016).

The New York Stock Exchange, Inc. ("NYSE") currently charges \$300 for 1 Mb, \$700 for 5 Mb, and \$900 for 10 Mb.¹⁴ In addition, the proposed rates continue to be less than what a subscriber would pay to connect directly to another exchange.¹⁵ The Exchange notes that, overall, the connectivity fee for routing of orders to other market centers proposed by the Exchange is similar to that charged by the NYSE.

Second, with regard to utilizing Bats Connect to receive market data products from other exchanges, the Exchange only charges subscribers a connectivity fee, the amount of which is based solely on the amount of bandwidth required to transmit that specific data product to the subscribers. The Exchange believes it is necessary to increase the rates for select market data feeds as described herein to address changes in bandwidth necessary to receive such feeds. The increased fees will also enable the Exchange to continue to cover the increased infrastructure costs while also enabling it to continue to maintain and improve the service.

The amounts of the connectivity fees continue to be reasonable as compared to similar fees charged by other exchanges. For example, for market data connectivity, Nasdaq charges \$1,412 per month for CQS/CTS data feed, and the Exchange proposes to charge \$1,400 per month connectivity for CQS/CTS data feed.¹⁶

The Exchange believes it is reasonable to offer such discounted pricing to subscribers who purchase connectivity to a bundle of market data products as it would enable them to reduce their overall connectivity costs for the receipt of market data. The Exchange is not required by any rule or regulation to make Bats Connect available; nor are subscribers required by any rule or regulation to utilize Bats Connect. Accordingly, subscribers can discontinue use at any time and for any reason, including due to an assessment of the reasonableness of fees charged. Moreover, the Exchange believes the proposed fees are reasonable and equitable because they continue to be based on the Exchange's costs to cover the amount of bandwidth required to provide connectivity to the select

¹⁴ See Section 3.6.1 of NYSE's SFTI Americas Product and Service List available at <http://www.nyxdata.com/docs/connectivity>.

¹⁵ See e.g., Nasdaq Rule 7034(b) and the NYSE Arca fee schedule available at https://www.nyse.com/publicdocs/nyse/markets/nyse-arca/NYSE_Arca_Marketplace_Fees.pdf (dated December 2, 2016).

¹⁶ See Nasdaq Rule 7034 (setting forth Nasdaq's connectivity fees for receipt of third party market data products).

bundle of data feeds. The proposed fees will continue to allow the Exchange to recoup this cost, while providing subscribers with an alternative means to connect to the select bundle of data feeds at a discounted rate.

Lastly, the Exchange believes the proposed fees are reasonable and equitable because they are based on the Exchange's costs to cover hardware, installation, testing and connection, as well as expenses involved in maintaining and managing the service. The proposed fees allow the Exchange to recoup these costs, while providing subscribers with an alternative means to connect to other exchange and market centers. The Exchange believes that the proposed fees are reasonable and equitable in that they reflect the costs and the benefit of providing alternative connectivity.

(B) Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act. As discussed above, the Exchange believes that fees for connectivity are constrained by the robust competition for order flow among exchanges and non-exchange markets. The Exchange does not believe that the proposed changes represent a significant departure from previous pricing offered by the Exchange or pricing offered by the Exchange's competitors. Additionally, Members may opt to disfavor the Exchange's pricing if they believe that alternatives offer them better value. Further, excessive fees for connectivity would serve to impair an exchange's ability to compete for order flow rather than burdening competition.

Lastly, the Exchange does not believe the proposed fees for Bats Connect will result in any burden on competition. The proposed rule change is designed to provide subscribers with an alternative means to access other market centers on the Exchange's network if they choose or in the event of a market disruption where other alternative connection methods become unavailable. Bats Connect is not the exclusive method to connect to these market centers and subscribers may utilize alternative methods to connect to the product if they believe the Exchange's proposed pricing is unreasonable or otherwise. Therefore, the Exchange does not believe the proposed rule change will have any effect on competition.

(C) Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants or Others

The Exchange has not solicited, and does not intend to solicit, comments on this proposed rule change. The Exchange has not received any unsolicited written comments from Members or other interested parties.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A) of the Act¹⁷ and paragraph (f) of Rule 19b-4 thereunder.¹⁸ At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File Number SR-BatsEDGX-2016-75 on the subject line.

Paper Comments

• Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549-1090. All submissions should refer to File Number SR-BatsEDGX-2016-75. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the

Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR-BatsEDGX-2016-75 and should be submitted on or before February 3, 2017.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.¹⁹

Eduardo A. Aleman,
Assistant Secretary.

BILLING CODE P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-79760; File No. SR-BatsBYX-2016-40]

Self-Regulatory Organizations; Bats BYX Exchange, Inc.; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Modify Fees for Connectivity and Its Communication and Routing Service Known as Bats Connect

January 9, 2017.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act"),¹ and Rule 19b-4 thereunder,² notice is hereby given that on December 27, 2016, Bats BYX Exchange, Inc. ("Exchange" or "BYX") filed with the Securities and Exchange Commission ("Commission") the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the Exchange. The Exchange has designated the proposed rule change as one establishing or changing a member due, fee, or other charge imposed by the Exchange under Section 19(b)(3)(A)(ii) of the Act³ and Rule 19b-4(f)(2) thereunder,⁴ which renders the proposed rule change

effective upon filing with the Commission. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange filed a proposal to amend the fee schedule applicable to Members⁵ and non-members of the Exchange pursuant to BYX Rules 15.1(a) and (c) to modify its fees for physical ports, logical ports, and for the use of a communication and routing service known as Bats Connect.

The text of the proposed rule change is available at the Exchange's Web site at www.batstrading.com, at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in Sections A, B, and C below, of the most significant parts of such statements.

(A) Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to modify its fees for physical ports, logical ports, and for the use of a communication and routing service known as Bats Connect. Each of these proposed changes are described below.

Physical Ports

A physical port is utilized by a Member or non-Member to connect to the Exchange at the data centers where the Exchange's servers are located. The Exchange currently maintains a presence in two third-party data centers: (i) The primary data center where the Exchange's business is primarily conducted on a daily basis, and (ii) a secondary data center, which is

¹⁹ 17 CFR 200.30-3(a)(12).

¹ 15 U.S.C. 78s(b)(1).

² 17 CFR 240.19b-4.

³ 15 U.S.C. 78s(b)(3)(A)(ii).

⁴ 17 CFR 240.19b-4(f)(2).

⁵ The term "Member" is defined as "any registered broker or dealer that has been admitted to membership in the Exchange." See Exchange Rule 1.5(n).

¹⁷ 15 U.S.C. 78s(b)(3)(A).

¹⁸ 17 CFR 240.19b-4(f).

predominantly maintained for business continuity purposes. The Exchange currently assesses the following physical connectivity fees for Members and non-Members on a monthly basis: \$2,000 per physical port that connects to the System⁶ via 1 gigabyte circuit; and \$4,000 per physical port that connects to the System via 10 gigabyte circuit. The Exchange proposes to increase the fee per physical port that connects to the System via a 10 gigabyte circuit from \$4,000 per month to \$6,000 per month in order cover its increased infrastructure costs associated with establishing physical ports to connect to the Exchange's Systems and enable it to continue to maintain and improve its market technology and services. The Exchange does not propose to amend the fee for a 1 gigabyte circuit, which will remain \$2,000 per month.

Logical Ports

The Exchange currently charges for logical ports (including Multicast PITCH Spin Server and GRP ports) \$500 per port per month. A logical port represents a port established by the Exchange within the Exchange's system for trading and billing purposes. Each logical port established is specific to a Member or non-Member and grants that Member or non-Member the ability to operate a specific application, such as FIX order entry or PITCH data receipt. Logical port fees are limited to logical ports in the Exchange's primary data center and no logical port fees are assessed for redundant secondary data center ports. The Exchange assesses the monthly per logical port fees to all

Members' and non-Members' logical ports. The Exchange now proposes to increase charges for logical ports (including Multicast PITCH Spin Server and GRP ports) from \$500 per port per month to \$550 per month. Like as for the proposed fee increase for physical ports described above, the proposed increase in logical port fees is intended to cover increased infrastructure costs associated with establishing ports to connect to the Exchange's Systems and to enable the Exchange to continue to maintain and improve its market technology and services.

Bats Connect

The Exchange proposes to increase select fees related to the use of Bats Connect. Bats Connect is offered by the Exchange on a voluntary basis in a capacity similar to a vendor.⁷ In sum, Bats Connect is a communication service that provides subscribers an additional means to receive market data from and route orders to any destination connected to the Exchange's network. Bats Connect does not provide any advantage to subscribers for connecting to the Exchange's affiliates⁸ as compared to other methods of connectivity. The servers of the subscriber need not be located in the same facilities as the Exchange in order to subscribe to Bats Connect. Subscribers may also seek to utilize Bats Connect in the event of a market disruption where other alternative connection methods become unavailable.

The Exchange charges a monthly connectivity fee to subscribers utilizing

Bats Connect to route orders to other exchanges and broker-dealers that are connected to the Exchange's network via unicast access. The amount of the connectivity fee varies based solely on the bandwidth selected by the subscriber. Specifically, as set forth under the Unicast Access—Order Entry section of the fee schedule, the Exchange charges \$350 for 1 Mb, \$700 for 5 Mb, \$950 for 10 Mb, \$1,500 for 25 Mb, \$2,500 for 50 Mb, and \$3,500 for 100 Mb. The Exchange proposes to increase those fees as follows: \$500 for 1 Mb, \$1,000 for 5 Mb, and \$1,250 for 10 Mb. The proposed increases are designed to cover increased costs related to hardware, installation, and testing, as well as increased expenses involved in maintaining and managing the service. The Exchange does not propose to increase the fees for the 25 Mb, 50 Mb and 100 Mb connections as those fees will remain \$1,500, \$2,500, and \$3,500, respectively.

Bats Connect also allows subscribers to receive market data feeds from the exchanges connected to the Exchange's network. In such case, the subscriber pays the Exchange a connectivity fee, which are set forth under the Market Data Connectivity section of the fee schedule and vary based solely on the amount of bandwidth required to transmit the selected data product to the subscriber.⁹ The proposed connectivity fees currently range from no charge to \$11,500 based on the market data product the subscriber selects. The Exchange proposes to increase select connectivity fees for market data as follows:

Data feed	Current fee	Proposed fee
UQDF/UTDF/OMDF	\$650	\$1,200
CQS/CTS	1,000	1,400
OPRA	3,500	4,500
Nasdaq TotalView	1,300	1,500
Nasdaq BX TotalView	650	1,000
Nasdaq PSX TotalView	350	750
NYSE Integrated	11,500	14,500
NYSE ArcaBook	1,000	1,250
NYSE MKT OpenBook Ultra	150	500
NYSE Alerts	250	500
NYSE Imbalances	100	500
NYSE Arca Trades	250	500
BBDS/TDDS	100	500

The proposed increases are designed to allow the Exchange to cover the increased costs related to the amount of bandwidth required to provide

connectivity to receive market data as well as the costs of maintaining that infrastructure.

The Exchange also charges a discounted fee of \$4,160 per month for subscribers who purchase connectivity to a bundle of select market data

⁶ The term "System" is defined as "the electronic communications and trading facility designated by the Board through which securities orders of Users are consolidated for ranking, execution and, when

applicable, routing away." See Exchange Rule 1.5(aa).

⁷ See Exchange Rule 13.8.

⁸ The Exchange's affiliated exchanges are Bats EDGX Exchange, Inc. ("EDGX"), Bats EDGA

Exchange, Inc. ("EDGA"), and Bats BZX Exchange, Inc. ("BZX").

⁹ Subscribers pays any fees charged by the exchange providing the market data feed directly to that exchange.

products, known as the U.S. Equities Select + SIP Bundle. The following market data products are included in the bundle: UQDF/UTDF/OMDF, CQS/CTS, Nasdaq TotalView, Nasdaq BX TotalView, Nasdaq PSX TotalView, NYSE ArcaBook, NYSE MKT OpenBook Ultra, and BBDS/TTDS.¹⁰ Absent the discount, a subscriber purchasing connectivity through Bats Connect for each of these market data products would currently pay a total monthly fee of \$5,200. Instead, a subscriber who purchases connectivity to each of the above market data products is charged a monthly fee of \$4,160, which represents a 20% discount. The Exchange proposes to add NYSE OpenBook Ultra to the bundle. Also, in light of the proposed changes outlined above, the Exchange proposes to increase the discounted rate of the bundle to \$5,910 per month, which would now represent a 40% discount from the rate of \$9,850 a subscriber purchasing connectivity through Bats Connect for each of these market data products would be charged under the proposed rule change.

Lastly, the Exchange proposes to charge a discounted fee of \$6,390 per month for subscribers who purchase connectivity to the OPRA, UQDF/UTDF/OMDF, and CQS/CTS data feeds, to be known as the OPRA + SIP Bundle. Absent the discount, a subscriber purchasing connectivity through Bats Connect for each of these market data products would pay a total monthly fee of \$7,100. Instead, a subscriber who purchases connectivity to each of the above market data products is charged a monthly fee of \$6,390, which represents a 10% discount.

Implementation Date

The Exchange proposes to implement this amendment to its fee schedule on January 3, 2017.¹¹

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with the objectives of Section 6 of the Act,¹² in general, and furthers the objectives of Section 6(b)(4),¹³ in particular, as it is designed to provide for the equitable allocation of reasonable dues, fees and other charges among its Members and

other persons using its facilities. The Exchange also notes that it operates in a highly-competitive market in which market participants can readily direct order flow to competing venues if they deem fee levels at a particular venue to be excessive. The proposed rule change reflects a competitive pricing structure designed to incent market participants to direct their order flow to the Exchange. The Exchange believes that the proposed rates are equitable and non-discriminatory in that they apply uniformly to all Members. The Exchange believes the fees and credits remain competitive with those charged by other venues and therefore continue to be reasonable and equitably allocated to Members.

The Exchange believes that the proposal represents an equitable allocation of reasonable dues, fees, and other charges as its fees for physical connectivity are reasonably constrained by competitive alternatives. If a particular exchange charges excessive fees for connectivity, affected Members and non-Members may opt to terminate their connectivity arrangements with that exchange, and adopt a possible range of alternative strategies, including routing to the applicable exchange through another participant or market center or taking that exchange's data indirectly. Accordingly, if the Exchange charges excessive fees, it would stand to lose not only connectivity revenues but also revenues associated with the execution of orders routed to it, and, to the extent applicable, market data revenues. The Exchange believes that this competitive dynamic imposes powerful restraints on the ability of any exchange to charge unreasonable fees for connectivity.

Furthermore, the proposed rule change is also an equitable allocation of reasonable dues, fees, and other charges as the Exchange believes that the increased fees obtained will enable it to cover its increased infrastructure costs associated with establishing physical ports to connect to the Exchange's Systems. The additional revenue from the increased fees will also enable the Exchange to continue to maintain and improve its market technology and services.

Physical Ports

The Exchange believes that the proposed fees for a 10 gigabyte circuit of \$6,000 per month is reasonable in that they are less than analogous fees charged by the Nasdaq Stock Market LLC ("Nasdaq") and NYSE Arca, Inc. ("Arca"), which range from \$10,000–\$15,000 per month for 10 gigabyte

circuits.¹⁴ The Exchange believes that the proposed rates are equitable and non-discriminatory in that they apply uniformly to all Members and non-Members. Members and non-Members will continue to choose whether they want more than one physical port and choose the method of connectivity based on their specific needs. All Exchange Members that voluntarily select various service options will be charged the same amount for the same services. As is true of all physical connectivity, all Members and non-Members have the option to select any connectivity option, and there is no differentiation with regard to the fees charged for the service.

Logical Ports

The Exchange believes that the increase of fees for logical ports represents an equitable allocation of reasonable dues, fees and other charges. The Exchange believes that its proposed changes to logical port fees are reasonable in light of the benefits to Exchange participants of direct market access and receipt of data. The Exchange believes its proposed fees are reasonable because Nasdaq and NYSE Arca charge comparable rates for logical ports to access such markets.¹⁵

Bats Connect

The Exchange also believes that its proposed fees for Bats Connect provide for the equitable allocation of reasonable dues, fees and other charges among members and other persons using its facilities. First, the Exchange charges a connectivity fee to subscribers utilizing Bats Connect to route orders to other exchanges and market centers that are connected to the Exchange's network, which varies based solely on the amount of bandwidth selected by the subscriber. The proposed increased connectivity fees remain reasonable and competitive as compared to similar fees charged by other exchanges. For purposes of order routing, the Exchange proposes to now charge \$500 for 1 Mb, \$1,000 for 5 Mb, and \$1,250 for 10 Mb. The New York Stock Exchange, Inc. ("NYSE") currently charges \$300 for 1 Mb, \$700 for 5 Mb, and \$900 for 10

¹⁰ The Exchange also proposes to correct a typographical error in referencing BBDS/TTDS in its description of the U.S. Equity Select + SIP bundle.

¹¹ The Exchange notes that the date of its fee schedule was previously updated to January 3, 2017 in SR-BatsBYX-2016-39 (December 6 [sic], 2017). See Securities Exchange Act Release No. 79623 (December 20, 2016).

¹² 15 U.S.C. 78f.

¹³ 15 U.S.C. 78f(b)(4).

¹⁴ See Nasdaq Rule 7034(b) and the NYSE Arca fee schedule available at https://www.nyse.com/publicdocs/nyse/markets/nyse-arca/NYSE_Arca_Marketplace_Fees.pdf (dated December 2, 2016).

¹⁵ See Nasdaq Rule 7015(b) (charging a fee of \$575 per month for FIX Trading Ports) and the NYSE Arca fee schedule available at https://www.nyse.com/publicdocs/nyse/markets/nyse-arca/NYSE_Arca_Marketplace_Fees.pdf (dated December 2, 2016) (charging a fee of \$550 per month for ports for order/quote entry).

Mb.¹⁶ In addition, the proposed rates continue to be less than what a subscriber would pay to connect directly to another exchange.¹⁷ The Exchange notes that, overall, the connectivity fee for routing of orders to other market centers proposed by the Exchange is similar to that charged by the NYSE.

Second, with regard to utilizing Bats Connect to receive market data products from other exchanges, the Exchange only charges subscribers a connectivity fee, the amount of which is based solely on the amount of bandwidth required to transmit that specific data product to the subscribers. The Exchange believes it is necessary to increase the rates for select market data feeds as described herein to address changes in bandwidth necessary to receive such feeds. The increased fees will also enable the Exchange to continue to cover the increased infrastructure costs while also enabling it to continue to maintain and improve the service.

The amounts of the connectivity fees continue to be reasonable as compared to similar fees charged by other exchanges. For example, for market data connectivity, Nasdaq charges \$1,412 per month for CQS/CTS data feed, and the Exchange proposes to charge \$1,400 per month connectivity for CQS/CTS data feed.¹⁸

The Exchange believes it is reasonable to offer such discounted pricing to subscribers who purchase connectivity to a bundle of market data products as it would enable them to reduce their overall connectivity costs for the receipt of market data. The Exchange is not required by any rule or regulation to make Bats Connect available; nor are subscribers required by any rule or regulation to utilize Bats Connect. Accordingly, subscribers can discontinue use at any time and for any reason, including due to an assessment of the reasonableness of fees charged. Moreover, the Exchange believes the proposed fees are reasonable and equitable because they continue to be based on the Exchange's costs to cover the amount of bandwidth required to provide connectivity to the select bundle of data feeds. The proposed fees will continue to allow the Exchange to recoup this cost, while providing

subscribers with an alternative means to connect to the select bundle of data feeds at a discounted rate.

Lastly, the Exchange believes the proposed fees are reasonable and equitable because they are based on the Exchange's costs to cover hardware, installation, testing and connection, as well as expenses involved in maintaining and managing the service. The proposed fees allow the Exchange to recoup these costs, while providing subscribers with an alternative means to connect to other exchange and market centers. The Exchange believes that the proposed fees are reasonable and equitable in that they reflect the costs and the benefit of providing alternative connectivity.

(B) Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act. As discussed above, the Exchange believes that fees for connectivity are constrained by the robust competition for order flow among exchanges and non-exchange markets. The Exchange does not believe that the proposed changes represent a significant departure from previous pricing offered by the Exchange or pricing offered by the Exchange's competitors. Additionally, Members may opt to disfavor the Exchange's pricing if they believe that alternatives offer them better value. Further, excessive fees for connectivity would serve to impair an exchange's ability to compete for order flow rather than burdening competition.

Lastly, the Exchange does not believe the proposed fees for Bats Connect will result in any burden on competition. The proposed rule change is designed to provide subscribers with an alternative means to access other market centers on the Exchange's network if they choose or in the event of a market disruption where other alternative connection methods become unavailable. Bats Connect is not the exclusive method to connect to these market centers and subscribers may utilize alternative methods to connect to the product if they believe the Exchange's proposed pricing is unreasonable or otherwise. Therefore, the Exchange does not believe the proposed rule change will have any effect on competition.

(C) Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants or Others

The Exchange has not solicited, and does not intend to solicit, comments on

this proposed rule change. The Exchange has not received any unsolicited written comments from Members or other interested parties.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A) of the Act¹⁹ and paragraph (f) of Rule 19b-4 thereunder. At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File Number SR-BatsBYX-2016-40 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549-1090.
- All submissions should refer to File Number SR-BatsBYX-2016-40. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE.,

¹⁶ See Section 3.6.1 of NYSE's SFTI Americas Product and Service List available at <http://www.nyxdata.com/docs/connectivity>.

DEPARTMENT OF STATE

[Public Notice: 9792]

30-Day Notice of Proposed Information Collection: Request for Determination of Possible Loss of United States Citizenship

ACTION: Notice of request for public comment and submission to OMB of proposed collection of information.

SUMMARY: The Department of State has submitted the information collection described below to the Office of Management and Budget (OMB) for approval. In accordance with the Paperwork Reduction Act of 1995 we are requesting comments on this collection from all interested individuals and organizations. The purpose of this Notice is to allow 30 days for public comment.

DATES: Submit comments directly to the Office of Management and Budget (OMB) up to February 13, 2017.

ADDRESSES: Direct comments to the Department of State Desk Officer in the Office of Information and Regulatory Affairs at the Office of Management and Budget (OMB). You may submit comments by the following methods:

- *Email:* oira_submission@omb.eop.gov. You must include the DS form number, information collection title, and the OMB control number in the subject line of your message.
- *Fax:* 202-395-5806. Attention: Desk Officer for Department of State.

FOR FURTHER INFORMATION CONTACT:

Direct requests for additional information regarding the collection listed in this notice, including requests for copies of the proposed collection instrument and supporting documents, to Derek A. Rivers, Bureau of Consular Affairs, Overseas Citizens Services (CA/OCS/PMO), U.S. Department of State, 2201 C. St. NW., Washington, DC 20522, who may be reached at mailto:RiversDA@state.gov.

SUPPLEMENTARY INFORMATION:

- *Title of Information Collection:* Request for Determination of Possible Loss of United States Citizenship.
- *OMB Control Number:* 1405-0178.
- *Type of Request:* Extension of a Currently Approved Collection.
- *Originating Office:* Bureau of Consular Affairs, Overseas Citizens Services (CA/OCS).
- *Form Number:* DS-4079.
- *Respondents:* United States Citizens.
- *Estimated Number of Respondents:* 600.
- *Estimated Number of Responses:* 600.

²⁰ 17 CFR 200.30-3(a)(12).

- *Average Time per Response:* 40 minutes.
- *Total Estimated Burden Time:* 400 hours.
- *Frequency:* On Occasion.
- *Obligation to Respond:* Voluntary, but if not completed, may not obtain or retain benefits.

We are soliciting public comments to permit the Department to:

- Evaluate whether the proposed information collection is necessary for the proper functions of the Department.
- Evaluate the accuracy of our estimate of the time and cost burden for this proposed collection, including the validity of the methodology and assumptions used.
- Enhance the quality, utility, and clarity of the information to be collected.
- Minimize the reporting burden on those who are to respond, including the use of automated collection techniques or other forms of information technology.

Please note that comments submitted in response to this Notice are public record. Before including any detailed personal information, you should be aware that your comments as submitted, including your personal information, will be available for public review.

Abstract of Proposed Collection

The purpose of the DS-4079 questionnaire is to determine current citizenship status and the possibility of loss of United States citizenship. The information provided assists consular officers and the Department of State in determining if the U.S. citizen has lost his or her nationality by voluntarily performing an expatriating act with the intention of relinquishing United States nationality. 8 U.S.C. 1501 grants authority to collect this information.

Methodology

The Bureau of Consular Affairs will post this form on Department of State Web sites to give respondents the opportunity to complete the form online, or print the form and fill it out manually and submit the form in person or by fax or mail.

Michelle Bernier-Toth,

Managing Director, Bureau of Consular Affairs, Overseas Citizens Services, Department of State.

Federal Aviation Administration

Tenth RTCA SC-229 406 MHz ELT Plenary Joint With WG-98; Correction

AGENCY: Federal Aviation Administration (FAA).

ACTION: Notice; correction.

SUMMARY: The Federal Aviation Administration published a document in the *Federal Register* of January 9, 2017, concerning the Tenth RTCA SC-229 406 MHz ELT Plenary Joint with WG-98. The document contained the incorrect location.

FOR FURTHER INFORMATION CONTACT:

Rebecca Morrison at rmorrison@rtca.org or 202-330-0654, or The RTCA Secretariat, 1150 18th Street NW., Suite 910, Washington, DC 20036, or by telephone at (202) 833-9339, fax at (202) 833-9434, or Web site at <http://www.rtca.org>.

Correction

In *Federal Register*, of January 9, 2017, in FR doc Vol. 82, No. 5, on page 2435 in Column 3 Correct the caption **ADDRESS** to read:

ADDRESSES: The meeting will be held at: E.A.S.A., Konrad-Adenauer-Ufer 3, D-50668 Cologne, Germany.

Dated: January 10, 2017.

Mohann Dawoud,

Management & Program Analyst, Partnership Contracts Branch, ANG-A17, NextGen, Procurement Services Division, Federal Aviation Administration.

DEPARTMENT OF TRANSPORTATION

Federal Highway Administration

Notice of Final Federal Agency Action on Proposed Transportation Project in Illinois

AGENCY: Federal Highway Administration (FHWA), DOT.

ACTION: Notice of Limitation on Claims for Judicial Review of Actions by FHWA.

SUMMARY: This notice announces actions taken by the FHWA that are final within the meaning of 23 U.S.C. 139(l)(1). The action relates to a the proposed construction of a new highway between Huntley Road and Illinois Route 62 and a new bridge crossing over the Fox River in Kane County. The Federal action, taken as a result of an Environmental Assessment and Finding of No Significant Impact under the National

Environmental Policy Act, 42 U.S.C. 4321-4351 (NEPA) and 23 CFR part 771 determined certain issues relating to the proposed project. This decision will be used by Federal agencies in subsequent proceedings, including decisions whether to grant licenses, permits, and approvals for the proposed highway project. The decision also may be relied upon by State and local agencies in proceedings on the proposed project.

DATES: By this notice, the FHWA is advising the public of the final agency action subject to 23 U.S.C. 139(l)(1). A claim seeking judicial review of the Federal agency action of the proposed highway project will be barred unless the claim is filed on or before June 12, 2017. If the Federal law that authorizes judicial review of a claim provides a time period of less than 150 days for filing such claim, then that shorter time period still applies.

FOR FURTHER INFORMATION CONTACT: For FHWA Ms. Catherine A. Batey, Division Administrator, 3250 Executive Park Drive, Springfield, Illinois 62703; telephone: (217) 492-4600; email address: Catherine.Batey@dot.gov. The FHWA Illinois Division Office's normal business hours are 7:30 a.m. to 4:15 p.m. (Central Standard Time). For the Illinois Department of Transportation: Mr. Jose Rios, Engineer of Program Development, 201 West Center Court, Schaumburg, Illinois 60196; telephone: (847) 705-4000. The Illinois Department of Transportation Region One's normal business hours are 8:00 a.m. to 4:30 p.m. (Central Standard Time). For the Kane County Division of Transportation, Mr. Steve Coffinbarger, Assistant Director, 41W011 Burlington Road, St. Charles, IL 60175; telephone: (630) 584-5265. The Kane County Division of Transportation's normal business hours are 8:00 a.m. to 4:30 p.m. (Central Standard Time).

SUPPLEMENTARY INFORMATION: Notice is hereby given that the FHWA has issued a Finding of No Significant Impact (FONSI) in connection with the proposed highway project in Illinois: the proposed construction of a new highway between Huntley Road and Illinois Route 62 and a new bridge crossing over the Fox River in Kane County.

The actions by the Federal agencies, and the laws under which such actions were taken, are described in the EA approved July 26, 2016, the FONSI approved November 22, 2016, and in other documents in the FHWA project records. The EA, FONSI, and other documents in the FHWA project file are available by contacting the FHWA, the Illinois Department of Transportation,

or the Kane County Division of Transportation at the addresses provided above. The EA and FONSI also are available online at <http://www.co.kane.il.us/dot/foxBridges/longmeadowPkwy.aspx>. Interested parties may consult the EA, the Errata, and the FONSI for further information on each of the decisions described above.

This notice applies to all Federal agency decisions as of the issuance date of this notice and all laws under which such actions were taken, including, but not limited to:

1. General: National Environmental Policy Act (NEPA) [42 U.S.C. 4321–4351] Federal-Aid Highway Act [23 U.S.C. 109 and 23 U.S.C. 128].
 2. Air: Clean Air Act [42 U.S.C. 7401–7671(q)].
 3. Land: Section 4(f) of the Department of Transportation Act of 1966 [49 U.S.C. 303 and 23 U.S.C. 138].
 4. Wildlife: Endangered Species Act [16 U.S.C. 1531–1544 and Section 1536]; Migratory Bird Treaty Act [16 U.S.C. 703–712].
 5. Historic and Cultural Resources: Section 106 of the National Historic Preservation Act of 1966, as amended [16 U.S.C. 470(f) *et seq.*].
 6. Water Resources: Safe Drinking Water Act [42 U.S.C. 300(f)–300(j)(6)]; Wild and Scenic Rivers Act [16 U.S.C. 1271–1287].
 7. Executive Orders: E.O. 11990 Protection of Wetlands; E.O. 11988 Floodplain Management; E.O. 12898 Federal Actions to Address Environmental Justice in Minority Populations and Low Income Populations.
- (Catalog of Federal Domestic Assistance Program Number 20.205, Highway Research, Planning and Construction. The regulations implementing Executive Order 12372 regarding intergovernmental consultation on Federal programs and activities apply to this program)

Authority: 23 U.S.C. 139(l)(1)

Issued on: January 5, 2017.

Glenn D. Fulkerson,

Assistant Division Administrator, Springfield, Illinois.

BILLING CODE 4910–22–P

DEPARTMENT OF TRANSPORTATION

Federal Highway Administration

Notice of Statute of Limitations on Claims; Final Federal Agency Actions on Proposed Highway in California

AGENCY: Federal Highway Administration (FHWA), DOT.

ACTION: Notice of Limitation on Claims for Judicial Review of Actions by the California Department of Transportation (Caltrans), pursuant to 23 U.S.C. 327, and United States Fish and Wildlife Service (USFWS), and United States Army Corp of Engineers (USACE).

SUMMARY: The FHWA, on behalf of Caltrans, is issuing this notice to announce actions taken by Caltrans, USFWS and USACE, that are final within the meaning of 23 U.S.C. 139(l)(1). The actions relate to a proposed highway project, United States (US) 101/State Route (SR) 84 interchange in the City of Redwood City, along 1.9 miles on US 101 and 0.4 mile on SR 84 in the County of San Mateo, State of California. Those actions grant licenses, permits, and approvals for the project.

DATES: By this notice, the FHWA, on behalf of Caltrans, is advising the public of final agency actions subject to 23 U.S.C. 139(l)(1). A claim seeking judicial review of the Federal agency actions on the highway project will be barred unless the claim is filed on or before June 12, 2017. If the Federal law that authorizes judicial review of a claim provides a time period of less than 150 days for filing such claim, then that shorter time period still applies.

FOR FURTHER INFORMATION CONTACT:

For Caltrans: Stefan Galvez, Chief of Environmental Analysis; Caltrans District #4; 111 Grand Avenue, Oakland CA 94611; 8 a.m.–5 p.m.; (510) 867–6786; Stefan.galvez@dot.ca.gov.

For USFWS: Ryan Olah, Coast Bay Division Chief; USFWS; Sacramento Fish and Wildlife Office; 2800 Cottage Way, Suite W–2605, Sacramento, CA 95825; 8 a.m.–5 p.m.; (916) 414–6623; ryan_olah@fws.gov.

For USACE: Calvin Fong, Regulatory Chief; USACE; 1455 Market Street, San Francisco, CA 94103; 8 a.m.–5 p.m.; (415) 977–8461; Calvin.c.fong@usace.army.mil.

SUPPLEMENTARY INFORMATION: Effective July 1, 2007, the Federal Highway Administration (FHWA) assigned, and the California Department of Transportation (Caltrans) assumed, environmental responsibilities for this project pursuant to 23 U.S.C. 327. Notice is hereby given that the Caltrans, USFWS, and USACE have taken final agency actions subject to 23 U.S.C. 139(l)(1) by issuing licenses, permits, and approvals for the following highway project in the State of California: The project proposes to widen and add lanes to SR 84 (hereafter simply Woodside Road), reconstruct all ramp connections to US 101, and construct direct-connect

flyover ramps between US 101 and Veterans Boulevard. The project would also construct additional pedestrian and bicycle facilities throughout the project area and improve the intersections of Woodside Road with Veterans Boulevard, Broadway, and Bay Road to the south of US 101, and Seaport Boulevard/East Bayshore Road/Blomquist Road to the north of US 101. The project extends for 1.9 miles along US 101 and 0.4 mile along Woodside Road. The total project length is 2.3 miles. Federal Project Number SM–050027. The actions by the Federal agencies, and the laws under which such actions were taken, are described in the Final Environmental Assessment (EA) for the project, approved on December 16, 2016, in the Caltrans' Finding of No Significant Impact (FONSI) issued on December 16, 2016 and in other documents in the FHWA project records. The EA, FONSI, and other project records are available by contacting Caltrans at the addresses provided above. The Caltrans EA and FONSI can also be viewed and downloaded from the project Web site at <http://www.dot.ca.gov/d4/envdocs.htm>.

The USFWS, concurred that the proposed Project will not directly affect the following species or their habitat: Ridgeway's rail (*Laterallus jamaicensis coturniculus*), California least tern (*Sternula antillarum browni*), and salt marsh harvest mouse (*Reithrodontomys raviventris*).

The USACE, concurred that the proposed Project would not affect jurisdictional wetlands or waters of the U.S., as defined in Section 404 of the Clean Water Act. As a result, a Section 404 permit from USACE will not be required.

This notice applies to all Federal agency decisions as of the issuance date of this notice and all laws under which such actions were taken, including but not limited to:

1. General: National Environmental Policy Act (NEPA) (42 U.S.C. 4321–4351 *et seq.*)
2. Council on Environmental Quality Regulations
3. Map-21, the Moving Ahead for Progress in the 21st Century Act
4. Clean Air Act (42 U.S.C. 7401–7671(q))
5. Migratory Bird Treaty Act (16 U.S.C. 703–712)
6. Historic and Cultural Resources: Section 106 of the National Historic Preservation Act of 1966, as amended, (16 U.S.C. 470(f) *et seq.*)
7. Clean Water Act (Section 401)
8. Federal Endangered Species Act of 1973 (16 U.S.C. 1531–1543)

9. Fish and Wildlife Coordination Act of 1934, as amended
10. Noise Control Act of 1972
11. Safe Drinking Water Act of 1944, as amended
12. Executive Order 11990—Protection of Wetlands
13. Executive Order 11988 Floodplain Management
14. Executive Order 13112, Invasive Species
15. Executive Order 12898, Federal Actions to Address Environmental Justice and Low-Income Populations
16. Title VI of Civil Rights Act 1964, as amended
17. Clean Air Act of 1963, as amended

(Catalog of Federal Domestic Assistance Program Number 20.205, Highway Planning and Construction. The regulations implementing Executive Order 12372 regarding intergovernmental consultation on Federal programs and activities apply to this program.)

Authority: 23 U.S.C. 139(l)(1).

Issued on: January 3, 2017.

Matt Schmitz,

Director, Project Delivery, Federal Highway Administration, Sacramento, California.

BILLING CODE 4910-RY-P

DEPARTMENT OF TRANSPORTATION

Federal Highway Administration

Notice of Final Federal Agency Actions on Proposed Highway in North Carolina

AGENCY: Federal Highway Administration (FHWA), DOT.

ACTION: Notice of limitations on claims for judicial review of actions by FHWA and other federal agencies.

SUMMARY: This notice announces action taken by the FHWA and other federal agencies that is final within the meaning of 23 U.S.C. 139(l)(1). This final agency action relates to a proposed highway project, Bonner Bridge Replacement Project along NC 12, from Rodanthe to Bodie Island in Dare County, North Carolina. The FHWA's Record of Decision (ROD) identifies the Bridge on New Location as the selected alternative for Phase IIb (Rodanthe Breach) of the Bonner Bridge Replacement Project.

DATES: By this notice, the FHWA is advising the public of final agency actions subject to 23 U.S.C. 139(l)(1). A claim seeking judicial review of the Federal agency actions on the highway project will be barred unless the claim is filed on or before June 12, 2017. If the Federal law that authorizes judicial

review of a claim provides a time period of less than 150 days for filing such claim, then that shorter time period still applies.

FOR FURTHER INFORMATION CONTACT: For FHWA: Clarence W. Coleman, P.E., Director of Preconstruction and Environment, Federal Highway Administration, North Carolina Division, 310 New Bern Avenue, Suite 410, Raleigh, North Carolina 27601-1418; Telephone: (919) 747-7014; email: clarence.coleman@dot.gov. FHWA North Carolina Division Office's normal business hours are 8 a.m. to 5 p.m. (Eastern Time). For the North Carolina Department of Transportation (NCDOT): Rodger Rochelle, Director of Technical Services, North Carolina Department of Transportation (NCDOT), 1548 Mail Service Center, Raleigh, North Carolina 27699-1548; Telephone (919) 707-2900; email: rdrochelle@ncdot.gov. NCDOT Technical Services Division Office's normal business hours are 8 a.m. to 5 p.m. (Eastern Time).

SUPPLEMENTARY INFORMATION: Notice is hereby given that FHWA has taken final agency action by issuing a Record of Decision (ROD) for the following highway project in the State of North Carolina: Rodanthe Breach Long-Term Improvements for Phase IIb of the Bonner Bridge Replacement Project along Highway NC 12 in Dare County, North Carolina. The project is also known as State Transportation Improvement Program (STIP) Project B-2500B, and is part of the second phase (Phase IIb) of the Parallel Bridge Corridor/Transportation Management Plan (PBC/TMP), which was identified as the selected alternative for the Bonner Bridge Replacement Project (STIP No. B-2500) in the Record of Decision (ROD) approved by FHWA on December 20, 2010. The NC 12 PBC/TMP addresses the length of the entire project for STIP No. B-2500, from the Village of Rodanthe to Bodie Island. The TMP is guiding the implementation of future phases of the project through 2060.

Located along the Outer Banks of North Carolina, the selected alternative for Phase IIb is approximately 2.8 miles in length, including a 2.4-mile long bridge on new location. The proposed alignment for NC 12 would leave the existing NC 12 alignment within the Pea Island National Wildlife Refuge at a point approximately 1.8 miles north of the Refuge boundary and enter Pamlico Sound. The bridge would be in Pamlico Sound until a point north of the Rodanthe emergency ferry terminal, where NC 12 would turn east and enter Rodanthe. The bridge extends

approximately 1,400 feet west of the Pamlico Sound shoreline at its farthest point. The Rodanthe area was breached as a result of Hurricane Irene in August 2011 and remains susceptible to breaches at the south end of the Refuge and Rodanthe, as well as the Rodanthe 'S' Curves Hot Spot that experiences high erosion rates.

The FHWA's action, related actions by other Federal agencies and the laws under which such actions were taken, are described in the Final Environmental Impact Statement (FEIS)/Final Section 4(f) Evaluation for the project, approved on September 17, 2008; the Revised Final Section 4(f) Evaluation, approved on October 9, 2009; the Environmental Assessment, approved on May 7, 2010; the FHWA ROD approved on December 20, 2010 for Phase I and the PBC/TMP for the remainder of the project; the Phase IIb Environmental Assessment, approved December 3, 2013; a Revised Phase IIb Environmental Assessment, approved May 24, 2016, the FHWA ROD for Phase IIb approved on December 15, 2016 and other documents in the project file. The above documents are available for review by contacting the FHWA or the NCDOT at the addresses provided above. In addition, these documents can be viewed and downloaded from the project Web site at <http://www.ncdot.gov/projects/bonnerbridgereplace/>.

This notice applies to all Federal agency decisions as of the issuance date of this notice and all laws under which such actions were taken, including but not limited to:

1. General: National Environmental Policy Act (NEPA) [42 U.S.C. 4321-4351]; Federal-Aid Highway Act [23 U.S.C. 109 and 23 U.S.C. 128].
2. Air: Clean Air Act [42 U.S.C. 7401-7671(q)].
3. Land: Section 4(f) of the Department of Transportation Act of 1966 [49 U.S.C. 303]; Coastal Barrier Resources Act [16 U.S.C. 3501-3510].
4. Wildlife: Endangered Species Act [16 U.S.C. 1531-1544]; Marine Mammal Protection Act [16 U.S.C. 1361-1407]; Anadromous Fish Conservation Act [16 U.S.C. 757(a)-757(g)]; Fish and Wildlife Coordination Act [16 U.S.C. 661-667(d)]; Migratory Bird Treaty Act [16 U.S.C. 703-712]; Magnuson-Stevenson Fishery Conservation and Management Act [16 U.S.C. 1801 *et seq.*].
5. Historic and Cultural Resources: Section 106 of the National Historic Preservation Act of 1966 [16 U.S.C. 470(f)].
6. Social and Economic: Civil Rights Act of 1964 [42 U.S.C. 2000(d)-2000(d)(1)].

7. Wetlands and Water Resources: Clean Water Act (Section 404, Section 401, Section 319) [33 U.S.C. 1251–1377]; Coastal Barrier Resources Act [16 U.S.C. 3501–3510]; Coastal Zone Management Act [16 U.S.C. 1451–1465]; Land and Water Conservation Fund (LWCF) [16 U.S.C. 4601–4604]; Safe Drinking Water Act (SDWA) [42 U.S.C. 300(f)–300(j)(6)]; Rivers and Harbors Act of 1899 [33 U.S.C. 401–406]; Wild and Scenic Rivers Act [16 U.S.C. 1271–1287]; Emergency Wetlands Resources Act [16 U.S.C. 3921, 3931]; TEA–21 Wetlands Mitigation [23 U.S.C. 103(b)(6)(m), 133(b)(11)]; Flood Disaster Protection Act [42 U.S.C. 4001–4128].

8. Hazardous Materials: Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) [42 U.S.C. 9601–9675]; Superfund Amendments and Reauthorization Act of 1986 (SARA; 42 U.S.C. 11011 *et seq.*); Resource Conservation and Recovery Act (RCRA) [42 U.S.C. 6901–6992(k)].

9. Executive Orders: E.O. 11990 Protection of Wetlands; E.O. 11988 Floodplain Management; E.O. 12898, Federal Actions to Address Environmental Justice in Minority Populations and Low Income Populations; E.O. 11593 Protection and Enhancement of Cultural Resources; E.O. 13007 Indian Sacred Sites; E.O. 13287 Preserve America; E.O. 13175 Consultation and Coordination with Indian Tribal Governments; E.O. 11514 Protection and Enhancement of Environmental Quality; E.O. 13112 Invasive Species; and E.O. 13186—Responsibilities of Federal Agencies to Protect Migratory Birds.

This notice does not apply to those pending environmental permitting decisions. (Catalog of Federal Domestic Assistance Program Number 20.205, Highway Research, Planning and Construction. The regulations implementing Executive Order 12372 regarding intergovernmental consultation on Federal programs and activities apply to this program.)

Authority: 23 U.S.C. 139(l)(1).

Issued on: December 22, 2016.

Clarence W. Coleman,

Director of Preconstruction and Environment, Raleigh, North Carolina.

BILLING CODE 4910-RY-P

DEPARTMENT OF TRANSPORTATION

Federal Railroad Administration

[Docket No. FRA–2017–0001]

Establishment of an Emergency Relief Docket for Calendar Year 2017

AGENCY: Federal Railroad Administration (FRA), Department of Transportation (DOT).

ACTION: Notice of establishment of public docket.

SUMMARY: This Notice announces the establishment of FRA’s emergency relief docket (ERD) for calendar year 2017. The designated ERD for calendar year 2017 is Docket Number FRA–2017–0001.

SUPPLEMENTARY INFORMATION: On May 19, 2009, FRA published a direct final rule establishing ERDs and the procedures for handling petitions for emergency waivers of safety rules, regulations, or standards during an emergency situation or event. 74 FR 23329. The direct final rule became effective on July 20, 2009, and made minor modifications to 49 CFR 211.45 in FRA’s Rules of Practice in 49 CFR part 211. Section 211.45(b) provides that each calendar year FRA will establish an ERD in the publicly accessible DOT docket system (available at <http://www.regulations.gov>). Section 211.45(b) further provides that FRA will publish a notice in the **Federal Register** identifying by docket number the ERD for that year. FRA established the ERD and emergency waiver procedures to provide an expedited process for FRA to address the needs of the public and the railroad industry during emergency situations or events. This Notice announces the designated ERD for calendar year 2017 is Docket Number FRA–2017–0001.

As detailed in Section 211.45, if the FRA Administrator determines an emergency event as defined in 49 CFR 211.45(a) has occurred, or that an imminent threat of such an emergency occurring exists, and public safety would benefit from providing the railroad industry with operational relief, the emergency waiver procedures of 49 CFR 211.45 will go into effect. In such an event, the FRA Administrator will issue a statement in the ERD indicating the emergency waiver procedures are in effect and FRA will make every effort to post the statement on its Web site at <http://www.fra.dot.gov>. Any party desiring relief from FRA regulatory requirements as a result of the emergency should submit a petition for emergency waiver under 49 CFR

211.45(e) and (f). Specific instructions for filing petitions for emergency waivers under 49 CFR 211.45 are found at 49 CFR 211.45(f). Specific instructions for filing comments in response to petitions for emergency waivers are at 49 CFR 211.45(h).

Anyone can search the electronic form of any written communications and comments received regarding any of our dockets by the name of the individual submitting the comment (or signing the document, if submitted on behalf of an association, business, labor union, etc.). In accordance with 5 U.S.C. 553(c), DOT solicits comments from the public to better inform its processes. DOT posts these comments, without edit, including any personal information the commenter provides, to www.regulations.gov, as described in the system of records notice (DOT/ALL–14 FDMS), which can be reviewed at <https://www.transportation.gov/privacy>. See also <https://www.regulations.gov/privacy> Notice for the privacy notice of www.regulations.gov.

Robert C. Lauby,

Associate Administrator for Railroad Safety, Chief Safety Officer.

BILLING CODE 4910–06–P

DEPARTMENT OF TRANSPORTATION

Federal Railroad Administration

[Docket Number FRA–2002–11896]

Petition for Waiver of Compliance

In accordance with part 211 of Title 49 of the Code of Federal Regulations (CFR), this document provides the public notice that by a document dated December 5, 2016, Norfolk Southern Corporation (NS) has petitioned the Federal Railroad Administration (FRA) for a waiver of compliance from certain provisions of the Federal railroad safety regulations contained at 49 CFR part 231. FRA assigned the petition Docket Number FRA–2002–11896.

In its petition, NS requested that the FRA extend its existing waiver of compliance from certain provisions of 49 CFR part 231 for an additional 5 years, permitting NS’s Triple Crown Service to continue to operate RoadRailer® trains.

A copy of the petition, as well as any written communications concerning the petition, is available for review online at www.regulations.gov and in person at the U.S. Department of Transportation’s (DOT) Docket Operations Facility, 1200 New Jersey Ave. SE., W12–140, Washington, DC 20590. The Docket

Operations Facility is open from 9 a.m. to 5 p.m., Monday through Friday, except Federal Holidays.

Interested parties are invited to participate in these proceedings by submitting written views, data, or comments. FRA does not anticipate scheduling a public hearing in connection with these proceedings since the facts do not appear to warrant a hearing. If any interested parties desire an opportunity for oral comment and a public hearing, they should notify FRA, in writing, before the end of the comment period and specify the basis for their request.

All communications concerning these proceedings should identify the appropriate docket number and may be submitted by any of the following methods:

- *Web site:* <http://www.regulations.gov>. Follow the online instructions for submitting comments.
- *Fax:* 202-493-2251.
- *Mail:* Docket Operations Facility, U.S. Department of Transportation, 1200 New Jersey Avenue SE., W12-140, Washington, DC 20590.
- *Hand Delivery:* 1200 New Jersey Avenue SE., Room W12-140, Washington, DC 20590, between 9 a.m. and 5 p.m., Monday through Friday, except Federal Holidays.

Communications received by February 27, 2017 will be considered by FRA before final action is taken. Comments received after that date will be considered as far as practicable.

Anyone is able to search the electronic form of any written communications and comments received into any of our dockets by the name of the individual submitting the comment (or signing the document, if submitted on behalf of an association, business, labor union, etc.). In accordance with 5 U.S.C. 553(c), DOT solicits comments from the public to better inform its processes. DOT posts these comments, without edit, including any personal information the commenter provides, to www.regulations.gov, as described in the system of records notice (DOT/ALL-14 FDMS), which can be reviewed at <https://www.transportation.gov/privacy>. BILLING CODE 4910-06-P

DEPARTMENT OF TRANSPORTATION

Federal Railroad Administration

[Docket Number FRA-2016-0121]

Petition for Waiver of Compliance

In accordance with part 211 of Title 49 of the Code of Federal Regulations (CFR), this provides the public notice that by a document dated December 6, 2016, the Long Island Railroad Company (LIRR) has petitioned the Federal Railroad Administration (FRA) for a waiver of compliance from certain provisions of the Federal railroad safety regulations contained at 49 CFR part 214.353(a). FRA assigned the petition Docket Number FRA-2016-0121. LIRR submitted this petition for a partial waiver of a new regulation, which will be set forth in 49 CFR 214.353(a) and will go into effect on April 1, 2017, requiring that conductors who act as roadway workers in charge (RWICs) receive annual training as set forth in that section. See 81 FR 37840.

LIRR is not requesting a waiver from the portion of the new rule requiring that it provide conductors who act as RWICs the specified training set forth in the rule. LIRR already includes all of those items in its training of assistant conductors prior to their promotion to conductors. In fact, the level of Qualifications/Certifications for LIRR assistant conductors and conductors far exceeds the RWIC requirements, and LIRR conductors are fully qualified on all operating rules and physical characteristics for LIRR's entire system. LIRR also is revising its syllabus to make sure that, as of April 1, 2017, the refresher training given to conductors includes all of the specified topics, as well as any additional topics recommended in FRA Safety Advisory 2016-02 (See 81 FR 85676). Nor is it requesting a waiver from the portion of the new rule requiring that these individuals be qualified every 3 years and, in fact, will require that they be qualified every 2 years. Finally, LIRR is not requesting that the annual training requirement be waived for LIRR's roadway workers or any employees (such as non-roadway worker Engineering Department employees) other than conductors who act as RWICs. It is simply requesting that LIRR be permitted to provide the specified training to its conductors who act as RWICs every 2 years.

LIRR is making this request because of the difficulty of training all of its 1,200 conductors each year. LIRR currently conducts bi-annual block training, with half of its conductors (600 out of 1,200) trained in 1 year and the other half

trained the following year. LIRR also notes that it provides all of them each spring with a "Roadway Worker Refresher Guide" that includes specific RWIC responsibilities. In running its program in this manner, LIRR is able to maintain its 24 hour a day/7 day a week operation of the largest commuter railroad in the United States and carry over 87 million passengers per year. Requiring that all 1,200 conductors receive training each year would force LIRR to hire additional conductors (an expensive and lengthy process) and/or increase overtime (also expensive) to cover the assignments that conductors cannot cover due to the increased training. LIRR also may need to hire additional training personnel and/or limit the amount of time such training personnel can devote to teaching LIRR employees other non-mandated but useful subjects. As a public benefit corporation that receives much of its funding from tax revenues, these added personnel and training costs then would be passed on to the public.

LIRR has spoken with officials from The International Association of Sheet Metal, Air, Rail and Transportation Workers (SMART) Division, the union representing LIRR's conductors. SMART provided a letter in support, and it is available for review in the public docket for this waiver petition.

Permitting LIRR to instruct and qualify its conductors who act as RWICs on the items set forth in 49 CFR 214.353, *Training and qualification of roadway workers who provide on-track safety for roadway work groups*, every 2 years, rather than instruct them every year and qualify them every 3 years, would allow LIRR to maintain the safety of its passengers and employees and also allow it to maintain its operations without the need to: (i) Hire additional conductors and/or training personnel, (ii) increase overtime, or (iii) reduce training in non-mandated areas. As the waiver would be in the public interest and consistent with public safety, LIRR requests that it be granted.

A copy of the petition, as well as any written communications concerning the petition, is available for review online at www.regulations.gov and in person at the U.S. Department of Transportation's (DOT) Docket Operations Facility, 1200 New Jersey Avenue SE., W12-140, Washington, DC 20590. The Docket Operations Facility is open from 9 a.m. to 5 p.m., Monday through Friday, except Federal Holidays.

Interested parties are invited to participate in these proceedings by submitting written views, data, or comments. FRA does not anticipate scheduling a public hearing in

connection with these proceedings since the facts do not appear to warrant a hearing. If any interested party desires an opportunity for oral comment and a public hearing, they should notify FRA, in writing, before the end of the comment period and specify the basis for their request.

All communications concerning these proceedings should identify the appropriate docket number and may be submitted by any of the following methods:

- *Web site:* <http://www.regulations.gov>.

Follow the online instructions for submitting comments.

- *Fax:* 202-493-2251.

- *Mail:* Docket Operations Facility, U.S. Department of Transportation, 1200 New Jersey Avenue SE., W12-140, Washington, DC 20590.

- *Hand Delivery:* 1200 New Jersey Avenue SE., Room W12-140, Washington, DC 20590, between 9 a.m. and 5 p.m., Monday through Friday, except Federal Holidays.

Communications received by February 27, 2017 will be considered by FRA before final action is taken.

Comments received after that date will be considered as far as practicable.

Anyone is able to search the electronic form of any written communications and comments received into any of our dockets by the name of the individual submitting the comment (or signing the document, if submitted on behalf of an association, business, labor union, etc.). In accordance with 5 U.S.C. 553(c), DOT solicits comments from the public to better inform its processes. DOT posts these comments, without edit, including any personal information the commenter provides, to www.regulations.gov, as described in the system of records notice (DOT/ALL-14 FDMS), which can be reviewed at www.transportation.gov/privacy. See also <https://www.regulations.gov/privacyNotice> for the privacy notice of www.regulations.gov.

BILLING CODE 4910-06-P

DEPARTMENT OF TRANSPORTATION

Federal Transit Administration

[Docket No. FTA-2015-0030]

Award Management Requirements: Availability of Final Circular

AGENCY: Federal Transit Administration (FTA), DOT.

ACTION: Notice of availability of final circular.

SUMMARY: The Federal Transit Administration (FTA) has placed in the docket and on its Web site guidance in the form of FTA Circular 5010.1E, “Award Management Requirements,” to facilitate implementation of FTA’s assistance programs. The final Circular updates the “Grant Management Requirements” Circular 5010.1D to reflect various changes in the law, as well as FTA’s transition to a new electronic award management system.

DATES: The effective date of the Circular is February 13, 2017.

FOR FURTHER INFORMATION, CONTACT: For program matters, contact Pamela A. Brown, FTA Office of Program Management, at (202) 493-2503, or pamela.brown@dot.gov. For legal matters, contact Linda W. Sorkin, FTA Attorney Advisor, Office of Chief Counsel, at (202) 366-0959 or linda.sorkin@dot.gov.

SUPPLEMENTARY INFORMATION:

Availability of Final Circular

This notice provides a summary of the final changes to the Award Management Requirements Circular and responds to comments received on the proposed Circular. The final Circular itself is not included in this notice; instead, an electronic version may be found on FTA’s Web site, at www.transit.dot.gov, and in the docket, at www.regulations.gov. Paper copies of the final Circular may be obtained by contacting FTA’s Administrative Services Help Desk, at (202) 366-4865.

I. Overview

FTA is updating its Award Management Requirements Circular (formerly “Grant Management Requirements” Circular) to incorporate changes to FTA’s programs resulting from enactment of FTA’s most recent authorizing legislation, the Fixing America’s Surface Transportation (FAST) Act (Pub. L. 114-94, Dec. 4, 2015), as well as the Moving Ahead for Progress in the 21st Century Act (MAP-21) (Pub. L. 112-141, July 6, 2012). In addition, the final Circular incorporates

Department of Transportation (DOT) regulations, “Uniform Administrative Requirements, Cost Principles, and Audit Requirements for Federal Awards,” 2 CFR part 1201, and changes in the terms as used in FTA’s new electronic award management system, the Transit Award Management System (TrAMS).

This notice provides a summary of changes to FTA Circular 5010.1D, “Grant Management Requirements,” and addresses comments received in response to the February 29, 2016, **Federal Register** notice of proposed circular and request for comments (81 FR 10358). The final Circular 5010.1E, “Award Management Requirements” becomes effective on February 13, 2017 and supersedes Circular 5010.1D.

On December 26, 2014, U.S. DOT adopted the Office of Management and Budget (OMB) regulatory guidance, “Uniform Administrative Requirements, Cost Principles, and Audit Requirements for Federal Awards,” (Uniform Guidance), 2 CFR part 200, now incorporated by reference in U.S. DOT regulations, 2 CFR part 1201. The Uniform Guidance streamlines and adds to the guidance formerly found in eight OMB Circulars that have been superseded by 2 CFR part 200. While 2 CFR part 1201 adopts most of the Uniform Guidance, part 1201 does contain several DOT-specific provisions.

U.S. DOT regulations, 2 CFR part 1201, apply to an FTA award and any amendments thereto signed by an authorized FTA official on or after December 26, 2014. These regulations supersede 49 CFR part 18, “Uniform Administrative Requirements for Grants and Cooperative Agreements to State and Local Governments,” and 49 CFR part 19, “Uniform Administrative Requirements for Grants and Cooperative Agreements with Institutions of Higher Education, Hospitals, and Other Non-Profit Organizations,” except that Grants and Cooperative Agreements executed before December 26, 2014, continue to be subject to 49 CFR parts 18 and 19 as in effect on the date of such Grants or Cooperative Agreements.

In addition to addressing changes to federal law, the final Circular reflects terminology changes for consistency with FTA’s new electronic award management system, TrAMS. The Circular also clarifies FTA’s requirements and processes, includes FTA policies, and restructures FTA Circular 5010.1D, “Grant Management Requirements.” The final Circular applies to Grants and Cooperative Agreements when program-specific requirements are not addressed in an FTA program-specific Circular.

II. Chapter-by-Chapter Analysis

A. General Comments

Approximately 71 commenters provided feedback to the docket in response to the proposed Award Management Requirements Circular, including providers of public transportation, State Departments of Transportation, bus and bus part manufacturers, members of Congress, industry associations, and individuals.

Generally, commenters were supportive of FTA's efforts to update this Circular. Several commenters suggested the award management process should be streamlined, with Activity Line Items (ALIs) as general as possible while still meeting FTA's oversight needs. Commenters suggested that administrative staff time to receive and then manage Awards is significant, given the specificity of information required, and that specific ALIs and scope codes do not ensure better oversight or stronger adherence to federal law. Commenters suggested that Grant Agreements and Cooperative Agreements simply provide a "general understanding of the project" in place of the specific detail required currently. FTA did not propose any changes to the ALI and scope codes as the level of information is necessary to define what is being funded and to report on program activities.

Commenters further suggested that, in particular for states, FTA should approach "Administration of Award" at the recipient level, giving states more flexibility to define projects for subrecipients over the course of implementing an Award. In response, FTA's practice is to approach Administration of Award at the recipient level. States and designated recipients are required to have a State or Program Management Plan and manage subrecipient programs in compliance with that plan. Further, when FTA last issued the Rural Area Formula Program Circular (C. 9040.1G), FTA made streamlining efforts; for example, commenters were supportive of FTA providing flexibility to states when making minor revisions to the program of projects.

B. Chapter I—Introduction and Background

Chapter I covers general information regarding FTA, FTA's authorizing legislation, *Grants.gov*, and how to contact FTA; this chapter also includes definitions and acronyms used in the Circular. In Chapter I, FTA proposed a new list of acronyms and their meanings, as well as changes to definitions, particularly those needed

for consistency with 49 U.S.C. chapter 53 as amended by the FAST Act and MAP-21, the Uniform Guidance, and TrAMS.

In the proposed Circular, FTA added and amended numerous definitions to align with changes in the law and TrAMS. Some commenters noted defined terms and acronyms that were not included in the text of the document; FTA has reviewed all defined terms and acronyms to ensure all are used in the text of the Circular. Similarly, FTA has added terms (such as "Intelligent Transportation Systems," "Project Budget") in response to commenters who noted the terms would make the Circular easier to read.

A number of commenters suggested small edits to some of the definitions, and FTA adopted most of those suggestions. For example, FTA has amended the definition of the term "Rolling Stock Repowering" to clarify that repowering does not require a propulsion system to be replaced with a different type of propulsion system, and amended the definition of the term "Overhaul" to state that it applies to revenue and non-revenue vehicles. Where terms included in the Circular are defined in regulation, FTA has not amended the Circular definition; this includes terms such as "Subrecipient" (2 CFR 200.93) and "Questioned Cost" (2 CFR 200.84). One commenter sought a definition of "non-functional landscaping"; in response, FTA has included examples of functional landscaping in the definition of "Associated Transit Improvement."

Finally, several commenters expressed concern with the definition of "Capital Asset," both in reference to proposed text indicating an asset with a useful life of at least one year, and to the value of capital assets, suggesting that no individual asset with an initial value below \$50,000 should be deemed capital for FTA purposes or tracked as a unit of equipment. FTA has amended the definition from a useful life of "at least one year" to a useful life of "more than one year." In addition, FTA has amended the definition for consistency with the Uniform Guidance (2 CFR 200.12) and FTA's Transit Asset Management (TAM) rule (49 CFR 625.5). Notably, the TAM rule requires an inventory of "all capital assets that a provider owns, except equipment with an acquisition value under \$50,000 that is not a service vehicle."

C. Chapter II—Circular Overview

Chapter II covers general information regarding the requirements and procedures for FTA programs, particularly when a program-specific

Circular does not discuss a particular issue.

Chapter II lists descriptions of new or revised programs under 49 U.S.C. chapter 53, as amended by the FAST Act and MAP-21. As in Circular 5010.1D, Chapter II then discusses various federal civil rights requirements, such as those pertaining to the Americans with Disabilities Act (ADA), Title VI of the Civil Rights Act of 1964 (Title VI), Equal Employment Opportunity (EEO), and Disadvantaged Business Enterprise (DBE).

The proposed Circular provided updates to Chapter II consistent with changes in the law and FTA policy. FTA has made some edits to this chapter for clarity and ease of reading. In response to comments, FTA had edited the section on Disadvantaged Business Enterprise (DBE), including Transit Vehicle Manufacturers (TVM), and closely reviewed to ensure the Circular text is consistent with the DOT DBE regulations.

D. Chapter III—Administration of the Award

Chapter III provides more detail about administrative requirements that accompany an Award to ensure compliance with 49 U.S.C. chapter 53 and the Uniform Guidance. While Chapter III of the final Circular covers the same information found in Circular 5010.1D, FTA proposed substantial edits to this chapter.

In response to comments, FTA included the stages of the Award Cycle in a bulleted list, in order to provide clarity for readers. In addition, the Department is now using the term "notice of funding opportunity" or NOFO, in place of "notice of funding availability" or NOFA, so FTA has used the acronym "NOFO" in the final Circular.

In section 3, Reporting Requirements, one commenter read the sentence, "FTA's policy for reporting requirements may vary depending on the size of the recipient or the type or amount of federal assistance the recipient receives" as meaning the recipient might be able to negotiate its reporting requirements with FTA. The sentence following the above-quoted sentence is instructive: "The Award may include special reporting requirements." In other words, there are cases where additional reporting may be required depending on the circumstances; however, the basic reporting requirements apply to all recipients, with some variation as necessary and appropriate, as determined by FTA.

A few commenters had questions about the reporting requirements for transit vehicle manufacturers (TVM). The regulation at 49 CFR 26.49 requires recipients to report to FTA the name of the TVM contractor and the total dollar amount of the contract to FTA within 30 days of entering into a contract for a federally-funded vehicle. FTA has amended the language in the Circular for clarity. One commenter questioned the threshold for reporting under the Federal Funding Accountability and Transparency Act of 2006 (FFATA) (Pub. L. 109–282, Sept. 26, 2006). The threshold for reporting is \$25,000, not \$25 million as suggested by the commenter.

Throughout Chapter III, FTA has made edits as requested by commenters to ensure consistency, add clarity, and improve readability. Specifically, FTA has edited the section on NTD reporting to include additional information on the small systems waiver, tribal reporting, annual and monthly reports, and safety reports. In addition, FTA has made clarifying edits to the section on modifications to the award, including award budget revisions and amendments to awards; as well as to the section on award closeout.

E. Chapter IV—Management of the Award

Chapter IV includes guidance regarding the management, use, and disposition of FTA assisted assets, including real property and the facilities purchased or constructed thereon, equipment consisting of rolling stock and other items of personal property, and supplies, consistent with 2 CFR part 1201 and 2 CFR part 200. It also addresses the design and construction of facilities in light of amendments to 49 U.S.C. chapter 53.

1. Real Property

One commenter sought clarity on the text related to preliminary discussions and preliminary negotiations related to acquisition of real property. The text in the Circular is clear that preliminary discussions and preliminary negotiations are two different activities.

FTA proposed that the paragraph, “title to real property” require the recipient to include a covenant in the title of the property acquired that assures non-discrimination during the useful life of the property. One commenter suggested this covenant was neither necessary nor customary for commercial real estate transactions. The U.S. DOT Title VI regulation at 49 CFR 21.7 provides, “the instrument effecting or recording the transfer shall contain a covenant running with the land assuring

nondiscrimination for the period during which the real property is used for a purpose for which the federal financial assistance is extended or for another purpose involving the provision of similar services or benefits.” There is a similar provision in the Department’s Section 504 regulation at 49 CFR 27.9. Therefore, FTA has not amended the language.

Some commenters had questions about real property inventory and reporting, with one commenter recommending the inventory/reporting requirements be removed, as pulling data for property could be time-consuming and expensive. To clarify, the requirement applies only to new federal awards made on or after December 26, 2014. The Excess Real Property and Utilization Plan continues to apply to awards made prior to December 26, 2014. FTA has made clarifying edits to this section.

FTA received several comments related to incidental use of federal assets. The proposed Circular stated that FTA approval would be required for incidental use. One commenter suggested FTA reconsider that proposal; FTA has removed the language and instead the final Circular states the recipient must maintain satisfactory continuing control over the asset, and should consult with FTA before continuing with incidental use. FTA proposed that an incidental use agreement should permit revocation by the recipient. One commenter observed that in its experience, few incidental users would agree to a revocation provision, and suggested FTA strike the language or clarify that a revocation clause may be commercially reasonable under certain circumstances. FTA has accepted the suggestion and added the words, “if commercially feasible” to the provision. Two commenters asked about “no-income incidental use”; in response, FTA has provided examples of no-income use.

One commenter suggested the language on shared use was not clear as to whether a non-transit partner is free to sell or lease the part of the property that the partner is occupying. FTA has added text to this section to be clear that the recipient must maintain satisfactory continuing control of the property.

2. Equipment, Supplies, and Rolling Stock

Section 4 of Chapter IV addresses issues pertaining to the acquisition, use, management, and disposition of equipment and supplies, including rolling stock.

FTA received several comments pertaining to useful life of rolling stock.

One commenter suggested the useful life of a trolley should be the same as that of a bus, given they operate in the same environment. The Circular indicates that trolleys with combustion engines do have the same useful life as a bus of similar size. Trolleys that operate on overhead catenaries have a longer useful life as the propulsion system lasts longer than combustion engines. For rebuilt buses, FTA proposed the additional useful life be the remaining useful life at the time of rebuild plus four years. One commenter suggested the extension of useful life be based on the cost of repowering the vehicle, and two commenters suggested that FTA add a mileage option to the useful life, in addition to years. FTA declines to accept the first suggestion, and we have amended the Circular to include “or miles equivalent to four years.”

FTA specifically sought comment on whether the current useful life requirement for buses discourages the consideration of zero emission technology, and if so, what an appropriate useful life requirement for these vehicles should be and/or whether these requirements should change over time as the technology advances. One commenter suggested that FTA consider reassessing its useful life and spare ratio requirements for zero emission vehicles. One commenter suggested that a rigid useful life requirement prevents transit agencies from adopting new technologies when they are first introduced. The commenter suggested that a graduated useful life policy for new technologies would mean that manufacturers would commit to a certain durability, but recipients would have the option to upgrade prior to the end of the useful life of the vehicles they’ve acquired, as additional technologies become available. FTA did not receive information sufficient to determine another method of determining whether useful life for zero emission technology would be sufficient or appropriate and has retained the current language.

Several commenters addressed zero emission buses and spare ratio requirements. The proposed Circular added the introduction of zero emission vehicles as a reason that an agency would be permitted to maintain their contingency fleet. One commenter noted that at times, it has experienced up to 45 percent of the zero emission fleet out of commission due to mechanical issues, and a 20 percent spare ratio does not fill that gap. Some commenters suggested removing advanced technology vehicles from the spare ratio calculation. Another commenter suggested that, absent a spare ratio

policy specifically for zero emission buses, FTA's proposal of permitting agencies to include vehicles that have met their useful life in their contingency fleet if the agency is adding zero emission vehicles into its fleet is a reasonable solution. Another commenter suggested that newer technology should not be considered for the spare ratio until the technology is at least five years old and the industry has an understanding of the durability of the technology. In response to these concerns as well as to a comment requesting additional information on contingency fleets, FTA has added language to clarify the use of vehicles held in a contingency fleet. In addition, FTA has retained language from the proposed Circular that permits an agency to seek a spare ratio deviation from FTA for no more than two (2) years.

Similarly, some commenters requested the spare ratio be increased to 25 percent and increased proportionally for fleets with an average vehicle age exceeding 12 years or an average vehicle mileage greater than 500,000. There may be situations in which a recipient may want to seek a spare ratio deviation from FTA, or keep vehicles in a contingency fleet, and the final Circular provides guidance on these issues.

Several small operators had questions about spare ratio requirements for smaller fleets. The proposed Circular stated that the spare ratio requirement of 20 percent applies to recipients operating 50 or more fixed route buses in peak service, but was silent as to the ratio requirement for operators with fewer than 50 fixed route buses in peak service. FTA does not set a specific spare ratio for smaller operators, but expects the number of spare buses to be reasonable taking into account the number of vehicles and variety of vehicle types and sizes. We have added this information to the final Circular for clarity.

3. Remanufactured Vehicles

Almost every commenter to the docket commented on FTA's proposals related to remanufactured vehicles. Generally, commenters objected to FTA including this information in a Circular; asserted that remanufactured vehicles should not be subject to bus testing, useful life, and other requirements that apply to new vehicles; and asserted that remanufactured vehicles have already undergone testing, proven reliable over the years, and have provided value, particularly to smaller transit providers. Commenters asserted that FTA's efforts to define the remanufacturing process limits the manufacturer's ability to

control the cost of the remanufacturing process, and that requiring remanufactured vehicles to comply with new bus requirements would diminish the cost and time savings in the remanufacturing process, and likely eliminate remanufactured buses as a viable option.

FTA's previous Grant Management Requirements Circular did not specifically address requirements for the purchase of previously-owned and/or remanufactured vehicles purchased from a third party. As the remanufactured vehicle market has developed, FTA has received questions from recipients on what requirements apply to the acquisition of these vehicles if using FTA funding. As the previous Circular applied Buy America, useful life, and Bus Testing requirements to the acquisition of vehicles in general, unless FTA provided for otherwise, those requirements would have applied to the acquisition of all vehicles whether new or previously owned.

While FTA will continue to study the issue, FTA has modified its requirements in the final Circular to provide guidance for these procurements without proscribing specific performance characteristics. For clarification, FTA has added a definition of previously-owned vehicles and modified its definition of remanufactured vehicles to be a subset of previously-owned vehicles. FTA has added language permitting funds to be used to purchase previously-owned vehicles that had previously met FTA's Bus Testing and Buy America requirements. Recipients are required to identify their intent to purchase previously-owned vehicles and identify the proposed useful life in their procurement. As part of the bid or proposal the recipient is required to obtain from the vendor certification and documentation ascertaining that applicable Bus Testing and Buy America requirements have been met by the original owner.

Additionally, for remanufactured vehicles, the remanufacturer would need to demonstrate compliance with Buy America and DBE TVM requirements. No additional bus testing would be required for the remanufactured vehicles.

Further, FTA has not added any new requirements for bus overhauls or bus rebuilds for work on buses a recipient already owns, whether or not the work is done by the recipient or contracted.

4. Other

FTA proposed a number of changes to the section on capital leases, in

accordance with changes to the law pursuant to the FAST Act. One commenter suggested that the organization of the provisions in the proposed Circular was confusing and did not clearly indicate when FTA's capital leasing regulation, 49 CFR part 639, applies and when it doesn't, nor did it adequately explain when section 3019 of the FAST Act applies. Another commenter asked for specificity related to the applicability of 49 CFR part 639. FTA has amended the text of the final Circular to clarify these matters.

Several commenters had questions and suggestions related to disposition of assets. One commenter asked about disposal costs of assets that have become liabilities, as when a bus or railcar is at the end of or past its useful life and there is no buyer for the asset. Disposal of assets is considered an operating cost and thus may be an eligible expense for recipients in small urbanized or rural areas. Often, these assets do have a salvage value that can offset transportation and disposal costs. To the extent there remains a federal interest in the asset disposed of, the final Circular provides that a recipient may subtract \$500 or ten percent of the proceeds, whichever is less, for selling and handling expenses, from the amount due to FTA.

For calculating the federal interest in an asset, one commenter requested information on how fair market value is determined. Generally, fair market value is determined by the value an unrelated party is willing to pay for an asset. This may be obtained by advertising the asset for sale, seeking an estimate from dealers, published values for assets (e.g., blue book value), prior experience in valuation of similar assets, selling the asset for scrap, or any reasonable means the recipient has to access to in order to determine the remaining value of the asset.

Section 5 of Chapter IV provides information on design and construction of facilities, sets forth references to major environmental laws and regulations that affect the design and construction of facilities, and clarifies force account requirements.

One commenter objected to language in the proposed Circular stating that recipients agree to comply with FTA "recommendations and determinations" pertaining to its review of construction plans and specifications, given the recipient is responsible for managing the Award. The commenter asserted the language suggests FTA would take full control of the Award. Similarly, the commenter suggested that language providing the FTA regional office should be consulted to determine

whether FTA review is necessary to advance the Award to the next level of design could delay Awards. Importantly, the text does not state that FTA will manage or take control of the Award. However, there may be instances in which FTA or its contractors observe a situation that must be addressed, such as a failure to comply with the law. Thus, FTA has not amended the language in the final Circular.

FTA received two comments related to force accounts: one commenter asked whether a force account plan is required for preventive maintenance, and one commenter asked whether the requirement for force account plans was subject to the Paperwork Reduction Act. First, a force account plan is not required for preventive maintenance. Second, FTA has paperwork collection approvals for all of its federal assistance programs. Paperwork submissions and recordkeeping requirements are captured in those approvals.

In addition to the changes described above, FTA made minor edits to the text of Chapter IV for clarity.

F. Chapter V—FTA Oversight

Chapter V includes guidance regarding the various types of reviews that FTA conducts. Reviews are grouped in the following categories: (1) Program Oversight, (2) Safety Oversight, and (3) Project Oversight.

FTA received one comment related to Chapter V. The commenter asked if FTA intended to use the term “project sponsor” instead of “recipient.” In response, FTA edited the text to state, “project sponsor or recipient.” In addition, FTA made minor, clarifying edits to this chapter.

G. Chapter VI—Financial Management

Chapter VI includes guidance regarding internal controls, non-federal share, financial plan, federal principles for determining allowable costs, indirect costs, program income, annual audit, payment procedures, de-obligation of federal assistance, debt service reserve, and the right to terminate.

Farebox Revenues is discussed in the Program Income section of Chapter VI, found at section 7(i). For purposes of operating assistance grants, farebox revenues are deducted from the eligible operating expenses to derive the “net project cost.” The question regarding FTA’s treatment of farebox revenues for recipients of capital assistance arose in light of the proposed definition of program income in proposed FTA Circular 5010.1E. Although FTA Circular 5010.1D does not discuss the relationship, if any, between program

income and farebox revenue, the proposed Circular 5010.1E included explicit language listing farebox revenue as a type of program income. Whereas Circular 5010.1D allowed program income to be spent “for public transportation purposes,” the proposed Circular permits program income to be spent only on allowable costs. Under Circular 5010.1D, there are no federal requirements governing the disposition of program income earned after the end of the period of performance (*i.e.*, after the ending date of the final Federal Financial Report), unless the terms of the agreement or the federal agency regulations provide otherwise. In proposed Circular 5010.1E, FTA has included an exception to this general rule for farebox revenue states that farebox revenue retains its status as program income after the close of the Award. FTA has made edits to Chapter VI to withdraw these changes and clarify these points.

FTA received several comments related to indirect costs. One commenter noted that the discussion of indirect costs in section 6 of Chapter VI contained a different definition than that found in the definitions section of Chapter I. Specifically, the text in Chapter VI contains additional language relating to states and local governments and Cost Allocation Plans found in 2 CFR 200.416. We have clarified the language in Chapter VI.

One commenter suggested that FTA clarify that cost allocation plans will not apply to every recipient. The commenter also suggested that FTA clarify that indirect cost proposals and cost allocation plans are separate documents. FTA has made edits to Chapter VI to clarify these points.

One commenter indicated that reporting indirect costs on a cumulative basis in the Federal Financial Report (FFR) would require adding many lines to the FFR. Further, the commenter noted that indirect costs currently are not reported for subrecipients. In response, FTA agrees that cumulative reporting will add lines to the FFR. However, indirect cost rates should be reported for the reporting agency, not for subrecipients. Documentation and reporting on subawards and contractual indirect cost rates should be maintained by the recipient and collected as part of its subrecipient monitoring. We have made edits to Appendix B to provide additional guidance to recipients for this reporting requirement. In addition, a commenter suggested that the requirement to identify the indirect cost rate as a separate budget line item “would require recipients to provide a level of budget detail that will be

impossible to meet.” The commenter asserted that many Awards contain multiple projects, and many projects are funded by multiple Awards. However, the indirect cost rate should be the same across multiple Awards and multiple projects, as indirect cost rates are not determined on an Award by Award or project by project basis.

H. Appendices

As stated in the summary under Chapter VI, FTA has amended Appendix B, Federal Financial Report, for clarity in reporting indirect costs.

FTA has reversed the order of proposed Appendices F and G, such that now Appendix F is Cost Allocation Plans and Appendix G is Indirect Cost Rate Proposals.

FTA struck proposed Appendix J, “Award Amendments and Budget Revision Guidelines,” as the information is otherwise available on FTA’s Web site at <https://www.transit.dot.gov/trams>.

In addition to the above, FTA made minor, clarifying edits to the appendices.

Carolyn Flowers,

Acting Administrator.

BILLING CODE 4910–57–P

DEPARTMENT OF THE TREASURY

Community Development Financial Institutions Fund

Community Development Advisory Board Meeting

ACTION: Notice of open meeting.

SUMMARY: This notice announces the next meeting of the Community Development Advisory Board (the Advisory Board), which provides advice to the Director of the Community Development Financial Institutions Fund (the CDFI Fund). The meeting will be conducted via telephone conference call.

DATES: The meeting will be held from 2:00 p.m. to 3:00 p.m. Eastern Standard Time on Monday, January 30, 2017.

Submission of Written Statements: Participation in the discussions at the meeting will be limited to Advisory Board members, Department of the Treasury staff, and certain invited guests. Anyone who would like to have the Advisory Board consider a written statement must submit it by 5:00 p.m. Eastern Standard Time on Monday, January 23, 2017. Send paper statements to Bill Luecht, Senior Advisor, Office of

Legislative and External Affairs, CDFI Fund, 1500 Pennsylvania Avenue NW., Washington, DC 20220. Send electronic statements to AdvisoryBoard@cdfi.treas.gov.

In general, the CDFI Fund will make all statements available in their original format, including any business or personal information provided such as names, addresses, email addresses, or telephone numbers, for public inspection, and photocopying at the CDFI Fund. The CDFI Fund is open on official business days between the hours of 9:00 a.m. and 5:00 p.m. You can make an appointment to inspect statements by emailing AdvisoryBoard@cdfi.treas.gov. All statements received, including attachments and other supporting materials, are part of the public record and subject to public disclosure. You should only submit information that you wish to make publicly available.

FOR FURTHER INFORMATION CONTACT: Bill Luecht, Senior Advisor, Office of Legislative and External Affairs, CDFI Fund, 1500 Pennsylvania Avenue NW., Washington, DC 20220, (202) 653-0322 (this is not a toll free number) or AdvisoryBoard@cdfi.treas.gov. Other information regarding the CDFI Fund and its programs may be obtained through the CDFI Fund's Web site at <http://www.cdfifund.gov>.

SUPPLEMENTARY INFORMATION: Section 104(d) of the Community Development Banking and Financial Institutions Act of 1994 (12 U.S.C. 4703(d)) established the Advisory Board. The charter for the Advisory Board has been filed in accordance with the Federal Advisory Committee Act, as amended (5 U.S.C. App.), and with the approval of the Secretary of the Treasury.

The function of the Advisory Board is to advise the Director of the CDFI Fund (who has been delegated the authority to administer the CDFI Fund) on the policies regarding the activities of the CDFI Fund. The Advisory Board shall not advise the CDFI Fund on the approving or declining any particular application for monetary or non-monetary awards. The Advisory Board shall meet at least annually.

It has been determined that this document is not a major rule as defined in Executive Order 12291 and therefore regulatory impact analysis is not required. In addition, this document does not constitute a rule subject to the Regulatory Flexibility Act (5 U.S.C. chapter 6).

In accordance with section 10(a) of the Federal Advisory Committee Act, 5 U.S.C. App. 2 and the regulations thereunder, Bill Luecht, Designated Federal Officer of the Advisory Board,

has ordered publication of this notice that the Advisory Board will convene an open meeting which will be conducted via a telephone conference call from 2:00 p.m. to 3:00 p.m. Eastern Standard Time on Monday, January 30, 2017.

Public participation will be limited to 50 individual phone lines. Notification of intent to attend the meeting must be made via email to AdvisoryBoard@cdfi.treas.gov. The CDFI Fund will send confirmation of attendance and instructions for accessing the meeting to the first 50 individuals who submit notifications of intent. For more information, please call (202) 653-0322.

The Advisory Board meeting will include (i) a presentation to the full Advisory Board by an Advisory Board subcommittee on a plan to promote the knowledge and utilization of the Access to Capital and Credit in Native Communities report and (ii) deliberation on the recommendations contained therein.

Authority: 12 U.S.C. 4703.

Mary Ann Donovan,
Director, Community Development Financial Institutions Fund.

BILLING CODE 4810-70-P

DEPARTMENT OF THE TREASURY

Office of Foreign Assets Control

Sanctions Actions Pursuant to the Sergei Magnitsky Rule of Law Accountability Act of 2012

AGENCY: Office of Foreign Assets Control, Treasury.

ACTION: Notice.

SUMMARY: The Treasury Department's Office of Foreign Assets Control ("OFAC") is publishing the names of five individuals whose property and interests in property are blocked pursuant to the Sergei Magnitsky Rule of Law Accountability Act of 2012 (the "Magnitsky Act").

DATES: OFAC's actions described in this notice were effective on January 9, 2017.

FOR FURTHER INFORMATION CONTACT: The Department of the Treasury's Office of Foreign Assets Control: Assistant Director for Licensing, tel.: 202-622-2480, Assistant Director for Policy, tel.: 202-622-2746, Assistant Director for Regulatory Affairs, tel.: 202-622-4855, Assistant Director for Sanctions Compliance & Evaluation, tel.: 202-622-2490; or the Department of the Treasury's Chief Counsel (Foreign Assets Control), Office of the General Counsel, tel.: 202-622-2410.

SUPPLEMENTARY INFORMATION:

Electronic and Facsimile Availability

This document and additional information concerning OFAC are available from OFAC's Web site (www.treasury.gov/ofac).

Background

On January 9, 2017, OFAC blocked the property and interests in property of the following five individuals pursuant to the Magnitsky Act (Pub. L. 112-208, December 14, 2012):

1. PLAKSIN, Gennady Nikolaevich, Russia; DOB 31 Aug 1961; Gender Male (individual) [MAGNIT].
2. GORDIEVSKY, Stanislav Evgenievich, Russia; DOB 09 Sep 1977; Gender Male (individual) [MAGNIT].
3. LUGOVOI, Andrei Konstantinovich, Russia; DOB 19 Sep 1966; Gender Male (individual) [MAGNIT].
4. KOVTUN, Dmitri, Russia; DOB 1965; Gender Male (individual) [MAGNIT].
5. BASTRYKIN, Alexander Ivanovich, Russia; DOB 27 Aug 1953; Gender Male (individual) [MAGNIT].

Gennady Plaksin and Stanislav Gordievsky are being designated pursuant to Section 404(a) of the Magnitsky Act because they were involved in the criminal conspiracy uncovered by Sergei Magnitsky. Andrei Lugovoi and Dmitri Kovtun are being designated pursuant to Section 404(a) of the Magnitsky Act because they are responsible for the extrajudicial killing of Alexander Litvinenko for his activities seeking to expose illegal activity carried out by officials of the Government of the Russian Federation. Alexander Bastrykin is being designated pursuant to Section 404(a) of the Magnitsky Act for participating in efforts to conceal the legal liability for the detention, abuse, or death of Sergei Magnitsky.

Dated: January 9, 2017.

John E. Smith,
Acting Director, Office of Foreign Assets Control.

DEPARTMENT OF THE TREASURY

Office of Foreign Assets Control

Sanctions Actions Pursuant To The Cuban Assets Control Regulations

AGENCY: Office of Foreign Assets Control, Treasury.

ACTION: Notice.

SUMMARY: The Department of the Treasury's Office of Foreign Assets Control (OFAC) is publishing the names

of 10 individuals and 14 entities whose names have been removed from the list of Specially Designated Nationals and Blocked Persons (SDN List) pursuant to the Cuban Assets Control Regulations.

DATES: OFAC's actions described in this notice were effective on January 6, 2017.

FOR FURTHER INFORMATION CONTACT: The Department of the Treasury's Office of Foreign Assets Control: Assistant Director for Licensing, tel.: 202-622-2480, Assistant Director for Regulatory Affairs, tel.: 202-622-4855, Assistant Director for Sanctions Compliance & Evaluation, tel.: 202-622-2490; or the Department of the Treasury's Office of the Chief Counsel (Foreign Assets Control), Office of the General Counsel, tel.: 202-622-2410.

SUPPLEMENTARY INFORMATION:

Electronic Availability

The list of Specially Designated Nationals and Blocked Persons (SDN List) and additional information concerning OFAC sanctions programs are available from OFAC's Web site at <http://www.treasury.gov/ofac>.

Notice of OFAC Actions

On January 6, 2017, OFAC removed from the SDN List the persons listed below, whose property and interests in property were blocked pursuant to the Cuban Assets Control Regulations.

Individuals

1. ANGELINI, Alejandro Abood, Panama (individual) [CUBA].
2. DOMINGUEZ, Carlos, Vinales Tours, Oaxaca 80, Roma, Mexico, D.F., Mexico (individual) [CUBA].
3. DE FRANCE, Naomi A., Cubanatur, Baja California 255, Edificio B., Oficina 103, Condesa, Mexico, D.F. 06500, Mexico (individual) [CUBA].
4. EGGLETON, Wilfred, Baja California 255, Edificio B., Oficina 103, Condesa, Mexico, D.F. 06500, Mexico; Director General, Cubanatur (individual) [CUBA].
5. GARCIA, Daniel, Avenida Insurgentes Sur No. 421, Bloque B Despacho 404, Mexico, D.F. 06100, Mexico; Manager, Promociones Artisticas (PROARTE) (individual) [CUBA].
6. GONZALEZ, Carlos Alfonso (a.k.a. ALFONSO, Carlos), Panama (individual) [CUBA].
7. ORTIZ, Guadalupe, Cubanatur, Baja California 255, Edificio B., Oficina 103, Condesa, Mexico, D.F. 06500, Mexico (individual) [CUBA].
8. PONCE DE LEON GOMEZ, Lazaro, Medira, Mexico (individual) [CUBA].
9. SANTO, Anabel, Avenida Insurgentes Sur No. 421, Bloque B Despacho 404, Mexico, D.F. 06100, Mexico (individual) [CUBA].
10. YAM, Melvia Isabel Gallegos, Merida, Mexico (individual) [CUBA].

Entities

1. CARIBSUGAR INTERNATIONAL TRADERS, S.A., 125-133 Camden High Street, London NW1 7JR, United Kingdom [CUBA].
2. CUREF METAL PROCESSING BV, Boezembolcht 23, Rotterdam, Netherlands [CUBA].
3. MANZPER CORP., Panama [CUBA].
4. NIPPON-CARIBBEAN CO., LTD., Chuo-Ku, Akasaki-Chuo 1-1 Akasaki Bldg., Tokyo, Japan [CUBA].
5. BELMEX IMPORT EXPORT CO., LTD., 24 Corner Regent and Kings Streets, Belize City, Belize [CUBA].
6. COLONY TRADING, S.A., Panama [CUBA].
7. CORPORACION ARGENTINA DE INGENIERIA Y ARQUITECTURA, S.A. (a.k.a. COPIA, S.A.), San Martin 323, 4th Floor, Buenos Aires, Argentina [CUBA].
8. EXPORTADORA DEL CARIBE, Medira, Mexico [CUBA].
9. KYOEI INTERNATIONAL COMPANY, LIMITED, Tokyo, Japan [CUBA].
10. LEVERYE, S.A., Corrientes 1386, 5th Floor, Buenos Aires, Argentina [CUBA].
11. MARISCO DE FARALLON, S.A. (a.k.a. MARISCOS DE FARALLON, S.A.), Panama [CUBA].
12. PANOAMERICANA, Panama [CUBA].
13. PROMOCIONES ARTISTICAS (a.k.a. PROARTE), Avenida Insurgentes Sur No. 421, Bloque B Despacho 404, C.P. 06100, Mexico, D.F., Mexico [CUBA].
14. SHIPLEY SHIPPING CORP., Panama [CUBA].

Dated: January 6, 2017.

BILLING CODE 4810-AL-P

DEPARTMENT OF THE TREASURY

United States Mint

Notification of Citizens Coinage Advisory Committee January 17, 2017, Public Meeting Pursuant to United States Code, Title 31, Section 5135(b)(8)(C), the United States Mint Announces the Citizens Coinage Advisory Committee (CCAC) Public Meeting Scheduled for January 17, 2017

Date: January 17, 2017.

Time: 1:00 p.m. to 2:00 p.m. EST.

Location: This meeting will occur *via teleconference*. Interested members of the public may dial in to listen to the meeting at (866) 564-9287/Access Code: 62956028.

Subject: Consideration of artists' concepts for the 2019 and 2020 Native American \$1 Coins.

Interested persons should call the CCAC HOTLINE at (202) 354-7502 for the latest update on meeting time and room location.

In accordance with 31 U.S.C. 5135, the CCAC:

- Advises the Secretary of the Treasury on any theme or design proposals relating to circulating coinage, bullion coinage, Congressional Gold Medals, and national and other medals.

- Advises the Secretary of the Treasury with regard to the events, persons, or places to be commemorated by the issuance of commemorative coins in each of the five calendar years succeeding the year in which a commemorative coin designation is made.

- Makes recommendations with respect to the mintage level for any commemorative coin recommended.

FOR FURTHER INFORMATION CONTACT: Betty Birdsong, Acting United States Mint Liaison to the CCAC; 801 9th Street NW., Washington, DC 20220; or call 202-354-7200.

Any member of the public interested in submitting matters for the CCAC's consideration is invited to submit them by fax to the following number: 202-756-6525.

Authority: 31 U.S.C. 5135(b)(8)(C).

Dated: January 9, 2017.

David Motl,

Acting Deputy Director, United States Mint.

BILLING CODE 4810-37-P

DEPARTMENT OF VETERANS AFFAIRS

[OMB Control No. 2900-0801]

Agency Information Collection Activity: (Non-Degenerative Arthritis (Including Inflammatory, Autoimmune, Crystalline and Infectious Arthritis) and Dysbaric Osteonecrosis Disability Benefits Questionnaire (VA Form 21-0960M-3)

AGENCY: Veterans Benefits Administration, Department of Veterans Affairs.

ACTION: Notice.

SUMMARY: The Veterans Benefits Administration (VBA), Department of Veterans Affairs (VA), is announcing an opportunity for public comment on the proposed collection of certain information by the agency. Under the Paperwork Reduction Act (PRA) of 1995, Federal agencies are required to publish notice in the **Federal Register** concerning each proposed collection of information, including each proposed revision of a currently approved collection, and allow 60 days for public comment in response to the notice.

VA Forms 21-0960M-3 is used to gather necessary information from a claimant's treating physician regarding the results of medical examinations.

DATES: Written comments and recommendations on the proposed collection of information should be received on or before March 14, 2017.

ADDRESSES: Submit written comments on the collection of information through Federal Docket Management System (FDMS) at www.Regulations.gov or to Nancy J. Kessinger, Veterans Benefits Administration (20M33), Department of Veterans Affairs, 810 Vermont Avenue NW., Washington, DC 20420 or email to nancy.kessinger@va.gov. Please refer to "OMB Control No. 2900-0801" in any correspondence. During the comment period, comments may be viewed online through the FDMS.

FOR FURTHER INFORMATION CONTACT: Nancy J. Kessinger at (202) 632-8924 or FAX (202) 632-8925.

SUPPLEMENTARY INFORMATION: Under the PRA of 1995 (Pub. L. 104-13; 44 U.S.C. 3501-21), Federal agencies must obtain

approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. This request for comment is being made pursuant to Section 3506(c)(2)(A) of the PRA.

With respect to the following collection of information, VBA invites comments on: (1) Whether the proposed collection of information is necessary for the proper performance of VBA's functions, including whether the information will have practical utility; (2) the accuracy of VBA's estimate of the burden of the proposed collection of information; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or the use of other forms of information technology.

Title: (Non-Degenerative Arthritis (including inflammatory, autoimmune, crystalline and infectious arthritis) and

Dysbaric Osteonecrosis Disability Benefits Questionnaire (VA Form 21-0960M-3).

OMB Control Number: 2900-0801.

Type of Review: Extension of an approved collection.

Abstract: VA Forms 21-0960M-3 is used to gather necessary information from a claimant's treating physician regarding the results of medical examinations.

Affected Public: Individuals or households.

Estimated Annual Burden: 25,000 hours.

Estimated Average Burden per Respondent: 15 minutes.

Frequency of Response: One time.

Estimated Number of Respondents: 100,000.

By direction of the Secretary.

Cynthia Harvey-Pryor,

Department Clearance Officer, Office of Privacy and Records Management, Department of Veterans Affairs.

Reform of Generator Interconnection Procedures and Agreements;
Proposed Rule

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

18 CFR Parts 35 and 37

[Docket No. RM17-8-000]

Reform of Generator Interconnection Procedures and Agreements

AGENCY: Federal Energy Regulatory Commission, Department of Energy.

ACTION: Notice of proposed rulemaking.

SUMMARY: The Federal Energy Regulatory Commission (Commission) is proposing to revise its regulations and the pro forma Large Generator Interconnection Procedures and pro forma Large Generator Interconnection Agreement. The Commission proposes reforms designed to improve certainty,

promote more informed interconnection, and enhance interconnection processes. The proposed reforms are intended to ensure that the generator interconnection process is just and reasonable and not unduly discriminatory or preferential.

DATES: Comments are due March 14, 2017.

ADDRESSES: Comments, identified by docket number, may be filed in the following ways:

• Electronic Filing through http://www.ferc.gov. Documents created electronically using word processing software should be filed in native applications or print-to-PDF format and not in a scanned format.

• Mail/Hand Delivery: Those unable to file electronically may mail or hand-deliver comments to: Federal Energy Regulatory Commission, Secretary of the

Commission, 888 First Street NE., Washington, DC 20426.

Instructions: For detailed instructions on submitting comments and additional information on the rulemaking process, see the Comment Procedures section of this document.

FOR FURTHER INFORMATION CONTACT:

Tony Dobbins (Technical Information), Office of Energy Policy and Innovation, Federal Energy Regulatory Commission, 888 First Street NE., Washington, DC 20426, (202) 502-6630, Tony.Dobbins@ferc.gov.

Adam Pan (Legal Information), Office of the General Counsel, Federal Energy Regulatory Commission, 888 First Street NE., Washington, DC 20426, (202) 502-6023, Adam.Pan@ferc.gov.

SUPPLEMENTARY INFORMATION:

Table of Contents

Table with 2 columns: Section Title and Paragraph No. (1-247). Includes sections I through X and a Table of Contents entry.

NOT PUBLISHED IN THE FEDERAL REGISTER

Appendix A: List of Short Names of Commenters on the AWEA Petition (Docket No. RM 15-21-000) and the 2016 Technical Conference (Docket No. RM16-12-000)

Appendix B: Compilation of proposed changes to the pro forma LGIP

Appendix C: Compilation of proposed changes to the pro forma LGIA

I. Introduction

1. In this Notice of Proposed Rulemaking (Proposed Rule), the Commission is proposing to revise its regulations and the *pro forma* Large Generator Interconnection Procedures (LGIP) and *pro forma* Large Generator Interconnection Agreement (LGIA).¹ The Commission proposes reforms designed to improve certainty, promote more informed interconnection, and enhance interconnection processes. The proposed reforms are intended to ensure that the generator interconnection process is just and reasonable and not unduly discriminatory or preferential.²

2. The *pro forma* LGIP and LGIA establish the terms and conditions under which public utilities³ must provide interconnection service to Large Generating Facilities.⁴ While Order No. 2003 was a significant step to reduce undue discrimination in the generator interconnection process, interconnection customers have continued to express concerns with systemic inefficiencies and discriminatory practices that affect them.⁵ In addition, there have been a number of developments that impact generator interconnection, including the changing resource mix, the emergence of new technologies, and state and federal policies that have impacted the resource mix. At the same time, transmission providers have expressed concern that the interconnection study process can be difficult to manage because some interconnection customers submit requests for

interconnection service associated with new generating facilities that have little chance of reaching commercial operation. Upon consideration of these issues, the Commission finds that it is appropriate to propose reforms to the interconnection processes.

3. In 2015, the American Wind Energy Association (AWEA) filed a Petition for Rulemaking (Petition) requesting changes to the Commission's interconnection rules and procedures.⁶ The Commission sought and received comments on the Petition. In May 2016, a technical conference was convened to further explore these issues (2016 Technical Conference). Comments were requested and received both prior to the technical conference and after the technical conference.

4. Based, in part, on that input, the Commission has identified proposed reforms that could remedy potential shortcomings in the existing interconnection processes. The Commission believes the proposed reforms will benefit interconnection customers through more timely and cost-effective interconnection and will benefit transmission providers by mitigating the potential for serial restudies associated with late-stage interconnection request withdrawals. Specifically, the Commission believes that the provision of more timely and accurate information could increase certainty for interconnection customers and assist them in earlier evaluation and quicker development, as well as assist in earlier, less disruptive withdrawals from the interconnection queue. The Commission also believes that more thorough and transparent information presented for the interconnection customer could enable more informed decisions earlier in the interconnection process, which could reduce late-stage interconnection request withdrawals and result in fewer restudies and delays. More timely and accurate information regarding an interconnection request, as well as greater transparency, will also reduce the incentive for interconnection customers to submit multiple interconnection requests when they only intend to see one to commercial operation. The Commission has also identified a set of reforms that enhance the interconnection process by, for example, addressing interconnection issues experienced most acutely by new technologies. The Commission believes there are ways to allow flexibility in the

interconnection process to accommodate innovation.

5. Specifically, the Commission preliminarily finds that certain interconnection practices may not be just and reasonable and may be unduly discriminatory or preferential and proposes several potential reforms. The Commission is proposing fourteen reforms that focus on improving aspects of the *pro forma* LGIP and LGIA, the *pro forma* Open Access Transmission Tariff, and the Commission's regulations. The proposed reforms fall into three broad categories and are intended to: (1) Improve certainty in the interconnection process; (2) improve transparency by providing more information to interconnection customers; and (3) enhance interconnection processes.

6. First, the Commission proposes four reforms to improve certainty by affording interconnection customers more predictability in the interconnection process. To accomplish this goal, the Commission proposes to: (1) Revise the *pro forma* LGIP to require transmission providers that conduct cluster studies to move toward a scheduled, periodic restudy process; (2) remove from the *pro forma* LGIA the limitation that interconnection customers may only exercise the option to build transmission provider's interconnection facilities and stand alone network upgrades if the transmission owner cannot meet the dates proposed by the interconnection customer; (3) modify the *pro forma* LGIA to require mutual agreement between the transmission owner and interconnection customer for the transmission owner to opt to initially self-fund the costs of the construction of network upgrades; and (4) require that the Regional Transmission Organizations (RTO) and Independent System Operators (ISO) establish dispute resolution procedures for interconnection disputes. The Commission also seeks comment on the extent to which a cap on the network upgrade costs for which interconnection customers are responsible can mitigate the potential for serial restudies without inappropriately shifting cost responsibility.

7. Second, the Commission proposes five reforms to improve transparency by providing improved information for the benefit of all participants in the interconnection process. These reforms would provide a fuller picture of the considerations involved in interconnecting a new large generating facility. The Commission proposes to: (1) Require transmission providers to outline and make public a method for

¹ *Standardization of Generator Interconnection Agreements and Procedures*, Order No. 2003, FERC Stats. & Regs. ¶ 31,146 (2003) (Order No. 2003), *order on reh'g*, Order No. 2003-A, FERC Stats. & Regs. ¶ 31,160 (Order No. 2003-A), *order on reh'g*, Order No. 2003-B, FERC Stats. & Regs. ¶ 31,171 (2004) (Order No. 2003-B), *order on reh'g*, Order No. 2003-C, FERC Stats. & Regs. ¶ 31,190 (2005) (Order No. 2003-C), *aff'd sub nom. Nat'l Ass'n of Regulatory Util. Comm'rs v. FERC*, 475 F.3d 1277 (D.C. Cir. 2007), *cert. denied*, 552 U.S. 1230 (2008).

² In this proceeding, the Commission refers to comments and filings in Docket Nos. RM15-21-000 and RM16-12-000. A list of commenters in those proceedings and the abbreviated names used in this Proposed Rule appears in Appendix A. Any comments to this Proposed Rule should be filed in this proceeding, Docket No. RM17-8-000.

³ A public utility is a utility that owns, controls, or operates facilities used for transmitting electric energy in interstate commerce, as defined by the Federal Power Act (FPA). See 16 U.S.C. 824(e) (2012). A non-public utility that seeks voluntary compliance with the reciprocity condition of an Open Access Transmission Tariff (OATT) may satisfy that condition by filing an OATT, which includes the *pro forma* LGIP and the *pro forma* LGIA. See Order No. 2003-A, FERC Stats. & Regs. ¶ 31,160 at P 773.

⁴ A large generating facility is "a Generating Facility having a Generating Facility Capacity of more than 20 MW." *Pro forma* LGIA Art. 1.

⁵ See, e.g., AWEA June 19, 2015 Petition at 2 (Petition).

⁶ American Wind Energy Association, Petition for Rulemaking to Revise Generator Interconnection Rules and Procedures, Docket No. RM15-21-000 (filed June 19, 2015).

determining contingent facilities in their LGIPs and LGIAs based upon guiding principles in the Proposed Rule; (2) require transmission providers to list in their LGIPs and on their Open Access Same-Time Information System (OASIS) sites the specific study processes and assumptions for forming the networking models used for interconnection studies; (3) require congestion and curtailment information to be posted in one location on each transmission provider's OASIS site; (4) revise the definition of "Generating Facility" in the *pro forma* LGIP and LGIA to explicitly include electric storage resources; and (5) create a system of reporting requirements for aggregate interconnection study performance. The Commission also seeks comment on proposals or additional steps that the Commission could take to improve the resolution of issues that arise when affected systems are impacted by a proposed interconnection.

8. Third, the Commission proposes five reforms to enhance interconnection processes by making use of underutilized existing interconnections, providing interconnection service earlier, or accommodating changes in the development process. In this area, the Commission proposes to: (1) Allow interconnection customers to limit their requested level of interconnection service below their generating facility capacity; (2) require transmission providers to allow for provisional agreements so that interconnection customers can operate on a limited basis prior to completion of the full interconnection process; (3) require transmission providers to create a process for interconnection customers to utilize surplus interconnection service at existing interconnection points; (4) require transmission providers to set forth a separate procedure to allow transmission providers to assess and, if necessary, study an interconnection customer's technology changes (e.g., incorporation of a newer turbine model) without a change to the interconnection customer's queue position; and (5) require transmission providers to evaluate their methods for modeling electric storage resources for interconnection studies and report to the Commission why and how their existing practices are or are not sufficient.

9. The Commission seeks comments on these proposed reforms and areas for further comment within 60 days after publication of this Proposed Rule in the **Federal Register**.

10. The purpose of these proposals is to ensure that the processing of generator interconnection requests will

be just and reasonable and not unduly discriminatory or preferential consistent with Federal Power Act (FPA) sections 205 and 206. These proposed reforms could help improve the efficiency of processing interconnection requests for both transmission providers and interconnection customers, maintain reliability, increase energy supply, balance the needs of interconnection customers and transmission owners and remove barriers to needed resource development.⁷

11. Unless otherwise noted, the proposed reforms described below would result in changes to the *pro forma* LGIP and *pro forma* LGIA and regulations that affect transmission provider LGIPs and LGIAs. The Commission also seeks comment, however, on whether any of these proposed reforms should be applied to small generating facilities and implemented in the *pro forma* Small Generator Interconnection Procedures (SGIP) and Small Generator Interconnection Agreement (SGIA).⁸

II. Background

A. Order No. 2003

12. In 1996, the Commission issued Order No. 888,⁹ which "established the foundation necessary to develop competitive bulk power markets in the United States: Nondiscriminatory open access transmission services by public utilities and stranded cost recovery rules to provide a fair transition to competitive markets."¹⁰ In Order No. 888, the Commission did not, however, address generator interconnection issues. In *Tennessee Power Company*, the Commission encouraged, but did not require, transmission providers to revise their OATTs to include interconnection procedures, including a standard interconnection agreement and specific criteria, procedures, milestones, and

⁷ 16 U.S.C. 824d and 824e (2012).

⁸ The Commission adopted these documents in Order No. 2006. *Standardization of Small Generator Interconnection Agreements and Procedures*, Order No. 2006, FERC Stats. & Regs. ¶ 31,180, *order on reh'g*, Order No. 2006-A, FERC Stats. & Regs. ¶ 31,196 (2005), *order granting clarification*, Order No. 2006-B, FERC Stats. & Regs. ¶ 31,221 (2006).

⁹ *Promoting Wholesale Competition Through Open Access Non-Discriminatory Transmission Services by Public Utilities; Recovery of Stranded Costs by Public Utilities and Transmitting Utilities*, Order No. 888, FERC Stats. & Regs. ¶ 31,036 (1996), *order on reh'g*, Order No. 888-A, FERC Stats. & Regs. ¶ 31,048, *order on reh'g*, Order No. 888-B, 81 FERC ¶ 61,248 (1997), *order on reh'g*, Order No. 888-C, 82 FERC ¶ 61,046 (1998), *aff'd in relevant part sub nom. Transmission Access Policy Study Group v. FERC*, 225 F.3d 667 (D.C. Cir. 2000), *aff'd sub nom. New York v. FERC*, 535 U.S. 1 (2002).

¹⁰ Order No. 2003, FERC Stats. & Regs. ¶ 31,146 at P 8.

timelines for evaluating interconnection requests.¹¹

13. In Order No. 2003, the Commission recognized a "pressing need for a single set of procedures for jurisdictional Transmission Providers and a single, uniformly applicable interconnection agreement for Large Generators."¹² Prior to the issuance of Order No. 2003, the Commission addressed interconnection issues on a case-by-case basis through, for example, applications under FPA section 205.

14. In Order No. 2003, the Commission asserted that interconnection is a "critical component of open access transmission service and thus is subject to the requirement that utilities offer comparable service under the OATT."¹³ The Commission found that a standard set of procedures would "minimize opportunities for undue discrimination and expedite the development of new generation, while protecting reliability and ensuring that rates are just and reasonable."¹⁴

15. Consequently, in Order No. 2003, the Commission required public utilities that own, control, or operate transmission facilities to file standard generator interconnection procedures and a standard agreement to provide interconnection service to generating facilities with a capacity greater than 20 megawatts (MW). To this end, the Commission adopted the *pro forma* LGIP and LGIA and required all public utilities subject to Order No. 2003 to modify their OATTs to incorporate the *pro forma* LGIP and LGIA.

B. 2008 Order on Interconnection Queuing Practices

16. The Commission held a technical conference on December 17, 2007 and issued a notice inviting further comments in response to concerns raised about the effectiveness of queue management practices.¹⁵ Comments revealed that some transmission providers were not processing their interconnection queues with the timelines envisioned in Order No. 2003. Commenters pointed to surges in the volume of new generation development in some regions, particularly for renewable resources, as taxing interconnection queues. Commenters

also noted that some regions had developed capacity markets after the issuance of Order No. 2003 and struggled with accommodating these new markets.¹⁶

17. On March 20, 2008, the Commission issued an order addressing interconnection queue issues (2008 Order). The Commission acknowledged that delays in processing interconnection queues were more pronounced in RTOs/ISOs that were attracting significant new entry.

18. The Commission declined to impose generally applicable solutions, given the regional nature of some interconnection queue issues. However, the Commission provided guidance to assist RTOs/ISOs and their stakeholders in their efforts to improve the processing of interconnection queues.¹⁷ The Commission further stated that, while it “may need to [impose solutions] if the RTOs and ISOs do not act themselves,” each region would be provided an opportunity to propose its own solutions through “consensus proposals.”¹⁸ Following the 2008 Order, RTOs/ISOs submitted multiple queue reform proposals to the Commission, generally moving their interconnection queuing practices from a “first-come, first-served” approach to a “first-ready, first-served” approach.

C. 2015 American Wind Energy Association Petition

19. On June 19, 2015, AWEA filed the Petition in Docket No. RM15–21–000 requesting that the Commission revise the *pro forma* LGIP and *pro forma* LGIA. AWEA asserts that the current interconnection process has “imbedded unjust and unreasonable and unduly discriminatory delays, costs, rates, terms and conditions” and “imposes barriers to the development of needed new generation resources.”¹⁹ AWEA states that while transmission providers have modified their LGIPs in ways that “occasionally [provide] limited benefits. . . . [they] have not solved, and have even exacerbated, problems encountered by interconnection customers.”²⁰ AWEA contends that, consequently, the interconnection process often results in “complex, time consuming technical disputes about

. . . interconnection feasibility, cost, and cost responsibility” with delays that “undermine the ability of new generators to compete.”²¹

20. AWEA proposes multiple reforms to improve: (1) Certainty in the interconnection study/restudy process; (2) transparency in the interconnection process; (3) certainty with respect to network upgrade costs; and (4) accountability.²²

21. On July 7, 2015, the Commission issued a Notice of Petition for Rulemaking in Docket No. RM15–21–000 to seek public comment on the Petition. The Commission received thirty-five comments and three answers and reply comments.²³

D. 2016 Technical Conference

22. On May 13, 2016, Commission staff convened the 2016 Technical Conference at Commission headquarters. The 2016 Technical Conference featured five panels on “The Current State of Generator Interconnection Queues,” “Transparency and Timing in the Interconnection Study Process,” “Certainty in Cost Estimates and Construction Time,” “Other Queue Coordination and Management Issues,” and “Interconnection of Electric Storage Resources.” The panels featured representatives from RTOs/ISOs, non-independent transmission providers, transmission owners within RTOs/ISOs, renewable generation developers, and other stakeholders.

23. On June 3, 2016, the Commission issued a Notice Inviting Post-Technical Conference Comments. The Commission received 24 post-technical conference comments.

III. Need for Reform of the Interconnection Process

24. Since the issuance of Order No. 2003, the electric power industry has undergone numerous changes. For example, the nation’s resource mix has undergone significant change. In many regions, the resource mix now includes increasing amounts of generation powered by wind,²⁴ natural gas, solar, and most recently, electric storage

resources.²⁵ These changes are the result of a multitude of factors, such as the economics of new power generation largely driven by sustained low natural gas prices, technology advances, and federal and state policies, including federal environmental regulations and state-level mandates for renewable capacity. The changing resource mix has impacted the Commission’s interconnection policies.

25. The increasing penetration of variables energy resources and emerging technologies has implications for the interconnection process, for both interconnection customers and transmission providers.²⁶ For example, wind generation is limited geographically because it is concentrated in locations where there are dependable windy conditions that are sufficient to generate electricity. Additionally, a lengthy interconnection process affects all resources attempting to interconnect and can have a disproportionate effect on resources that can be built more quickly than traditional resources. Further, interconnection processes should consider the evolving capabilities of electric storage resources, which may involve different considerations than the interconnection of more traditional generation resources. These factors suggest a need for the Commission to reevaluate its interconnection policies to ensure that they are just and reasonable and not unduly discriminatory or preferential.

26. As described above, beginning with Order No. 2003, the Commission has sought to improve the interconnection process by minimizing opportunities for undue discrimination and expediting the development of new generation while protecting system reliability and ensuring just and reasonable rates. However, at present, many interconnection customers

²⁵ See U.S. Energy Information Administration, *Natural Gas Expected to Surpass Coal in Mix of Fuel Used for U.S. Power Generation in 2016* (Mar. 16, 2016), <http://www.eia.gov/todayinenergy/detail.cfm?id=25392>; see also Energy Storage Association, *US Surpasses 100 MW of Storage Deployments through Q3 2015, Already Best Year Ever* (Dec. 3, 2015, 11:13 a.m.), <http://energystorage.org/resources/us-surpasses-100-mw-storage-deployments-through-q3-2015-already-best-year-ever>. The Commission defines an electric storage resource as a facility that can receive electric energy from the grid and store it for later injection of electricity back to the grid. This includes all types of electric storage technologies, regardless of their size or storage medium (e.g., batteries, flywheels, compressed air, pumped-hydro, etc.). See *Midcontinent Indep. Sys. Operator, Inc.*, 155 FERC ¶ 61,211, at n.7 (2016).

²⁶ See, e.g., Monitoring Analytics, PJM State of the Market at Table 12–17, http://monitoringanalytics.com/reports/PJM_State_of_the_Market/2016/2016q2-som-pjm-sec12.pdf.

¹⁶ *Interconnection Queuing Practices*, 122 FERC ¶ 61,252, at P 3 (2008) (2008 Order). With regard to capacity markets, commenters noted that in regions that had established capacity markets, interconnection queue delays could prevent least cost resources from being available in new capacity market auctions. *Id.* P 5.

²⁴ In 2015, for example, wind, natural gas, and solar power were the largest classes of new entrants. See *Wind Adds the Most Electric Generation Capacity in 2015, Followed by Natural Gas and Solar* (Mar. 23, 2016) <https://www.eia.gov/todayinenergy/detail.php?id=25492>.

experience delays, and interconnection queues have significant backlogs and long timelines.²⁷ According to interconnection customers and transmission providers, a recurring problem is that late-stage interconnection request withdrawals lead to interconnection study restudies and consequent delays for lower-queued interconnection customers.²⁸

Interconnection request withdrawals can also lead to increased network upgrade cost responsibility for lower-queued interconnection customers, which could, in turn, result in further cascading withdrawals. Further, a lack of cost and timing certainty can hinder interconnection customers from obtaining financing. Cost uncertainty in particular presents a significant obstacle, as some interconnection customers are less able to absorb unexpected and potentially higher costs.

27. Consistent with the 2008 Order, where the Commission allowed RTOs/ISOs to develop and propose their own solutions to interconnection timing issues, most RTOs/ISOs have implemented different procedures to alleviate queue delays. MISO, in particular, has proposed four different queue reforms, each of which have been designed to improve and expedite the interconnection process.²⁹ SPP has implemented two queue reforms, for similar reasons.³⁰ CAISO has employed network upgrade cost caps and periodic, scheduled restudies in order to provide certainty to the interconnection customer.³¹ Despite these efforts, delays, backlogs, and long queue times continue to affect interconnection customers.³²

28. The Petition highlighted some of the issues affecting the interconnection process and encouraged the Commission to consider these and other interconnection issues as well as the overall state of interconnection queues.

²⁷ See, e.g., 2016 Technical Conference Tr. 210: 1–10 (discussion of delays up to a year).

²⁸ See, e.g., 2016 Technical Conference Tr. 20:15–23 (discussion regarding MISO's experiencing 50 percent withdrawal rates in many parts of the queue).

³² See Petition at 8–11.

In light of these issues, the Commission in this proceeding reviewed current interconnection processes and proposes reforms to ensure that these processes continue to “minimize opportunities for undue discrimination and expedite the development of new generation, while protecting reliability and ensuring that rates are just and reasonable.”³³ The Commission conducted this review and developed proposals based on information provided in the 2016 Technical Conference and comments submitted in that proceeding.

29. The Commission preliminarily finds that aspects of the current interconnection process may hinder the timely development of new generation and, thereby, stifle competition in the wholesale markets, resulting in rates, terms, and conditions that are not just and reasonable or are unduly discriminatory or preferential. The current interconnection process can create uncertainty for interconnection customers regarding both costs and timing. A lack of transparency in the interconnection process can result in interconnection customers submitting interconnection requests to the queue that may be speculative or unlikely to reach commercial operation, which can affect other interconnection customers and create difficulties for transmission providers and owners. Increasing transparency will allow for interconnection customers to better evaluate the viability of an interconnection request prior to entering the queue, which could result in fewer interconnection requests dropping out of the queue. A lack of timely and clear information can also affect an interconnection customer's decisions regarding whether and where to build a generating facility or other resource and can also affect the viability of an interconnection request after it enters the interconnection queue. Finally, the current interconnection process can involve unnecessary obstacles to the interconnection of new technologies and as such, the Commission has proposed reforms to address these issues.

30. The Commission also preliminarily finds that the process for a transmission provider to conduct interconnection studies may result in uncertainty and inaccurate information. The current interconnection study process is meant to allow for refinements in the study estimates of interconnection costs as an interconnection request moves through each of the interconnection study

phases.³⁴ However, uncertainty in study results and a lack of transparency may hamper generation development. Cost uncertainty presents a particularly significant obstacle as some interconnection customers are less able to absorb unexpected and potentially higher costs for interconnection facilities and network upgrades that may occur either in the normal course of refined estimates or as a result of restudy. Moreover, if an interconnection customer does not obtain timely studies or is assessed previously unanticipated network upgrade costs, this could affect a number of development aspects, including the interconnection customer's land lease agreements required to support unanticipated network upgrades, additional project financing required for increased network upgrade costs, and/or ability to obtain a power purchase agreement in the face of a potential delay.

31. Additionally, the Commission preliminarily finds that the potential for discriminatory interconnection processes exists as new technologies enter the power generation sphere. New technologies may be hampered in the study process as study conductors come up to speed on how to evaluate the incorporation of these technologies onto the system. Interconnection customers involving new technologies may be affected more by process and information uncertainty than incumbents experienced with the interconnection process in certain regions.

IV. Proposed Reforms

32. The Commission is proposing to reform certain aspects of the Commission's regulations and the *pro forma* LGIP and *pro forma* LGIA that affect the interconnection process to ensure that they are just and reasonable and not unduly discriminatory or preferential.

33. The provision of more timely and accurate information could increase certainty for interconnection customers and assist them in earlier project evaluation and quicker project development, as well as assist in earlier, less disruptive withdrawals from the interconnection queue. Interconnection customers and transmission providers alike have frequently expressed frustration at the need for repeated restudies and prolonged queue times resulting from the withdrawal of higher-queued interconnection requests.³⁵

³⁴ See Order No. 2003, FERC Stats. & Regs. ¶ 31,146 at PP 195, 217–34.

³⁵ See, e.g., 2016 Technical Conference Tr. 20:15–23.

³³ Order No. 2003, FERC Stats. & Regs. ¶ 31,146 at P 11.

improvements in certainty and the quality of information conveyed at an earlier stage in the interconnection process, some of these withdrawals could be eliminated, and the queue could proceed more quickly. At the same time, fewer withdrawals would benefit transmission providers by reducing the burden of processing requests that are unlikely to reach commercial operation.

34. The Commission also believes that providing interconnection customers with access to more detailed information could enable the interconnection customer to make more informed decisions earlier in the interconnection process. For example, increased knowledge of the assumptions used in interconnection studies could assist an interconnection customer with identifying optimal points of interconnection as well as allow it to better anticipate the duration of the interconnection process and better understand issues that may arise as the result of study outcomes.

Interconnection customers may also benefit from a more complete up front understanding of the network upgrades, contingencies, and risks of curtailment that their interconnection requests may face, which could reduce late-stage interconnection request withdrawals and result in fewer restudies and delays. More timely and accurate information regarding an interconnection request, as well as greater transparency of the study process and of congestion, will reduce the incentive for interconnection customers to submit multiple interconnection requests when expecting to interconnect a large generating facility. While interconnection customers may still submit multiple requests, the Commission anticipates that they would submit fewer requests with better information and that the interconnection customer would terminate a non-viable interconnection request earlier.

35. The Commission also proposes reforms that could enhance interconnection processes. The Commission believes that new technologies will drive grid innovation, as well as offer other facility efficiencies and advances. These innovations may reach the market after an interconnection customer has initiated or completed an interconnection request. However, in some circumstances, there are likely ways to inject efficiencies in the traditional interconnection process or to preempt the need for a transmission provider to construct new, unnecessary interconnection facilities and network

upgrades. Additionally, the Commission believes there are ways to allow flexibility in the interconnection process to incorporate innovation or developments that transpire while an interconnection request is in the queue.

36. At this time, the Commission does not propose reforms to generator interconnection processes and agreements other than those described herein. This limitation includes any reforms proposed by AWEA in its Petition that are not included in this Proposed Reforms section.

A. Improving Certainty for Interconnection Customers

37. The reforms proposed below would improve certainty by providing interconnection customers more predictability in the interconnection process, including more predictability regarding the costs and the timing of interconnecting to the grid. Increasing certainty for interconnection customers—particularly cost certainty—may decrease the number of late-stage interconnection request withdrawals from the interconnection queue, which could meaningfully ameliorate the cycle of repeated, cascading restudies. In addition to the proposed reforms, the Commission seeks comment on the extent to which capping interconnection customer cost responsibility for actual network upgrade costs to some margin above estimated network upgrade costs can mitigate the potential for serial restudies without inappropriately shifting cost responsibility.

1. Scheduled Periodic Restudies

38. As discussed below, the Commission proposes to revise the *pro forma* LGIP to require transmission providers that conduct cluster studies to establish a schedule for conducting periodic restudies.

a. Current Provisions and Background

39. The current *pro forma* LGIP requires the transmission provider to make reasonable efforts³⁶ to provide: (i) Feasibility study results within 45 days after receipt of a signed feasibility agreement; (ii) system impact study results within 90 days after receipt of a signed system impact study agreement or after the cluster window closes; and (iii) facilities study results either within 90 days after receipt of a signed

³⁶ Reasonable Efforts “shall mean, with respect to an action required to be attempted or taken by a Party under the Standard Large Generator Interconnection Agreement, efforts that are timely and consistent with Good Utility Practice and are otherwise substantially equivalent to those a Party would use to protect its own interests.” *Pro forma* LGIP Sec. 1 (Definitions).

facilities study agreement or 180 days after receipt of a signed facilities study agreement, depending on the accuracy margin provided.³⁷ For the purpose of conducting the system impact study, the current *pro forma* LGIP allows transmission providers the option to process interconnection requests on a serial basis or in groups using clusters.³⁸

40. A transmission provider may require a restudy of an interconnection customer’s study results if a higher-queued interconnection request drops out of the queue or an interconnection customer modifies its interconnection request.³⁹ A transmission provider may also require restudy if either the feasibility or system impact studies uncover any unexpected result not contemplated during the scoping meeting that will require re-designation of the point of interconnection. According to the *pro forma* LGIP, restudy of an interconnection feasibility study shall take no longer than 45 days from the date the transmission provider provides notice that such restudy is required. Restudy of an interconnection system impact study or interconnection facilities study shall not take longer than 60 days from the date the transmission provider provides notice to the interconnection customer that such restudy is required.⁴⁰ While the current *pro forma* language establishes timeframes in which to complete restudies after an interconnection customer is notified, it does not provide guidance on the frequency at which such restudies should occur for clustered or grouped interconnection requests.

b. AWEA Petition and Comments

41. In its Petition, AWEA recognizes that restudies are often necessary, but it states that, in certain regions, restudies are conducted on an *ad hoc* basis as the need arises.⁴¹ AWEA argues that repeated restudies conducted at irregular intervals may increase or prolong uncertainty for interconnection customers.

42. AWEA further explains that, under the current *pro forma* LGIP, the withdrawal of a higher-queued interconnection request may necessitate a restudy, which may then change the assumptions for other queued interconnection requests within a cluster, necessitating further restudies in a cascading effect. AWEA contends that these cascading restudies prolong

³⁷ See *Pro forma* LGIP Sec. 6.3, 7.4 and 8.3.

³⁸ See *Pro forma* LGIP Sec. 4.2.

³⁹ See *Pro forma* LGIP Sec. 6.4, 7.6, and 8.5.

⁴⁰ See *Pro forma* LGIP Sec. 6.4, 7.6 and 8.5.

⁴¹ Petition at 22.

cost uncertainty, cause delays in finalizing interconnection study results, and delay the execution of LGIAs. As a potential solution, AWEA proposes an annual or periodic restudy process for interconnection requests within a cluster, in which the transmission provider would consider all relevant system condition changes, including higher-queued interconnection requests that withdraw from the queue. AWEA contends that such a restudy process provides certainty because each restudy would be completed according to a schedule, rather than conducted on an *ad hoc* basis due to intervening events.⁴²

43. However, AWEA also asserts that when an unplanned restudy becomes necessary outside of the scheduled restudy process, it is of critical importance that the restudy be processed in as timely a manner as possible. AWEA adds that the transmission provider should, if necessary, hire additional consultants or staff to ensure proper resources to process the restudy in a consistent and timely manner.⁴³

44. Several commenters, including a number of entities that have been interconnection customers for wind generation such as NRG, EDF, and NextEra, support a scheduled restudy process and offer suggestions for how transmission providers should conduct this process.⁴⁴ MISO also acknowledges that the withdrawal of higher-queued interconnection requests creates the need for cascading restudies of lower-queued interconnection requests and that scheduled restudies may alleviate the need for multiple *ad hoc* restudies.⁴⁵ NextEra states that, under an annual restudy process, the transmission provider should consider all relevant system condition changes, as well as all higher-queued interconnection requests that dropped out of the queue, in one restudy for the applicable interconnection requests in a cluster or sub-region. Although it believes there may be some efficiency in a group restudy, EDF cautions that, if the restudy were to include different interconnection requests from different clusters, it could result in as many issues and inefficiencies as are produced by the current process.⁴⁶

45. Some commenters oppose scheduled, periodic restudies. ISO-NE, Xcel, and ITC express the belief that an

annual, group restudy would not be useful. These commenters assert that the primary cause for restudies—namely, the withdrawal of higher-queued interconnection requests—is out of the transmission provider's control and can occur at any time. These commenters contend that limiting restudies to once a year could force viable generation interconnection requests to wait longer than necessary for restudy results.⁴⁷ The ISO/RTO Council states that this proposal is inapplicable to NYISO due to its “non-serial” interconnection queue approach, in which an interconnection request is only included in the base case for restudy when it has satisfied certain requirements. The ISO/RTO Council also notes that ISO-NE's interconnection process is merged with the Forward Capacity Market. Thus, the ISO/RTO Council argues, AWEA's proposals for the restudy process could be disruptive.⁴⁸

c. Proposal

46. The Commission proposes to revise the *pro forma* LGIP to require transmission providers that conduct cluster studies to conduct restudies on a scheduled, periodic basis (*e.g.*, annually, semi-annually, quarterly, or a set number of days after the completion of the cluster study). The Commission proposes to require transmission providers to update their LGIPs to specify the frequency of restudies for interconnection customers in a cluster study and post the dates of these restudies on the transmission provider's OASIS.

47. A scheduled, periodic restudy process could enhance the efficiency and certainty of the study process for all parties by mitigating the problem of cascading restudies. This reform could achieve this result because it creates some milestones that can serve as decision points for interconnection customers and allows transmission providers to further revise their interconnection processes as necessary to incorporate scheduled restudies. Further, the Commission notes that it is not proposing that all transmission providers establish the same restudy schedule; rather, the Commission proposes to give transmission providers flexibility in establishing the frequency of restudies to best accommodate the needs of interconnection customers and transmission providers.

48. Accordingly, the Commission proposes to require each transmission provider that conducts cluster studies to

revise sections 6.4 and 7.6 of the *pro forma* LGIP as follows (*proposing to delete italicized text*):

If Re-Study of the [insert appropriate study] Study is required due to a higher queued project dropping out of the queue, or a modification of a higher queued project subject to Section 4.4, or re-designation of the Point of Interconnection pursuant to Section [insert appropriate section] Transmission Provider shall notify Interconnection Customer in writing. *Serially processed Re-Studies Such Re-Study* shall take no longer than [forty-five (45)/sixty (60)] Calendar Days from the date of the notice. Any cost of Re-Study shall be borne by the Interconnection Customer being re-studied.

If a Transmission Provider that conducts cluster studies identifies a need for restudies, it will conduct periodic Re-Studies for each cluster [placeholder for time frame proposed by each Transmission Provider]. Re-Study dates for each cluster will also be posted on the Transmission Provider's OASIS. Re-Study shall take no longer than [forty-five (45)/sixty (60)] Calendar Days from the commencement date of the Re-Study. Any cost of Re-Study shall be borne by the Interconnection Customer being re-studied.

49. Likewise, the Commission proposes to require each transmission provider that conducts cluster studies to revise section 8.5 of the *pro forma* LGIP as follows (*proposing to delete italicized text*):

If Re-Study of the Interconnection Facilities Study is required due to a higher queued project dropping out of the queue or a modification of a higher queued project pursuant to Section 4.4, Transmission Provider shall so notify Interconnection Customer in writing. *Serially processed Re-Studies Such Re-Study* shall take no longer than sixty (60) Calendar Days from the date of the notice. Any cost of Re-Study shall be borne by the Interconnection Customer being re-studied.

A Transmission Provider that conducts cluster studies will conduct periodic Re-studies for each cluster [placeholder for time frame proposed by each Transmission Provider]. Re-Study dates for each cluster will also be posted on the Transmission Provider's OASIS. Re-Study of the cluster shall take no longer than sixty (60) Calendar Days from the commencement date of the Re-Study.

50. The Commission acknowledges the concern held by some stakeholders that a scheduled, periodic restudy process could force viable interconnection requests to wait longer than necessary to progress through the interconnection process. The Commission seeks comment on whether regions that conduct cluster studies and move to periodic re-studies should retain some discretion to conduct restudies outside of the established schedule at the request of interconnection customers or under specific circumstances that deem such

⁴² Petition at 22–25.

⁴³ AWEA 2016 Comments at 30.

⁴⁴ NRG 2015 Comments at 4; EDF 2016 Comments at 31; NextEra 2015 Comments at 8–9.

⁴⁸ ISO/RTO Council 2015 Comments at 5–7.

deviations necessary. The Commission seeks comments on when this discretion should be restricted and the circumstances under which such deviations should be allowed.

51. Additionally, some commenters allege that transmission provider tariffs generally provide insufficient transparency regarding the type of triggers that would require restudy for projects processed through serial or cluster studies; they also contend that transmission providers do not apply such triggers consistently.⁴⁹ In contrast, some transmission providers assert that their tariffs sufficiently detail restudy triggers.⁵⁰ We believe that the Commission's proposal above to require scheduled, periodic restudies could help address these concerns for interconnection requests processed through cluster studies. However, the Commission also seeks comment on (1) whether the Commission should further revise the *pro forma* LGIP to improve the transparency and application of restudy triggers generally, and (2) if so, what reforms are needed.

2. The Interconnection Customer's Option To Build

52. The Commission proposes to allow the interconnection customer to exercise the option to build unilaterally; that is, the Commission proposes that the interconnection customer's option to assume responsibility for construction of the transmission provider's interconnection facilities and stand alone network upgrades is not contingent on the transmission provider notifying the interconnection customer that it cannot complete such facilities on the schedule proposed by the interconnection customer.

a. Current Provisions and Background

53. Under the current *pro forma* LGIA, the interconnection customer's option to build is contingent on the transmission provider's notification that the transmission provider cannot complete the facilities on schedule. Specifically, under the *pro forma* LGIA, the interconnection customer selects the "In-Service Date, Initial Synchronization Date, and Commercial Date"⁵¹ and "either the Standard

Option or Alternative Option" unless mutually agreed to between the parties to the agreement.⁵² Under the standard option, the transmission provider "shall construct the Transmission Provider's Interconnection Facilities⁵³ and Network Upgrades using Reasonable Efforts to complete the construction by the dates designated by the Interconnection Customer."⁵⁴ Under the alternate option, "Transmission Provider shall construct the Transmission Provider's Interconnection Facilities and Network Upgrades according to the construction completion dates established by the Interconnection Customer, and if it fails to meet those dates, it may be liable for liquidated damages," although the transmission provider may decline this option "within 30 Calendar Days of executing the LGIA."⁵⁵

54. Under the current OATT, there are two other options, which are available if the transmission provider informs the interconnection customer that it cannot meet the proposed dates: The "Option to Build" and the "Negotiated Option."⁵⁶ The "Option to Build," which the *pro forma* LGIA describes in section 5.1.3, provides an interconnection customer with the option to build the transmission provider's interconnection facilities and stand alone network upgrades, but limits that option to circumstances where the transmission provider cannot meet the dates proposed by the interconnection customer. That is, an interconnection customer may "assume responsibility for the design, procurement and construction of Transmission Provider's Interconnection Facilities and Stand Alone Network Upgrades."⁵⁷ However,

upon which Trial Operation begins." *Id.* The Commercial Operation Date is "the date on which the Generating Facility commences Commercial Operation as agreed to by the Parties pursuant to Appendix E to the Standard Large Generator Interconnection Agreement." *Id.*

⁵² *Pro forma* LGIA Sec. 5.1.

⁵³ According to the *pro forma* LGIA:

Transmission Provider's Interconnection Facilities shall mean all facilities and equipment owned, controlled or operated by the Transmission Provider from the Point of Change of Ownership to the Point of Interconnection as identified in Appendix A to the Standard Large Generator Interconnection Agreement, including any modifications, additions or upgrades to such facilities and equipment. Transmission Provider's Interconnection Facilities are sole use facilities and shall not include Distribution Upgrades, Stand Alone Network Upgrades or Network Upgrades.

Pro forma LGIA Art. 1.

⁵⁴ Order No. 2003, FERC Stats. & Regs. ¶ 31,146 at P 351.

⁵⁵ Order No. 2003, FERC Stats. & Regs. ¶ 31,146 at P 352.

⁵⁶ Order No. 2003, FERC Stats. & Regs. ¶ 31,146 at P 353.

⁵⁷ *Pro forma* LGIA Sec. 5.1.3.

the interconnection customer may only exercise this option if the transmission provider notifies the interconnection customer that the transmission provider cannot meet the interconnection customer's preferred construction completion dates.⁵⁸

55. The "Negotiated Option" applies "if the Transmission Provider notifies the Interconnection Customer that it cannot meet the dates established by the Interconnection Customer, and the Interconnection Customer does not want to assume responsibility for construction."⁵⁹ Under this option, the "Interconnection Customer may decide that the Parties shall negotiate in good faith to revise the construction completion dates and other provisions under which the Transmission Provider is responsible for the construction."⁶⁰ If the parties are unable to reach an agreement during these negotiations, the transmission provider assumes responsibility "for construction of the Transmission Provider's Interconnection Facilities and Network Upgrades in accordance with the Standard Option."⁶¹

b. Comments

56. Multiple parties that have experience as interconnection customers at the 2016 Technical Conference expressed support for reforms that would allow them to build some interconnection facilities and network upgrades, explaining that they are often able to build more rapidly and at lower cost than transmission owners.⁶² Several commenters advocate expanding the option to build to circumstances beyond those described in current section 5.1.3 of the LGIA.⁶³ They contend that the Commission should not condition the usage of the option to build on timing but should instead allow for an absolute right for interconnection customers to build interconnection facilities and stand alone upgrades.

57. Other commenters oppose expansion of the circumstances under which an interconnection customer may exercise the option to build.⁶⁴ For

⁵⁸ See, e.g., *ISO New England Inc.*, 149 FERC ¶ 61,274, at P 18 (2014).

⁵¹ The In-Service Date is "the date upon which the Interconnection Customer reasonably expects it will be ready to begin use of the Transmission Provider's Interconnection Facilities to obtain back feed power." *Pro forma* LGIA Art. 1. The Initial Synchronization Date is "the date upon which the Generating Facility is initially synchronized and

instance, ITC suggests that removing the limitation on when the option to build can be exercised would threaten system reliability.⁶⁵ Additionally, MISO TOs states that in Order No. 2003–A, the Commission clarified that the transmission provider has no obligation to cede ownership of stand alone network upgrades or the transmission provider's interconnection facilities to the interconnection customer.⁶⁶ Some commenters that support expanding the option to build acknowledge that usage of this option should still require that reliability standards be maintained.⁶⁷

c. Proposal

58. The Commission preliminarily finds that limiting the option to build only to circumstances where the transmission provider cannot meet the interconnection customer's requested dates may not be just and reasonable and may be unduly discriminatory or preferential. The limitation may restrict an interconnection customer's ability to efficiently build the transmission provider's interconnection facilities and the interconnection customer's stand alone network upgrades in a cost-effective manner.⁶⁸ As a result, an interconnection customer may pay more for the transmission provider's interconnection facilities and standalone upgrades. Furthermore, removing the limitation may provide interconnection customers more control and certainty during the design and construction phase of the interconnection process.

59. The Commission proposes to modify the *pro forma* LGIA to allow an interconnection customer to exercise the option to build regardless of whether the transmission provider can meet the requested construction dates. More specifically, the Commission proposes to modify the *pro forma* LGIA to allow an interconnection customer to design, procure, and construct the transmission provider's interconnection facilities and stand alone network upgrades—even if the transmission provider can meet the requested construction dates—where the interconnection customer and transmission provider (and transmission

owner, if applicable) are in agreement as to the transmission provider's interconnection facilities and stand alone network upgrades that would be built, including the design and construction details. Existing responsibilities and protections, including reliability considerations, in section 5.2 of the *pro forma* LGIP under “General Conditions Applicable to Option to Build” would continue to apply.

60. The Commission is *not* proposing changes with respect to how transmission provider's interconnection facilities and stand-alone network upgrades are designed or approved, which standards or practices must be followed, or the ownership of transmission provider's interconnection facilities and stand-alone network upgrades that are built under the option to build.⁶⁹ Nor is the Commission proposing to expand the types of stand-alone facilities that interconnection customers may construct under the option to build beyond transmission provider's interconnection facilities and stand-alone network upgrades. The proposal instead removes the limitation on when the interconnection customer can exercise the option to build such that an interconnection customer may opt to build in an effort to reduce its costs or improve the timeline for construction. Specifically, the Commission proposes to modify the language in section 5.1 of the *pro forma* LGIA as follows (*proposing to delete italicized text*):

Options. Unless otherwise mutually agreed to between the Parties, Interconnection Customer shall select the In-Service Date, Initial Synchronization Date, and Commercial Operation Date; and either the Standard Option or Alternate Option set forth below for completion of *Transmission Provider's Interconnection Facilities and Network Upgrades*, as set forth in Appendix A, *Interconnection Facilities and Network Upgrades*, and such dates and selected option shall be set forth in Appendix B, Milestones. At the same time, *Interconnection Customer shall indicate whether it elects to exercise the Option to Build set forth in section 5.1.3 below. If the dates designated by Interconnection Customer are not acceptable to Transmission Provider, Transmission Provider shall so notify Interconnection Customer within thirty (30) Calendar Days. Upon receipt of the notification that Interconnection Customer's designated dates are not acceptable to Transmission Provider, the Interconnection Customer shall notify the Transmission Provider within thirty (30) Calendar Days whether it elects to exercise the Option to Build if it has not already elected to exercise the Option to Build.*

61. The Commission also proposes to modify the language in article 5.1.3 of the *pro forma* LGIA as follows (*proposing to delete italicized text*):

Option to Build. *If the dates designated by Interconnection Customer are not acceptable to Transmission Provider, Transmission Provider shall so notify Interconnection Customer within thirty (30) Calendar Days, and unless the Parties agree otherwise, Interconnection Customer shall have the option to assume responsibility for the design, procurement and construction of Transmission Provider's Interconnection Facilities and Stand Alone Network Upgrades on the dates specified in Article 5.1.2. Transmission Provider and Interconnection Customer must agree as to what constitutes Stand Alone Network Upgrades and identify such Stand Alone Network Upgrades in Appendix A. Except for Stand Alone Network Upgrades, Interconnection Customer shall have no right to construct Network Upgrades under this option.*

62. Given the changes proposed above, revisions to the negotiated option are necessary because the current version of the negotiated option references the current limitations on the option to build. For this reason, it is necessary to remove these references in the negotiated option and to address scenarios in which an interconnection customer exercises the option to build and still wishes to negotiate completion times for other facilities, including network upgrades that are not stand alone network upgrades, as well as circumstances in which the interconnection customer does not wish to exercise the option to build. Such revisions are necessary because the ability to exercise the option to build would no longer be contingent upon a transmission provider's inability to meet the interconnection customer's proposed dates. However, the negotiated option must also contemplate the possibility that the transmission provider does not agree to the interconnection customer's proposed dates as to other facilities not covered by the option to build (*i.e.*, other than transmission provider's interconnection facilities and stand-alone network upgrades). That is, even if the interconnection customer elects to exercise the option to build, the transmission provider would still be responsible for the design, procurement, and construction of the interconnection facilities and network upgrades other than transmission provider's interconnection facilities and stand-alone network upgrades. The option to build does not grant any right to the interconnection customer to construct network upgrades that are not stand-alone upgrades. Furthermore, both the

⁶⁵ ITC 2016 Comments at 10.

⁶⁶ MISO TOs 2016 Comments at 21.

⁶⁷ See AES 2016 Comments at 9.

⁶⁸ The *pro forma* LGIA states that:

Stand Alone Network Upgrades shall mean Network Upgrades that an Interconnection Customer may construct without affecting day-to-day operations of the Transmission System during their construction. Both the Transmission Provider and the Interconnection Customer must agree as to what constitutes Stand Alone Network Upgrades and identify them in Appendix A to the Standard Large Generator Interconnection Agreement.

Pro forma LGIA Art. 1.

⁶⁹ *Pro forma* LGIA Sec. 5.2.

transmission provider and the interconnection customer must agree on which facilities are the stand-alone network upgrades and identify them in Appendix A to the LGIA.⁷⁰

63. The Commission therefore proposes to modify the language in article 5.1.4 of the *pro forma* LGIA as follows (*proposing to delete italicized text*):

Negotiated Option. *If Interconnection Customer elects not to exercise its option under Article 5.1.3, Option to Build, Interconnection Customer shall so notify Transmission Provider within thirty (30) Calendar Days, and If the dates designated by Interconnection Customer are not acceptable to Transmission Provider, the Parties shall in good faith attempt to negotiate terms and conditions (including revision of the specified dates and liquidated damages, the provision of incentives, or the procurement and construction of a portion of Transmission Provider's Interconnection Facilities and Stand Alone Network Upgrades by Interconnection Customer—all facilities other than Transmission Provider's Interconnection Facilities and Stand Alone Network Upgrades if the Interconnection Customer elects to exercise the Option to Build under Article 5.1.3) pursuant to which Transmission Provider is responsible for the design, procurement and construction of Transmission Provider's Interconnection Facilities and Network Upgrades. If the Parties are unable to reach agreement on such terms and conditions, then, pursuant to 5.1.1 (Standard Option), Transmission Provider shall assume responsibility for the design, procurement and construction of Transmission Provider's Interconnection Facilities and Network Upgrades all facilities other than Transmission Provider's Interconnection Facilities and Stand Alone Network Upgrades if the Interconnection Customer elects to exercise the Option to Build pursuant to 5.1.1, Standard Option.*

3. Self-Funding by the Transmission Owner

64. The Commission proposes to require agreement between a transmission owner or provider and interconnection customer before the transmission owner or provider may elect to initially fund network upgrades.

a. Existing Provisions and Background

65. Order No. 2003 laid out a pricing policy with regard to the costs of interconnection. There, the Commission stated that, where the transmission provider is not an RTO/ISO, it is appropriate for the interconnection customer to “be solely responsible for the costs of Interconnection Facilities”⁷¹ and for network

upgrades⁷² to be “funded initially by the interconnection customer unless the Transmission Provider elects to fund them.”⁷³ If the interconnection customer funds the network upgrades, then the interconnection customer is “entitled to a cash equivalent refund . . . equal to the total amount paid for the Network Upgrades” paid “as credits against the Interconnection Customer's payments for transmission services, with the full amount to be refunded . . . within five years of the date the Network Upgrades are placed in service.”⁷⁴ This upfront payment from the interconnection customer “serves not as a rate for interconnection or transmission service, but simply as a financing mechanism that is designed to facilitate the efficient construction of Network Upgrades”⁷⁵ In Order No. 2003, the Commission explained that, while it is appropriate for the interconnection customer to pay the initial full cost for network upgrades that “would not be needed but for the interconnection,” the interconnection customer must receive transmission service credits in return to ensure that it “will not have to pay both incremental costs and an average embedded cost rate for the use of the Transmission System.”⁷⁶ The Commission further stated that this policy helps ensure that every interconnection “is treated comparably to the interconnections that a non-independent Transmission Provider completes for its own Generating Facilities.”⁷⁷ The Commission further explained that the costs of network

Customer's Interconnection Facilities. Collectively, Interconnection Facilities include all facilities and equipment between the Generating Facility and the Point of Interconnection, including any modification, additions or upgrades that are necessary to physically and electrically interconnect the Generating Facility to the Transmission Provider's Transmission System. Interconnection Facilities are sole use facilities and shall not include Distribution Upgrades, Stand Alone Network Upgrades or Network Upgrades.

Pro forma LGIA Art. 1.

⁷² Network upgrades refer to:

the additions, modifications, and upgrades to the Transmission Provider's Transmission System required at or beyond the point at which the Interconnection Facilities connect to the Transmission Provider's Transmission System to accommodate the interconnection of the Large Generating Facility to the Transmission Provider's Transmission System.

Pro forma LGIA Art. 1.

⁷³ Order No. 2003, FERC Stats. & Regs. ¶ 31,146 at PP 693–694, 676.

⁷⁴ Order No. 2003, FERC Stats. & Regs. ¶ 31,146 at P 676.

⁷⁵ Order No. 2003–A, FERC Stats. & Regs. ¶ 31,160 at P 612.

⁷⁶ Order No. 2003, FERC Stats. & Regs. ¶ 31,146 at P 694.

⁷⁷ Order No. 2003, FERC Stats. & Regs. ¶ 31,146 at P 694.

upgrades for a transmission provider's own generation are traditionally rolled into the transmission provider's transmission rates. The Commission allows some pricing flexibility for transmission providers that are part of an RTO/ISO and independent of market participants, as these transmission providers have “no incentive to use the cost determination and allocation process to unfairly advantage [their] own generation.”⁷⁸

66. Currently, article 11.3 of the *pro forma* LGIA states that:

Network Upgrades and Distribution Upgrades. Transmission Provider or Transmission Owner shall design, procure, construct, install, and own the Network Upgrades and Distribution Upgrades described in Appendix A, Interconnection Facilities, Network Upgrades and Distribution Upgrades. The Interconnection Customer shall be responsible for all costs related to Distribution Upgrades. Unless Transmission Provider or Transmission Owner elects to fund the capital for the Network Upgrades, they shall be solely funded by Interconnection Customer.

The option for the transmission owner or provider to fund the cost for network upgrades is termed the “self-fund option.” Under Order No. 2003, a transmission owner or provider electing the self-fund option provides the upfront funding for the capital cost of the network upgrades and then recovers the costs of those upgrades through its rolled-in transmission rates charged to transmission customers.⁷⁹

67. In 2009, the Commission accepted a MISO proposal to increase the cost responsibility of an interconnection customer to 100 percent of the costs of network upgrades with a possible 10 percent reimbursement for network upgrades that are 345 kV or above.⁸⁰ This approach reflects a departure from the *pro forma* LGIA interconnection pricing policy provided in Order No. 2003. In 2013, MISO proposed to allow a transmission owner to elect to initially fund network upgrades and to directly assign those costs to the interconnection customer under MISO's interconnection customer funding policy.⁸¹ In that proceeding, the Commission accepted MISO's proposal for a transmission

⁷⁸ Order No. 2003, FERC Stats. & Regs. ¶ 31,146 at P 694; Order No. 2003–A, FERC Stats. & Regs. ¶ 31,160 at P 587.

⁷⁹ See Order No. 2003, FERC Stats. & Regs. ¶ 31,146 at P 676. Order No. 2003, however, allows independent entities to depart from the *pro forma* LGIA approach. See *Interstate Power and Light Co. v. ITC Midwest, LLC*, 144 FERC ¶ 61,052, at P 38 (2013).

⁸⁰ *Midwest Indep. Transmission Sys. Operator, Inc.*, 129 FERC ¶ 61,060, at P 8 (2009).

⁸¹ *Midcontinent Indep. Sys. Operator, Inc.*, 145 FERC ¶ 61,111 (2013) (*Hoopeston*).

⁷⁰ Order No. 2003, FERC Stats. & Regs. ¶ 31,146 at P 353.

⁷¹ Interconnection Facilities refer to: shall mean the Transmission Provider's Interconnection Facilities and the Interconnection

owner that elects to initially fund network upgrades under MISO's *pro forma* GIA to recover the capital costs for network upgrades through a network upgrade charge assessed to the interconnection customer.⁸²

68. Recently, another transmission owner in MISO sought to unilaterally elect the self-fund option for network upgrades.⁸³ The Commission found that article 11.3 of MISO's *pro forma* GIA may be unjust, unreasonable, unduly discriminatory or preferential because it allows the transmission owner the discretion to elect to initially fund the upgrades and subsequently assess the interconnection customer a network upgrade charge that is not later reimbursed through the provision of credits. The Commission found that this practice could result in discriminatory treatment by the transmission owner of different interconnection customers.⁸⁴ The Commission additionally found that, by *unilaterally* electing to initially fund network upgrades for which the interconnection customer is ultimately financially responsible and does not receive credits for those costs, the affected system operator or transmission owner may deprive the interconnection customer of more favorable network upgrade financing options. For instance, the Commission found that the transmission owner's unilateral election to initially fund network upgrades may increase costs of interconnection service by assigning increased capital costs and a security requirement to the interconnection customer with no corresponding increase in service.⁸⁵ As a result, the Commission directed MISO to revise article 11.3 of its GIA to require mutual agreement with the interconnection customer for the transmission owner to elect to initially fund network upgrades.⁸⁶

b. AWEA Petition and Comments

69. In its Petition, AWEA argues that, where the Commission has granted independent entity variations that do not credit back network upgrade costs to the interconnection customer, transmission owners or providers should not have exclusive decision-

making authority with respect to the self-fund option. AWEA specifically raises concerns that the self-fund option hinders competition and provides an opportunity for undue discrimination and affiliate abuse. In support, AWEA argues that the self-fund option allows transmission owners or providers to levy large upgrade costs onto the interconnection customer. AWEA requests that the Commission allow the transmission owner or provider to self-fund network upgrades only if the interconnection customer agrees.⁸⁷

70. Some commenters oppose requiring mutual agreement for self-funding in all regions. MISO TOs view the proposal as eliminating a transmission owner's right to self-fund network upgrades, arguing that this could preclude the transmission owner from the ability to earn a return on its investment.⁸⁸ ITC agrees, arguing that it is just and reasonable for transmission owners to earn a fair rate of return on constructed network upgrades.⁸⁹ EEI argues that the Commission has long permitted transmission owners to self-fund upgrades while collecting the capital costs for such upgrades, further asserting that self-funding is an important aspect of the Commission's interconnection pricing policy. EEI notes that the Commission has clarified that the self-fund option should not include the recovery of costs other than the return of and on the capital costs of the network upgrades.⁹⁰ Additionally, several commenters state that self-funding is a regional issue; thus, a generic rulemaking is not needed.⁹¹

c. Proposal

71. The Commission proposes to revise the *pro forma* LGIA to require mutual agreement between the interconnection customer and the transmission owner or provider for the transmission owner or provider to elect to fund the capital for network upgrades. Specifically, the Commission proposes to revise section 11.3 of the *pro forma* LGIA to include the requirements established in the *Otter Tail Proceedings*. To which, the *Otter Tail Proceedings* resulted in the changes as indicated below to article 3.2.1 of MISO's Attachment X to read:

⁸⁷ RENEW and Wind on the Wires support this request. RENEW 2015 Comments at 6; Wind on the Wires 2015 Comments at 3.

⁸⁸ MISO TOs 2015 Comments at 18.

⁸⁹ ITC 2015 Comments at 12 (citing, e.g., *Ameren Energy Resource Generating Co. v. Midcontinent Indep. Sys. Operator, Inc.*, 148 FERC ¶ 61,057, at P 38 (2014)).

⁹⁰ EEI 2015 Comments at 44–45 (citing *Hoopeston*, 145 FERC ¶ 61,111 at P 42).

⁹¹ MISO TOs 2015 Comments at 18; MISO 2015 Comments at 21.

Transmission Owner shall provide Transmission Provider and Interconnection Customer with written notice pursuant to Article 15 that Transmission Owner elects to fund the capital for the Network Upgrades and Transmission Owner's System Protection Facilities, which election shall only be available upon mutual agreement of Interconnection Customer and Transmission Owner; otherwise, such facilities, if any, shall be solely funded by Interconnection Customer.

As such, the Commission proposes to modify the language in article 11.3 of the *pro forma* LGIA as follows:

Transmission Provider or Transmission Owner shall design, procure, construct, install, and own the Network Upgrades and Distribution Upgrades described in Appendix A, Interconnection Facilities, Network Upgrades and Distribution Upgrades. The Interconnection Customer shall be responsible for all costs related to Distribution Upgrades. Unless Transmission Provider or Transmission Owner elects to fund the capital for the Network Upgrades, *which election shall only be available upon mutual agreement of Interconnection Customer and Transmission Owner or Transmission Provider*, they shall be solely funded by Interconnection Customer.

72. The Commission preliminarily finds that allowing the unilateral option to self-fund to continue for any transmission owner or transmission provider may be unjust, unreasonable, unduly discriminatory, or preferential. The Commission affirmed in the *Otter Tail Proceedings* that the unilateral election to self-fund created the same condition that was of concern in *E.ON Climate & Renewables North America, LLC v. Midwest Indep. Transmission Sys. Operator, Inc.*, namely "unacceptable opportunities for undue discrimination by affording a transmission owner the discretion to increase the costs of interconnection service by assigning both increased capital costs, as well as non-capital costs . . . to particular interconnecting generators, but not others."⁹² The Commission further added that the unilateral election for the transmission owner to provide initial funding for network upgrades may deprive the interconnection customer of other options to finance the cost of the network upgrades that may provide more favorable terms and rates.⁹³

73. The Commission proposes this reform to balance the interconnection customer's ability to manage the cost of

⁹² *E.ON Climate & Renewables North America, LLC v. Midwest Indep. Transmission Sys. Operator, Inc.*, 137 FERC ¶ 61,076, at P 37 (2011), *order on reh'g*, 142 FERC ¶ 61,048, at P 21 (2013).

⁸² *Hoopeston*, 145 FERC ¶ 61,111 at P 41.

⁸³ See *Otter Tail Power Co. v. Midcontinent Indep. Sys. Operator, Inc.*, 153 FERC ¶ 61,352 (2015).

⁸⁴ See *Otter Tail Power Co. v. Midcontinent Indep. Sys. Operator, Inc.*, 153 FERC ¶ 61,352 at P 14; *Midcontinent Indep. Sys. Operator, Inc.*, 151 FERC ¶ 61,220 (2015); *Otter Tail Power Co. v. Midcontinent Indep. Sys. Operator, Inc.*, 156 FERC ¶ 61,099 (2016) (*Otter Tail Proceedings*).

⁸⁵ *Otter Tail Power Co. v. Midcontinent Indep. Sys. Operator, Inc.*, 153 FERC ¶ 61,352 at P 9.

⁸⁶ *Midcontinent Indep. Sys. Operator, Inc.*, 151 FERC ¶ 61,220 at P 53.

interconnection with the transmission owner's or provider's desire to earn a return on any network upgrades. The Commission recognizes that interconnection customers may have internal reasons for funding their own network upgrades and that doing so may enhance the interconnection customer's ability to manage the cost of interconnection. The Commission, in addition, does not believe that requiring mutual agreement in order for the transmission provider or owner to initially fund network upgrades in regions that follow the *pro forma* LGIA crediting approach would harm the transmission provider or owner. To the extent an interconnection customer does not withhold agreement to allow the transmission owner or provider to pay the upfront cost of network upgrades, the transmission provider or owner will be able to earn a return. The Commission invites comment on benefits the interconnection customer may realize by forgoing its opportunity to fund network upgrades and thereby allowing the transmission owner or provider to initially fund the network upgrades. The Commission is similarly interested in the comments regarding the benefits an interconnection customer may realize by funding network upgrades itself. Finally, the Commission seeks further comment on whether extending the requirement for mutual agreement for the transmission owner or provider to initially fund the network upgrades would result in circumstances that could harm an interconnection customer.

74. While the concern motivating this proposed change may typically be more salient in regions where transmission credits are not provided for the costs paid by interconnection customers, there may occasionally be reasons that interconnection customers in regions where transmission credits are provided may want to require mutual agreement with the transmission owner or provider before it could self-fund. Accordingly, the Commission proposes that all transmission providers revise article 11.3 in their *pro forma* LGIA to require mutual agreement between the interconnection customer and transmission owner or provider before the transmission owner or provider can choose to self-fund, but seeks comment as to whether the proposal should apply to all regions, as proposed, or be limited to RTOs/ISOs or regions that do not provide transmission credits.

75. The Commission preliminarily disagrees with MISO TOs and ITC that requiring mutual agreement is akin to removing the option to self-fund. In regions where transmission credits are

not provided, transmission owners or providers may still exercise the self-funding option, as long as there is mutual agreement between the interconnection customer and the transmission owner or provider.

76. The Commission agrees that self-funding is an important aspect of the Commission's interconnection pricing policy and that transmission owners or providers opting to self-fund in regions where transmission credits are not provided, pursuant to mutual agreement with the interconnection customer, may recover the return of and on their capital costs. Further, the Commission believes that requiring mutual agreement between the transmission owner or provider and the interconnection customer should not affect the costs recovered by the transmission owner or provider when the self-fund option is utilized.

77. As stated above, the Commission's proposal will clarify article 11.3 of the existing *pro forma* LGIA to require mutual agreement between the transmission owner or provider and interconnection customer before the transmission owner or provider may elect to initially fund network upgrades. The Commission also seeks comment on whether this proposal, if adopted, should apply to all regions as proposed or be limited to RTOs/ISOs or regions that do not provide transmission credits.

4. RTO/ISO Dispute Resolution

78. The Commission proposes that RTOs/ISOs establish interconnection dispute resolution procedures that allow a disputing party to unilaterally seek dispute resolution in RTO/ISO regions. Commenters have not raised dispute resolution procedures outside of RTO/ISO regions as an issue, so the Commission has not proposed changes to non-RTO/ISO dispute resolution procedures in this Proposed Rule. However, as discussed below, the Commission invites comments regarding the adequacy of dispute resolution processes outside of RTO/ISO regions.

a. Current Provisions and Background

79. The current interconnection dispute resolution process is described in article 13.5 of the *pro forma* LGIP. This article states that, if a dispute "arises out of or in connection with" the LGIA, LGIP, or either party's performance thereunder, a disputing party provides written notice of dispute to the other party outlining the dispute's terms.⁹⁴ If the parties have not resolved the dispute within thirty days, one party

may, "upon mutual consent," submit the dispute for external arbitration procedures.⁹⁵ If the parties fail to agree upon a single arbitrator within ten days, they may each select an arbitrator, and both arbitrators will have twenty days to select a third arbitrator. Each arbitrator must be knowledgeable "in electric utility matters, including electric transmission and bulk power issues, and shall not have any current or past substantial business or financial relationships with any party to the arbitration."⁹⁶ Unless otherwise agreed, the arbitrator(s) must render a decision within ninety days, and the parties must pay their own costs and the costs of the arbitrators.⁹⁷

80. Some RTOs/ISOs have adopted interconnection dispute resolution procedures similar to those laid out in the *pro forma* LGIP;⁹⁸ others direct parties to their general dispute resolution procedures.⁹⁹

b. AWEA Petition and Comments

81. Interconnection customers can have disputes with transmission owners about a number of issues, including costs, construction schedules, and the design of interconnection facilities and network upgrades.¹⁰⁰ Multiple renewable interconnection customers state that they consider current RTO/ISO dispute resolution procedures inadequate and argue that the filing of a complaint pursuant to FPA section 206 is not a serviceable substitute for dispute resolution because the complaint process is too expensive and time-consuming, given the time sensitivity of the interconnection process.¹⁰¹ Nonetheless, commenters

⁹⁵ *Pro forma* LGIP Sec. 13.5.1.

⁹⁶ *Pro forma* LGIP Sec. 13.5.2.

⁹⁷ *Pro forma* LGIP Sec. 13.5.3, 13.5.4. Under section 13.5.4, each party must pay (1) the cost of the arbitrator chosen by the party to sit on the three member panel and one half of the cost of the third arbitrator chosen; or (2) one half the cost of the single arbitrator jointly chosen by the parties.

⁹⁸ ISO-NE, Transmission, Markets and Services Tariff, Section II, Schedule 22 (9.0.0), Section 13.5; NYISO, NYISO Tariffs, OATT Section 30.13 (2.0.0) (Miscellaneous); CAISO, eTariff, FERC Electric Tariff, OATT, app. DD, Section 15 (1.0.0) (Miscellaneous); SPP, OATT, Attachment V, Section 1.5 (2.0.0).

⁹⁹ MISO, FERC Electric Tariff, Attachment X (49.0.0), art. 11.5 (Disputes); *PJM Interconnection, L.L.C.*, 123 FERC ¶ 61,163, at n. 41 (2008) ("dispute resolution procedures in section 12 [PJM, Intra-PJM Tariffs, OATT, Section 12 (0.0.0)] are applicable to disputes arising regarding the interconnection process"). PJM's general dispute resolution procedures are similar to those laid out in section 13.5 of the *pro forma* LGIP.

¹⁰¹ Invenery 2016 Comments at 2, 3, 26; EDF 2016 Comments at 40–41; EDP 2016 Comments at 20; NextEra 2016 Comments at 9–10.

⁹⁴ *Pro forma* LGIP Sec. 13.5.1.

disagree about how to improve RTO/ISO dispute resolution procedures. EDP contends that RTOs/ISOs are often in the best position to mediate such discussions and disputes.¹⁰² NextEra asserts, however, that on occasion, RTOs refuse to be a party to dispute resolution and tell the parties to resolve the issues themselves.¹⁰³ Furthermore, EDP argues that there is some question about RTO/ISO independence because RTOs/ISOs “often lean on” the transmission owner for assistance in modeling or design information.¹⁰⁴ Similarly, EDF argues that the interconnection customer “almost always loses” because issues are judged by the RTO/ISO and fellow transmission owners and transmission providers.¹⁰⁵

82. Because of its unease with RTOs/ISOs, NextEra states that the Commission is the “ideal adjudicator” of such conflicts and asks the Commission to devise an expeditious interconnection dispute adjudication process.¹⁰⁶ NextEra states that this process could involve more formal predictable procedures through the Commission’s hotline or some other method to quickly respond to the facts presented.¹⁰⁷ Similarly, Invenery and AWEA propose that each RTO/ISO establish an in-house ombudsman that can reach out to designated Commission staff to intervene as needed.¹⁰⁸ EDP also voices the need for an independent arbiter to assist in resolving these disputes without relying on the RTO/ISO.¹⁰⁹

83. Not all commenters argue that the current available procedures are defective or that dispute resolution reform is necessary. For instance, MISO argues that parties rarely take advantage of its dispute resolution process for interconnection issues.¹¹⁰ Similarly, CAISO and ISO-NE state that issues that require dispute resolution seldom arise.¹¹¹ These commenters and others consider the available dispute resolution procedures adequate.¹¹²

c. Proposal

84. The Commission preliminarily finds that RTO/ISO generator interconnection dispute resolution procedures may not be just and reasonable or may be unduly discriminatory or preferential. The current processes allow a disputing party to pursue a streamlined dispute resolution process only if the other party to the dispute agrees to this process. As a result, disputing parties may have little recourse. Multiple commenters have suggested that the Commission, rather than the RTO/ISO, is in the best position to resolve interconnection disputes. It is not clear whether such commenters are suggesting that the Commission adopt the dispute resolution provisions of the *pro forma* SGIP, which allow disputing parties to contact the Commission’s Dispute Resolution Service to assist in either resolving a dispute or in selecting an appropriate dispute resolution venue.¹¹³ Regardless, because RTOs/ISOs are more familiar with the details regarding their respective systems and interconnection processes, the Commission proposes to require that RTOs/ISOs serve as the neutral decision-makers to interconnection disputes. While several commenters have expressed concern about the RTOs’/ISOs’ neutrality, independence of market participants was, and is, a foundational requirement of the RTOs/ISOs.¹¹⁴ The Commission proposes that RTOs/ISOs provide staff member(s) or utilize subcontractor(s) to preside over such dispute resolution (e.g., as mediators or arbitrators) and that such staff member(s) or subcontractor(s) be independent of the influence of transmission owners and interconnection customers and can thus serve as neutral decision-makers. To establish this neutrality, the Commission proposes that the selected staff member(s) or subcontractor(s) shall not have any current or past substantial business or financial relationships with any party to the dispute.¹¹⁵ This standard is identical to the one provided in section 13.5.2 of the *pro forma* LGIP. Additionally, the RTO/ISO-devised procedures must account for the time sensitivity of the generator interconnection process.

85. The Commission also proposes that RTOs/ISOs eliminate the

requirement that a dispute resolution process only be available “upon the mutual agreement of the Parties.”¹¹⁶ While no commenter has suggested that the arbitration process embodied in section 13.5 of the *pro forma* LGIP lacks neutrality, this process is effectively unavailable to the interconnection customer if a transmission provider or a transmission owner opposes this arbitration process. The Commission also proposes that each Commission-approved RTO/ISO amend its generator interconnection procedures to provide dispute resolution procedures (e.g., mediation or arbitration) that are tailored to address interconnection process disputes.

86. The comments received regarding dispute resolution procedures only express concerns about dispute resolution within RTOs/ISOs. Accordingly, the Commission has preliminarily concluded that interconnection customers and non-RTO/ISO transmission providers are satisfied with the dispute resolution procedures outside of RTOs/ISOs. In any case, the Commission does not propose to change section 13.5 (Disputes) of the *pro forma* LGIP at this time. Additionally, at this time, the Commission does not propose to adopt procedures in the *pro forma* LGIP similar to those adopted in section 4.2 (Disputes) of the *pro forma* SGIP, which directs disputing parties to address their issues through the Commission’s Dispute Resolution Service. The Commission seeks comment, however, on the need for reform to generator interconnection dispute procedures outside of the RTOs/ISOs and the appropriateness of adopting procedures similar to those outlined in the *pro forma* SGIP.

87. To effectuate this proposal, the Commission proposes to revise section 35.28(g)(9) of the Code of Federal Regulations to require every Commission-approved independent system operator or regional transmission organization to maintain tariff provisions governing generator interconnection dispute resolution procedures to allow a disputing party to unilaterally initiate dispute resolution procedures under the respective tariff. Such provisions must provide for independent system operator or regional transmission organization staff member(s) or utilize subcontractor(s) to serve as the neutral decision-maker(s) or presiding staff member(s) or subcontractor(s) to the dispute resolution procedures. Such staff participating in dispute resolution

procedures shall not have any current or past substantial business or financial relationships with any party. Additionally, such dispute resolution procedures must account for the time sensitivity of the generator interconnection process.

5. Capping Costs for Network Upgrades

a. Existing Provisions and Background

88. The *pro forma* LGIP requires that transmission providers provide a good faith estimate of the cost of interconnection facilities and network upgrades needed to accommodate an interconnection customer's requested level of interconnection service.¹¹⁷ The transmission provider includes this cost estimate with the facilities study results, typically with a stated accuracy margin within 10 to 20 percent of the estimate.¹¹⁸ After completion of the construction of the transmission provider's interconnection facilities and network upgrades needed to interconnect a generating facility, the transmission provider conducts a true-up to assess the final cost of construction of the interconnection customer. The transmission provider provides a final invoice to the interconnection customer that details variations between actual and estimated costs. Overpayment by the interconnection customer results in a refund to the interconnection customer, or a surcharge in case of an underpayment.¹¹⁹

89. In Order No. 2003–A, the Commission also clarified that the cost of network upgrades originally assigned to a higher-queued interconnection customer that has withdrawn its interconnection request could fall to a lower-queued interconnection customer, if the network upgrades are still necessary to support the interconnection of the lower-queued interconnection customer's generating facility. The Commission acknowledged that this business risk creates uncertainty for the interconnection customer. However, the Commission found that such costs shifts were just and reasonable, as the lower-queued interconnection customer would need the network upgrades to support the interconnection of its generating facility.¹²⁰

90. The Commission has approved an independent entity variation from this Commission policy in the CAISO

region.¹²¹ CAISO caps cost responsibility for reliability and local delivery network upgrades¹²² at the lower of its Phase I and Phase II study report amounts. Transmission owners are responsible for additional reliability network upgrade and local delivery network upgrade costs beyond the cap, unless they are due to interconnection customer errors or changes.¹²³ Transmission owners, in turn, reflect these costs in their transmission service rates, which ultimately shifts these costs onto load.¹²⁴

b. AWEA Petition and Comments

91. In its Petition, AWEA claims that interconnection customers frequently pay costs that exceed the higher bound of a transmission provider's cost estimates and that significant excess costs can disrupt an interconnection customer's business model. AWEA asserts that it is just and reasonable to protect interconnection customers from excessive cost overruns. AWEA contends that the transmission provider should be obligated to pay the portion of any final cost beyond the estimated cost accuracy margin for interconnection studies, excluding demonstrated, extraordinary costs beyond its control. AWEA asserts that it is unjust and unreasonable to shift the

¹²¹ *California Indep. Sys. Operator Corp.*, 124 FERC ¶ 61,292.

¹²² The CAISO Tariff defines the term "Reliability Network Upgrade" as:

The transmission facilities at or beyond the Point of Interconnection identified in the Interconnection Studies as necessary to interconnect one or more Generating Facility(ies) safely and reliably to the CAISO Controlled Grid, which would not have been necessary but for the interconnection of one or more Generating Facility(ies), including Network Upgrades necessary to remedy short circuit or stability problems, or thermal overloads. Reliability Network Upgrades shall only be deemed necessary for system operating limits, occurring under any system condition, which system operating limits cannot be adequately mitigated through Congestion Management, Operating Procedures, or Special Protection Systems based on the characteristics of the Generating Facilities included in the Interconnection Studies, limitations on market models, systems, or information, or other factors specifically identified in the Interconnection Studies. Reliability Network Upgrades also include, consistent with [Western Electricity Coordinating Council] practice, the facilities necessary to mitigate any adverse impact the Generating Facility's interconnection may have on a path's [Western Electricity Coordinating Council] rating." CAISO Tariff, Appendix A, Definition—Reliability Network Upgrade.

The CAISO Tariff defines "Local Deliverability Network Upgrade" as:

"A transmission upgrade or addition identified by the CAISO in the [Generator Interconnection and Deliverability Allocation Procedures] interconnection study process to relieve a Local Deliverability Constraint." CAISO Tariff, Appendix A, Definition—Local Delivery Network Upgrade.

¹²³ CAISO Tariff, Appendix DD, Sec. 10.

¹²⁴ 2016 Technical Conference Tr. 161: 7–23.

consequences of a transmission provider's inaccurate cost estimates onto the interconnection customer. It argues that the transmission provider should assume such risk because it has control over the interconnection process. AWEA points to CAISO's phased study approach as an example of a cost cap mechanism that would provide more cost certainty.¹²⁵ Several commenters support AWEA's request to cap costs at the higher bound of a stated accuracy margin, absent demonstrated, extraordinary circumstances beyond a transmission provider's control.¹²⁶ Six Cities supports establishing maximum cost responsibility for network upgrades but opposes a cap on interconnection facility costs, contending that interconnection customers should bear all cost responsibility for interconnection facilities.¹²⁷ CAISO states that its phased study approach, coupled with a cost cap, has helped reduce the need for restudies in its region and provided more certainty to interconnection customers earlier in the study process.¹²⁸

92. Other commenters oppose AWEA's proposal to impose caps on interconnection cost estimates.¹²⁹ These commenters argue that this proposal would achieve little because the most significant contributors to cost overruns, such as the withdrawal of higher-queued interconnection requests and inaccurate cost estimates provided by transmission owners, are outside the transmission provider's control.¹³⁰ Additionally, commenters express concerns that implementing a cost cap will result in inappropriate cost shifts, particularly to load, that violate traditional cost causation principles.¹³¹ Several commenters also express concern that AWEA's proposal would be problematic in regions in which the Commission has approved cost allocation variations from the *pro forma* GIA. MISO asserts that, because CAISO is a single-state RTO, any cost overruns are ultimately shifted to load, which

¹²⁰ Order No. 2003–A, FERC Stats. & Regs. ¶ 31,160 at P 320.

will eventually benefit from any generation resulting from the interconnection. MISO argues, however, that capping costs, whether in aggregate or per unit, and socializing the cost of overruns is not necessarily embraced by regulators in multistate RTOs/ISOs that require generator costs to be more specifically borne by the beneficiaries of the power from the resource.¹³² ISO-NE concurs, contending that implementing a cost cap would shift costs to ratepayers that the interconnection customer should bear. That shift, argues ISO-NE, is not an option under its “but for” cost allocation design.¹³³

c. Request for Comments

93. Several of the proposed reforms in this Proposed Rule seek to provide more certainty to interconnection customers during the interconnection study process, such as the proposal to schedule the frequency of restudies. As noted above, increasing certainty for interconnection customers—particularly cost certainty—may decrease the number of late-stage interconnection request withdrawals from the interconnection queue, which could meaningfully ameliorate the cycle of repeated, cascading restudies. Capping costs at a certain variance above estimates could provide interconnection customers with business certainty useful to more efficiently develop an interconnection request. A cost cap could also discipline the study process to produce more accurate cost estimates. The Commission acknowledges, however, that a cost cap could incentivize transmission providers to overestimate network upgrade costs in order to minimize potential cost shifts.

94. The Commission also recognizes that the prospect of implementing a cost cap raises difficult issues. Several RTO/ISO regions have reached consensus on cost allocation policies under the independent entity variation that differ from the pricing policy laid out in Order No. 2003. These cost allocation policies, in turn, have become embedded in these RTO/ISO regions and have supported other cost allocation strategies, which are not easily disturbed. Implementing a cost cap would diverge from the Commission’s “but for” cost allocation policy with respect to network upgrades because it would reallocate costs that would not have been necessary but for a particular interconnection request. The Commission appreciates insights into balancing the benefits of increasing cost certainty to interconnection customers against the potential

drawbacks of shifting costs to other parties, particularly load.

95. The Commission seeks comment on whether it should revise the *pro forma* LGIP and LGIA to provide for a cost cap that would limit an interconnection customer’s network upgrade costs at the higher bound of a transmission provider’s cost estimate plus a stated accuracy margin following a certain stage in the interconnection study process. Such a cap could permit the interconnection customer to assume costs that exceed the cap under limited circumstances, such as where there is demonstrable proof that the cause of a cost increase is beyond the transmission provider’s control. The cost cap could also specify which party or parties would assume network upgrade costs in excess of the cap. The Commission seeks comment on how to minimize potential cost shifts to other parties if such a cost cap is imposed. The Commission also seeks comments on alternative proposals, or additional steps that the Commission could take, to provide more cost certainty to interconnection customers during the interconnection study process.

B. Promoting More Informed Interconnection

96. The five reforms in this section would improve transparency regarding the interconnection process and provide improved information to the benefit of all participants in the interconnection process. These benefits have the potential to lead to efficiencies in the development process and a reduction in participation disagreements or uncertainty. Additionally, these reforms may address aspects of the interconnection process that may not be just and reasonable or that may be unduly discriminatory or preferential. In addition to the proposed reforms, the Commission seeks comment on proposals or additional steps that the Commission could take to improve the resolution of issues that arise when affected systems are impacted by a proposed interconnection.

1. Identification and Definition of Contingent Facilities

97. The Commission proposes to revise the *pro forma* LGIP to require transmission providers to detail the method they use to determine contingent facilities. The Commission proposes to define contingent facilities as those unbuilt interconnection facilities and network upgrades upon which the interconnection request’s costs, timing, and study findings are dependent, and if not built, could cause a need for restudies of the

interconnection request or a reassessment of network upgrades and/or costs and timing.

a. Existing Provisions

98. The Commission currently requires transmission providers to identify for interconnection customers contingencies potentially affecting interconnection studies¹³⁴ and list applicable contingent facilities in interconnection agreements.¹³⁵

b. AWEA Petition and Comments

99. In its Petition, AWEA asserts that interconnection customers rely on the detailed list of contingent facilities that are listed in studies and their interconnection agreements in order to assess future risk.¹³⁶ AWEA states that transmission providers are not consistently providing full and accurate lists of contingent facilities within interconnection studies and interconnection agreements. Moreover, AWEA asserts that transmission providers and transmission owners may add more contingent facilities after the interconnection agreement has been signed or filed with the Commission.¹³⁷ AWEA also states that some, but not all, LGIPs or related business practices manuals acknowledge the need to study contingent facilities. AWEA asserts that there is often neither a clear definition of contingent facilities in LGIPs or in business practice manuals, nor an affirmative obligation in the LGIPs to apprise the interconnection customer of such contingencies in the facilities study and interconnection agreement. AWEA further asserts that in some cases, the appendices to an interconnection agreement may contain a long list of contingencies, including higher-queued generators throughout the RTO and numerous transmission upgrades; however, no showing has been made regarding whether these interconnection requests and facilities will impact a particular interconnection request.¹³⁸ AWEA supports MISO’s practice of listing, in the interconnection agreement, contingent facilities that have a five percent or greater distribution factor impact on an interconnection request. AWEA notes that this practice has resulted in a

¹³⁴ *Pro forma* LGIP Section 2.3.

¹³⁵ Order No. 2003, FERC Stats. & Regs. ¶ 31,146 at P 409 (“[i]f it is apparent to the Parties . . . that contingencies (such as other Interconnection Customers terminating their LGIAs) might affect the financial arrangements, the Parties should include such contingencies in their LGIA and address the effect of such contingencies on their financial obligations”).

¹³⁶ Petition at 25–26.

¹³⁷ Petition at 26.

¹³⁸ Petition at 27.

¹³² MISO 2016 Comments at 2–3.

¹³³ ISO-NE 2016 Comments at 24.

reduction in the number of contingent facilities listed in interconnection agreements by focusing on those that are electrically-impacted by the proposed interconnection request.¹³⁹ In particular, AWEA states that MISO's five percent threshold has resulted in an 85 percent reduction in contingent facilities listed in interconnection agreements.¹⁴⁰

100. Several commenters assert that there is little clarity on how a transmission provider identifies contingent facilities and request that the Commission require transmission providers to specify the method they use to identify contingent facilities.¹⁴¹ Invenergy states that the number of contingent facilities can change dramatically from the system impact study phase to the interconnection agreement phase, which can result in disputes between stakeholders regarding the study assumptions that resulted in addition or removal of certain contingent facilities from the list.¹⁴² NextEra encourages the Commission to identify additional best practices that can be implemented in all regions.¹⁴³

101. Some commenters note the potential difficulties in creating a generic methodology for determining the list of contingent facilities or note that a generic methodology may not be applicable to a given region. For example, EEI asserts that providing additional information, in line with MISO's five percent threshold, may increase the time and cost for preparing interconnection studies, cautioning that the five percent threshold might not work outside of MISO.¹⁴⁴ Indicated NYTOs note that developing a contingent facilities method is not applicable to NYISO because of NYISO's Class Year Study process.¹⁴⁵ MISO states that it is currently reviewing "how to identify the network upgrades [that] a generation interconnection would be contingent upon."¹⁴⁶ ISO-NE states that contingent facilities are identified in the system impact study and are memorialized in the interconnection agreement, and the interconnection customer learns about these contingent facilities through the study of its interconnection request.¹⁴⁷

c. Proposal

102. As noted above, the Commission requires transmission providers to list applicable contingent facilities in interconnection agreements.¹⁴⁸ However, the existing requirements do not specify how transmission providers should determine the list of contingent facilities, and this omission could result in uncertainty for interconnection customers. The Commission preliminarily finds that some practices with regard to these contingent facilities may not be just and reasonable or may be unduly discriminatory or preferential. Therefore, the method for determining contingent facilities must be described in *pro forma* LGIPs, rather than the business practices manuals.

103. The Commission proposes to require transmission providers to detail in the *pro forma* LGIP the method that transmission providers will use to determine the list of contingent facilities in evaluating an interconnection request. The Commission proposes that the transmission provider's method be transparent and sufficiently detailed to determine why a specific contingent facility was included on the list and how it impacts the interconnection request. The Commission also proposes for transmission providers to provide the list of contingent facilities to interconnection customers at the conclusion of the system impact study.

104. The transmission provider should also provide, upon request of the interconnection customer, the estimated network upgrade costs and estimated in-service completion time associated with each identified contingent facility when this information is not commercially sensitive. The Commission believes that such information will inform the interconnection customer about the potential impacts of a contingent facility on an interconnection request.

105. The Commission is considering whether the method for determining contingent facilities used by transmission providers should be harmonized among regions as much as possible. To this end, the Commission seeks comment on how transmission providers currently identify contingent facilities and what improvements to the existing approach(es) would be recommended by interconnection customers or others to determine whether there are identifiable best practices. The Commission also seeks comment on how the process for identifying contingent facilities could be standardized. For example, the Commission seeks comment on the

usefulness of requiring transmission providers to include a distribution factor analysis in their methodologies for identifying contingent facilities, and if so, whether a specific distribution factor should be implemented in the *pro forma* LGIP (e.g., a 5 percent distribution factor as referenced by AWEA). The Commission also seeks comment on whether there are alternative methodologies besides a distribution factor analysis that could be used to identify contingent facilities, and that may be better suited for standardization across transmission providers and included in the *pro forma* LGIP.

106. The Commission proposes to add the following new definition to Section 1 of the *pro forma* LGIP:

Contingent Facilities shall mean those unbuilt interconnection facilities and network upgrades upon which the interconnection request's costs, timing, and study findings are dependent, and if not built, could cause a need for restudies of the interconnection request or a reassessment of the network upgrades and/or costs and timing.

107. The Commission proposes to add a new section 3.8 to the *pro forma* LGIP:

3.8 Identification of Contingent Facilities
Transmission Provider shall post in this section a method for identifying the Contingent Facilities to be provided to Interconnection Customer at the conclusion of the System Impact Study and included in Interconnection Customer's GIA. The method shall be sufficiently transparent to determine why a specific Contingent Facility was identified and how it relates to the interconnection request. Transmission Provider shall also provide, upon request of the Interconnection Customer, the estimated interconnection facility and/or network upgrade costs and estimated in-service completion time of each identified Contingent Facility when this information is not commercially sensitive.

108. The Commission seeks comment on the proposed reforms to the *pro forma* LGIP for transmission providers to include a method to identify contingent facilities and to provide the list of contingent facilities to interconnection customers at the conclusion of the system impact study. The Commission also seeks comment on whether estimates of the costs and timing of higher-queued contingent facilities are helpful to the interconnection customer and can be provided to the interconnection customer without disclosing commercially sensitive information.

2. Transparency Regarding Study Models and Assumptions

109. As discussed in the previous section, increasing the transparency of

¹⁴⁸ Order No. 2003, FERC Stats. & Regs. ¶ 31,146 at P 409.

the network models and underlying assumptions used for interconnection studies, including shift factors and dispatch information, is a key improvement that could be made to the interconnection process. To increase transparency with regard to the interconnection study processes for interconnection customers and to ensure consistency in the analysis of interconnection requests, the Commission proposes a general requirement that transmission providers list all the network models and underlying assumptions used for interconnection studies in their *pro forma* LGIPs and on their OASIS sites. The Commission believes this information will benefit both interconnection customers in the queue as well as those developing interconnection requests by potentially helping them avoid entering the queue with non-viable interconnection requests. The Commission also proposes that transmission providers include non-confidential supporting data on OASIS.

a. Existing Provisions and Background

110. Section 2.3 of the *pro forma* LGIP requires the transmission provider to provide base power flow, short circuit, and stability databases, including all underlying assumptions, and a contingency list upon request, subject to confidentiality provisions in section 13.1 of the *pro forma* LGIP. A transmission provider may require that an interconnection customer sign a confidentiality agreement before the release of commercially sensitive information or Critical Energy Infrastructure Information (CEII) in the base case data.¹⁴⁹

111. In Attachment A to the individual interconnection study agreements in the *pro forma* LGIP, the interconnection customer and the transmission provider list the assumptions under which the individual studies are to be performed. However, the general assumptions used to form the network models are not universally listed or posted for interconnection customers to examine prior to entering the queue.

112. While some regions allow their network models to be accessed prior to an interconnection customer submitting an interconnection request in order to facilitate development decisions, such access is not consistent across regions. At times, information that would be relevant for prospective interconnection customers to plan interconnection requests is contained within business

practice manuals and may not be consolidated in one location or easily found.

b. AWEA Petition and Comments

113. In its Petition, AWEA claims that the study processes and assumptions for forming network models used in interconnection studies are not always transparent. AWEA claims that some transmission providers inconsistently apply certain assumptions, such as shift factors, which can lead to vastly different study results for similar interconnection requests participating in the same market.¹⁵⁰ In its post-technical conference comments about the use of non-disclosure agreements to facilitate the study process, AWEA contends that, once a non-disclosure agreement is provided by the interconnection customer, the transmission provider or transmission owner should not deny or delay providing models or other requested information.¹⁵¹

114. Several commenters, such as Wind on the Wires, agree with AWEA that further transparency is necessary with respect to interconnection studies and study assumptions.¹⁵² Additionally, the Wind Coalition asserts that transmission providers should make clear to all stakeholders how they model interconnections.¹⁵³ EDF states that study assumptions have a direct effect on generator interconnection study results that determine available capacity and whether network upgrades are necessary to accommodate the level of requested interconnection service. According to EDF, a key study assumption is generation dispatch, *i.e.*, the assumed levels of dispatch during peak and off-peak periods assigned to an interconnection request. EDF claims that it has seen significant variation in study assumptions from RTO to RTO and also within an RTO.¹⁵⁴ EDF also states that interconnection customers need access to models before deciding to enter the interconnection queue and that these models need to take into account up-to-date power flow data.¹⁵⁵

115. Some commenters do not think it is appropriate for the Commission to require transmission providers to be more transparent about interconnection study assumptions. ISO-NE states that it already provides extensive information about assumptions underlying its

interconnection studies.¹⁵⁶ TVA contends that transmission providers may be able to provide more detailed information regarding study process practices, inputs, and results, but certain information cannot be made public and can be provided to customers only under a non-disclosure agreement.¹⁵⁷

116. While some transmission providers might already provide sufficient information regarding their study assumptions, some commenters do not consider all transmission providers to be sufficiently transparent in this regard.¹⁵⁸

c. Proposal

117. The Commission believes that stakeholders benefit from increased transparency. The Commission preliminarily finds that clear network model assumptions, made available early in the interconnection process, will provide interconnection customers with data that will allow them to better plan interconnection requests and lead to a more efficient interconnection process. Additionally, the Commission preliminarily finds that interconnection customers' ability to obtain study assumptions will reduce the need for protracted study discussions.

118. The Commission proposes to require transmission providers to make more transparent the assumptions underlying the network models used in conducting interconnection studies. The Commission proposes that transmission providers detail the network model assumptions used during the feasibility study in Attachment A to Appendix 2 of the *pro forma* LGIP. The Commission also proposes that transmission providers detail the network model assumptions used during the system impact study in Attachment A to Appendix 3 of the *pro forma* LGIP.

119. Additionally, because interconnection customers would benefit from an understanding of network models and their underlying assumptions before submitting interconnection requests, the Commission proposes that transmission providers be required to provide network model details on their OASIS sites, including, but not limited to, shift factors, dispatch assumptions, load power factors, and power flows. The Commission proposes modifying section 2.3 of the *pro forma* LGIP:

Base Case Data. Transmission Provider shall provide base power flow, short circuit

¹⁵⁸ See, e.g., EDF 2015 Comments at 21–23; Wind Coalition 2015 Comments at 2.

¹⁴⁹ *Pro forma* LGIP Sec. 2.3.

and stability databases, including all underlying assumptions, and contingency list upon request subject to confidentiality provisions in LGIP Section 13.1.

Additionally, Transmission Provider will maintain network models and underlying assumptions on its OASIS site for access by OASIS users. Transmission Provider is permitted to require that Interconnection Customer and OASIS site users sign a confidentiality agreement before the release of commercially sensitive information or Critical Energy Infrastructure Information in the Base Case data. Such databases and lists, hereinafter referred to as Base Cases, shall include all (1) generation projects and (ii) transmission projects, including merchant transmission projects that are proposed for the Transmission System for which a transmission expansion plan has been submitted and approved by the applicable authority.

120. The Commission seeks comment on whether there are other specific network model details and underlying assumptions that transmission providers should post on their OASIS site and should describe in the *pro forma* LGIP. The Commission seeks comment on whether and how transmission providers should provide notice of any variation from posted network model assumptions for a specific study, including whether the Commission should require notice of any variation to be submitted to the Commission.

121. The Commission appreciates that transmission providers have confidentiality and data security concerns associated with providing certain information and system access, *e.g.*, business sensitive information and cybersecurity-related information. However, the Commission believes there are likely safeguards that can be put in place to satisfactorily address these concerns. The Commission seeks comment on any confidentiality or security concerns regarding the posting of specific model assumptions on OASIS or describing them in the *pro forma* LGIP. Commenters should also specify any data elements that should be subject to confidentiality or non-disclosure agreements.

3. Congestion and Curtailment Information

122. The Commission proposes to require transmission providers to post congestion and curtailment information and seeks comment regarding the location of such posting and the level of disaggregation (or granularity) of the information posted. This information can be particularly important for interconnection customers that are considering Energy Resource

Interconnection Service (ERIS),¹⁵⁹ as the interconnection customer may interconnect to the transmission system and be eligible to deliver its output using the existing firm or non-firm capacity of that transmission system on an “as available” basis.¹⁶⁰ An important consideration for such a customer is the degree to which the customer will be curtailed. Historic congestion and curtailment information can inform the interconnection customer’s assessment. This information could also be relevant for any interconnection customer in determining where on the system to request interconnection. For instance, knowledge that a particular location experiences frequent congestion or curtailment may suggest that any “as-available” service at such a location will likely be frequently unavailable or may require extensive network upgrades to enable interconnection.

a. Existing Provisions and Background

123. Currently, transmission providers are not required to provide consistent and transparent congestion information to interconnection customers. The level of disaggregation and availability of this data varies per transmission provider. Additionally, how and where this data is posted may be inconsistent from transmission provider to transmission provider.

b. AWEA Petition and Comments

124. In its Petition, AWEA asserts that interconnection studies do not provide system information showing the extent of potential curtailments. AWEA argues that interconnection customers cannot make informed business decisions regarding the financial viability of their interconnection requests and cannot accurately assess the extent of energy deliverability unless they have a reasonable expectation of their curtailment risk. AWEA requests that the Commission require transmission providers to provide curtailment risk information on their Web sites and in interconnection studies. AWEA contends that requiring transmission providers to provide curtailment information on a monthly basis, as well

as provide more detailed information on all interfaces, including local interfaces, could improve the deliverability of energy from new generation and improve interconnection customers’ ability to optimally site generating facilities.¹⁶¹

125. Several commenters concur with AWEA that more information on curtailment and congestion provided by transmission providers would benefit interconnection customers. NRG asserts that accurate reporting of congestion and curtailment information, and having access to congestion and operational data, could play a crucial role in siting generating facilities and lowering the amount of required network upgrades needed to interconnect.¹⁶² E.ON contends that transmission providers have the tools to determine the extent to which historical congestion on local transmission elements may impact an interconnection request, but they do not share this information with interconnection customers.¹⁶³

126. Several commenters make specific suggestions on the types of information they would like transmission providers to share.¹⁶⁴ For example, AWEA requests that the Commission require that transmission providers post, on a monthly basis, information on congested transmission facilities and interfaces covering the previous three years, including flow duration curves, the number of hours of curtailments due to congestion on those facilities and interfaces, and the cause(s) of congestion. AWEA also requests that the Commission require transmission providers to include, in interconnection studies, information on existing usage and congestion on the transmission facilities that are electrically significant to the interconnection request based on system conditions known at the time.¹⁶⁵

127. ISO-NE and MISO argue that their processes to share curtailment and congestion data are sufficient.¹⁶⁶ ISO-NE notes that it frequently informs stakeholders of areas where curtailment is likely to occur, and MISO states that it posts real-time information on constraints. MISO argues that

¹⁵⁹ Energy Resource Interconnection Service shall mean an Interconnection Service that allows the Interconnection Customer to connect its Generating Facility to the Transmission Provider’s Transmission System to be eligible to deliver the Generating Facility’s electric output using the existing firm or nonfirm capacity of the Transmission Provider’s Transmission System on an as available basis. Energy Resource Interconnection Service in and of itself does not convey transmission service. See Standard Large Generator Interconnection Procedures, Section 1, Definitions.

¹⁶⁰ Order No. 2003, FERC Stats. & Regs. ¶ 31,146 at PP 752–753.

¹⁶¹ Petition at 40.

¹⁶² NRG 2015 Comments at 4–5.

¹⁶³ E.ON 2016 Comments at 11.

¹⁶⁴ EDF 2016 Comments at 3; E.ON 2016 Comments at 11.

¹⁶⁵ Petition at 43–44.

¹⁶⁶ MISO 2015 Comments at 17–18. MISO states that it does post in real-time information on constraints according to its Business Practice Manuals. ISO-NE states that assumptions underlying planning are already shared according to its Planning Procedures and Planning Guides, and base case data can be requested according to section 2.3 of Schedule 22 of its LGIP.

interconnection customers can hire consultants to investigate curtailment risks, rather than requiring RTOs/ISOs to do this research for them.¹⁶⁷ ISO-NE also argues that system impact studies are discrete testing programs and cannot capture the full range of real-time load and outages. MISO and EEI argue that AWEA's request for more curtailment information would result in administrative burden and further queue delays. Additionally, ISO-NE asserts that AWEA inaccurately implies that ISO-NE's minimum interconnection service grants new generators rights to avoid curtailment risks,¹⁶⁸ arguing that all interconnection customer of new assets face curtailment risk stemming from a competitive market design. Similarly, MISO TOs interpret AWEA's request as a complaint about the lack of certainty associated with ERIS, which by definition is an as-available service.¹⁶⁹ They argue that a customer with ERIS assumes the risk of potentially intermittent service and could choose to pay for Network Resource Interconnection Service (NRIS).¹⁷⁰ Six Cities argues that interconnection customers may misinterpret information on expected congestion as a commitment to future availability of service when interconnecting under ERIS or Energy-Only Deliverability Status procedures.¹⁷¹

c. Proposal

128. The Commission preliminarily finds that improving access to congestion and curtailment data may allow interconnection customers to more accurately assess curtailment risks at different locations on the system. As a result, interconnection customers may be better able to assess the value of requesting ERIS relative to NRIS and may be better able to choose where to site their generating facilities. Such better informed decision-making could result in a more efficient use of the transmission system. In addition, improving access to congestion and curtailment data could mitigate the risk

of interconnection customers exiting at later stages of the interconnection process, thereby reducing the need for restudies, given that interconnection customers would be better informed on grid conditions through more transparent access to congestion and curtailment data. The Commission proposes revising section 37.6 of its regulations to require that transmission providers post congestion information and curtailment information in one location on their OASIS sites so that interconnection customers can more easily assess information that may aid in their decision-making. The Commission also seeks comment on whether there is congestion and curtailment information that is specific to an interconnection request and whether transmission providers should be required to provide this information to interconnection customers through the interconnection study process.

129. Improving access to curtailment and congestion data could reduce uncertainties associated with as-available service, as well as better inform interconnection customers of the risks surrounding as-available transmission service. With regard to whether interconnection customers may misinterpret information and make assumptions about the availability of service, the Commission finds that this is a reasonable risk of doing business, and it is the interconnection customers' responsibility to make certain decisions based on the best data available.

130. In addition, the Commission proposes to require transmission providers to post disaggregated, or more granular (*e.g.*, hourly and locational data), congestion and curtailment information that is more specific than the information currently provided by some transmission providers.¹⁷² The Commission proposes that the transmission provider must post on OASIS information on congestion data representing (i) total hours of curtailment on all interfaces, (ii) total hours of Transmission Provider-ordered generation curtailment and transmission service curtailment due to congestion on that facility or interface, (iii) the cause

of the congestion (*e.g.*, a contingency or an outage), and (iv) total megawatt hours of curtailment due to lack of transmission for that month. The Commission proposes that this data shall be posted on a monthly basis by the 15th day of the following month in one location on the OASIS, and maintained for a minimum of three years. This proposed reform aims to increase transparency regarding congestion and curtailment risks at various points in the transmission system that could help interconnection customers identify interconnection locations in less congested areas. To effectuate this proposal, the Commission proposes to revise section 37.6 of the Code of Federal Regulations to add new section (l) requiring the posting of congestion and curtailment data on a monthly basis by the 15th day of the following month in one location on the OASIS. Transmission providers must maintain these data for at least three years. The information that must be posted is as follows: (i) Total hours of curtailment on all interfaces, (ii) total hours of Transmission Provider-ordered generation curtailment and transmission service curtailment due to congestion on that facility or interface, (iii) the cause of the congestion (*e.g.*, a contingency or an outage), and (iv) total megawatt hours of curtailment due to lack of transmission for that month.

131. The Commission seeks comments on the level of information to be provided, the frequency at which the information should be provided, and how many months/years the provided information should cover. The Commission further seeks comment on the value to interconnection customers of requiring transmission providers to post on OASIS flow duration curves on the major transmission interfaces, based on hourly flow data. The Commission also seeks comment on whether there is detailed, interconnection request-specific congestion and curtailment information that would be more appropriately provided to the interconnection customer through the interconnection study process (*e.g.*, at the scoping meeting).

132. With regard to the sharing of more detailed congestion and curtailment data, several parties raise concerns that this level of detail could expose market sensitive information, such as CEII data, and give interconnection customers a market advantage over other market participants.¹⁷³ The Commission does not find these arguments credible. The

¹⁶⁷ MISO 2015 Comments at 17–18.

¹⁶⁸ ISO-NE 2015 Comments at 46.

¹⁶⁹ MISO TOs 2015 Comments at 16 (citing Order No. 2003, FERC Stats. & Regs. ¶ 31,146 at P 752; *pro forma* LGIA at Art. 1 (definition of ERIS) and Sec. 4.1.1; MISO, FERC Electric Tariff, Attachment X, Sec. 3.2.1.1 (49.0.0)).

¹⁷⁰ If an interconnection customer chooses NRIS, Order No. 2003 requires the transmission provider to conduct interconnection studies similar to how the transmission provider would integrate its own generators to serve load. This approach assumes a portion of the capacity of existing network resources is displaced by the output of the facility seeking to interconnect. Order No. 2003, FERC Stats. & Regs. ¶ 31,146 at PP 754–55.

¹⁷¹ Six Cities 2015 Comments at 4.

¹⁷² AWEA requests that the Commission require that transmission providers post, on a monthly basis, information on congested transmission facilities and interfaces covering the previous three years, including flow duration curves, the number of hours of curtailments due to congestion on those facilities and interfaces, and the cause(s) of congestion. AWEA also requests that the Commission require transmission providers to include, in interconnection studies, information on existing usage and congestion on the transmission facilities that are electrically significant to the interconnection request based on system conditions known at the time. Petition at 43–44.

¹⁷³ EEI 2015 Comments at 38–39; MISO 2015 Comments at 18.

Commission believes that the posting of more detailed congestion and curtailment data will not give undue advantage to interconnection customers over other market participants, as all market participants will have access to this data, and none of the data should include proprietary marginal costs. With regard to concerns that the provision of congestion and curtailment information unnecessarily burdens transmission providers, the Commission notes that the proposal merely requires the posting of congestion and curtailment information in one location on OASIS, which should improve interconnection customers' ability to conduct their own research on which to base their decisions. The Commission seeks comments on the level of detail appropriate for congestion and curtailment information, the frequency of reporting, the length of time reported data should cover, and whether there is interconnection-request-specific congestion and curtailment information that could be provided to interconnection customers as part of the interconnection study process.

133. The Commission seeks comment on further changes to Section 3.3.4 of the LGIP requiring transmission providers and/or transmission owners to provide curtailment and congestion information at the scoping meeting between the transmission provider, transmission owner, and interconnection customer. For example, the Commission could revise Section 3.3.4 of the LGIP to read:

3.3.4 Scoping Meeting. Within ten (10) Business Days after receipt of a valid Interconnection Request, Transmission Provider shall establish a date agreeable to Interconnection Customer for the Scoping Meeting, and such date shall be no later than thirty (30) Calendar Days from receipt of the valid Interconnection Request, unless otherwise mutually agreed upon by the Parties. The purpose of the Scoping Meeting shall be to discuss alternative interconnection options, to exchange information including any transmission data, including any curtailment and/or congestion information, that would reasonably be expected to impact such interconnection options, to analyze such information and to determine the potential feasible Points of Interconnection. Transmission Provider and Interconnection Customer will bring to the meeting such technical data, including, but not limited to: (i) General facility loadings, (ii) general instability issues, (iii) general short circuit issues, (iv) general voltage issues, and (v) general reliability issues as may be reasonably required to accomplish the purpose of the meeting. Transmission Provider and Interconnection Customer will also bring to the meeting personnel and other resources as may be reasonably required to accomplish the purpose of the meeting in the

time allocated for the meeting. On the basis of the meeting, Interconnection Customer shall designate its Point of Interconnection, pursuant to Section 6.1, and one or more available alternative Point(s) of Interconnection. The duration of the meeting shall be sufficient to accomplish its purpose.

4. Definition of Generating Facility in the *Pro Forma* LGIP and LGIA

134. The Commission proposes to revise the definition of a "Generating Facility" in the *pro forma* LGIP/LGIA to include electric storage resources.

a. Existing Provisions and Background

135. While the Commission includes electric storage resources in the definition of a generating facility in the *pro forma* SGIP/SGIA,¹⁷⁴ the Commission has not explicitly set forth a similar definition in the *pro forma* LGIP/LGIA. Although some transmission providers have extended the clarification for electric storage resources to large generating facilities, doing so consistently may ensure that all transmission providers have interconnection procedures and agreements that are applicable to FERC-jurisdictional electric storage resources, regardless of size.

b. Proposal

136. The Commission preliminarily finds that the failure to include electric storage resources in the definition of "Generating Facility" in the *pro forma* LGIA/LGIP may pose a barrier to the development of large electric storage resources, which may not be just and reasonable or may be unduly discriminatory or preferential. In Order No. 792, the Commission revised the definition of "Small Generating Facility" in the *pro forma* SGIP/SGIA to: "[t]he Interconnection Customer's device for the production *and/or storage for later injection* of electricity identified in the Interconnection Request, but shall not include the Interconnection Customer's Interconnection Facilities."¹⁷⁵

137. Given the existing precedent for small generators, the inconsistency between the *pro forma* definitions of small generating facilities and large generating facilities, and the potential that development of electric storage resources larger than 20 MW will increase,¹⁷⁶ the Commission proposes a

¹⁷⁴ *Small Generator Interconnection Agreement and Procedures*, 78 FR 73,240 (Nov. 22, 2013), Order No. 792, 145 FERC ¶ 61,159 at P 227, *clarifying*, Order 792-A, 146 FERC ¶ 61,214 (2014).

¹⁷⁵ Order No. 792, 145 FERC ¶ 61,159 at P 228 (emphasis in original).

¹⁷⁶ Slaughter, Andrew, "Electricity Storage Technologies, impacts, and prospects," Deloitte Center for Energy Solutions, 2015 at 7; <https://www2.deloitte.com/content/dam/Deloitte/us/Documents/energy-resources/us-er-electric-storage-paper.pdf>.

conforming change to the definition of "Generating Facility" in the *pro forma* LGIP/LGIA.

138. In consideration of the foregoing, the Commission proposes to amend the definition of Generating Facility in the *pro forma* LGIP/LGIA to:

Generating Facility shall mean Interconnection Customer's device for the production *and/or storage for later injection* of electricity identified in the Interconnection Request, but shall not include the interconnection customer's Interconnection Facilities.

139. This revised definition is also reflected in the proposed revisions to section 1 of the *pro forma* LGIP and the proposed revisions to article 1 of the *pro forma* LGIA.

5. Interconnection Study Deadlines

140. The Commission proposes that transmission providers report on their completion of interconnection studies within established timeframes, in order to improve transparency and to provide greater insight into the causes of processing delays.

a. Existing Provisions and Background

141. Currently in the *pro forma* LGIP, transmission providers must use "Reasonable Efforts"¹⁷⁷ to complete feasibility studies in 45 days, system impact studies in 90 days, and the facility studies within 90 or 180 days.¹⁷⁸ While independent entities may propose variations to these study completion timeframes, they must use reasonable efforts to complete interconnection studies within such timeframes. The Commission currently requires transmission providers to post information about transmission service request processing time on the transmission providers OASIS¹⁷⁹ and assesses penalties to transmission providers that complete too many transmission service request studies outside of the study completion timeframes. Transmission providers are able to explain extenuating circumstances in a filing with the Commission to avoid such penalties.

¹⁷⁷ As noted above, Reasonable Efforts shall mean, with respect to an action required to be attempted or taken by a Party under the Standard Large Generator Interconnection Agreement, efforts that are timely and consistent with Good Utility Practice and are otherwise substantially equivalent to those a Party would use to protect its own interests. *Pro forma* LGIP Sec. 1 (Definitions).

¹⁷⁸ *Pro forma* LGIP at Sec. 6.3, 7.4, and 8.3.

¹⁷⁹ See 18 CFR 37.6(h) (2016).

b. AWEA Petition and Comments

142. In its Petition, AWEA voices concern about the nature of study delays and requests elimination of the reasonable effort standard and instituting firm deadlines to give some certainty to the process.¹⁸⁰ Some commenters disagree about AWEA's proposal to remove the reasonable efforts standard from established timeframes to require that transmission providers meet firm deadlines. Several commenters contend that AWEA does not account for the various factors that impact the interconnection study and restudy processes.¹⁸¹ NYISO states that the performance of interconnection studies requires the active participation and input of multiple parties, including the provision of extensive information and technical data by interconnection customers. NYISO and Indicated NYTOs assert that flexibility in performing interconnection studies is necessary.¹⁸² Similarly, TVA contends that the lack of uniformity in generator interconnection requests does not allow a transmission provider to follow an inflexible, standardized study schedule. TVA argues that differences in size and location of proposed generators result in significant variability in the studies' complexity and the required analysis time, asserting that the process is not entirely within a transmission provider's control.¹⁸³ Additionally, some commenters argue that restudy delays are often due to the actions or inactions of the interconnection customer.¹⁸⁴

143. TVA asserts that if a transmission provider must always meet a fixed study schedule, it would have to either maintain a larger analytical staff that would frequently be idle when there are few interconnection requests or would have to increasingly rely on contractors to conduct studies.¹⁸⁵ KCP&L states that interconnection customers would ultimately pay the additional costs for increased staffing and resources needed to meet firm study deadlines.¹⁸⁶ KCP&L argues that there are costs to faster processing of interconnection requests, costs which are most likely, and

appropriately, recovered in higher study fees—fees that AWEA criticizes and seeks to cap.¹⁸⁷ TVA contends that allowing greater flexibility in study completion time allows the transmission provider to balance the legitimate timing needs of generation developers with the costs to load.¹⁸⁸

144. Several parties with experience as interconnection customers with renewable generating facilities support efforts to provide interconnection study requests and restudy results by the dates listed in the generator interconnection procedures.¹⁸⁹ Sustainable FERC contends that the ability to accurately and timely complete interconnection studies pursuant to interconnections requests is within transmission providers' control but that these delays chiefly affect interconnection customers even though interconnection customers have no control over the process.¹⁹⁰ NRG asserts that the uncertainty created by sliding study dates causes significant risk to interconnection customers, which is, in turn, passed through to all purchasers of renewable power in the form of higher risk premiums.¹⁹¹

145. Similarly, RENEW argues that the current interconnection process, which it believes contains embedded unjust, unreasonable, and unduly discriminatory delays, imposes barriers to the development of new generation sources.¹⁹² In addition, Interwest Energy Alliance contends that for renewable energy generators in the West, some interconnection processes have imposed delays and unduly discriminatory costs that resulted in "increased potential for missed deadlines and disqualification when submitting bids in response to requests for proposals in competitive procurements."¹⁹³

c. Proposal

146. The Commission has expressed concerns about interconnection queue delays in other proceedings.¹⁹⁴ In the 2008 Order, the Commission required all RTOs/ISOs to file an interconnection queue status report at the Commission and, as a condition of approving requested queue reforms, required RTOs/ISOs to file periodic queue status

updates at the Commission for a period of time.¹⁹⁵

147. Although the Commission has approved queue reforms to attempt to streamline the interconnection process, there are still delays associated with the interconnection process. Some commenters have asked the Commission to require transmission providers to complete interconnection connection studies within the *pro forma* LGIP time frames rather than simply require the transmission providers to make reasonable efforts to do so. The Commission believes that transmission providers should continue to have flexibility in completing interconnection studies, but is nonetheless concerned that delays in the interconnection process continue. At times, it is not clear to interconnection customers why and where queue delays are occurring, and the underlying causes of queue delays are not always agreed upon by interconnection customers and transmission providers. Providing greater transparency by identifying the geographical locations where these delays are occurring and the causes of these delays would benefit stakeholders.

148. The Commission proposes to require that transmission providers post summary statistics related to processing interconnection studies, pursuant to interconnection service requests, on their OASIS sites on a quarterly basis. This proposal is analogous to the requirement we established in Order No. 890 that transmission providers post information on processing of transmission service request studies within the best efforts timeframes.¹⁹⁶ The Commission proposes to require that a transmission provider that has more than 25 percent of any study type exceeding study deadlines for interconnection requests for two consecutive quarters must file informational reports at the Commission for the next four calendar quarters. For example, if a transmission provider had 35 percent of its interconnection feasibility studies exceeding study deadlines one calendar quarter and 40 percent of them exceeding study deadlines the next calendar quarter, the transmission provider would have to

Operator Corp.*, 124 FERC ¶ 61,292 at PP 199–200 (directing CAISO to file quarterly reports on the interconnection including the number of interconnection requests received, studies conducted and the reasons for missing study deadlines).

¹⁹⁶ See 18 CFR 37.6(h) (2016).

file reports to the Commission for the following four calendar quarters describing the reason for each study (or group of clustered studies) delay and post on OASIS the total number of employee or consultant hours devoted to processing studies that quarter. *The transmission provider must continue to file these reports for four consecutive quarters. If during this period, the transmission provider exceeds more than 25 percent of study deadlines for any study type for two consecutive quarters, the reporting requirement would be retriggered for another four consecutive quarters from the date of the last consecutive quarter to exceed the 25 percent threshold.* For example, if a transmission provider had more than 25 percent of its interconnection feasibility studies exceeding study deadlines every calendar quarter in Year 1, it must begin reporting to the Commission in the third quarter of Year 1 and must continue reporting until at least the fourth quarter of Year 2.

149. To this end, the Commission proposes to modify section 3.4 of the *pro forma* LGIP¹⁹⁷ as follows (*proposing to delete italicized text*):

3.4–3.5.1 OASIS Posting.

3.5.2 *The Transmission Provider will maintain on its OASIS summary statistics related to processing Interconnection Studies pursuant to Interconnection Requests, updated quarterly. For each calendar quarter, Transmission Providers must calculate and post the information detailed in sections 3.5.2.1 through 3.5.2.4.*

3.5.2.1 *Interconnection Feasibility Studies processing time. (A) Number of Interconnection Requests that had Interconnection Feasibility Studies completed within the Transmission Provider's coordinated region during the reporting quarter, (B) Number of Interconnection Requests that had Interconnection Feasibility Studies completed within the Transmission Provider's coordinated region during the reporting quarter that were completed more than [timeline as listed in the Transmission Provider's LGIP] after receipt by the Transmission Provider of the Interconnection Customer's executed Interconnection Feasibility Study Agreement, (C) At the end of the reporting quarter, the number of active valid Interconnection Requests with ongoing incomplete Interconnection Feasibility Studies where such Interconnection Requests had executed Interconnection Feasibility Study Agreements received by the Transmission Provider more than [timeline as listed in the Transmission Provider's LGIP]*

before the reporting quarter end, (D) Mean time (in days), Interconnection Feasibility Studies completed within the Transmission Provider's coordinated region during the reporting quarter, from the date when the Transmission Provider received the executed the Interconnection Feasibility Study Agreement to the date when the Transmission Provider provided the completed Interconnection Feasibility Study to the Interconnection Customer, (E) Percentage of Interconnection Feasibility Studies exceeding [timeline as listed in the Transmission Provider's LGIP] to complete this reporting period, calculated as 1—(the sum of 3.5.2.2(A) minus 3.5.2.2(B) and dividing that amount by the sum of 3.5.2.2(A) plus 3.5.2.2(C)).

3.5.2.2 *Interconnection System Impact Studies processing time. (A) Number of Interconnection Requests that had Interconnection System Impact Studies completed within the Transmission Provider's coordinated region during the reporting quarter, (B) Number of Interconnection Requests that had Interconnection System Impact Studies completed within the Transmission Provider's coordinated region during the reporting quarter that were completed more than [timeline as listed in the Transmission Provider's LGIP] after receipt by the Transmission Provider of the Interconnection Customer's executed Interconnection System Impact Study Agreement, (C) At the end of the reporting quarter, the number of active valid Interconnection Requests with ongoing incomplete System Impact Studies where such Interconnection Requests had executed Interconnection System Impact Study Agreements received by the Transmission Provider more than [timeline as listed in the Transmission Provider's LGIP] before the reporting quarter end, (D) Mean time (in days), Interconnection System Impact Studies completed within the Transmission Provider's coordinated region during the reporting quarter, from the date when the Transmission Provider received the executed Interconnection System Impact Study Agreement to the date when the Transmission Provider provided the completed Interconnection System Impact Study to the Interconnection Customer, (E) Percentage of Interconnection System Impact Studies exceeding [timeline as listed in the Transmission Provider's LGIP] to complete this reporting period, calculated as 1—(the sum of 3.5.2.3(A) minus 3.5.2.3(B) and dividing that amount by the sum of 3.5.2.3(A) plus 3.5.2.3(C)).*

3.5.2.3 *Interconnection Facilities Studies Processing time. (A) Number of Interconnection Requests that had Interconnection Facilities Studies that are completed within the Transmission Provider's coordinated region during the reporting quarter, (B) Number of Interconnection Requests that had Interconnection Facilities Studies that are completed within the Transmission Provider's coordinated region during the reporting quarter that were completed more than [timeline as listed in the Transmission Provider's LGIP] after receipt by the Transmission Provider of the Interconnection*

Customer's executed Interconnection Facilities Study Agreement, (C) At the end of the reporting quarter, the number of active valid Interconnection Service requests with ongoing incomplete Interconnection Facilities Studies where such Interconnection Requests had executed Interconnection Facilities Studies Agreement received by the Transmission Provider more than [timeline as listed in the Transmission Provider's LGIP] before the reporting quarter end (D) Mean time (in days), Interconnection Facilities Studies completed within the Transmission Provider's coordinated region during the reporting quarter, from the date when the Transmission Provider received the executed Interconnection Facilities Study Agreement to the date when the Transmission Provider provided the completed Interconnection Facilities Study to the Interconnection Customer, (E) Percentage of delayed Interconnection Facilities Studies this reporting period, calculated as 1—(the sum of 3.5.2.4(A) minus 3.5.2.4(B) and dividing that amount by the sum of 3.5.2.4(A) plus 3.5.2.4(C)).

3.5.2.4 *Interconnection Service requests withdrawn from interconnection queue. (A) Number of Interconnection Service requests withdrawn from the Transmission Provider's interconnection queue during the reporting quarter, (B) Number of Interconnection Service requests withdrawn from the Transmission Provider's interconnection queue during the reporting quarter before completion of any interconnection studies or execution of any interconnection study agreements, (C) Number of Interconnection Service requests withdrawn from the Transmission Provider's interconnection queue during the reporting quarter before completion of an Interconnection System Impact Study, (D) Number of Interconnection Service requests withdrawn from the Transmission Provider's interconnection queue during the reporting quarter before completion of an Interconnection Facility Study, (E) Number of Interconnection Service requests withdrawn from the Transmission Provider's interconnection queue after execution of a generator interconnection agreement or Interconnection Customer requests the filing of an unexecuted, new interconnection agreement, (F) Mean time (in days), for all withdrawn Interconnection Service requests, from the date when the request was determined to be valid to when the Transmission Provider received the request to withdraw from the queue.*

3.5.3 *The Transmission Provider is required to post on OASIS the measures in paragraph 3.5.2.1(A) through paragraph 3.5.2.4(F) for each calendar quarter within 30 days of the end of the calendar quarter. The Transmission Provider will keep the quarterly measures posted on OASIS for three calendar years with the first required reporting year to be 2017.*

3.5.4 *In the event that any of the values calculated in paragraphs 3.5.2.1(E), 3.5.2.2(E) or 3.5.2.3(E) exceeds 25 percent for two consecutive calendar quarters the Transmission Provider will have to comply with the measures below for the next four consecutive calendar quarters and must continue reporting this information until the*

¹⁹⁷ In the "Utilization of Surplus Interconnection Service" section, the Commission proposes revisions to the *pro forma* LGIP that result in renumbering of several existing sections. One section that the Commission proposes to be renumbered is section 3.4. For this reason, the proposed revisions to the "OASIS Posting" section (current section 3.4) will begin at section 3.5.1.

Transmission Provider reports four consecutive calendar quarters without the values calculated in 3.5.2.1(E), 3.5.2.2(E) or 3.5.2.3(E) exceeding 25 percent for two consecutive calendar quarters:

(i) The Transmission Provider must submit a report to the Commission describing the reason for each study or group of clustered studies pursuant to an Interconnection Request that exceeded its deadline (i.e., 45, 90 or 180 days) for completion (excluding any allowance for Reasonable Efforts). The Transmission Provider must describe the reasons for each study delay and any steps taken to remedy these specific issues and, if applicable, prevent such delays in the future. The report must be filed at the Commission within 45 days of the end of the calendar quarter.

(ii) The Transmission Provider shall aggregate the total number of employee-hours and third party consultant hours expended towards interconnection studies within its coordinated region that quarter and post on OASIS. This information is to be posted within 30 days of the end of the calendar quarter.

150. The Commission preliminarily finds that this proposal will increase transparency into study timeliness and the reason for delays in regions that have consistent study delays. The Commission seeks comment on whether to require fewer or additional interconnection processing statistics to be posted on OASIS by the transmission provider. For example, such additional statistics could include: The number of new valid interconnection requests received by the transmission provider, the average number of days it takes for the transmission provider to determine whether a received interconnection service request is a valid interconnection request, the average number of days it takes for an interconnection request to receive a study agreement, and the number of study agreements executed in the transmission provider's region during the reporting period. The Commission also seeks comment on whether it is proposing the appropriate summary data requirements to enhance transparency into interconnection queue processes and what, if any, customizations of these requirements should be made to adjust for different regional processes.

151. The Commission notes that LGIP Sections 6.3, 7.4 and 8.3 have provisions requiring transmission providers to inform interconnection customers as to the causes of study delays and to provide them with revised study schedules. The Commission requests comment on whether interconnection customers have sufficient information regarding, and transparency into, the cause of study delays under the current LGIP

provisions and whether transmission providers should have to provide a more detailed explanation to interconnection customers regarding the cause(s) of study delays. The Commission also seeks comment on whether a transmission provider should have to inform interconnection customers regarding its process for revising study timelines once a delay occurs and whether the transmission provider should also describe in sufficient detail any relevant issues that could further affect the revised timeline for a particular interconnection customer.

6. Improving Coordination With Affected Systems

a. Existing Provisions and Background

152. The interconnection of a new generating facility to a transmission system may sometimes affect the reliability of a neighboring transmission system, termed the affected system. Currently, section 3.5 of the *pro forma* LGIP requires the transmission provider to coordinate required interconnection studies with affected systems¹⁹⁸ and, if possible, include those results within applicable results from the LGIP study process. In Order No. 2003, the Commission found that:

[a]lthough the owner or operator of an Affected System is not bound by the provisions of the Final Rule LGIP or LGIA, the Transmission Provider must allow any Affected System to participate in the process when conducting the Interconnection Studies, and incorporate the legitimate safety and reliability needs of the Affected System.¹⁹⁹

Because the transmission operator of the affected system is not bound by the terms of the LGIP or LGIA of a particular interconnection request, the transmission operator of the affected system may choose not to abide by the time limits established for the various interconnection studies.

153. Order No. 2003 further explained that, if the affected system does not provide information in a timely manner, a transmission provider may proceed without taking into account any information that could have been provided by the affected system.²⁰⁰

¹⁹⁸ An "Affected System shall mean an electric system other than the Transmission Provider's Transmission System that may be affected by the proposed interconnection." *Pro forma* LGIP, Sec. 1 (Definitions); *Pro Forma* LGIA, Art. 1 (Definitions).

¹⁹⁹ Order No. 2003, FERC Stats. & Regs. ¶ 31,146 at P 121.

²⁰⁰ Order No. 2003, FERC Stats. & Regs. ¶ 31,146 at P 121. On rehearing, the Commission clarified that delays by an affected system in performing interconnection studies or providing information for such studies is not an acceptable reason to deviate from the timetables established in Order No. 2003 unless the interconnection itself (as distinct

Typically, transmission providers do not proceed with the interconnection process until they receive the analysis of reliability impact from the affected system(s). The issue of impacts on an affected system is raised in a recent contested proceeding.²⁰¹

154. Order No. 2003 does not require that transmission providers publicize their process for coordination with affected systems. It also does not require that transmission providers include the affected systems analysis alongside the system impact study and facilities study. During the Order No. 2003 process, the Commission declined Duke's request to require affected systems to participate in the interconnection process with interconnection customers.²⁰² The Commission reiterated, however, that a transmission provider must allow any affected system to participate in the interconnection study process and incorporate the affected system's legitimate safety and reliability needs.²⁰³

b. AWEA Petition and Comments

155. Multiple commenters that represent interconnection customers and RTOs/ISOs voiced a need for improved affected system coordination. For example, MISO supports more specific guidance in the *pro forma* LGIP on when and how to engage affected systems, as well as how to impose obligations on affected systems to minimize delays in the interconnection process.²⁰⁴ AWEA asks the Commission to require a standard contract between affected systems.²⁰⁵ Additionally, AWEA asks the Commission to require affected systems to share their respective models to ensure that prospective interconnection customers can more readily ascertain the impacts of their interconnection requests in a timely manner.²⁰⁶ SoCal Edison states that the primary challenge associated with the coordination of affected systems is the enforceability of provisions in a particular balancing

from any future delivery service) will endanger reliability. See Order No. 2003-A, FERC Stats. & Regs. ¶ 31,171 at P 114.

²⁰¹ See Docket No. ER17-75-000, in which PJM filed an unexecuted LGIA with Lackawanna. Energy Center, LLC (Lackawanna) at Lackawanna's request. This unexecuted LGIA contains non-conforming terms and conditions, including limitations on Lackawanna's output, due to preliminary (and as yet incomplete) affected systems analysis by NYISO.

²⁰² Order No. 2003, FERC Stats. & Regs. ¶ 31,146 at P 121.

²⁰³ Order No. 2003, FERC Stats. & Regs. ¶ 31,146 at PP 120-121.

²⁰⁶ AWEA 2016 Comments at 18.

authority area tariff if those provisions place obligations on potentially affected systems, especially those outside of the Commission's jurisdiction. To address this issue, SoCal Edison proposes that RTOs/ISOs amend existing balancing authority area agreements or enter into new, legally-binding affected system agreements, to implement appropriate, enforceable mechanisms, including cost responsibility for mitigation.

156. El Paso states that it is not always clear how many affected systems an interconnection request may impact until after study work on the request is complete or near completion. El Paso argues that, to improve this process, the transmission provider should invite all electrically-connected transmission owners and operators to participate in the interconnection study process upon receipt of a valid interconnection request. El Paso further suggests that the transmission provider extend this invitation to any other transmission system(s) for which the transmission provider has reason to suspect that the interconnection request may have adverse impacts, given its location, size, type, and other characteristics. Transmission Dependent Utility Systems urge the Commission to clarify the definition of affected system in the *pro forma* LGIP, *pro forma* LGIA, and *pro forma* SGIP to reflect the recognition, articulated in Order No. 2006, that the definition is not limited to transmission facilities but also to "an electric system . . . that may be affected by the proposed interconnection."²⁰⁷

157. Some entities, like Modesto Irrigation District, Imperial Irrigation District, Xcel, and MISO TOs, indicate no changes are needed in affected systems provisions.²⁰⁸

c. Request for Comments

158. Several of the proposed reforms in this Proposed Rule seek to improve the information provided to interconnection customers through the interconnection process and facilitate the timely interconnection of new generating facilities. Based on the comments received, it appears that transmission providers may not provide

²⁰⁷ Transmission Dependent Utility Systems 2016 Comments at 7 (quoting Order No. 2006 at P 543). Transmission Dependent Utility Systems consist of the following rural electric generation and transmission cooperatives: Golden Spread Electric Cooperative, Inc.; Kansas Electric Power Cooperative, Inc.; North Carolina Electric Membership Corporation; PowerSouth Energy Cooperative, and Seminole Electric Cooperative, Inc.

²⁰⁸ Modesto Irrigation District 2015 Comments at 3; Imperial Irrigation District 2016 Comments at 4–6; Xcel 2016 Comments at 11; MISO TOs Comments at 13.

sufficient information on the guidelines and timelines they will use to coordinate with affected systems during the interconnection process. Providing these guidelines and timelines could improve the information available to the interconnection customer in the interconnection process and could help to avoid late-stage withdrawals due to unforeseen costly network upgrades on affected systems. Furthermore, a clear set of procedures and timelines regarding the affected system's study of the proposed interconnection memorialized in a Commission-approved agreement regarding affected systems analysis could help to ameliorate delays experienced awaiting study results from affected systems.

159. The Commission seeks comment on whether it should prescribe guidelines for affected systems analyses and coordination or if it should impose study requirements and associated timelines on affected systems that are also public utility transmission providers. The Commission also seeks comment on whether to standardize the process for coordinating an affected system analysis and whether to develop a standard affected system study agreement. Finally, the Commission seeks comments on proposals or additional steps that the Commission could take (e.g., conducting a workshop or technical conference focused on improving issues that arise when affected systems are impacted by a proposed interconnection).

C. Enhancing Interconnection Processes

160. The five proposed reforms in this section would enhance interconnection processes by making use of underutilized interconnection service, providing interconnection service earlier, and accommodating changes in the development process.

1. Requesting Interconnection Service Below Generating Facility Capacity

161. The Commission proposes to allow interconnection customers to request a level of interconnection service for a generating facility that is lower than the generating facility's capacity.²⁰⁹ The use of a level of interconnection service below generating facility capacity will allow generating facilities that do not intend to use the full generating facility capacity to avoid constructing network upgrades and interconnection facilities to meet a level of interconnection

²⁰⁹ The term generating facility capacity means "the net capacity of the Generating Facility and the aggregate net capacity of the Generating Facility where it includes multiple energy production devices." *Pro forma* LGIA at Art.1.

service that is not necessary. For example, the owner of an electric storage resource with a generating facility capacity of 30 MW may choose to always operate the facility in such a way that it only uses 25 MW of interconnection service. Under this proposal, the transmission provider would allow the interconnection customer to apply for the 25 MW it intends to use instead of the entire 30 MW of generating facility capacity. If a facility utilizes this option, it must establish in its interconnection agreement the appropriate hardware and/or software to prevent it from exceeding its interconnection service, consent to penalties if its output does exceed its interconnection service, and be subject to curtailment provisions consistent with 9.7.2 of the LGIA.

a. Existing Provisions and Background

162. There are no current provisions in the *pro forma* LGIP and LGIA that directly speak to this issue. However, in certain regions of the country, there are already generating facilities with a level of interconnection service lower than the generating facility capacity. The details of these limitations have thus far been included in Appendix C of the LGIA.²¹⁰

b. Comments

163. In post-technical conference comments, parties with experience as interconnection customers emphasized their desire for the ability to request interconnection service that meets a facility's needs, even if this service is below the generating facility capacity.²¹¹ Commenters argue that the unique characteristics of electric storage resources, including their fast response times and high controllability, justify interconnection service below the rated capacity of the facility because they can time their charging and discharging of the resource to avoid or mitigate congestion of the transmission grid or to support transmission grid voltage and frequency.²¹² SoCal Edison provides examples of interconnection agreements that limited interconnection service to

²¹⁰ See, e.g., *S. Cal. Edison Co.*, Docket No. ER16–1459–000 (June 14, 2016) (delegated letter order); *S. Cal. Edison Co.*, Docket No. ER16–44–000 (November 16, 2015) (delegated letter order); *S. Cal. Edison Co.*, Docket No. ER15–2730–000 (November 12, 2015) (delegated letter order).

²¹¹ See, e.g., NextEra 2016 Comments at 10–12; AES 2016 Comments at 15; ESA 2016 Comments at 5; RES Americas 2016 Comments at 3, 5–6; California Energy Storage Alliance 2016 Comments at 12–13.

²¹² California Energy Storage Alliance 2016 Comments at 6 (citing *Midcontinent Indep. Sys. Operator, Inc.*, 155 FERC ¶ 61,211 (2016)).

an amount lower than full capacity.²¹³ ESA and NextEra note that PJM and CAISO have allowed interconnection customers to limit injection rights in certain circumstances.²¹⁴ NextEra suggests that the structure of interconnection rights could alternatively be set forth in a separate *pro forma* agreement, similar to MISO's Monitoring and Consent Agreement for Net Zero Interconnection Service.²¹⁵

164. The RTOs/ISOs comments suggest they are cautiously open to the idea of allowing interconnection service below the total generating facility capacity if the interconnection request is subject to the proper control technologies and penalties.²¹⁶ MISO notes that it is actively discussing the issue with stakeholders.²¹⁷ NYISO states that allowing interconnection at a level below the generating facility capacity should not be permitted without adequate provisions for enforcement of the maximum limit, but that interconnection customers should be able to submit proposals for limited interconnection service.²¹⁸ ISO-NE notes that it would still need to know the network impacts for the full output of the generating facility capacity.²¹⁹

165. Representatives of the storage industry agree that safeguards to limit output should be in place to ensure safety and reliability when limiting interconnection service.²²⁰ ESA and RES Americas suggest that operational tests and/or demonstrations could validate interconnection customers' intended uses and control technologies.²²¹ Commenters also suggest that RTOs/ISOs could install physical safeguards and/or impose financial penalties and legal liability.²²² California Energy Storage Alliance suggests that verifiable controls and algorithms, as well as utility equipment already in place (e.g., reclosers), cap the discharge at the point of interconnection and that there is no need to require power relays and other physical equipment.²²³ NYISO argues that monitoring and corrective action must

maintain reliability if the facility exceeds the maximum power limit.²²⁴ SoCal Edison explains that, pursuant to its current agreements that allow interconnection below generating facility capacity, SoCal Edison will notify the interconnection customer if that customer is violating its maximum output and notes that the customer risks disconnection if the violation persists.²²⁵

c. Proposal

166. The Commission preliminarily finds that the *pro forma* LGIP and *pro forma* LGIA may not be just and reasonable and may be unduly discriminatory or preferential to the extent that they disallow interconnection service below generating facility capacity. Disallowing the requests for interconnection service below generating facility capacity forces generating facilities intending to utilize lower levels of interconnection service capacity to pay for interconnection facilities and network upgrades they do not need.

167. The Commission proposes to require that transmission providers allow interconnection customers to request interconnection service below their generating facility capacity. The Commission recognizes the concerns raised regarding the need for proper control technologies and penalties to ensure that an interconnection is safe and reliable when a generating facility requests interconnection service below the facility's full capacity. Provided these concerns can be addressed through hardware and/or software installed to prevent a facility from exceeding its interconnection service, as well as penalties and possible curtailment, the Commission believes that there are legitimate reasons for allowing an interconnection customer to request interconnection service at a level less than its generating facility capacity. Reducing the amount of interconnection facilities and network upgrades required for lower interconnection service capability could also result in lower interconnection costs, lower ratepayer costs, and more efficient use of the network upgrades and interconnection facilities that are constructed. Therefore, the Commission preliminarily finds that this proposal will result in just and reasonable and not unduly discriminatory or preferential rates, terms and conditions. The proposal will help to reduce overbuilding of interconnection facilities and network upgrades by

tailoring the interconnection facilities and network upgrades to a facility's needed capacity. This means that if a facility, for operational or other reasons, will never exceed its interconnection service limitations, it may request to build upgrades for interconnection service at a lower level to match the intended operation of the facility. This proposal will therefore remove barriers to the development of generating facilities which do not intend to operate at full generating facility capacity. Allowing generating facilities to limit their interconnection costs by avoiding the construction of unnecessary interconnection facilities and network upgrades may also lower costs to customers.

168. The Commission proposes that transmission providers have a process in the *pro forma* LGIP and LGIA in place to consider such requests. The Commission proposes to require that any interconnection customer that seeks interconnection service below its generating facility capacity install appropriate monitoring and control technologies at its generating facility. Such a generating facility or interconnection customer will be subject to reasonable provisions that enforce a maximum export limit, a notification process to a generating facility that has exceeded such limit, and a process for resolving disputes if deemed necessary by the transmission provider and/or transmission owner as part of the *pro forma* LGIP and LGIA. Additionally, the Commission proposes that interconnection customers that request interconnection service below generating facility capacity be subject to reasonable penalties imposed by transmission owners, or transmission providers if more appropriate, if they exceed the limitations for interconnection service established in their interconnection agreements. Such penalties could be financial, could include a requirement to pay the cost of additional interconnection facilities or network upgrades, or could consist of a loss of interconnection rights. The Commission seeks comment on the potential penalties that transmission providers or transmission owners may impose if an interconnection customer exceeds the interconnection service levels agreed upon.

169. In addition to seeking comment on these proposals, the Commission seeks comment on the types and availability of control technologies and protective equipment that could ensure that a generating facility does not exceed its level of interconnection service. The Commission expects that the transmission providers,

²²⁴ NYISO 2016 Comments at 28.

²²⁵ SoCal Edison 2016 Comments at 6.

transmission owners, and interconnection customers will establish the necessary control technologies, as well as reasonable penalties or other enforcement mechanisms necessary to ensure compliance with the maximum injection limit in Appendix C of the *pro forma* LGIA. The Commission also seeks comment on whether certain protection systems would eliminate the need to study the full generator facility capacity in some circumstances, potentially reducing study costs.

170. This proposal would not eliminate the transmission provider's potential need to study interconnection customers' interconnection facilities and network upgrades at generating facility capacity in addition to the generating facility's requested level of interconnection service when needed to ensure reliability.²²⁶ The Commission seeks comment on what types of studies and under what conditions the transmission provider may need to study the generating facility at its generating facility capacity, even if the interconnection customer does not intend to use that level of interconnection service and agrees to install all necessary equipment to prevent injections of electricity in excess of the requested level of interconnection service.

171. The Commission acknowledges that allowing interconnection customers to request service below their generating facility capacity could result in additional study costs during the interconnection process because the transmission provider may need to study the full generating facility capacity as well as the requested level of interconnection service. The Commission proposes that interconnection customers should bear any additional study costs associated with requesting interconnection service below their generating facility capacity, but the Commission seeks comment on the potential nature and extent of such costs.

172. The Commission also proposes changes to the definitions of "Large Generating Facility" and "Small Generating Facility" in the *pro forma* LGIP and *pro forma* LGIA so that they are based on the level of interconnection service for the generating facility rather than the generating facility capacity. The Commission considers this proposed change to be consistent with the reform in Order No. 792 where the Commission allowed, subject to certain

conditions, transmission providers to measure the capacity of small generating facilities based on the capacity specified in the interconnection request.²²⁷ The Commission seeks comment on the proposed changes to the definitions of "Large Generating Facility" and "Small Generating Facility" and the impact of such a change, if any, on the interconnection procedures and the interconnection agreement, including the need for other related changes to the *pro forma* LGIP and LGIA.

173. The Commission also seeks comment on whether revisions in addition to those proposed here for the *pro forma* LGIP or LGIA are necessary to accommodate requests for interconnection service below generating facility capacity. We also seek comment on whether in lieu of changes to the Commission's *pro forma* LGIP and LGIA, transmission providers should describe the processes for processing and studying requests for interconnection service below generating facility capacity in their *pro forma* LGIPs and LGIAs on compliance, or if such requests should be processed on an *ad hoc* basis rather than having a specified process in the *pro forma* documents.

174. The Commission proposes to add the following new paragraph at the end of section 3.1 of the *pro forma* LGIP as follows:

The Transmission Provider shall have a process in place to consider requests for Interconnection Service below the Generating Facility Capacity. These requests for Interconnection Service shall be studied at the level of Interconnection Service requested for purposes of Interconnection Facilities, Network Upgrades, and associated costs, but may be subject to other studies at the full Generating Facility Capacity to ensure safety and reliability of the system, with the study costs borne by the Interconnection Customer. Any Interconnection Facility and/or Network Upgrade costs required for safety and reliability also would be borne by the Interconnection Customer. Interconnection Customers may be subject to additional control technologies as well as testing and validation of those technologies consistent with Article 6 of the LGIA. The necessary

²²⁷ See Order No. 792, 145 FERC ¶ 61,159 at P 230 (stating that "Under section 4.10.3 adopted herein, the Transmission Provider is to measure the capacity of a Small Generating Facility based on the capacity specified in the interconnection request, which may be less than the maximum capacity that a device is capable of injecting into the Transmission Provider's system, provided that the Transmission Provider agrees, with such agreement not to be unreasonably withheld, that the manner in which the Interconnection Customer proposes to limit the maximum capacity that its facility is capable of injecting into the Transmission Provider's system will not adversely affect the safety and reliability of the Transmission Provider's system.").

control technologies and protection systems as well as any potential penalties for exceeding the level of Interconnection Service established in the executed, or requested to be filed unexecuted, LGIA shall be established in Appendix C of that executed, or requested to be filed unexecuted, LGIA.

175. The Commission proposes to add the following language to the end of section 6.3 of the *pro forma* LGIP:

Transmission Provider shall study the interconnection request at the level of service requested by the interconnection customer, unless otherwise required to study the full Generating Facility Capacity due to safety or reliability concerns.

176. The Commission proposes to insert the following language in section 7.3 of the *pro forma* LGIP in line 8 of the second paragraph, just before the sentence "The Interconnection System Impact Study will provide a list of facilities that are required as a result of the Interconnection Request and a non-binding good faith estimate of cost responsibility and a non-binding good faith estimated time to construct."

For purposes of determining necessary interconnection facilities and network upgrades, the System Impact Study shall consider the level of interconnection service requested by the Interconnection Customer, unless otherwise required to study the full Generating Facility Capacity due to safety or reliability concerns.

177. The Commission proposes to add the following language to the end of section 8.2 of the *pro forma* LGIP:

The Facilities Study will also identify any potential control equipment for requests for Interconnection Service that are lower than the Generating Facility Capacity.

178. The Commission proposes to add the following language to Appendix 1, Item 5, of the *pro forma* LGIP, as sub-item h:

Requested capacity (in MW) of Interconnection Service (if lower than the Generating Facility Capacity)

179. Lastly, the Commission proposes to change the definition of "Large Generating Facility" and "Small Generating Facility" in section 1 of the *pro forma* LGIP and article 1 of the *pro forma* LGIA as follows (*proposing to delete italicized text*):

Large Generating Facility shall mean a Generating Facility for which an Interconnection Customer has having a Generating Facility Capacity requested Interconnection Service of more than 20 MW.

Small Generating Facility shall mean a Generating Facility for which an Interconnection Customer has requested Interconnection Service that has a Generating Capacity of no more than 20 MW.

180. The Commission recognizes that the NERC reliability standards are

²²⁶ ISO-NE suggests that it would always need to evaluate the generating facility capacity to know the network impacts of the full rated capacity and ensure reliability. ISO-NE Comments at 28.

generally applicable to generating facilities with a gross nameplate rating of greater than 20 MVA,²²⁸ and do not generally apply to Small Generating Facilities with SGAs. The Commission clarifies that its proposed revisions to the definition of Large Generating Facility and Small Generating Facility are not intended to conflict with any applicable NERC Reliability Standards or NERC's compliance registration process.

2. Provisional Interconnection Service

181. The Commission recognizes that the length of the interconnection process can pose a challenge for interconnection customers. In some cases, there is a certain amount of interconnection capacity that has already been studied at the point of interconnection. The Commission therefore proposes to adopt a provisional agreement process wherein new generating facilities could interconnect, possibly under limited operation, using interconnection service pursuant to existing and regularly updated studies while they wait to complete the additional studies needed to satisfy their full interconnection request.

a. Existing Provisions and Background

182. There are no current provisions in the *pro forma* LGIP or *pro forma* LGIA that allow for provisional agreements where new generating facilities could interconnect, possibly under limited operation, using interconnection service pursuant to existing and regularly updated studies while they wait to complete the additional studies needed to satisfy their full interconnection request. Under the current interconnection process, an interconnection customer that seeks to interconnect quickly, possibly under limited operation, and is willing to bear the financial risk of network upgrades that will be identified after the interconnection process has been completed, may not use interconnection service that is available as indicated by existing and regularly updated studies. Only at the end of the interconnection process—after the transmission provider has studied the final form of the proposed generating facility and its effects, and has evaluated the need for any interconnection facilities and network upgrades—may the interconnection customer begin injection onto the grid. Thus, the *pro*

forma LGIP/LGIA do not provide for provisional arrangements that would allow interconnection customers to interconnect using existing capacity on the transmission system prior to the completion of the interconnection study process.

183. However certain regions, such as SPP and MISO, already permit interconnection customers to execute provisional agreements prior to the completion of the full interconnection process.²²⁹ In MISO, interconnection customers are able to request provisional agreements to provide a limited amount of service prior to completion of the interconnection process, *i.e.*, prior to the completion of any network upgrades, based on the availability of existing studies.²³⁰ To do so, interconnection customers must demonstrate that sufficient facilities exist for the level of output requested in the provisional agreement and must re-verify that determination on a regular basis.²³¹ Extending this policy to other transmission providers could help facilitate the interconnection of generating facilities that have a desire to build and/or provide service prior to completion of the full interconnection process.

b. Comments

184. Multiple commenters, particularly those in the electric storage industry, expressed a desire to expedite the interconnection process and to employ existing interconnection and network facilities as a way to do so. Several note that increasing the speed of interconnection for resources such as electric storage is important because these resources can physically come on-line before completion of the interconnection process.²³²

c. Proposal

185. The Commission preliminarily finds that the lack of a process in the *pro forma* LGIP and the lack of a provision in the *pro forma* LGIA for an interconnection customer to obtain a provisional agreement for interconnection service weakens competition due to the inability of interconnection customers to leverage prior investments in interconnection studies and related facilities to provide wholesale services. This lack of provisional interconnection service may

also raise costs due to the inability to use some existing interconnection facilities and network upgrades, thereby leading to unjust and unreasonable rates for customers. Although a transmission provider may be able to provide interconnection service at the currently studied and approved level of interconnection capacity while it is studying a larger interconnection request, the *pro forma* LGIP and *pro forma* LGIA do not currently provide for such flexibility for provisional service at currently studied levels. Therefore, lack of a process for provisional interconnection service precludes the interconnection customer from providing wholesale services during the pendency of its interconnection request.

186. The Commission therefore proposes to allow interconnection customers to enter into provisional agreements for limited interconnection service prior to the completion of the full interconnection process. Such provisional agreements could benefit interconnection customers by permitting limited operation based on existing and regularly updated studies, and prior to the completion of studies and network upgrades being built for the larger interconnection service that is requested. Provisional agreements could also benefit interconnection customers with short development lead times, such as electric storage resources, which can provide some services prior to completion of the full interconnection process. Under this proposal, interconnection customers with provisional agreements would be able to begin operation up to the MW level as permitted by existing and regularly updated studies. The transmission provider may require milestone payments prior to submission of the provisional agreement. The provisional agreement would be in effect while awaiting the final results of the interconnection studies, finalization of a final interconnection agreement, and the construction of any additional interconnection facilities and network upgrades and cost assignments for the network upgrades that may result from the full interconnection process. The Commission also proposes that provisional large generator interconnection agreements and the associated provisional interconnection service would terminate upon completion of construction of network upgrades. At this point, the interconnection customer would proceed according to the terms of the interconnection agreement.

187. Provisional agreements may also mitigate interconnection customer risk associated with unknown final network

²²⁸ See NERC Statement of Compliance Registry Criteria (effective: July 1, 2014), http://www.nerc.com/FilingsOrders/us/RuleOfProcedureDL/Appendix_5B/RegistrationCriteria_20140701.pdf.

²²⁹ SPP, OATT, Attachment V, app. 6 (6.1.0). MISO, FERC Electric Tariff, Att. X, Section 11.5 (47.0.0).

²³² See, e.g., AES 2016 Comments at 3.

upgrade costs by creating revenue streams earlier in an interconnection customer's life. However, the Commission proposes that such interconnection customers must still assume all risks and liabilities associated with the required interconnection facilities and network upgrades for their interconnection that are identified pursuant to the interconnection studies for the requested interconnection service.

188. The Commission therefore proposes to require that transmission providers allow interconnection customers to request provisional interconnection service and operate under provisional interconnection agreements based on existing and regularly updated studies that demonstrate that necessary interconnection facilities and network upgrades are in place to meet applicable North American Electric Reliability Corporation (NERC) or other regional reliability requirements for new, modified, and/or expanded generating facilities. If available studies do not demonstrate whether provisional interconnection service can be reliably accommodated, the transmission provider shall perform additional studies as necessary. An evaluation of provisional service by the transmission provider shall determine whether stability, short circuit, and/or voltage issues would arise if the interconnection customer seeking provisional interconnection service interconnects without modifications to the generating facility or the transmission provider's system. The Commission also proposes that transmission providers must assess any safety or reliability concerns posed by provisional agreements, and establish a process for the interconnection customer that will mitigate any reliability risks associated with operation pursuant to provisional agreements. The costs of such mitigation, if necessary, would be borne by the interconnection customer. The Commission is interested in additional comments on this proposal and the means by which transmission providers and interconnection customers could mitigate any risks and liabilities for provisional interconnection service. Additionally, acknowledging that transmission providers have limited resources to conduct studies, we also seek comment on the circumstances under which provisional interconnection service would be beneficial and how common such circumstances would be for potential interconnection customers.

189. The Commission proposes to add the following new definitions to Section

1 of the *pro forma* LGIP, as well as to article 1 of the LGIA:

Provisional Interconnection Service shall mean interconnection service provided by the Transmission Provider associated with interconnecting the Interconnection Customer's Generating Facility to the Transmission Provider's Transmission System and enabling that Transmission System to receive electric energy and capacity from the Generating Facility at the Point of Interconnection, pursuant to the terms of the Provisional Large Generator Interconnection Agreement and, if applicable, the Tariff.

Provisional Large Generator Interconnection Agreement shall mean the interconnection agreement for Provisional Interconnection Service established between the Transmission Provider and/or the Transmission Owner and the Interconnection Customer. This agreement shall take the form of the Large Generator Interconnection Agreement, modified for provisional purposes.

190. Additionally, the Commission proposes a new section 5.10 for the *pro forma* LGIA that defines the requirements for transmission providers to provide provisional interconnection service and the responsibilities of the interconnection customer. The Commission has not developed a *pro forma* Provisional Large Generator Interconnection Agreement because such agreements could either be established on an *ad hoc* basis for provisional interconnection service, or transmission providers could establish their own *pro forma* provisional agreements. However, the Commission seeks comment on the need for the Commission to establish a *pro forma* Provisional Large Generator Interconnection Agreement as part of the *pro forma* LGIA as well as any important details related to the service, *e.g.*, the stage in the interconnection process where the customer would be able to request this service and whether all milestone payments would be required to be paid upon submission of the provisional agreement. The Commission proposes to add the following new section 5.10 to the *pro forma* LGIA:

5.10 Provisional Interconnection Service. Upon the request of Interconnection Customer, and prior to completion of requisite Network Upgrades, the Transmission Provider may execute a Provisional Large Generator Interconnection Agreement or Interconnection Customer may request the filing of an unexecuted Provisional Large Generator Interconnection Agreement with the Interconnection Customer for limited interconnection service at the discretion of Transmission Provider based upon an evaluation that will consider the results of available studies. Transmission Provider shall determine, through available studies or additional studies as necessary,

whether stability, short circuit, thermal, and/or voltage issues would arise if Interconnection Customer interconnects without modifications to the Generating Facility or Transmission Provider's system. Transmission Provider shall determine whether any Network Upgrades, Interconnection Facilities, Distribution Upgrades, or System Protection Facilities that are necessary to meet the requirements of NERC, or any applicable Regional Entity for the interconnection of a new, modified and/or expanded Generating Facility are in place prior to the commencement of interconnection service from the Generating Facility. Where available studies indicate that such Network Upgrades, Interconnection Facilities, Distribution Upgrades, and/or System Protection Facilities that are required for the interconnection of a new, modified and/or expanded Generating Facility are not currently in place, Transmission Provider will perform a study, at the Interconnection Customer's expense, to confirm the facilities that are required for provisional interconnection service. The maximum permissible output of the Generating Facility in the Provisional Large Generator Interconnection Agreement shall be studied and updated on a quarterly basis. Interconnection Customer assumes all risks and liabilities with respect to changes between the Provisional Large Generator Interconnection Agreement and the Large Generator Interconnection Agreement, including changes in output limits and Network Upgrades, Interconnection Facilities, Distribution Upgrades, and/or System Protection Facilities cost responsibilities.

3. Utilization of Surplus Interconnection Service

191. Based on comments received during this proceeding, it has become clear that a number of interconnection customers would like to co-locate new generating facilities with existing generating facilities which may not be fully utilizing an existing generating facility's interconnection service. Commenters provided examples of circumstances when this can happen, including instances where an existing variable energy resource is paired with a new electric storage resource. In this example, the variability in the variable energy resource's output may prevent it from fully utilizing its interconnection capacity during some hours. To address these comments, the Commission proposes to require transmission providers to include in their tariffs and the *pro forma* LGIP an expedited process for interconnection customers to utilize or transfer surplus interconnection service at existing generating facilities. The Commission further proposes that this process give an existing generating facility owner or its affiliate priority to use the surplus interconnection service, but that the tariffs and *pro forma* LGIP also establish

an open and transparent process for the sale of that surplus interconnection service if the owner and its affiliates elect not to use it, and elect to make it available to another party. Lastly, the Commission proposes that this expedited process for surplus interconnection service be available for any quantity of surplus interconnection service, regardless of whether it is above or below the 20 MW threshold for small and large generator interconnection.

a. Existing Provisions and Background

192. On occasion, interconnection customers request more interconnection service for an interconnection request than they may need at any given time. As a result, they may have surplus interconnection service that the relevant transmission provider has already studied and approved. An interconnection customer with an existing interconnection agreement might want to add resources, such as electric storage resources, which were not planned as part of the original interconnection request, or it may wish to sell surplus interconnection service without conveying the originally planned generating facility as part of the sale. In these instances, it is difficult for an interconnection customer at present to utilize this surplus interconnection service. The Commission has addressed the desire for an interconnection customer to retain access to excess capacity on interconnection customer interconnection facilities.²³³ These reforms were motivated by phased generating facilities that have built additional interconnection customer interconnection facility capacity beyond that needed by the initial phases of development. However, there are other circumstances when an interconnection customer may have surplus interconnection service and the *pro forma* LGIP and *pro forma* LGIA do not address the utilization or transfer of surplus interconnection service where there is no transfer of the underlying generating facility.

193. MISO's tariff offers Net Zero Interconnection Service, which MISO designed to allow an existing interconnection customer to increase the gross generating capacity at the point of interconnection of an existing generating facility without increasing the total interconnection service at the point of interconnection.²³⁴ Under

²³³ *Open Access and Priority Rights on Interconnection Customer's Interconnection Facilities*, Order No. 807, 150 FERC ¶ 61,211 (2015).

²³⁴ MISO FERC Electric Tariff, Att. X, Section 1 (Definitions) (47.0.0) ("Net Zero Interconnection Service shall mean a form of Energy Resource Interconnection Service that allows an

MISO's approach, a new generating facility could use this service to interconnect at an existing point of interconnection.²³⁵ In MISO, Net Zero Interconnection Service entails a separate interconnection process for interconnection service that an existing interconnection customer wishes to make available for a new interconnection customer.²³⁶ This process includes an energy displacement agreement between the existing and the new interconnection customers,²³⁷ a monitoring and consent agreement between the new interconnection customer and the transmission owner,²³⁸ as well as the appropriate studies, and an evaluation process for Net Zero Interconnection Service.²³⁹

194. As implemented in MISO, Net Zero Interconnection Service is a restricted form of Energy Resource Interconnection Service. The interconnection study consists of reactive power, short circuit/fault duty, and stability analyses. Steady-state (thermal/voltage) analyses may be performed as necessary to ensure that all required reliability conditions are studied. Moreover, if the existing generating facility was not studied under off-peak conditions, off-peak

interconnection customer to alter the characteristics of an existing generating facility, with the consent of the existing generating facility, at the same POI such that the Interconnection Service limit remains the same").

²³⁵ *Midwest Indep. Transmission Sys. Operator*, 138 FERC ¶ 61,233 at P 16.

²³⁶ MISO FERC Electric Tariff, Att. X, Section 1 (Definitions) (47.0.0) ("Net Zero Interconnection Service shall mean a form of Energy Resource Interconnection Service that allows an interconnection customer to alter the characteristics of an existing generating facility, with the consent of the existing generating facility, at the same POI such that the Interconnection Service limit remains the same").

²³⁷ MISO FERC Electric Tariff, Att. X, Section 1 (Definitions) (47.0.0) ("Energy Displacement Agreement shall mean an agreement between an Interconnection Customer with an existing generating facility on the Transmission Provider's Transmission System and an Interconnection Customer with a proposed Generating Facility seeking to interconnect with Net Zero Interconnection Service. The Energy Displacement Agreement specifies the term of operation, the Generating Facility Interconnection Service limit, and the mode of operation for energy production (common or singular operation)").

²³⁸ MISO FERC Electric Tariff, Att. X, Section 1 (Definitions) (47.0.0) ("Monitoring and Consent Agreement shall mean an agreement that defines the terms and conditions applicable to a Generating Facility acquiring Net Zero Interconnection Service. The Monitoring and Consent Agreement will list the roles and responsibilities of an Interconnection Customer seeking to interconnect with Net Zero Interconnection Service and Transmission Owner to maintain the total output of the Generating Facility inside the parameters delineated in the GIA").

²³⁹ MISO FERC Electric Tariff, Att. X, Sections 3.2.3 & 3.3.1 (47.0.0).

steady state analyses will be performed to the required level necessary to demonstrate reliable operation of the Net Zero Interconnection Service. If no system impact study was available for the existing generation, both off-peak and peak analysis may need to be performed for the generating facility seeking Net Zero Interconnection Service in accordance with the LGIP. The interconnection study will identify the interconnection facilities required and the network upgrades necessary to address reliability issues.

195. In its order accepting MISO's proposal for Net Zero Interconnection Service, the Commission expressed concern about the "lack of transparency" and failure to "provide a clear and consistent way in which generators seeking Net Zero Interconnection Service may identify opportunities for [such service] or how such a generator would be chosen for such service."²⁴⁰ For these reasons, the Commission directed MISO to submit a compliance filing to ensure that MISO offers Net Zero Interconnection Service "on a fair, transparent, and non-discriminatory basis and that comply with the filing requirements of FPA section 205."²⁴¹

b. Comments

196. The Commission received multiple comments that support Commission action to improve the interconnection process with regard to surplus interconnection service. Some commenters stressed the importance of getting resources, especially electric storage resources, on-line more quickly. For instance, NextEra states that a program that allows for utilization of surplus interconnection capacity could result in faster processing of requests to co-locate batteries with existing generation.²⁴² ESA argues that customers that wish to install electric storage resources without additional injection rights should be able to limit interconnection service to the level established in the existing interconnection agreement. ESA also suggests that interconnection customers should be able to transfer some of their injection rights to others, with thermal studies required only for the incremental service.²⁴³

²⁴⁰ *Midwest Indep. Transmission Sys. Operator, Inc.*, 138 FERC ¶ 61,233, at P 301 (2012) (First Net Zero Order).

²⁴¹ First Net Zero Order, 138 FERC ¶ 61,233 at P 302.

²⁴² See, e.g., NextEra 2016 Comments at 13. MISO notes that its Net Zero Interconnection Service product is available to any new resources. MISO 2016 Comments at 24–25.

²⁴³ ESA 2016 Comments at 8–10.

197. Commenters also assert that co-locating electric storage resources with generators that have existing interconnection rights should require less modeling and should not require thermal injection studies.²⁴⁴ NextEra suggests that studies should be tailored to the service requested, with a focus on stability studies and thermal withdrawal studies only if they are necessary. NextEra suggests that these changes should apply to both electric storage resources that seek to interconnect at existing generation sites and to new brownfield electric storage resources co-located with new generation.²⁴⁵

198. During the technical conference, transmission providers noted that processes and procedures would need to be in place to determine whether the requested interconnection service was available, including having service, rights, and descriptions that are clear and implementable.²⁴⁶

c. Proposal

199. The Commission is concerned that existing interconnection service is underutilized. The Commission also recognizes changes in the industry that have created greater opportunities for co-located facilities, such as generation and electric storage resources. It is appropriate to incentivize the utilization of surplus interconnection service because creating an expedited process for interconnection customers to utilize or transfer the utilization of surplus interconnection service will help reduce system costs by leveraging existing assets. Doing so could also improve competition in the wholesale markets by accelerating the interconnection process and facilitating the use of new complementary technologies such as electric storage resources that can further improve reliability and competition. Therefore, the Commission preliminarily finds that facilitating the use of surplus interconnection service will reduce costs and improve competition, helping to ensure just and reasonable rates as required of the Commission under the FPA.

200. The Commission preliminarily finds that providing an expedited process for interconnection customers to utilize or transfer surplus interconnection service at existing generating facilities could remove barriers to the interconnection of a new generator, or to the modification and/or

expansion of the existing generating facility. Expediting the use of surplus interconnection service could be particularly beneficial to electric storage and other resources that can be developed and constructed faster than existing interconnection processes often allow. Allowing interconnection customers to better leverage existing assets, whether for their own purposes or for transfer to another interconnection customer, will help prevent stranded costs and improve access to the transmission system, thereby enhancing competition and helping to ensure just and reasonable rates, terms, and conditions.

201. The Commission proposes to add a new definition for Surplus Interconnection Service to section 1 of the *pro forma* LGIP and to article 1 of the *pro forma* LGIA that provides an expedited process for interconnection customers to utilize or transfer surplus interconnection service at existing generating facilities. The Commission further proposes that this process give an existing generating facility owner or its affiliates priority to use the surplus interconnection service, but that the transmission providers would also establish an open and transparent process for the transfer of that surplus interconnection service if the generating facility owner and its affiliates elect not to use it, and the generating facility owner elects to make it available to another party.

202. The Commission proposes that the studies for surplus interconnection service shall consist of reactive power, short circuit/fault duty, and stability analyses, and that steady-state (thermal/voltage) analyses may be performed as necessary to ensure that all required reliability conditions are studied. The Commission proposes that if the surplus interconnection service was not studied under off-peak conditions, off-peak steady state analyses shall be performed to the required level necessary to demonstrate reliable operation of the surplus interconnection service. The Commission also proposes that if the original System Impact Study is not available for the surplus interconnection service, both off-peak and peak analysis may need to be performed for the existing generating facility associated with the request for surplus interconnection service. Additionally, the Commission proposes that this process for the use or transfer of surplus interconnection service be available for any quantity of surplus interconnection service that currently exists.

203. The Commission proposes that a new interconnection agreement for surplus interconnection service must be

executed, or filed unexecuted, by the transmission provider, transmission owner (as applicable), and the surplus interconnection service customer. The surplus interconnection service customer may be the interconnection customer for the existing generating facility, one of its affiliates, or a new interconnection customer selected through an open and transparent solicitation process. In addition to the new interconnection agreement for surplus interconnection service, we recognize that other contractual arrangements may also be necessary. For example, the interconnection customer for the existing generating facility and the surplus interconnection service customer will likely want to memorialize their rights and obligations with regard to the operation of the existing generating facility and the new generating facility that will use the surplus interconnection service.

204. While the Commission does not propose specific contractual arrangements with respect to surplus interconnection service in this Proposed Rule, the Commission seeks comment on how these arrangements should work and on whether requirements for such arrangements should be established in the Commission's *pro forma* LGIP and LGIA. The Commission notes that the *pro forma* LGIA only permits survival of the LGIA under limited circumstances.²⁴⁷ For this reason, one important consideration for the new interconnection agreement for surplus interconnection service is whether the surplus interconnection service should survive the retirement of the existing generating facility. The Commission seeks comment on whether the interconnection agreement for surplus interconnection service should terminate upon the retirement of the existing generating facility, or whether there are circumstances under which the surplus interconnection service customer may operate its generating facility under terms of the surplus interconnection service agreement after the retirement of the existing generating facility. If the transmission provider, transmission owner (as applicable), and

²⁴⁷ Article 2.6 provide that an LGIA:

shall continue in effect after termination to the extent necessary to provide for final billings and payments and for costs incurred hereunder, including billings and payments pursuant to this LGIA; to permit the determination and enforcement of liability and indemnification obligations arising from acts or events that occurred while this LGIA was in effect; and to permit each Party to have access to the lands of the other Party pursuant to this LGIA or other applicable agreements, to disconnect, remove or salvage its own facilities and equipment.

Pro forma LGIA Art. 2.6 (Survival).

²⁴⁴ NextEra 2016 Comments at 13; California Energy Storage Alliance 2016.

²⁴⁵ NextEra 2016 Comments at 13.

²⁴⁶ Review of Generator Interconnection Agreements and Procedures, American Wind Energy Association, Docket No RM16-12-000, Technical Conference Transcript at 251.

the surplus interconnection service customer choose to provide for survival of the surplus interconnection service agreement for the surplus interconnection service customer after the retirement of the existing generating facility, they must memorialize this arrangement in the surplus interconnection service agreement. The Commission notes, however, that in recent precedent, the Commission stated that procedures that allow retiring generators to transfer their interconnection service must “ensure that the opportunity to replace or increase the capacity of the retiring facility is offered on a fair, transparent, and nondiscriminatory basis.”²⁴⁸ For this reason, the Commission anticipates that, upon the retirement of the existing generating facility, any interconnection service could only be transferred on a fair, transparent, and nondiscriminatory basis.

205. While some commenters suggest that other transmission providers should adopt a process similar to MISO’s process for Net Zero Interconnection Service, upon further consideration of the MISO Net Zero Interconnection Service proceeding, the Commission proposes to modify its position with regard to utilization of surplus interconnection service so that the existing generating facility owners have priority to utilize such surplus interconnection service. In revisiting these previous findings, the Commission notes that existing generating facility owners (or their predecessors) have already paid for the interconnection studies and interconnection facilities and have real property interests and other assets associated with those existing generating facilities, such as real estate and permits. After executing an interconnection agreement, a generating facility owner is entitled to the interconnection service contained therein, and is not required to make such service available unless it elects to.

206. Under this proposal, an existing generating facility owner or its affiliate would have priority to use any surplus interconnection service and would be able to execute, or request the filing of an unexecuted, new interconnection agreement for surplus interconnection service without posting or going through an open solicitation. However, if an existing generating facility owner that has surplus interconnection service wishes to transfer this surplus interconnection service, and it does not wish to use the surplus interconnection

service itself or to transfer it to one of its affiliates, the existing generator must conduct an open and transparent solicitation process for that surplus interconnection service. The proposal to grant existing generating facility owners priority over their surplus interconnection service is similar to the Commission’s findings in Order No. 807 where the Commission waived certain open access requirements and granted interconnection customers priority over their interconnection customer’s interconnection facilities.²⁴⁹ While the Commission proposes that priority be given to the existing generating facility owner of the surplus interconnection service or its affiliates, the Commission seeks comment on whether any further limitations should be placed on the entities with priority use of that surplus interconnection service.

207. In consideration of the foregoing, the Commission proposes to add a new definition for Surplus Interconnection Service to section 1 of the *pro forma* LGIP and to article 1 of the *pro forma* LGIA. Additionally, the Commission proposes to add new sections 3.3, 3.3.1 and 3.3.2 to the *pro forma* LGIP that define the requirements of the transmission provider regarding requests for the use of surplus interconnection service and the solicitation process for surplus interconnection service that the existing generating facility owner must follow if it, or one of its affiliates, elects not to use the surplus interconnection service and wants to transfer that service to another interconnection customer.

208. The Commission proposes to add the following new definition to Section 1 of the *pro forma* LGIP and to article 1 of the *pro forma* LGIA:

Surplus Interconnection Service shall mean any unused portion of Interconnection Service established in a Large Generator Interconnection Agreement, such that if Surplus Interconnection Service is utilized the Interconnection Service limit at the Point of Interconnection would remain the same.

209. The Commission proposes to add a new section 3.3 to the *pro forma* LGIP that requires the transmission provider to establish a process for the use of surplus interconnection service. This section will displace the current section 3.3, changing the numbering of current sections 3.3, 3.4, 3.5, and 3.6 to 3.4, 3.5, 3.6, and 3.7, respectively.²⁵⁰

Utilization of Surplus Interconnection Service. The Transmission Provider must

²⁴⁹ Order No. 807, Open Access and Priority Rights on Interconnection Customer’s Interconnection Facilities, 150 FERC ¶ 61,211.

²⁵⁰ Renumbering detailed in Appendix B of this Proposed Rule.

provide a process that allows an Interconnection Customer to utilize or transfer Surplus Interconnection Service at an existing Generating Facility. The original Interconnection Customer or one of its affiliates shall have priority to utilize Surplus Interconnection Service. If the existing Interconnection Customer or one of its affiliates does not exercise its priority, then that service may be made available to other potential interconnection customers through an open and transparent solicitation process.

210. The Commission proposes to add a new section 3.3.1 to the *pro forma* LGIP that describes the process for using surplus interconnection service:

Surplus Interconnection Service Requests

Surplus Interconnection Service requests may be made by the existing Generating Facility or one of its affiliates. Surplus Interconnection Service requests also may be made by another Interconnection Customer selected through an open and transparent solicitation process. The Transmission Provider shall provide a process for evaluating interconnection requests for Surplus Interconnection Service. Studies for Surplus Interconnection Service shall consist of reactive power, short circuit/fault duty, stability analyses, and any other appropriate studies. Steady-state (thermal/voltage) analyses may be performed as necessary to ensure that all required reliability conditions are studied. If the Surplus Interconnection Service was not studied under off-peak conditions, off-peak steady state analyses shall be performed to the required level necessary to demonstrate reliable operation of the Surplus Interconnection Service. If the original System Impact Study is not available for the Surplus Interconnection Service, both off-peak and peak analysis may need to be performed for the existing Generating Facility associated with the request for Surplus Interconnection Service. The reactive power, short circuit/fault duty, stability, and steady-state analyses for Surplus Interconnection Service will identify any additional Interconnection Facilities and/or Network Upgrades necessary.

211. The Commission proposes to add a new section 3.3.2 to the *pro forma* LGIP that establishes the open and transparent solicitation process for surplus interconnection service:

Solicitation Process for Surplus Interconnection Service

If the existing Generating Facility owner elects to transfer rights for Surplus Interconnection Service to an unaffiliated Interconnection Customer, it must do so through an open and transparent solicitation process. The existing Generating Facility owner must first request that the Transmission Provider post on its Web site that it is willing to accept requests for Surplus Interconnection Service at the existing Point of Interconnection. Such posting will include the name of the existing Generating Facility, the exact electrical location of the physical termination point of the Surplus Interconnection Service,

²⁴⁸ Midwest Indep. Transmission Sys. Operator, Inc., 153 FERC ¶ 61,313, at P 27 (2015).

including proposed breaker position(s) within its substation, the state and county of the existing Generating Facility, and a valid email address and phone number to contact the representative of the existing Generating Facility. The existing Generating Facility owner must provide the Transmission Provider with the System Impact Study performed for the existing Generating Facility with its request for posting Surplus Interconnection Service or indicate that such study is not available.

After the existing Generating Facility owner requests that the Transmission Provider post the availability of Surplus Interconnection Service, the Transmission Provider will also post on its Web site a description of the selection process for transferring rights to the Surplus Interconnection Service that will include a timeline and the selection criteria developed by the existing Generating Facility owner. The selection process may vary among existing Generating Facility owners but the existing Generating Facility owner will choose the winning request after all necessary studies have been performed by the Transmission Provider. The existing Generating Facility owner will submit to the Transmission Provider, for posting on the Transmission Provider's Web site, the results of the selection process and will include a description of whose proposal for the Surplus Interconnection Service was selected and why. After an Interconnection Customer has been chosen, the new Interconnection Customer will execute, or request the filing of an unexecuted, interconnection agreement with the Transmission Provider and Transmission Owner (as applicable) upon completion of all necessary studies for its new Generating Facility.

4. Material Modification and Incorporation of Advanced Technologies

212. It is not uncommon for equipment manufacturers to make technological advancements to equipment while an interconnection request progresses through the interconnection process since the process can span several years. Technological advancements to equipment may achieve cost efficiencies and/or electrical grid performance benefits. These changes may include, for example, advancements to turbines, inverters, plant supervisory controls, or may affect a generating facility's ability to provide ancillary services. However, the *pro forma* LGIP does not include clear guidelines on what technology changes constitute material modifications and how these changes can be incorporated into an interconnection request. The *pro forma* LGIP also does not contain guidance regarding the analysis and modeling for the incorporation of technological advancements into an existing interconnection request. The Commission proposes to require that transmission providers develop: (1) A

definition of permissible technological advancements pursuant to an interconnection request that the interconnection process can accommodate and (2) an accompanying procedure that will be used to accommodate the incorporation of technological advancements to interconnection requests for synchronous and non-synchronous generating facilities. Further, the Commission proposes that this definition should contemplate advancements that provide cost efficiency and/or electrical performance benefits.

a. Existing Provisions and Background

213. Under the *pro forma* LGIP, an interconnection customer must submit to the transmission provider, in writing, modifications to any information provided in the interconnection request.²⁵¹ An interconnection customer retains its queue position if the modifications are either allowed explicitly under the *pro forma* LGIP or if the transmission provider determines that the modifications are not Material Modifications.²⁵² The *pro forma* LGIP directs transmission providers to commence any necessary additional studies related to the interconnection customer's modification request no later than 30 calendar days after receiving notice of the request.²⁵³ If a transmission provider finds a proposed modification to be material, the interconnection customer can choose whether to abandon the proposed modification or to proceed with the modification and lose its existing queue position.

b. Comments

214. During the 2016 Technical Conference, some panelists questioned whether interconnection customers should be able to incorporate technological advancements into their interconnection requests as they move through the interconnection study process. The Commission subsequently solicited post-technical conference comments on whether technological advancements could be incorporated without presenting system reliability concerns and causing delays to the interconnection study process.²⁵⁴ Multiple commenters assert that the interconnection process could benefit from the additional flexibility to

accommodate technological advancements that do not cause significant reliability issues or timing delays.²⁵⁵ Some commenters state that these advancements should be permissible as long as they do not trigger the Material Modification provision of the LGIP and do not disrupt other interconnection requests.²⁵⁶ PacifiCorp proposed a formal procedure for transmission providers to evaluate technological advancements.²⁵⁷ In particular, PacifiCorp's proposal would require interconnection customers to provide formal notification and a \$10,000 deposit for the performance of a technological change study that the transmission provider would complete within 30 days.²⁵⁸ MISO asserts that a new approach to account for technological advancements would require manufacturers to provide validation documentation that the advancement performs equally or better than without the technological change. MISO further asserts that if a technological advancement would result in improved performance, in most cases, a transmission provider study is unnecessary.²⁵⁹ Xcel acknowledges that new technologies may not be appropriately modeled in the existing analytical software, and states that developing sufficient modeling parameters should be made clear to interconnection customers' technology vendors.²⁶⁰ Xcel argues that confidentiality issues should not preclude the sharing of functional specifications sufficient to model the new equipment.²⁶¹

215. With regard to the timing of technological change requests, most commenters did not identify an appropriate deadline within the interconnection process beyond which transmission providers could not accommodate technological advancements. EDF argues that technological advancements should be accommodated as an interconnection request proceeds through the LGIP process up until the commercial operation date, because advancements provide benefits to all customers.²⁶² NYISO, on the other hand, asserts that

²⁵⁵ See, e.g., PacifiCorp 2016 Comments at 3–4; AWEA 2016 Comments at 27; Invenergy 2016 Comments at 18; MISO 2016 Comments at 14; EDF 2016 Comments at 25; NYISO 2016 Comments at 19; ISO-NE 2016 Comments at 20–21.

technological advances and other modifications can be incorporated into an interconnection request only if they are proposed at appropriate stages.²⁶³

c. Proposal

216. The Commission preliminarily finds that the provisions regarding material modifications in the *pro forma* LGIP provide the transmission provider with significant discretion in determining whether a modification is deemed material, and that this discretion can lead to unjust and unreasonable rates, terms, and conditions, and unduly discriminatory or preferential practices when transmission providers evaluate technological advancements under the existing material modification construct.

217. The Commission thus proposes to require transmission providers to establish a technological change procedure to assess and, if necessary, study whether they can accommodate a technological change request without the change considered to be a material modification. The Commission proposes that transmission providers include the technological change procedure in their *pro forma* LGIPs. The Commission proposes an approach below for how this new procedure should be structured and proposes to require that transmission providers use this approach when developing their technological change procedure.

218. The Commission proposes that an interconnection customer that seeks to incorporate technological advancements into an interconnection request must formally notify the relevant transmission provider. In order for the transmission provider to determine that a proposed technological change is not a material modification,²⁶⁴ the interconnection customer's formal technological change request would include analyses to demonstrate that the proposed incorporation of the technological advancement would result in electrical performance that is equal to or better than the electrical performance expected prior to the technology change. In some instances, a transmission provider may determine that no additional study is necessary to accommodate a proposed technological advancement without a loss of queue position.

219. In other instances, a transmission provider may require a study for a proposed technological advancement to

not be considered a material modification. The Commission proposes that, in this scenario, the interconnection customer should tender an appropriate study deposit and provide the necessary modeling data that sufficiently models the behavior of the new equipment and any other required data about the technological advancement to the transmission provider. The transmission provider should then provide the study results within 30 days.

220. Under this proposal, the technological change procedure should specify what technological advancements can be incorporated at various stages of the interconnection process and the procedure should clearly specify which requirements apply to the interconnection customer and which apply to the transmission provider. The procedure should, for example, state that an interconnection customer that seeks to incorporate technological advancements into its generating facility should submit a formal technological change request. Additionally, the procedure should specify the necessary information that should be submitted by the interconnection customer as part of a formal technological change request and, to the extent practicable, specify the conditions when a study will or will not be necessary. If a study is necessary, the procedure should clearly specify the information that the interconnection customer needs to provide, including study scenarios, modeling data, and any other assumptions. The procedure should also clearly indicate what types of information and/or study results are necessary from the interconnection customer and explain how the transmission provider will evaluate the technological change request. In the instance where the transmission provider performs the study, the interconnection customer may be required to tender a deposit, and the procedure should specify the amount of the study deposit and include the timeframe for the transmission provider to perform the study and return the results to the interconnection customer. If a proposed technological advancement cannot be accommodated without triggering the material modification provision of the *pro forma* LGIP or be completed through an abbreviated assessment that does not affect the interconnection customer's queue position, the Commission proposes to require the transmission provider to provide an explanation to the interconnection customer. The Commission seeks comment on

reasonable study deposits and time frames.²⁶⁵

221. Consistent with the discussion above, the Commission proposes to revise Section 4.4.2 of the *pro forma* LGIP as follows (*proposing to delete italicized text*):

4.4.2 Prior to the return of the executed Interconnection Facility Study Agreement to the Transmission Provider, the modifications permitted under this Section shall include specifically: (a) Additional 15 percent decrease in plant size (MW), and (b) Large Generating Facility technical parameters associated with modifications to Large Generating Facility technology and transformer impedances; provided, however, the incremental costs associated with those modifications are the responsibility of the requesting Interconnection Customer; and (c) *certain technological advancements for the Large Generating Facility after the submission of the interconnection request. Section 4.4.4 specifies a separate Technological Change Procedure including the requisite information and process that will be followed to assess whether the Interconnection Customer's proposed technological advancement under section 4.4.2(c) is a Material Modification. Section 1 contains a definition of technological advancements.*

222. Pursuant to this proposal, the Commission also proposes to require transmission providers to develop a definition of technological advancements in their LGIPs. This definition should consider technological changes to equipment that may achieve cost and grid performance efficiencies. Examples of technological advancements that fit within these parameters include, but are not limited to, upgrades to turbines, inverters, and plant supervisory controls.

223. This proposal should reduce barriers to the implementation of technological advancements that improve the electrical characteristics of a generating facility and that perform equally or better than the performance of previous equipment and/or provide cost efficiencies. The Commission proposes that transmission providers use sound engineering judgment to determine whether they can accommodate the proposed technological changes so that they would not require a material modification. The Commission proposes to permit interconnection customers to submit requests to incorporate technological advancements prior to the execution of the interconnection facilities study agreement, and the

²⁶³ NYISO 2016 Comments at 19.

²⁶⁴ The *pro forma* LGIP defines Material Modification as "those modifications that have a material impact on the cost or timing of any Interconnection Request with a later queue priority date." See *pro forma* LGIP at Section 1.

²⁶⁵ In its 2016 Comments, PacifiCorp proposes a \$10,000 study deposit and 30-day timeframe for the study to be performed. PacifiCorp 2016 Comments at 4-5.

Commission seeks comment as to whether this is the appropriate stage in the interconnection process to implement the technological change procedure.

5. Modeling of Electric Storage Resources for Interconnection Studies

224. The Commission proposes to require that transmission providers evaluate their methods for modeling electric storage resources for interconnection studies, identify whether their current modeling and study practices adequately and efficiently account for the operational characteristics of electric storage resources, and report to the Commission why and how their existing practices are or are not sufficient.

a. Existing Provisions and Background

225. Electric storage resources present unique interconnection challenges because they are able to both receive electricity from the grid and inject electricity onto the grid. For this reason, transmission providers must study them in a way that measures their potential impact as both generation and load. It is not currently clear to the Commission whether making electric storage resources fit into the existing procedures for generation and load is the most effective means of evaluating these interconnection requests. The fact that generation studies and load studies are often conducted separately appears to complicate the way electric storage resources are modeled during the interconnection process and was a source of frustration among interconnection customers of electric storage resources that filed post-technical conference comments.

b. Comments

226. At the 2016 Technical Conference, panelists and staff discussed the modeling of electric storage resources for interconnection studies, including potential means for interconnection studies to better reflect the intended operation of electric storage resources. The Commission requested comment on whether current interconnection studies adequately account for the operational characteristics of electric storage resources in its request for post-technical conference comments. In response, several commenters note that two changes would improve the functionality of the interconnection study process: (1) Changing the way storage is evaluated and modeled to follow California's "negative generation" approach; and (2) allowing interconnection customers to specify the

charge/discharge parameters to be used by the transmission provider in interconnection studies.²⁶⁶ Commenters also recommend that interconnection studies model the impacts of storage resources under their planned use cases and argue that they include the operational characteristics of storage and the benefits it provides for reliability.²⁶⁷ AES notes that its software eliminates the potential for voltage flicker and that transmission providers should be able to take into account that a particular interconnection customer can operate without voltage flicker.²⁶⁸

227. The RTOs/ISOs generally believe that their practices for modeling electric storage resources for interconnection studies are adequate. MISO asserts that the generator interconnection process is an appropriate process to study new storage interconnections and that only minor changes from that process are necessary for it to study storage interconnection.²⁶⁹ NYISO contends that interconnection studies currently account for the operating characteristics of electric storage resources to the extent necessary under the minimum interconnection standard. However, NYISO states that it has experienced challenges with the accuracy of modeling information used to evaluate electric storage resources in the interconnection process.²⁷⁰ ISO-NE claims that its current interconnection studies adequately account for the operational characteristics of electric storage resources.²⁷¹

228. CAISO's approach to modeling electric storage resources (or Non-Generator Resources) as "negative generation" was identified as a best practice during the 2016 Technical Conference and in the post-technical conference comments.²⁷² NextEra states that allowing electric storage resources to provide better information about their resources for interconnection studies would benefit the study process, and NYISO indicates that it has experienced challenges with the accuracy of modeling information.²⁷³ Both

²⁶⁶ See, e.g., ESA Comments at 5; RES Americas Comments at 3. The Commission notes that RES Americas would prefer a separate process but alternatively suggests using the negative generation approach. NextEra Comments at 10–11.

²⁶⁷ Energy Storage Association Comments at 7–8; RES Americas Comments at 5; California Energy Storage Alliance Comments at 11; Invenergy Comments at 28; AES comments at 3–4; NextEra Comments at 11; Xcel Comments at 18.

²⁶⁸ AES Comments at 14.

²⁶⁹ MISO Comments at 23.

²⁷⁰ NYISO Comments at 27–28.

²⁷¹ ISO-NE Comments at 28.

²⁷² ESA Comments at 5; RES Americas Comments at 3.

²⁷³ NextEra Comments at 11; NYISO Comments at 28.

NextEra's and NYISO's concern suggests that more specific information requirements for modeling electric storage resources would be appropriate.

c. Proposal

229. The Commission proposes to require that transmission providers evaluate their methods for modeling electric storage resources for interconnection studies, identify whether their current modeling and study practices adequately and efficiently account for the operational characteristics of electric storage resources, and provide their responses to the Commission in comments to this Proposed Rule regarding why and how their existing practices are or are not sufficient. Specifically, transmission providers and others should comment on whether establishing a unified model for studying electric storage resources would expedite the study process and therefore reduce the time and costs expended by the transmission providers for studying the interconnection of electric storage resources. For example, the negative-generation practice in CAISO may allow transmission providers to better account for the transitions of electric storage resources between generation and load and may better enable the use of existing generator interconnection procedures and agreements due to their treatment as negative generation instead of load. This approach to studying electric storage resources may also expedite their interconnection by allowing the transmission provider to study them as a single resource and perform one study (as opposed to separate studies for generation and load impacts). In addition, this approach may also help ensure the applicability of existing interconnection agreements and procedures to electric storage resources.

230. Additionally, commenters should describe what information electric storage resources should provide that is not already consistently provided with interconnection requests. Since transmission providers evaluate electric storage resources using existing processes for generation and load, it is unclear to the Commission whether the existing information requirements for new interconnection customers that want to interconnect electric storage resources are adequate to capture the operational characteristics of electric storage resources. Bringing electric storage resources onto the system as efficiently as possible may enhance competition in the wholesale markets and improve reliability. If there are approaches to studying electric storage resources that capture their unique

characteristics and facilitate their interconnection, the Commission would like to identify those potential improvements as best practices for all transmission providers.

V. Proposed Compliance Procedures

231. The Commission proposes to require each public utility²⁷⁴ transmission provider to submit a compliance filing within 90 days of the effective date of the final rule in this proceeding revising its LGIP and LGIA, as necessary, to demonstrate that it meets the requirements set forth in any final rule issued in this proceeding.

232. Some public utility transmission providers may have provisions in their existing LGIPs and LGIAs that the Commission has previously deemed to be consistent with or superior to the *pro forma* LGIP and *pro forma* LGIA. Where these provisions would be modified by the final rule, public utility transmission providers must either comply with the final rule or demonstrate that these previously-approved variations continue to be consistent with or superior to the *pro forma* as modified by the final rule. The Commission also proposes to permit appropriate entities to seek “regional reliability variations” or “independent entity variations” from the proposed revisions to the *pro forma*.²⁷⁵

233. The Commission will assess whether each compliance filing satisfies the proposed requirements stated above

and issue additional orders as necessary to ensure that each public utility transmission provider meets the requirements of the subsequent final rule.

234. The Commission proposes that Transmission Providers that are not public utilities will have to adopt the requirements of this Proposed Rule as a condition of maintaining the status of their safe harbor tariff or otherwise satisfying the reciprocity requirement of Order No. 888.²⁷⁶

VI. Information Collection Statement

235. The following collection of information contained in this Proposed Rule is subject to review by the Office of Management and Budget (OMB) regulations under section 3507(d) of the Paperwork Reduction Act of 1995.²⁷⁷ OMB’s regulations require approval of certain information collection requirements imposed by agency rules.²⁷⁸ Upon approval of a collection of information, OMB will assign an OMB control number and expiration date. Respondents subject to the filing requirements of this Proposed Rule will not be penalized for failing to respond to the collection of information unless the collection of information displays a valid OMB control number.

236. The reforms proposed in this Proposed Rule would revise the Commission’s *pro forma* LGIP, *pro forma* LGIA, and the Commission’s regulations in accordance with section

35.28(f)(1) of the Commission’s regulations.²⁷⁹ This Proposed Rule proposes that each public utility transmission provider will amend its LGIP and LGIA to improve the interconnection process. The Commission anticipates the revisions proposed in this Proposed Rule, once implemented, will not significantly change currently existing burdens on an ongoing basis. The Commission will submit the proposed reporting requirements to OMB for its review and approval under section 3507(d) of the Paperwork Reduction Act.²⁸⁰

237. While the Commission expects the revisions proposed in this Proposed Rule will provide significant benefits, the Commission understands that implementation can be a complex and costly endeavor. The Commission solicits comments on its need for this information, whether the information will have practical utility, the accuracy of the provided burden and cost estimates, ways to enhance the quality, utility, and clarity of the information to be collected or retained, and any suggested methods for minimizing the respondents’ burdens.

Burden Estimate and Information Collection Costs: The Commission believes that the burden estimates below are representative of the average burden on respondents. The estimated burden and cost²⁸¹ for the requirements contained in this Notice of Proposed Rulemaking follow.

FERC 516F

	Number of applicable registered entities	Annual number of responses per respondent	Total number of responses	Average burden (hours) and costs per response ²⁸³	Total annual burden hours and total annual cost
	(1)	(2) ²⁸²	(1) * (2) = (3)	(4)	(3) * (4) = (5)
Issue A1—Scheduled periodic restudies	Non-RTO/ISO (126)	Year 1—1 Year 2—0	Year 1—126 Year 2—0	Year 1—4 Year 2—0	Year 1—504. Year 2—0.
	RTO/ISO (6)	Year 1—1 Year 2—0	Year 1—6 Year 2—0	Year 1—4 Year 2—0	Year 1—24. Year 2—0.
Issue A2—Interconnection customer’s option to build	Non-RTO/ISO (126)	Year 1—1 Year 2—0	Year 1—126 Year 2—0	Year 1—4 Year 2—0	Year 1—504. Year 2—0.
	RTO/ISO (6)	Year 1—1 Year 2—0	Year 1—6 Year 2—0	Year 1—4 Year 2—0	Year 1—24. Year 2—0.
Issue A3—Self-funding by the transmission owner	Non-RTO/ISO (126)	N/A	N/A	N/A	N/A.
	RTO/ISO (6)	Year 1—1 Year 2—0	Year 1—6 Year 2—0	Year 1—4 Year 2—0	Year 1—24. Year 2—0.

²⁷⁴ A public utility is a utility that owns, controls, or operates facilities used for transmitting electric energy in interstate commerce, as defined by the FPA. See 16 U.S.C. 824(e) (2012). A non-public utility that seeks voluntary compliance with the reciprocity condition of an OATT may satisfy that condition by filing an OATT, which includes an SGIA.

²⁷⁵ See, e.g., Order No. 2003, FERC Stats. & Regs. ¶ 31,146 at PP 822–827; Order No. 2006, FERC Stats. & Regs. ¶ 31,180 at PP 546–550.

²⁷⁶ *Promoting Wholesale Competition Through Open Access Non-Discriminatory Transmission on Services by Public Utilities; Recovery of Stranded Costs by Public Utilities and Transmitting Utilities*, Order No. 888, FERC Stats. & Regs. ¶ 31,036, at 31,760–763 (1996).

²⁷⁷ 44 U.S.C. 507(d) (2012).

²⁷⁸ 5 CFR 1320.11 (2016).

²⁷⁹ 18 CFR 35.28(f)(1) (2016).

²⁸⁰ 44 U.S.C. 3507(d) (2012).

²⁸¹ The estimates for cost per response are derived using the following formula: Average Burden hours per Response * \$74.50 per Hour = Average Cost per Response. The hourly cost figure comes from the Commission average salary of \$154,647. Subject matter experts found that industry employment costs closely resemble the Commission’s regarding the FERC–516F information collection.

²⁸² Any figures labeled as “Year 2” should be considered ongoing response or burden amounts.

²⁸³ (\$154,647/year)/(2,080 hours/year) = \$74.349 per hour and is rounded to \$74.50 per hour.

FERC 516F—Continued

	Number of applicable registered entities	Annual number of responses per respondent	Total number of responses	Average burden (hours) and costs per response ²⁸³	Total annual burden hours and total annual cost
	(1)	(2) ²⁸²	(1) * (2) = (3)	(4)	(3) * (4) = (5)
Issue A4—RTO/ISO dispute resolution	Non-RTO/ISO (126) RTO/ISO (6)	N/A Year 1—1 Year 2—0	N/A Year 1—6 Year 2—0	N/A Year 1—4 Year 2—0	N/A Year 1—24. Year 2—0.

Issue B5—Interconnection study deadlines	Non-RTO/ISO (126) RTO/ISO (6)	Year 1—1 Year 2—4 Year 1—1 Year 2—4	Year 1—126 Year 2—504 Year 1—6 Year 2—24 ..	Year 1—4 Year 2—4 Year 1—4 Year 2—4	Year 1—504. Year 2—2,016. Year 1—24. Year 2—96.
Issue C1—Requesting interconnection service below generating facility capacity.	Non-RTO/ISO (126) RTO/ISO (6)	Year 1—1 Year 2—0 Year 1—1 Year 2—0	Year 1—126 Year 2—0 Year 1—6 Year 2—0	Year 1—4 Year 2—0 Year 1—4 Year 2—0	Year 1—504. Year 2—0. Year 1—24. Year 2—0.
Issue C2—Provisional agreements	Non-RTO/ISO (126) RTO/ISO (6)	Year 1—1 Year 2—0 Year 1—1 Year 2—0	Year 1—126 Year 2—0 Year 1—6 Year 2—0	Year 1—4 Year 2—0 Year 1—4 Year 2—0	Year 1—504. Year 2—0. Year 1—24. Year 2—0.
Issue C3—Utilization of surplus interconnection service.	Non-RTO/ISO (126) RTO/ISO (6)	Year 1—1 Year 2—0 Year 1—1 Year 2—0	Year 1—126 Year 2—0 Year 1—6 Year 2—0	Year 1—4 Year 2—0 Year 1—4 Year 2—0	Year 1—504. Year 2—0. Year 1—24. Year 2—0.
Issue C4—Material modification and incorporation of advanced technologies.	Non-RTO/ISO (126) RTO/ISO (6)	Year 1—1 Year 2—0 Year 1—1 Year 2—0	Year 1—126 Year 2—0 Year 1—6 Year 2—0	Year 1—4 Year 2—0 Year 1—4 Year 2—0	Year 1—504. Year 2—0. Year 1—24. Year 2—0.
Issue C5—Modeling of electric storage resources	Non-RTO/ISO (126) RTO/ISO (6)	Year 1—1 Year 2—0 Year 1—1 Year 2—0	Year 1—126 Year 2—0 Year 1—6 Year 2—0	Year 1—80 .. Year 2—0 Year 1—80 .. Year 2—0	Year 1—10,080. Year 2—0. Year 1—480 Year 2—0.
Total	Non-RTO/ISO, Year 1 Non-RTO/ISO, Ongoing RTO/ISO, Year 1 RTO/ISO, Ongoing	276 64 284 64	276 64 284 64	34,776. 8,064. 1,704. 384.	

Cost to Comply: The Commission has projected the total cost of compliance as follows:²⁸⁴

Year 1: \$2,590,812 (\$20,562/non-RTO/ISO utility), \$126,948 (\$21,158/RTO/ISO utility)²⁸⁵

Year 2: \$600,768 (\$4,768/non-RTO/ISO utility), \$28,608 (\$4,768/RTO/ISO utility)²⁸⁶

Year 1 costs reflect filing of new LGIP and LGIA language with the Commission, as well as certain efforts to review and revise existing interconnection procedures. Year 2 represents ongoing costs that the transmission provider will face on an ongoing basis to fulfill the directives of this Notice of Proposed Rulemaking. The reforms proposed in this Notice of Proposed Rulemaking, once implemented, would not significantly change existing burdens on an ongoing basis.

Title: FERC-516, Electric Rate Schedules and Tariff Filings.

Action: Proposed revision to an information collection.

OMB Control No.: TBD.

Respondents for Proposal: Businesses or other for profit and/or not-for-profit institutions.

Frequency of Information: One-time during year one. Multiple times during subsequent years.

Necessity of Information: The Commission issues this Proposed Rule to address interconnection practices that may be resulting in unjust and unreasonable or unduly discriminatory or preferential rates, terms, and conditions. The Commission seeks to improve certainty in the interconnection process, to promote more informed interconnection decisions by interconnection customers, and to enhance interconnection processes.

Internal Review: The Commission has reviewed the proposed changes and has determined that such changes are necessary. These requirements conform to the Commission's need for efficient information collection, communication, and management within the energy industry. The Commission has specific, objective support for the burden estimates associated with the information collection requirements.

²⁸⁴ The costs for Year 1 would consist of filing proposed changes to the LGIP and LGIA with the Commission within 90 days of the effective date of the final revision plus initial implementation. The costs for year 2 represent ongoing requirements that would persist in subsequent years.

²⁸⁵ Non-RTO/ISO utility costs (Year One): 34,776 hours * \$74.50 = \$2,590,812; \$2,590,812 + 126 = \$20,562. RTO/ISO utility costs: 384 hours * \$74.50 = \$28,608; \$28,608 + 6 = \$4,768.

²⁸⁶ Non-RTO/ISO utility costs (Year 2 and ongoing): 8,064 hours * \$74.50 = \$600,768; \$600,768 + 126 = \$4,768. RTO/ISO utility costs: 384 hours * \$74.50 = \$28,608; \$28,608 + 6 = \$4,768.

238. Interested persons may obtain information on the reporting requirements by contacting the following: Federal Energy Regulatory Commission, 888 First Street NE., Washington, DC 20426 [Attention: Ellen Brown, Office of the Executive Director], email: DataClearance@ferc.gov, phone: (202) 502-8663, fax: (202) 273-0873. Comments concerning the collection of information and the associated burden estimate(s) in the Proposed Rule should be sent to the Commission in this docket and may also be sent to the Office of Information and Regulatory Affairs, Office of Management and Budget, 725 17th Street NW., Washington, DC 20503 [Attention: Desk Officer for the Federal Energy Regulatory Commission, phone: (202) 395-0710, fax: (202) 395-7285]. Due to security concerns, comments should be sent electronically to the following email address: oira_submission@omb.eop.gov. Comments submitted to OMB should include FERC-516D and OMB Control No. 1902-0288.

VII. Regulatory Flexibility Act

239. The Regulatory Flexibility Act of 1980 (RFA)²⁸⁷ generally requires a description and analysis of rules that will have significant economic impact on a substantial number of small entities. The RFA does not mandate any particular outcome in a rulemaking. It only requires consideration of alternatives that are less burdensome to small entities and an agency explanation of why alternatives were rejected.

240. The Small Business Administration (SBA) revised its size standards (effective January 22, 2014) for electric utilities from a standard based on megawatt hours to a standard based on the number of employees, including affiliates. Under SBA's standards, some transmission owners will fall under the following category and associated size threshold: Electric bulk power transmission and control, at 500 employees.²⁸⁸

241. The Commission estimates that the total number of public utility transmission providers that would have to modify the LGIPs and LGIAs within their currently effective OATTs is 132. Of these, the Commission estimates that approximately 43 percent are small entities (approximately 57 entities). The Commission estimates the average total cost to each of these entities will be between \$20,562 and \$21,158 in Year

²⁸⁷ 5 U.S.C. 601-12 (2012).

²⁸⁸ 13 CFR 121.201, Sector 22 (Utilities), NAICS code 221121 (Electric Bulk Power Transmission and Control) (2016).

One and \$4,768 in subsequent years. According to SBA guidance, the determination of significance of impact "should be seen as relative to the size of the business, the size of the competitor's business, and the impact the regulation has on larger competitors."²⁸⁹ The Commission does not consider the estimated burden to be a significant economic impact. As a result, the Commission certifies that the revisions proposed in this Proposed Rule will not have a significant economic impact on a substantial number of small entities.

VIII. Environmental Analysis

242. The Commission is required to prepare an Environmental Assessment or an Environmental Impact Statement for any action that may have a significant adverse effect on the human environment.²⁹⁰ The Commission concludes that neither an Environmental Assessment nor an Environmental Impact Statement is required or the revisions proposed in this Proposed Rule under section 380.4(a)(15) of the Commission's regulations, which provides a categorical exemption for approval of actions under sections 205 and 206 of the FPA relating to the filing of schedules containing all rates and charges for the transmission or sale of electric energy subject to the Commission's jurisdiction, plus the classification, practices, contracts and regulations that affect rates, charges, classification, and services.²⁹¹ The revisions proposed in this Proposed Rule fall within the categorical exemptions provided in the Commission's regulations, and as a result neither an Environmental Impact Statement nor an Environmental Assessment is required.

IX. Comment Procedures

243. The Commission invites persons to submit comments on the matters and issues proposed in this Notice of Proposed Rulemaking to be adopted, including any related matters or alternative proposals that commenters may wish to discuss. Comments are due March 14, 2017. Comments must refer to Docket No. RM17-8-000, and must include the commenter's name, the

²⁸⁹ U.S. Small Business Administration, *A Guide for Government Agencies How to Comply with the Regulatory Flexibility Act*, at 18 (May 2012), https://www.sba.gov/sites/default/files/advocacy/rfaguide_0512_0.pdf.

²⁹⁰ *Regulation Implementing National Environmental Policy Act of 1969*, Order No. 486, FERC Stats. & Regs. ¶ 30,783 (1987).

²⁹¹ 18 CFR 380.4(a)(15) (2016).

organization they represent, if applicable, and their address.

244. The Commission encourages comments to be filed electronically via the eFiling link on the Commission's Web site at <http://www.ferc.gov>. The Commission accepts most standard word processing formats. Documents created electronically using word processing software should be filed in native applications or print-to-PDF format and not in a scanned format. Commenters filing electronically do not need to make a paper filing.

245. Commenters that are not able to file comments electronically must send an original of their comments to: Federal Energy Regulatory Commission, Secretary of the Commission, 888 First Street NE., Washington, DC 20426.

246. All comments will be placed in the Commission's public files and may be viewed, printed, or downloaded remotely as described in the Document Availability Section below. Commenters on this proposal are not required to serve copies of their comments on other commenters.

X. Document Availability

247. In addition to publishing the full text of this document in the **Federal Register**, the Commission provides all interested persons an opportunity to view and/or print the contents of this document via the Internet through the Commission's Home Page (<http://www.ferc.gov>) and in the Commission's Public Reference Room during normal business hours (8:30 a.m. to 5:00 p.m. Eastern time) at 888 First Street NE., Room 2A, Washington, DC 20426.

248. From the Commission's Home Page on the Internet, this information is available on eLibrary. List of Subjects

18 CFR Part 35

Electric power rates. Electric utilities, Reporting and recordkeeping requirements.

18 CFR Part 37

Electric power rates, Electric utilities, Reporting and recordkeeping requirements.

By direction of the Commission.

Dated: December 15, 2016.

Nathaniel J. Davis, Sr.,

Deputy Secretary.

In consideration of the foregoing, the Commission proposes to amend Parts 35 and 37 Chapter I, Title 18, *Code of Federal Regulations*, as follows.

PART 35—FILING OF RATE SCHEDULES AND TARIFFS

■ 1. The authority citation for Part 35 continues to read as follows:

Authority: 16 U.S.C. 791a–825r; 2601–2645; 31 U.S.C. 9701; 42 U.S.C. 7101–7352.

■ 2. Amend § 35.28 by adding paragraph (g)(9) to read as follows:

§ 35.28 Non-discriminatory open access transmission tariff.

* * * * *

(g) * * *

(9) *Generator Interconnection Dispute Resolution Procedures.* Every Commission-approved independent system operator or regional transmission organization tariff must contain provisions governing generator interconnection dispute resolution procedures to allow a disputing party to unilaterally initiate dispute resolution procedures under the respective tariff. Such provisions must provide for independent system operator or regional transmission organization staff

member(s) or utilize subcontractor(s) to serve as the neutral decision-maker(s) or presiding staff member(s) or subcontractor(s) to the dispute resolution procedures. Such staff participating in dispute resolution procedures shall not have any current or past substantial business or financial relationships with any party. Additionally, such dispute resolution procedures must account for the time sensitivity of the generator interconnection process.

PART 37—OPEN ACCESS SAME-TIME INFORMATION SYSTEMS

■ 1. The authority citation for Part 37 continues to read as follows:

Authority: 5 U.S.C. 551–557; 16 U.S.C. 791a–825r; 31 U.S.C. 9701; 42 U.S.C. 7107–7352.

■ 2. Amend § 37.6 by adding paragraph (l) as follows:

§ 37.6 Information to be posted on the OASIS

* * * * *

(l) *Posting of congestion and curtailment data.* (1) The Transmission Provider must post on OASIS information as to congestion data representing:

(i) Total hours of curtailment on all interfaces;

(ii) Total hours of Transmission Provider-ordered generation curtailment and transmission service curtailment due to congestion on that facility or interface;

(iii) The cause of the congestion (*e.g.*, a contingency or an outage); and

(iv) Total megawatt hours of curtailment due to lack of transmission for that month.

(2) This data shall be posted on a monthly basis by the 15th day of the following month and shall be posted in one location on the OASIS. The Transmission Provider should maintain this data for a minimum of three years.

42 CFR Parts 409, 410, 418, et al.

Medicare and Medicaid Program: Conditions of Participation for Home Health Agencies; Final Rule

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Medicare & Medicaid Services

42 CFR Parts 409, 410, 418, 440, 484, 485 and 488

[CMS-3819-F]

RIN 0938-AG81

Medicare and Medicaid Program: Conditions of Participation for Home Health Agencies

AGENCY: Centers for Medicare & Medicaid Services (CMS), HHS.

ACTION: Final rule.

SUMMARY: This final rule revises the conditions of participation (CoPs) that home health agencies (HHAs) must meet in order to participate in the Medicare and Medicaid programs. The requirements focus on the care delivered to patients by HHAs, reflect an interdisciplinary view of patient care, allow HHAs greater flexibility in meeting quality care standards, and eliminate unnecessary procedural requirements. These changes are an integral part of our overall effort to achieve broad-based, measurable improvements in the quality of care furnished through the Medicare and Medicaid programs, while at the same time eliminating unnecessary procedural burdens on providers.

DATES: These regulations are effective on July 13, 2017.

FOR FURTHER INFORMATION CONTACT: Danielle Shearer (410) 786-6617. Mary Rossi-Coajou (410) 786-6051. Maria Hammel (410) 786-1775.

SUPPLEMENTARY INFORMATION:

I. Background Information

A. The Home Health Benefit

Home health services are covered for the elderly and disabled under the Hospital Insurance (Part A) and Supplemental Medical Insurance (Part B) benefits of the Medicare program, and are described in section 1861(m) of the Social Security Act (the Act). These services, provided under a plan of care that is established and periodically reviewed by a physician, must be furnished by, or under arrangement with, a home health agency (HHA) that participates in the Medicare or Medicaid programs. Services are provided on a visiting basis in the beneficiary's home, and may include the following:

- Part-time or intermittent skilled nursing care furnished by or under the

supervision of a registered professional nurse.

- Physical therapy, speech-language pathology, and occupational therapy.
- Medical social services under the direction of a physician.
- Part-time or intermittent home health aide services.
- Medical supplies (other than drugs and biologicals) and durable medical equipment.
- Services of interns and residents if the HHA is owned by or affiliated with a hospital that has an approved medical residency training program.
- Services at hospitals, skilled nursing facilities, or rehabilitation centers when the services involve equipment too cumbersome to bring to the home.

Under the authority of sections 1861(o) and 1891 of the Act, the Secretary has established in regulations the requirements that an HHA must meet to participate in the Medicare program. These requirements are set forth in regulations at 42 CFR part 484, Home Health Services. Current regulations at 42 CFR 440.70(d) specify that HHAs participating in the Medicaid program must also meet the Medicare Conditions of Participation (CoPs). Section 1861(o)(6) of the Act requires that an HHA must meet the CoPs specified in section 1891(a) of the Act, and other CoPs as the Secretary finds necessary in the interest of the health and safety of patients. Section 1891(a) of the Act establishes specific requirements for HHAs in several areas, including patient rights, home health aide training and competency, and compliance with applicable federal, state, and local laws. The CoPs for HHAs protect all individuals under the HHA's care, unless a requirement is specifically limited to Medicare beneficiaries. Section 1861(o) of the Act describes an HHA for purposes of participation in the Medicare program. All the requirements are stated generally, and are applicable to the HHA's overall activity, not specifically to Medicare patients. This provision, which was reaffirmed by the Congress in the Omnibus Budget Reconciliation Act (OBRA), 1987 amendments to section 1891(a) of the Act, has been in the law since the inception of the Medicare program, and CMS' interpretation of it has remained the same. Under section 1891(b) of the Act, the Secretary is responsible for assuring that the CoPs, and their enforcement, are adequate to protect the health and safety of individuals under the care of an HHA, and to promote the effective and efficient use of Medicare funds. To implement this requirement, State

Survey Agencies and CMS-approved accrediting organizations conduct surveys of HHAs to determine whether they are complying with the CoPs.

B. Previous HHA Conditions of Participation Rules

On March 10, 1997 (62 FR 11004), we published a proposed rule, entitled, "Revision of the Conditions of Participation for Home Health Agencies and Use of the Outcome and Assessment Information Set (OASIS) as Part of the Revised Conditions of Participation for Home Health Agencies," that would have revised the entire set of HHA CoPs. Due to the significant volume of public comments and the rapidly changing nature of the HHA industry at that time, this rule, in its entirety, was never finalized.

Rather than finalizing all portions of the March 1997 rule, we published a final regulation (64 FR 3764, January 25, 1999) that only finalized the OASIS regulations. The January 1999 final rule required that each patient receive from the HHA a patient-specific, comprehensive assessment that identifies the patient's medical, nursing, rehabilitation, social, and discharge planning needs.

We also issued an interim final rule with comment period on the same day (64 FR 3748) that required HHAs to use the OASIS data collection instrument that standardizes parts of the assessment and to transmit the data to CMS. That rule implemented sections 1891(c)(2)(C) and 1891(d)(1) of the Act, which require the Secretary to establish a standardized assessment instrument for measuring the quality of care and services furnished by HHAs. The OASIS data collection instrument and data transmission rule was finalized on December 23, 2005 (70 FR 76199).

Although the OASIS requirements were finalized in separate rules, we intended to proceed with another rule to finalize the remainder of the requirements of the March 1997 proposed rule. However, section 902 of the Medicare Prescription Drug, Improvement, and Modernization Act of 2003 (MMA) added section 1871(a)(3) to the Act. This section provided that, effective December 8, 2003, the Secretary, in consultation with the Director of the Office of Management and Budget (OMB), would have to establish and publish regular timelines for the publication of Medicare proposed regulations based on the previous publication of Medicare proposed or interim final regulations. Section 902 of the MMA further provided that the timeline could vary among different regulations, but could

not be longer than 3 years, except under exceptional circumstances. Pursuant to the MMA, we issued a notice implementing this provision in the **Federal Register** on December 30, 2004 (69 FR 78442). In that notice, we interpreted section 902 as rendering ineffective any proposed Medicare regulations that had been outstanding for 3 years or more as of December 8, 2003; this included the proposed HHA CoPs. Therefore, out of an abundance of caution, we decided not to finalize the remaining provisions of the March 10, 1997 proposed rule, but begin rulemaking again.

On October 9, 2014, we set forth proposed rules for HHAs that choose to participate in Medicare and Medicaid (79 FR 61164). We proposed to revise all of the existing CoPs, and to add several new CoPs to address aspects of home health care that we believe need attention.

C. Transforming the HHA Conditions of Participation

As the single largest payer for health care services in the United States, the Federal government assumes a critical responsibility for the delivery and quality of care furnished under its programs. Historically, we have adopted a quality assurance approach that has been directed toward identifying health care providers that furnish poor quality care or fail to meet minimum Federal standards. Facilities not meeting requirements would either correct the inappropriate practice(s) or would be terminated from participation in the Medicare or Medicaid programs. We have found that this problem-focused approach has inherent limits. Ensuring quality through the enforcement of prescriptive health and safety standards, rather than improving the quality of care for all patients, has resulted in expending much of our resources on dealing with marginal providers, rather than on stimulating broad-based improvements in the quality of care delivered to all patients.

Obtaining quality health care for Federal beneficiaries from CMS-certified providers and suppliers requires taking advantage of continuing advances in the health care delivery field. As a result, we are revising the home health agency requirements to focus on a patient-centered, data-driven, outcome-oriented process that promotes high quality patient care at all times for all patients. Before we began development of new proposed CoPs for Medicare and Medicaid participating HHAs, we received recommendations from home health providers, professional associations and practitioner

communities, consumer advocates and state and other governmental agencies with an interest or responsibility in HHA regulation and oversight. We also took into account the comments that were submitted by the public on the March 1997 proposed rule and suggestions submitted by the HHA industry in the summer of 2011, as well as developments since that time within the industry. In light of this information, we have used the following principles to assist in the development of the new HHA CoPs:

- Develop a more continuous, integrated care process across all aspects of home health services, based on a patient-centered assessment, care planning, service delivery, and quality assessment and performance improvement.

- Use a patient-centered, interdisciplinary approach that recognizes the contributions of various skilled professionals and their interactions with each other to meet the patient's needs. Stress quality improvements by incorporating an outcome-oriented, data-driven, quality assessment and performance improvement program specific to each HHA.

- Eliminate the focus on administrative process requirements that lack adequate consensus or evidence that they are predictive of either achieving clinically relevant outcomes for patients or preventing harmful outcomes for patients.

- Safeguard patient rights. We believe that the overall approach of the CoPs provides HHAs with greatly enhanced flexibility. At the same time, we believe the new requirements improve performance results for HHAs, in terms of achieving needed and desired outcomes for patients, and increasing patient satisfaction with services provided.

D. Organization of This Rule

This final rule is organized in the following manner:

- *Background Information.* This section summarizes the Home Health benefit, previous HHA CoP rules, and transforming the HHA CoP.

- *Provisions of the Proposed Regulations.* This section briefly summarizes all of the proposed requirements in numerical order by CoP number.

- *Home Health Crosswalk.* This section cross references former requirements to their new location.

- *Analysis of and Responses to Public Comments.* This section summarizes and responds to all public comments

that were received in numerical order by CoP number.

- *Provisions of the Final Rule.* This section lists all changes that were made from the proposed version of the rule to the final version of the rule.

- *Good Cause to Waive Notice and Comment Rulemaking.* This section explains why notice-and-comment is impracticable, unnecessary, or contrary to the public interest.

- *Collection of Information and Regulatory Impact Analysis.* These sections describe the anticipated estimated burdens and savings that will result from the implementation of this final rule in a statistically typical HHA.

- *Regulatory Text.* This section sets forth the regulations that are being finalized in this rule.

II. Provisions of the Proposed Regulations

A. Overview

We proposed to make extensive changes in the organizational scheme to group together all CoPs directly related to patient care and place them near the beginning of part 484. Regulations concerning the organization and administration of an HHA would follow in a separate subpart entitled "Organizational Environment."

B. Proposed Subpart A, General Provisions

We proposed to reorganize this section to clarify the basis and scope of this part. Part 484 is based on sections 1861(o) and 1891 of the Act, which establish the conditions that an HHA must meet in order to participate in the Medicare program. Part 484 is also based on section 1861(z) of the Act, which specifies the institutional planning standards that HHAs must meet. These provisions serve as the basis for survey activities for the purposes of determining whether an agency meets the requirements for participation in Medicare.

At § 484.2, we proposed to clarify some of the definitions for terms used in the HHA CoPs. We proposed to modify the definition for "branch office" by adding the requirement that the parent agency offer more than the sharing of services; specifically, that it provide supervision and administrative control of branches on a daily basis to the extent that the branch depends upon the parent agency's supervision and administrative functions in order to meet the CoPs, and could not do so as an independent entity. Though the definition would no longer require the branch office to be "sufficiently close," the parent agency would have to be

available to meet the needs of any situation and respond to issues that could arise with respect to patient care or administration of the agency. A violation of a CoP in one branch office would apply to the entire HHA.

We also proposed minor changes in the language of the current definitions for “clinical note,” “parent home health agency,” “proprietary agency,” and “subdivision.” We also proposed to eliminate current definitions of the terms “bylaws” and “supervision,” “home health agency,” “progress notes,” and “subunit.” On the effective date of this rule, any existing subunits, which already operate under their own provider number, will be considered distinct HHAs and will be required to independently meet all CoPs, including having an independent governing body and administrator. Subject to state-specific laws and regulations, this federal regulatory change will permit a subunit to apply to become a branch of its existing parent HHA if the parent provides “. . . direct support and administrative control” of the branch. The State Survey Agency and CMS Regional Office will continue to be responsible for approving an HHA’s application for a branch office, in accordance with current CMS guidance as set out in various survey and certification letters and section 2182.4B of the State Operations Manual. No new subunits will be approved upon implementation of this regulation, only “branch offices.”

Finally, we proposed to add definitions for the terms “in advance,” “quality indicator,” “representative,” “supervised practical training,” and “verbal order.” We proposed to define the term “representative” in a patient-centered manner that enables patients to choose their representatives, if they wish to do so. We proposed to define the term “verbal orders” to mean those physician orders that are delivered verbally (meaning spoken), by the physician, to a nurse or other qualified medical personnel, and recorded in the plan of care.

As discussed in detail in section III.D.4 of this preamble, we proposed modifications to the current personnel qualifications requirements, and proposed to relocate those requirements to § 484.80, “Home health aide services,” and § 484.115, “Personnel qualifications.”

We also proposed to retain the current definitions of “primary home health agency,” “public agency,” and “summary report” without change.

C. Proposed Subpart B, Patient Care

1. Release of Patient Identifiable OASIS Information (Proposed § 484.40)

At § 484.40, we proposed to recodify the current requirements of § 484.11, which require an HHA and its agents to ensure the confidentiality of all patient-identifiable information in the clinical record, including the OASIS data.

2. Reporting OASIS Information (Proposed § 484.45)

In this CoP, we proposed to include most of the current requirements of § 484.20, which relate to the electronic reporting of the OASIS data. We proposed to remove the requirement that an HHA transmit data using electronic communications software that provides a direct telephone connection from the HHA to the state agency or CMS OASIS contractor. In its place, we proposed to add a requirement that the OASIS data be transmitted in accordance with current CMS transmission policy, which currently requires HHAs to transmit data using electronic communications software that complies with the Federal Information Processing Standard (FIPS 140–2, issued May 25, 2001).

3. Patient Rights (Proposed § 484.50)

At § 484.50, we proposed revised patient rights provisions under six standards: (1) Notice of rights; (2) Exercise of rights; (3) Rights of the patient; (4) Transfer and discharge; (5) Investigation of complaints; and (6) Accessibility. In proposed § 484.50(a), we stated that each patient and patient representative (if the patient has one), would have the right to be informed of his or her rights in a language and manner the individual understands.

More specifically, under § 484.50(a)(1), we proposed that the HHA provide the patient and patient’s representative with verbal notice of the patient’s rights in the primary or preferred language of the patient or representative, and in a manner that the individual can understand, during the initial evaluation visit, and in advance of care being furnished by the HHA. We also proposed to require that the patient be provided a written copy of the patient rights information. The written information would be required to be provided in alternate formats free of charge for persons with disabilities, when necessary, to ensure effective communication. In addition, written notice would be required to be understandable to persons who had limited English proficiency. Furthermore, HHAs would be required to inform patients of the availability of

the services and instruct patients how to access those services.

Proposed § 484.50(a) (2) would require the HHA to provide each patient with specific business contact information for the HHA’s administrator so that patients and caregivers could report complaints and specific patient rights violations to the HHA administrator, and could ask questions about the care being provided. We also proposed at § 484.50(a)(3) that the HHA provide a copy of the OASIS privacy notice to all patients from whom the OASIS data are collected at the same time that the general notice of rights is provided to the patient. Finally, at § 484.50(a)(4), we proposed to require that the HHA obtain the patient’s or representative’s signature confirming that he or she received a copy of the notice of rights and responsibilities.

At § 484.50(b), “Exercise of rights,” we proposed that, in the event that a patient was declared incompetent under state law by a court of proper jurisdiction, the rights of that patient could be exercised by the person appointed by the state court. If a state court had not made a declaration, any representative, as chosen by the patient, could exercise the rights of the patient in accordance with the patient’s preferences. In situations where a patient has been adjudged to lack legal capacity under state law by a court of proper jurisdiction, the patient would be allowed to exercise his or her rights to the extent allowed by the court order.

Proposed § 484.50(c) set forth the explicit rights of each home health patient. At § 484.50(c) (1), we proposed that the patient would have a right to have his or her property and person treated with respect. At § 484.50(c) (2), we proposed that the patient would have a right to be free from verbal, mental, sexual and physical abuse, including injuries of unknown source, neglect, and misappropriation of property. Under proposed § 484.50(c)(3), the patient would have a right to make complaints to the HHA regarding treatment or care that was (or failed to be) furnished which the patient and/or their family believe was inappropriate. Under proposed § 484.50(c)(4), patients and their representatives would also have the right to participate in, be informed about, and consent to or refuse care. Moreover, each patient would have the right to participate in and be informed about the patient-specific comprehensive assessment, including an assessment of the patient’s goals and care preferences. Additionally, each patient would have the right to participate in and be informed about the care that the HHA plans to furnish

based on the needs identified during the comprehensive assessment, establishing and revising that plan, the disciplines that will furnish care, the frequency of visits, identifying expected outcomes of care, and any factors that could impact treatment effectiveness. In accordance with proposed § 484.50(c)(4)(iii), each patient would also have the right to receive a copy of his or her individualized HHA plan of care, including all updated plans of care, as described in proposed § 484.60. HHAs would be required at § 484.50(c)(4)(viii) to inform the patient about any changes in the care to be furnished in advance of those changes being made in the patient's plan of care. In addition to being involved in the care planning process, we proposed to add a requirement at § 484.50(c)(5) that patients have the right to receive all of the services outlined in the plan of care. Additionally, we proposed to retain the current requirements from current § 484.10(d), which concern the patient's right to the confidentiality of his or her clinical records, under proposed § 484.50(c)(6). Proposed § 484.50(c)(7) would retain the requirements of the current standard at § 484.10(e), Patient liability for payment. This patient liability requirement would be related to the home health advance beneficiary notice (ABN) and home health change of care notices; therefore, we proposed to reference the current requirements at § 411.408(d)(2) and § 411.408(f). HHAs would be required to comply with all ABN requirements, including restrictions related to who may receive the ABN on the patient's behalf.

At § 484.50(c)(8), we proposed that a patient would have the right to receive proper written notice, in advance of a specific service being furnished, if the HHA believes that the service may be non-covered care; or in advance of the HHA reducing or terminating on-going care. We proposed to incorporate a cross-reference to the regulations regarding expedited reviews, found at 42 CFR part 405, subpart J.

We proposed to retain the current regulations regarding the home health hotline at proposed § 484.50(c)(9). Patients would be advised that the purpose of the hotline was to receive complaints or questions about local HHAs. Additionally, under § 484.50(c)(10), patients would be advised of the names, addresses, and telephone numbers for relevant federally and state-funded consumer information, consumer protection, and advocacy agencies.

We also proposed at § 484.50(c)(11), that patients have the right to be free from discrimination or reprisal for

exercising their rights, whether by voicing grievances to the HHA or to an outside entity. Finally, we proposed at § 484.50(c)(12) that patients have the right to be informed of their right to access auxiliary aids and language services, and to be provided instruction on how to access these services.

We proposed to add a new standard at § 484.50(d), which would mandate that all patients and representatives (if any), have the right to be informed of the HHA's policies governing admission, transfer, and discharge in advance of the HHA providing care. This proposed standard set forth the criteria by which an HHA could discharge or transfer a patient. Under this proposed standard, an HHA could only transfer, discharge, or terminate care for the following reasons: (1) If the physician responsible for the HHA plan of care and HHA agreed that the HHA could no longer meet the patient's needs, based on the patient's acuity; (2) when the patient or payer could no longer pay for the services provided by the HHA; (3) if the physician responsible for the HHA plan of care and HHA agreed that the patient no longer needed HHA services because the patient's health and safety had improved or stabilized sufficiently; (4) when the patient refused HHA services or otherwise elected to be transferred or discharged (including if the patient elected the Medicare hospice benefit); (5) when there was cause; (6) when a patient died; or (7) when the HHA ceased to operate.

In accordance with the requirements of proposed § 484.50(d)(1), if the care needs of a patient exceeded the HHA's ability to provide services, the HHA would be required to ensure that the patient received a safe and appropriate transfer to another care entity better suited to meeting the patient's needs.

We proposed to specify at § 484.50(d)(5) that we would permit discharge for cause if the patient's (or other persons in the patient's home) behavior was so disruptive, abusive, or uncooperative that the delivery of care to the patient or the ability of the HHA to operate effectively and safely was seriously impaired. Before discharging a patient for cause, the HHA would be required to advise the patient, the representative (if any), the physician who was responsible for the home health plan of care, and the patient's primary care practitioner or other health care professional who would be responsible for providing care and services to the patient after discharge from the HHA (if any) that a discharge for cause was being considered, make efforts to resolve the problem(s)

presented by the patient's behavior or by other person(s) in the home (as applicable), or situation (such as a dangerous animal being loose in the home), document the problem(s) and efforts made to resolve the problem(s), and enter this documentation into its clinical records. Additionally, we proposed that the HHA would be required to provide the patient and representative (if any), with contact information for other agencies or providers who were potentially able to provide care following the discharge.

Given the vulnerability of home health patients and in the interest of patient safety, we proposed a standard at § 484.50(e), "Investigation of complaints," that would require the HHA to investigate complaints made by patients, representatives, caregivers, and families regarding treatment or care that was (or failed to be) furnished, or was furnished inconsistently or inappropriately. In addition, HHAs would be required to investigate allegations of mistreatment, neglect, or verbal, mental, psychosocial, sexual, and physical abuse, including injuries of unknown source, and misappropriation of patient property by anyone furnishing services on behalf of the HHA. Proposed § 484.50(e)(1)(ii) would require the HHA to document both the existence and the resolution of the complaint, while § 484.50(e)(1)(iii) would require the HHA to take immediate action to prevent further potential abuse while the complaint was being investigated.

Proposed § 484.50(e)(2) would require any HHA staff, regardless of whether they are employed directly or obtained under arrangements with another entity, to immediately report to the HHA or other appropriate authorities any incidences of mistreatment, neglect, or abuse, and/or any misappropriation of patient property, which they have noticed during the normal course of providing services to patients.

To address effective communication with patients who are limited English proficiency (LEP) or have disabilities, we proposed a new standard at § 484.50(f), "Accessibility." We proposed that information that is provided to patients would have to be provided to the individual in plain language, and in a manner that is both accessible and timely.

In accordance with the requirements of the Medicare provider agreement, HHAs must not discriminate against Medicare beneficiaries, and if a participating HHA accepts non-Medicare patients at any given level of acuity, it must also accept Medicare beneficiaries at a similar level of acuity

as a condition of participating in the Medicare program. HHAs that provide services to non-Medicare patients while refusing services to Medicare patients in similar situations risk having their provider agreements terminated, in accordance with § 489.53(a)(2).

4. Comprehensive Assessment of Patients (Proposed § 484.55)

We proposed to retain the majority of the substantive requirements of current § 484.55, with significant reorganization. We proposed to retain the requirement that each patient be required to receive a patient-specific comprehensive assessment. We also proposed to retain the requirement that, for Medicare beneficiaries, the HHA would be required to verify the patient's eligibility for the Medicare home health benefit, including the patient's homebound status, at the specified timeframes. Furthermore, we proposed to retain all requirements related to the initial assessment visit at standard (a), as well as the completion of the comprehensive assessment requirements at standard (b).

We proposed to establish a new standard (c), "Content of the comprehensive assessment," that would incorporate much of the content currently set forth in the introductory paragraph of the CoP, the drug regimen review currently set forth in standard (c), and the incorporation of the OASIS data items requirement currently set forth at standard (e). We also proposed new content requirements, such as an assessment of psychosocial and cognitive status, which we believe would provide for a more holistic patient assessment. We believe that these assessment areas are essential in the establishment of a more complete understanding of the patient's condition (both medically and non-medically), strengths and limitations, preferences, and risk factors. Developing a more complete understanding of the patient will enable HHAs and physicians to develop a plan of care that is more comprehensive and more likely to achieve desired outcomes. We proposed to require that the comprehensive assessment must accurately reflect the patient's status, and would assess or identify (as applicable) the following:

- The patient's current health, psychosocial (new), functional (new), and cognitive (new) status;
- The patient's strengths, goals, and care preferences, including the patient's progress toward achievement of the goals identified by the patient and the measurable outcomes identified by the HHA (new);

- The patient's continuing need for home care;
- The patient's medical, nursing, rehabilitative, social, and discharge planning needs;
- A review of all medications the patient is currently using;
- The patient's primary caregiver(s), if any, and other available supports (new); and
- The patient's representative (if any) (new).

The assessment would also be required to incorporate items from the information collection set out in the OASIS data set, using the language and groupings of the OASIS items, as specified by the Secretary.

We proposed to retain the majority of the content of the requirements of current § 484.55(d), with one change. We proposed to revise § 484.55(d)(2) to allow for a physician-ordered resumption of care date. Adding the physician ordered resumption of care date as an alternative to the fixed 48 hour time frame for a post-hospital reassessment allows physicians to specify a resumption of care date that is tailored to the particular needs and preferences of each patient.

5. Care Planning, Coordination of Services, and Quality of Care (Proposed § 484.60)

We proposed to create a new condition of participation, "Care planning, coordination of services, and quality of care" at § 484.60. This section would specify that the HHA would have to provide the patient a plan of care that would set out the care and services necessary to meet the patient-specific needs identified in the comprehensive assessment, and the outcomes that the HHA anticipates would occur as a result of developing the individualized plan of care and subsequently implementing its elements.

In the CoP, we proposed that patients be accepted for treatment on the basis of a reasonable expectation that the patient's medical, nursing, rehabilitative, and social needs could be met adequately by the agency in the patient's place of residence. Each patient would receive an individualized written plan of care which would specify the care and services necessary to meet the patient's needs, including the patient and caregiver education and training that the HHA will provide, specific to the patient's care needs. The individualized plan of care would be revised or added to at intervals as necessary to continue to meet patient care needs. We also proposed that the plan of care include the patient-specific measurable outcomes which the HHA

anticipates would result from its implementation.

Under proposed § 484.60(a)(1), Plan of care, we proposed that all home health services furnished to patients would follow an individualized written plan of care, setting out, among other things, the frequency and duration of therapeutic interventions. The plan would be established, periodically reviewed, and signed by a doctor of medicine, osteopathy, or podiatric medicine acting within the boundaries of all applicable state laws and regulations. Under paragraph (a)(2), the individualized plan of care would be required to include all pertinent diagnoses; the patient's mental, psychosocial, and cognitive status; the types of services, supplies, and equipment required; the frequency and duration of visits to be made; prognosis; rehabilitation potential; functional limitations; activities permitted; nutritional requirements; all medications and treatments; safety measures to protect against injury; patient and caregiver education and training to facilitate timely discharge or referral; patient-specific measurable outcomes/goals; and any additional interventions/orders the HHA or physician chose to include.

Under paragraph (a)(3), if HHA services are initiated following a patient's hospital discharge, we proposed to require that the HHA include an assessment of the patient's level of risk for hospital emergency department visits and hospital readmission. We proposed that HHAs would be required to include in the patient's individualized plan of care all appropriate interventions that are necessary to address and mitigate identified risk factors that contribute to the HHA's establishment of a particular risk level for a patient.

Proposed § 484.60(b), "Conformance with physician orders," would provide that drugs, services, and treatments be administered only as ordered by the physician who is responsible for the home health plan of care. We proposed to retain the current influenza and pneumococcal vaccination requirement at § 484.60(b)(2). Proposed § 484.60(b)(3) would maintain the requirement that only personnel authorized by applicable state laws and regulations and the HHA's internal policies, may accept verbal orders from physicians. We proposed at § 484.60(b)(4) that a registered nurse (RN) or other qualified practitioner licensed to practice by the state must document a verbal order in writing in the patient's clinical record, with a signature, time, and date. Verbal orders would also have to be recorded in the patient's plan of care. If a

physician faxed orders or otherwise transmitted them through other electronic methods from his or her office, those orders would also be required to be included in the patient's clinical record and plan of care. We would also require that verbal orders be authenticated, dated, and timed by the physician according to the HHA's internal policies and applicable state laws and regulations.

Under § 484.60(c), "Review and revision of the plan of care," we proposed that the individualized plan of care be reviewed and revised by the physician who was responsible for the HHA plan of care and the HHA as frequently as the patient's condition or needs requires, but no less frequently than once every 60 days, beginning with the start of care date. We proposed that the HHA promptly alert the physician who is responsible for the HHA plan of care to any changes in the patient's condition or needs that would suggest that measurable outcomes are not being achieved and/or that the HHA should alter the plan. At § 484.60(c)(2), we proposed to require that the HHA revise the plan of care, as necessary, to reflect current information from the patient's updated comprehensive assessment, and to record the patient's progress towards meeting the patient-specific measurable outcomes and goals selected by the HHA and patient, as specified in the plan of care.

Furthermore, we proposed at paragraph (c)(3) that it would be the HHA's responsibility to notify the patient, representative (if any), caregivers, and the physician who is responsible for the HHA plan of care, when the individualized plan of care is updated due to a significant change in the patient's health status. We also proposed that, when the HHA makes updates related to plans for the patient's discharge, the HHA would communicate these changes with the patient and representative, caregivers, the physician who is responsible for the HHA plan of care, and the patient's primary care practitioner or other health care professional who will be responsible for providing care and services (if any) to the patient after discharge from the HHA.

In § 484.60(d), "Coordination of care," we proposed in paragraph (d)(1) to require that the HHA must integrate services, whether services are provided directly or under arrangement, to assure the identification of patient needs and factors that could affect patient safety and treatment effectiveness, the coordination of care provided by all disciplines, and communication with the physician. The proposed standard at

§ 484.60(d)(2) would also require the HHA to coordinate care delivery to meet each patient's needs, and to involve the patient, representative (if any), and caregiver(s), as appropriate, in the coordination of care activities. Finally, under proposed § 484.60(d)(3), we proposed that the HHA ensure that each patient and caregiver, where applicable, receive ongoing training and education from the HHA regarding the care and services identified in the plan of care that the patient and caregiver are expected to implement. The HHA would be required to ensure that each patient and caregiver receives any training necessary for a timely discharge from the HHA. Each skilled professional would be expected to be responsible for educating the patient and/or caregiver about the care and services as appropriate to the discipline.

At § 484.60(e), "Discharge or transfer summary," we proposed that HHAs be required to compile a discharge or transfer summary for each discharged or transferred patient. The summary would be required to include the following:

- The initial reason for referral to the HHA;
- A brief description of the patient's HHA care;
- A description of the patient's clinical, mental, psychosocial, cognitive, and functional status at the start of care;
- A list of all services provided by the HHA to the patient;
- The start and end dates of HHA care;
- A description of the patient's clinical, mental, psychosocial, cognitive, and functional status at the end of care;
- The patient's most recent drug profile;
- Any recommendations for follow-up care;
- The patient's current individualized plan of care; and
- Any additional documentation that would assist in the continuity of post-discharge or transfer care, or that was requested by the receiving practitioner or facility.

6. Quality Assessment and Performance Improvement (QAPI) (Proposed § 484.65)

As part of our effort to reduce medical errors, and improve the quality of health care in all settings, we propose to replace two current HHA CoPs, § 484.16, "Group of professional personnel," and § 484.52, "Evaluation of the agency's program," with a single, new CoP, at § 484.65, "Quality Assessment and Performance Improvement" (QAPI). We have

organized this new CoP into the following five standards: (1) Program scope; (2) Program data; (3) Program activities; (4) Performance improvement projects; and (5) Executive responsibilities.

In § 484.65(a), "Program scope," we proposed that this data-driven QAPI program would be capable of showing measurable improvement in indicators for which there was evidence that the improvement led to improved health outcomes (for example, reduced hospitalizations and readmissions), safety, and quality of care for patients. The HHA would also have to measure, analyze, and track quality indicators, including adverse patient events, as well as other indicators of performance so that the agency could adequately assess its processes, services, and operations.

We proposed, at § 484.65(b), "Program data," that an HHA's QAPI program utilize quality indicator data, including measures derived from the OASIS (CMS provided reports), where applicable, and other relevant data, to assess the quality of care provided to patients, and identify and prioritize opportunities for improvement. Quality assessment efforts, including data collection, should focus on high priority safety and health conditions, and other goals identified by an HHA. The tools, collected data, and associated quality measures would be used by the HHA to monitor the effectiveness and safety of its services, as well as the quality of its care. In addition, the HHA would use the quality measures that are calculated based on the data collected to identify opportunities for improvement. We also proposed that the HHA's governing body would be responsible for approving the frequency of, and level of detail to be used in data collection.

At § 484.65(c), "Program Activities," we would require an HHA's QAPI program activities to focus on high risk, high volume, or problem-prone areas of service, and to consider the incidence, prevalence, and severity of problems in those areas. We also proposed that the HHA immediately correct any identified problems that directly or potentially threaten the health and safety of patients. Additionally, the HHA's QAPI activities would have to track incidents and adverse patient events, as well as analyze those events, so that preventive actions and mechanisms could be implemented by the HHA. We also proposed that after steps have been taken to improve an area of concern, the HHA would continue to monitor the area in order to assure that improvements were sustained over time.

Proposed § 484.65(d), “Performance improvement projects,” would require that the HHA’s performance improvement projects, conducted at least annually, reflect the scope, complexity, and past performance of the HHA’s services and operations. An agency would need to focus on those areas of past performance which have proven to be problematic for the HHA over time or areas where there was clear evidence of poor patient outcomes, as well as areas of high-risk and high-volume. Within this standard, we also proposed that the HHA document the QAPI projects undertaken, the reasons for conducting these projects, and the measurable progress achieved.

Finally, under proposed § 484.65(e), “Executive responsibilities,” we would require that the HHA’s governing body assume responsibility for the agency’s QAPI program. This subsection would require that the governing body assume the overall responsibility for ensuring that the QAPI program reflected the complexity of the HHA and its services, involved all services (including those provided under contract or arrangement), focused on indicators related to improved outcomes, and took actions that addressed the HHA’s performance across the spectrum of care, including the prevention and reduction of medical errors. The governing body would be required to define, implement, and maintain a program for quality improvement and patient safety that was ongoing and agency-wide. The governing body would be required not only to ensure that performance improvement efforts were prioritized, but that they were also evaluated for effectiveness. We note that it is the governing body which would be ultimately responsible for establishing the HHA’s expectations for patient safety through an agency-wide QAPI program. Therefore, we proposed that the governing body establish clear expectations for patient safety. We also proposed that the governing body would appropriately address any findings of fraud or waste in order to assure that resources are appropriately used for patient care activities and that patients are receiving the right care to meet their needs.

7. Infection Prevention and Control (Proposed § 484.70)

We proposed to establish a new CoP at § 484.70, “Infection prevention and control,” organized under the following three standards: (1) Prevention, (2) Control, and (3) Education. We proposed in § 484.70(a) that HHAs follow infection prevention and control best practices, which include the use of

standard precautions, to curb the spread of disease. Under proposed standard § 484.70(b), “Control,” we would expect the HHA to maintain a coordinated agency-wide program for the surveillance, identification, prevention, control, and investigation of infectious and communicable diseases.

Additionally, under this proposal, the program would be expected to be an integral part of the agency’s QAPI program. We proposed an education standard within this CoP at § 484.70(c). HHAs would be expected to provide education on “current best practices” to staff, patients, and caregivers.

8. Skilled Professional Services (Proposed § 484.75)

This proposed new condition would set forth the requirements for skilled professional services. Instead of specifically identifying tasks, we proposed to broadly describe the expectations of the skilled professionals who participate in the interdisciplinary team approach to home health care delivery. Skilled professionals, within this context, would provide services to HHA patients directly as employees of the HHA or under a contractual agreement. We proposed that skilled professionals actively participate in the coordination of all aspects of care where appropriate. We have organized this proposed condition into three areas: (1) Skilled professional services; (2) Responsibilities of skilled professionals; and (3) Supervision of skilled professional assistants. Skilled professional services, as proposed in § 484.75(a), include physician services, skilled nursing services, physical therapy, speech-language pathology services, occupational therapy, and medical social work services. Provision of services by skilled professionals, as proposed in § 484.75(b), would specify that skilled professional services may only be provided by health care professionals who meet the appropriate criteria spelled out in proposed § 484.115, “Personnel qualifications,” and who practice according to the HHA’s policies and procedures.

We proposed in § 484.75(b), “Responsibilities of skilled professionals,” that skilled professionals who provide services to HHA patients directly, or under arrangement, participate in coordinating all aspects of care, including:

- Assuming responsibility for the ongoing interdisciplinary assessment and development of the individualized plan of care in partnership with the patient, representative (if any), and caregiver(s);

- Providing services that are ordered by the physician as indicated in the plan of care;

- Providing patient, caregiver, and family counseling;
- Providing patient and caregiver education;
- Preparing clinical notes;
- Communicating with the physician who is responsible for the home health plan of care and other health care practitioners (as appropriate) related to the current home health plan of care; and
- Participating in the HHA’s quality assessment and performance improvement program and HHA-sponsored in-service training.

In addition to the requirements for licensed professional services described above, we proposed to include a requirement governing the supervision of skilled professional assistants at § 484.75(c). This would require an RN identified by the HHA to supervise the care provided by nurses such as licensed vocational nurses and licensed practical nurses. We also proposed that all rehabilitative therapy assistant services would be provided under the supervision of a physical therapist (PT) or occupational therapist (OT) who meets the appropriate requirements of § 484.115. Furthermore, we believe that it is essential for all medical social services to be provided under the overall supervision of a Master of Social Work (MSW) prepared social worker who meets the requirements of § 484.115.

9. Home Health Aide Services (Proposed § 484.80)

We proposed to organize the home health aide requirements as nine standards under § 484.80: (1) Home health aide qualifications; (2) content and duration of home health aide classroom and supervised practical training; (3) competency evaluation; (4) in-service training; (5) qualifications for instructors conducting classroom and supervised practical training; (6) eligible training and competency evaluation organizations; (7) home health aide assignments and duties; (8) supervision of home health aides; and (9) individuals furnishing Medicaid personal care aide-only services under a Medicaid personal care benefit.

At proposed § 484.80(a)(1), we would specify the necessary requirements for an individual to be considered a qualified home health aide. A qualified home health aide would be an individual who has successfully completed one of the following: (1) A training and competency evaluation program that meets the requirements

described in § 484.80(b) and § 484.80(c); or (2) a competency evaluation program that meets the requirements described in § 484.80(c); or (3) a nurse aide training and competency evaluation program that is approved by the state as meeting the requirements of § 483.151 through § 483.154 and is currently listed in good standing on the state nurse aide registry; or (4) a state licensure program that meets the requirements described in § 484.80(b) and § 484.80(c).

Under proposed § 484.80(a)(2), we would specify when a home health aide is deemed to have completed a program (as specified in proposed § 484.80(a)(1)). This determination would be based on whether, since the most recent completion of a program, there was a period of 24 months or greater since completion of the last home health aide training during which none of the services furnished by the aide were for compensation. We would also stipulate that, if there had been a 24-month or greater lapse in furnishing services, the aide would need to complete another program before the home health aide can provide services, as specified in § 484.80(a)(1).

We proposed, at § 484.80(b), to set forth the requirements for training content and its duration, training methods (classroom and practical), and training documentation. At § 484.80(b)(4), we proposed to require the HHA to maintain documentation that the requirements for content and duration of home health aide classroom and supervised practical training have been met.

We proposed to address various requirements for the competency evaluation of home health aides in § 484.80(c). We proposed to retain the requirement currently found at § 484.36(b)(1), which states that an individual may furnish home health aide services on behalf of an HHA only after the successful completion of a competency evaluation program as described in that section. In accordance with proposed § 484.80(c)(2), the competency evaluation described in this paragraph may be offered by any organization, except an organization that falls under one of the exceptions specified in the regulation as described in proposed paragraph (f) of this section. Section 484.80(c)(3) would maintain the current requirement that an RN must perform the competency evaluation. In addition to the RN, we proposed that the competency evaluation be done in consultation with other skilled professionals, as appropriate. We proposed that, if a home health aide is going to perform a task for which he or she was rated “unsatisfactory,” it must

be performed under the supervision of a licensed nurse (either a licensed practical nurse or an RN) until he or she achieves an evaluation of “satisfactory.”

At § 484.80(d), we would retain 12 as the minimum number of hours of in-service training required for a 12-month period. The training could occur while an aide was furnishing care to a patient. Proposed § 484.80(b) would set forth the elements that must comprise home health aide classroom and supervised practical training, thus suggesting that those elements of training should form a basis for ongoing in-service training. We proposed that aide in-service training could be offered by any organization, and that the training would be required to be supervised by an RN.

We proposed to relocate the requirement that the RN that conducts training possess a minimum of 2 years of nursing experience, of which at least 1 year is in home health care, to standard (e), “Qualifications for instructors conducting classroom and supervised practical training.” We continue to believe that RNs with nursing experience in the home health field should be the principal instructors in the basic training of home health aides. While other individuals could provide instruction to home health aides, classroom and practical training would be required to be under the general supervision of an RN who possessed a minimum of 2 years nursing experience, at least 1 year of which would have to be in home health care.

We proposed to retain the current requirements regarding organizations that offer aide training at § 484.80(f), “Eligible training and competency evaluation organizations.” We proposed to retain the current requirement that home health aide training may be provided by any organization, except an organization that falls under one of the exceptions specified in the regulation. These exceptions include, but are not limited to, agencies that have been found out of compliance with the home health aide requirements any time in the last 2 years, agencies that permitted an unqualified individual to function as a home health aide, and agencies that have been found to have compliance deficiencies that endangered patient health and safety. The full list of exceptions are included in the regulatory text.

We proposed, at § 484.80(g), “Home health aide assignments and duties,” to set forth aide responsibilities and duties. Proposed § 484.80(g)(1) would provide that the home health aide would be assigned to a specific patient by the RN or other appropriate skilled

professional (that is, physical therapist, speech-language pathologist, or occupational therapist). Proposed § 484.80(g)(2) would require that the home health aide provide services that are ordered by the physician in the plan of care, that the home health aide is permitted to perform under state law, and that are consistent with the home health aide training. In § 484.80(g)(3), we proposed to retain the inclusive listing of duties for home health aides currently under § 484.36(c)(2). At § 484.80(g)(4) we proposed a requirement that home health aides be members of the interdisciplinary team, must report changes in the patient’s condition to an RN or other appropriate skilled professional, and must complete appropriate records in compliance with the HHA’s policies and procedures.

On-going home health aide supervision, as described in proposed § 484.80(h), “Supervision of home health aides,” is a necessary component of quality care for HHAs, and ensures that services provided by home health aides are in accordance with the agency’s policies and procedures and in accordance with state and federal law. In this proposed standard, we would differentiate the aide supervision requirements based on the skill level of the care required by the patient. In proposed § 484.80(h)(1), we proposed that if a patient is receiving skilled care, the home health aide supervisor (RN or therapist) must make an onsite visit to the patient’s home no less frequently than every 14 days. The home health aide would not have to be present during this visit. If a potential deficiency in home health aide service was noted by the home health aide supervisor, then the supervisor would have to make an on-site visit to the location where the patient was receiving care in order to observe and assess the home health aide while he or she is performing care. In addition to the regularly scheduled 14-day supervision visits and the as-needed observation visits, HHAs would be required to make an annual on-site visit to a patient’s home to observe and assess each home health aide while he or she is performing patient care activities. The HHA would be required to observe each home health aide with at least one patient.

In proposed § 484.80(h)(2), we would require that if home health aide services are provided to a patient who is not receiving skilled care, the RN must make an on-site visit to the location where the patient is receiving care no less frequently than every 60 days in order to observe and assess each home

health aide while he or she is performing care.

At proposed § 484.80(h)(3), we would require that if a deficiency in home health aide services was verified by the home health aide supervisor during an on-site visit, then the agency would have to conduct, and the home health aide would have to complete, a competency evaluation in accordance with paragraph (c) of this section.

We also proposed to add a new paragraph at § 484.80(h)(4) to ensure that home health aide supervision visits focus on the aide's ability to demonstrate initial and continued satisfactory performance in meeting essential criteria. Supervision visits would be required to assess the home health aide's success in following the patient's plan of care; completing tasks assigned to the home health aide; communicating with the patient, representative (if any), caregivers, and family; demonstrating competency with assigned tasks; complying with infection prevention and control policies and procedures; reporting changes in the patient's condition; and honoring patient rights.

Proposed § 484.80(h)(5) would retain, with minor revisions, the current requirements found under § 484.36(d)(4) as they relate to the HHA's responsibilities for home health aides who are furnishing services under arrangement (that is, the aides are not employees of the HHA). The HHA would be required to ensure the quality of home health aide services, supervise aides as proposed in this section, and ensure that aides have met the training and competency evaluation requirements of this proposed part.

At proposed § 484.80(i), "Individuals furnishing Medicaid personal care aide-only services under a Medicaid personal care benefit," we proposed to retain the requirements at current § 484.36(e), with some minor clarifying revisions. Under this provision, a Medicare-certified HHA that provides personal care aide services to Medicaid patients under a State Medicaid personal care benefit would be required to determine and ensure the competency of individuals for those Medicaid-approved services performed. In addition, the reference to § 440.170 in the current regulation at § 484.36(e)(2) is incorrect; it should read § 440.167. Therefore, we proposed to make the necessary correction.

D. Proposed Subpart C, Organizational Environment

1. Compliance With Federal, State, and Local Laws and Regulations Related to Health and Safety of Patients (Proposed § 484.100)

We proposed that HHAs must be in compliance with all Federal, State and local laws related to the health and safety of patients, and that HHA services must be furnished in accordance with accepted professional standards and principles. We also proposed specific disclosure of ownership requirements. At § 484.100(a), we proposed to continue to require HHAs to comply with the requirements of part 420, subpart C by disclosing the names and addresses of all persons with an ownership or controlling interest, the name and address of each officer, director, agent, or managing employee, and the name and address of the entity responsible for the management of the HHA along with the names and addresses of the CEO and chairperson of the board of that entity.

Under the provisions of proposed § 484.100(b), an HHA, its branches, and its staff would be licensed, certified, or registered, as applicable, by the state licensing authority if the state had established licensure requirements. If a state requires an HHA to have a license, then we would require that the provider be in compliance with that state's law or regulation.

Finally, we proposed at § 484.100(c), "Laboratory services," to require that HHAs engaged in certain types of lab testing, with an appliance that has been approved for that purpose by the Food and Drug Administration, conduct testing in compliance with the requirements of 42 CFR 493 (Laboratory Requirements). This section would also prohibit HHAs from substituting their own self-administered testing equipment in lieu of a patient's self-administered testing equipment when assisting a patient in administering the test. In addition, this section would provide that if the HHA chose to refer specimens for laboratory testing, the referral laboratory would have to be certified in accordance with the applicable requirements of part 493. The laboratory services standard is a federal requirement in accordance with the Clinical Laboratory Improvement Amendments of 1988 (CLIA).

2. Organization and Administration of Services (Proposed § 484.105)

We proposed at § 484.105(a), "Governing body," to require the governing body to be able to assess the HHA's financial needs and to assume

responsibility for effectively managing its financial resources, as well as assume full legal authority and responsibility for the agency's overall management and operation, the provision of all home health services, the review of the budget and operational plans, and the agency's quality assessment and performance improvement program.

Proposed § 484.105(b), "Administrator," described the role of the administrator and provisions for when the administrator is not available. We proposed that the administrator be appointed by the governing body, be responsible for all day to day operations of the HHA, and be responsible for ensuring that a skilled professional as described in § 484.75 is available during all operating hours. We proposed that, any time when the administrator is not available, a pre-designated person, who is authorized in writing by the administrator and governing body, would assume the same responsibilities and obligations as the administrator, including the responsibility to be available during all operating hours.

In addition to the overall management of the HHA by the governing body and the administrator, we proposed a new clinical manager role at § 484.105(c). The clinical manager would be a qualified licensed physician or registered nurse, identified by the HHA, who is responsible for the oversight of all personnel and all patient care services provided by the HHA, whether directly or under arrangement, to meet patient care needs. The supervision of HHA personnel would include assigning personnel, developing personnel qualifications, and developing personnel policies.

In § 484.105(d), we proposed a new standard, "Parent-branch relationship," to focus on the ability of the parent HHA to demonstrate that it can monitor all services provided in its entire service area, furnished by any branch offices, to ensure compliance with the CoPs. We would require that HHAs report their branch locations to the state survey agency at the time of an HHA's initial certification request, at each survey, and at the time any proposed additions or deletions were made.

We proposed at § 484.105(e), "Services under arrangement," to govern all services provided under arrangement with another agency or organization. The agency providing services under arrangement may not have been denied Medicare enrollment; been terminated from Medicare, another federal health care program, or Medicaid; had its Medicare or Medicaid billing privileges revoked; or been

debarred from participating in any government program. We proposed to require that the primary HHA have a written agreement with another agency, with an organization, or with an individual, that it has contracted with to provide services to its patients, which stipulates that the primary HHA would maintain overall responsibility for all HHA care provided to a patient in accordance with the patient's plan of care, whether the care is provided directly or under arrangement. If the primary HHA chooses to furnish some services under arrangement, then it retains management, service oversight, and financial responsibility for all services that are provided to the patient by its contracted entities. All services provided by contracted entities would be authorized by the primary HHA, and furnished in a safe and effective manner by qualified personnel. In addition to this revision, we proposed to correct a typographical error in the cross-reference citation for the United States Code.

As stated in proposed § 484.105(f)(1), skilled nursing and one of the therapeutic services must be made available on a visiting basis in the patient's home. At least one service would be required to be provided directly by the HHA.

We proposed a requirement for compliance with accepted professional standards and principles at § 484.105(f)(2). We would require that HHAs furnish all services in accordance with accepted professional standards of practice. We also proposed to require that all HHA services be provided in accordance with current clinical practice guidelines.

We proposed to relocate the requirements for outpatient physical therapy or speech pathology services to § 484.105(g), without change.

Finally, we proposed to retain the "Institutional planning" standard as required for HHAs under section 1861(z) of the Act at § 484.105(h). We did not propose any revisions to this content.

3. Clinical Records (Proposed § 484.110)

We proposed to retain, with some additional clarification, many of the long-standing clinical record requirements. The primary requirement under the proposed clinical records CoP would be that a clinical record containing pertinent past and current relevant information would be maintained for every patient who was accepted by the HHA to receive home health services. We proposed to add the requirement that the information contained in the clinical record would

need to be accurate, adhere to current clinical record documentation standards of practice, and be available to the physician who is responsible for the home health plan of care and appropriate HHA staff. The clinical record would be required to exhibit consistency between the diagnosed condition, the plan of care, and the actual care furnished to the patient.

Proposed § 484.110(a), "Contents of clinical record," would retain the requirement that the record include clinical notes, plans of care, physician orders, and a discharge summary. We proposed to require that the clinical record include: (1) The patient's current comprehensive assessment, including all of the assessments from the most recent home health admission, clinical visit notes, and individualized plans of care; (2) all interventions, including medication administration, treatments, services, and responses to those interventions, which would be dated and timed in accordance with the requirements of proposed § 484.110(b); (3) goals in the patient's plan of care and the progress toward achieving the goals; (4) contact information for the patient and representative (if any); (5) contact information for the primary care practitioner or other health care professional who will be responsible for providing care and services to the patient after discharge from the HHA; and (6) a discharge or transfer summary note that would be sent to the patient's primary care practitioner or other health care professional who will be responsible for providing care and services to the patient after discharge from the HHA within 7 calendar days, or, if the patient is discharged to a facility for further care, to the receiving facility within 2 calendar days of the patient's discharge or transfer.

We proposed to add a new standard at § 484.110(b) to require authentication of clinical records. We proposed that all entries be legible, clear, complete, and appropriately authenticated, dated, and timed.

At § 484.110(c), we proposed to require that clinical records be retained for 5 years after the discharge of the patient, unless state law stipulates a longer period of time. We would require, in § 484.110(c)(2), that HHA policies provide for retention of records even if the HHA discontinues operations. We also proposed that the HHA would be required to notify the state agency as to where the agency's clinical records would be maintained.

We also proposed at § 484.110(d) to require that clinical records, their contents, and the information contained

therein, be safeguarded against loss or unauthorized use.

We proposed to add a new standard at § 484.110(e), "Retrieval of clinical records." We proposed that a patient's clinical records (whether hard copy or electronic) be made readily available to a patient or appropriately authorized individuals or entities upon request. The provision of clinical records must be in compliance with the rules regarding protected health information set out at 45 CFR, parts 160 and 164.

Finally, in the preamble material explaining § 484.110, we provided information regarding the HHS Policy Priority to Accelerate Interoperable Health Information Exchange, including Use of Certified Electronic Health Record Technology.

4. Personnel Qualifications (Proposed § 484.115)

We proposed a new "Personnel qualifications" CoP, with conforming amendments to the regulations for the other provider types that cross-reference the HHA personnel requirements. We proposed to retain the current personnel qualifications for the following professions: Audiologist, home health aide, licensed practical nurse, occupational therapist, occupational therapy assistant, physical therapist, physical therapist assistant, physician, registered nurse, social work assistant, and social worker. We also proposed to replace the term "practical (vocational) nurse," currently found in § 484.4, with the more widely used and accepted term, "licensed practical nurse."

We also proposed to revise the current personnel qualifications for HHA administrators. Specifically, we proposed that an HHA administrator would be required to be a licensed physician, or hold an undergraduate degree, or be a registered nurse. We also proposed that an administrator would have at least 1 year of supervisory or administrative experience in home health care or a related health care program.

Finally, we proposed at § 484.115(m) to revise the personnel qualifications for speech-language pathologists (SLP) in order to more closely align the regulatory requirements with those set forth in section 1861(l)(4)(A) of the Act. We proposed that a qualified SLP is an individual who has a master's or doctoral degree in speech-language pathology, and who is licensed as a speech-language pathologist by the state in which he or she furnishes these services. Should a state choose to not offer licensure at some point in the future, we proposed a second, more specific, option for qualification. In that

circumstance, we would require that a SLP has successfully completed 350 clock hours of supervised clinical practicum (or is in the process of accumulating supervised clinical experience); performed not less than 9 months of supervised full-time speech-

language pathology services after obtaining a master's or doctoral degree in speech-language pathology or a related field; and successfully completed a national examination in speech-language pathology approved by the Secretary.

III. Home Health Crosswalk (Cross Reference of Former to New Requirements)

The table below shows the relationship between the former sections to the new regulations.

Current CoPs	Revised CoPs
§ 484.1, Basis and scope	Revised at § 484.1
§ 484.2, Definitions	Revised at § 484.2
§ 484.4, Personnel qualifications	Revised at § 484.115
Home health aide qualifications	Revised at § 484.80
§ 484.10, Patient rights	§ 484.50, Patient rights
§ 484.10(a)	Revised at § 484.50(a)
§ 484.10(b)	Revised at §§ 484.50(b), (c), and (e)
§ 484.10(c)	Revised at § 484.50 (c)
§ 484.10(d)	Revised at § 484.50(c)
§ 484.10(e)	Revised at § 484.50(c)
§ 484.10(f)	Revised at § 484.50(c)
	New standard at § 484.50(d), Transfer and discharge.
	New standard at § 484.50(e), Investigation of complaints.
§ 484.11, Release of patient identifiable OASIS information	§ 484.40, Release of patient identifiable OASIS information.
§ 484.12, Compliance with Federal, State, and local laws, disclosure and ownership information, and accepted professional standards and principles.	§ 484.100, Compliance with Federal, State, and local laws and regulations related to the health and safety of patients.
§ 484.12(a)	Revised at § 484.100 and § 484.100(b)
§ 484.12(b)	Redesignated at § 484.100(a).
§ 484.12(c)	Revised at § 484.60, § 484.70, and § 484.105(f)
§ 484.14, Organization, services, and administration	§ 484.105, Organization and administration of services.
§ 484.14(a)	Revised at § 484.105(f).
§ 484.14(b)	Revised at § 484.105(a).
§ 484.14(c)	Revised at § 484.105(b).
§ 484.14(d)	Revised at § 484.105(b), and § 484.105(c)
§ 484.14(e)	Revised at § 484.75(b) and § 484.115.
§ 484.14(f)	Revised at § 484.105(e).
§ 484.14(g)	Revised at § 484.60(d) and § 484.105(c).
§ 484.14(h)	Revised at § 484.105(e).
§ 484.14(i)	Revised at § 484.105(h).
§ 484.14(j)	Revised at § 484.100(c).
§ 484.16, Group of professional personnel	Deleted, see § 484.65, Quality assessment and performance improvement (QAPI).
§ 484.18, Acceptance of patients, plan of care, and medical supervision.	§ 484.60, Care planning, coordination of services, and quality of care.
§ 484.18(a)	Revised at § 484.60(a).
§ 484.18(b)	Revised at § 484.60(c).
§ 484.18(c)	Revised at § 484.60(b).
	New standard at § 484.60(e), Written information to the patient.
§ 484.20, Reporting OASIS information	§ 484.45, Reporting OASIS information.
§ 484.30, Skilled nursing services	§ 484.75, Skilled professional services.
§ 484.32, Therapy services	§ 484.75, Skilled professional services.
§ 484.34, Medical social services	§ 484.75, Skilled professional services.
§ 484.36, Home health aide services	§ 484.80, Home health aide services.
§ 484.36(a)(1)	Revised at § 484.80(b).
§ 484.36(a)(2)(i)	Revised at § 484.80(f).
§ 484.36(a)(2)(ii)	Revised at § 484.80(e).
§ 484.36(a)(3)	Revised at § 484.80(b).
§ 484.36(b)(1)	Revised at § 484.80(c).
§ 484.36(b)(2)(i)	Revised at § 484.80(c).
§ 484.36(b)(2)(ii)	Revised at § 484.80(h).
§ 484.36(b)(2)(iii)	Revised at § 484.80(d).
§ 484.36(b)(3)(i)	Revised at § 484.80(c) and (d).
§ 484.36(b)(3)(ii)	Revised at § 484.80(c) and (d).
§ 484.36(b)(3)(iii)	Revised at § 484.80(c).
§ 484.36(b)(4)	Revised at § 484.80(c).
§ 484.36(b)(5)	Redesignated at § 484.80(c).
§ 484.36(b)(6)	Deleted.
§ 484.36(c)	Revised at § 484.80(g).
§ 484.36(d)	Revised at § 484.80(h).
§ 484.36(e)	Revised at § 484.80(i).
§ 484.38, Qualifying to furnish outpatient physical therapy or speech pathology services.	Revised at § 484.105(g).
§ 484.48, Clinical records	§ 484.110, Clinical records.
§ 484.48(a)	Revised at § 484.110(c).

Current CoPs	Revised CoPs
§ 484.48(b)	Revised at § 484.110(d). New standard at § 484.110(a), Contents of clinical record. New standard at § 484.110(b), Authentication. New standard at § 484.110(e), Retrieval of clinical records.
§ 484.52, Evaluation of the agency's program	Deleted, see § 484.65, Quality assessment and performance improvement and § 484.70, Infection prevention and control.
§ 484.55, Comprehensive assessment of patients	§ 484.55, Comprehensive assessment of patients.

IV. Analysis of and Responses to Public Comments

We received 199 letters of public comment from HHA industry associations, patient advocacy organizations, HHAs, and individuals. A summary of the major issues and our responses follow.

Effective Date

Comment: The vast majority of commenters made suggestions related to the effective date of the final rule. Commenters strongly expressed a need for a significant period of time to prepare for implementation of the new rules, noting that HHAs would need to adjust resource allocation, staffing, and potentially even infrastructure. Recommended implementation time frames ranged from 6 months to 5 years. The most frequent suggestion was to implement the final rule 1 year following its publication.

Response: We agree that it is appropriate to allow additional time to implement the final rule in order to allow HHAs adequate time to prepare for these changes. We believe that requiring HHAs to comply with the requirements of this rule on July 13, 2017 is sufficient to allow for appropriate HHA preparations to implement these changes. Therefore, we are finalizing an effective date of July 13, 2017.

Definitions

Comment: We received a few comments in support of the branch and parent office definition. One commenter strongly supported the change and emphasized with the automation age and web-based storage and access, the parent office can easily identify and investigate exceptions to standards of care for all patients and all employees, focusing administrative time on investigation, action and improvement. One commenter suggested CMS use the term of "Service Location" in lieu of "Branch Office." Several commenters asked that CMS clarify some concerns regarding the branch office definition. The commenters asked that CMS provide guidance on what constitutes an adequate level of supervision on a "daily basis." They specifically asked if

there is a certain amount or type of communication between the branch and parent offices. In addition, one commenter asked whether a survey citation for a violation in a branch office would apply to the entire HHA.

Response: We appreciate the public comments regarding this issue. We will continue to use the term "branch location" because it has been in use for more than a decade, and both HHAs and surveyors are accustomed to the term. To change the terminology without a pressing reason to do so would risk unnecessary and unwanted confusion among HHAs and surveyors. The concept of an adequate level of supervision on a daily basis is longstanding, and refers to the parent HHA's ability to demonstrate administrative control over each branch. We did not propose, nor are we finalizing, any specific requirements for communication because our primary concern relates to the evidence of control rather than the process for achieving it. As stated in the proposed rule, a violation that occurred in care and services being provided by a branch location would be considered a violation by the HHA as a whole. Therefore, it is essential for the parent to exercise adequate control, supervision, and guidance for all branches under its leadership.

Comment: We received several comments supporting the inclusion of the proposed definition of quality indicator. One commenter stated it is a much needed addition. Another commenter stated the addition of quality indicator as a definition would allow an HHA to take into account its patient population and unique characteristics while meeting the needs of the patients.

Response: We appreciate support from the public regarding this definition, and are finalizing it without change.

Comment: Several commenters submitted comments regarding the proposed definition of the term "representative." Commenters supported our goal of creating a patient-centered definition that acknowledges the importance of patient choice, patient involvement in his or her care, and the

role of family, friends, and caregivers. A commenter stated that this definition should facilitate more timely communication and cooperation between the HHA, patient, and representatives and family members. However, a few commenters expressed concern with the potential for confusion between legally designated representatives, such as a legal guardian, and patient-designated representatives. One commenter stated that HHAs may face questions of whom to listen to in situations where a patient has designated a representative who may not have legal status to make health care decisions. Another commenter stated that state laws regarding the rights and responsibilities of those with health care power of attorney can sometimes prevent an HHA from responding to communications and requests from a caregiver or loved one. The commenter suggested that the definition of "representative" should clearly acknowledge that legal limitations may exist that limit the HHA's ability to be responsive to communications and requests from patient-identified representatives at any given point in time. Recognition of this fact in the definition will assist agencies in managing those complex and conflicted situations that arise in the delivery of home health services. Similarly, another commenter suggested that the term "representative" be used only where the requirements include decision-making authority, while a different term, such as "caregiver" be used when the requirement is in relation to those individuals that provide support to the patient.

Response: We appreciate the broad-based support for this patient-centered definition of the term "representative." We acknowledge that patients may have several different representatives, each serving a different support and/or decision making role in the patient's life. Although conflicts between representatives who have legal authority and those who do not do have legal authority exist, we believe that these situations are relatively uncommon. The resolution of such conflicts would be dependent upon the exact scope of the legal representation. For example, an

individual may serve as a patient's representative solely for financial decision making, meaning that the individual would not have health care decision making authority, and would therefore be in no more significant of a position than any other individual chosen by the patient to serve as a patient-selected representative. If an individual was the legally designated or appointed health care decision maker, the HHA would be expected to act in accordance with the decisions made by that individual while still giving preference to patient choices within the boundaries of that legal representation relationship. As stated in the proposed rule (79 FR 61168), if an HHA has reason to believe that the representative is not acting in accordance with what the patient would want, is making decisions that could cause harm to the patient, or otherwise cannot perform the required functions of a representative, we would expect the HHA to make referrals and/or reports to the appropriate agencies and authorities to assure the health and safety of the patient. We do not believe that it would be appropriate to revise the definition of the term "representative" in an attempt to factor in the wide variety of legal relationships that may or may not exist; as such an attempt would inevitably fail to account for every possibility. We do agree that it is necessary to distinguish between those representatives that are chosen by a patient, but who may not have legal standing, and those representatives who are acting on legal authority to make health care decisions for a patient. While a commenter suggested that the term "caregiver" would be appropriate for those representatives that are chosen by a patient, but who do not have legally established decision making authority, we believe that the phrase "patient-selected representative" is a more appropriate way to express this concept. Likewise, when referring to those representatives who are acting on legal authority to make health care decisions for a patient, we will use the term "legal representative." We believe that using the modifiers "patient-identified" and "legal" when referring to the types of "representatives" that a patient may have will help clarify the expectations for HHAs.

Comment: A commenter suggested that, if a representative is not following what the patient requests or is causing harm to the patient in any way, the HHA staff should report such disagreements or harm to HHA management so that HHA management can take appropriate steps to ensure the

safety of the patient, including reporting harm to outside entities.

Response: We agree with this statement. As we stated in the proposed rule, "If an HHA has reason to believe that the representative is not acting in accordance with what the patient would want, is making decisions that could cause harm to the patient, or otherwise cannot perform the required functions of a representative, we would expect the HHA to make referrals and/or reports to the appropriate agencies and authorities to assure the health and safety of the patient."

Comment: We received a few comments that directly asked for CMS to revise or clarify the requirements for verbal orders. The commenters stated that other licensed practitioners, such as physician's assistants and nurse practitioners, should be permitted to give verbal orders for treatment. Another commenter requested additional clarification of the word "spoken."

Response: Section 1861(m) of the Act requires the HHA plan of care to be under the direction of a physician. We do not have statutory authority to allow other licensed practitioners to give verbal orders for treatment, as such an allowance would mean that the plan of care would no longer be under a plan established by a physician because pieces of that plan would be established by non-physicians. We intended a plain language meaning of the term "spoken" as meaning a communication that is said aloud or communicated by sign language.

Comment: One commenter stated that he or she disagrees with what appears to be another sub-regulatory process for the definitions of "in advance," "quality indicator" and "supervised practical training."

Response: The proposed rule included definitions for these terms within the regulation. Thus, we did not propose a "sub-regulatory" process for these definitions.

Comment: One commenter asked if CMS meant to remove the definition of "nonprofit agency" in the proposed rule.

Response: Removing the definition of the term "nonprofit agency" was intentional. This term is not used within the regulatory text; therefore it is not necessary to define a term that no longer exists.

Comment: One commenter stated they did not support the "subregulatory process" and deletion of the terms "bylaws" and "supervision" in the proposed rule because they feel the two definitions are important in the delivery of care and organizational structure.

Response: We proposed to delete a definition of the term "bylaws" because the term is not included in the regulatory text. It is not necessary to define a term that is not used. We proposed to delete the term "supervision" because a single definition of the term cannot adequately encompass the variety of ways in which the term is used in this rule. To set forth a single definition of the term would create more confusion rather than resolve it.

Comment: Several commenters asked CMS to amend § 484.14(a) to define "agency employee" by referencing common law definition of employee, or issue other guidance clarifying that CMS will interpret "agency employee" in accordance with the common law definition of employee. This guidance is utilized for payroll and accounting purposes for issuance of W-2 forms for the HHA. One commenter asked that CMS define the term "professional employment organization."

Response: The regulation does not include the term "agency employee;" therefore we are not defining it. Where the term "employee" is used, CMS generally considers an employee someone for whom the facility issues a W-2. The regulation does not include the term "professional employment organization"; therefore it is unnecessary to set forth a definition for this term.

Comment: A commenter asked that CMS include the definition of "caregiver" in the final rule. They asked for CMS to clarify what the term "caregiver" is meant to encompass and how the term differs from "family." They suggest CMS use the term "family caregivers," which refers to any relative, partner, friend or neighbor of the patient who has a significant relationship with, and who provides a broad range of assistance to, the patient.

Response: The term "caregiver" refers to any individual who renders uncompensated care to a patient, whereas the term "family" refers to legal and/or blood relationships. We do not believe that it is necessary to define the term because it is not an HHA-specific term of art, nor is it being used to have a special meaning in this rule. Furthermore, we believe that adding a definition would run the risk of inadvertently excluding a type of caregiver, which would be detrimental to patients, caregivers, and HHAs alike. Many times "caregivers" are "family" members, but this is not a requirement. For example, a patient's child may live out of state and be considered a "family" member, but would not render care to the patient as distance would

preclude such an arrangement. Therefore, the daughter would be a “family” member, but not a “caregiver.” We do not believe that using the term “family caregivers” would bring greater clarity to our meaning, as such a term would inappropriately imply that only family members can be caregivers. Rather than being inclusive of neighbors, friends, church members, etc., the term “family caregivers” would imply that these individuals are not included in the broad category of “caregivers.”

Release of Patient Identifiable Outcome and Assessment Information Set (OASIS) Information and Reporting OASIS Information

Comment: We received many supportive comments regarding the proposed OASIS data reporting requirements. Several of the commenters believe the changes are more consistent with electronic reporting technology and software that is currently being utilized for data transmission. One commenter stated they believe the proposed OASIS changes combine most of the current requirements and the language reflects current technological terms.

Response: We appreciate the support of the commenters, and are finalizing these sections as proposed, with one change. We originally proposed to change the transmission requirements for test OASIS data in a manner that would bring the regulation in line with current transmission guidelines that existed at the time when the proposed rule was published. Specifically, at § 484.45 we proposed to require that an HHA must, “Successfully transmit test data to the state agency or CMS OASIS contractor.” On January 1, 2015 CMS changed the OASIS transmission guidelines to require that an HHA must successfully transmit test data to the Quality Improvement and Evaluation System, Assessment Submission and Processing, (QIES ASAP) System or CMS OASIS contractor. We have revised the final rule at § 484.45 to reflect this change and maintain consistency between the transmission guidelines and the regulatory requirements.

Comment: One commenter encouraged CMS to address the potential implications and to coordinate its policies concerning data collection with the requirements of the IMPACT Act. They specifically mentioned the call for standardized post-acute care assessment data for quality, payment, discharge planning and other purposes.

Response: We agree that data collection should be coordinated, and have undertaken numerous efforts to

align data elements across data sets, where appropriate. On November 5, 2015, we finalized the CY 2016 Home Health Prospective Payment System Rate Update; Home Health Value-Based Purchasing Model; and Home Health Quality Reporting Requirements rule (80 FR 68623) that discusses implementation of the requirements of the IMPACT Act for HHAs. We will be taking steps to implement the IMPACT act over the next several years, in accordance with its statutory deadlines.

Comment: Several commenters cautioned CMS on over-reliance on OASIS to assess home health agency performance and for CMS to address shortcomings with the OASIS data collection tool. They recommended that CMS advise home health agencies to utilize available resources that provide guidance in managing complex health conditions.

Response: While we appreciate these suggestions related to the OASIS, the content of the OASIS and its use by CMS to assess the quality of care provided by HHAs are not within the scope of this rule. HHAs are encouraged to use all appropriate available resources to manage patient care, such as those available on the CMS OASIS Web site (https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/OASIS/index.html?redirect=/OASIS/01_Overview.asp).

Patient Rights

Comment: Many commenters supported the proposed patient rights requirements, highlighting the patient-centered focus of the proposed requirements, and stating that such requirements will help achieve better health and better health outcomes. Conversely, a few commenters questioned the need for an expanded set of patient rights and stated that the new requirements would require too many forms. Others stated that the proposed requirements were repetitive.

Response: We appreciate the support for this requirement, and agree that it is a useful part of the overall goal to achieve better outcomes for patients. We do not agree that the new requirement will result in a greater number of forms per patient, as these changes can be incorporated into the current patient rights process that HHAs are already required to have. We also do not agree that the requirements are repetitive in that each standard addresses a distinct aspect of patient rights.

Comment: A few commenters suggested that CMS take an active role in assisting HHAs in complying with the patient rights requirements by

requiring states to develop ombudsman services for home health care patients to help patients resolve complaints and assist patients who wish to appeal an HHA’s decision to transfer or discharge them. Commenters also suggested that CMS should create a consumer Web site to provide information about patient rights in layperson’s terms, and that this Web site should be available in multiple languages.

Response: We appreciate these suggestions; however, they are beyond the scope of this regulation. Therefore, we are precluded from acting upon them in this rule. We will retain this suggestion for future consideration.

Comment: A few commenters suggested that CMS develop standardized patient rights materials, translated into the languages most commonly used by Medicare beneficiaries. Commenters also suggested that CMS should provide the OASIS privacy notice in languages other than English and Spanish, and that the notice should be written in a way that is understandable to persons who have limited English proficiency.

Response: The content and format of the OASIS privacy notice are not within the scope of this rule; however we will retain this suggestion for future consideration. We do not agree that requiring a specific patient rights form would benefit HHAs or HHA patients, as the use of a specific form would reduce HHA flexibility to include additional HHA-specific information that may be relevant. In addition, mandating a specific form may interfere with or duplicate the patient rights information requirements established by states and accrediting organizations. Therefore, this rule does not require the use of a specific patient rights form. Rather, HHAs may use a means of their choosing that conveys the required information. We remind HHAs that where several regulatory bodies have established standards governing the same subject matter, we expect HHAs to adhere to the most stringent requirement. Absent a single mandated notice of patient rights, it is not possible for CMS to provide translations.

Comment: A commenter requested clarification regarding the provision of the notice of patient rights. The commenter asked whether the HHA would be required to deliver notices to (1) both the patient and the patient’s representative, or (2) either the patient or the patient’s representative.

Response: We proposed, and are finalizing a requirement that the notice of patient rights must be provided to both the patient and his or her representative. This is particularly

necessary in situations where the representative legally possesses health care decision making authority. In situations where the representative is patient-selected and does not possess legal health care decision making authority, a patient may choose to decline the provision of the notice of rights to the patient-selected representative because the definition of the term “representative” explicitly states that the patient determines the role of the representative, to the extent possible. The patient may choose to involve or not involve the patient-selected representative regarding every interaction with the HHA. We would expect an HHA to document in the patient’s record that a patient declined to have a copy of the notice of rights provided to the representative. We believe that explicitly allowing patients to choose whether or not the information is provided to the patient-selected representative will give patients greater control over their care.

Comment: A few commenters referenced existing statutes and regulations that relate to the proposed requirements. One commenter stated that it would be helpful if CMS expressly stated that these requirements are identical to the requirements under Title VI of the Civil Rights Act to ensure that there is no discrepancy related to the standard that will be applied. Another commenter referenced the National Standards for Culturally and Linguistically Appropriate Services in Health and Health Care (the National CLAS standards, <https://www.thinkculturalhealth.hhs.gov/content/clas.asp>), and stated that, under these standards, an agency may identify the dominant languages in its patient population and prepare written materials in the most frequently spoken languages. Individuals who speak less commonly encountered languages receive a description of the contents of the patient rights notice from an interpreter. The commenter asked whether adherence to the National CLAS standards will meet the intent of the proposed regulation. The commenter also suggested that we should revise the regulation requirements at § 484.50(a)(1)(ii) to specifically allow interpreters to be used to help individuals who speak a language not commonly found in the agency’s service area to understand the notice of patient rights. Yet another commenter referenced the Office for Civil Rights (OCR) Guidance at <http://www.hhs.gov/ocr/civilrights/resources/specialtopics/lep/hhslepguidancepdf.pdf>, which states,

“. . . the starting point is an individualized assessment that balances the following four factors: (1) The number or proportion of limited English proficiency (LEP) persons eligible to be served or likely to be encountered by the program or grantee; (2) the frequency with which LEP individuals come in contact with the program; (3) the nature and importance of the program, activity, or service provided by the program to people’s lives; and (4) the resources available to the grantee/recipient and costs.” The commenter suggested that this guidance should be used as the basis for the regulations.

Response: We appreciate the comments on this subject, but as stated in the proposed rule, the regulation requirements on this subject are already consistent with Department of Health and Human Services guidance regarding Title VI of the Civil Rights Act. We agree that the National Standards for Culturally and Linguistically Appropriate Services in Health and Health Care (CLAS) is a good reference, but we are unable to say with certainty that adherence to CLAS guarantees full compliance with this rule because each situation is evaluated on its own merits. In addition, we would like to clarify that regulation requirements that state documents must be “understandable” does not require or suggest that documents must be written in every language.

Comment: While commenters expressed general support for the concept of effective communication with patients, a large number of commenters posed questions regarding the proposed requirement to communicate with patients in a language and manner that they understand. Commenters wanted to know if all patient rights documents would be required to be translated into the patient’s preferred language both orally and in writing. Commenters also requested clarification regarding the responsibility of each HHA to have written notices in each possible language the agency may encounter in the community, and asked that CMS provide a more limited and nationally standardized set of languages in which such notice must be conveyed. Additionally, commenters suggested that we should differentiate between “vital” and “non-vital” patient rights information that would need to be provided, in writing, in a language and manner that a patient understands, limiting required written information to what is vital and permitting the communication of non-vital information to an oral translation. Commenters further noted the challenges associated

with providing a written copy of the notice of rights in the preferred language at the time of the initial visit because there are times when an HHA is not aware of the referred patient’s language preference until the visit is initiated. The commenter suggested that, in such situations, the HHA should be required to provide the written notice in a reasonable amount of time (for example, 72 hours). Similarly, a commenter questioned whether an unforeseen inability to orally inform a patient of his or her rights in understandable language and manner “in advance of providing care” would mean that the clinician performing the initial patient visit would be prohibited from admitting the patient to services.

Response: We appreciate these comments and realize the task of requiring agencies to communicate with patients in a language and manner in which they understand may cause confusion when trying to meet the regulations in a consistent manner to remain compliant. We do not have the expectation that HHAs will be presenting a translated patient rights document to every single patient in their native language when they are admitted and before they begin receiving care. We want to emphasize that the term “understandable” does not mean it is expected to be written in every language. A general understanding means that patients achieve a grasp of the explanation of something and not necessarily a verbatim written translation. We expect HHAs to utilize technology, such as telephonic interpreting services and any other available resources for oral communication in the patient’s primary or preferred language prior to the completion of the second skilled visit. The flexibility that is built into this requirement, allowing the use of technology, remote interpretation services, and patient-selected interpreters should accommodate most situations, alleviating potential concerns regarding an “unforeseen inability” to communicate with patients in advance of furnishing services. Based on the HHA location, language needs will vary and often times a document will only have to be translated once and then can be utilized again as needed without extra translation burden. In addition, we have revised the requirements to allow additional time for HHAs to provide oral notification of rights, removing the requirement that oral notification be provided in advance of providing care. We believe that this change will also alleviate concerns regarding an unforeseen inability to orally inform a

patient of his or her rights in understandable language and manner preventing the clinician performing the initial patient visit from admitting the patient to services.

Comment: A commenter requested clarification of the term “preferred language.”

Response: The Department of Health and Human Services 2013 Language Access Plan described “Preferred Language” as the language that a limited English proficiency (LEP) individual identifies as the preferred language that he or she uses to communicate effectively.

Comment: Several commenters submitted comments regarding the role of patient-selected, rather than professional, interpreters. Specifically, commenters supported statements in the preamble that would permit a patient to select his or her own interpreter in lieu of a professional interpreter.

Commenters noted that, even if a patient or representative does offer to provide an interpreter, she or he should still be informed of the availability of professional interpretation services. A commenter requested clarification of the preamble statement that an HHA “may wish to document” the refusal of a professional interpreter, stating that some surveyors may interpret this suggestion as a regulatory requirement.

Response: We appreciate these comments of support. We agree that a patient should be informed of the availability of professional interpretation services, regardless of whether the patient offers to provide an interpreter. Section 484.50(c)(12) requires HHAs to provide written notice, prior to the initiation of care, informing patients that they have the right to access auxiliary aids and language services, and how to access these services. Title VI of the Civil Rights Act does not require documentation, and we do not intend to require anything above and beyond what is currently required in Title VI. HHAs have the flexibility to document more information, but it is not a regulatory requirement.

Comment: A commenter disagreed with the idea that an HHA may communicate patient rights information to the patient’s representative “if a patient is unable to effectively communicate directly with HHA staff.” The commenter asserted that this should only be true in situations where the patient is unable to participate, to any degree, in decision making regarding her or his health care. The commenter stated that if a patient can participate in health care decision making, it is essential that HHAs offer

auxiliary aids, professional interpretation services, and translated materials directly to the patient, rather than relying on the representative to serve as an interpreter.

Response: Our intent is to assure that HHAs communicate directly with the patient in all situations where the patient has the mental capacity to participate in and understand such communications. However, if a patient is unable to effectively communicate and participate in their care due to a compromised mental capacity as identified through information provided by referral sources, clinical observations, and/or clinical assessment, then the HHA is permitted to communicate with the patient’s representative.

Comment: A commenter disagreed with the way we characterized the role of an interpreter in the preamble of the proposed rule. The commenter stated that, in addition to our original description, it is also an interpreter’s role to facilitate two-way communication, so that the patient can describe changes in his or her condition or experience of care, ask questions, and articulate preferences and concerns.

Response: We agree that an interpreter’s role also includes facilitating two-way communication and patient participation in his or her care. We encourage communication that will help the patient be an active participant in his or her care. We emphasize the interpreter’s role in communications from the facility because the facility has a legal obligation to communicate effectively with the patient or his/her representative.

Comment: Some commenters agreed, while other commenters disagreed, with the requirement that the HHA must ensure that the communication via the interpreter of choice is effective. A commenter stated that this requirement is impracticable, as by nature of the fact that the HHA staff is using an interpreter means that staff member is unable to communicate in the patient’s language, rendering the staff member incapable of ensuring the effectiveness of the communication. Another commenter recommended that minors should be prohibited from acting as patient-selected interpreters. This commenter stated that minors lack clinical knowledge to be effective interpreters, and that performing interpreter duties may result in minors being exposed to information that is confusing or frightening to them, especially if they are interpreting for a parent.

Response: The most reliable way to assure that communication is effective

is to use the services of a professional interpreter who possesses appropriate training and certifications to perform his or her job duties as an interpreter. Even so, patients have the right to choose someone other than a professional interpreter. Absent a professional interpreter, either because the patient has expressly declined the use of one or the patient’s language is so rare that an interpreter, whether in person or by communication device such as the telephone, cannot be located, the HHA may use a patient-selected interpreter, such as the patient’s representative. The patient’s representative, who could be a family member or friend, may act as a liaison between the patient and the HHA to help the patient communicate, understand, remember and cope with the interactions that take place during the visit, and explain any instructions to the patient that are delivered by the HHA staff. The HHA would be responsible for verifying that communication to the representative was effective and accurate communication, which could be accomplished by having the patient representative repeat back instructions. An HHA would be expected to observe the interactions between the patient-selected interpreter and the patient to determine whether the communication appears to be effective. For example, if a patient continues to look confused after the information is presented, then the HHA clinician may conclude that the communication was not effective in conveying the necessary information. This regulation is consistent with the current HHS guidance (“Guidance to Federal Assistance Recipients Regarding Title VI Prohibition Against National Origin Discrimination Affecting Limited English Proficient Persons,” 68 FR 47311, August 8, 2003, (<https://www.hhs.gov/civil-rights/for-individuals/special-topics/limited-english-proficiency/guidance-federal-financial-assistance-recipients-title-vi/>)), and the HHA should respect patient preference to use someone other than a professional interpreter (even after being offered and denied). If the competency or accuracy of the patient-selected interpreter is in serious question, for example, the clinician speaks a paragraph of specific instructions and the interpreter “interprets” in a single sentence, the expectation would be to then bring in the services of a professional interpreter. We agree that the use of minors to serve as interpreters should be a last resort and only used in emergency circumstances.

Comment: Several commenters raised concerns about translators, particularly

in relationship to less common languages. Commenters requested guidance on handling situations when an interpreter is not available in the community. Other commenters requested guidance on the appropriate use of available technologies that could be used to achieve compliance with the accessibility requirements in this rule.

Response: We understand these concerns and agree that it is occasionally difficult to locate an interpreter for certain less common languages. Compliance with this requirement is achievable if the HHA takes all reasonable steps and actions to provide meaningful access to an interpreter as set forth by the HHA guidelines. HHAs are expected to exhaust all avenues of technology such as telephone translation, video conferencing, or online translation of written documents. All of those choices are acceptable options when a local interpreter cannot be located, provided that the chosen option meets the patient's communication needs.

Comment: A commenter asked whether the regulation requires HHA personnel to read the entire content of the notice of patient rights to the patient or whether it is acceptable to explain the overall intent and general content of the notice of patient rights without reviewing the rights verbatim.

Response: The intent of this requirement is for HHAs to thoroughly discuss the content of the notice of patient rights with the patient and representative, and to allow patients and representatives an opportunity to ask questions and otherwise seek clarification regarding the notice of patient rights. HHA staff members are not required to read the notice word-for-word to the patient. Rather HHA staff members have the flexibility to provide comprehensive and accurate summaries of each right in conversational language and tone in order to engage patients and representatives in this discussion.

Comment: A large number of commenters submitted comments regarding the proposed requirement to provide the notice of patient rights prior to the initiation of care. Commenters expressed concern about providing a large amount of information (both in paper form and in oral explanation) at a single visit, and all prior to initiating care. Commenters stated that this can be overwhelming for patients, and can result in patients not retaining important information (for example, how to make a complaint). The commenters suggested a multi-visit approach to providing information regarding patient rights. Some commenters suggested spreading the

communications regarding patient rights across two visits, while others suggested a more extended approach. Commenters suggested that the first visit should include the information deemed to be essential prior to the initiation of care, with important, but not essential, information being reviewed during a subsequent visit. A commenter also suggested that HHAs should be required to provide the notice of rights whenever the plan of care is revised or updated, and should be required to obtain the patient's signature each time this is done.

Response: In accordance with the requirements of section 1891(a)(1)(F) of the Act, HHAs must provide notice in writing to each patient regarding his or her rights in advance of providing care. We agree that providing both written and oral notice in advance of providing care may not be in the best interest of all HHA patients. Therefore, we are revising the requirements at § 484.50(a) to require written notice in advance of providing care and oral notice by the end of the second skilled visit. HHAs must obtain the signature of the patient or the patient's legal representative to confirm that written information was received. HHAs may conduct a thorough conversation with the patient and representative regarding the content and meaning of the notice of patient rights over the first two visits by a skilled professional (nurse, therapist, and medical social worker). We believe that extending the time frame for the oral explanation of the notice of patient rights and responsibilities will foster greater patient understanding of those rights, as well as assure that the conversation does not inappropriately impede the delivery of patient care. HHAs would still need to document in the patient's clinical record that they have provided a complete oral explanation of the notice of patient rights, in addition to the written notice provided in advance of furnishing care. Documenting oral notice may be done by obtaining the patient's or representative's signature, or by a clinical note.

Comment: A commenter expressed concern with the proposed requirement that the HHA must provide the patient and the patient's representative (if any) with written and verbal notice of the patient's rights and responsibilities during the initial evaluation visit, in advance of care being provided to the patient. The commenter noted that a patient-selected representative may not be available or identified at the initial visit. Furthermore, the commenter stated that requiring the provision of written and verbal notice of patient

rights to the representative in situations where a patient is competent may serve to postpone the initiation of patient care, and negatively impact patient health and safety. The commenter suggested that the requirements of § 484.50(a) should be clarified to allow for a patient's representative to receive a written notice of the patient's rights upon admission or as soon thereafter in situations when the patient is competent to make his or her own decisions.

Response: If a patient has a legally appointed or designated representative that has health care decision making authority, the HHA must provide notice of the patient's rights prior to initiating care. Notifying the individual with legal health care authority cannot be postponed. However, we agree that providing notice to patient-selected representatives that do not have legal health care decision making authority is not always necessary prior to the initiation of care. As stated previously, a patient may choose to decline the provision of the notice of rights to the patient-selected representative. We believe that HHAs would choose to document this in the patient's record in order to demonstrate compliance upon survey. If the patient does not decline to have the patient-selected representative be informed, and such representative is not present at the time of care initiation, an HHA may provide a copy to the patient-selected representative within 4 business days of initiating care. This information can be provided by mail or electronic means. We have revised the regulatory text at § 484.50(a) accordingly.

Comment: Some commenters strongly supported the proposed requirement to provide each patient with contact information for the HHA's administrator. A commenter stated that it would be appropriate to provide contact information for the administrator, as well as the administrator's designee, to meet the requirement. The administrator is not always available, so naming an alternate contact at the agency would facilitate more efficient and timely response to patient complaints or questions. However, a commenter suggested that an administrator should be responsible for receiving complaints, but not for answering routine patient questions that may be more appropriate for clinical staff and clinical managers. Other commenters suggested that it would be more appropriate to provide contact information for the HHA's 24-hour on-call service number or the HHA's general contact information.

Response: We agree that routine patient questions may be more appropriate for clinical staff and clinical managers; therefore at § 484.50(a) we have removed from the regulation text the requirement for the administrator to receive questions. The requirement that the administrator receive complaints remains in the regulation because we believe this is an essential leadership function. We also agree that providing contact information for the 24 hour call line would be appropriate for answering patient questions; however we do not believe that this is necessary to require in regulation. HHAs may choose to incorporate this information, but would not be required to do so. Similarly, HHAs may choose to include contact information for the administrator's designee, but would not be required to do so.

Comment: A commenter questioned the necessity of requiring an HHA to provide each patient with a copy of the OASIS privacy notice, given that patients are also provided the Health Insurance Portability and Accountability Act (HIPAA) privacy statement. The commenter stated that, if the point of the OASIS privacy notice is to advise the patient why the OASIS is being collected, this information can be more simply stated and incorporated elsewhere.

Response: As stated in the June 18, 1999 notice related to the implementation of the OASIS data set (64 FR 32984 through 32989), HHA patients whose data will be collected and used by the federal government must receive a notice of their privacy rights. These rights include: (1) The right to be informed that OASIS information will be collected and the purpose of collection; (2) the right to have the information kept confidential and secure; (3) the right to be informed that OASIS information will not be disclosed except for legitimate purposes allowed by the Federal Privacy Act; (4) the right to refuse to answer questions; and (5) the right to see, review, and request changes on their assessment. The statements of patient privacy rights with regard to the OASIS collection (one for Medicare/Medicaid patients, one for all other patients served by the HHA) are included in the OASIS privacy notice. Many of the topics addressed in the OASIS privacy notice are not included in the HIPAA (Pub. L. 104–191, 110 Stat. 1936, enacted August 21, 1996) privacy statement. Therefore, we do not believe that the HIPAA privacy statement is an appropriate substitution for the OASIS privacy notice, and we are maintaining the requirement that HHAs must provide patients with both

the HIPAA privacy statement and the OASIS privacy notice.

Furthermore, we believe that the content of the OASIS privacy notice is understandable to patients. As explained in the June 1999 notice, consumer testing was undertaken to determine whether Medicare beneficiaries understood the overall message of the proposed Medicare notice. The findings indicated that beneficiaries understood that the notice was informing them about their rights relating to their personal health care information and that these protections were good. In addition, the majority of the beneficiaries found the notice's language to be clear and easy to understand.

Comment: Most commenters supported the patient-centered, patient-directed approach used in relationship to the role of the patient representative, and several commenters offered suggestions for ways to implement or clarify this role. A commenter suggested that HHAs should build a conversation focused specifically on patient representation into every admission visit. This conversation would allow the patient to identify those person(s) with whom the agency may discuss their care, or not discuss their care. The agency would document this in whatever format is most appropriate for them (for example, the electronic medical record (EMR)) and that would guide future conversations. In addition, the commenter suggested that HHAs should provide patients with written information, as part of the patient rights information, that would inform the patient that he or she can choose representatives, and make changes to that choice at any time by contacting HHA staff. Another commenter suggested that, in order to comply with the proposed requirement to allow patients to select their representatives, HHAs would need to create timeframes for contacting representatives, maintain documentation of patient preferences, maintain documentation of contacts with representatives, and actually involve representatives in care planning. Another commenter suggested that HHAs should be required to establish a primary contact to which all communication will be directed concerning the patient. That person would receive all information regarding the patient's rights, plan of care, and discharge plan updates.

Response: We appreciate all of the suggestions, and believe that they are examples of best practices that an HHA may consider adopting in order to facilitate compliance with the written regulations and spirit of the rule.

Comment: A few commenters suggested changes to the wording used to describe competency as it relates to rulings under state law. Commenters stated that the regulation should include other designations made under state law short of adjudication of "incompetence." In place of the term "incompetence," commenters suggested that we use the phrase "lack legal capacity." Commenters also suggested that, if a state court has not adjudged a patient to lack legal capacity, the patient's representative should be permitted to exercise the patient's rights, but doing so must be in accordance with state law and with the patient's permission.

Response: While we believe that "incompetence" is a legally appropriate term, we agree that there are degrees of competence and incompetence, and that the term "incompetence" may not adequately express the exact degree that we originally intended to convey. For this reason, at § 484.50(b) we have replaced the term "incompetence" with the more precise phrase "lack legal capacity to make health care decisions as defined by state law." The extent to which patients who possess legal capacity to make their own health care decisions choose to delegate that decision making authority to others would be established by the patient, as recognized in the definition of the term "representative." The definition at § 484.3 states that, "the patient determines the role of the representative, to the extent possible." HHAs are encouraged to engage patients in a thoughtful discussion about the representative role that the patient desires. HHAs may find resources related to supported health care decision making agreements helpful in creating a framework for and documenting the results of these discussions. (See <http://autisticadvocacy.org/wp-content/uploads/2014/07/ASAN-Supported-Decisionmaking-Model-Legislature.pdf> for one example of a supported health care decision making agreement.)

Comment: A commenter suggested that the patient or his or her representative should have the right, upon an oral or written request, to inspect all records pertaining to himself or herself including current clinical records within 48 hours (excluding weekends and holidays); and to receive copies of electronic records free of charge or to purchase, at a cost not to exceed the community standard, photocopies of the records or any portions of those records with 2 working days of the HHA receiving the request.

Response: We agree that patients and/or representative have the right to request a copy of their clinical record. Patients may access their records in accordance with § 484.110(e), which requires that a patient's clinical record (whether hard copy or electronic form) must be made available to the patient upon request, free of charge, at the next home visit, or within 4 business days (whichever comes first).

Comment: A commenter stated that it is redundant to require that HHAs must assure that patients receive services in a manner that is free from illegal actions, such as sexual abuse or physical abuse.

Response: We do not agree that it is redundant because the enforcement mechanisms for criminal statutes and these CoPs are very different. While certain actions, such as misappropriation of patient property (theft) are illegal, HHA surveyors do not enforce criminal statutes. However, we do believe that the HHA has a responsibility to ensure that no illegal activity takes place, and should be penalized if it does not take all necessary precautions to prevent its staff from engaging in criminal activity. If this requirement at § 484.50(c) were removed, an HHA surveyor would have no mechanism to cite an HHA for criminal acts committed by its staff. Therefore, we believe that it is in the best interest of HHA patients to include this requirement and enable an HHA surveyor to issue a deficiency citation for non-compliance.

Comment: A commenter stated that the patient's right to participate in, be informed about, and consent or refuse care in advance of and during treatment, where appropriate, with respect to factors that could impact treatment effectiveness is not a reasonable expectation in all cases.

Response: We disagree with this comment. A patient's right to be informed about care, and to consent or refuse any element of that care, is fundamental. Furthermore, where internal or external factors exist that may impact the effectiveness of a given treatment option, we believe that it is a reasonable expectation that they would be discussed with a patient in advance so that the patient can make an informed decision about the care they are set to receive.

Comment: A commenter opposed the proposed requirement that a patient has the right to participate in, be informed about, and consent or refuse care in advance of and during treatment, where appropriate. The commenter opposed the phrase "where appropriate," stating that there are no circumstances where it

would not be appropriate for a patient to participate in, be informed about, and consent or refuse care in advance of and during treatment. The commenter also stated that the term "appropriate" is subjective and would be defined by the HHA, possibly resulting in limiting or even eliminating a patient's right to be involved in his or her care.

Response: While we agree that patients have these fundamental rights, and that those rights should be guaranteed in regulation, the phrase "where appropriate" is necessary. The patient has the right to determine the degree to which he or she wants to be involved in his or her care, and the use of this phrase reflects the fact that each patient will determine what is or is not appropriate in his or her own way. We believe that most patients will not want to be involved in every specific detail of care (for example, the type of supplies used). Thus, these decisions would likely not require full explanation to, and discussion with, the patient. To mandate the right to participate in, be informed about, and consent or refuse care in advance of and during treatment, for every single decision made by an HHA would be burdensome to patients that have no interest in such a degree of participation, and contrary to the goal of delivering care efficiently.

Comment: A commenter suggested that patients should have the right to participate in, be informed about, and consent or refuse care in advance of and during treatment with respect to the timing of visits and who provides services.

Response: These concepts are already included in § 484.55(c)(2), which requires the HHA to assess each patient's care preferences, and § 484.60, which requires that the individualized plan of care be based on the assessment of the patient.

Comment: A commenter suggested that, rather than requiring that a patient has the right to be informed about the patient-specific comprehensive assessment, the regulation should require that a patient has the right to be informed about all assessments throughout the course of care. The commenter stated that patients and caregivers may want to know the findings of any given assessment, rather than just the comprehensive assessment, which is performed at specified periods of time.

Response: We agree that the HHA's patients should be informed about, and consent or refuse care in advance of and during treatment, where appropriate, with respect to all patient assessments, rather than just the "comprehensive assessment." We have revised the

regulation text at § 484.50(c)(4)(i) to reflect this change.

Comment: A commenter recommended that a patient's right to be involved in establishing and revising the plan of care should be limited to involvement in major revisions to the plan of care, such as a change in the goal of care, the number of visits, or discharge date.

Response: The intent of this requirement is to assure that HHA patients can be informed about and involved in establishing and revising their plan of care as a whole. We believe the patient has a right to be involved with all facets of the care they receive. It is the HHA's responsibility to discuss the level of involvement that patients and their representatives want to have in the plan of care. This would include factors such as how much the patient is capable of understanding and the extent they wish to be involved with the development and updates to the plan of care. HHAs should make all reasonable attempts to respect patient wishes.

Comment: The majority of commenters expressed concern regarding the proposed requirement that an HHA must provide a patient with a copy of his or her plan of care. While some commenters agreed with our position that providing a patient with information about his or her plan of care would improve patient understanding and compliance, most stated that, as a clinically oriented document for use by medical personnel, the plan of care is not created in a manner that would make sense to a patient. Some commenters stated that patients would not want information about their plan of care, and noted that all patients already have a right to request copies of medical records, while other commenters stated that patients would prefer to receive this information. A few of these commenters suggested that the plan of care should be required to be provided if the patient desires it or specifically requests it. A single commenter sought reassurance that the copy of the plan of care would be provided at no charge to the patient. Still other commenters requested additional clarification regarding the meaning of the term "plan of care" as it is used in this section. These commenters stated that "plan of care" could mean general items the patient, home health clinicians, and physician agree the patient will be working on, or, it could mean all the physician orders, medications, etc. Some commenters suggested that HHAs should be required to provide each patient with an abbreviated plan of care, also referred to as a care plan summary, as a distinctive product specifically designed to engage

patients, their caregivers, and representatives as partners in treatment and care. Commenters suggested the following elements for this product: Patient condition, goals of care and measurable outcomes that the agency and patient have identified, a list of homecare services to be provided, specific training and interventions designed to prevent the need for emergency department care and hospitalization, a visit calendar for each discipline involved in the patient's care, and any other information that is necessary to improve the patient's health.

Response: We appreciate the many thoughtful comments that were submitted on this subject. We agree with the large majority of commenters that the plan of care (as set forth in § 484.60(a)) is a clinically oriented document that is written in medical terminology and in a manner that may not be comprehensible to the majority of HHA patients. For this reason, we agree that it is not appropriate to require HHAs to routinely provide each patient with a copy of his or her plan of care and we have removed this requirement from the regulation at § 484.50(c). However, HHAs are still required to provide any information contained in the clinical record, including the plan of care, free of charge, upon request from the patient, in accordance with the requirements of § 484.110(e). While we see the potential benefit of requiring HHAs to prepare and provide a plan of care summary to each patient, and believe that patients should be able to easily access information pertinent to their care, we do not believe that the significant burden that would be imposed with such a requirement is justified at this time. Currently many HHAs do not possess the technology, such as electronic medical records with secure patient portals, to make implementation of a plan of care summary requirement feasible. We will consider a plan of care summary requirement in the future based on the evolving use of technology in the HHA environment. While the plan of care described in this rule is focused on services delivered by the HHA, we also note that the concept of a "plan of care" continues to evolve, and future "plans of care" are likely to be more comprehensive documents that reflect the care patients receive across settings. As plans of care become more comprehensive, the importance of ensuring patients have access to this document will also increase. It is important to note that HHAs are still required to involve patients in the

actual development and updating of the plan of care as required by § 484.50(c) and § 484.60(c).

In addition, in response to comments requesting that CMS require that written clinical and educational information be made available to HHA patients and caregivers, we have added a new standard at § 484.60(e), "Written information to the patient." The new provision, which partially replaces other requirements previously placed elsewhere, requires the HHA to provide written instructions to the patient and care giver outlining visit schedule including frequency of visits, medication schedule/instructions, treatments administered by HHA personnel and personnel acting on the behalf of the HHA, pertinent instructions related to patient care and the name and contact information of the HHA clinical manager. We believe that these requirements will ensure that patients are actively engaged in their own care. In addition, HHAs may use any form of communication (for example, typed summaries, checklists, calendars, handwritten notes, secure electronic communications, or orientation videos) to facilitate patient knowledge and understanding of the care being provided. Providing patients and caregivers written instructions that they may refer to between visits is critical to both the quality and safety of patient care.

Comment: Many commenters sought clarification regarding the format for providing a copy of the plan of care to each patient. Specifically, commenters questioned whether the plan of care could be provided via electronic means, such as a secure patient portal. A few commenters suggested that the regulations should only require information to be communicated to patients orally, rather than in written form. Commenters also sought clarification regarding the timing for providing a copy of the plan of care. Commenters questioned whether the plan of care needed to be signed by the physician before being provided to the patient. Commenters also stated that requiring that patients be immediately provided with a hard copy of their plan of care would be extremely difficult in the current system of electronic medical record (EMR) reliance, and urged that HHAs be allowed to mail a copy of the plan of care within 24 hours of any actions that necessitate the copy to be shared. Commenters also suggested that HHAs be permitted to deliver the copy of the plan of care either to the patient or to the patient's representative. Numerous commenters requested additional information about the

proposed requirement to provide each updated version of the plan of care to each patient. Commenters questioned whether updates could be delivered electronically by email or other secure electronic means to the patient or to the patient's representative. Other commenters sought clarification about the types of updates that would be required to be communicated to patients. Specifically, one commenter stated that in the preamble to the proposed rule, we explained that an HHA would need to notify a patient when the individualized plan of care is updated due to a significant change in the patient's health status. However, the text of the proposed regulation did not include the word "significant," making it appear as if slight changes in patient status that result in tweaks to the plan would require notice. The commenter stated that we should include the word "significant" in the final regulation. Commenters offered suggestions regarding changes that would be significant, such as a change in therapy from physical to occupational therapy, with new caregivers coming to the home, or a change in medication, versus changes that would not, in the commenter's opinion, be significant, such as a change in visit frequencies or a change in medication dose. Commenters also requested flexibility in the format for providing notice, such as providing updates to the plan of care orally, with a notation in the patient's clinical record to document this oral communication. In addition to providing oral communication of changes to the plan of care, one commenter suggested that, if the change of plan of care involves teaching the patient skills to improve their medical treatment, the HHA should provide written information, such as flyers, that would help the patient remember and follow what they were taught. Another commenter suggested that HHAs should be required to manually update the copy of the first plan of care whenever there is a change or new order, and then furnish a clean, current copy of the plan of care upon request by the patient or representative, or whenever it is apparent that the patient's copy is missing, incomplete, inconsistent, or difficult to clearly read or follow.

Response: For the reasons set forth above, as well as in light of the many logistical concerns raised by commenters, we have revised the regulation at § 484.50(c) to remove the requirement that HHAs must routinely provide a copy of the plan of care to each patient. HHAs must involve patients in the development and

updating of the plan of care to the degree that a patient chooses to be involved in this process. HHAs are permitted to use any form of communication (for example, typed summaries, checklists, calendars, handwritten notes, secure electronic communications, or orientation videos) to facilitate patient knowledge and understanding of the care being provided.

Comment: A few commenters expressed concern regarding the information security of leaving a copy of a patient's plan of care in the home. The commenters were concerned that potentially sensitive information, such as substance use-related diagnoses, may be included on the plan of care, and potentially disclosed in the act of leaving a copy of the plan of care in the patient's home. A commenter also stated that it would be burdensome to require HHAs to educate patients and caregivers regarding the proper handling of sensitive information. The commenter stated that patients and caregivers, not HHAs, are in the best position to determine where this information should be kept and who sees it.

Response: We appreciate the thoughtful comments regarding sensitive patient information. For the reasons set forth above, we have revised the regulation at § 484.50(c) to remove the requirement that HHAs must routinely provide a copy of the plan of care to each patient. HHA patients retain the right to request a copy of any information contained in the patient's clinical record, including the plan of care. It is the HHA's responsibility to ensure proper and appropriate education is provided to the patient regarding protecting their own healthcare information. We do not agree that patient education regarding protection of the plan of care is any different than the patient education that is already provided regarding protection of other information that HHAs routinely leave in the patient's home (for example, aide visit calendars and patient rights information); therefore there would not be an additional burden for this activity. Rather, it is part of the cost of doing business. Teaching patients to secure their personal healthcare information is basic information that can be shared when giving the HHA contact information, policies and procedures and plan of care in the initial phase of care. Patients and their representatives have the ultimate responsibility to decide how and where information will be kept in the home.

Comment: Many commenters were concerned with the burden that would be placed upon HHAs in providing each

patient with a copy of his or her plan of care, as well as updates to that plan of care.

Response: For the reasons set forth above, as well as in light of the many logistical and burden-related concerns raised by commenters, we have revised the regulation at § 484.50(c) to remove the requirement that HHAs must routinely provide a copy of the plan of care to each patient.

Comment: A few commenters asked for clarification about providing a copy of the plan of care in relation to the requirement to communicate with patients in a manner that they understand. Specifically, commenters wanted to know whether the plan of care would need to be provided in the language the patient is most comfortable with, whether it would need to be understood at a 6th grade level, and whether it would need to be provided in a format that accommodates individuals with disabilities.

Response: For the reasons set forth above, as well as in light of the many logistical concerns raised by commenters, we have revised the regulation at § 484.50(c) to remove the requirement that HHAs must routinely provide a copy of the plan of care to each patient. HHAs are permitted to use any form of communication (including, but not limited to, typed summaries, checklists, calendars, handwritten notes, secure electronic communications, and orientation videos) to facilitate patient knowledge and understanding of the care being provided. Should an HHA provide a written document to a patient, we would expect that document to be understandable to the patient in accordance with the requirements of § 484.50(f). As clarified above, the term "understandable" means that patients achieve a grasp of the explanation of something and not necessarily a verbatim written translation. We expect HHAs to utilize technology, such as telephonic interpreting services and any other available resources for timely oral communication in the patient's primary or preferred language.

Comment: While some commenters agreed with the proposed requirement that a patient would have the right to participate in establishing the goals of care, other commenters identified some concerns with this concept. Commenters observed that patients may not understand the concept of establishing measurable goals of care, may have unrealistic goals, or may have goals that are inconsistent with other goals of care. One commenter requested guidance on how to comply with this proposed requirement when the patient-

identified goals are unclear or unrealistic, while another commenter suggested that in these cases an HHA should document the reason that the patient's goal cannot or should not be accommodated.

Response: We appreciate the thoughtful comments. Regardless of whether a patient can verbalize their goals, all patients have goals even if it is as basic as feeling better today than they did yesterday. It is part of the HHA's responsibility to help patients form and shape achievable goals that are relevant to the delivery of the HHA care they receive. There may be times when a patient's goal may be contrary to the HHA healthcare goals. For example, a patient may wish to walk outside unattended, but if the patient has serious cognitive impairment, they may be at risk for wandering. We believe the HHA is capable of discussing realistic goals with their patients and documenting why a specific goal may not be appropriate. As part of the re-directing process with the patient, the HHA is able to identify more appropriate goals that are achievable.

Comment: A few commenters sought clarification regarding the proposed patient right to refuse services. Commenters sought to understand the scope of this right, asking questions such as whether this right is meant to cover minor situations, such as refusing to have their hair washed on a particular day because of feeling ill, or more significant refusals such as the refusal of all services. Commenters stated that, if a patient's refusal relates to a significant part of the recommended care, the home health agency is faced with determining whether continued home care is reasonable and necessary for claims billing purposes or whether the home health patient should be discharged. Commenters stated that further guidance in this area would be appreciated.

Response: Patients have always had the right to refuse services. Although this is the first time that we are including such a right within the regulations, it is not a new concept. We expect HHAs to already have policies and procedures in place to address these situations. If a patient refuses something minor, such as declining a bath due to fatigue that day, we would expect the HHA to document this in the clinical record. If the patient or patient representative refuses large aspects of care (such as dressing changes or essential medications), then the HHA has the responsibility to document this in the clinical record and communicate with the patient regarding implications of the refusal. The HHA would also

need to communicate with the physician(s) responsible for the plan of care regarding the refusal of one or more large aspects of care that have the potential to compromise the HHA's ability to safely and effectively deliver care to the extent that the HHA can no longer meet the patient's needs, and discuss the options with the physician(s). The HHA may need to consider discharge if the patient's refusal of services compromises the HHA's ability to safely and effectively deliver care to the extent that that the HHA can no longer meet the patient's needs. We would expect HHAs to advise the patient, the representative (if any), the physician(s) responsible for issuing orders related to the element(s) of the plan of care that are refused, and the patient's primary care practitioner or other health care professional who will be responsible for providing care and services to the patient after discharge from the HHA (if any) that a discharge is being considered. HHAs should also provide the patient and representative (if any) with contact information for other agencies or providers who may be able to provide care in a manner that is consistent with the patient's preferences.

Comment: A commenter suggested that the regulation should clearly state that representatives and caregivers have a right to be involved in establishing the goals of care and care preferences.

Response: This is an enumeration of the patient's rights. Legal representatives with health care decision making authority make decisions on behalf of the patient, and would therefore already have the right to establish the goals of care and care preferences on the patient's behalf. Additionally, if a patient has authorized a patient-selected representative to make decisions on his or her behalf, this individual would have the authority to establish the goals of care and care preferences. We believe that these flexibilities are sufficient to assure that representatives are able to represent the interests of patients. As an enumeration of the rights of the patient, we do not believe that it would be appropriate to set forth the distinct rights of the caregiver. It is a best practice for HHAs to take caregiver goals and preferences into account, but it is not a regulatory requirement.

Comment: A few commenters questioned the need for regulations that would enforce a patient's right to receive all of the services included in the plan of care. Additionally, a commenter expressed concern with this requirement in relation to specific

service coverage limitations that may be imposed by payment sources.

Response: We believe it is absolutely necessary to include in regulations the right for the patient to receive all services outlined in the plan of care. Since HHAs and physicians are responsible for the items and services included in the plan of care, we presume they will only include those items and services that are covered by the patient's payment source or that the patient is willing to pay for.

Comment: A commenter suggested that HHAs should not be required to inform patients regarding the health hotline and patient liability for payment.

Response: These are statutory requirements for HHAs set forth at 1891(a)(1)(G) and (E), respectively, of the Act. Thus, it is appropriate and necessary to include these requirements in the HHA regulations.

Comment: Many commenters requested clarification regarding the proposed requirement that an HHA include contact information for local federally-funded and state-funded consumer information, protection, and advocacy agencies. Many of these commenters requested flexibility to determine, based on their patient population, which organizations would be most appropriate to meet this requirement. Commenters also stated that HHAs should not be required to assure that this list is exhaustive. Other commenters suggested that CMS should provide a set list of agencies to be included in the notice that is provided to patients. A commenter suggested that any organizations or agencies that are included on any list should be capable of substantive initial and follow-up services. Another commenter suggested that the list should include the local Center for Independent Living, transportation broker, and housing authority. Some commenters noted potential difficulties with this requirement, stating that it could be difficult to maintain the list as organizations and agencies continue and discontinue operations, relocate, etc. A commenter suggested that HHAs should be required to prepare and update the list annually. Furthermore, commenters noted that a universal list may not meet the needs of different patient populations. Commenters also stated that not all communities may be able to provide these types of services. Still other commenters stated that the requirement was unnecessary because nurses and social workers are available in HHAs to direct patients to the resources that suit their needs. Instead, commenters suggested that CMS should

require that HHAs maintain accurate and up-to-date lists of local, state, and federal support and services agencies available to agency patients in the area where they reside.

Response: We agree that HHAs should have flexibility to include, at their discretion, those national, state and local resources that would appropriately meet the needs of their patient population. At the same time, we also agree that there needs to be a minimum set list of organizations and entities that all patients will receive. Therefore, we are finalizing a requirement at § 484.50(c) that an HHA must provide the names, addresses, and telephone numbers for the regional Agency on Aging (defined in section 102 of the Older Americans Act of 1965 (42 U.S.C. 3002), http://aoa.acl.gov/AoA_Programs/OAA/How_To_Find_Agencies/find_agencies.aspx), Center for Independent Living (as defined in section 702 of the Rehabilitation Act of 1973 (29 U.S.C. 796a), <http://www.ilru.org/projects/cil-net/cil-center-and-association-directory>), Protection and Advocacy Agency (<http://www.ndrn.org/en/ndrn-member-agencies.html>), Aging and Disability Resource Center (as defined in section 102 of the Older Americans Act of 1965 (42 U.S.C. 3002), <http://www.adrc-tae.acl.gov/tiki-index.php?page=ADRCLocator>), and Quality Improvement Organization (as set forth at sections 1152 through 1154 of the Social Security Act, <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/QualityImprovementOrgs/index.html?redirect=/QualityImprovementOrgs/>) that serves the area where the patient resides. These federally- and state-funded community-based services and organizations provide care for patients who are returning home or who want to avoid institutionalization entities, and are required by federal statute to help connect individuals to community services and supports. HHAs that choose to provide the names, addresses, and telephone numbers of additional organizations and entities may find the Eldercare Locator at <http://eldercare.gov/Eldercare.NET/Public/Index.aspx> to be useful, both as a reference for HHAs and as a reference to be provided to patients and their representatives.

Comment: A commenter stated that patients should be counseled on their right to access auxiliary aids and language services, and how to access those services.

Response: Section 484.50(c)(12) of the final rule states that patients have the

right to be informed of the right to access auxiliary aids and language services, and of how to access these services. We believe that this information would be included in the written notice of patient rights that is understandable to the patient. Additionally, HHAs are required to orally discuss the content of the notice of rights, and we believe that this oral discussion is sufficient to meet patient needs.

Comment: Some commenters requested clarification regarding the proposed requirement that an HHA provide a patient with information regarding the HHA's admission, transfer, and discharge policies. Specifically, commenters wanted to know whether the proposed requirement means that the policies must be provided to the patient, or that the HHA must notify the patient that such policies exist and are available upon request. Commenters also wanted to know if this information would be required to be provided orally or in writing. Finally, commenters requested clarification regarding how this requirement would be enforced in the survey process.

Response: HHAs are required to provide physical or electronic documents for the patient's keeping that outline the acceptable reasons for discharge or transfer, as set forth in 42 CFR 484.50(d)(1) through (7). We agree that disclosure of admission policies is not necessary as the patient would already be admitted to the HHA before any such disclosure would take place, rendering the disclosure unnecessary. Therefore, we have revised the regulation at § 484.50(d) to clarify that only those discharge policies set forth in this rule need to be included in the notice. We expect that verification of distribution of this notice would be incorporated into a home visit made by a state surveyor.

Comment: A commenter suggested that we should add the following requirement to the patient rights CoP: An HHA must ensure that a patient is transferred or discharged to a setting in which he or she will receive the level and type of care needed and make every effort to honor a patient's preferences and choices. A transfer or discharge may not occur until care in an appropriate setting is obtained. The HHA must provide sufficient preparation and orientation to patients to provide for a safe and orderly transfer or discharge from the HHA.

Response: HHAs have the responsibility of coordinating the discharge and transfer plan to the greatest degree possible to assure a

smooth transition in accordance with patient preferences. We agree that proper planning and thorough patient preparation is an important part of a smooth transfer and discharge process. The patient, representative, caregivers, follow-up care practitioner, etc. are required to be informed of changes to the transfer or discharge plans in accordance with the requirements of § 484.60(c)(3)(ii), and we believe this would be an appropriate time for HHAs to prepare patients for a transfer and discharge. However, we note that HHAs cannot control the availability and quality of post-discharge or post-transfer care and should not be held responsible for those elements that are beyond their control.

Comment: A few commenters submitted comments related to patient involvement in the discharge or transfer process. Some commenters suggested that the HHA should be required to provide written notice of potential discharge or transfer to the patient, as well as the caregiver or representative (as appropriate), at least 30 days in advance of discharge or transfer. Furthermore, a commenter suggested that the written notice should be required to include the following:

- The reason for transfer or discharge;
- The effective date of transfer or discharge;
- The location to which the patient will be transferred or discharged;
- A statement that the patient has the right to appeal the HHA's decision to transfer or discharge him or her; and
- The address and telephone number of any agency/program that can represent the patient at a hearing, including but not limited to, the local office of the Legal Services Corporation; the state protection and advocacy system; and the local long-term care ombudsman if the state long-term care ombudsman program is authorized to serve home care clients.

Additionally, a commenter suggested that HHAs should be required to notify the State Survey Agency and Medicare contractor of its intention to discharge for cause. Another commenter requested clarification regarding whether patient consent is required for transfer. A commenter suggested that the regulation should include a specific process for patients to follow if they disagree with the HHA's decision to discharge or transfer.

Response: We believe the commenters' concerns are sufficiently addressed by § 484.60(c)(3)(ii), which requires that any revisions related to plans for the patient's discharge must be communicated to the patient, representative, and caregiver(s). This is

sufficient to assure appropriate communications between the HHA and the patient, representative, and caregiver(s) regarding transfer or discharge plans. Specifically, we do not believe a thirty day notice of transfer or discharge is a practical requirement for HHAs at this time. HHA discharges can occur in much shorter timeframes for a variety of unavoidable reasons ranging from a patient's decision to transfer to another HHA to a patient's transfer to an acute care provider to a situation in which HHA personnel are unable to deliver care due to an unsafe home environment.

Comment: A few commenters suggested additional circumstances under which HHAs should be permitted to discharge a patient. The commenters suggested the following additions:

- The HHA experiences a staffing change (unexpected staffing shortage); and
- The coverage requirements (that is, the face-to-face encounter) have not been met.

Response: We do not agree that staffing changes would be an appropriate reason for patient discharge. HHAs are responsible for assuring adequate staffing at all times to consistently meet the needs of all patients under their care. Likewise, we do not agree that it is necessary to add a reason for discharge specifically related to coverage requirements. In the event that coverage requirements are not met, an HHA would be permitted to discharge a patient because the patient or payer will no longer pay for the care (§ 484.50(d)(2)). We believe that situations where an HHA patient does not meet Medicare coverage requirements due to a failure to complete the face-to-face encounter requirements should be exceptionally rare, as we have made considerable efforts to streamline the requirements related to the face-to-face encounter coverage requirement and there is ample time (a 120 day period) to complete this coverage requirement. We expect HHAs to facilitate and coordinate efforts of the patient and physician to ensure that the face-to-face encounter occurs timely. In the case where the face-to-face encounter requirement is not met, an HHA cannot hold a patient financially liable for services provided. Failure to meet a condition for payment is not one of the criteria where an HHA can hold a patient financially liable. Once a patient is admitted, an HHA cannot abruptly discharge a patient unless the patient is properly notified and there is a valid reason for discharge. Ideally, a face-to-face encounter, as part of the

certification process, would occur before the patient received services.

Comment: A few commenters made suggestions regarding the entities to which patients are discharged. One commenter suggested that, in addition to requiring an HHA to discharge a patient to a suitable source of care, the regulation should also address situations where the patient refuses further placement or care from another entity. The commenter stated that patients have the right to refuse follow-up services. Another commenter suggested that HHAs should not be required to “ensure” a safe and appropriate transfer to another care entity because HHAs are not in control of other healthcare providers and cannot guarantee that another agency will take a patient under care.

Response: We appreciate these comments. All HHAs are required to ensure that appropriate arrangements for transfer are made for those patients whose acute care needs cannot be met by the HHA, and we have revised the final regulation at § 484.50(d)(1) to clarify this responsibility. The Improving Medicare Post-Acute Care Transformation Act of 2014 (IMPACT Act) (Pub. L. 113–185) requires HHAs to take into account patient goals and preferences in discharge and transfer planning. On November 3, 2015, we published a proposed rule, “Medicare and Medicaid Programs; Revisions to Requirements for Discharge Planning for Hospitals, Critical Access Hospitals, and Home Health Agencies” (80 FR 68126), that would implement this section of the IMPACT Act. The HHA patient has the right to refuse a transfer to any provider or supplier, and the HHA would be expected to document the refusal and communicate with the patient and representative/care giver to help meet their healthcare needs to the best of the HHA’s ability.

Comment: A commenter disagreed with the proposed regulation that an HHA would be permitted to discharge a patient when the patient or payer will no longer pay for the services provided by the HHA. The commenter stated that this regulation would conflict with the regulation in one state. Another commenter suggested that the regulation should be clarified with regard to what it means for a patient to no longer pay for services. Specifically, the commenter stated that discharge for non-payment should not be allowed in situations when a patient has submitted to a third party payer the paperwork necessary for the bill to be paid, and the bill is still pending.

Response: For those instances where state and federal laws overlap, the

stricter regulation would prevail. For example, if a state regulation did not allow HHAs to discharge a patient due to a lack of payment, then the HHA would have to comply with state law, since state law prohibits discharge while federal regulations permit it. We agree that a discharge for non-payment is not to be considered until all payment source options have been fully explored and payment from a third party is no longer considered pending.

Comment: Some commenters opposed the proposal that an HHA be permitted to discharge a patient when the physician and HHA agreed that the patient no longer needed HHA services because the patient’s health and safety had improved or stabilized sufficiently. The commenters stated that this regulation would, in certain cases, violate Medicare coverage law and regulations, as well as the settlement agreement in *Jimmo v. Sebelius* (see *Jimmo et al. v. Sebelius, D.Vt. No. 11–cv–17, October 25, 2011, 2011 WL 5104355*).

Response: The proposed rule stated that discharge or transfer would be permitted if it is appropriate because the patient’s health and safety have improved or stabilized sufficiently, and the HHA and the physician who is responsible for the home health plan of care agree that the patient no longer needs the HHA’s services. Our intent was that, if the physician responsible for issuing orders related to the reason that HHA care was initiated and the HHA both agree that a patient has achieved the goals set forth in the plan of care (see § 484.60(a)(2)(xiv)), then discharge would be appropriate because the goals of care have been achieved. We have clarified this original intent in the regulation to assure that it is appropriately implemented. If the patient disagrees with a discharge or transfer, he or she has the right to appeal the decision. As set forth in § 484.50(c)(8), each patient has the right to receive proper written notice, in advance of a specific service being furnished, if the HHA believes that the service may be non-covered care; or in advance of the HHA reducing or terminating on-going care. The HHA must also comply with the requirements of 42 CFR 405.1200 through 405.1204. This written notice includes information related to patient appeals. Finally, the *Jimmo* settlement agreement pertains only to guidance, not to regulations, and does not prevent implementation of new regulations.

Comment: A few commenters submitted suggestions to clarify the proposed discharge requirements for situations when patients refuse HHA

services. One commenter noted that there are various degrees of which a patient may refuse services. For example, a patient may refuse an IV antibiotic, but accept therapy services in lieu of such treatment. The commenter suggested that only a refusal of all HHA services would warrant discharge. Other commenters suggested that it is not the refusal of services in and of itself that would necessitate a discharge. Rather, it is the effect of that refusal that may make discharge appropriate. These commenters stated that HHAs should be allowed to discharge or transfer a patient at any time when the refusal of services or the refusal to follow the agreed upon plan of care results in the HHA being unable to effectively deliver care.

Response: As stated previously, patients have the right to decline services. If a patient declines something minor, such as declining a bath due to fatigue that day, we would expect the HHA to document this in the clinical record. If the patient or patient representative declines large aspects of care (such as dressing changes or essential medications) then the HHA has the responsibility to document this in the clinical record and communicate with the patient regarding implications of the decline. We would expect HHAs to explore alternative options for providing care that is both consistent with patient preferences that continues to meet the patient specific needs as identified in the comprehensive assessment, and the measurable outcomes and goals identified by the HHA and the patient. The HHA would also need to communicate with the physician regarding the decline of services that have the potential to compromise the HHA’s ability to safely and effectively deliver care to the extent that that the HHA can no longer meet the patient’s needs, and discuss the options. The HHA may consider discharge if the patient’s decline of services compromises the HHA’s ability to safely and effectively deliver care to the extent that that the HHA can no longer meet the patient’s needs. We would expect HHAs to advise the patient, the representative (if any), the physician(s) issuing orders for the home health plan of care, and the patient’s follow-up care professional (if any) that a discharge is being considered because the HHA can no longer meet the patient’s needs. HHAs should also provide the patient and representative (if any) with contact information for other agencies or providers who may be able to provide care following discharge from the HHA.

Comment: Many commenters stated that HHAs should be explicitly permitted to discharge a patient for cause if the safety of the HHA's staff is threatened. In such situations, commenters suggested that reporting the danger to the proper authorities, such as law enforcement, protective services, etc., should suffice for documentation of the significant safety hazard that warranted a discharge. Other commenters suggested a broader list of reasons related to staff well-being that they believed would warrant discharging a patient from services, such as sexual harassment or verbal abuse. A commenter also suggested that, if a patient is discharged for reasons related to HHA staff safety and well-being, the HHA should be permitted to conduct the discharge process via alternative means, such as by phone, mail or electronic communication.

Response: The proposed regulation text states that if "the patient's (or other persons in the patient's home) behavior is disruptive, abusive, or uncooperative to the extent that delivery of care to the patient or the ability of the HHA to operate effectively is seriously impaired," then the HHA may discharge the patient after following certain intermediary steps to attempt to resolve the issue(s). We believe this requirement already includes situations where the HHA's staff feels threatened, as such situations would seriously impair the HHA's ability to operate effectively in the delivery of care. We also believe the proposed requirement for documenting the problem and efforts made to resolve the problem will be sufficient for documentation purposes. If HHA staff felt that re-entry to the patient's residence was unsafe for them, the discharge process could be handled by way of an alternative method (for example, phone or electronic mail) rather than face-to-face communication.

Comment: While many commenters suggested that HHAs should be permitted to discharge patients for cause at the discretion of the HHA, without any regulatory limitations, other commenters strongly opposed the concept of discharge for cause in its entirety, suggesting that a discharge for cause provision would be used to "dump" patients (or patients who have caregivers) who they could claim were being "difficult."

Response: While we acknowledge that the discharge for cause provision may be subject to misuse in rare cases, we do not believe that the potential for abuse is appropriately counteracted by the complete removal of all discharge for cause options. Likewise, while we acknowledge that the discharge for

cause provisions impose significant limits upon an HHA's ability to discharge patients who may be perceived as being "difficult," we believe that these restrictions are essential in order to minimize the potential for inappropriate discharges. As part of the survey monitoring process, HHA's may be asked if there have been patients who have been discharged for cause. The surveyor may also request the patient(s) record as part of the clinical record review process during the survey. We believe that this type of monitoring may mitigate potential negative behaviors in an HHA.

Comment: A commenter opposed a statement in the preamble of the proposed rule that "it would be incumbent upon the HHA to take all reasonable steps to resolve safety and noncompliance issues prior to taking steps to discharge a patient." The commenter stated that the word "all" is overly broad and implies that corrective action is entirely up to the agency.

Response: It appears that the intent of the statement was misunderstood. Rather than requiring that "all" steps be taken, this statement was intended to convey the message that "all reasonable" steps must be taken prior to discharging a patient for cause. HHAs would be expected to take every reasonable step that is available to them in order to resolve the issue(s) at hand prior to initiating a discharge for cause.

Comment: A few commenters requested clarification regarding the proposed requirement that HHAs investigate injuries of unknown source. Commenters sought guidance on how and to what extent HHAs should conduct such investigations. The commenters noted that patients are in the presence of HHA personnel for a very limited amount of time, and that HHAs should not be held responsible for minor injuries that occur in the course of everyday life, such as bruises and cuts.

Response: We appreciate the commenters' views and the opportunity to clarify the parameters an HHA should use when investigating an injury of an unknown source. An injury should be classified as an "injury of unknown source" when both of the following conditions are met: (1) The source of the injury was not observed by any person or the source of the injury could not be explained by the patient; and (2) The injury is suspicious because of the extent of the injury, or the location of the injury (for example, the injury is located in an area not generally vulnerable to trauma), or the number of injuries observed at one particular point in time, or the recurring incidence of

injuries over time. The type, extent, process, and personnel involved for investigations would be left to the discretion of the HHA. HHAs are responsible for asking the questions necessary to determine whether minor injuries are indicative of more significant concerns. Furthermore, HHAs are responsible for complying with applicable state-specific reporting laws, in accordance with the requirements of § 484.50(e)(2).

Comment: While several commenters expressed strong support for the proposed requirement to investigate patient complaints regarding potential violations of patient rights, several other commenters offered suggested revisions to this requirement. While one commenter stated that CMS should recognize that investigations necessarily must vary in terms of intensity and duration, depending on the complaint alleged, and as such, any required investigation process should be flexible enough to allow for calibration to the circumstances, other commenters disagreed with the open-ended manner in which the standard was written, calling it "too vague." Some commenters sought specific parameters for what constitutes appropriate reporting and documentation. Others suggested that the regulation should include examples of authorities to whom patient rights violations should be reported, such as adult protective services, law enforcement, and the state licensure agency. Additionally, others suggested that the regulation should identify and delineate complaints into different categories by level of severity, and implement a clear process for investigation for each different level. Still another commenter suggested that we should create a robust and detailed complaint investigation standard that requires the following:

- HHAs must have a complaint process, complete with policies and procedures, that is provided, in writing, to the patient, the patient's representative, and the patient's caregivers at the time of admission and each time the plan of care is updated.
- HHAs must provide a written report to the patient, documenting the findings of the investigation and resolution of the complaint within 14 calendar days of its receipt.
- If the patient is not satisfied with the HHA's response, the patient should be permitted to request another review, and the HHA would be responsible for responding, in writing, within 30 days from the date it received the patient's request for review.
- The HHA's response to this second review would be required to include the

telephone number and address of all agencies and programs with which a complaint may be filed, and the telephone number of the state home health hotline.

Response: We believe the proposed general language establishing an expectation for patient complaint investigation and reporting, without specifying details, is the most appropriate regulatory approach given the wide variety of situations that HHAs will likely encounter. We agree that HHAs will experience varying levels of intensity and duration when investigating patient complaints. These investigation and reporting suggestions from the commenters are all appropriate elements for HHAs to include in their internal policies and procedures for implementing this general requirement.

Comment: A few commenters sought clarification on the relationship between the proposed patient rights violation reporting requirements and existing state laws and regulations. One commenter stated that its state law requires HHAs, rather than HHA staff, to report misappropriation of patient property. Another commenter suggested that the reporting requirement should be qualified by the phrase “in accordance with state law” to assure that reporting meets current state requirements. A commenter also suggested that any HHA staff member who identifies, notices, or recognizes incidences or circumstances of mistreatment, neglect, verbal, mental, sexual, and/or physical abuse, including injuries of unknown source, or misappropriation of patient property, should be required to report said incidences or circumstances directly to law enforcement, in addition to reporting to the HHA management.

Response: We agree with the commenter that reporting should occur in accordance with state law, and have amended the regulations at § 484.50(e) to include this requirement. We note that, where these federal requirements are more stringent, HHAs are expected to comply with the more stringent federal requirement. We believe allowing each HHA to establish its own policies and precise chain of command for reporting incidents will give them the flexibility to meet the various levels of incidents and behavior, and to respond appropriately.

Comment: A commenter suggested that the regulation should state that a patient complaint may not be investigated by any HHA staff involved in the complaint.

Response: We agree that this is the appropriate policy for all HHAs, and would expect HHAs to exercise appropriate discretion in their

investigations. However, we do not believe that this needs to be incorporated into the regulatory text, which establishes the broad goals for investigations rather than the specific mechanisms for them.

Comment: A commenter suggested that the regulation should clarify that complaints by a patient, representative, or caregiver may include, but are not limited to, complaints regarding treatment or care that is (or fails to be) furnished, is furnished inconsistently, or is furnished inappropriately. Another commenter suggested that the regulation should state that the patient has the right to make complaints “without discrimination, retaliation or fear of retaliation to the HHA and the state survey and certification agency.”

Response: We agree that the topics set forth in the proposed rule are not the only issues that a patient may make complaints about, and have revised regulatory text at § 484.50(e) accordingly. We also agree that patients have the right to exercise their right to complain without discrimination, retaliation or fear of retaliation. This concept is reflected in § 484.50(c)(11), which states that the patient has the right to be free from any discrimination or reprisal for exercising his or her rights or for voicing grievances to the HHA or an outside entity. This would include the right set forth in § 484.50(c)(3) to “Make complaints to the HHA regarding treatment or care that is (or fails to be) furnished, and the lack of respect for property and/or person by anyone who is furnishing services on behalf of the HHA.”

Comment: A commenter suggested that the regulation should specifically state that an HHA must take action to prevent further potential violations, including retaliation, while the complaint is being investigated.

Response: We agree that HHAs should take all appropriate steps to prevent retaliation, and have incorporated this requirement into the regulatory text at § 484.50(e)(1)(iii).

Comment: A few commenters expressed concern regarding the proposed requirement to provide auxiliary aids to patients for the purpose of facilitating communication, citing the potentially large expense of certain auxiliary aids. Commenters stated that HHAs should be expected to make efforts to facilitate acquisition of auxiliary aids for patients, but not be required to provide more expensive equipment directly. Commenters also sought clarification of the proposed requirement to provide patient rights information in alternate formats.

Specifically, the commenters stated that the term “alternate formats” is unclear.

Response: The provisions of the Americans with Disabilities Act and Section 504 of the Rehabilitation Act require facilities to provide equal access to individuals with disabilities. If the provision of auxiliary aids becomes an “undue burden,” the HHA may seek protection that is available under section 504 of the Rehabilitation Act. As we noted in the preamble of the proposed regulation, the alternate formats expectation includes, but is not limited to, the provision of qualified interpreters, large print documents, Braille, digital versions of documents, and audio recording.

Comment: Several commenters made suggestions regarding ways that CMS and HHAs could address the issue of health disparities. Comments ranged from providing a standardized notice of patient rights in multiple languages to requiring HHAs to employ personnel who are similar in age, gender, and background to the HHA’s patient population to formulating a CMS-wide response to the results of the vulnerable care study mandated by the Affordable Care Act.

Response: We appreciate these suggestions that commenters submitted; however, they are beyond the scope of this rule. We will retain these suggestions for future consideration.

Comprehensive Assessment of Patients

Comment: A commenter stated that the requirement for each patient to have an initial and comprehensive assessment should only apply to those patients who are receiving skilled care. Another commenter asked whether the proposed content elements of the comprehensive assessment applied to patients from all payer sources, or only to a subset of patients with certain specified payer sources, such as Medicare and Medicaid.

Response: We do not believe that limiting the assessment requirements solely to those patients set to receive skilled care services or to those patients who have Medicare or Medicaid as a payment source would be in the best interest of patients. The patient assessment is designed to identify patient needs, and all patients will have needs to be assessed. Therefore we are maintaining the requirement that all patients must be assessed; otherwise they would not be receiving HHA services in the first place.

Comment: The majority of commenters who submitted comments on this section made suggestions regarding the professionals who are permitted to complete the initial and

comprehensive patient assessments under various circumstances. Suggestions included allowing a therapy discipline to complete the assessments as long as that therapy is ordered, and allowing therapists to complete all assessments in all situations to allowing occupational therapists to complete the assessments in therapy-only, but not necessarily occupational therapy-only, situations.

Response: The suggestions made by commenters go far beyond our original intent to maintain the long-standing requirements that was proposed in the October 2014 rule. Since this would be a significant change to what was originally proposed, we believe that the most appropriate course of action would be to address this issue in separate notice and comment rulemaking at a future date. Therefore, we are finalizing the proposed requirements, which is a continuation of longstanding CMS policy.

Comment: A commenter stated that the 5 day time frame within which HHAs must complete the comprehensive assessment may not be sufficient to capture the full extent of some of these proposed factors in the comprehensive assessment, such as psychosocial and cognitive status, for certain patients. The commenter stated that this is due, in part, to the nature of certain conditions—especially psychosocial conditions—and, in part, to the focus on stabilization that consumes much of the initial visit(s). The commenter recommended that CMS should acknowledge this limitation, and should provide for additional time to complete the comprehensive assessment in limited, necessary circumstances.

Response: We do not agree that a period of greater than 5 days is necessary to gather information regarding all elements of the patient assessment. HHAs are already accustomed to completing the current assessment requirements within 5 days, and there is no evidence that patient care has suffered because of the failure of additional conditions to manifest themselves within that timeframe. While we acknowledge that this rule will expand the content of the assessment, such expansion is in keeping with current best practices and can be incorporated into HHA assessment timelines without undue burden. We note that hospice care providers, who operate under similar conditions, and who are also required to complete a patient assessment of very similar content, have developed ways to successfully assess things such as psychosocial condition within the same 5 day period as we are finalizing in this

rule. Given the success of another very similar provider type in meeting this timeline, we believe that it is appropriate to maintain the 5 day timeline for HHAs. The 5 day timeline to complete the comprehensive assessment begins upon the physician ordered start of care date. If an HHA is unable to begin care on that date for any reason, we would expect the HHA to decline the referral because it is unable to meet the patient's needs in a timely manner. It is not acceptable for an HHA to seek a new referral with a new start of care date that is more convenient for the HHA.

Comment: Several commenters expressed support for the proposed requirement that, when occupational therapy is the only service ordered by the physician who is responsible for the home health plan of care, and if the need for that service establishes program eligibility, the initial assessment visit may be made by the occupational therapist. The commenters interpreted this requirement to mean that occupational therapy in now permitted to establish eligibility for the Medicare home health benefit.

Response: We appreciate the commenters' support. However, we did not propose to change the requirements for establishing eligibility for the Medicare home health benefit. Rather, we proposed that if occupational therapy established eligibility, which may occur for a non-Medicare home health benefit such as private insurance or for a subsequent episode of home health care when the continuing need for occupational therapy establishes Medicare eligibility for the home health benefit, then the occupational therapist may perform the assessment.

Comment: A commenter noted that the new requirements related to the content of the comprehensive assessment will require revisions to forms and electronic medical records in order to assure that all information is documented appropriately.

Response: Neither the proposed rule nor the final rule mandate the use of a specific assessment form or electronic medical records (EMRs), which may also be referred to as electronic health records (EHRs). The extent to which HHAs choose to revise their forms or EMRs is entirely left to their discretion.

Comment: A commenter suggested that information about caregivers should be gathered as part of the comprehensive assessment. The commenter noted that oftentimes caregivers play a significant role in care delivery, as indicated by the proposed rule's inclusion of specific requirements related to caregiver education and

training. Given their important role in care delivery, the commenter suggested that the patient assessment should include the following additional elements: caregiver willingness and ability to provide care; caregiver availability and schedules (for example, hours worked outside the home); the caregiver's current level of comfort in carrying out medical/nursing tasks or assisting with activities of daily living; and a brief screen for caregiver strain or depression. The commenter suggested that these elements are necessary in developing an understanding of a caregiver's particular situation in order to best provide appropriate and effective caregiver education and training.

Response: We agree that gathering certain key information about caregivers is essential for effective HHA care planning activities. HHAs cannot develop a schedule for turning a bed-bound patient, for example, without knowing the times when a caregiver would be available to perform the task. Thus, we are adding a requirement in this final rule that, as part of assessing patient caregivers (proposed and finalized at § 484.55(c)(6)), HHAs will be required to gather information regarding caregiver willingness, ability, availability, and schedules. We believe that the concept of "willingness and ability" adequately covers a caregiver's level of comfort in carrying out tasks. We believe that these concepts fit well with the finalized requirement at § 484.60(d)(5) that an HHA must ensure that each patient, and his or her caregiver(s), receive ongoing education and training provided by the HHA, as appropriate, regarding the care and services identified in the plan of care. However, screening for caregiver strain/depression is beyond the scope of HHA services as set forth in the Act. While these screenings are certainly a best practice that we encourage HHAs to incorporate on their own, we do not have the authority to expand the unit of care beyond the patient.

Comment: A commenter recommended that the comprehensive assessment regulation should address the use of standardized tests and measures by home health clinicians. The commenter stated that the use of standardized tests and measures early in an episode of care establishes the baseline status of the patient, assists in the development of the plan of care, and provides a means to quantify change in the patient's functioning. Outcome measures, along with other standardized tests and measures used throughout the episode of care, as part of periodic reexamination, provide information

about whether predicted outcomes are being realized.

Response: We fully support the use of standardized data elements, tools, and measures by HHAs. To that end, the OASIS already provides standardized data elements that HHAs may use to establish the baseline status of the patient, assist in the development of the plan of care, and provide a means to quantify change in the patient's functioning. For those aspects of the patient assessment that are not captured via OASIS data elements, we encourage HHAs to use standardized data elements, tools, and measures that are available from national sources. This may include measurement scales such as the Functional Independence Measure and Functional Assessment Measure (http://www.dementia-assessment.com.au/symptoms/fim_manual.pdf) and the Chedoke-McMaster Stroke Assessment (<http://www.rehabmeasures.org/pdf%20library/cmsa%20manual%20and%20score%20form.pdf>) to name a few.

Comment: While most commenters expressed general support for our proposal to expand the required elements of the comprehensive assessment, several commenters requested additional clarification regarding specific proposed elements of the comprehensive assessment as follows: Psychosocial status, and cognitive status. Specifically, commenters sought more information regarding the extent to which these proposed elements may or may not differ from similar OASIS items (M1700–M1750), the meaning and intent of the term “psychosocial,” and the goals that CMS wants to achieve as a result of requiring an HHA to assess psychosocial and cognitive status.

Response: We appreciate the opportunity to clarify the intent of these requirements. Assessing a patient's psychosocial status refers to an evaluation of his or her mental health, social status, and functional capacity within the community by looking at issues surrounding both a patient's psychological and social condition (for example, education and marital history). This provision is intended to be a screening for potential issues that may complicate or interfere with the delivery of HHA services and the patient's ability to participate in his or her own care. Based on the results of this screening, an HHA may need to make referrals to additional care sources and other outside entities. Assessing a patient's “cognitive status” refers to an evaluation of the degree of his or her ability to understand, remember, and participate in developing and

implementing the plan of care. Numerous screening tools are available that HHAs may choose to use in order to implement this requirement (<http://www.ncbi.nlm.nih.gov/pmc/articles/PMC2117747/>). We are not requiring the use of any particular tool, nor are we prescribing the extent of the cognitive status assessment. Our goal is to make cognitive assessment a routine practice in HHAs so that HHAs can use this information in developing and implementing the patient-specific plan of care, and so that HHAs identify potentially unmet patient needs that warrant follow-up care with another health care provider, with the HHA making appropriate referrals as needed. We agree that there is crossover between these assessment elements and those items already included in the OASIS. However, those items included in the OASIS may not be sufficient for all patients. That is to say, some patients may require additional assessment beyond what is required in the OASIS, and we expect HHAs to revise or expand their patient assessment, as needed, to assure that each patient's psychosocial and cognitive status are assessed. The goal of this requirement is to enable HHAs to develop a more complete and person-centered understanding of the patient.

Comment: A commenter requested additional information regarding the intent and meaning of the proposed requirement that an HHA would identify a patient's strengths and care preferences. Another commenter requested guidance on honoring patient care preferences in case-by-case situations, such as when a patient prefers a shower bath on a day that they are feeling well versus the bed bath that is scheduled for that day.

Response: Traditionally the home health plan of care has been developed with a focus on patient deficits that require treatment. The physician and the HHA decide how to treat these deficits, and patients are told what is going to be done. This model of care places patients in a passive recipient role that does not optimize the achievement of positive patient outcomes. First, this model does not take into account those patient-strengths that can be harnessed by the HHA staff and plan of care to facilitate patient well-being. Examples of patient strengths that HHAs may identify, through observation and directly asking the patient to identify his or her own strengths, may include things such as knowledge of medications, motivation and readiness for change, vocational interests/hobbies, interpersonal relationships and supports, and

financial stability. HHAs need to look at a patient's deficits as well as their strengths in order to develop a complete understanding of the patient, and we believe that this requirement will facilitate this practice.

Second, the traditional model of home care tells patients what is going to be done rather than asking patients what their care preferences are. The requirement to gather information regarding patient care preferences and take them into account when developing and implementing the home health plan of care seeks to revise this approach. We would expect patients to be engaged as active participants in their own care, and this begins with gathering and taking into account patient preferences regarding their care. For example, if a patient prefers a shower on a day when a bed bath is scheduled, or, conversely, if a patient prefers a bed bath on a day when a shower is scheduled, we would expect the HHA to take this preference into account and accommodate it to the greatest degree possible. Patient care preferences may go beyond basic daily decisions. Some patients may prefer to have a greater degree of pain control requiring medications that impair the ability to safely function independently while other patients may prefer to take less medication, even if that means a higher level of pain, to allow a greater degree of independence to safely function. Each patient has their own set of care preferences, and we would require HHAs to both identify and respect these care preferences to the greatest degree possible. Our goal is to assure that HHAs plan for and provide care that is both patient-directed and in accordance with the physician-ordered plan of care.

Comment: A few commenters requested clarification regarding proposed § 484.55(c)(8), which would require the comprehensive assessment to include data items collected at inpatient facility admission or discharge only. The commenters wanted to know what data items were being referred to in this requirement. The commenters asked if this requirement was in reference to the inpatient facility discharge/home health agency referral paperwork, or if there were other data items that we had in mind when developing this proposed requirement.

Response: The phrase “data items collected at inpatient facility admission or discharge only” is included in the regulations that HHAs have been required to comply with for more than a decade. This phrase refers to specific OASIS data elements (see

Initiatives-Patient-Assessment-Instruments/HomeHealthQualityInits/OASIS-C1-DataSets.html). Specifically, in OASIS-C1/ICD 10, “data items collected at inpatient facility admission” is equivalent to those items that must be collected for “Transfer to an Inpatient Facility.” The data items collected at “discharge only” are equivalent to those items that must be collected for “Discharge from Agency—Not to an Inpatient Facility Death at home,” and “Discharge from agency.” No change to these data set items is being made at this time.

Comment: A commenter requested clarification on the criteria HHAs should use to determine when a change in a patient’s condition warrants an update to the comprehensive assessment. The commenter interpreted this requirement to mean that an update to the comprehensive assessment is required only in situations where the change in a patient’s condition is significant enough that it warrants close monitoring by HHA staff or results in a revision to the plan of care.

Response: The proposed provisions do not reflect a change in our policy. Current policy requires each HHA to have a policy defining a significant change in condition that would trigger an update to the assessment. For example, an initiation or discontinuation of a service, or a significant improvement or worsening of a patient’s condition not anticipated in the plan of care. It will be up to each individual HHA to determine how a significant change in condition is to be defined.

Comment: All commenters who submitted comments regarding the proposed allowance for a physician-ordered resumption of care date fully supported this proposed change. One commenter suggested that the requirement to update the comprehensive assessment within 48 hours of the patient’s return to the home from a hospital admission should be reconsidered because a hospital stay is not the only marker of a change in condition that would warrant an update to the comprehensive assessment. The commenter noted that patients with extended emergency room stays, patients who are in the hospital on observation status, and patients who are accessing urgent care may all be appropriate candidates for a physician-ordered re-assessment.

Response: We agree that extended patients who experience extended emergency room stays, being kept in the hospital on observation status, and utilizing urgent care services for urgent concerns may be in need of an update

to the comprehensive assessment. These situations are all examples of a “significant change in condition.” The regulation at § 484.55(d) requires that the comprehensive assessment must be updated and revised (including the administration of the OASIS) as frequently as the patient’s condition warrants due to a major decline or improvement in the patient’s health status, but not less frequently than the last 5 days of every 60 days beginning with the start-of-care date, unless there is a significant change in condition. Consistent with current CMS policy, HHAs are expected to develop policies and procedures that establish the parameters for what constitutes a “significant change in condition.” We believe that extended emergency room stays, patients who are in the hospital on observation status, and patients who are accessing urgent care are all experiencing a “significant change in condition” that would warrant a patient assessment. Therefore, we do not believe that it is necessary to explicitly incorporate these circumstances into the regulation because they are already captured under the broader heading of “significant change in condition.”

Care Planning, Coordination of Services, and Quality of Care

Comment: A commenter suggested that the requirement to develop an individualized plan of care should only apply to patients receiving skilled services. In other words, the plan of care requirements should not apply to those patients that only receive non-skilled (that is, homemaker) services.

Response: All patient care, regardless of the level of clinical skill involved, should be delivered in accordance with a plan of care. To do otherwise would create opportunities for uncoordinated care, duplication of services, and missing services.

Comment: A commenter stated that the use of the terms “plan of care” and “care plan” throughout the rule is confusing because some may interpret these two terms as being two separate documents. The commenter suggested that a single term be used consistently in order to avoid potential confusion.

Response: The use of “care plan” and “plan of care” were intended to mean the same thing. However, in order to avoid the potential for any confusion, we are using the term “plan of care” throughout to express this concept.

Comment: Most commenters expressed strong support for the overall concept of an HHA developing a patient-specific, patient-centered plan of care for each patient. The commenters stated that the revised requirement

would better ensure that the patient will, indeed, receive all the services and education called for in the plan of care. One commenter suggested that the requirement should specify that each plan of care be individualized to the patient’s needs, as reflected in the comprehensive assessment.

Response: We agree that the plan of care should be based on the assessment and that it is important for the plan to specify patient education and training. We understand that is standard of practice for the patient to receive written care information based off the individualized plan of care, from the HHA outlining the medication schedule/instructions, visit schedule and any other pertinent instruction related to the patients care and treatments that the HHA will provide. We believe that this is critical information to improve the patient and caregiver comprehension of diagnosis and treatment, improve compliance with medications and treatment schedules and promote high quality care for the patient. Therefore, in response to comments, we have revised our proposed rule to create a new standard at § 484.60(e), “Written information to the patient.” The new provision requires the HHA to provide written instructions to the patient and care giver outlining visit schedule, including frequency of visits; medication schedule/instructions; treatments administered by HHA personnel and personnel acting on the behalf of the HHA; pertinent instructions related to patient care; and the name and contact information of the HHA clinical manager.

Comment: A commenter requested examples of effective interdisciplinary teams.

Response: Interdisciplinary teams work together, each member contributing their knowledge and skills, interacting with and building upon each other, to enhance patient care. The interdisciplinary team model is the foundation of care in other health care providers, such as hospices and complex chronic care management practices. HHAs may choose to develop interdisciplinary team models based on the experiences and knowledge developed by these similar care providers, or may develop their own strategies and structures to create effective interdisciplinary teams.

Comment: A commenter requested clarification of the term “social needs” in the context of the proposed requirement that patients are accepted for treatment on the reasonable expectation that an HHA can meet the patient’s medical, nursing,

rehabilitative, and social needs in his or her place of residence.

Response: Patients come from a variety of backgrounds and settings, each with their own social needs. Some patients require a more intense level of services based on their social needs, and not all HHAs have the staff (for example, social workers) or other capabilities to meet the needs of all patients. Patient social needs may include intrapersonal and interpersonal relationships in the immediate family, financial status, homemaker/household needs, vocational rehabilitation needs, family social problems, transportation needs, and recreational needs. This requirement assures that, if a patient has social needs that go beyond the capabilities of the HHA and/or they would interfere with the HHA's ability to safely and effectively deliver patient care, the HHA would not be expected to accept that patient for care.

Comment: A few commenters suggested that licensed practitioners, such as nurse practitioners and physician assistants, should be permitted to review, sign and order home health services for patients served by Medicare certified HHAs. Other commenters suggested that "physician extenders" should be authorized to provide verbal orders. The commenter stated that, as necessary, their orders could be co-signed by the physicians to whom they report for the purposes of billing.

Response: Section 1861(m) of the Act requires that the home health plan of care be established and maintained by a physician. Section 1861(r) of the Act defines "physician" in a manner that does not include other licensed practitioners, such as nurse practitioners and physician assistants. Therefore, pursuant to statute, other licensed practitioners may not establish and maintain the home health plan of care, including reviewing, signing, and ordering home health services.

Comment: A commenter suggested that the individualized plan of care should be required to identify caregiver needs.

Response: While the needs of caregivers are important, they are beyond the scope of the home health benefit as set forth in the Social Security Act. It would be inappropriate to require HHAs to identify caregiver needs in the home health plan of care, as HHAs would then be obligated to deliver care to meet those needs and such an obligation is beyond the scope of covered HHA services.

Comment: A commenter stated that the regulation should include more specificity regarding the proposed

requirement that the plan of care would include safety requirements, functional limitations and nutritional requirements. The commenter stated that the regulation should specify the data elements and level of detail for these aspects of the plan of care because there are no industry standards for them.

Response: The intent of this final rule is to allow HHAs flexibility, where appropriate, to tailor their practices to the needs and preferences of their patients and staff, to the extent possible. Thus, specifying the data elements and exact level of detail for these aspects of the plan of care would not be in keeping with the intent of this rule. HHAs may identify data elements at a level of detail that meets the needs of patients and clinicians.

Comment: A small number of commenters requested clarification of the proposed requirement that each patient's plan of care be required to include the frequency and duration of visits to be made. One commenter stated that HHAs currently indicate visit frequency and duration in their plans of care, and questioned whether the proposed requirement is different from this current practice. Another commenter stated that some HHAs prescribe visit frequencies that span the entire 60 day certification period, while other HHAs prescribe visit frequencies and durations based on the patient's condition and best practices. The commenter wanted to know if the proposal would require HHAs to assure that visit frequencies and durations are based on assessment and plan of care findings, rather than on general episodes of care.

Response: The term "frequency" is used to refer to the frequency of services that are ordered by the physician (for example, nursing 2 to 4 times per week). Likewise, the term "duration" refers to the amount of time for a given frequency (for example, 5 weeks of nursing services, with nursing 2 to 4 times per week for the first 3 weeks, and 1 to 3 times per week for the last 2 weeks) and may, in the case of therapy services, also refer to visit lengths and/or intervention lengths (for example, 90 minute visit, 70 minutes therapeutic interventions and 20 minutes heat application). We expect the plan of care to contain visit frequencies and durations based on the patient-specific needs as assessed in the patient assessment. This may or may not mean that visit frequencies and durations will account for the entire 60 day certification period.

Comment: A small number of commenters suggested that HHAs should not be required to include a

patient's rehabilitation potential in the plan of care because some patients receive home health services for skilled maintenance therapy and, therefore, this element may be unnecessary. Commenters also expressed concern regarding the presence of this element in the plan of care in relationship to the medical review process that is related to HHA payment policy. These commenters believe that including information related to rehabilitation potential in the plan of care may create problems for HHAs during medical review.

Response: We believe that including "rehabilitation potential" on the plan of care is appropriate for all patients, including those patients receiving skilled maintenance therapy. Assuming all other eligibility and coverage requirements are met, skilled maintenance therapy services are covered when an individualized assessment of the patient's clinical condition demonstrates that the specialized judgment, knowledge, and skills of a qualified therapist are necessary for the performance of a safe and effective maintenance program. "Rehabilitation potential" in the plan of care should include expected outcomes and the plan of care must also list measureable goals. The "rehabilitation potential" or the expected outcome of maintenance therapy can be to preserve and maintain the patient's current condition or to prevent or slow further deterioration. In addition, the home health record must specify the purpose of the skilled service required.

We remind the commenters that HHAs are required to report all services provided to the beneficiary during each episode, this includes reporting each visit in line-item detail. Therefore, it is expected that the home health records for every visit will reflect the need for the skilled care provided. In accordance with Chapter 7 of the Medicare Benefit Policy Manual (Pub. 100-02, section 40.2.1, <https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/downloads/bp102c07.pdf>) these clinical notes are also expected to provide important communication among all members of the home care team regarding the development, course and outcomes of the skilled observations, assessments, treatment and training performed. Taken as a whole then, the clinical notes are expected to tell the story of the patient's achievement towards his or her goals as outlined in the plan of care. In this way, the notes will serve to demonstrate why a skilled service is needed. Therefore, in accordance with Chapter 7 of the Medicare Benefit Policy Manual, the

home health clinical notes must document as appropriate:

- The history and physical exam pertinent to the day's visit, (including the response or changes in behavior to previously administered skilled services) and
- The skilled services applied on the current visit, and
- The patient/caregiver's immediate response to the skilled services provided, and
- The plan for the next visit based on the rationale of prior results.

Clinical notes should be written such that they adequately describe the reaction of a patient to his or her skilled care. Clinical notes should also provide a clear picture of the treatment, as well as "next steps" to be taken. When the skilled service is being provided to either maintain the patient's condition or prevent or slow further deterioration, Chapter 7 of the Medicare Benefit Policy Manual requires that the clinical notes must also:

- Include a detailed rationale that explains the need for the skilled service in light of the patient's overall medical condition and experiences,
- Describe the complexity of the service to be performed, and
- Describe any other pertinent characteristics of the beneficiary or home.

Finally, CMS requires the therapist to initially assess (and reassess at least every 30 calendar days) the patient using a method which allows for objective measurement of function and successive comparison of measurements. The therapist must document the measurement results in the clinical record.

Comment: All commenters who commented on the proposed requirement that each patient's plan of care must include patient and caregiver education and training to facilitate timely discharge expressed full support for this proposal. One commenter highlighted resources for caregiver education and training that are available from the Alzheimer's Association. The Association provides a wide variety of caregiver resources, which can be found at www.alz.org, as well as through a 24/7 Helpline at 800-272-3900. A commenter also highlighted the Chronic Disease Self-Management Program (CDSMP) based at Stanford University's School of Medicine and the Skills2Care program, which helps caregivers to manage the challenges of dementia in the home.

Response: We appreciate the support from commenters, and agree that the resources noted in comments may be helpful to HHAs.

Comment: A single commenter requested guidance for handling situations in which it has been determined by clinical assessment that a patient is able to learn how to self-administer insulin but simply refuses to learn, and there is no able, willing and available caregiver to teach.

Response: Section 40.1.2.4 in Chapter 7 of the Medicare Benefit Policy Manual (Pub. 100-02) states that where a patient is either physically or mentally unable to self-inject insulin and there is no other person who is able and willing to inject the patient, the injections would be considered a reasonable and necessary skilled nursing service covered by the Medicare home health benefit. However, Medicare would not cover this service for a patient who is capable of learning and self-administering insulin, but refuses to do so, in which case the HHA may choose to discharge a patient because the payment source will no longer pay (see § 484.50(d)(2)). However, we believe that these situations are very rare. We would expect an HHA to explore all possible avenues to identify one or more individuals who could administer insulin to the patient as well as all possible options for convincing a patient to learn the proper self-administration techniques. We would also expect an HHA to thoroughly document all steps taken to resolve this issue, converse with the patient regarding the implications of this decision, communicate with the physician(s) involved in the patient's home health care and the practitioner who will be providing follow-up care, and provide the patient with information regarding other possible sources of care that may meet the patient's care preferences. For patients with other sources of payment that would continue to pay for insulin administration to a patient who is capable of learning self-administration, but refuses to do so, HHAs are permitted to continue providing services until such time as the patient is no longer in need of the HHA's services.

Comment: Several commenters supported the proposed requirement that the plan of care would be required to include measurable outcomes and goals identified by the HHA and the patient. One commenter stated that patients and caregivers need to feel their concerns matter in order to ensure their engagement. However, other commenters expressed concern and requested additional clarification regarding this proposed requirement. Commenters sought specific guidance regarding how to document patient goals, comply with patient-identified

goals, and reconcile potential conflicts between patient-identified goals and the physician-ordered plan of care. One commenter suggested that HHAs should be required to establish the plan of care "in collaboration" with the patient, rather than "in partnership" because acting "in partnership" would increase the burden to HHAs. A single commenter asserted that patients don't know how to identify quantifiable, measurable goals.

Response: We appreciate the support of the commenters who submitted comments on this issue. We did not propose, nor are we finalizing, specific documentation or implementation requirements for this provision, as such requirements may impose unnecessary restrictions on HHAs in achieving the ultimate goal of delivering goal-concordant care. We acknowledge that patient established goals of care may be verbalized in a different fashion than those that are established by the physician(s) involved in the HHA plan of care. Nonetheless, we believe that patients are capable of establishing goals and that these goals can be successfully aligned with the goals established by the physician(s). Where there is direct conflict between a patient-established goal and a physician-established goal, we would expect the HHA to educate the patient about why the physician-established goal must be used to guide the care planning and delivery process. Patients should also be encouraged to discuss concerns regarding their care goals with their physician(s). We are finalizing this requirement as proposed, including use of the phrase "in partnership." We believe that the phrase "in partnership" is equivalent to the suggested phrase "in collaboration", and that there is no difference in burden based on the use of one phrase over another.

Comment: Some commenters agreed with the proposed requirement that the plan of care would include measurable outcomes, even suggesting that such outcomes should be supported by evidence based measures through the use of standardized test and measures when possible. However, a single commenter contested the necessity of including measurable outcomes in a patient's plan of care, stating that there is not sufficient evidence to support the requirement. Other commenters expressed concern with the potential implications of the proposed requirement. These commenters stated that requiring measurable outcomes may imply that the goal of helping patients safely and effectively manage their health conditions in a community setting is not sufficient in itself, and that

home health services should be available to clients only so long as they demonstrate continued, quantifiable improvement from those services. Additionally, commenters expressed concern that working with the physician to establish such goals would be burdensome.

Response: The concept of measurable outcomes is well established in health care. For example, measurable outcomes are used in physical therapy to assess the effectiveness of interventions and are used in medical social work to assess patient progress in mental health therapy. Measurable outcomes can be used in home health care to measure these elements, as well as outcomes related to nursing, patient safety, and effective self-management, to name just a few. Measurable outcomes jointly established by the patient, HHA, and physician(s) may include measures related to self-medication management, avoidance of unnecessary emergent care visits and hospital admissions, and more. We do not agree that the phrase “measurable outcomes” would in any way convey the message that the goal of helping patients safely and effectively manage their health conditions in a community setting is not sufficient of itself, and that home health services should be available to clients only so long as they demonstrate continued, quantifiable improvement from those services, as the commenter asserted. Furthermore, we do not agree that establishing measurable outcomes would be burdensome, as this should already be part of standard care planning activities. Without the pre-establishment of outcomes, it would be difficult to measure when a patient with a goal of rehabilitation (the primary population currently served by HHAs) has made sufficient progress to warrant discharge. Likewise, it would be difficult to assess whether maintenance services have, in fact, achieved their maintenance goals.

Comment: A commenter requested clarification of a statement in the preamble related to the development of measurable outcomes and goals. The preamble stated, “An evidence and outcome based approach to patient care that can be understood by the patient and caregivers, with specificity of orders, and adherence to best practice interventions to provide the basis for the development of an optimal plan of care and goals.” The commenter requested further explanation regarding evidence and outcome based approaches, as well as how adherence to best practices will be measured.

Response: The concept of evidence-based care, an approach to decision-

making in which the clinician uses the best evidence available, in consultation with the patient, to decide upon the option which suits that patient best, is well established. For example, in 1997 the Agency for Healthcare Research and Quality launched an initiative to promote evidence-based patient care through its Evidence-based Practice Center Program. Among other things, the Program develops evidence reports on clinical topics and publishes those reports for public use (see <http://www.ahrq.gov/research/findings/evidence-based-reports/overview/> for more details). We expect HHAs to use evidence-based care, often done through the implementation of best practices, to improve the experience of care and outcomes of individual patients and entire patient populations within an HHA's care.

Comment: One commenter requested examples of measurable outcomes, while another commenter noted that the National Quality Forum recently released recommendations on quality measurement and dementia that could be considered by HHAs as they develop outcomes for persons with dementia and their caregivers. This commenter also urged that patient- or representative/caregiver-reported outcomes be included as measurable outcomes in the plan of care, stating that patient and caregiver perspective is often overlooked in favor of more quantifiable measures.

Response: Measurable outcomes may include anything from an improvement in ambulation to a stabilizing of blood pressure to an improvement in self-management. Measurable outcomes must be tailored to the specific patient, including his or her circumstances, goals, and condition. We believe that leaving the term as broad as possible is the most appropriate way to account for this high degree of variability. We believe that the suggestions provided by the commenter related to available resources are appropriate and may be of value to HHAs in implementing this requirement.

Comment: A commenter stated that, in addition to permitting the HHA and physician to add additional items to the plan of care, the patient should also be permitted to add items to the plan of care.

Response: HHAs are paid for their services based on a set of covered services and items that is established by each payment source, whether Medicare, a Medicaid state plan, private insurance, or the patient him/herself. While we agree that patients have the right to state their care preferences and goals (see § 484.50) and that those

preferences and goals should be incorporated into the individualized plan of care (see § 484.60), we do not agree that patients should be permitted to add items to the plan of care. Because we require HHAs to provide all services set out in the plan of care, such additions could possibly place HHAs in the position of being required to deliver services and items that are not covered by the payment source. This would be an unreasonable burden on HHAs.

Comment: Commenters supported the concept of assessing a patient's risk for re-hospitalization, and several even suggested that the requirement should apply to all patients rather than be limited to those patients that are admitted to HHA services following a hospitalization. One commenter requested clarification regarding the exact patient population to which the requirement would apply, noting that not all home care begins immediately following a post-acute discharge. Commenters stated that identifying a patient's risk for re-hospitalization and emergency department visits will help improve patient care and reduce unnecessary and avoidable hospitalizations.

Response: We agree that, for the sake of patient safety and for the sake of establishing a requirement that can be clearly and equally applied by all HHAs, this requirement should be applied to all patients, as all patients have some level of risk for a hospital admission or emergency department visit. Therefore, we have made a change to the regulatory text at § 484.60(a)(2)(xii) to apply this requirement to all HHA admissions. This requirement is consistent with CMS's focus on reducing preventable re-admissions through a variety of efforts such as HHA quality measures and CMS payment reforms.

Comment: Commenters identified opportunities for improved clarity regarding the re-hospitalization risk assessment proposal. Commenters noted that using “low, medium, and high” to rank each patient's risk may result in significant variation among HHAs because these terms are subjective and are not defined. One commenter suggested that CMS should provide additional resources and training to facilitate compliance. A few commenters suggested that, in order to achieve consistency, there should be an instrument that has been validated for agencies to use. Another commenter suggested that this risk assessment should be based on a Patient Activation Measurement (PAM) score. The commenter stated that peer-reviewed studies, have identified a strong link

between patient activation or having the knowledge, skills, and confidence needed to manage one's health and hospital readmissions. A study conducted at Boston Medical Center (Journal of Internal Medicine. February 2014; 29(2): 349–355. <http://www.ncbi.nlm.nih.gov/pmc/articles/PMC3912296/>) found that patients with the lowest levels of activation had nearly twice the risk of returning to the hospital within 30 days, compared with patients with the highest levels of activation. Systematic assessment of a beneficiary's level of activation and self-management capability can guide more effective approaches to provider interactions with beneficiaries during in-home visits by skilled home healthcare professionals. Patients in the lower two levels of activation are often overwhelmed by their medical condition and struggle with health-related self-management tasks. Knowing a beneficiary's level of activation allows home health providers to tailor information, goals, and action steps to the abilities of the patient.

Response: We agree that the terms “low, medium, high” are not useful without further definition and standardized measurement tools that all HHAs would use. Our goal is to bring this issue to the forefront of patient care, and to assure that, within an HHA, it is consistently examined and addressed for each patient. While there may be benefits to establishing more inter-HHA consistency in the application of this requirement, we do not believe that those benefits would outweigh the cost of reducing HHA flexibility and innovation to determine the best possible way to achieve the overall goal of reducing unnecessary emergent care visits and hospital admissions. Therefore, at § 484.60(a)(2)(xii) we have removed the terms “low, medium, high”, and are not suggesting a specific tool or process at this time.

Comment: The proposed rule included a requirement that all patient care orders, including verbal orders, must be recorded in the plan of care. A commenter requested clarification regarding the need for, and benefit of, including ALL orders (including verbal orders) in the patient's plan of care. The commenter stated that including all orders may cause confusion in cases where orders have changed several times over the course of an episode.

Response: The plan of care is an evolving document that outlines the patient's journey throughout HHA care and treatment. It is essential that the plan of care be reflective of past orders and current orders that are actively ongoing. As new orders are given to

initiate or discontinue an intervention, the plan of care is updated to reflect those changes. New versions of the plan of care are created as needed to assure that each clinician is working on the most recent plan of care, with older versions being filed away in the clinical record in any manner that meets the needs of the HHA.

Comment: Several commenters expressed concern with the proposed requirement that drugs, services, and treatments are administered only as ordered by the physician who is responsible for the home health plan of care. Commenters stated that patients often have multiple physicians who order treatments and medications, and that the physician responsible for the home health plan of care is often not the ordering physician for every drug and treatment included on the home health plan of care. According to commenters, the standard practice is that the HHA informs the physician responsible for the home health plan of care of all treatments, drugs and services that the patient is receiving, and if applicable, who the ordering physician is, without requiring that this physician actually orders all of them himself or herself. Another commenter stated that in certain situations one physician will not take responsibility for the orders of another. One commenter stated that the regulation should be revised to allow communication from the HHA to a physician group practice, noting that some HHAs provide services patients who receive care from a group of physicians, and these patients do not necessarily have a single physician who is responsible for the plan of care. Commenters suggested that the regulation should be revised to reflect that drugs, services, and treatments be administered only as directed by a physician who is responsible for the care of the patient, and that the physician responsible for the home health plan of care is made aware of all treatments that the patient is receiving from the HHA.

Response: We agree that situations may exist in which multiple physicians are directly involved in providing care for a patient at the same time, and would thus be in a position to give orders to the HHA related to the care of a single patient. Furthermore, we agree that it is appropriate to revise the regulations to permit this arrangement. To that end, we have revised the requirement specifically related to physician orders to allow HHAs to accept orders directly from multiple physicians who are involved in a patient's care at that point in time, regardless of whether those physicians

are part of the same group practice or not. The physician that is responsible for care of the condition that led to the initiation of home health care, and is thus the main physician responsible for the home health plan of care would have the opportunity to review all orders because all orders from all physicians must be included in the plan of care (§ 484.60(a)(3)) and the plan of care must be reviewed and signed by the physician responsible for the HHA plan of care (§ 484.60(a)). We have also added new requirements within § 484.60(d), Coordination of care, to specifically address the role and responsibility of the HHA when it chooses to accept orders from more than one physician. Specifically, in addition to the proposed requirements that HHAs would be responsible for coordinating HHA services and ensuring patient education and training, we have added new requirements within § 484.60(d) that HHAs that choose to accept orders from multiple physicians are responsible for:

- (1) Assuring communication with all physicians involved in the plan of care.
- (2) Integrating orders from all physicians involved in the plan of care to assure the coordination of all services and interventions provided to the patient.

The purpose of assuring communication and integrating orders is to avoid duplicate or contradictory physician orders and to assure that all patient needs are being met (whether directly by the HHA or by the physicians). We would expect HHAs to have appropriate systems and processes in place to both identify and resolve conflicting or duplicative orders. We believe that these expectations are consistent with the role of the clinical manager at § 484.105(c). In particular, the clinical manager is responsible for assuring the development, implementation, and updates of the individualized plan of care. We believe that, in order to effectively assure the development, implementation, and updates of the individualized plan of care, there would have to be communication with all physicians involved in the plan of care and integration of orders from all physicians involved in the plan of care to assure the coordination of all services and interventions provided to the patient. The requirement to integrate orders from all physicians would include those orders related to medications. Medication orders may be for long-term maintenance issues (for example, cholesterol management medications) as well as shorter-term medications for temporary issues that may or may not be directly related to the reason that home

health care was initiated (for example, pain management medications that may be used in the process of surgical recovery or may be used as part of a treatment plan for a strained back that the patient just happened to experience during the time that he or she receives HHA care). We would continue to expect that all services or interventions that are ordered are medically necessary, as supported by documentation in the patient's record, in accordance with the requirements of 42 CFR 409.44 and 409.45.

Comment: One commenter requested clarification regarding the proposed requirements permitting HHAs to offer vaccinations to patients in accordance with HHA policy without obtaining a separate physician order for each patient. The commenter requested that CMS define what steps in the vaccination process it will hold providers accountable for, and how CMS will reimburse providers for the vaccine.

Response: The proposed provisions do not reflect a change in our policy. HHAs are permitted to, in consultation with a physician, develop a policy for the administration of influenza and pneumococcal vaccinations without a patient-specific physician order, such as in the form of a standing order. We would expect that this policy would address topics such as obtaining patient consent and assuring that it is safe to administer a vaccination to a given patient prior to administration. As a medical treatment, this rule would require that any administered vaccines be documented in the patient's clinical record in accordance with the requirements of § 484.110(a).

Comment: A few commenters expressed confusion regarding the relationship between the concept of "verbal orders" and orders that are faxed or otherwise transmitted through other electronic methods. The commenters were unclear as to whether faxed or other HIPAA-compliant electronic orders are considered to be "verbal orders." One commenter suggested that emailed and faxed orders would be followed up by a written order signed by the physician.

Response: In accordance with the definitions set forth in § 484.2, a verbal order means a physician order that is spoken to appropriate personnel and later put in writing for the purposes of documenting as well as establishing or revising the patient's plan of care. Faxed and other electronic orders are not considered verbal orders because they do not meet this definition. However, all orders need to be appropriately authenticated.

Comment: The proposed rule stated that, when services are provided on the basis of a physician's verbal orders, the clinician receiving the order(s) must document it in the patient's clinical record, and sign, date, and time the order(s). While a single commenter supported this proposal, the vast majority of commenters who submitted comments regarding this proposal disagreed with the requirement that verbal orders must be timed, questioning the relevancy and necessity of a requirement in the home health care setting. A commenter also stated that it is unclear whether the "timed" requirement applies to the time that the care was provided or activity occurred; when the verbal order was documented; or when the verbal order was signed by the physician.

Response: While we acknowledge that most HHA patients do not typically require rapidly changing orders, we nonetheless believe that timing the receipt of verbal orders is necessary for those infrequent occasions when such situations do arise. There are times when a patient's condition rapidly changes, and clinicians are not necessarily able to effectively predict when such situations are about to occur. Therefore, we believe that it is necessary and appropriate to proactively record the time of day that each verbal order is received by an HHA clinician from a physician. This requirement corresponds with the clinical record authentication requirements at § 484.110(b), which requires all entries in the clinical record to be timed.

Comment: The proposed rule stated that verbal orders must be authenticated and dated by the physician in accordance with applicable state laws and regulations, as well as the HHA's internal policies. Several commenters understood this provision to also require timing of the physician signature, and disagreed with that idea. One commenter suggested that the regulation should include a timeframe for physician signature, while other commenters strongly supported the proposed deferral to applicable state laws and regulations. One commenter cautioned states and HHAs against imposing 48 hour timeframes for physician countersignature of verbal orders, stating that strict deadlines could impose constraints on physicians' time and patient care schedules, and could also negatively impact patients and Medicare expenditures by leading to delays in receiving treatments.

Response: We appreciate the opportunity to clarify the proposed requirement. We believe that there was some confusion among commenters,

and want to be clear that we did not propose, nor are we finalizing, a requirement related to a physician timing the signature for a verbal order. Rather, all verbal orders must be authenticated and dated by the physician in accordance with applicable state laws and regulations, as well as the HHA's internal policies. We do not believe that it is necessary to require a specific timeframe for completing the authentication process, as in general, this is already effectively governed by existing state requirements. States and HHAs are permitted to establish timeframes that meet their needs. We remind HHAs that authentication must be completed in accordance with established billing requirements for those patients for whom Medicare is a payment source.

Comment: A commenter expressed concern about the requirement in § 484.60(b)(4) that a registered nurse or qualified therapist must document verbal orders. The commenter stated that state law allows others to receive verbal orders, and that the requirement included in the proposed regulation would limit an HHA's ability to employ licensed practical nurses (LPNs).

Response: We agree that there is no health and safety-related reason to prohibit a LPN from receiving and documenting verbal orders because LPNs have the necessary training and skill to perform this function. Therefore, we agree that it is appropriate to allow LPNs to receive verbal orders as long as the LPN is acting within his or her state licensure requirements and permitted in accordance with state scope of practice. This policy is consistent with the regulations for other providers, such as hospitals and hospice inpatient care facilities, both of which permit LPNs to receive verbal orders in accordance with state regulations and the organizations own policies and procedures. We have revised the regulation text at § 484.60(b)(4) to reflect this change.

Comment: A commenter requested clarification regarding the relationship between the requirements for care plan reviews and the timeframes for verbal order countersignature.

Response: All verbal orders must be authenticated and dated by the physician in accordance with applicable state laws and regulations, as well as the HHA's internal policies. This requirement applies to verbal orders that occur at any time during the plan of care development, implementation, and update cycle.

Comment: Commenters supported the proposed level of physician involvement in updating the plan of care, as well as the proposed

requirement for an HHA to communicate with the physician as frequently as the patient's condition or needs require, when any significant changes in the patient's health care status occur, and at the time of discharge from the HHA.

Response: We appreciate the support of these provisions, and are finalizing these requirements at § 484.60(c) with minor changes to reflect situations where more than one physician issues orders for patient care.

Comment: A few commenters suggested that the timeframes for updating the plan of care should be modified. Commenters suggested that the regulation should require a plan of care update when there is a significant change in patient condition, and upon the request of the patient or representative (if any), but no less frequently than once every 60 days, beginning with the start of care date.

Response: The HHA should be in regular communication with the patient and caregiver(s), and must assure that the plan of care is achieving the goals established by the patient and physician(s). However, we do not see a reason to explicitly state that the plan of care should be updated at the request of the patient or representative. The plan of care is not updated as long as it is meeting the goals established by the physician(s) and the patient.

Comment: A small number of commenters disagreed with the proposed requirement that a revised plan of care must reflect current information from the patient's updated comprehensive assessment. Commenters stated that a new assessment is not needed when there is a revised plan of care. Commenters also stated that the proposed requirement implies that any change in the plan of care, such as a "minor" change in orders that does not constitute a "significant change in condition" (for example adjusted medication dose, revised wound care procedure), requires an updated comprehensive assessment.

Response: The proposed provisions do not reflect a change in our policy. Current policy requires each HHA to have a policy defining a significant change in condition that would trigger an update to the assessment (for example, an initiation or discontinuation of a service, or a significant improvement or worsening of patient condition not anticipated in the plan of care). It will be up to each individual HHA to determine how a significant change in condition is be defined.

Comment: A few commenters sought clarification regarding communications

related to changes in the plan of care and the discharge plan. We proposed that, if the plan of care is revised due to a change in patient health status, an HHA must communicate the revisions to the patient, representative (if any), caregiver, and the physician who is responsible for the HHA plan of care. We also proposed that any revisions related to plans for the patient's discharge must be communicated to the patient, representative, caregiver, the physician who is responsible for the HHA plan of care, and the patient's primary care practitioner or other health care professional who will be responsible for providing care and services to the patient after discharge from the HHA (if any). Commenters asked the following questions:

- Does this mean that the care plan and discharge summary must be communicated to a specific provider or can be communicated to the patient's physicians' practice?
- What are the timeframes for when communication regarding revisions to the plan of care, including discharge planning, need to be completed and documented?
- Can these changes be communicated to the patient and the physician physically by mail or electronically by email or other secure electronic means?

Response: In the majority of cases where there is a specific physician or practitioner with whom to communicate, we would expect HHAs to communicate directly with that individual. In the small minority of cases where there is no designated practitioner, HHAs may communicate with the practitioner group. We are refraining from specifying timeframes and formats in order to afford HHAs flexibility in complying with these rules. Patient acuity and patient needs should drive the timeframes for various communications, with critical and/or time sensitive information being communicated as quickly as possible and less critical or time sensitive information being communicated on an as-needed basis. Likewise, the needs of the recipients should drive the format of the information and any associated documentation. We do not believe that it is necessary or appropriate to specify how information is communicated, provided that the patient's right to a confidential record is assured in accordance with § 484.50(c)(6).

Comment: Many commenters supported the proposed requirement that an HHA communicate changes in the plan of care to the patient, representative (if any), caregiver, and the physician who is responsible for the

HHA plan of care, stating that, in order to successfully implement the plan of care, everyone involved must be aware of its contents. A few commenters suggested that the regulation should clarify that such communications must occur only when there is a significant change to the plan of care, such as when new orders are needed from the physician.

Response: We appreciate the support of the commenters for the requirement that an HHA communicate changes in the plan of care to the patient, representative (if any), caregiver, and the physician. HHAs are strongly encouraged to engage patients, representatives, and caregivers in a conversation about the level of involvement that these individuals prefer to have in developing and updating the plan of care, and to act in accordance with those preferences. Some individuals may prefer to have more involvement, desiring communication regarding every change, while others may prefer communications regarding changes to focus only on certain topics or occur no more than once a week. HHAs would document these preferences and structure their communications accordingly to meet them. In the absence of such patient-directed guidelines for communication of changes, the default expectation from CMS would be that all changes in the plan of care are communicated, even "minor" ones, such as visit frequencies. We remind HHAs that communications regarding updates to the plan of care to the patient, representative, or caregivers can be done via telephone or secure electronic means, with associated documentation in clinical record.

Comment: A commenter requested additional guidance regarding the manner in which HHAs should document that they communicated changes to the plan of care to patients, representatives, caregivers, and physicians. The commenter requested that CMS clarify whether all changes to the plan of care require the plan of care to be re-signed by the physician, and if not, explicitly when that would and would not be required. The commenter also suggested clarifying whether the HHA would also need the patient and/or the patient's representative to sign the plan of care to indicate that the HHA has communicated this information. If a patient signature is not required, the commenter requested information regarding how HHAs should provide evidence that the communication occurred.

Response: The signature of the physician who is responsible for issuing

orders related to the condition(s) that led to the initiation of home health services should be on all iterations of the individualized plan of care for each patient in accordance with the requirements of § 484.60(a). We did not propose, nor are we finalizing, patient signature requirements for the plan of care. HHAs may document communications with the patient in regards to the patient's plan of care in any manner that demonstrates compliance with the communication requirements of § 484.60. This could include documentation in clinical notes, a specific section of the clinical record developed for this purpose, printouts or .pdf versions of secure electronic communications that are linked to or maintained within the clinical record, or any other method that could be used to demonstrate compliance.

Comment: Several commenters submitted comments regarding the proposed care coordination requirements. Commenters supported the goals of care coordination, stating that communication between the HHA and other physicians and practitioners is essential for producing the best possible outcome of care. This is especially true with respect to issues that are not directly connected to the issues being addressed by the HHA. Commenters also stated that it was important to coordinate care with those managing the patient's care after the patient is discharged from the HHA. Commenters suggested that care coordination should be led by a clinician, and should be patient centered, goal oriented, and outcome based. Within the context of this broad support, a few commenters raised specific concerns and points for additional clarification. A commenter noted that carrying out these activities is growing increasingly complex with the emergence of new models of care. As managed care penetration grows, and new accountable care models gain traction, patients with complex needs are experiencing care management and care coordination on a number of fronts. There is a risk of duplication of effort, and confusing or inconsistent communications to patients and health care professionals. The commenter suggested that the regulations should support efforts to streamline requirements among various health care sources and increase flexibility in implementing them. Another commenter cautioned that, while it is important to involve family caregivers, as appropriate, in care coordination and provide needed training, the coordination of care should also include

appropriate continuity of care and referrals to accessible home and community-based services in the community, as needed. The commenter sought to assure that care coordination activities would not be delegated by an HHA to the caregiver.

Response: We agree with commenters that well implemented care coordination within an HHA has the potential to improve patient care and outcomes, and are finalizing this requirement. We note that the proposed care coordination requirements were specifically referring to coordinating care within an HHA. We expect HHAs to coordinate the nursing, therapy, aide, and medical social work services that they offer, whether these services are provided directly or under arrangement. In addition to these expectations, as discussed previously, in response to public comments we are finalizing a new requirement for HHAs to be in communication with all physicians who are writing orders related to the HHA plan of care. These activities are the inherent responsibility of the HHA, and it would not be appropriate for the HHA to delegate these tasks to a patient or caregiver under any circumstances. We do not expect HHAs to coordinate the care being provided by other entities beyond what is included in the HHA plan of care. For example, we would expect the HHA to coordinate all services and orders related to wound care for a patient receiving post-operative hip replacement HHA care. We would not expect the HHA to coordinate that patient's cardiac care with the patient's cardiologist and other specialists if this care coordination is already performed by the physician who is issuing the wound care orders, and if all orders for all care (wound and otherwise) are issued by that single physician who assumes the care coordinator role. It is only when HHAs choose to accept orders from multiple physicians to be included in the plan of care for a single patient that we would expect HHAs to coordinate the orders of those physicians. If an HHA chooses to place itself in the role of a direct recipient of orders from multiple physicians, it is incumbent upon the HHA (as required by § 484.60(d)(2)) to assume the role of a care coordinator in order to assure that patient needs are continuously met and that there is no duplication or contradiction of services. While there may be HHAs that participate in care coordination programs where the HHA coordinates all aspects of a patient's care, care coordination programs are separate programs that have their own

requirements, separate from the home health care requirements set forth in this rule. In these situations, HHAs would be expected to assume a care coordination role that meets the standards of the care coordination program in which it is participating, as well as meeting these HHA CoPs.

Comment: A commenter requested additional guidance on what constitutes an "adequate" level of coordination across all disciplines and the mechanism to conduct coordination. Another commenter suggested that the regulation should require HHAs to specifically document care coordination activities.

Response: Coordination of patient care entails assuring that patient needs are continually assessed, addressed in the plan of care, that care is delivered in a timely and effective manner, and that goals of care are achieved. HHAs may document these activities in a manner that suits their needs to demonstrate compliance.

Comment: Most commenters who submitted comments related to the "Care planning, coordination of services, and quality of care" requirement focused their comments on the proposed discharge summary requirements. Many of these commenters stated that the regulations should not include any requirements related to the discharge summary. Other commenters suggested a pared down list of content elements focused on the status of the patient at the time of discharge, such as a current reconciled medication list, a copy of the most recent plan of care, and recommendations for follow-up care.

Response: We appreciate the many suggestions that commenters submitted on this topic. Two days prior to publication of the proposed HHA CoPs, the Improving Medicare Post-Acute Care Transformation Act of 2014 (IMPACT Act) (Pub. L. 113-185) was signed into law. Section 2(a), which added new section 1899B(i) to the Act, requires hospitals of various types and HHAs to take into account quality measures, resource use measures, and other measures to assist patients and their families during the discharge planning process. We believe that this provision will encourage hospital patients and their families to become active participants in the planning of their transition to post-acute care settings (or between post-acute care settings). This requirement will allow patients and their families' access to information that will help them to make informed decisions about their post-acute care, while addressing their goals of care and treatment preferences. Due to the very

close timing of this legislation in reference to publication of the HHA rule, the proposed HHA rule did not take into account the requirements of the IMPACT Act. In order to meet the requirements of the IMPACT Act for HHAs, we have decided to withdraw our proposals related to the content of the discharge summary. In its place, we are proposing a separate rule (“Medicare and Medicaid Programs; Revisions to Requirements for Discharge Planning for Hospitals, Critical Access Hospitals, and Home Health Agencies,” November 3, 2015 (80 FR 68126)) that would implement the discharge planning provisions of the IMPACT Act and would address the content of the HHA discharge summary.

Comment: Many commenters responded to the request for additional ways to increase and improve HHA-physician communication. Comments ranged from statements that it is not necessary or desirable to increase communications between HHAs and physicians to suggestions that HHAs should be required to have medical directors overseeing clinical operations. Additional suggestions included: The implementation of interoperable health records to facilitate timely information exchange; establishing a demonstration to test the use of licensed practitioners, such as nurse practitioners, to oversee the home health plan of care; and aligning physician financial incentives with the goal of reducing hospital admissions and re-admissions while improving patient outcomes.

Response: The only commenter suggestion that could be implemented through the CoPs is the suggestion that the regulations should require each HHA to have a physician medical director. This concept was not included in any manner in the proposed rule, and its inclusion would be a significant change. We believe that, should this policy be considered for implementation, it would be most appropriate to pursue separate notice and comment rulemaking at a future date. All other suggestions are beyond the scope of this rule.

Quality Assessment and Performance Improvement (QAPI)

Comment: We received many comments regarding the proposed Quality Assessment and Performance Improvement (QAPI) requirements. The comments supported our understanding of data collection as a driving force in implementing evidence-based healthcare. The commenters stated that HHAs that are using data to drive organizational change can expect to improve the quality of care they provide

to their patients. Many commenters appreciated the flexibility of the proposed requirement that allows HHAs to proactively identify risk areas and performance problems through the QAPI program. The commenters also supported the concept that each HHA would be expected to conduct its QAPI program in a way that best met its needs and the needs of the HHA’s patients. However, we also received several comments that were not supportive of the QAPI CoP. One commenter stated that QAPI might not be appropriate for a home-based provider because the type of information collected through QAPI is geared toward facility-based patients and facility-based providers. In addition, this commenter stated that QAPI was too burdensome and too costly relative to any increased benefit it will provide. One commenter stated that the impact analysis for this provision was far under their perceived estimate to implement a QAPI program and the cost proposed by CMS would not allow the HHAs to produce any credible results that would represent any fundamental quality improvement change.

Response: We appreciate the support of this proposed requirement, as it confirms our understanding of current HHA quality practices. We do not agree with the assertion that QAPI is not appropriate for home-based providers. Hospices and dialysis providers, both of which include home-based services within their scope of services, have been successfully complying with QAPI requirements since 2008. HHAs have an abundance of standardized data elements and quality measures to select from in order to facilitate compliance with this requirement. We note that the impact analysis is neither a minimum nor a maximum level of effort. It is merely an estimate of the time and associated costs for a statistically typical HHA to develop and implement a basic QAPI program. Each HHA, depending on its needs and circumstances, may need more or less resources than estimated in the impact analysis.

Comment: Several commenters asked for a phased-in implementation time frame beyond the other HHA regulations. The reasons for the increased implementation time frame were because many states align their licensure requirements with some of the federal CoP requirements and the fact many HHAs do not currently have a comprehensive QAPI program that meets the standards of the proposed CoP.

Response: We agree that a phased-in implementation time frame is appropriate for the requirement that

HHAs must conduct performance improvement projects because it will take additional time to collect the data necessary to identify areas for improvement that are appropriate for performance improvement. We have added a phase-in to allow HHAs the time necessary to collect data prior to implementing performance improvement projects. This allows for a full 12 month time period between the time that this final rule is published and the time that HHAs must begin conducting performance improvement projects. All other QAPI requirements can be implemented within the standard time frame for implementation of the CoPs as a whole (by July 13, 2017).

Comment: One commenter suggested that CMS utilize the Patient Activation Measure (PAM) as part of the requirements for HHAs under the QAPI CoP. The commenter explained that PAM is a 10- or 13-item questionnaire that assesses an individual’s knowledge, skill and confidence for managing their health and healthcare. They stated the measure has strong psychometric properties and is being used in clinical settings around the globe. In a related comment, a commenter suggested that HHAs should use the ASHA Functional Communication Measures, and should collect patient-level data related to speech, language, cognition, and swallowing as areas of focus within their QAPI programs.

Response: HHAs may choose to use data elements and measures that meet their quality needs and goals, provided that those data elements and measures meet the requirements of this final rule.

Comment: One commenter suggested it would be a good idea to have families or patients participate in a survey about the quality of service they are receiving from the HHA. They stated that having a survey like this would allow for CMS and HHAs to understand and receive feedback on the care they are providing.

Response: We agree that obtaining patient feedback is an important aspect of assessing the quality of care provided by an HHA. For this reason, in October 2009 HHAs began participating, on a voluntary basis, in collecting this information through the Consumer Assessment of Healthcare Providers and Systems (CAHPS®) Home Health Care Survey (HH CAHPS). The survey is designed to measure the experiences of people receiving home health care from Medicare-certified home health care agencies. HHA participation in the survey became mandatory in late 2010. (<https://homehealthcahps.org/>) Information from the survey is publicly reported on Home Health Compare on the *Medicare.gov* Web site as of April

2012. (<https://www.medicare.gov/homehealthcompare/search.html>)

Comment: Several commenters urged CMS to consider the development and use of tools that can be utilized by HHAs and shared with surveyors to provide additional guidance. Some suggested that OASIS data be used for QAPI, while others voiced concern over potential problems with Private Duty Nursing (PDN) patients versus traditional home health patients when utilizing OASIS data to measure HHA quality. Some commenters suggested incorporating information from HHA surveys by State Survey Agencies, and that quality measures should be differentiated by HHA size (small, large and more complex HHAs).

Response: Accreditation organizations, industry associations, universities, and other independent entities are all sources of quality measures, tools, guides, and other resources that HHAs may use to aid in the implementation of QAPI requirements. OASIS data and survey data may or may not be an appropriate source of information for specific quality measures, depending on the data needed. We believe that these various sources of quality measures and tools make it unnecessary for us to develop separate tools.

Comment: We received several comments that expressed concern over the QAPI requirements, suggesting that CMS was providing too much latitude to HHAs in designing and implementing their QAPI programs. The commenters stated that such flexibility would allow some HHAs to evade scrutiny or conveniently brush problems and violations under the rug. They stated that in the absence of clear expectations, parameters and standards for enforcement, less scrupulous providers will pay lip service to QAPI requirements without making a meaningful effort to address problem areas.

Response: While there may be a subset of providers that attempt to do the bare minimum to comply with all of the requirements in this rule, we do not believe that creating a more prescriptive requirement will enhance overall patient care. Indeed, a prescriptive requirement would likely lead to rote behaviors that lack the introspective analysis that QAPI is based on. HHAs would be more likely to just do something for the sake of compliance, rather than to think about ways to continually improve. We believe that the HHA survey process, which includes HHA surveys by State Survey Agencies or accreditation organizations at least every 36 months, is effective in

identifying substandard providers and prompting the necessary corrections.

Comment: We received several general questions regarding the QAPI requirements. One commenter asked if an HHA could fulfill the QAPI requirements if it participated in a larger, system-based improvement program that was implemented by their parent hospital/health system. A second commenter asked about what would be considered to be an “effective” program. A third commenter stated they believed the requirements should hold HHAs accountable for complying with the requirement and not just require that the QAPI program be “capable of showing measurable improvement.” A fourth commenter asked if HHAs would be considered out of compliance if it chose an area that did not meet the criteria of high risk, high volume or problem-prone. A fifth commenter asked about what happens if improvements are not sustained.

Response: A QAPI program must be individualized to the HHA and must be designed in a manner that will result in improving patient care and HHA operations. We require that a program be “capable of showing measurable improvement” because, despite an HHA’s best efforts, not all endeavors will result in actual improvements being made. Parts of quality improvement are trial and error, figuring out which interventions do and do not improve processes and outcomes. HHAs are responsible for making all reasonable efforts to collect and analyze data from a wide variety of sources (including, but not limited to, patient care records, administrative records, and procurement records) to assess its operations and care delivery, and for using that data to develop and analyze performance improvement projects. For this reason, we believe that it remains appropriate to require that an HHA QAPI program be “capable of showing measurable improvement.” As stated previously, this rule requires the QAPI program to be individualized to the HHA. Participation in a larger, system-based improvement program may or may not satisfy the requirements of this rule, depending on whether the larger, system-based improvement program addresses the specific areas of concern or weakness within the HHA component of the system. HHAs are required to include, at a minimum, those areas that are high risk, high volume, or problem-prone, and that reflect the scope, complexity, and past performance of the HHA’s services and operations. If, for example, a system-based program focused on infection prevention and control, while the

HHA’s historical area of weakness is the effectiveness of occupational therapy in achieving desired outcomes, then participation in the larger, system-based improvement program would not be considered sufficient to meet the requirements of this rule. Conversely, if an HHA chose to participate in the system-based program that focuses on infection prevention and control in addition to its own separate focus on occupational therapy, then it could be considered to be in compliance. HHAs may choose to focus on areas that are not high-risk, high-volume, or problem-prone in addition to their efforts related to areas that are high-risk, high-volume, or problem-prone. Regardless of the chosen focus areas, HHAs are required to implement performance improvement projects, to monitor their implementation, revise the projects as necessary to achieve success, and assure that improvements are sustained over time. If improvements are not sustained over time, we would expect HHAs to continue to revise their approach as needed until improvements are sustained.

Comment: We received several comments that suggested we remove or revise language in the regulations. Several comments asked that CMS remove or revise the language that used the term “medical errors.” They stated “medical errors” appears more applicable to hospitals and there is a legal definition of “medical error” now associated with liability insurance, so they cautioned CMS to use the term carefully. One commenter suggested the removal of “hospital admissions/re-admissions” and replace it with the terms “emergent care/re-hospitalization” because they pertain more to home health care. One commenter suggested we revise the requirement “immediate correction of any identified problem that directly or potentially threaten the health and safety of patients” because these types of situations indicate “immediate jeopardy” or emergency and should be corrected immediately and not necessarily as a result of data collection.

Response: We appreciate the suggestions related to “medical errors” and hospital admissions/re-admissions. In regards to the term “medical errors”, we are not associating this term with HHA liability insurance. While there may be liability insurance implications that may occur as a result of identifying a “medical error,” such insurance issues are not within the scope of this rule. Recognizing and responding to “medical errors” is an essential responsibility of all HHAs because medical errors are a significant quality

and safety concern. As for hospital admission/re-admissions, we agree that using the term emergent/re-hospitalization is acceptable, however, all three of these areas (hospital admissions, re-admissions and emergent care) need to be considered by the HHA. We have revised the regulation at § 484.65 to include emergent care, in addition to admissions and re-admissions. Lastly, we agree that any immediate jeopardy situations that are identified, whether through an incident report, patient complaint, staff observation, or data collection should be corrected immediately. However, we do not agree that it is appropriate to revise the regulatory requirement that there must be an immediate correction of any problem that directly or potentially threatens the health and safety of patients. A problem that directly or potentially threatens the health and safety of patients should be immediately corrected, and we see no reason to change this requirement.

Comment: We received several comments that asked who should work on QAPI. One commenter stated the preamble mentioned physician participation but did not include physicians specifically in the regulatory language. One commenter pointed out that patients, their representatives and caregivers are not included in the QAPI CoP requirements.

Response: We do not agree that it is necessary or appropriate to specify the persons that should be involved in QAPI. Each HHA may choose different individuals representing different areas of knowledge and experience in order to achieve their specific QAPI goals. HHAs may choose to solicit specific information from physicians, patients, representatives, and caregivers beyond the data that is already gathered from them to use in QAPI efforts.

Comment: One commenter asked if the elimination of the “Group of Professional Personnel” will eliminate physician involvement. The commenter stated that the current group of professional personnel requirement is the only factor that insures a physician has involvement with the operations of the agency. On the other hand, another commenter stated that maintaining the group of professional personnel “was more a troublesome administrative burden than a mechanism that yielded demonstrable benefits for patient care.” This commenter further stated the QAPI program, based on the concepts articulated in the proposed rules and prevailing QAPI accreditation standards, provides a better basis for achievement of patient-focused, performance-based outcomes. Another

commenter stated that the previously-required 60 day summary of care statement should be part of an HHA’s evidence-based program of quality improvement.

Response: HHAs may choose to involve physicians in their QAPI efforts, and may benefit from seeking the input of a variety of physicians, such as those who refer to home health care, those who manage HHA plans of care, and those who have expertise in quality measurement and improvement. However, we do not believe that it is necessary to mandate physician involvement, because this would be a significant cost to HHAs. Furthermore, HHAs may choose to assess the timeliness and completeness of HHA-physician communications, in their many forms, as part of their QAPI programs. We agree that this measurement and subsequent analysis may be valuable. However, we do not believe that it is appropriate to mandate such measures because they may not meet the specific needs of all HHAs.

Comment: One commenter suggested that CMS add a CoP that requires that every HHA receiving public dollars from Medicare and Medicaid programs must implement an electronic visit verification mechanism. They stated they believe this would provide electronic proof and record accountability that a visit had taken place. In addition, they stated this would be a common sense best practice approach to prevent fraud, waste and abuse that all HHAs must comply with in order to participate in the Medicare programs.

Response: While we agree that electronic visit verification software may be a helpful tool for HHAs to use, there are no uniform standards for the implementation of electronic visit verification. In the absence of these standards, we do not believe that it is appropriate to mandate the use of electronic visit verification software.

Comment: We received several comments asking for clarification and justification for the performance improvement projects. Several commenters asked that CMS be more specific in the requirement for performance improvement projects, specifically asking for a prescribed level of detail regarding their content and frequency. Commenters suggested that performance improvement projects may be warranted in response to a deficiency cited by a survey. In addition, commenters voiced concerns regarding the potential for inconsistent survey processes and outcomes related to this requirement because the requirement for QAPI is not prescriptive. One

commenter asked why performance improvement projects are required and expressed concern that conducting performance improvement projects could distract and take away from program activities that address critical problems. Additionally, a commenter observed that the proposed requirement does not call for the HHA to sustain these improvements. Absent such requirements, the commenter stated that the time and resources would be wasted on a short-lived effort whose effect does not last.

Response: The regulation already requires that performance improvement projects, as part of the overall QAPI program, be focused on indicators related to improved health outcomes, patient safety, and quality of care; focused on high risk, high volume, or problem-prone areas; and that the number and scope of distinct improvement projects conducted annually be reflective of the scope, complexity, and past performance of the HHA’s services and operations. To be more specific than these requirements would restrict the flexibility that HHAs need in order to effectively and efficiently comply with these requirements. Of particular note, we believe that the requirement to focus on high-risk, high-volume, and problem-prone areas is the same as focusing on program activities that address critical problems. Rather than detracting from such efforts, the rule would require that they receive the data and resources necessary to develop effective solutions. Furthermore, the regulation at § 484.65(c)(3) requires that “The HHA must take actions aimed at performance improvement, and, after implementing those actions, the HHA must measure its success and track performance to ensure that improvements are sustained.” We believe that this requirement will assure that HHAs sustain improvements over time.

Comment: We received various comments on the role of the governing body in the QAPI CoP. A few commenters stated that they supported the concept of “leadership from the top,” and that the approval of data collection should be the role of the HHA leaders, not the governing body. We received comments that asked for clarification regarding the role of the QAPI Committee, the Professional Advisory Committee, the Interdisciplinary Record Review Committee and whether one takes the place of another, whether they could be combined, if there were expectations as to who served on what committee, how often each committee would need to meet, whether or not HHAs would need

a medical director, and what role they would serve in meeting the QAPI CoPs.

Response: The HHA governing body is responsible for approving data collection, leaving HHA management responsible for all of the research and decisions leading up to final approval by the governing body. Furthermore, these regulations do not require any particular committees to be used, so we are unable to clarify the roles, schedules, or compositions of committees that HHAs may choose to develop or maintain. Additionally, this regulation does not require an HHA to employ a medical director. If an HHA chooses to employ a medical director, the HHA would be allowed to incorporate the medical director into the QAPI program in a manner that it sees fit.

Infection Prevention and Control

Comment: We received many positive comments that supported our new infection control program requirements. Previously, the home health regulations only briefly addressed infection control procedures. One commenter stated they believed incorporating preventive care of infectious diseases is the best addition to the CoPs. Other commenters also agreed that infection control requirements will bring the focus of care back to the patient, and that it will promote and help to improve quality of care.

Response: We agree with commenters that the infection prevention and control requirements are an important addition to the HHA CoPs, and appreciate the support of the commenters.

Comment: Several commenters asked that CMS utilize a phased-in approach for the infection control program. The rationale for a phased-in approach was based on the fact that variation exists among home health agencies with regard to the infection control elements required, and will require additional resources for the agencies.

Response: This rule will be effective July 13, 2017. We believe that this time period will be sufficient for HHAs to develop and implement an infection prevention and control program that complies with these requirements.

Comment: One commenter suggested that CMS consider the requirement of an infectious disease specialist in implementing and maintaining such a program. The commenter believed that having an infectious disease specialist would help align the infection control efforts within the broader, integrated network and could be relied upon to lead the education programs for staff, patients and caregivers.

Response: The services of an infectious disease specialist may be valuable for HHAs in the development and refinement of infection prevention and control. However, we do not agree that the services of an infectious disease specialist are necessary for establishing a program that is capable of meeting the requirements of this rule. We believe that non-specialist physicians, advanced practitioners, nurses, and others have sufficient knowledge and training to create effective programs without the added cost and logistics of consulting an infectious disease specialist.

Comment: One commenter asked CMS to clarify the role of the Infection Control Committee. They asked if it was part of the QAPI or is it a separate committee.

Response: This rule does not require the use of an infection control committee. HHAs are permitted to create an infection prevention and control program using the expertise of all appropriate individuals.

Comment: Several commenters requested clarification on the method, plan and use of “standards of practice” when implementing an infection control program. They specifically asked for examples of surveillance activities, which guidelines or current standards of practice to use, and guidance on the type and amount of education and whether or not it can be provided verbally or if it must be in writing.

Response: Federal and state agencies such as the Centers for Disease Control and Prevention and state departments of health, as well as accreditation organizations and national professional organizations, have all developed infection prevention and control standards of practice. There is a wide variety of information on this subject available for HHAs to choose from in creating their own programs, and we do not believe that it is appropriate to specify which standards HHAs must use. We would expect an HHA to be able to identify the source of the standards it selects and be capable of explaining why those standards were chosen for incorporation into the HHA’s infection prevention and control program. Similarly, we do not believe that it is appropriate to specify the form or content of patient and caregiver education regarding infection prevention and control. The education, both in content and format, must meet the needs of the patient and caregivers. This means different things for different individuals. Some understand better with written instructions while others understand better with in person demonstrations and still others understand better with video

instructions. The form and content of the education efforts need to meet the needs of the individual being educated. We would expect HHAs to document these efforts in a manner that suits the workflow of the HHA and successfully demonstrate upon survey that the requirement was met.

Skilled Professional Services

Comment: One commenter suggested that this requirement should be renamed “Professional Services” because use of the term “skilled” may be confusing in relationship to coverage requirements. Additionally, the commenter recommended that CMS develop a more comprehensive title for § 484.75(b) by combining the language for a more inclusive responsibility.

Response: The professions included in this section are all “skilled”; therefore we believe that it is appropriate to maintain this element of the title. Furthermore, we do not agree that standard (b) should be re-named, as the content of the standard is directly related to the responsibilities of skilled professionals.

Comment: While several commenters supported the grouping of discipline-specific regulations under a single CoP, a small number of commenters disagreed with this regulatory text organizational structure. These commenters recommended retaining all of the current provisions as separate CoPs, and adding new regulatory requirements within each of those separate CoPs to support interdisciplinary participation. One commenter was concerned that grouping discipline-specific regulations under a single CoP would impede interdisciplinary care by diluting the roles of professionals within the team. One commenter also asked that “physician extenders” be recognized as part of the interdisciplinary team, while another suggested that physician services include those services provided by interns and residents.

Response: We appreciate the support for the reorganization of skilled professional services. We believe it is in the best interest of the HHA staff that each discipline be held to the same high standard, and that combining all discipline-specific requirements into a single standard will help assure that all disciplines are being equally held to the same expectations. Furthermore, applying the same expectations to all disciplines will facilitate HHA compliance with the regulations as well as facilitate survey consistency. We do not agree that holding all disciplines to the same expectations will dilute the roles of each discipline. In regard to the

use of physician extenders, section 1861(m) of the Act specifically defines HHA services as skilled nursing, PT, OT, SLP, medical social services, and medical supplies. However, the Act does not include physician extenders. Therefore, we do not think that it is appropriate to include these professionals in the “skilled professional services” section. Lastly, there is only one place in section 1861(m)(6) of the Act that refers to HHA physician services. The Act states that “in the case of a home health agency which is affiliated or under common control of a hospital, medical services provided by an intern or resident-in-training of such hospital, under a teaching program of such hospital” are part of HHA services. Since we do not have a specific requirement for physician services in any part of this rule, they are otherwise not part of HHA services, and are exceedingly rare. Therefore, we do not believe that regulatory language is needed beyond what is already included in the Act to govern these situations.

Home Health Aide Services

Comment: Several commenters offered support for the home health aide proposed requirements. One commenter states they are pleased CMS is proposing to enhance the current regulations to require HHAs to take action when there is a potential or verified deficiency in aide services. This new monitoring and oversight of aide performance would help ensure ongoing quality care. Another commenter strongly supports the incorporation of home health aides into the health care team process and supports the proposal to add a new home health aide skill requirement related to recognizing and reporting changes in skin condition, including pressure ulcers. Lastly, commenters strongly support the recognition of additional skilled professionals within the interdisciplinary team and urges CMS to adopt an immediate effective date for therapists and other appropriate skilled professionals to determine home health aide assignments.

Response: We appreciate the support of commenters in moving forward with these changes. While we acknowledge that some HHAs may wish to implement select changes as soon as possible, most commenters requested a significant period of time to implement the requirements of this final rule. To accommodate commenter concerns, we are finalizing a July 13, 2017 effective date. Therefore, the provision permitting therapists to determine home

health aide assignments will be effective July 13, 2017.

We also appreciate the commenters’ support for the new home health aide skill requirement related to recognizing and reporting changes in skin condition, including pressure ulcers. We believe that it is important for home health aides to be taught to recognize and report changes in skin condition; however, it has been brought to our attention that the skills involved in reporting changes in the condition of pressure ulcers are beyond the home health aide’s normal scope of practice. Therefore, in light of this information, we are withdrawing our proposal to require home health aides to be taught to recognize and report changes in pressure ulcers. The revision will require only recognizing and reporting changes in skin condition.

Comment: One commenter stated that the regulations for education, training, competency evaluations, certification and supervisory requirements for certified home health aides are different in their state than what is proposed.

Response: We acknowledge that states often have more stringent aide requirements. In situations where a state has more stringent requirements for aide education, training, competency evaluations, certification and supervision, those state requirements would take precedence over these federal requirements. Likewise, in situations where the federal requirements are more stringent, those would take precedence over the more lenient requirements.

Comment: Several commenters expressed concern that the regulation’s attention to home health aide service is excessive. Several other commenters suggested that the regulations should allow state nursing boards to set the standards.

Response: Many of the home health aide requirements, such as those for aide training and entities prohibited from offering training, are set forth in the Act and, as such, must be included in the regulation. We have streamlined the home health aide requirements to the greatest degree possible while still implementing the requirements of the Act and assuring that all essential components of aide services that lead to safe and effective patient care are addressed.

Comment: One commenter requested CMS to consider either not requiring home health aides to obtain CNA certification, or change the requirements to maintain CNA certification so a home health aide could maintain CNA certification without undue burden.

Response: To clarify, the proposed regulation does not require CNA training. Rather, the regulation proposed that CNA training (as opposed to home health aide training) may be considered as an appropriate qualification for an individual to be a home health aide.

Comment: A commenter disagreed with the proposed requirement that the individual complete another aide training program before providing services if, since the individual’s most recent completion of the aide training program(s), there has been a continuous period of 24 consecutive months during which none of the services furnished by the individual were for compensation. Similarly another commenter recommended that flexibility be incorporated into this requirement. Another commenter stated that the aide 24-month lapse was not necessary.

Response: This regulatory requirement directly implements section 1891(a)(3)(A) of the Act and cannot be altered via regulation.

Comment: We received many comments requesting clarification on several different issues related to home health aides. A few commenters specifically requested clarification on home health aide employment/training. One commenter asked if a home health aide who had worked for an HHA for 10 years and then stopped working for the agency for 2 years to care for an aging parent, would then be required to complete a new aide training program prior to returning to work for the agency? Another commenter asked CMS to clarify what happens if an HHA aide completed another training program but had not furnished home health aide services for 24 months. This same commenter also requested a definition of the term “compensation.”

Response: We appreciate the opportunity to clarify the requirement related to home health aides. Part of our requirements for home health aides states, “A home health aide or nurse aide is not considered to have completed a training and competency evaluation program if, since the individual’s most recent completion of the program(s), there has been a continuous period of 24 consecutive months during which no aide services (personal care services, simple dressing changes, assistance with medications that are ordinarily self-administered, assistance with activities that are directly supportive of skilled therapy services, and routine care of prosthetic and orthotic devices) were furnished for compensation.” In the examples from the commenters there was a 24-month lapse in furnishing services for compensation. This means the

individual must complete another training and competency evaluation program, or a competency evaluation program, before providing services. If an individual has a 24 consecutive month lapse in furnishing aide services for compensation, regardless of the circumstances surrounding the lapse, he or she will be required to complete a new training and competency evaluation program, or a competency evaluation program, prior to providing aide services on behalf of the HHA. Compensation as it relates to home health aide means monetary compensation, as set forth in section 1891(a)(3)(A) of the Act.

Comment: A commenter cautions CMS against using the word “clinical” in the standard relating to communication skills. It created a higher standard of clinical qualifications than may be required by the state. Instead of “verbally report clinical information,” the commenter suggested, “verbally reporting information relevant to the patient’s clinical condition.” In addition, a commenter expressed concern about the possibility of increased expectation regarding the aide’s capability in preparing documentation for the clinical record. The commenter asserted that HHA aides are not “certified” and so their level of documentation skills are not standardized. The commenter asked how a surveyor would assess the documentation developed by an aide when documentation standards do not exist for the aide. The commenter also stated that, unlike nurses, who must meet documentation standards by virtue of licensure, aides do not have such standards.

Response: We appreciate the opportunity to clarify the requirements related to HHA aide documentation. We do not agree that the language change to “verbally reporting information relevant to the patient’s clinical condition . . .” is any clearer than what was proposed. Therefore, no changes will be made. The commenter also stated that HHA aides are not “certified” and so their level of documentation skills is not “standard.” To clarify, aides are expected to function within their existing state licensure requirements to the extent applicable, so no higher level of skill is expected than what is already established under a state’s laws and regulations. As for documentation, this standard is related to the content of the aide training program. By including “documentation” as an element of the basic aide training program, training in documentation would become standardized, and both HHAs and surveyors would be able to assess the

accuracy and effectiveness of aide documentation that is produced as a result of this training. HHAs will be held responsible for the accuracy of information in the clinical record that is created by HHA aides, in accordance with the requirements of § 484.110. HHAs will also be held responsible for assuring that each aide completes, at a minimum, a competency evaluation to assure that an aide’s documentation skills are sufficient.

Comment: We received several comments regarding HHA aide training. A few commenters requested clarification on currently employed HHA aides who have already been through basic training and competency assessment. Specifically the commenter asked if agencies will need to implement training regarding skin care, decubitus ulcers and communication and if that could be met through in-service training. Other commenters asked CMS to provide greater clarification as to the requirements regarding home health aide communication skills, including the required ability to read, write and verbally report clinical information to patients, representatives and caregivers as well as HHA staff. Several commenters suggested that the effective date for compliance be phased in to accommodate those aides currently employed by the agency to receive updated training in new areas through in-service training. A few commenters proposed that a certified nurse aide must successfully complete supplemental training in order to qualify as a home health aide. One of the commenters went on to suggest that the content of this training should be set by CMS and approved by the state.

Response: This rule will be effective on July 13, 2017. We do not believe that additional time for this provision is necessary because current HHA aides would only require training on new skills (for example, recognizing skin changes), which may be done through routine in-service training. In accordance with the requirements of § 484.80(a), individuals trained as nurse aides are already required to complete a competency evaluation to assure that they have the skills appropriate to furnish home health aide services to home health patients. In accordance with the requirements of § 484.80(c)(4), any skills for which a HHA aide is evaluated as unsatisfactory may only be done under the direct supervision of a registered nurse until such time as he or she successfully completes a subsequent evaluation. Retraining would be done as needed to assure competency in all required skill areas. We believe that this

competency evaluation process will assure that nurse aides possess all necessary skills to furnish safe and appropriate care to home health patients.

Comment: A commenter requested clarification as to whether HHAs could use in-service education provided by another organization such as the HHQI national campaign, accompanied by a post test, adding that the HHA would still provide any educational needs or questions the aide may have.

Response: We appreciate the opportunity to clarify the requirements related to HHA aide in-service education. It would be permissible for HHAs to use in-service education through another organization, as long as it is under the supervision of an RN.

Comment: A commenter stated that the roles and responsibilities of the home health aide should be clarified. For example, the proposed language may be interpreted as allowing home health aides to provide clinical information to the patient, which the commenter did not support. In addition, the commenter recommends that this requirement provide specific direction as to how home health aides are to be involved on the interdisciplinary team.

Response: We appreciate the opportunity to clarify the requirements related to home health aide roles and responsibilities. The role of the aide is governed by the state licensure requirements. Therefore, CMS believes aides should be able to communicate clinical information to patients that is within the aide’s licensure requirements (for example, blood pressure). While we understand the request for clarification related to the home health aide’s involvement in the interdisciplinary team, we believe that being prescriptive on how aides should be involved in the team could limit the HHA’s own creativity, flexibility and innovation. It is up to the HHA to decide how it would like its aides to be involved in the interdisciplinary team.

Comment: A commenter stated that § 484.80(g)(3) could be misinterpreted to imply that the physician-signed plan of care must specifically identify each individual who would perform all of the duties set out in subparagraphs (g)(3)(i) through (iv).

Response: We appreciate the opportunity to clarify these requirements. We would expect the physician-established plan of care to authorize aide services in general. However, the aide-specific plan of care would be established by the RN or qualified professional, and would be expected to contain the level of detail

set out at subparagraphs (g)(3)(i) through (iv).

Comment: A commenter requested clarification on which professionals may give written instructions to aides. This commenter stated that many times OT is involved in preparing the plan of care, but is not involved for the duration of the care, and thus would not be supervising the aide.

Response: While written patient care instructions for the aide must be prepared by a licensed professional, preparing the written care instructions includes overseeing the contributions from all disciplines involved in the plan of care and synthesizing those contributions. As a result, a discipline that is involved in the patient's care for a portion of their time on service would contribute its information to the clinician responsible for developing the written instructions.

Comment: We received several comments related to HHA supervision. One commenter requested clarification on § 484.80, stating "please clarify 'professional'. Does this mean the actual professional (person) who completes the home health aide plan of care, or can any professional by discipline (for example, RN) perform the supervision?" A commenter suggested that an RN, PT, or OT should be permitted to supervise home health aides. One commenter requested clarification on the requirements for supervision of aides caring for skilled care and non-skilled care, specifically the 14-day versus the 60-day minimum supervision timeframe requirement. Another commenter asked CMS to clarify that the CoP requires the aide supervisor make at least one home visit for each non-skilled case every 60 days rather than one home visit per home health aide every 60 days. Some commenters were opposed to the 14-day supervisory aide visit, requesting that we remove the timeframe entirely, while others stated that phrasing the time frame as "every 2 weeks" provides the agency with more flexibility. Other commenters stated that it is more practical to allow home health aide supervision to be performed during a regularly scheduled skilled visit and/or to occur when the home health aide is actually present in the patient's home, while another commenter noted that skilled visits may occur on an infrequent basis, such as every 3 weeks. Some commenters stated that requiring the aide supervision to occur onsite, as opposed to being completed via a phone call, adds undue burden on the HHA in the form of non-billable nursing visits.

Response: We appreciate the opportunity to clarify the requirements related to home health aide supervision.

As originally proposed, the requirement expected that written patient care instructions for the aide would be prepared by the same clinician who would supervise the aide. However, the proposed requirement generated significant confusion, and we believe that it should be revised to be simpler. To that end, we have removed the requirement that written patient care instructions for the aide would be prepared by the same clinician who would supervise the aide. In its place, we are finalizing a requirement that the skilled professional who supervises aide services must be familiar with the patient, the patient's plan of care, and the written patient care instructions described in § 484.80(g). This revision accomplishes the same goal of assuring that the skilled professional responsible for supervision has all of the information necessary to effectively supervise the aide's services while removing the confusing regulatory language that was originally proposed.

We also appreciate the opportunity to clarify the aide supervision timeframes. If the patient is receiving skilled visits by an RN, PT, OT, SLP, then a supervisory visit is required at least once every 14 days. If the patient is receiving non skilled visits, meaning that RN, PT, OT, or SLP services are not being provided to that patient during that episode of care, then a supervisory visit is required every 60 days for each patient. While we acknowledge the request to change the "every 14 days" to "every 2 weeks," we disagree that this is an appropriate substitute. The 14-day requirement provides a more reliably frequent supervision schedule, whereas "every 2 weeks" creates the possibility for excessively long gaps between supervisory visits. Lastly, we believe that supervision by phone is not adequate. Without the supervisor actually seeing the patient in person, the onus is placed on the patient to report substandard care. The patient is not necessarily qualified to recognize when standards of practice are not followed. It is the responsibility of the HHA to ensure patient care is being delivered according to best practices, as well as agency policies and procedures. However, if a patient or representative report a problem related to the delivery of aide services, the expectation would be that the problem is noted by the supervisor and an onsite supervisory visit to observe aide serves would occur. We believe in-person supervision is in the best interest of the patient, ensuring quality health care in a safe environment.

Comment: A commenter stated that they did not agree that if an aide

performed task(s) unsatisfactorily, only an RN could subsequently supervise (rather than a LPN), stating that both RNs and LPNs are qualified to supervise home health aides. The commenter proposes that CMS consider allowing for the RN or LPN to be able to assess the aide's proficiency of the task in a laboratory setting in addition to the patient's home. Another commenter recommended that remediation on the skill that was deemed deficient be required, rather than a complete competency evaluation.

Response: A registered nurse is responsible for overall aide supervision; therefore we believe that it is appropriate to require that a registered nurse must be responsible for supervising an aide in a task for which the aide's skills have been determined to be unsatisfactory. In addition to this level of supervision, a competency evaluation is necessary in situations where an aide's skill is noted to be unsatisfactory because a deficiency in one skill area may indicate higher likelihood of deficiencies in the aide's other skill areas. A competency evaluation would provide HHAs the opportunity to note any additional skill deficiencies, as well as the opportunity to reteach aides on unsatisfactory skills, thus assuring safer patient care.

Comment: One commenter requested clarification regarding the wording of § 484.80(h)(1)(iii), stating that this requirement may be interpreted as either requiring the HHA to provide an annual on-site visit to one of the home health aide's patients while the aide is working or that the HHA has to do an annual visit on each patient being seen by each home health aide. The commenter also expressed concern that in § 484.80(h)(1)(ii), the term "potential deficiency" is undefined and lacks a timeframe for what and when potential deficiencies would require a follow-up visit by the supervisor. They recommended that CMS change the term "potential deficiency" to a more solid term necessitating follow-up such as "identified deficiency." The commenter also requested further clarification of this requirement by including a time frame for the supervisor's site visit and adding this time frame requirement to § 484.80(h)(3).

Response: We appreciate the opportunity to clarify the requirements related to the aide supervisory visits. To clarify, the intent of this standard is to require supervision of each aide with at least one patient every year. We agree with the comments that the term "potential deficiency" may be misleading. Therefore we are amending

the language to state “area of concern”, which is also consistent with the way we express this same concept in the hospice CoPs. Lastly, we disagree with the commenters suggestion to include a time frame for the supervisor’s site visit and adding this time frame requirement to § 484.80(h)(3). We want to ensure the necessary flexibility to account for variations in aide visit frequencies to the patient’s home, as some patients have more frequent aide visits while others have less frequent aide visits. We also want to allow HHAs to tailor the timing of the direct supervision to the urgency of the area(s) of concern, with those that may affect patient safety or outcomes requiring a faster response time.

Comment: One commenter requested clarification on whether the supervision elements set forth in (h)(4)(i) through (vi) must be documented on each aide supervisory visit. Lastly, one commenter requested clarification on what is meant by “demonstrate specific communication skills”?

Response: All elements set forth in paragraph (h)(4) need to be accounted for in each and every supervisory visit. In other words, each supervisory visit would need to provide for and document supervision related to: Following the patient’s plan of care for completion of tasks assigned to a home health aide by the registered nurse or other appropriate skilled professional; maintaining an open communication process with the patient, representative (if any), caregivers, and family; demonstrating competency with assigned tasks; complying with infection prevention and control policies and procedures; reporting changes in the patient’s condition; and honoring patient rights. The phrase “demonstrate specific communication skills” was never used in the proposed rule, so we are unable to clarify its meaning or intent.

Compliance With Federal, State, and Local Laws and Regulations Related to Health and Safety of Patients

Comment: We received several comments regarding lab services, specifically, the prohibition on substituting home health agency equipment for patient’s equipment. Several commenters suggested that CMS allow HHAs the flexibility of using agency equipment based on individual patient need and with the patient’s consent when assisting with self-testing. A few commenters requested clarification regarding situations when a patient could not afford equipment, or when testing would be for a short period of time. Commenters also asked if

testing would be covered by a CLIA waiver, and, if an agency does not have a CLIA waiver, would they be covered to use their own equipment. Another commenter asked whether a patient’s refusal to obtain equipment would be a reason to discharge for cause.

Response: We proposed and are finalizing a requirement that HHAs may not substitute HHA-owned self-administered testing equipment for patient-owned self-administered testing equipment. As stated in the preamble to the proposed rule, “Agencies may also use their own self-administered testing equipment for a short, defined period of time when the patient has not yet obtained his or her own testing equipment, such as in the days immediately following physician orders to obtain the testing equipment when a patient may not have the time and resources immediately available to complete the process. We would expect the HHA to use available resources to assist the patient in obtaining his or her own testing equipment as quickly as possible.” We believe that this establishes a reasonable expectation for the use of HHA owned self-administered testing equipment on a short-term basis while a patient obtains his or her own equipment. HHAs are expected to help patients identify and access existing resources that mitigate or alleviate any potential barriers to obtaining this essential equipment. We believe that enabling patients to use their own equipment will improve the quality of care management that they experience and will avoid the potential for a patient to not have access to any testing equipment in emergency situations when HHA staff may not be immediately available to provide it. In cases specifically related to the use of self-administered testing equipment for purposes of blood glucose monitoring, if, despite all HHA efforts to help patients identify and access existing resources that mitigate or alleviate any potential barriers to obtaining this essential equipment, a patient refuses to obtain his or her own testing equipment, and if the patient is receiving the Medicare home health benefit, then the refusal to obtain self-administered testing could be grounds for patient discharge. Daily, and multiple daily visits for purposes of blood glucose monitoring over a long period of time would not meet the criteria for coverage of Medicare home health services under section 1861(m) of the Act, which prohibits payment for services that are more than part-time or intermittent. Therefore, an HHA would be permitted to discharge the patient because the

payment source will no longer pay (see § 484.50(d)(2)). However, we believe that these situations are very rare. We would expect an HHA to thoroughly document all steps taken to resolve this issue, converse with the patient regarding the implications of this decision, communicate with the physician responsible for the home health plan of care and the practitioner who will be providing follow-up care, and provide the patient with information regarding other possible sources of care that may meet the patient’s care preferences.

If the HHA is only assisting an individual in self-administering a test with an appliance that has been cleared for that purpose by the Food and Drug Administration (regardless of appliance ownership status), the testing self-administration assistance is not required to be in compliance with the applicable requirements of part 493 of this chapter. However, if the HHA engages in laboratory testing outside of the context of assisting an individual in self-administering a test with an appliance that has been cleared for that purpose by the Food and Drug Administration, then the testing must be in compliance with all applicable requirements of part 493 of this chapter.

Organization and Administration of Services

Comment: While one commenter strongly supported the proposed requirement that an HHA organize, manage and administer its resources to attain and maintain the highest practicable functional capacity for each patient’s medical, nursing and rehabilitative needs as indicated by the plan of care, including overcoming those deficits that led to the patient’s need for home health services, another commenter disagreed with this proposal. The commenter recommended revising the requirement from “overcoming those deficits that led to the patient’s need for home health services” to “providing optimal care to meet patient’s identified needs.”

Response: We agree that revising this statement is appropriate to reflect the broad scope of HHA services that may be provided, including maintenance services. The revised is as follows, “The HHA must organize, manage, and administer its resources to attain and maintain the highest practicable functional capacity, including providing optimal care to achieve the goals and outcomes identified in the patient’s plan of care, for each patient’s medical, nursing, and rehabilitative needs.”

Comment: A commenter recommended a total revision of the

organization and administration requirements in a manner that removes established roles (for example, administrator and clinical manager) in favor of a structure that focuses on parent offices, where non-patient care administrative functions are performed and service locations from which patient care functions are performed.

Response: A revision of this extent would be a significant departure from the original proposal. Thus, we believe that, should we choose to act upon this recommendation, such actions would be most appropriately undertaken in separate rulemaking to allow all interested parties the opportunity to comment on such changes.

Comment: Several commenters suggested that the regulations should require an HHA to have a physician that serves as the HHA medical director, similar to what is already required in the regulations for nursing homes and hospices. Commenters suggested that the medical director be responsible for the following:

- Implementation of patient care policies;
- Coordination of medical care within the HHA;
- Coordination and oversight of related practitioners;
- Clinical leadership regarding application of current standards of practice for patient care and new or proposed treatments, practices, and approaches to care;
- Promoting attainment of optimal patient outcomes;
- Serving as a clinical resource when attending physicians are unavailable to ensure that urgent matters are addressed;
- Diagnosing changes in patient condition;
- Linking the HHA to the physician community to improve HHA-physician relationships; and
- Providing input for the HHA's QAPI program.

Additionally, commenters requested that the relationship between the medical director and the governing body be defined.

Response: A new requirement of this magnitude, both in terms of potential effect on HHA daily operations and HHA costs, would be a significant departure from the original proposal. Thus, we believe that, should we choose to act upon this recommendation, such actions would be most appropriately undertaken in separate notice and comment rulemaking to allow all interested parties the opportunity to comment on such changes.

Comment: Commenters agreed with the proposed role of the governing body,

but asked for clarification regarding the composition of the group. A commenter asked if the Professional Advisory Committee could be considered the governing body for purposes of this rule. Commenters also asked if there were specific disciplines that would be expected to be represented in the membership of the governing body and if there were specific requirements for how often the governing body would need to meet. Lastly, commenters asked for further explanation of the proposal that the governing body would assume "full legal authority" for the HHA.

Response: An HHA may establish a governing body composed of individuals of its choosing. The individuals that comprise the governing body are those who have the legal authority to assume responsibility for assuring that management and operation of the HHA is effective and operating within all legal bounds. Those individuals could be members of the previously-required Professional Advisory Committee, but that is not a requirement.

Comment: Many commenters submitted comments regarding the proposed requirements for HHA administrators. Of those commenters, many requested clarification on whether a single administrator would be permitted to oversee the operations of multiple HHAs. Commenters suggested that HHAs should be permitted to use this arrangement if it could be demonstrated that the administrator could fully meet the requirements of the duties set forth in the proposed rule. Commenters suggested that, in order to permit this arrangement, the regulation should be revised to clarify that the administrator be immediately available "in person or by telecommunications."

Response: The HHA administrator is required, among other things, to be responsible for all day to day operations of the HHA (§ 484.110) and to be available to patients, representatives, and caregivers to receive complaints (§ 484.50(c)(3)). Our expectation is that the administrator will be actively involved in the daily responsibilities of running the HHA, and that HHAs will be able to demonstrate such involvement upon survey. We do not specify the manner in which this daily involvement must occur. We did not propose, nor are we finalizing, a requirement that each HHA have a full-time administrator. Therefore, it is permissible within these regulations for an administrator to work part-time for more than one HHA. However, we believe that the expectation of active involvement in daily operations and regular availability to patients,

caregivers, and representatives would be difficult, if not impossible, for an administrator to meet if he or she is responsible for operating numerous HHAs on any given day.

Comment: A commenter suggested that the role of the administrator should focus on the function of the HHA, assuring accountability to the governing body, and managing problems that cannot be resolved on a clinical level. Another commenter suggested that the role of the administrator should include responsibility for acting as liaison with the governing body, employing qualified personnel, ensuring adequate staff education, and conducting evaluations.

Response: We agree that the administrator should be accountable to and should report information to the governing body, and have added this requirement to the final rule. We also agree that assuring that the HHA employs qualified personnel is a responsibility of the HHA administrator, and have made this change. This is particularly important for the hiring and oversight of all management roles within the HHA. We believe that this concept includes assuring the proper education and training of those staff being hired. Furthermore, we agree that managing problems that cannot be resolved on a clinical level is part of the role of the administrator. However, we believe that this concept is already embodied in the requirement that the administrator must be responsible for all day-to-day operations of the HHA. We do not agree that an HHA administrator would be responsible for conducting staff evaluations, as directly evaluating all staff would be an inefficient use of administrator resources, and would likely be the appropriate responsibility of other managers within the organization.

Comment: A commenter suggested that the regulations should require an HHA to have a qualified professional clinician available to provide clinical oversight during all operating hours. The commenter noted that the current HHA regulations require a supervising physician or nurse, or equally qualified person, to be available at all times during operating hours. The proposed regulation requires the administrator (who may or may not be a clinician), or a pre-designated person who is a skilled professional, be available during operating hours. The proposed regulation did not require the clinical manager (who is a registered nurse or physician) to be available during operating hours, and did not require a designee in the clinical manager's absence. Therefore, the commenter stated that there exists the potential for

a home health agency to be operating without the direction of a clinician during operating hours. For example, when the administrator is available, the proposed rule does not specify the need for any pre-designated skilled professional to be available as well. If the administrator is not a clinician, and the clinical manager is not on duty, the home health agency would be operating without a designated clinical manager.

Response: We agree with the commenter that, as originally proposed, the regulations created the potential for a situation where a home health agency would be operating without a designated clinician serving in a manager role. This was not our intent, and we greatly appreciate the commenter's insight into this matter. We believe that a gap in clinical leadership would pose a threat to patient health and safety, as clinicians in the field would not necessarily have ready access to clinical management expertise and guidance when needed. In order to remedy this oversight, we have revised the regulatory text at § 484.105(b)(1)(iii) to require that a clinical manager, rather than a skilled professional, be available during all operating hours.

Comment: Many commenters requested additional information regarding the process for designating an individual to act on behalf of the administrator in his or her absence. Commenters asked whether the person designated to fill the role of the administrator, also referred to as the administrator designee, would need to be registered with the State Survey Agency. Commenters also asked for information regarding the timing of the designation, wanting to know whether it could be done a few days prior to the administrator being on planned leave. In addition, commenters made suggestions regarding those responsible for authorizing the administrator designee. One commenter suggested that the administrator should be permitted to authorize the designee, while another commenter suggested that any one member of the governing body should be allowed to authorize the administrator designee.

Response: Section 484.100(a)(2), which implements section 1891(a)(2) of the Act, requires disclosure of certain specified information regarding an officer, a director, an agent, or a managing employee of the HHA. This statutory authority does not extend to individuals who may act in a management capacity on an episodic basis for a short period of time in the administrator's absence (for example, 2 weeks a year while the administrator is

on vacation and on an occasional basis when the administrator is ill). However, if an individual were to act in a managing employee capacity as the administrator designee on a frequent or regularly scheduled basis (for example, 1 day a week every week, a few hours each day, or 2 weeks out of each month), then that individual would be a managing employee, and the HHA would be expected to disclose the required information in accordance with § 484.100(a). The timeframe for pre-designating the individual who will be responsible for fulfilling the role of the administrator in his or her absence should be established in each HHA's own policies and procedures. We note that pre-designation needs to be by both the administrator and the governing body as a whole. The time necessary to obtain governing body approval for the designation should be factored into the HHA's timeframe as established in its policies and procedures. The goal of this requirement is to provide management continuity within the HHA to the greatest degree possible. HHA staff should know and be able to verbalize upon interview whom the pre-designated individual(s) is/are for this role.

Comment: Several commenters made suggestions related to the number of administrator designees that an HHA should be permitted to have. Commenters agreed that having one administrator and one administrator designee may not be sufficient to allow for situations of illness, planned vacations, and various other factors. Some commenters suggested that three administrator designees may be appropriate, while others suggested having no limits to the number of designees that an HHA may select. One commenter suggested that, rather than have the governing body approve a single designated back up person to function in the absence of the administrator, the regulation should allow the governing body to approve the HHA's policy outlining how administrative oversight will be transferred in the absence of the administrator.

Response: The number of administrator designees should be determined by HHA needs and set forth in each HHA's policies and procedures. As stated previously, the goal is to provide continuity within the HHA to the greatest degree possible. HHA staff should know and be able to indicate to a surveyor whom the pre-designated individual(s) is/are for this role. We are retaining the requirement that the governing body must approve the pre-designated individual(s). The governing

body is responsible for the administrator's appointment, and should be similarly responsible for the designee's appointment.

Comment: A commenter suggested that the regulation should clearly permit the clinical manager to serve as the administrator designee, as long as he or she meets the qualifications for the administrator as described in § 484.115(a).

Response: The clinical manager may be the designee, as long as he or she meets the personnel qualifications to do so. However, it would not be appropriate to specify this in the regulatory text, as such an addition may inaccurately imply that others within the HHA who also meet the personnel requirements would not be permitted to be the designee.

Comment: A commenter suggested that the term "equally qualified substitute" be used in place of "pre-designated person" to describe the individual who fills the administrator role in the absence of the administrator.

Response: We believe that both the "qualified" and "pre-designated" nature of the individual should be included in the regulation, and have added "qualified" to the regulatory text. An individual would be considered "qualified" to be the "pre-designated individual" by meeting the personnel qualifications for the administrator role as set forth in § 484.115(a).

Comment: A commenter requested clarification of the phrase "operating hours" as it was used in terms of the availability of the administrator. The commenter stated that HHAs typically have a nurse available to see patients 24 hours per day, and wanted to know if this availability would also mean that the administrator must be available 24 hours a day.

Response: As currently stated in the HHA interpretive guidelines (http://cms.hhs.gov/Regulations-and-Guidance/Guidance/Manuals/downloads/som107ap_b_hha.pdf), the term "operating hours" means all hours that staff from the agency are providing services to patients. For the sake of consistency, we intend to maintain this understanding of the term.

Comment: We received many comments related to the proposed requirement that each HHA have a clinical manager who is responsible for several duties. Many of these commenters were supportive of the new requirement, stating that it more clearly articulates the responsibility of the former supervising physician or supervising nurse role, ensuring that patient needs are continually assessed, and ensuring coordination of care,

coordination of referrals, and updating of plans, etc. While some commenters suggested that the role be eliminated altogether, other commenters sought clarification regarding its function, goals, and operational implementation. A commenter asked if this role was intended to be filled by the individual who would provide hands-on care in the field, or if it could be filled by a supervisor who may not be out in the field. Another commenter expressed a similar concern, asking whether the clinical manager would be responsible for oversight of certain agency functions (for example, making patient and personnel assignments, coordinating referrals, and assuring that patient needs were continually assessed) or whether the clinical manager would have to perform the functions himself. Some commenters asked whether multiple individuals would be permitted to fulfill the clinical manager role, noting that in large HHAs it may be difficult for one single individual to perform all of the proposed duties. Some suggested that multiple people could all do the same job, each for an assigned subset of the HHA's patient population, while others suggested that multiple people could divide the duties of the clinical manager role, such as one clinical manager is responsible for oversight of personnel and another clinical manager is responsible for patient care services. Other commenters suggested that the clinical manager should be permitted to delegate to other individuals, both clinical and non-clinical, to carry out the duties for which the clinical manager has oversight responsibility. Some commenters supported the idea that the clinical manager and the administrator should be separate roles filled by separate individuals, while other commenters stated that the roles should be permitted to be combined and filled by a single person.

Response: The clinical manager requirement is set forth as a list of responsibilities, such as coordinating patient care and referrals (§ 484.105(c)), in order to allow HHAs flexibility in its implementation. In a small HHA one clinical manager may fulfill all of these roles and for all patients. In a larger HHA, multiple clinical managers may divide up the HHA's caseload, and each clinical manager takes responsibility for assuring all of these functions for his or her caseload. Alternatively an HHA may have one clinical manager that delegates different aspects of the clinical manager role to different individuals, assuring that each individual performs the necessary duties and functions. The organizational structure for each HHA

will vary, as set forth in each HHA's own policies and procedures. While we believe that it would be rare for a single individual to be capable of effectively fulfilling all of the responsibilities of the administrator and the clinical manager for an entire HHA, this rule would not prohibit this arrangement, provided that the individual meets the personnel qualifications for both roles as set forth in § 484.115 and the quality of care provided to patients is not compromised. However, we believe that in the vast majority of situations, HHAs will find it necessary to have at least two individuals fulfilling the administrator and clinical manager responsibilities separately.

Comment: Numerous commenters suggested that, in addition to permitting a registered nurse or a physician to fill the clinical manager role, the regulation should also permit a physical therapist, speech-language pathologist, occupational therapist, audiologist, or social worker to fill the clinical manager role.

Response: We agree that these skilled professionals may have the appropriate qualifications to fill this role. HHAs will be responsible for assuring that any skilled professional filling the role of the clinical manager has the necessary clinical, managerial, and communication skills needed to successfully fulfill his or her responsibilities as a clinical manager. The regulatory text regarding the qualifications for a clinical manager has been revised accordingly, and has been moved to the "Personnel Qualifications" section of the rule at § 484.115.

Comment: A few commenters opposed the proposal that the clinical manager be responsible for assuring the development of personnel qualifications and policies. Commenters stated that this is the role of the Human Resources staff, which has specialty knowledge regarding the legal rights and obligations of professionals relative to their employment with the organization. Commenters suggested that the development of personnel qualifications and policies should be the responsibility of the administrator and the human resources director, with approval from the governing body. Commenters also suggested that clinical managers should express the needs of the clinical program to the Human Resources staff so that those needs could be reflected in personnel policies (including, but not limited to, job duties, job knowledge, expectations relating to the submission of clinical notes, productivity expectations, and hours of work). These commenters

suggested that it would be more appropriate to require that the clinical manager collaborate with the administrator regarding the development of personnel qualifications and policies.

Response: We agree that assuring the development of personnel qualifications, and policies and procedures, is a task more appropriately assigned to the administrator, rather than the clinical manager. We have revised the regulatory requirement at § 484.105(b)(1)(iv) accordingly. The administrator may choose to delegate these tasks to others, including the clinical manager, as appropriate, while retaining the responsibility for assuring that tasks are completed and duties performed.

Comment: A commenter recommended that the clinical manager be responsible for "supervision of staff."

Response: Both the proposed and final rule require that the clinical manager provide oversight of personnel. We believe that the broad concept of "oversight" already includes the narrower concept of "supervision." The extent to which the clinical manager directly supervises personnel or delegates such functions to others, while maintaining responsibility for assuring that supervision is done appropriately, would be left to the discretion of HHAs as established in their individual organization structures, as well as their own policies and procedures.

Comment: A few commenters suggested alternate phrasing for the clinical manager requirement in a way that avoids creating a specific management position. While the commenters supported the concept of HHA staff members performing the duties set forth in the proposed rule, they opposed establishment of a specific managerial role for those duties. Commenters suggested that the regulation should identify the functions that need to be performed without using the "clinical manager" title, and require that "a designated HHA staff member" who is a qualified licensed physician or registered nurse provide oversight. One commenter suggested that the regulation should be re-named "Oversight of Patient Care Services and Personnel."

Response: As stated in the preamble of the proposed rule, our goal is to consolidate under the direct responsibility and authority of HHA management those areas that receive the most frequent deficiency citations. We believe that the clinical manager role is essential for managing the complex, interdisciplinary care of home health patients. Although the current HHA rule

addresses these issues, it does so in a decentralized manner that has not consistently led to the patient care outcomes that we seek to achieve in this rule. Six of the twenty most frequently cited survey deficiencies center on the need for patient care coordination and implementation, including the most frequently cited deficiency related to ensuring that each patient has a written and updated plan of care. These frequent deficiency citations indicate that patient care, as structured under the current CoPs, is not being sufficiently planned, coordinated, and implemented to ensure the highest quality care for all HHA patients at all times. As such, we believe that a new approach is needed in order to consistently achieve improved patient outcomes, and that consolidating these frequently deficient areas under the overall responsibility of a designated management position will address this need. HHAs may choose to organize one or more clinical managers in a manner that meets their needs, but we believe that this designated position is essential.

Comment: A few commenters expressed strong support for the proposed parent-branch relationship, particularly the proposal to remove distance between locations as a consideration in the branch approval process, stating that, distance should not be a consideration as long as the parent can demonstrate administrative control over the branch. Commenters also supported the proposed requirement that the parent office has direct day-to-day control and direct supervision of all activities performed and services provided by/from the branch office, including all contracts, personnel oversight, plans of care, services, quality control, etc. However, one commenter stated that the proposed rule did not go far enough in abandoning geography as an organizational consideration. The commenter stated that advancements in technology available to HHAs, including IT enhanced functions like clinical software (including, but not limited to, assessments, plan of care, and scheduling), IT support, payroll, communications, accounting/billing and many administrative functions, such as HR administration, insurance and strategic planning, are amenable to centralized configuration for multiple service locations, as opposed to decentralized provision of services and day-to-day supervision of services.

Response: We appreciate the support of most commenters, and believe that the proposed, and finalized, requirements strike an appropriate balance between the need for HHA

flexibility in management and structure, and the need to assure accountability throughout an organization and its many possible locations in a manner that assures patient safety and high quality patient care.

Comment: While some commenters supported the proposal to discontinue the use of subunits, many commenters posed logistical questions regarding the conversion of existing subunits to branches or independent HHAs. One commenter indicated that its “branches” currently have their own provider number or NPI, and asked whether those “branches” that currently do have their own NPI will be required to be registered as a separate agencies. Other commenters noted that the current CMS Manuals indicate that there is a process for the conversion of a branch to a subunit; however, those Manuals are silent on the process for the conversion of a subunit to a branch or to a parent HHA. In light of this, commenters posed the following questions:

- How will the transition need to occur for patients who span the conversion in terms of claim submission? Will agencies need to close the patient under the subunit provider number and re-open the patient’s care under the parent provider number? Will that require a new start of care and associated face-to-face evaluation?
- Will a subunit converting to an independent HHA automatically be “recognized” as an independent parent HHA without any further application or formal conversion process? As a part of that recognition, will the subunits converting be permitted to maintain their current CMS certification numbers (“CCN”) so as not to interrupt treatment, billing and reimbursement for current patients?
- Will subunits undergoing the conversion process to branches be treated as new enrollees?
- Will subunits undergoing the conversion process be required to submit new CMS Form 855A applications?
- Will subunits undergoing the conversion process be subject to survey as a “new” HHA?
- Will subunits undergoing conversion be required to discharge current patients and readmit them to the parent HHA or an alternative HHA provider during the conversion process?
- Will billing and claims processing for subunits undergoing conversion to branch offices be interrupted, and how?
- How will subunits being converted to branch offices be added to their parent HHAs’ CCNs?

- If an 855A is required for a subunit being converted, is there a way to streamline the process for approval if the subunit has a positive compliance record?

- How will subunits undergoing the conversion process to become a branch be held accountable for data transmission, billing, and compliance during the transition process?

Response: HHAs with subunits will need to work through a wide variety of questions and concerns. As the commenters indicated, guidance related to converting a branch to a subunit is set forth in CMS manuals in section 2182.3 of the State Operations Manual (<https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Downloads/som107c02.pdf>). Similarly, we believe that the logistics of converting existing subunits to branches or independent HHAs is also more appropriately addressed in CMS manuals than in this regulation. Following publication of this final rule, we intend to issue a Survey and Certification letter to the states that will explain the change in terminology and revise the guidance to reflect the new terminology. Additionally, we will revise sections of Chapter 2 of the State Operations Manual that address branches and subunits to reflect the changes finalized in this rule.

Comment: Many commenters suggested that, in order to smooth the process of converting subunits to branches or independent HHAs, CMS should reprioritize approval of new branches and new HHAs from a tier 4 priority to a tier 1 priority in the State Survey Agencies and CMS Regional Offices.

Response: Subunits are already the equivalent of stand-alone HHAs and will be able to continue functioning as such, relieving the need to change to branches. Since there would be no threat to an HHA’s ability to function and serve its patients, we do not agree that it would be appropriate for CMS to allocate survey resources to those HHAs that desire to, but do not need to, convert a subunit to a branch. Thus, the current process and priority levels will remain the same.

Comment: Numerous commenters stated that the final regulation should provide ample time for HHAs to convert a subunit to either a parent or a branch. Commenters stated that HHAs converting from subunits to independent parent HHAs may need to put into place a new governing body and/or appoint a new administrator, meaning that HHAs may need time to recruit, hire, train and integrate these individuals. Commenters also stated

that time may be needed for subunits to file new or amended state licensure applications and complete the processes necessary to obtain new or amended licenses. Lastly, commenters also stated that existing subunits in some states would have to seek and obtain permission from their respective state certificate of need agencies to convert to an independent parent HHA before they could even apply for the necessary state license. For these reasons, commenters requested a transition period of 6 to 12 months to ensure that HHAs have adequate time and preparation to come into compliance with the new parent-branch requirements that eliminate the use of subunits.

Response: All requirements set forth in this rule, including the removal of the subunit organizational structure, are effective July 13, 2017. We believe that this will provide HHAs with adequate time to make any adjustments for a subunit to begin operations as a stand-alone HHA.

Comment: One commenter suggested that the regulations related to HHA structure and parent-branch relationships could be streamlined by eliminating the requirement for bordering states to have reciprocal agreements in place in order to cross state borders. The commenter stated that this would negate the necessity of the separate provider number and resulting duplicative and unnecessary administrative costs. Agencies' offices in bordering states could then function under the revised branch definition, as proposed.

Response: This suggestion regarding reciprocal agreements between State Survey Agencies is related to the survey process, and is not within the scope of this rule, which sets forth the health and safety requirements for HHAs. Therefore, we are not addressing it in the rule.

Comment: A commenter requested reassurance that HHAs with existing subunits may choose to convert the subunit to either a parent or a branch at the HHA's discretion, subject to state-specific laws and regulations and the ability of the parent to demonstrate direct support and administrative control.

Response: The commenter is correct. A subunit may choose to be a distinct HHA (a parent) or go through the current approval process to become a branch.

Comment: A commenter expressed concern with the proposal that an HHA may not contract with an entity that has been denied Medicare or Medicaid enrollment; been excluded or terminated from any federal health care

program or Medicaid; had its Medicare or Medicaid billing privileges revoked; or been debarred from participating in any government program. The commenter asked whether the entity's attestation that it meets these conditions as part of the written agreement would be sufficient to demonstrate compliance with this requirement. The commenter stated that it would be very difficult for an HHA to obtain this information directly.

Response: We appreciate the opportunity to clarify this requirement. Enforcement of these provisions will vary based on the specific provision to be verified. In order to identify whether or not an entity has been denied enrollment or had its billing privileges revoked, we agree that written and signed self-certification is the most appropriate method to assure compliance because this is not publicly available information that HHAs can check on their own. However, we expect that HHAs will routinely check the List of Excluded Individuals and Entities (<https://oig.hhs.gov/exclusions/>). HHAs should also check the Special Advisory Bulletin (<https://oig.hhs.gov/exclusions/advisories.asp>). In addition, in order to check whether or not an entity has been debarred, in accordance with the debarment regulations at 2 CFR 180.300, an HHA may check the System for Award Management (<https://www.sam.gov/portal/SAM/#content>) or obtain self-certification from the entity. HHAs are responsible for assuring a contracted entity's continued good standing, and would be expected to establish policies and procedures for doing so.

Comment: A small number of commenters suggested that the regulations should permit those individuals who are employed by a "Professional Employer Organization" (PEO) to be considered a direct employee for purposes of the proposed requirement that at least one HHA service must be provided directly.

Response: It is our longstanding policy to establish a "direct" relationship between an employer and employee through the issuance of a W-2 by an employer to an employee without intermediaries. We did not propose to revise our longstanding policy and the commenters did not provide any evidence to demonstrate that the use of PEOs would improve patient health and safety. Therefore, we are maintaining current CMS policy that providing a service "directly" means providing a service by employees who are issued a W-2 by the HHA.

Comment: A commenter suggested that the regulation should be clarified so

that a service would be considered to be provided "directly" in situations when that service is temporarily provided by supplementary contracted staff. For example, an HHA may employ a large number of nurses to provide nursing services directly, but use contracted supplement nurses in situations such as a medical leave of absence of an employed nurse or to fill an employed nurse position while the HHA hires a new nurse. The commenter stated that having one or two temporarily contracted staff should not preclude the HHA from designating that service as being provided directly by the HHA.

Response: In order to assure compliance at all times with the requirement of 484.105(f), which states that a HHA "must provide at least one of the services described in this subsection directly," an HHA may not use contracted individuals to provide its chosen service directly.

Comment: A commenter suggested that the services of mental health professionals (Social Workers, Psychologists, Counselors, and Therapists) should be part of home health services.

Response: Medical social services are already part of the HHA benefit, as set forth in the Act. However, mental health services beyond those provided as medical social work services are not within the scope of HHA services as set forth in section 1861(m)(3) of the Act. For this reason, it would not be appropriate to include the services of other mental health professionals in this rule.

Comment: A commenter suggested that all regulations related to HHA financial planning should be removed or replaced by a regulation that focuses on the sufficiency of the HHA's operating budget to meet its needs and provide services to the patients in its care.

Response: The financial planning requirements for HHAs are set forth in section 1861(z) of the Act and these regulations implement those statutory requirements. Therefore, we are required to retain the financial planning requirements in this rule.

Clinical Records

Comment: We received many comments on the content of the clinical record. A few commenters supported the requirement, stating that it would decrease duplication by no longer requiring certain information (for example, physician name and drug, treatment and activity orders) be included in a dedicated part of the clinical record since this information is also in the plan of care, which is a part

of the total clinical record. Other commenters requested clarification on what was meant by the term “current” comprehensive assessment. One commenter questioned the rationale for requiring that the home health clinical record contain the current assessment, including all of the assessments from the most recent home health admission. This commenter went on to say that assessments from prior admissions would have limited value in providing an accurate picture of a patient without all other components of the clinical record from that time frame. Furthermore, “most recent admissions” leaves home health agencies in the position of having to guess at the required time frame and the number of assessments needed to meet the requirement. The commenter recommended that CMS remove the requirement to include the assessments from prior admissions in the current clinical record since these assessments can be retrieved and viewed in the context of the total previous record for 5 years, in accord with record retention requirements.

Response: The current assessment would be the assessment that was completed with the most recent date. We did not propose, nor are we finalizing, that the record must include assessments from prior admissions. The patient’s record is meant to provide a full history of that patient’s care and status while he or she is under the care of the HHA. Therefore, it must contain all assessments ever related to the patient’s current admission. HHAs may choose to keep the most current/recent assessment in a different part of the record to differentiate it from older, out of date assessments, if that would improve clarity for users of the clinical record.

Comment: One commenter urged CMS to require listing the inclusion of contact information for caregivers, not just the patient and any representative, in the patient’s clinical record (§ 484.110(a)). The commenter goes on to say that while the comprehensive assessment identifies caregivers and itself is part of the clinical record, specifically including contact information for the caregivers is appropriate in light of the various responsibilities specified for HHAs with respect to a patient’s caregivers throughout the CoPs.

Response: We agree that, in addition to the patient representative contact information (whether legal or patient-selected), it is important to include contact information for the primary caregiver(s) as well. We believe this would be helpful to the HHA staff as

they coordinate and deliver care. Therefore, we amended the language at § 484.110(a)(4) by adding this requirement to the final rule.

Comment: One commenter expressed concern that it may be difficult for some organizations to obtain and keep contact information for the patient’s primary care practitioner who will be responsible for providing the patient’s care after discharge. The commenter also states that the requirement is very broad in scope, and in many cases the practitioner who will care for the patient after discharge may work within a practice in which one specific provider may not be identified for the patient. In addition, the practitioner who will care for the patient after discharge may not be the same as the physician(s) writing home health orders for the patient. The commenter continues on to say that this is often problematic for organizations to determine which practitioner will be providing care for the patient after they have completed their home health visits.

Response: We understand the commenter’s concerns with obtaining contact information for the patient’s follow-up care practitioner. However, we strongly believe this information benefits the patient by supporting continuity and transition of care between the HHA and the primary care or other practitioner. The practitioner(s) who will be responsible for providing post-discharge care need to be identified in the record so that HHAs know with whom to communicate regarding discharge planning, as required in § 484.60(c). We understand that the patient’s practitioner(s) may be different than the physician(s) issuing orders for the HHA plan of care, which is why we strongly believe that requiring separate identification of the practitioner in the patient’s clinical record is so important. Lastly, we understand it may not be possible to identify the name and contact information for a specific practitioner where the practice as a whole furnishes care to the patient. In such cases it is acceptable for the HHA to include the contact information of the health care practice.

Comment: We received many comments regarding clinical records and the proposed discharge summary requirements. Some commenters supported the transfer/discharge requirement, with one commenter stating that they wanted to reinforce their belief that CMS was correct in assuming that most agencies do develop and send a discharge summary to the physician at the time of discharge. Many commenters stated that the 7 day and 2

day proposed timeframes to send the discharge or transfer summary was not enough time. Commenters stated that transfers and discharges could occur on weekends or holidays when staffing, specifically administrative staffing, is lower. Commenters suggested numerous alternative timeframes, as follows:

- 2 business (rather than calendar) days for transfer summaries.
- 7 business days for both discharge and transfer summaries.
- Transfer summaries on the day of transfer and discharge summaries in 2 calendar days.
- 5 business days for transfer summaries and 10 business days for discharge summaries.
- 7 to 14 business days for discharge summaries
- No timeframes for any summaries

Another commenter requested that if the HHA is not able to meet the timeframe requirements, CMS should permit the HHA to document the reason(s) in the medical record.

Response: We appreciate the wide array of comments. While most commenters believed that transfer and discharge summaries are important, the time frames suggested varied greatly. We believe both transfer and discharge summaries are important for care continuity and transitions. Transfer summaries prepared and sent on the day of transfer, and discharge summaries prepared and sent in 2 calendar days after discharge are ideal, and we strongly encourage all HHAs to meet these timeframes. However, we understand that this may not be feasible in all transfer and discharge situations. The CoP requirements are meant to establish maximum timeframes. Thus, we believe that 2 business days for a transfer summary and 5 business days for discharge summary are appropriate maximum standards, and have amended the regulatory language at § 484.110(a)(6)(i) and (ii) to reflect these new timeframes.

Comment: Some commenters stated that HHAs may not know that a patient was transferred to a facility for several days after that transfer has occurred, and therefore suggest starting the 2 day clock when the HHA becomes aware of the transfer. In addition, one commenter stated that no discharge/transfer summary for urgent/emergent admissions should be required, because HHAs usually do not know about these until several days later, and providing discharge/transfer summary days after the fact is not helpful to the receiving provider. One commenter suggested that the regulation should not require HHAs to send discharge or transfer summaries to hospitals; while another commenter

requested CMS to consider allowing the HHA to develop their own policy on how to best communicate patient information at the time of transfer or discharge, which could include a verbal or written report. The commenter stated that in many cases, it is uncertain who at a hospital should receive the information. Additionally, the commenter stated that, generally, the discharge or transfer information would not be used in the diagnosis or treatment of the hospitalized individual.

Response: We understand the commenters' concerns regarding the issues surrounding an unplanned transfer to a facility, and agree that it would be difficult for the HHA to comply with the requirements if it was not aware that the transfer had occurred. Therefore, we have amended the regulatory requirement at § 484.110(a)(6)(iii) to require that the HHA sends a completed transfer summary within 2 business days of becoming aware of an unplanned transfer, only if the patient is still receiving care in the receiving health care facility at the time when the HHA becomes aware of the unplanned transfer. We believe that this revision strikes an appropriate balance between sharing information, when such sharing has the potential to be helpful because the patient is still under the care of the inpatient provider, and conserving HHA resources when the patient has been admitted and discharged from the inpatient care provider before the HHA is even aware of the situation. In the future, as the use of interoperable health records becomes widespread in the HHA industry, we may consider a shorter timeframe for sending a transfer summary in order to make the information exchange more timely and relevant to patient care.

Comment: One commenter suggested that transfers without an agency discharge, where the agency will be resuming care, should require that a transfer summary be provided only if a transfer summary was requested by the receiving facility. In addition, others stated that a transfer summary would only be needed if a patient was being discharged with no plan to return to the HHA. Another commenter suggested that an agency should be relieved of this requirement if the patient was admitted to home health from a facility and returned to that same facility.

Response: We appreciate these comments. While we understand that patients may be discharged for a period of time and then return to the HHA, we strongly believe that a transfer summary should be proactively sent, and that this information benefits the patient by

supporting continuity and transition of care between the HHA and the receiving facility or practitioner. Therefore, no additional changes have been made to the transfer summary requirements at § 484.110(a)(6)(iii).

Comment: One commenter stated that CMS may want to consider including the requirement to send the discharge or transfer summary in § 484.60(e). Discharge or transfer, in addition to or instead of § 484.110(a), Contents of the clinical record. This requirement is more aligned with care coordination than clinical records, and moving its placement could make it easier to find for HHA staff working on discharge policies.

Response: While this requirement could also be grouped with those related to the content of the discharge or transfer plan, it is equally appropriate to include this requirement in the clinical record section because it addresses timeframes for distributing items that are maintained within the clinical record. In developing their own policies and procedures surrounding the discharge or transfer process, HHAs are free to gather information from all sections of the CoPs that are appropriate to inform the development of relevant HHA policies and procedures.

Comment: One commenter recommended that the regulation require the HHA to send a copy of the discharge or transfer summary to the patient, representative (if any) and the caregiver.

Response: Section 484.60(c)(3)(ii) requires that changes in the discharge plan must be communicated to the patient, representative and caregiver. We believe that this communication is appropriate and necessary for the patient, representative and caregivers. However, the discharge and transfer summary is written for medical professionals and is not necessarily appropriate for the patient's use. Therefore, we do not think that it is necessary to require HHAs to provide a copy of the discharge summary to each patient. Additionally, HHAs are required to educate patients and caregivers regarding their roles in implementing the plan of care, so patients and caregivers should already have the knowledge and skills necessary to meet any ongoing care needs following cessation of home health services.

Comment: We received a few comments regarding the proposed clinical record authentication requirements. Some commenters supported the need to document the actual time of administration of treatments and/or medication

administration, but were unsure as to why each entry into the record, which is not a time sensitive issue, must be timed. In addition, one commenter requested that CMS clarify "timed" in the sentence "dated and timed." One commenter also went on to ask if this requirement would include all records of case conferences, phone calls, interdisciplinary communications, etc. be timed and dated; and if so, what would be the supporting reasoning as to the need to time such communications. An additional commenter also supported this requirement but noted that these requirements are often part of organizational policy. This commenter went on to state that some organizations will have difficulty meeting the requirements due to failure of staff to date and time their entries and encourages CMS to provide education for all home care organizations on these requirements.

Response: There seems to be confusion related to what we mean by the term "timed." To clarify, "timed" means the actual time that an event occurred, which is not necessarily the time when the documentation was entered into the record. The date and time requirement applies to all entries in the record. We believe it is extremely important that the clinical record accurately reflects a clear account of the patient's entire course of care. The clinical record should tell a linear story of the course of the patient's care that is managed and delivered by the HHA. Without timing entries, there is the risk for a disjointed record and a possibility for the occurrence of avoidable medical errors.

Comment: We received a few comments on authentication. One commenter requested that the regulations be more specific about what is required for electronic signature, and require electronic audit trails which show if any changes were made in a patient's electronic health record, exactly what changes were made, who made those changes, and when those changes were made in all electronic health records. The commenter stated that HHAs experience problems with vendors when HHA surveys identify documentation problems. One commenter recommended that language relating to "signature and title" be replaced with the broader requirement for "authentication" without specifying how that authentication would be accomplished. Lastly, one commenter recommended that CMS allow providers that maintain clinical records electronically to scan the "signature" documents and then destroy the paper copies.

Response: We appreciate the comments received on the subject of record authentication. "Electronic signatures" may mimic paper signatures, complete with a signature and a title (occupation), or may be a secured computer entry by an identifier that is unique to the individual creating the entry. These requirements, particularly those for a "signature and title" are standard practice, and we see no reason to deviate from them at this time. While we understand that HHAs may desire to destroy paper copies of signature documents in order to reduce physical paper storage space, we believe that maintaining the original, signed paper documents is essential for purposes of authentication of the documents. Furthermore, while we agree that electronic audit trails may be a useful tool for some HHAs, we do not believe that they should be incorporated into the regulations as a minimum requirement for all HHAs because there is more than one way for an HHA to achieve the goals accomplished by electronic audit trails. Furthermore, electronic audit trails would not apply to those HHAs that choose to use paper records. HHAs bear ultimate responsibility for continuous compliance with the requirements of these regulations, and are expected to manage all contracts, including those with software vendors, to assure such compliance. We urge HHAs to engage in due diligence to ensure that their vendors are providing them with EHR technology solutions that support patient health.

Comment: CMS received a few comments on record retention. One commenter recommended that retention of records mirror the timeframes in other federal law or regulation. For example, 5 years does not correlate with requirements for HIPAA or the look back periods for recovery audit contractors or zone program integrity contractors. While another commenter supported the 5 year time frame; stating it simplifies the timeframe during which the patient's records are kept (5 years from discharge as opposed to from filing of cost report) and for some states record retention regulations are stricter, requiring records be held for 6 years. Therefore this standard would not impose burdens on agencies in the state.

Response: We believe that retaining records for a period of 5 years is sufficient for health and safety purposes. We acknowledge that other rules may exist that contain different record retention or compliance documentation timeframes. HHAs need to develop their own agency-specific policies and procedures to assure that

records are retained in accordance with the law, regulation, or policy that requires the longest retention period, which may exceed the 5 year period established here.

Comment: We received a few comments on the availability of clinical records. One commenter supports the standard, stating it facilitates access to records by patients, authorized individuals and entities to ensure transparency and continuity of care. Another commenter requested clarification on the timeframe for making records available, stating that, in cases where individuals are onsite awaiting information, HHAs should be allowed sufficient time to assemble records. In many HHAs, not all materials are electronic, including signed verbal orders, files from hospitals, and other content. HHAs may need several hours to compile the most up-to-date records. For other purposes, the commenter recommended that HHAs be allowed a minimum of 4 business days to make records available. Another commenter stated that this proposed condition will encourage more requests for copies of medical records which will increase costs. The commenters internal analysis indicates that as much as \$230,000 annually may be incurred on HHAs should there be a large increase in medical record requests and urges CMS to acknowledge the increase in costs of this requirement.

Response: We believe that all patients should have the right to receive information contained in the clinical record, including the plan of care, free of charge. We agree with the commenter that suggested HHAs be allowed a maximum of 4 business days to make records available. Additionally we understand that the HHA may have another scheduled visit with the patient before the 4-day mark and that it would be advantageous for the HHA to deliver the record at that next scheduled visit. Likewise, if a patient requests to have the plan of care emailed, the HHA would have a maximum of 4 business days to comply. Therefore, we are finalizing this requirement to state that "[a] patient's clinical record (whether hard copy or electronic form) must be made available to a patient, free of charge, upon request at the next home visit, or within 4 business days (whichever comes first)." HHAs may also be governed by state laws and regulations that pertain to this issue, and are expected to comply with such laws and regulations to the extent that they provide greater rights of patient access than HIPAA. We also understand and agree that it may take several hours to assemble a complete clinical record

to be reviewed onsite, such as for state surveyor review. We do not think that this regulation is going to dramatically increase record requests. For additional information and guidance on the HIPAA requirements for patient access with which HHA's must also comply, please see guidance issued earlier this year from the OCR available at <http://www.hhs.gov/hipaa/for-professionals/privacy/guidance/access/index.html>.

Comment: We received several comments related to electronic health records (EHRs). A few commenters stated that incentives should be given to offset the costs and detailed training guidelines should be offered to HHAs who make the switch. One commenter offered support for EHRs, stating that they encourage the exchange of health information across all providers to improve the quality of care and care transitions. According to commenters, EHRs have been proven to reduce medical error rates and help improve the coordination of patient care. Therefore, according to commenters, assisting HHAs in making the leap to EHRs would be beneficial to improving the quality of patient care.

Response: We appreciate the commenter feedback related to EHRs. The Department of Health and Human Services is committed to accelerating health information exchange through the use of EHRs and other types of health information technology (health IT) across the broader care continuum through a number of initiatives including: (1) Alignment of incentives and payment adjustments to encourage provider adoption and optimization of health IT and health information exchange services through Medicare and Medicaid payment policies; (2) adoption of common standards and certification requirements for interoperable health IT; (3) support for privacy and security of patient information across all health information exchange-focused initiatives; and (4) governance of health information networks. These initiatives are designed to improve care delivery and coordination across the entire care continuum and encourage the electronic exchange of health information among all health care providers, including professionals and hospitals eligible for the Medicare and Medicaid EHR Incentive Programs and those who are not eligible for such programs. However, providing additional incentives to any provider, including HHAs, is beyond the scope of this rule and subject to the limitations of statutory authority.

Comment: One commenter believes that HIE, in theory, is an outstanding idea. The efforts nationwide, however, are scattered and of varying success. In

the absence of ACA funding, some are failing. The commenter stated that he does not believe that use of an HIE should be addressed in the CoPs. With regard to interoperability, the commenter recommended consideration of the most recent ONC statement on interoperability, and stated that at this time full interoperability is too far in the future to make HIE an element of CoPs. Another commenter stated that a certification program, required or voluntary, cannot be successful without industry and provider commitment to the necessity of such a program and without participation requirements applicable to the provider community. The commenter also expressed concern that voluntary or required certification without the implementation of Meaningful Use Stage 3 will neither substantially improve the alignment of existing federal and state programs nor appropriately balance the required costs and benefits due to the current low adoption rates of Meaningful Use Stage 2 requirements by hospitals and other eligible providers.

Response: We agree that this is not the appropriate time to require, in the CoPs, the use of HIEs or compliance with any stage of the Meaningful Use criteria. We will continue to monitor the voluntary use of certified record systems and HIEs, and would use the notice and comment rulemaking process to promulgate any future HHA regulations related to these issues.

Comment: One commenter stated that it was important to point out that as a result of the growing discussion related to the use of massive collections of data, an integrated information database that is aimed at improving quality standards in HHAs and aimed at a more comprehensive approach towards current and long term health care specifically designed for each individual patient could be a wonderful tool if used correctly. The commenter cautioned, however, that the amassing of data and the technology that is used to analyze it may be vulnerable to exploitation.

Response: We agree that it is incumbent upon HHAs to appropriately secure data, and the systems used to collect and analyze it, against inappropriate access and use. Section 484.110(d), Protection of records, requires that HHAs must be in compliance with the HIPAA Privacy and Security rules regarding protected health information set out at 45 CFR parts 160 and 164. We believe that this requirement establishes an appropriate expectation of security in the maintenance of patient data, and the systems used to collect and analyze it.

In addition to the steps taken by HHAs to assure the confidentiality of data that they collect, CMS takes all appropriate steps to assure the security of all data that is submitted to CMS by HHAs.

Personnel Qualifications

Comment: We received many supportive comments regarding personnel requirements. One commenter supported the retention of the requirement that “social work assistants” be supervised by a qualified social worker. One organization strongly supports the proposal to retain personnel qualification requirements, including those for occupational therapy. This commenter stated that keeping the qualification requirements intact protects the public health, safety, and welfare of the patients served by occupational therapy practitioners and ensures that services are performed by trained and qualified providers.

Response: We appreciate the support of the commenters, and agree that establishing minimum personnel qualifications is an essential part of assuring the safety and quality of HHA care.

Comment: We received many comments on the personnel qualification of the administrator. A few commenters requested that CMS grandfather in the current administrators, with one commenter stating that there should be an exception policy in place that acknowledges years of experience in the Medicare certified home health field as an appropriate qualification for a home health administrator. One commenter stated that they applaud expanding the standard for eligibility for the administrator. The commenter added that they supported the role of administrator being provided by persons with skill sets that do not require medical or nursing degrees. A few commenters requested that CMS not require a degree and experience, stating that experience all on its own is good enough and requiring both is too burdensome. One commenter stated that an undergraduate degree and 1 year of experience does not seem adequate to fulfill the role of administrator, which requires knowledge in many areas. The commenter suggested that a graduate degree or specialized clinical certification and additional years of experience in management would be appropriate. Another commenter advised that CMS not have any qualification requirements.

Response: It was not our intent to disqualify any currently employed administrator from continuing to perform his or her job duties with his

or her current employer. Therefore, we agree that administrators who do not meet these qualifications should be allowed to continue employment in their current position, and we have revised the regulation at § 484.115(a) to reflect this policy. In light of the various suggestions from the public regarding the appropriate qualifications for those administrators that begin working for an HHA after the effective date of this final rule (July 13, 2017), we have chosen to finalize the originally proposed requirement. An administrator who begins working for an HHA after the effective date of this final rule, even if he or she was previously employed as an administrator for a different HHA, is required to be a licensed physician, a registered nurse, or hold an undergraduate degree. A registered nurse would include a Nurse Practitioner or other advance practice nurse. Additionally, an administrator who begins working for an HHA after the effective date of this final rule is required to have experience in health service administration, with at least 1 year of supervisory or administrative experience in home health care or a related health care program. We believe that this combination of education and experience requirements strikes an appropriate balance between those commenters who sought to require that an administrator must possess a graduate degree and those who sought to remove all personnel requirements for an administrator. Furthermore, we believe that adding these personnel requirements for all future administrators will serve as a disincentive to the creation of HHAs that are operated with fraudulent intent, as many of these entities are opened by individuals who would not meet these minimum qualifications. Such HHAs pose a significant threat to the health and safety of Medicare beneficiaries in need of HHA services. The personnel requirements set forth in this rule are the minimum requirements. HHA governing bodies may establish more stringent requirements that meet the needs of their organizations.

Comment: We received one comment on the personnel requirements for occupational therapists and one comment on occupational therapy assistants. The commenter stated that the qualifications for occupational therapists are almost identical to current regulation. However, the current regulations allow therapists educated abroad to meet part of the necessary criteria by successfully completing a program that is substantially equivalent to occupational therapist entry-level

education in the U.S. offered by one of four categories of organizations. In the proposed rule, the therapist must have successfully completed a program that is substantially equivalent to occupational therapist assistant entry-level education in the U.S. by one of the four categories of organizations. The commenter questioned why the word "assistant" appears here, since there is a separate set of qualifications for occupational therapy assistants. The commenter who asked about occupational therapy assistants is requesting clarification stating that the qualifications outlined in the proposed rule for an occupational therapy assistant are almost exactly the same as those in current regulation. However, the proposed rule states that an occupational therapy assistant is a person who "[a]fter January 1, 2010, meets the requirements in paragraph (b)(6)(i) of this section." There is no paragraph (b)(6)(i) in the proposed rule text.

Response: Our intent was to maintain all of the current qualification options for occupational therapists and occupational therapy assistants, without change. We have revised the regulatory requirements to correct these technical errors.

Comment: We received a few comments on the personnel qualifications for physical therapists and physical therapy assistants. For physical therapists, one commenter requests clarification, stating that in the proposed rule, physical therapists must be licensed (if applicable) and must meet one of several additional categories of qualifications. In current regulations, the first category requires physical therapists to have successfully completed a physical therapist education program and passed an examination for physical therapists approved by the state. In the proposed rule, the word "and" is dropped, and the text is renumbered in a way that could imply that either education or passage of an exam is acceptable. An additional commenter requests clarification as to whether CMS intended to propose this change, stating that under current standards, the fifth category requires a physical therapist to have been admitted to membership by the American Physical Therapy Association (APTA); or admitted to registration by the American Registry of Physical Therapists; or have graduated from a physical therapy curriculum in a 4-year college or university approved by a state department of education. In the proposed rule, the fifth option includes the above mentioned membership, registration and graduation from a

physical therapy curriculum. We received one comment on physical therapy assistants requesting that CMS consider clarifying and revising the qualifications for physical therapy assistants. This commenter stated that under the proposed rule, a physical therapy assistant is a person licensed, registered or certified as a physical therapy assistant, if applicable, by the state in which the assistant is practicing, unless licensure does not apply. In addition, the assistant must meet one of two other categories of criteria. In the first category, the assistant must meet the same specified education as listed in current regulations. In the second category, the assistant must have passed a national exam for physical therapist assistants before 2010, and he or she must meet one of the following criteria:

- Is licensed, or otherwise regulated in the state in which practicing; or
- In states where licensure or other regulations do not apply, graduated before 2010 from a 2-year college-level program approved by APTA and after January 1, 2010, meets the requirements of paragraph (b)(8) of this section.

The commenter stated that it was unclear what was meant by the reference to (b)(8) of this section, as there was no (b)(8) in the proposed regulations text.

Response: We did not intend to alter the content of the requirements for physical therapists and physical therapy assistants in any way. Any appearance of alteration is due to changes in numbering and/or the unintentional switching of the terms "and" and "or", which we have revised accordingly in this final rule. We have also made other technical corrections, as described in this preamble.

Comment: We received several comments that noted the definition of Physician at 42 CFR 410.20(b) is not consistent with the specialties of physicians who may certify and establish the plan of care for home health services in the regulation at 42 CFR 424.22(a)(1)(iii). The commenter recommended the requirements for a physician should refer to 42 CFR 424.22(a)(1)(iii).

Response: The personnel requirements for a physician refer only to those physicians who are employed by, or are under arrangement with, an HHA. These requirements would not apply to hospital and community-based physicians who are responsible for issuing orders that establish the home health plan of care, as they would function outside of the purview of the HHA. The requirements set forth at § 424.22(a)(1)(iii) are specific Medicare payment requirements for physicians

who certify the eligibility of patients for the Medicare home health benefit. We do not believe that it would be necessary or appropriate to narrow down the group of physicians who are eligible for HHA employment to just those physician types set forth in the payment regulations because HHA physicians may perform many roles that do not relate to certification of HHA patients.

Comment: We received a few comments on the personnel qualifications for social workers. One commenter supported the addition of doctoral degree as a qualification option. Another commenter stated that baccalaureate (BSW), master's (MSW), or doctoral degree in social work is the only sufficient preparation for social work.

Response: We agree that a master's or doctoral degree is an appropriate qualification, and are finalizing this proposal without change. HHAs may choose to further restrict those individuals who are employed as social workers in order to meet their specific needs; however we do not agree that it is appropriate for these regulations to impose such a restriction, as it would disqualify many long time social workers who happen to have degrees in other related fields. Therefore we are maintaining the current requirement that a degree in a related field would be considered an appropriate qualification for a social worker.

Comment: We received one comment on the personnel qualifications for speech language pathologists. Specifically, this commenter states that CMS is correct in the assumption that all states now have licensing requirements for speech-language pathologists (SLPs). However, the commenter asserted that ASHA certification and completion of a degree from a Council on Academic Accreditation in Audiology and Speech-Language Pathology (CAA) approved program remains the standard and ensures that speech-language pathologists are participating in a minimum number of continuing education hours. Additionally, not all U.S. Territories have licensure; therefore, continued use of ASHA certification is warranted. The commenter recommends that CMS continue to reference ASHA certification for minimum qualifications and requests that the revision maintain the ASHA certification.

Response: Section 1861(11)(4)(A) of the Act, on which the regulation is based, does not limit SLPs to only those individuals who meet the ASHA certification standards. Since this

limitation does not exist in the Act, we do not believe it should exist in the regulations. Therefore, in order to align the regulatory requirements with those requirements set forth in the Act, we are not making the suggested change. States are free to require ASHA certification as part of their SLP licensure standards.

Comment: We received one comment on the personnel requirements for the clinical manager. The commenter states that while they support the creation of the clinical manager position, they advise that CMS consider the inclusion of specific qualification requirements for the clinical manager, since there are frequent deficient practices related to reassessments, referrals, coordination of care and updating plans of care.

Response: We agree that it is appropriate to establish minimum personnel requirements for clinical managers. In the October 2014 proposed rule we proposed that a clinical manager be either a licensed physician or RN (79 FR 61164, 61183). As stated previously, commenters also suggested a therapist or social worker could fill this role. We agree that those professionals may also be qualified to fulfill the duties of the clinical manager. Thus, we are finalizing a requirement at § 484.115(c), Clinical manager, requiring that a clinical manager be a licensed physician, physical therapist, speech-language pathologist, occupational therapist, audiologist, social worker, or a registered nurse. A registered nurse would include a Nurse Practitioner or other advance practice nurse.

Comment: We received a few comments related to criminal background checks. Specially, one commenter stated that background checks should be done for all staff members, especially those who plan to go to a patient's home to deliver health care. A few additional commenters advised that CMS should require reasonable and appropriate standards for criminal background screenings and that criminal background checks should be required for all owners, operators, or employees that have direct patient contact or access to patient records in order to validate competency according to minimum standards established by the Secretary.

Response: The National Background Check Program (NBCP), as established by the Affordable Care Act, aims to create a nationwide system for conducting comprehensive background checks on applicants for employment by the LTC facilities and providers. The term "long-term care facility or provider" means the following facilities or providers: Skilled nursing facility, nursing facility, home health agency,

provider of hospice care, a long-term care hospital, a provider of personal care services, a provider of adult day care, a residential care provider that arranges for, or directly provides, long-term care services, including an assisted living facility, an intermediate care facility for the intellectually disabled, and any other facility or provider of long-term care services as the participating state determines appropriate. Prior to passage of this law and creation of the NBCP, many states already required background checks for LTC workers, but state requirements and programs varied. The intent of the NBCP is to set-up a standard, effective, and economical program to conduct background checks that also includes fingerprint-based criminal history checks. The U.S. Department of Health and Human Services, Centers for Medicare & Medicaid Services (CMS) administers the NBCP. Since the start of the program in 2010, CMS has awarded nearly \$57 million in grant funds to a total of 25 states and U.S. Territories to design, implement, and operate background check programs that meet CMS criteria. We believe that this comprehensive program that fosters consistency in implementation is a preferable way to improve the volume and scope of background checks that are conducted for HHA employees and contractors.

Summary of Care

Comment: We received many comments on the removal of the 60-day summary of care requirement (79 FR 61166). A few commenters supported the elimination of the summary of care notification every 60 days. One commenter stated that their physicians did not see true value in having another document to review, but instead valued the verbal communication with them at pertinent times related to the care and treatment of their patient(s). Other commenters requested clarification as to whether it would be expected that the information typically contained in the summary of care notice would be provided to the physician by some other means or format. However, other commenters did not support the removal of the summary of care every 60 days. These commenters stated that, although immediate communication of timely events is undeniably important, it was not equivalent to summarizing the patient's status to the physician at the time of recertifying the plan of care because physicians do not always remember the relevant recent issues concerning a particular patient when asked to review and recertify a plan of care. Another commenter stated that

CMS did not offer any other support or justification for this change. A commenter also stated that the Impact Analysis was unclear, specifically, the calculation that this requirement "imposes a burden of 3 minutes per patient" (it was unclear if CMS meant 3 minutes every 60 days or cumulatively for a year), and that removing the provision would amount to a savings of nearly \$17 million annually.

Response: Section 484.60(c)(1) requires that the HHA must promptly alert the physician(s) issuing orders for the HHA plan of care to any changes in the patient's condition or needs that suggest that outcomes were not being achieved and/or that the plan of care should be altered; the requirements at § 484.60(c)(3) requires that revisions to the plan of care due to a change in health status or a change in discharge plans be communicated to the physician issuing orders for the condition(s) that led to the initiation of home health care who was responsible for the HHA plan of care; and § 484.75(b)(7) requires that every skilled professional be responsible for communicating with the physician(s) issuing orders for the HHA plan of care. All three of these requirements in this final rule clearly establish the expectation that HHAs would apprise physicians of the information necessary to make appropriate decisions regarding the content of the plan of care at all times. We do not believe that a 60-day summary of care is a necessary regulatory requirement on top of the requirements referenced above. The burden imposed by the summary of care was originally estimated in the currently-approved PRA package (OMB control number 0938-0365), originally published in the **Federal Register** on July 12, 2013 (78 FR 41931).¹ The burden estimate assumed a burden of 3 minutes per patient to develop the summary of care, and assumed that each patient would only be in HHA care long enough for a single 60-day summary of care to be prepared. We did not receive any public comments on this estimate at that time, and believe that they continue to be appropriate to use in this rule for purposes of estimating potential savings to HHAs. Savings to individual HHAs may be greater or lesser, depending on the HHA's average length of stay and technical capabilities to automate the production and distribution of the summary of care.

¹ This collection will be discontinued when a new collection is approved which will better align the PRA package with new regulations.

Miscellaneous

Comment: We received a few comments related to home health agency surveys. One commenter stated that home health agencies should go through a health accreditation every year based on how their patients receive care. Other commenters strongly urge CMS to ensure that the interpretive guidelines provided to surveyors are developed in collaboration with stakeholders across the industry, either through direct participation in their development or by providing an opportunity for stakeholders to comment on such guidelines before they are used for enforcement purposes. Other commenters encouraged CMS to share all such interpretive guidelines and surveyor training materials with HHAs prior to the start of enforcement.

Response: We appreciate the comments on this subject. However, the survey schedule, survey guidelines, and surveyor training materials are not within the scope of this rule.

Comment: One commenter asked if patients can receive care at their home if they are unable to go to a hospital. In addition, the commenter requested clarification on the kind of benefits patients can receive.

Response: The services covered under the Medicare home health benefit are set forth in section 1861(m) of the Act, as implemented in regulation at 42 CFR 409 subpart E. Medicaid and private insurers establish their own requirements for services, and we encourage the public to contact the relevant programs for any information that may be needed. HHA services are not meant to be a substitute for acute care providers, such as hospitals, in urgent and emergent situations. Rather, HHAs are expected to deliver part-time or intermittent skilled care to homebound patients who would otherwise receive care in an outpatient setting such as a physician office or physical therapy office, but who are confined to the home.

Comment: A few commenters suggested ways CMS could improve patient engagement. One commenter suggested that providing Medicare beneficiaries with materials similar to the annual update to *Medicare & You* that offer more details on the home health benefit and its requirements would be a place to begin. The commenter also suggested that a YouTube segment explaining the benefit would help beneficiaries, their families, and other caregivers. A few commenters stated that it would also help to hear from home health agency patients and their families to gather information

about the quality of service they were observing, the necessity of certain procedures, and how they thought the quality of care was meeting the standards set out in the proposed rule.

Response: We appreciate these suggestions for additional Medicare outreach options. However, Medicare outreach to beneficiaries is beyond the scope of this rule. We will retain these suggestions for future consideration. We agree that a patient care survey is a valuable tool for quality of care purposes, and implemented the Home Health Consumer Assessment of Healthcare Providers and Systems survey in October 2009 (<https://homehealthcahps.org/>).

Comment: We received many comments on referrals. One commenter suggested that CMS should educate other providers about the value of home health care. One commenter urged CMS to clarify, in regulation, that care referrals to HHAs by emergency departments and other care settings are appropriate. The commenters also suggested that we publish guidance on appropriate care coordination pathways that would encourage referrals to HHAs, making them more likely and possible. Another commenter encouraged CMS to help HHAs educate emergency departments and other providers to make more frequent and appropriate use of home health care for a growing volume of beneficiaries with complex health conditions. Lastly, one commenter recommended that CMS consider updating the number of paid medical consultants, medical directors, and physicians who are permitted to refer patients to home health services.

Response: We appreciate these suggestions for referral source outreach. However, this topic is beyond the scope of this rule. We will retain these suggestions for future consideration.

Comment: We received multiple comments related to HHA payment policy issues. Some commenters stated the CMS should increase Medicare/Medicaid rates for home health services. Another commenter suggested that CMS should grant greater flexibility in the coverage and reimbursement of home monitoring for oral anticoagulation therapy, including CMS coverage for home visits by nurses to patients who find it difficult to do their own home monitoring or travel to get tested. One commenter requested that CMS provide funding to HHAs so that they can develop the computer and related systems needed to share data with physicians, hospitals and other providers.

Response: We appreciate these suggestions related to Medicare home

health coverage policy and Medicare payment rates. Medicare home health coverage policy and payment rates are addressed in separate annual rulemaking, and comments related to this topic can be submitted during that process. This topic is beyond the scope of this rule therefore, we are not addressing these suggestions at this time.

Comment: Numerous commenters made suggestions for ways to revise Medicare home health coverage policy. One commenter requested that CMS consider permitting non-physician practitioners to perform face-to-face encounters and to sign a patient's plan of care, to the extent permitted by the licensing authority in the state in which the practitioner is licensed. Another organization urged CMS to re-examine the Medicare homebound requirement for Medicare home health services eligibility. One commenter shared that the home health industry advocates have long argued that case or care management is a natural activity for home health agencies, particularly for elderly individuals with multiple comorbidities. However, in order for agencies to be successful care managers, the focus of the Medicare home health benefit must shift from exclusively short-term, skilled, post-acute intervention for the homebound patient to include a chronic care management and oversight function for patients who may not need skilled care or be homebound at any given point in time. Additionally, one commenter stated the inclusion of maintenance therapy guidelines is greatly needed, and that they agree with the new Medicare Benefit Policy Manual update that the maintenance of the patient's current condition and prevention or slowing of further deterioration of the patient's condition may both warrant the use of skilled care provided under the Medicare home health benefit. Another commenter suggested that the social determinants of health should be considered as relevant variables in the prospective payment system.

Response: We appreciate these suggestions related to Medicare home health coverage policy. Medicare home health coverage policy is addressed in separate annual rulemaking, and comments related to this topic can be submitted during that process. As this topic is beyond the scope of this rule, we are not addressing these suggestions at this time.

Comment: We received a few comments related to OASIS. Commenters urged CMS to update the OASIS instrument to:

- Allow HHAs to indicate when referrals come from EDs and other health care providers and settings; and
- Reflect the social determinants of health.

Response: We appreciate these suggestions related to the content of the OASIS; however, this topic is beyond the scope of this rule, therefore we are not addressing these suggestions at this time. We will retain these suggestions for future consideration.

Comment: A commenter stated that under the Patient Protection and Affordable Care Act, CMS was required specifically to assess and document the needs of vulnerable individuals accessing home health services, and that this should be implemented in the CoPs.

Response: Section 3131(d) of the Affordable Care Act directed the Secretary to conduct a study on HHA costs involved with providing ongoing access to care to low-income Medicare beneficiaries or beneficiaries in medically underserved areas, and in treating beneficiaries with high levels of severity of illness. A Report to Congress on this home health study was released at the end of 2014, and is available to view at: <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/HomeHealthPPS/Downloads/HH-Report-to-Congress.pdf>. We awarded a follow-on contract to Abt Associates to further explore possible payment methodology changes as a result of the home health study. The work is ongoing at this time.

Comment: A commenter expressed confusion with the “reimbursement rates” described in the Collection of Information and Regulatory Impact Analysis sections. The commenter stated that “there seems to be a discrepancy with how services will be reimbursed. According to the 2014–2015 outlook, the hourly rate for physicians, nurses, clinical managers and administrators is \$180, \$63, \$85, and \$98; respectively. There are asterisks near job titles and hourly rates performed by nurses. For example, the clinical manager and administrator roles have asterisks. Clarification is needed regarding the reimbursement rate for other health care providers, including physicians, performing these administrative roles.”

Response: The impact analysis does not set forth reimbursement rates for any HHA services. Rather, as stated in the title of Table 1, “Assumptions and estimates used throughout the information collection and impact analysis section”, the impact analysis presents a set of assumptions regarding how much a typical HHA pays in terms of the salary, benefits, and overhead

associated with a single hour of employment for a given employee class. What an HHA chooses to pay an individual fulfilling an administrative role is entirely up to the discretion of the HHA. For purposes of our analysis, we assumed that a typical HHA would pay a typical administrator \$98 per hour (including salary, benefits, and overhead). A given HHA may pay more or less than this amount.

Comment: We received a few comments related to CMS data collection and one comment related to emergency preparedness. Specifically, one commenter encouraged CMS to consider collecting data on the quality of the HHA’s respective training/education programs. The commenter stated that data should measure the impact of the training/education program from the patient’s, family caregiver’s, and, as appropriate, from the direct care staff’s perspectives. CMS should consider whether a quality measure in this area is appropriate and feasible. Another commenter wrote that CMS’s proposed rule, “Medicare and Medicaid Programs: Emergency Preparedness Requirements for Medicare and Medicaid Participating Providers and Suppliers” (78 FR 79082, 79111, December 27, 2013) would require the home health agency to develop an emergency preparedness plan and conduct training and a mock drill or table top exercise annually, and that these requirements should be included as a standard under the organization and administration CoP.

Response: We appreciate suggestions related to the development of additional CMS data collection items and quality measures. Furthermore, we appreciate the suggestion related to the placement of future emergency preparedness requirements. However, these topics are not within the scope of this rule and are addressed in separate rule (Emergency Preparedness Requirements for Medicare and Medicaid Participating Providers and Suppliers, 81 FR 63859).

Comment: One commenter expressed concern on the economic impact to rural communities will lead to barriers to access in some areas due to a combination of negative margins, new standards, and limited referral sources.

Response: As its measure of significant economic impact, HHS uses a change in revenue of more than 3 to 5 percent. We estimate that the cost of this rule on a per-HHA basis is minimal (approximately a \$30,000 net increase in burden per non-accredited HHA in the 1st year, and a \$15,000 savings increase for accredited HHAs in the 1st year). Furthermore, many of the burdens occur on a one-time basis as HHAs update

their forms, and policies and procedures to conform to the updated requirements. We believe that this rule offers sufficient implementation flexibility to be adapted to the operations of a wide variety of HHAs, including those in rural areas.

Comment: One commenter encourages CMS to think creatively about how to leverage HHAs and home health services to improve health outcomes and quality of care, and avoid unnecessary hospitalizations and other institutional admissions. For example, the commenter suggested that if HHA personnel were providing services to an individual, and while, in the course of working with the family caregiver, saw that the family caregiver had health needs, the HHA staff could offer advice, make referrals, or provide a simple service to the caregiver that could improve their health (indirectly assisting the home health patient), especially if the caregiver is receiving Medicare or Medicaid services. Another commenter suggested that CMS ensure the operational capability of providers by requiring those agencies with new provider numbers to demonstrate proof of sufficient capital to operate for 1 year, and by requiring that existing agencies provide a \$100,000 surety bond.

Additionally, one commenter suggested that CMS establish a 2-year moratorium on the entry of new home health agencies into counties with demonstrable over-penetration (subject to certain exceptions). Another commenter suggested CMS identify and withhold payment for aberrant episodes and LUPA claims. Another commenter suggested that CMS consult with the Inspector General of the Department of Health and Human Services to establish a claims validation process by screening each claim (or a sample of claims) so that, before payment is made, the Secretary would validate claims on the basis of an HHA’s submission of OASIS assessments (or some other data set approved for home health agencies).

Response: We appreciate the commenters’ suggestions. However, we believe these comments are outside the scope of this rule.

V. Provisions of the Final Regulations

We are adopting as final the provisions set forth in the proposed rule published in the **Federal Register** on October 9, 2014 (79 FR 61164), with the following changes:

- Revised the definition of “representative” at § 484.2 for additional clarity.
- Revised 484.45(c)(2) to align the regulatory text with the current CMS guidelines for data transmission by replacing the requirement that test data

be transmitted to the “state agency” with a requirement that test data be transmitted to the “QIES ASAP system.” We proposed to require that an HHA must, “Successfully transmit test data to the state agency or CMS OASIS contractor.” On January 1, 2015, CMS changed the OASIS transmission guidelines to require that an HHA must successfully transmit test data to the QIES ASAP System or CMS OASIS contractor. We have revised the final rule at § 484.45 to reflect this change and maintain consistency between the transmission guidelines and the regulatory requirements. We ordinarily publish a notice of proposed rulemaking in the **Federal Register** and invite public comment on the proposal. This procedure can be waived, however, if an agency finds good cause to do so. In section VI of this preamble, we have provided our rationale for finalizing these provisions without prior notice and comment.

- Revised § 484.50(a)(1) to clarify that it is the patient’s legal representative that must be informed of the patient rights information prior to the start of care.

- Revised § 484.50(a)(1)(i) to require that an HHA must provide each patient with written notice regarding the HHA’s transfer and discharge policies. This requirement was originally proposed at 484.50(d).

- Redesignated proposed § 484.50(a)(1)(ii) as § 484.50(a)(3).

- Redesignated proposed § 484.50(a)(2) as § 484.50(a)(1)(ii) and removed the requirement that HHA administrators are expected to receive patient questions.

- Redesignated proposed § 484.50(a)(3) as § 484.50(a)(1)(iii).

- Redesignated proposed § 484.50(a)(4) as § 484.50(a)(2), and clarified that a signature confirming receipt of the notice of patient rights is only required from a patient or a patient’s legal representative.

- Revised § 484.50(a)(3), requiring that the HHA must provide verbal notice of the patient’s rights no later than the completion of the second visit from a skilled professional.

- Added new § 484.50(a)(4), requiring that the HHA provide written notice of the patient’s rights and the HHA’s discharge and transfer policies to a patient-selected representative within 4 business days after the initial evaluation visit.

- Revised 484.50(b) to replace the term “incompetence” wherever it appears with the more precise term “lack legal capacity to make health care decisions.”

- Revised § 484.50(c)(4)(i) to clarify that patients have the right to participate in and be informed about all assessments, rather than just the comprehensive assessment.

- Removed the requirement at § 484.50(c)(4)(iii) regarding providing a copy of the plan of care to each patient.

- Revised § 484.50(c)(10) to require HHAs to provide contact information for a defined group of federally-funded and state-funded entities.

- Revised § 484.50(d) to remove the requirement for HHAs to provide patients with information regarding HHA admission policies and clarified that the “transfer and discharge policies” are those set forth in paragraphs (1) through (7) of this standard.

- Revised § 484.50(d)(1) to clarify that HHAs are responsible for making arrangements for a safe and appropriate transfer.

- Revised § 484.50(d)(3) to clarify that discharge is appropriate when the physician and the HHA both agree that the patient has achieved the measurable outcomes and goals established in the individualized plan of care.

- Revised § 484.50(e)(1)(i) to clarify that the subject matter about which patients may make complaints is not limited to those subjects specified in the regulation. HHAs must investigate all such complaints.

- Revised § 484.50(e)(1)(iii) to specify that HHAs must take action to prevent retaliation while a patient complaint is being investigated.

- Revised § 484.50(e)(2) to specify that circumstances of mistreatment, neglect, abuse, or misappropriation of patient property must be reported in accordance with the requirements of state law.

- Added a requirement at § 484.55(c)(6)(i) and (ii) that the comprehensive assessment must include information about caregiver willingness and ability to provide care, and availability and schedules.

- Added a requirement at § 484.60 that patient and caregiver receive education and training including written instructions outlining medication schedule/instructions, visit schedule and any other pertinent instruction related to the patients care and treatments that the HHA will provide, specific to the patient’s care needs.

- Moved proposed § 484.60(a)(3) to § 484.60(a)(2)(xii), making it applicable to all patients, and removed the terms “low,” “medium,” and “high.”

- Revised § 484.60(b)(1) to permit drugs, services and treatment to be ordered by any physician, not just the

one responsible for the patient’s plan of care.

- Revised § 484.60(b)(4) to permit any nurse acting in accordance with state licensure requirements to receive verbal orders from a physician.

- Added requirements at § 484.60(d)(1) and (2) that HHAs must assure communication with all physicians involved in the plan of care, and integrate orders from all physicians involved in the plan of care to assure the coordination of all services and interventions provided to the patient.

- Redesignated proposed § 484.60(d)(1) through (3) as § 484.60(d)(3) through (5).

- Added a requirement at § 484.60(e), Written information to the patient.

- Revised § 484.65 to require that QAPI program indicators include the use of emergent care services.

- Revised § 484.75(b)(7) to require skilled professionals to communicate with all physicians involved in the plan of care.

- Revised § 484.80(b)(3)(xiii) by withdrawing part of the provision under home health aide training requirements for aides to recognize and report changes in pressure ulcers. We ordinarily publish a notice of proposed rulemaking in the **Federal Register** and invite public comment on the proposal. This procedure can be waived, however, if an agency finds good cause to do so. In section VI of this preamble, we have provided our rationale for finalizing these provisions without prior notice and comment.

- Revised § 484.80(g)(1) by removing the requirement that the skilled professional who is responsible for the supervision of a home health aide must be the individual who prepares written patient care instructions for the home health aide.

- Revised § 484.80(h)(1)(i) by adding a requirement that the registered nurse or other appropriate skilled professional who conducts supervision of a home health aide must be familiar with the patient, the patient’s plan of care, and the written patient care instructions described in § 484.80(g).

- Revised § 484.80(h)(1)(ii) by removing the word “potential deficiency” and replacing it with “area of concern.”

- Redesignated § 484.22—Emergency Preparedness under subpart B as § 484.102 under subpart C to align with CoP’s related to “Organizational Environment.” Section 484.22 was implemented as part of the Emergency Preparedness final rule published on September 16, 2016 (81 FR 63859).

- Revised the requirement at § 484.105 to clarify that an HHA must

organize, manage, and administer its resources to attain and maintain the highest practicable functional capacity, including providing optimal care to achieve the goals and outcomes identified in the patient's plan of care, for each patient's medical, nursing, and rehabilitative needs.

- Added a requirement at § 484.105(b)(1)(i) that the administrator must report to the governing body.

- Revised § 484.105(b)(1)(iii) to require that the administrator assures that a clinical manager is available during all operating hours.

- Added a requirement at § 484.105(b)(1)(iv) that the administrator must ensure that the HHA employs qualified personnel, including assuring the development of personnel qualifications and policies.

- Revised § 484.105(b)(2) to clarify that an individual that is pre-designated to fill the administrator role in the absence of the administrator (including the clinical manager) must be qualified to do so.

- Revised § 484.105(c) to specify that one or more qualified individuals must provide oversight of all patient care services and personnel.

- Revised § 484.105(c) Clinical manager by retaining a description of the clinical manager's duties while relocating the personnel specifications for this role to new § 484.115(c), which sets for the specific personnel requirements for the clinical manager.

- Removed § 484.105(c)(6).

- Added a requirement at § 484.110(a)(4) that the clinical record must include contact information for the patient's primary caregiver(s).

- Revised § 484.110(a)(6)(i) by changing the discharge summary deadline for completion from 7 calendar days to 5 business days.

- Revised § 484.110(a)(6)(ii) by changing the transfer summary deadline for completion from 2 calendar days to 2 business days of a planned transfer, if the patient's care will be immediately continued in a health care facility.

- Added § 484.110(a)(6)(iii), requiring that a completed transfer summary must be sent within 2 business days of becoming aware of an unplanned transfer, if the patient is still receiving care in a health care facility at the time when the HHA becomes aware of the transfer.

- Revised § 484.110(e), requiring that a patient's clinical record (whether hard copy or electronic form) must be made available to a patient, free of charge, upon request at the next home visit, or within 4 business days (whichever comes first).

- Revised the personnel qualification requirements for HHA administrators at § 484.115(a) to grandfather in currently employed HHA administrators.

- Added § 484.115(c) to specify personnel qualifications for clinical managers.

- Redesignated paragraphs § 484.115 (c) through (m) as (d) through (n).

- Revised the proposal at § 484.115(e) licensed practical nurse to utilize existing regulatory language regarding vocational nurses, and align the requirement with state practice acts. We ordinarily publish a notice of proposed rulemaking in the **Federal Register** and invite public comment on the proposal. This procedure can be waived, however, if an agency finds good cause to do so. In section VI of this preamble, we have provided our rationale for finalizing these provisions without prior notice and comment.

- Made technical changes to the requirements at § 484.115(f) through (i) to align with current personnel qualification requirements for occupational therapists, occupational therapy assistants, physical therapists, and physical therapy assistants.

VI. Good Cause To Waive Notice and Comment Rulemaking

As discussed in section IV of this preamble, at § 484.45 we proposed to require that an HHA must, "Successfully transmit test data to the state agency or CMS OASIS contractor." However, on January 1, 2015, CMS changed the OASIS transmission guidelines to require that an HHA must successfully transmit test data to the QIES ASAP System or CMS OASIS contractor. We have revised the final rule at § 484.45 to reflect this change and maintain consistency between the transmission guidelines and the regulatory requirements.

We ordinarily publish a notice of proposed rulemaking in the **Federal Register** and invite public comment on the proposal. The notice of proposed rulemaking includes a reference to the legal authority under which the rule is proposed, and the terms and substance of the proposed rule or a description of the subjects and issues involved. This procedure can be waived, however, if an agency finds good cause that a notice-and-comment procedure is impracticable, unnecessary, or contrary to the public interest and incorporates a statement of the finding and its reasons in the rule issued. We believe that finalizing the previously proposed language is contrary to the public interest because it conforms our rules to transmission guidelines that have changed since this rule has been

proposed. We wish to waive notice and comment for rulemaking because waiting until a future rulemaking to resolve this inconsistency would create unnecessary confusion within the HHA community. Such confusion would likely lead to inconsistent compliance with either the regulations or the transmission guidelines, potentially leading to information gaps in CMS databases that could negatively impact HHA payments and the accuracy of quality measure information that is reported to the public. Because this change is operational, non-controversial, and has already been implemented at the sub-regulatory level, we find good cause to waive the notice of proposed rulemaking related to this change, and to issue this provision of the final rule.

In section IV of this preamble, at § 484.80 "Condition of participation: Home Health Aide Services," we proposed to add a requirement under home health aide training at § 484.80(b)(3)(xiii) to require home health aides to be trained on "Recognizing and reporting changes in skin condition, including pressure ulcers." We believe that it is important for home health aides to be taught to recognize and report changes in skin condition; however, during the process of developing this final rule, CMS stakeholders identified concerns that this requirement is beyond the aide's scope of practice and possibly the aide's ability to report changes in pressure ulcers. Out of an abundance of caution, we are withdrawing the proposal for the aide to be taught to recognize and report changes in pressure ulcers. The revision will require only recognizing and reporting changes in skin condition.

We ordinarily publish a notice of proposed rulemaking in the **Federal Register** and invite public comment on the proposal. The notice of proposed rulemaking includes a reference to the legal authority under which the rule is proposed, and the terms and substance of the proposed rule or a description of the subjects and issues involved. This procedure can be waived, however, if an agency finds good cause that a notice-and-comment procedure is impracticable, unnecessary, or contrary to the public interest and incorporates a statement of the finding and its reasons in the rule issued. We believe that finalizing the previously proposed language is contrary to the public interest because requiring home health aides to perform skills that are inconsistent with their state scope of practice requirements would create a direct conflict between state and federal requirements. This direct conflict would

impede the ability of home health aides to do their jobs efficiently and effectively, and would negatively impact patient care and outcomes. Therefore, we find good cause to waive the notice of proposed rulemaking related to this change, and to withdraw this provision from the final rule.

In section IV of this preamble, at § 484.115 “Condition of participation: Personnel qualifications,” we proposed to remove the word “vocational” from the current CFR at § 484.4, “Personnel qualifications.” During a meeting of state leaders that occurred outside of the public comment process we were notified that two states currently use the term “licensed vocation nurse.” We believe that there are no significant substantive differences that exist between LPNs and LVNs other than the geographical locations and local variants in nomenclature; there are no major differences in educational preparation, licensure, roles, or skill sets. Therefore, after discussions with the states and an internal review we have amended § 484.115(e). We have withdrawn our proposal to delete the word “vocational” from the position title, and have amended the proposed definition to utilize existing regulatory language inclusive of both LVNs and LPNs. The final provision states: *Licensed Practical (vocational) Nurse.* A person who has completed a practical (vocational) nursing program, is licensed in the state where practicing, and who furnishes services under the

supervision of a qualified registered nurse.

We ordinarily publish a notice of proposed rulemaking in the **Federal Register** and invite public comment on the proposal. The notice of proposed rulemaking includes a reference to the legal authority under which the rule is proposed, and the terms and substance of the proposed rule or a description of the subjects and issues involved. This procedure can be waived, however, if an agency finds good cause that a notice-and-comment procedure is impracticable, unnecessary, or contrary to the public interest and incorporates a statement of the finding and its reasons in the rule issued. We believe that finalizing the previously proposed language is contrary to the public interest because the only significant difference between LPNs and LVNs is the geographical locations in which these terms are used. The terms are used interchangeably, and continuing the use of both terms, as has been required in the HHA CoPs for more than a decade, will have no impact on patient care or HHA operations. Therefore, we find good cause to waive the notice of proposed rulemaking related to this change, and to withdraw this provision from the final rule.

VII. Collection of Information Requirements

Under the Paperwork Reduction Act of 1995, we are required to provide 30-day notice in the **Federal Register** and

solicit public comment before a collection of information requirement is submitted to the Office of Management and Budget (OMB) for review and approval. In order to fairly evaluate whether an information collection should be approved by OMB, section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995 requires that we solicit comment on the following issues:

- The need for the information collection and its usefulness in carrying out the proper functions of our agency.
- The accuracy of our estimate of the information collection burden.
- The quality, utility, and clarity of the information to be collected.
- Recommendations to minimize the information collection burden on the affected public, including automated collection techniques.

We solicited public comment on each of these issues for the following sections of this document that contain information collection requirements (ICRs) during the proposed rulemaking.

Assumptions and Estimates

We have made several assumptions and estimates in order to assess both the time that it would take for an HHA to comply with the new provisions as well as the costs associated with that compliance. We have detailed these assumptions and estimates in Table 1, and have used these assumptions as the basis for both the Collection of Information and the Regulatory Impact Analysis sections of this rule.

TABLE 1—ASSUMPTIONS AND ESTIMATES USED THROUGHOUT THE INFORMATION COLLECTION AND IMPACT ANALYSIS SECTIONS

Number of Medicare participating HHAs nationwide in 2015	12,602
Number of Medicare participating HHAs that are accredited in 2015	4,972
Number of HHA patients in Medicare participating HHAs nationwide in 2014	17,751,840
Number of HHA patients in Medicare participating in 2015, accredited HHAs	7,005,548
Number of Medicare beneficiaries in HHAs in 2015	3,475,730
Average number of new HHAs per year (based on growth in the number of HHAs from 2010–2015)	455
Average number of new, non-accredited HHAs per year (based on growth in the number of HHAs from 2010–2015)	14
Average number of patients per HHA per year	1,409
Hourly rate of registered nurse *	\$63
Hourly rate of HHA office employee *	\$26
Hourly rate of administrator *	\$98
Hourly rate of home health aide *	\$20
Hourly rate of clinical manager *	\$85
Hourly rate of QAPI coordinator **	\$63
Hourly rate of physician *	\$180
Hourly rate of therapist (average of PT, OT, SLP) *	\$72
Hourly rate of clinician (average of Nurse, Aide, Therapist) *	\$60

* Estimate from the Bureau of Labor Statistics Occupational Outlook Handbook, 2014–2015 edition; includes 100 percent benefit and overhead package.

** Based on a registered nurse fulfilling this role.

Collection of Information Requirements—Discussion and Summary

A. ICRs Regarding Condition of Participation: Reporting OASIS Information (§ 484.45)

Section 484.45 states that HHAs must electronically report all OASIS data in accordance with § 484.55. Specifically, an HHA would have to encode and electronically transmit each completed OASIS assessment to the state agency or the CMS OASIS contractor within 30 days of completing an assessment of a beneficiary. The burden associated with this requirement is the time and effort necessary to conduct the OASIS assessment on a beneficiary and encode and transmit the information to the state agency or the CMS OASIS contractor. We did not make any changes to the OASIS data set, so the time to conduct the OASIS assessment on a beneficiary has stayed the same. We did change the destination of transmitted data; however, this does not change the time necessary to encode and transmit the data. While this requirement is subject to the PRA, the burden is currently approved under OMB control number 0938–1279.

B. ICRs Regarding Condition of Participation: Patient Rights (§ 484.50)

Section 484.50 implements the patient rights provisions of section 1891(a)(1) of the Act, which are currently specified in § 484.10. The purpose is to recognize certain rights that home health patients are entitled to, and protect their rights. HHAs are required to inform each patient of their rights. In § 484.50, we require HHAs to inform patients about the expected outcomes of treatment and the factors that could affect treatment. The HHAs are asked to devote efforts to improve patient's health literacy which lead to an increased comprehension of diagnosis and treatment for both patients and family. Increased comprehension allows patients to remain active and make the best possible decisions for their medical care. The requirements currently specified in § 484.10, that are retained in the final rule include:

- An HHA must provide the patient and representative (legal or patient-selected) with an oral and a written notice of the patient's rights in a manner that the individual can understand. The HHA must also document that it has complied with the requirements of this section.
- An HHA must document the existence and resolution of complaints about the care furnished by the HHA

that were made by the patient, representative, and family.

- An HHA must advise the patient in advance of the disciplines that will furnish care, the plan of care, expected outcomes, factors that could affect treatment, and any changes in the care to be furnished.

- An HHA must advise the patient of the HHA's policies and procedures regarding the disclosure of patient records.

- An HHA must advise the patient of his or her liability for payment.

- An HHA must advise the patient of the number, purpose, and hours of operation of the state home health hotline.

In addition to the retained requirements, we require that HHAs must also advise the patient of the following:

- The names, addresses, and telephone numbers of specified State-funded and federally-funded entities.

- The right to access auxiliary aids and language services, and how to access these services.

We foresee that HHAs will develop a standard notice of rights to fulfill the requirements contained in § 484.50(a) of this section. A copy of the signed notice would serve as documentation of compliance. We estimate that a home health agency will utilize an administrator to develop the patient rights form. All newly established HHAs would need to develop a notice of patient rights document. In order to speed up the process of becoming Medicare-approved, the majority of new HHAs are choosing to become accredited by a national accrediting organization for Medicare deeming purposes. The patient rights standards and patient notification requirements of the national accrediting organizations would meet or exceed those included in this rule; therefore this rule does not impose a burden upon those new HHAs that choose to obtain accreditation status for Medicare deeming purposes. We estimate that it would take 8 hours for each new non-accredited home health agency to develop the form. The total annual burden for new HHAs is 112 hours (8 hours per HHA × 14 HHAs). The estimated cost associated with this requirement is \$784 per HHA and \$10,976 for all new non-accredited HHAs, annually. In addition, we estimate that it would take each existing HHA 1 hour to update its existing patient rights form, for a one-time total of 12,602 hours and a cost of \$1,234,996.

The burden associated with § 484.50(e), which requires an HHA to document both the existence of a patient

complaint regarding care provided (or not provided) or inappropriate treatment by HHA staff and those working on behalf of the HHA, and the resolution of the complaint, would be the time and effort necessary to document a patient complaint and its resolution. We estimate that, in a 1 year period, an HHA would need to document complaints involving about 5 percent (70) of its patients. We estimate that the documentation would require 5 minutes per investigation. HHAs accredited by the Joint Commission, the Community Health Accreditation Partner, and the Accreditation Commission for Health Care are already required by their accrediting bodies to adhere to stringent patient rights violation investigation and record-keeping standards; therefore accredited HHAs are not be burdened by this new standard. The total annual burden per non-accredited HHA (7,630) would be 6 hours (70 investigations × 5 minutes per investigation/60).

We believe that the requirements of standard (f), "Accessibility," related to providing information to patients in a manner that can be understood would not impose a burden because all HHAs have already attested to CMS that they are in compliance with the requirements of Title VI of the Civil Rights Act of 1964, the Americans With Disabilities Act, and section 504 of the Rehabilitation Act (see 42 CFR 489.10, as implemented by form HHS–690, currently approved under OMB control number 0938–1279, current expiration August 31, 2017). Since HHAs have already attested that they are in compliance with these longstanding requirements, and since the requirements of this rule are not intended to go beyond these statutes, no new burden would be imposed.

C. ICRs Regarding Condition of Participation: Comprehensive Assessment of Patients (§ 484.55)

Section 484.55 requires the HHA to conduct, document and update, within a defined timeframe, a patient-specific comprehensive assessment that identifies the patient's need for HHA care and services, and the patient's need for physical, psychosocial, emotional and spiritual care. Although we have included additional areas of focus within the patient assessment requirements, these areas are already addressed in the OASIS data set that HHAs have been required to collect since 1999. Therefore, no new burden has been added with these changes. The information collection burden associated with the OASIS data set is currently approved under OMB control

number 0938–1279. The current expiration date is December 31, 2019.

D. ICRs Regarding Condition of Participation: Care Planning, Coordination of Services, and Quality of Care (§ 484.60)

The requirements in this section reflect an interdisciplinary, coordinated approach to home health care delivery. Section 484.60 requires that each patient's written plan of care specify the care and services necessary to meet the patient specific needs identified in the comprehensive assessment. Additionally, the written plan of care will be required to contain the measurable outcomes that the HHA anticipates will occur as a result of implementing and coordinating the plan of care. This section incorporates several of the requirements under former § 484.18. Section 484.18 consists of longstanding requirements that implement statutory provisions found in sections 1835, 1814, and 1891(a) of the Act. While these requirements are subject to the PRA, the associated collection is currently approved under OMB control number 0938–0365.² Additionally the plan of care must also specify the patient and caregiver education and training specific to the patient's care needs. A typical HHA patient will have one original plan of care, and we believe compliance with the new plan of care requirements, such as addressing each patient's psychosocial status and interventions to address readmission risk factors, will impose a new burden of 10 minutes per patient, per plan of care. We believe that most HHAs are already addressing these areas during the care planning process, so for purposes of this analysis only, we assume that 90 percent of HHAs are already complying with these requirements and that 10 percent will need to comply. We estimate that the 1,260 HHAs that are not already addressing these new factors in their care planning process will use 296,482 hours (1,409 patients per HHA × 0.167 hours per patient × 1,260 HHAs) at a cost of \$18,678,366 for a nurse to document the new required information in the plan of care.

Section 484.60(a) requires that each patient's written plan of care be established and periodically reviewed by a doctor of medicine, osteopathy, or podiatry. While HHAs average 1,409 home health patient admissions per year, on average 276 of those are Medicare patients. Having a doctor of

medicine, osteopathy, or podiatry establish and periodically review the HHA plan of care is also a requirement for Medicare payment; therefore HHAs do this in the absence of this requirement. Thus this requirement will not impose a burden with respect to those 276 Medicare patients. The anticipated burden associated with this requirement involves a member of the office support staff who would facilitate interaction with the physician with regard to non-Medicare patients. We estimate that this would take 5 minutes per admission for a total estimated burden of 94 hours per HHA [(1,133 non-Medicare admits per year × 5 minutes)/60 minutes per hour].

Section 484.60(a)(4) and (b)(1) requires HHAs to conform and fulfill all medical orders issued in writing or telephone (and later authenticated) by a patient's physician or qualified medical professional. We believe compliance with this requirement will constitute a usual and customary business practice and will not be subject to the PRA in accordance with the implementing regulations of the PRA at 5 CFR 1320.3 (b)(2). Issuing orders for patient care is one of the most fundamental tasks performed by physicians. Likewise, documenting and adhering to physician orders is one of the most fundamental tasks performed by the physician and all other clinicians within a patient's health care team, including the nurses, therapists, and social workers that are involved in home health care.

Section 484.60(c) requires an HHA to review, revise and document the plan on a timely basis. The burden associated with these requirements is the time and effort associated with reviewing, revising, and maintaining the plan of care. We believe compliance with the new plan of care requirements, such as addressing each patient's psychosocial status and interventions to address readmission risk factors, will impose a new burden of 5 minutes per patient, per updated plan of care. Assuming that a typical HHA patient will have one update to the plan of care, we estimate that all HHAs will use 147,353 hours (1,409 patients per HHA × 0.083 hours per patient × 1260 HHAs) at a cost of \$9,283,329 for a nurse to document the new required information in the plan of care.

Section 484.60(e) is a new provision that was added based on comments and which partially replaces other requirements previously placed elsewhere. This provision requires the HHA to provide written instructions to the patient and care giver outlining visit schedule including frequency of visits, medication schedule/instructions,

treatments administered by HHA personnel and personnel acting on the behalf of the HHA, pertinent instructions related to patient care, and the name and contact information of the HHA clinical manager. Giving written instruction to the patient and care giver outlining the medication schedule/instructions, visit schedule, pertinent instruction related to the patient's care and treatments and contact information of the HHA has been a long standing practice in the home health industry and is one of the most fundamental elements in patient education. For purposes of this analysis only, we assume that 90 percent of HHAs are already providing this information and 10 percent are not. We estimate that it would take 20 minutes to provide a patient with this written information and that each patient will receive written information twice while under the HHA's care. Based on these assumptions, we estimate that this provision will impose 1,182,376 hours of burden at a cost of \$74,489,688 for a nurse to provide the written information.

E. ICRs Regarding Condition of Participation: Quality Assessment and Performance Improvement (QAPI) (§ 484.65)

Section 484.65 requires HHAs to develop, implement, maintain and evaluate an effective, data driven quality assessment and performance improvement program. We have not prescribed the structures and methods for implementing this requirement and have focused the condition toward the expected results of the program. This provides flexibility to the HHA, as it is free to develop a creative program that meets the HHA's needs and reflects the scope of its services. This new provision replaces the former conditions at § 484.16, "Group of professional personnel," and § 484.52, "Evaluation of an agency's program."

The first standard under § 484.65 requires that an HHA's quality assessment and performance improvement program must include, but not be limited to, the use of objective measures to demonstrate improved performance. The second standard requires the HHA to track its performance to assure that improvements are sustained over time. The third standard requires that the HHA must set priorities for performance improvement, consider prevalence and severity of identified problems, and give priority to improvement activities that affect clinical outcomes. Lastly, the fourth standard requires the HHA to conduct performance improvement

² This collection will be discontinued when a new collection is approved which will better align the PRA package with new regulations.

projects that reflect the scope, complexity, and past performance of the HHA's services and operations, and document these projects.

We believe the writing of internal policies governing the HHA's approach to the development, implementation, maintenance, and evaluation of the quality assessment and performance improvement program, as described in § 484.65, will impose a new burden. We want HHAs to utilize maximum flexibility in their approach to quality assessment and performance improvement programs. Flexibility is provided to HHAs to ensure that each program reflects the scope of its services. We believe that this requirement provides a performance expectation that HHAs will set their own QAPI plan and goals and use the information to continuously strive to improve their performance over time. Given the variability across HHAs and the flexibility provided, we believe that the burden associated with writing the internal policies governing the approach to the development, implementation, and evaluation of the quality assessment and performance improvement program will reflect that diversity. We estimate that the burden associated with writing the internal policies would be an average of 4 hours annually per HHA, for an industry-wide total of 30,520 hours. (4 hours per HHA × 7,630 non-accredited HHAs), and an industry-wide cost of \$1,922,760 (30,520 hours × \$63/hour).

HHAs accredited by the Joint Commission, the Community Health Accreditation Partner, and the Accreditation Commission for Health Care are already required by their accrediting bodies to undertake and document performance improvement projects. In the absence of accreditation requirements, we believe that most HHAs already document the quality projects that they have undertaken as part of standard business practice. For purposes of this analysis only, we assume that 10 percent of non-accredited HHAs would use additional resources to document their quality projects. We estimate that the affected HHAs would use 1 hour per quarter to document performance improvement project activities and that the QAPI coordinator would perform this function, for a total of 3,052 hours (0.1 × 7,630 non-accredited HHAs × 1 hour per quarter × 4 quarters per year) at a cost of \$192,276.

F. ICRs Regarding Condition of Participation: Infection Prevention and Control (§ 484.70)

Section 484.70 requires an HHA to maintain and document an infection control program with the goal of preventing and controlling infections and communicable diseases. Specifically, § 484.70(b) states that the HHA must maintain a coordinated agency-wide program for the surveillance, identification, prevention, control, and investigation of infectious and communicable diseases that is an integral part of the HHA's QAPI program. Section 484.70(c) requires that each HHA provide infection control education to staff, patients, and caregivers. All aspects of the infection prevention and control CoP, from teaching patients and caregivers about proper prevention practices to monitoring infectious disease occurrences within an HHA's population to cooperating with outside bodies during disease outbreaks, are current standards of practice. Since health care-acquired infections have been a source of significant research, education, and training efforts by both the public and private health care sectors for more than a decade, we believe that all HHAs already have infection prevention and control programs. The burden associated with the infection prevention and control program would be the time necessary to document the program. We estimate that each HHA will spend 1 hour per quarter documenting its infection prevention and control program, for a total of 50,408 hours at a cost of \$3,175,704 for a nurse to complete the documentation.

G. ICRs Regarding Condition of Participation: Skilled Professional Services (§ 484.75)

We consolidated former provisions governing skilled nursing services at § 484.30, therapy services at § 484.32, and medical social services at § 484.34, under one new condition, § 484.75. Section 484.75 requires skilled professionals who provide services to HHA patients as employees or under arrangement to participate in all aspects of care. This includes, but is not limited to, participation in the on-going patient assessment process; development and maintenance of the interdisciplinary plan of care; patient, caregiver, and family counseling; patient and caregiver education; and communication with other health care providers. Section 484.75 also requires skilled professionals to be actively involved in the HHA's QAPI program and participate in HHA in-service trainings.

Furthermore, § 484.75 requires skilled professional services to be supervised. In the proposed rule that published on October 9, 2014 (79 FR 61114), we incorrectly stated that these requirements would be exempt under the implementing regulations of the PRA at 5 CFR 1320.3(b)(3). We still maintain that the burden associated with these requirements would be exempt; however, the correct exemption is located at 5 CFR 1320.3(b)(2). These are usual and customary business practices. Clinician involvement in patient care, quality improvement efforts, and continuing education are all commonly accepted as good medical practice and are typically part of state licensure requirements. The supervision of clinician services is also standard medical practice to ensure that patient care is delivered in a safe and effective manner.

H. ICRs Regarding Condition of Participation: Home Health Aide Services (§ 484.80)

This section governs the requirements for home health aide services. Many requirements in this section directly mirror the statutory requirements of sections 1891 and 1861 of the Act and include the following requirements: (1) The HHA must maintain sufficient documentation to demonstrate that training requirements are met; (2) The HHA's competency evaluation must address all required subjects; (3) The HHA must maintain documentation that demonstrates that requirements of competency evaluation are met; and (4) a registered nurse or appropriate skilled professional prepares written instructions for care to be provided by the home health aide.

We retained, for the most part, the requirements at previous § 484.36, but place them in a new condition of participation at § 484.80. We also added the provisions from previous § 484.4 concerning the qualifications for home health aides. All home health aide services must be provided by individuals who meet the personnel requirements and training criteria as specified. An HHA is required to maintain documentation that each home health aide meets these qualifications as specified in § 484.80(a). The burden associated with these standards is the time required to document that each new aide meets the qualification requirements. We estimate that it will take 5 minutes per newly hired home health aide per year to document the information. We assume that the average home health agency would replace 30 percent of its home health aides in a given year, or roughly two home health

aides a year based on an average of six home health aide FTEs (Basic Statistics About Home Care Updated 2010, National Association for Home Care, http://www.nahc.org/facts/10HC_Stats.pdf). Based on an estimate of 5 minutes per newly hired aide and two newly hired aides per agency, per year, we estimate that there will be 2,100 annual burden hours ([5 minutes per aide \times 2 aides per HHA]/60 minutes per hour \times 12,602 HHAs) for the home health industry. We assume, based on our experience with a similar requirement in the hospice environment, that an office employee (\$26/hour) would perform this function at a cost of \$4 per HHA per year. The total cost for all HHAs is \$54,600 (2,100 hours \times \$26/hour).

Section 484.80(b)(1) through (3) sets forth the content and duration of the home health aide classroom and supervised practical training. With respect to the recordkeeping requirements, § 484.80(b)(4) states that an HHA is required to maintain documentation that demonstrates that the requirements of this standard have been met. The burden associated with this requirement would be the time and effort necessary to document the information and maintain the documentation as part of the HHAs records. We estimate that it would take each of the 12,603 HHAs 5 minutes per newly hired aide per year to document that the requirements of this standard have been met. The estimated annual burden is 2,100 hours ([5 minutes per aide \times 2 aides per HHA]/60 minutes per hour \times 12,602 HHAs). The cost burden associated with this requirement is \$54,600, based on an office employee completing the documentation (\$26/hour \times 2,100 hours).

Section 484.80(c) contains the standard for competency evaluation. An individual could furnish home health services on behalf of an HHA only after that individual has successfully completed a competency evaluation program as described in this section. With respect to the recordkeeping requirements, § 484.80(c)(5) states that an HHA is required to maintain documentation that demonstrates that the requirements of this standard have been met. The burden associated with this requirement would be the time and effort necessary to document the information and maintain the documentation as part of the HHAs records. We estimate that it would take each of the 12,602 HHAs 5 minutes per newly hired aide per year to document that the requirements of this standard have been met. The estimated annual burden is 2,100 hours ([5 minutes per

aide \times 2 aides per HHA]/60 minutes per hour \times 12,602 HHAs). The cost burden associated with this requirement is \$54,600, based on an office worker completing the documentation (\$26/hour \times 2,100 hours).

Section 484.80(d) states that a home health agency is required to maintain documentation that all home health aides have received at least 12 hours of in-service training during each 12-month period. The burden associated with this requirement would be the time and effort necessary to document and maintain records of the required in-service training. We assume that it would require 5 minutes per aide to document the in-service training, and that these trainings would be conducted on a quarterly basis, for a total of approximately 2 hours per HHA, annually, to meet this requirement ([0.083 hours (aka 5 minutes) per aide per training \times 4 trainings per year \times 6 aides]/60 minutes per hour). The estimated total annual burden for this requirement is 25,103 hours (0.083 hours (aka 5 minutes) per aide per training \times 4 trainings per year \times 6 aides per HHA \times 12,602 HHAs).

Section 484.80(g) states that written patient care instructions for a home health aide must be prepared by a registered nurse or other appropriate skilled professional who is responsible for the supervision of a home health aide. The burden associated with this requirement would be the time and effort necessary for a registered nurse or other skilled professional to draft written patient care instructions for a home health aide. Providing written patient care instructions is a usual and customary business practice in accordance with the implementing regulations of the PRA at 5 CFR 1320.3(b)(2). Home health aide licensure standards require aides to practice under the direction of a nurse or other qualified medical professional. Likewise, the scope of practice for nurses and other qualified medical professionals includes the preparation of patient care instructions.

This rule at § 484.80(h) also requires HHAs to document the supervision of home health aides in accordance with specified timeframes. Supervising employees to ensure the safe and effective provision of patient care is standard business practice throughout the health care community. Likewise, documenting that this supervision has occurred for internal personnel, accreditation, and state and federal compliance purposes constitutes a usual and customary business practice and will not be subject to the PRA in accordance with the implementing

regulation of the PRA at 5 CFR 1320.3(b)(2).

I. ICRs Regarding Condition of Participation: Compliance With Federal, State, and Local Laws and Regulations Related to the Health and Safety of Patients (§ 484.100)

We are retaining most of the provisions of former § 484.12, “Compliance with Federal, State and local laws, disclosure of ownership information and accepted professional standards and principles” with minor changes, now set forth at § 484.100. As stated in § 484.100(a), the HHA is required to disclose to the state survey agency at the time of the HHA’s initial request for certification the name and address of all persons with an ownership or control interest in the HHA, the name and address of all officers, directors, agents, and managers of the HHA, as well as the name and address of the corporation or association responsible for the management of the HHA and the chief executive and chairman of that corporation or association. This requirement directly implements section 1891 of the Act. This provision expands upon a similar requirement currently contained in § 405.1221(b). It would impose a minimal burden of adding the necessary additional information to the current disclosure used by HHAs as required by former § 484.12(b), which further reference the requirements of 42 CFR part 420, subpart C related to Medicare Program Integrity requirements. We estimate that modifying the current disclosure would require 5 minutes (0.083 hours) per HHA, for a total of 1,046 hours for the HHA industry as a whole on a one-time basis (0.083 hours per modification \times 12,602 existing agencies). Additionally, we estimate that it would require new HHAs 1 hour to develop a disclosure statement, for a total of 455 annual hours industry wide each year (1 hour per new HHA \times 455 new HHAs).

J. ICRs Regarding Condition of Participation: Organization and Administration of Services (§ 484.105)

This section sets forth the organization and administration of services provided by an HHA. It states that the HHA must organize, manage, and administer its resources to attain and maintain the highest practicable functional capacity for each patient regarding medical, nursing, and rehabilitative needs as indicated by the plan of care. Although there are reporting and documentation requirements associated with the requirements, these activities are

standard business practice and would not impose a burden on HHAs. For example, § 484.105(d)(1) states that the parent HHA is responsible for reporting all branch locations of the HHA to the state survey agency at the time of the HHA's request for initial certification, at each survey, and at the time the parent proposes to add or delete a branch. Similarly, § 484.105(e)(2) states that an HHA must have a written agreement with another agency, with an organization, or with an individual when that entity or individual furnishes services under arrangement to the HHA's patients. We believe the burden associated with the aforementioned will constitute a usual and customary business practice and will not be subject to the PRA in accordance with the implementing regulations of the PRA at 5 CFR 1320.3(b)(2). Paragraph (h) of this section, "Institutional planning," imposes a minimal burden of the time required by new HHAs to develop the initial plan and by existing HHAs to review and revise the existing plan. We estimate the burden for developing a new plan at 1½ hours (90 minutes) and the burden for reviewing and revising an existing plan at 30 minutes. Accredited HHAs are required by their accrediting bodies to engage in institutional planning efforts that exceed these minimum federal requirements; therefore this requirement would not impose a burden upon accredited agencies. In addition, the vast majority of new HHAs are entering the Medicare program via accreditation from a national accrediting body; therefore this provision would not be imposing a burden upon new agencies as well. The estimated annual burden for existing HHAs is 3,815 hours ([7,630 existing non-accredited HHAs × 30 minutes]/60 minutes per hour). The estimated annual burden for anticipated new HHAs is 21 hours (1.5 hours per HHA × 14 new HHAs).

K. ICRs Regarding Condition of Participation: Clinical Records (§ 484.110)

This section sets forth the requirements that clinical records contain pertinent past and current findings, and are maintained for every patient who is accepted by the HHA for home health services. A clinical record containing pertinent past and current findings would be maintained for every patient receiving home health services. All entries in the clinical record must be authenticated, dated and timed, which is usual and customary clinical practice and does not impose a burden. Clinical records must be retained for 5 years after the month the cost report for the records is filed with the intermediary. HHAs are required to have written procedures that govern the use and removal of records, and the conditions for release of information. This section contains longstanding provisions that are specifically required in section 1861(o) of the Act, and are necessary to preserve the patient's privacy and the quality of care. The aforementioned documentation and record retention requirements are considered usual and customary business practices; therefore the burden associated with those requirements will not be subject to the PRA in accordance with the implementing regulation of the PRA at 5 CFR 1320.3(b)(2). At § 484.110(a)(5) HHAs are required to send a copy of a patient's discharge or transfer summary to the patient's primary care practitioner or other health care professional who will be responsible for providing care and services to the patient after discharge from the HHA, or the facility, if the patient leaves HHA care to enter a facility for further treatment. We estimate that an HHA would spend 5 minutes per patient sending the discharge or transfer summary to the patient's next source of health care services, for a total of 117 hours per

average HHA annually ([5 minutes per patient × 1,409 patients]/60 minutes per hour) at a cost of \$3,042 for an office employee to send the required documentation (\$26 per hour × 117 hours).

Furthermore, a patient's clinical record (whether hard copy or electronic form) must be made available to a patient, free of charge, upon request at the next home visit, or within 4 business days (whichever comes first). The burden associated with this requirement is the time and effort required to disclose a clinical record to an appropriate authority. Making clinical records available to the appropriate authority is part of the survey and certification process, and we believe compliance with this requirement will constitute a usual and customary business practice. Therefore, the burden associated with this requirement will not be subject to the PRA in accordance with the implementing regulations of the PRA at 5 CFR 1320.3(b)(2). Furthermore, we do not believe that this requirement would alter the frequency or scope of requests stemming from other appropriate authorities such as law enforcement.

L. ICRs Regarding Personnel Qualifications (§ 484.115)

In § 484.115, we defer to state certification or state licensure requirements in cases where personnel requirements are not statutory or do not relate to a specific payment provision. As defined in the implementing regulations of the PRA at 5 CFR 1320.3(b)(2), these requirements are usual and customary business practices. In accordance with the implementing regulations of the PRA at 5 CFR 1320.3(b)(3), we believe this state requirement would exist even in the absence of the federal requirement; therefore, the associated burden is not subject to the PRA.

TABLE 2—BURDEN AND COST ESTIMATES ASSOCIATED WITH INFORMATION COLLECTION REQUIREMENTS

* Denotes a one-time information collection requirement.

There are no capital/maintenance costs associated with the information collection requirements contained in this rule; therefore, we have removed the associated column from Table 2. In addition, the column for the total costs is also represents the total cost of reporting; therefore, we have removed the total cost of reporting column from Table 2 as well.

VIII. Regulatory Impact Analysis

A. Introduction

We have examined the impacts of this rule as required by Executive Order 12866 on Regulatory Planning and Review (September 30, 1993), Executive Order 13563 on Improving Regulation and Regulatory Review (January 18, 2011), the Regulatory Flexibility Act (RFA) (September 19, 1980, Pub. L. 96–354), section 1102(b) of the Social Security Act, section 202 of the Unfunded Mandates Reform Act of 1995 (March 22, 1995; Pub. L. 104–4), Executive Order 13132 on Federalism (August 4, 1999) and the Congressional Review Act (5 U.S.C. 804(2)).

Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). A regulatory impact analysis (RIA) must be prepared for major rules with economically significant effects (\$100 million or more in any 1 year).

This final rule is a revision of the Medicare and Medicaid CoPs for HHAs. The CoPs are the basic health and safety requirements that an HHA must meet in order to receive payment from the Medicare and Medicaid programs. This final rule incorporates advances and current medical practices in caring for

home health patients while removing unnecessary process and procedure requirements contained in the current CoPs. This is a major rule because the overall economic impact for all of the new CoPs is estimated to be \$293.3 million in year 1 and \$290.1 million in year 2 and thereafter.

B. Statement of Need

As the single largest payer for health care services in the United States, the federal government assumes a critical responsibility for the delivery and quality of care furnished under its programs. Historically, we have adopted a quality assurance approach that has been directed toward identifying health care providers that furnish poor quality care or fail to meet minimum federal standards, but this problem-focused approach has inherent limits. Ensuring quality through the enforcement of prescriptive health and safety standards, rather than improving the quality of care for all patients, has resulted in our expending much of our resources on dealing with marginal providers, rather than on stimulating broad-based improvements in the quality of care delivered to all patients.

This final rule adopts a new approach that focuses on the care delivered to patients by home health agencies while allowing HHAs greater flexibility and eliminating unnecessary procedural requirements. As a result, we are revising the HHA requirements to focus on a patient-centered, data-driven, outcome-oriented process that promotes high quality patient care at all times for all patients. We have developed a set of fundamental requirements for HHA services that encompasses patient rights, comprehensive patient assessment, and patient care planning and coordination by an interdisciplinary team. Overarching these requirements is a QAPI program that builds on the

philosophy that a provider's own quality management system is key to improved patient care performance.

These regulations contain two critical improvements that support and extend our focus on patient-centered, outcome-oriented surveys. First, the regulations are designed to enable surveyors to look at outcomes of care, because the regulations specify that each individual receives the care which his or her assessed needs demonstrate is necessary, rather than focusing simply on the services and processes that must be in place. Second, the addition of a strong QAPI requirement not only stimulates the HHA to continuously monitor its performance and find opportunities for improvement, it also affords the surveyor the ability to assess how effectively the provider was pursuing a continuous quality improvement agenda. All of the changes are directed toward improving patient-centered outcomes of care. We believe that the overall approach of the final CoPs will increase performance expectations for HHAs, in terms of achieving needed and desired outcomes for patients and increasing patient satisfaction with services provided.

C. Public Comments

As discussed in section III, “Analysis of and Responses to Public Comments,” of this rule, we received several public comments related to the estimates presented in the RIA section of the proposed rule. As a general summation, commenters stated that the estimates did not fully account for the burdens that HHAs will encounter in implementing this rule. However, by and large, commenters did not provide suggestions for estimates that should be used or evidence to guide the development of new estimates. Responses to particular comments are included under the relevant subject

matter headings. That is to say, comments regarding the RIA estimates related to patient rights, for example, are located in the discussion of all other patient rights comments. Those who submitted comments on particular burden estimates made general, vague statements that the estimates for the time and cost associated with compliance were understated. With one exception, commenters did not provide suggestions of more appropriate estimates. We received one specific comment, which asserted that requiring HHAs to notify patients of their right to access their own medical records would cost the HHA and additional \$230k, annually, because many more patients would be accessing their records. However, notifying each patient of his right to receive a copy of information contained in his medical record is already included in the standard HIPAA notice that HHAs are required to provide (see 45 CFR 164.520, as accounted for by OMB Control Number 0945–0003). Therefore, we are not creating a new right, nor are we creating a new notice of this right. Thus, we do not believe that this requirement will create the exponential increase in record requests that the commenter claims.

D. Summary of Impacts

Section VII of this rule, Collection of Information Requirements, provides a

detailed analysis of the burden hours and associated costs for all burdens related to the collection of information by HHAs that is required by this rule. That section, in tandem with this regulatory impact analysis section, present a full account of the burdens that will be imposed by this rule. Because the burdens have already been assessed in the Collection of Information Requirements section, we will not recount them in this RIA section. All estimates presented in this RIA section are based on the assumptions presented in Table 1, located at the beginning of the Section VII of this rule, Collection of Information Requirements.

Although we endeavor to provide the most accurate account of the burdens that will be imposed by this rule that is possible, we acknowledge that such analysis is inevitably imprecise. We believe that many of the tasks set forth in this final rule are already being done by the majority of HHAs as part of good business and health care practice. We have identified several activities, such as developing and updating a written plan of care for each patient, as usual and customary practices that would occur in the absence of regulation. While we believe that these identifications are an accurate reflection of current HHA practices as a whole,

uncertainty remains regarding whether such usual and customary practices occur in all HHAs in all appropriate circumstances. Additionally, there are some estimates for which we lack information regarding implementation in the HHA environment because we have not previously regulated those activities. Following implementation of this final rule, we will monitor HHA practices to assess the impact of these new regulations.

Where appropriate, we have differentiated between the burdens that this rule would impose on accredited versus non-accredited HHAs in recognition of the fact that current accreditation standards established by the three main HHA accreditation entities will meet or exceed the minimum standards that are established in this rule. Accredited HHAs will experience less burden when implementing new the patient rights, QAPI, infection prevention and control, and organization and administration of services requirements.

In addition to analyzing the burden hours and associated costs for all burdens related to these requirements, we have also assessed the potential savings associated with our removal of certain outdated, burdensome requirements that exist in the current HHA CoPs.

TABLE 3—SUMMARY OF ESTIMATED BURDEN FOR ALL COPs

CoP	Total time (hours)	Total cost in year 1	Annual cost in year 2 and thereafter
Burden and Cost Estimates Associated with Information Collection Requirements	4,462,805	\$182,350,264	\$179,136,942
Patient rights	2,398,446	147,326,970	147,326,970
QAPI	618,030	29,070,300	25,316,340
Infection prevention and control	595,140	37,493,820	37,493,820
Removal of 60 day summary requirement	887,592	– 16,864,248	– 16,864,248
Removal of Group of professional personnel requirement	203,620	– 16,924,452	– 16,924,452
Removal of Evaluation of the agency’s program	1,335,073	– 69,111,119	– 69,111,119
Total	5,648,136	293,341,535	290,128,213

1. Burden Assessment

Reporting OASIS Information (§ 484.45)

We are making one change to replace the requirement that an HHA has a “direct telephone connection” to transmit the OASIS data with a requirement that an HHA must transmit data using electronic communications software that complies with the Federal Information Processing Standard (FIPS 140–2, issued May 25, 2001) from the HHA or the HHA contractor to the CMS collection site. The FIPS 140–2 applies to all federal agencies that use cryptographic-based security systems to

protect sensitive information in computer and telecommunication systems (including voice systems) as defined in section 5131 of the Information Technology Management Reform Act of 1996, Public Law 104–106, including CMS. Therefore, this requirement does not impose a new burden upon HHAs.

Patient Rights (§ 484.50)

The final rule requires that an HHA must provide a patient with a written notice of rights. The final rule requires that an HHA must provide a patient’s representative (legal) with a written

notice of rights, and must provide a patient’s representative (patient-selected) with a written notice of rights in accordance with patient preferences. Communicating with patients and representatives, including the provision of a written notice of rights, is a standard practice in the health care industry and would impose no additional costs. Similar requirements already exist for many other health care provider types, including hospice providers, long term care facilities, ambulatory surgery centers, and end-stage renal disease facilities.

Verbal notification of rights in a language and manner that the individual understands, however, may create a new burden for some HHAs. The national accrediting organizations already require their accredited HHAs to orally apprise their patients of their rights in situations where patients cannot read or understand the written notice. We assume, for purposes of this analysis only, that accredited HHAs are providing oral notification to the 25 percent of their patients that cannot read or understand the written notice. Based on this assumption, 1,751,387 patients are already orally notified of their rights each year; therefore, we are excluding these patients from this analysis. For the remaining 75 percent of patients receiving care from an accredited HHA, we estimate that it would take approximately 5 minutes per patient to describe the content of the notice of rights and obtain the patient's signature confirming that he or she has received a copy of the notice. We assume that patients would be informed of their rights by a registered nurse at a cost of \$5 per patient (5 minutes × \$63/hour). The total number of hours per accredited HHA would be 88 hours (1,057 patients × 5 minutes per patient/60 minutes), at a cost of \$5,285 (1,057 patients × \$5 per patient).

For non-accredited HHAs, the requirement to provide this verbal notice is a new requirement for all 1,409

patients served in an average HHA each year. The total cost of this provision per non-accredited HHA would be \$7,045 (1,409 patients × \$5 per patient). The total number of hours per non-accredited HHA would be 117 hours (1,409 patients × 5 minutes per patient/60 minutes). The total cost for all HHAs would be \$80,030,370 [(\$7,045 per non-accredited × 7,630 HHAs) + [\$5,285 per accredited HHA × 4,972 HHAs]]. The total number of hours for all HHAs would be 1,330,246 hours [(117 hours per non-accredited HHA × 7,630 HHAs) + [88 hours per non-accredited HHA × 4,972 HHAs]].

We note that the requirement to communicate with patients in a language and manner that the patient understands is not a new expectation for Medicare-approved HHAs, as they are already required to be in compliance with the current civil rights requirements and guidance (see 42 CFR 489.10(b)). Specifically, HHAs are already required to comply with the requirements of Title VI of the Civil Rights Act of 1964, section 504 of the Rehabilitation Act of 1973, the Age Discrimination Act of 1975, section 1557 of the Affordable Care Act and "other pertinent requirements of the Office for Civil Rights of HHS." HHS guidance, issued in 2003, further explains the expected role of interpreters in communications with patients ("Guidance to Federal

Assistance Recipients Regarding Title VI Prohibition Against National Origin Discrimination Affecting Limited English Proficient Persons," August 8, 2003, 68 FR 47311). As such, the requirement to communicate with patients in a language and manner that the patient understands would not impose a new burden on HHAs.

Standard 484.50(e) requires that all patient/family complaints be investigated. We estimate that, in a 1 year period, an HHA would need to investigate complaints involving about 5 percent (70) of its patients, and that each investigation would take 2 hours to complete. The total annual burden per HHA would be 140 hours (70 investigations × 2 hour per investigation). All national accrediting organizations already require their accredited HHAs to document, investigate, and resolve patient complaints; therefore all 4,972 accredited HHAs would not be burdened by this requirement. The total annual burden hours for the industry would be 1,068,200 (140 hours per HHA × 7,630 non-accredited HHAs). The total annual cost for the QAPI coordinator to complete all investigations would be \$8,820 per HHA (\$63/hour × 140 hours), and \$67,296,600 for all non-accredited HHAs (\$63/hour × 1,068,200 hours).

TABLE 4—PATIENT RIGHTS

Standard	Time per HHA (hours)	Total time (hours)	Cost per HHA	Total cost
Providing notice of rights (annual, non-accredited/accredited HHAs) ...	117/88	1,330,246	\$7,045/5,285	\$80,030,370
Investigations (annual, non-accredited HHAs)	140	1,068,200	\$8,820	\$67,296,600
Total (annual, non-accredited/accredited)	257 or 88	2,398,446	\$15,865 or \$5,285	\$147,326,970

Comprehensive Assessment of Patients (§ 484.55)

We are retaining the requirements of current § 484.55, with a reorganization of several sections related to the content of the comprehensive assessment and the addition of several broad focus areas. We believe that the new focus areas (for example, cognitive status and patient goals) are standard practice and would not impose an additional burden. In addition, we are making a minor change to allow for the completion of an OASIS update upon the physician-ordered resumption of care date. Allowing for a physician to order the resumption of care date increases HHA flexibility; therefore there is no new burden associated with this retention.

Care Planning, Coordination of Services, and Quality of Care (§ 484.60)

The current regulations at § 484.12(c), "Compliance with accepted professional standards and principles"; § 484.14(g), "Coordination of patient services"; and § 484.18 "Acceptance of patients, plan of care, and medical supervision," are reorganized and revised at § 484.60.

The change in § 484.18, "Acceptance of patients, plan of care, and medical supervision," requires each patient to receive an individualized written plan of care, including any additions or revisions. The plan of care includes all orders, specifies the care and services necessary to meet the patient-specific needs and the measurable outcomes that the HHA anticipates would occur as a result of implementing and coordinating

the plan of care with the patient and physician, and includes all patient and caregiver education and training. The intent of the current standard at § 484.12(c) is retained under this CoP with the requirement that services be furnished in accordance with accepted standards of practice. No burden is associated with this part of the CoPs, as these requirements constitute current industry practices regarding plans of care.

Standard 484.60(a), "Plan of care," codifies current industry standards of practice through the revision of current § 484.18(a), "Plan of care," including references to the identification of patient-specific needs and measurable outcomes that are already currently required under current § 484.55,

“Comprehensive assessment of patients.” Therefore, this requirement does not present a new burden.

Proposed § 484.60(b), “Conformance with physician orders,” retains the provision of the current regulation at 42 CFR 484.18(c) that allows HHAs to administer influenza and pneumococcal vaccinations without specific physician orders, provided that certain requirements are adhered to. As an allowance of flexibility, rather than an imposition of a specific requirement, we believe that this provision does not impose a burden upon HHAs.

This standard also retains many of the current requirements regarding verbal orders with the exception of the requirement at § 484.60(b)(5), “Conformance with physician orders,” which requires the physician to countersign and date all verbal orders. Although this requirement is not in the current regulations, this and similar physician order practices are consistent with current standards of practice and with many state laws. Therefore, we expect no new burden with this provision.

Standard 484.60(c), “Review and revision of the plan of care,” incorporates some current requirements. Although there has been some revision to current § 484.18(b), “Periodic review of plan of care,” to include mention of measurable outcomes for patients, the intent of this requirement already exists at § 484.55, “Comprehensive assessment of patients.” Section 484.55 requires an HHA to demonstrate patient progress toward the achievement of desired outcomes. Therefore, the current standard remains essentially intact in this final rule and the new standard does not constitute any new burden.

Standard 484.60(d), “Coordination of care,” revises current § 484.14(g), “Coordination of patient services,” and some elements of current § 484.18(a), “Plan of care.” The intent of the current standards remains intact, and these revisions do not generate new burden.

Standard 484.60(e), “Written information to the patient,” requires the HHA to provide written instructions to the patient and care giver outlining visit schedule including frequency of visits, medication schedule/instructions, treatments administered by HHA personnel and personnel acting on the behalf of the HHA, pertinent instructions related to patient care and the name and contact information of the HHA clinical manager. Giving written instruction to the patient and care giver has been a longstanding practice in the home health industry and is one of the most fundamental elements in patient education. Patient education practices

are fundamental to patient care and are consistent with current standards of practice. Therefore, we expect no new burden with this provision.

Quality Assessment and Performance Improvement (QAPI) (§ 484.65)

The quality assessment and performance improvement (QAPI) requirement replaces the current quality-related requirements of § 484.16, “Group of professional personnel,” and § 484.52, “Evaluation of the agency’s program.” Quality assessment is already part of standard HHA practice through annual evaluations of an agency’s total program using both administrative reviews and a quarterly review of a sample of clinical records. Furthermore, HHAs are already familiar with the basic concept of measuring quality on both a patient and aggregate level. This rule further refines current HHA quality efforts and brings HHA quality programs in line with their counterparts in a variety of other settings, such as hospitals and hospices. Likewise, this rule brings non-accredited HHA quality practices in line with those of their accredited counterparts. The national accrediting organizations have spent a decade or more enhancing, expanding, and refining their quality-related standards, and those standards far exceed the current Medicare regulations. Indeed, many of the current quality-related standards established by the accrediting organizations, we believe, exceed those that we require in this rule. Since accredited HHAs already have QAPI programs that should meet the requirements of this rule by virtue of meeting the already existing accreditation standards, we are not including accredited HHAs in our analysis of the impact of this requirement. This rule provides a basic outline of what QAPI is and how we expect it to function in the HHA environment. Each HHA is free to decide how to implement the QAPI requirement in a manner that reflects its own unique needs and goals.

For purposes of this impact analysis we have described the impact in three general phases that we believe an average HHA will go through. These phases are based on our experience in implementing the QAPI requirements in hospices, another home-based provider type with a similar operating structure and patient population. While we have outlined these phases below, we stress that an HHA is not be required to approach QAPI in this manner. The QAPI requirement does not stipulate that an HHA must collect data for a specific domain; use specific quality measures, policies and procedures, or

forms; submit QAPI data to an outside body; or conduct a specified number of performance improvement projects. An HHA may choose to implement a data-driven, comprehensive QAPI program that meets the requirements of this rule in any way that meets its individual needs. These phases described below simply provide a framework for assessing the potential impact of the QAPI requirement upon an average non-accredited HHA. In phase one, we believe that an HHA will—

- Identify quality domains and measurements that reflect its organizational complexity; involve all HHA services; affect patient outcomes, patient safety, and quality of care; focus on high risk, high volume, or problem-prone areas; and track adverse patient events;

- Develop and revise policies and procedures to ensure that data is consistently collected, documented, retrieved, and analyzed in an accurate manner; and

- Educate HHA employees and contractors about the QAPI requirement, philosophy, policies, and procedures. In phase two, we believe that an HHA will—

- Enter data into patient clinical records during patient assessments;

- Aggregate data by collecting the same pieces of data from patient clinical records and other sources (for example, human resource records);

- Analyze the data that is aggregated through charts, graphs, and various other methods to identify patterns, anomalies, areas of concern, etc. that may be useful in targeting areas for improvement; and

- Develop, implement, and evaluate major and minor performance improvement projects based on a thorough analysis of the data collected. In phase three, we believe that an HHA will—

- Identify new domains and measures that may replace or be in addition to the domains and measures already being monitored by the HHA;

- Develop and/or revise policies and procedures to accommodate the new domains and measures; and

- Educate HHA employees and contractors on the new domains and measures, as well as the policies and procedures for them.

In addition to these three phases, an HHA will likely allocate resources to an individual responsible for the general overall coordination of its QAPI program. For simplicity, we refer to this individual as the QAPI coordinator; however, an HHA is not required to use this title. For purposes of this analysis only, we assume that an HHA would

choose a QAPI coordinator who has a clinical background, such as a nurse.

Based on these three phases, we have anticipated the impact of the QAPI requirement on an HHA's resources. In phase one, we anticipate that an HHA will use 9 hours to identify quality domains and measures. HHA quality domains and measures are readily available. Indeed, HHAs already collect data for a wide variety of domains and measures each year as part of the OASIS patient assessment data collection tool, and this data is already used to calculate quality measures as presented in OBQI, OBQM, and PBQI reports and the home health compare Web site. These sources provide a robust starting point for HHAs in the quality measurement efforts. We expect that these hours will be distributed among the three members of the HHA's QAPI committee. While we do not require an HHA to have a QAPI committee, we believe that most HHAs would choose to do so to ensure a variety of perspectives are represented in the QAPI decision-making process. We believe that the QAPI committee will include the QAPI coordinator, the HHA administrator, and a clinical manager. We estimate that the QAPI committee will meet three times per year for 1 hour each meeting to identify appropriate quality domains and measures. We estimate that, in total, the QAPI committee will need 9 hours annually to identify appropriate quality domains and measures (3 staff hours per meeting \times 3 meetings per year). The total annual cost for an average HHA to identify the domains and measures is \$738 (\$189 per QAPI coordinator + \$294 per administrator + \$255 per clinical manager). The total cost for all HHAs is \$5,630,940 (\$738 per HHA \times 7,630 non-accredited HHAs).

In addition to selecting measures and developing policies and procedures for QAPI activities, we anticipate that HHAs will train appropriate staff in data collection for any new data elements necessary to calculate quality measures, as well as the overall QAPI philosophy and efforts within the agency. For purposes of this analysis, we assume HHAs will train all clinical staff in the basic concept of QAPI, the agency's implementation of this requirement, and any agency-specific policies and procedures. We estimate that an HHA will spend 1 hour per staff member to provide this training, as many staff are already familiar with data collection and its role in quality measurement and improvement through the OASIS, OBQI, and PBQI instruments. For purposes of our analysis we are including patient care clinicians because they are the staff members that are most likely to be

performing data collection. In 2009, Medicare-certified HHAs had 242,020 clinician FTEs, for an average of 24 clinical FTEs per HHA. The cost per HHA is \$1,824. (1 hour per clinical staff member \times 24 clinical staff members \times \$76 per hour per clinical staff member) The total hour for non-accredited HHAs is 183,120 (24 hours per average HHA \times 7,630 non-accredited HHAs) and the total cost is \$13,917,120 (183,120 hours \times \$76/hour).

Phase two is related to gathering, entering, and analyzing data for quality assessment and performance improvement purposes. Thoroughly assessing a patient and collecting patient data in a standardized manner is already standard practice due to the OASIS regulations. The presence of the OASIS data set and quality reporting measures has been in place for several years and the concepts of each are fully integrated into standard HHA practices. Therefore, we do not believe that it would be a burden for HHAs to incorporate new data gathered for dual patient care planning and QAPI purposes into their current systems and processes.

We believe that any additional burden will arise from the act of entering, aggregating, and analyzing other types of available data that HHAs already collect for other purposes (for example, staffing productivity, staff vacancy rates, timeliness of delivery of services). We estimate that, in order to ensure that the volume of gathered data is manageable, an HHA will gather its data once a month. An HHA may choose to gather data on a more or less frequent basis to suit its needs and circumstances. Some HHAs may choose to gather all patient-level data, but we believe that most HHAs will choose to gather data from a sample of clinical records. Likewise, some HHAs may choose to gather data from a wide variety of administrative files, while others may choose to select only a few administrative data sources. There are many combinations that an HHA may choose to use when it comes to gathering data, and no single approach is considered preferable to another. Given this variability, it is difficult to estimate how long an average HHA may spend gathering and organizing data. For purposes of this analysis only, we assume that an average HHA will use 4 hours per month to gather data, for a total of 48 hours a year. We believe that an office employee would perform the data aggregation and organization at a cost of \$1,248 (4 hours \times 12 months \times \$26/hour) per HHA. The total cost is \$9,522,240 (\$1,248 per HHA \times 7,630 HHAs). Following data gathering and

organization, an HHA will analyze the data to identify trends, patterns, anomalies, areas of strength and concern. We believe that this data analysis will be done by the QAPI committee described previously. In order to identify trends and patterns, the committee will need to examine several months of data at the same time. Therefore, we assume that the committee will meet once every quarter to examine the data and make decisions based on the analysis. Meeting to discuss quality measure data is standard practice in the HHA industry. HHAs are well versed in quality measure reports due to the OBQI and PBQI reports produced by CMS, and the quality measure reports available to the public on the Home Health Compare Web site. Since HHAs already meet to discuss and analyze quality measure results, we do not believe that this requirement will impose a new burden.

Performance improvement projects follow all of the data entry, gathering, organization, and analysis. An HHA must conduct projects to improve its performance in areas where a weakness was identified. Performance improvement projects must reflect the HHA's scope, complexity, and past performance. They must also be data-driven, and affect patient outcomes, patient safety, and quality of care. Although this rule more clearly describes a performance improvement project, its basis, and its purpose, it is based on the same concept as the current requirement at § 484.52, "Evaluation of the agency's program," which requires that "Results of the evaluation are reported and acted upon by those responsible for the operation of the agency. . . ." Since an HHA already takes action to ensure that its program is appropriate, adequate, effective, and efficient, and since providing safe and effective care at all times for all patients is the essential charge of all health care providers, we believe that conducting both major and minor performance improvement projects is already a standard of practice within the HHA industry. Therefore, there will be no additional burden associated with this provision. Although we do not believe that the requirement to conduct performance improvement projects will require additional time and resources, we do believe that the required focus of such projects, and their data-driven nature, will help HHAs improve the efficiency and effectiveness that they achieve in these projects. We believe that the improved project efficiency and effectiveness may result in improved patient outcomes,

avoidance of future adverse events, more appropriate resource allocation, and a wide variety of other beneficial outcomes, based on the projects selected by each HHA.

Phase three of the QAPI process builds upon the QAPI program that an

HHA already has in place. We estimate that an HHA will use 3 hours a year to identify new domains and quality measures, and we believe that the QAPI committee will perform this task, at a total cost of \$246 (1 hour × \$63/hour for QAPI coordinator + 1 hour × \$98/hour

for administrator + 1 hour × \$85/hour rate for clinical manager). The total annual cost for non-accredited HHAs in updating domain and measures is \$1,876,980 (\$246 per HHA × 7,630 HHAs) in year 2 and thereafter.

TABLE 5—QUALITY ASSESSMENT AND PERFORMANCE IMPROVEMENT

Standard	Time per HHA (hours)	Total time (hours)	Cost per HHA	Total cost
Identify domains and measures (1st year)	9	68,670	\$738	\$5,630,940
Train staff (1st year and on-going)	24	183,120	1,824	13,917,120
Aggregate data (1st year and on-going)	48	366,240	1,248	9,522,240
Update domains and measures (on-going)	3	22,890	246	1,876,980
Total 1st year	81	618,030	3,810	29,070,300
Total yearly on-going	75	572,250	3,318	25,316,340

Infection Prevention and Control (§ 484.70)

There is no specific current requirement addressing infection control in the current HHA CoPs. However, current § 484.12(c), “Compliance with accepted professional standards and principles,” requires an HHA and its staff to comply with accepted professional standards and principles that apply to professionals furnishing services in an HHA. Given this broad requirement, we believe that HHA personnel are already using well-documented infection control practices and well-accepted professional standards and principles in their patient care practices. This regulation reinforces positive infection control practices and addresses the serious nature, as well as the potential hazards, of infectious and communicable diseases in the home health environment. This rule also brings non-accredited HHA quality practices in line with those of their accredited counterparts. The national accrediting organizations have spent a decade or more developing and refining their infection prevention and control standards in the absence of specific Medicare regulations. Indeed, the

current infection prevention and control standards established by the accrediting organizations would, we believe, even exceed those that we require in this rule.

Specifically, the regulation requires HHAs to have an organized, agency-wide program for the surveillance, identification, prevention, control, and investigation of infectious and communicable diseases that is an integral part of the HHA’s quality assessment and performance improvement (QAPI) program. The agency’s program is required to include the following:

- The use of accepted standards of practice, including standard precautions, to prevent the transmission of infections and communicable diseases;
- A method for identifying infectious and communicable disease problems;
- A plan for the appropriate actions that are expected to result in improvement and disease prevention; and
- Education to staff, patients, and caregivers about infection prevention and control issued and practices.

We believe that developing this organized program will require HHA

resources, and estimate that an HHA will use 1.5 hours of staff time each week, or 78 hours per year (1.5 hours × 52 weeks), to develop and maintain the infection prevention and control program. At a cost of \$63 per hour for a nurse to provide program leadership, the cost will be \$4,914 per HHA (78 hours × \$63/hour)

While we cannot quantify the benefits of having an organized program for the prevention and control of infections or the costs of replacing current infection control practices with practices conducted under an organized program, we believe a program should produce benefits for HHAs and their patients. For example, a program may improve the manner in which HHAs identify to HHA staff those patients who are infected or colonized with antibiotic resistant bacteria so that staff may take additional precautions in order to protect themselves during interactions with patients, thereby reducing the amount of sick leave used by HHA staff. We do not have adequate data from which to create accurate estimates of the potential benefits or ongoing costs of this requirement, but we believe that they are substantial.

TABLE 6—INFECTION PREVENTION AND CONTROL

Standard	Time per HHA (hours)	Total time (hours)	Cost per HHA	Total cost
Develop and maintain program	78	595,140	\$4,914	\$37,493,820
Total	78	595,140	4,914	37,493,820

Skilled Professional Services (§ 484.75)

We consolidated provisions previously located at § 484.30, “Skilled nursing services”; § 484.32, “Therapy

services”; and § 484.34, “Medical social services,” into this new requirement. We added a requirement that skilled professionals participate in the QAPI

program. Involvement in patient care and patient care-related activities is a professional responsibility, and therefore we believe involvement in the

agency's QAPI program imposes little or no additional burden. We also added a requirement, somewhat similar to the requirement at § 484.14(d), regarding the supervision of nursing assistants, therapy assistants, and medical social service assistants. We require that all nursing services be provided under the supervision of a registered nurse; all rehabilitative therapy assistant services be provided under the supervision of a physical therapist or occupational therapist; and all medical social services be provided under the supervision of a social worker. These supervision requirements codify current HHA supervision practices, and therefore do not impose a new burden upon HHAs.

Home Health Aide Services (§ 484.80)

Home health aide services are an integral part of home health care, and the CoP retains many of the current longstanding requirements. However, in an effort to make the current requirements for home health aides more consistent throughout, improve overall clarity, and reflect current standards of practice more accurately, we have reorganized and revised the requirements in this CoP. The burdens associated with this section are described in the Collection of Information section of this rule. Therefore, we are not repeating those burdens in this section. Other changes, such as requiring HHAs to supervise aides when performing skills for which the aides have not passed a competency evaluation or requiring aides to report changes in a patient's condition to a registered nurse or other appropriate skilled professional, constitute standard practice within the HHA industry. Therefore, no new burdens are imposed by these changes.

Compliance With Federal, State, and Local Laws and Regulations Related to Health and Safety of Patients (§ 484.100)

The current regulations at § 484.12(a), "Compliance with Federal, State, and local laws and regulations"; § 484.12(b), "Disclosure of ownership and management information"; and § 484.14(j), "Laboratory services," have been reorganized with only minor clarifying revisions to the language of each standard. The current condition statement is modified slightly for clarification purposes. However, the current regulation regarding compliance with all applicable laws and regulations related to patient health and safety, state licensing of HHAs, and laboratory services, essentially remains intact under this rule. The burden associated with this provision is the disclosure of certain information, which was

discussed in the Collection of Information section of this rule, and there are no other burdens associated with this provision.

Organization and Administration of Services (§ 484.105)

Several of the requirements currently found at § 484.14, "Organization, services, and administration," have been reorganized and revised under this condition.

In order to facilitate compliance with § 484.60(d) and to ensure that each patient's care is coordinated, we have combined, revised, and elaborated on former § 484.14(d) and (e) at § 484.105(c), "Clinical manager." This standard requires one or more qualified individuals to provide oversight of all patient care services and HHA personnel. Oversight includes making patient and personnel assignments; coordinating patient care; coordinating referrals; and assuring the development, implementation, and updates of the individualized plan of care. The clinical manager role in the regulations is a further refinement of the former "Supervising physician or registered nurse" role found in regulation at § 418.14(d); therefore the general duties described above are already required of home health agencies. The complex, multi-disciplinary nature of home health care necessitates both personnel supervision and patient care coordination to ensure the effective delivery of patient care and positive patient outcomes. The clinical manager position does not constitute any new functions within an HHA; rather, it provides a more structured approach for patient care coordination and personnel supervision tasks. Since the various patient care coordination functions already in existence are consolidated under the clinical manager position and are thus be a realignment of current resource allocations, we do not believe that this requirement poses a new burden.

Clinical Records (§ 484.110)

The former regulation at § 484.48, "Clinical records," is revised, and reorganized under this CoP. We believe that the majority of the revisions to the former clinical record requirement reflect contemporary professional standards already in place in the home health industry. Therefore, no additional burden is imposed. In addition, the requirements allow HHAs to maintain and send a patient's clinical record in electronic form. This flexibility may result in a reduction in burden for many HHAs with systems of

electronic record keeping already in place.

Personnel Qualifications (§ 484.115)

We reorganized the personnel qualification requirements formerly found at § 484.4, "Personnel qualifications," in a new CoP dedicated to personnel qualification standards. Within this new condition we use the term "licensed practical (vocational) nurse" instead of the current term of "practical (vocational) nurse" since state practice acts vary and both of these terms are accepted and typically used interchangeably. We also require that the possession of any undergraduate degree would be sufficient for a newly-hired administrator. In addition, we are expanding the qualifications for social workers to include those individuals who possess either a master's (M.S.W) or a doctor's degree (D.S.W.) in social work. Furthermore, we are deferring to state licensure requirements as the basis for determining the qualifications of SLPs. This expansion of the qualifications for administrators, social workers, and SLPs could provide an agency more flexibility in hiring these professions if it chose, and could provide a potential reduction in burden, though we are not able to quantify what this reduction might be at this time. These changes create no new burden for HHAs.

2. Deleted Requirements

We deleted three requirements of the former HHA regulations in their entirety. First, we deleted § 484.14(g), removing the requirement that an HHA must send a written summary report for each patient to the attending physician every 60 days. This requirement imposes a burden of 3 minutes per patient, and 887,592 hours, annually, for all HHAs at a cost of \$16,864,248, as indicated by the currently-approved PRA package (OMB control number 0938-0365). Therefore, removing this requirement saves HHAs \$16,864,248 each year.

Second, we deleted § 484.16, "Group of professional personnel," because the QAPI requirements address the same goals as are currently required of the group of professional personnel. This requirement imposes a documentation burden of 10 minutes per HHA, and 1,988 hours, annually, for all HHAs at a cost of \$37,772, as indicated by the currently-approved PRA package (OMB control number 0938-0365).

In addition to the burden related to documentation, we believe that eliminating this requirement also alleviates the burden of holding meetings with the group of professional

personnel for the sole purpose of complying with this regulatory requirement. The regulation requires that the group must consist of at least one physician, one registered nurse, and representation from other professional disciplines, with at least one member who is not employed by or an owner of the HHA. Since the regulations at § 484.14(a) require HHAs to provide skilled nursing services as well as the services of at least one other discipline, not including physician services, we know that the group of professional personnel is required to have at least three members. For purposes of this analysis, we assume that the group of professional personnel would include a physician (\$180), a registered nurse (\$63), a therapist (\$72), and a home health aide (\$20). The regulation also requires that the group of professional personnel must meet "frequently." For purposes of this analysis, we assume that the frequency requirement would be met by holding quarterly meetings of the group. Furthermore, we assume that most quarterly meetings would require 1 hour of each member's time, for a total of 4 labor hours per meeting, or 16 labor hours per year per HHA. We estimate the cost associated with this requirement to be \$335 per meeting, or \$1,340 per HHA per year (\$335 per meeting × 4 meetings per year), for a total of 201,632 hours (16 hours per HHA × 12,602 HHAs) at cost of \$16,886,680 (\$1,340 per HHA × 12,602 HHAs) per year. Therefore, we estimate that the total reduction of burden is 203,620 hours (201,632 hours + 1,988 hours) and \$16,924,452 (\$16,886,680 + \$37,772).

Third, we deleted § 484.52, "Evaluation of the agency's program," because the prescriptive quarterly review of clinical records is outdated and unnecessary. This requirement currently imposes a documentation burden of 11,863 hours, annually, for all HHAs at a cost of \$304,199, as indicated by the currently-approved PRA package (OMB control number 0938-0365).

In addition to the documentation burden imposed by this requirement, we believe that there is a burden associated with the time necessary to complete the quarterly clinical record reviews. The regulation requires that appropriate health professionals, representing at least the scope of the program, review a sample of both active and closed clinical records to determine whether established policies are followed in furnishing services directly or under arrangement. There is a continuing review of clinical records for each 60-day period that a patient receives home health services to determine adequacy

of the plan of care and appropriateness of continuation of care. Each professional may review the records separately, at different times. For purposes of this analysis, we assume that an HHA would review a 5 percent sample of its clinical records, or an average of 70 clinical records per year per facility. Furthermore, for purposes of this analysis, we assume that a registered nurse (\$63/hour), a therapist (\$72/hour), and a home health aide (\$20/hour) reviews each clinical record, and that each review would require 30 minutes per discipline, for a total of 90 minutes per record review. We estimate that each HHA uses 105 hours per year to meet this requirement, for a total of 1,323,210 hours for all HHAs. The total cost per record review is \$78, or \$5,460 per HHA per year, for a total of \$68,806,920 for all HHAs. Therefore, we believe that removing this requirement alleviates a total burden of 1,335,073 hours and \$69,111,119.

3. Impact on Patient Care

Although the positive effects of these changes cannot be quantified, we note that the changes are focused on improving the delivery of care to each and every patient. For example, the QAPI standard encourages HHAs to use their own internally-generated data to proactively identify patient care inefficiencies, contradictions, lapses, and other issues in the care delivery system so that HHAs can rapidly implement performance improvement projects designed to remedy the issue(s) at hand. Proactively identifying care issues and implementing projects to correct those issues will ultimately lead to more effective and efficient patient care and improved patient outcomes. However, as previously indicated, we cannot quantify the impact on patients.

E. Alternatives Considered

We considered finalizing the proposed requirement that HHAs must proactively provide each patient with a copy of his or her plan of care. We considered multiple options for implementing the originally proposed requirement.

Option 1—Require HHAs to provide each patient with a copy of only the initial plan of care. No written updates would be required in this option. We estimate that this requirement would create approximately 600,000 annual burden hours, at a cost of \$15.6 million, annually.

Option 2—Require HHAs to provide each patient with a copy of only the initial plan of care, and require HHAs to translate key elements of the plan of care into layman's terms. No written

updates would be required. We estimate that this requirement would create approximately 3 million annual burden hours at a cost of \$189 million annually (based on the assumption of a nurse using 10 minutes to translate the clinical plan of care into layman's terms).

Option 3—Require HHAs to provide each patient with a copy of plan of care for each 60-day episode of care. We estimate that this requirement would create approximately 11 million annual burden hours at a cost of \$285 million, annually.

Option 4—Require HHAs to provide each patient with a copy of plan of care and translate key elements of the plan of care into layman's terms for each 60-day episode of care. We estimate that this requirement would create approximately 55 million annual burden hours at a cost of \$3.5 billion, annually.

Option 5—Require HHAs to provide each patient with a copy of plan of care and require it to be updated for significant changes. Assuming 4 plans of care per 60 day episode for complex patients and 1 plan of care per 60 day episode for non-complex patients, we estimate that this requirement would create approximately 31 million annual burden hours at a cost of \$799 million, annually.

Option 6—Require HHAs to provide each patient with a copy of plan of care and translate key elements into layman's terms. Also require the plan of care to be updated for significant changes. Assuming 4 plans of care per 60 day episode for complex patients and 1 plan of care per 60 day episode for non-complex patients, we estimate that this requirement would create approximately 153.6 million annual burden hours at a cost of \$9.7 billion, annually.

Option 7—Do not require HHAs to provide patients with written information regarding the plan of care under any circumstances. Removing this concept from the regulations entirely would be consistent with current requirements, and would signal to HHAs, states, and accreditation organizations that such written communication is unnecessary. We believe that most HHAs are already providing certain written information to patients. Removing this concept from the rules entirely may encourage those entities to stop providing such written information, thus reducing their self-imposed burden.

We also considered retaining the broad requirement from the proposed rule that HHAs provide patients with the names, addresses, and telephone

numbers of pertinent, Federally-funded and State-funded, State and local consumer information, consumer protection, and advocacy agencies. Commenters stated that such a broad requirement would impose a significant burden due to the volume of entities to be identified and the need to assure updated contact information for such entities at all times. Although

commenters did not provide an estimate of the burden, we believe that HHAs may have expended one hour per quarter, or approximately 50,000 hours annually at a cost of \$1.3 million, annually.

F. Accounting Statement

As required by OMB Circular A-4 (available at [http://](http://www.whitehouse.gov/omb/circulars_a004_a-4)

www.whitehouse.gov/omb/circulars_a004_a-4), we have prepared an accounting statement in Table 7 showing the classification of the transfers and costs associated with the provisions of this rule for Calendar Year (CY) 2017 to 2021.

TABLE 7—ACCOUNTING STATEMENT: CLASSIFICATION OF ESTIMATED NET COSTS FROM CY 2017 TO CY 2021
[In millions]

Category	Estimates	Units		
		Year dollar	Discount rate (%)	Period covered
Costs:				
Annualized Monetized (\$million/year)	291	2015	7	2017–2021
	291	2015	3	2017–2021

Although the benefits and some of the costs of these changes cannot be quantified, we note that the changes are focused on improving the delivery of care to each and every patient. An increased focus on identifying and proactively addressing risk factors for emergency department visits and hospital re-admissions has the potential to reduce both, leading to improved patient health and decreased payer expenditures. Likewise, requiring HHAs to educate and teach patients the necessary self-care skills to facilitate a timely discharge may lead to more and better patient engagement in managing chronic health conditions such as diabetes, ultimately leading to improved patient health and reduced payer expenditures. However, as previously indicated, we cannot quantify the impact on patients.

G. Regulatory Flexibility Act (RFA)

The RFA requires agencies to analyze options for regulatory relief of small businesses, if a rule has a significant impact on a substantial number of small entities. For purposes of the RFA, small entities include small businesses, nonprofit organizations, and government agencies. Individuals and states are not included in the definition of a small entity. For the purposes of the RFA, most HHAs are considered to be small entities, either by virtue of their nonprofit status or government status, or by having revenues less than \$15 million in any 1 year (for details, see the Small Business Administration’s (SBA) Web site at https://www.sba.gov/sites/default/files/files/Size_Standards_Table.pdf (refer to the 620000 series). There are 12,602 Medicare-certified HHAs with average annual patient

census of 1,409 patients per HHA. An average Medicare-participating HHA in 2010 had annual revenues (all payment sources) of \$6.55 million. Therefore, the vast majority of these Medicare-certified HHAs would be considered small entities under the SBA’s NAICS.

As its measure of significant economic impact on a substantial number of small entities, HHS uses a change in revenue of more than 3 to 5 percent. We do not believe that this threshold will be reached by the requirements in this final rule because the cost of this rule on a per-HHA basis is minimal (approximately a \$15,100 net increase in burden per typical non-accredited HHA in the 1st year, and a small net savings of approximately \$700 for accredited HHAs in the 1st year). There are a small number of HHAs that will experience a larger increase in burden than a typical HHA, ranging anywhere from an additional \$500 to \$59,000 per year, depending on which aspects of the rule constitute a significant departure from their current practices. We believe that these HHAs account for up to 10 percent of the entire HHA population. An HHA that would need to come into compliance with the most costly provision (providing specified written information to patients per the requirements of 484.60(e), approximately \$59,000 per affected HHA) would still only experience a change in revenue equal to 1.13 percent (\$15,100+ \$59,000). Therefore, we certify that this rule would not have a significant economic impact on a substantial number of small entities.

In addition, section 1102(b) of the Social Security Act requires us to prepare a regulatory impact analysis if

a rule may have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 604 of the RFA. For purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of a metropolitan statistical area and has fewer than 100 beds. We believe that this rule would not have a significant impact on the operations of a substantial number of small rural hospitals because there are few HHAs in those facilities. Therefore, the Secretary has determined that this final rule will not have a significant impact on the operations of a substantial number of small rural hospitals.

H. Unfunded Mandates Reform Act (UMRA)

Section 202 of the Unfunded Mandates Reform Act of 1995 (UMRA) also requires that agencies assess anticipated costs and benefits before issuing any rule whose mandates require spending in any 1 year of \$100 million in 1995 dollars, updated annually for inflation. In 2016, that is approximately \$146 million. It includes no mandates on state, local, or tribal governments. The estimates presented in this section of the final rule exceed this threshold and, as a result, we have provided a detailed assessment of the anticipated costs and benefits in RIA section as well as other parts of the preamble.

I. Federalism

Executive Order 13132 establishes certain requirements that an agency must meet when it promulgates a proposed rule (and subsequent final rule) that imposes substantial direct

requirement costs on state and local governments, preempts state law, or otherwise has Federalism implications. This rule has no Federalism implications.

J. Congressional Review Act

This regulation is subject to the Congressional Review Act provisions of the Small Business Regulatory Enforcement Fairness Act of 1996 (5 U.S.C. 801 *et seq.*) and has been transmitted to the Congress and the Comptroller General for review.

In accordance with the provisions of Executive Order 12866, this final rule was reviewed by the Office of Management and Budget.

List of Subjects

42 CFR Part 409

Health facilities, Medicare.

42 CFR Part 410

Health facilities, Health professions, Kidney diseases, Laboratories, Medicare, Reporting and recordkeeping requirements, Rural areas, X-rays.

42 CFR Part 418

Health facilities, Hospice care, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 440

Grant programs—health, Medicaid.

42 CFR Part 484

Health facilities, Health professions, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 485

Grant programs—health, Health facilities, Medicaid, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 488

Administrative practice and procedure, Health facilities, Medicare, Reporting and recordkeeping requirements.

For the reasons set forth in the preamble, the Centers for Medicare & Medicaid Services amends 42 CFR Chapter IV as set forth below:

PART 409—HOSPITAL INSURANCE BENEFITS

■ 1. The authority citation for part 409 continues to read as follows:

Authority: Secs. 1102 and 1871 of the Social Security Act (42 U.S.C. 1302 and 1395hh).

■ 2. In the table below, for each section and paragraph indicated in the first two columns, remove the reference indicated in the third column and add the reference indicated in the fourth column:

Section	Paragraphs	Remove	Add
§ 409.43	(a)	§ 484.18(a)	§ 484.60(a)
§ 409.43	(c)(1)(i)(C)	42 CFR 484.4	42 CFR 484.115
§ 409.43	(d)	§ 484.4	§ 484.115
§ 409.44	(b)(1) introductory text and (c)(2)(ii)	§ 484.4	§ 484.115
§ 409.45	(c)(4)	§ 484.4	§ 484.115
§ 409.46	(b)	§ 484.36(d)	§ 484.80(h)
§ 409.47	(b) introductory text	§ 484.14(h)	§ 484.105(e)

PART 410—SUPPLEMENTARY MEDICAL INSURANCE (SMI) BENEFITS

■ 3. The authority citation for part 410 continues to read as follows:

Authority: Secs. 1102, 1834, 1871, 1881, and 1893 of the Social Security Act (42 U.S.C. 1302, 1395m, 1395hh, and 1395ddd).

§ 410.62 [Amended]

■ 4. In § 410.62(a) introductory text, remove “§ 484.4” and add in its place “§ 484.115”.

PART 418—HOSPICE CARE

■ 5. The authority citation for part 418 continues to read as follows:

Authority: Secs. 1102 and 1871 of the Social Security Act (42 U.S.C. 1302 and 1395hh).

■ 6. In the table below, for each section and paragraph indicated in the first two columns, remove the reference indicated in the third column and add the reference indicated in the fourth column:

Section	Paragraphs	Remove	Add
§ 418.76	(f)(1)	§ 484.36(a) and § 484.36(b)	§ 484.80
§ 418.76	(f)(2)	§ 484.36(a)	§ 484.80(a)

PART 440—SERVICES: GENERAL PROVISIONS

■ 7. The authority citation for part 440 continues to read as follows:

Authority: Sec. 1102 of the Social Security Act (42 U.S.C. 1302).

§ 440.110 [Amended]

■ 8. In § 440.110(a)(2) and (b)(2), remove “§ 484.4” and add in its place “§ 484.115”.

PART 484—HOME HEALTH SERVICES

■ 9. The authority citation for part 484 continues to read as follows:

Authority: Secs. 1102 and 1871 of the Social Security Act (42 U.S.C. 1302 and 1395(hh)) unless otherwise indicated.

■ 10. Part 484 is amended by revising subparts A through C to read as follows:

Subpart A—General Provisions

- Sec.
- 484.1 Basis and scope.
- 484.2 Definitions.

Subpart B—Patient Care

- 484.40 Condition of participation: Release of patient identifiable OASIS information.
- 484.45 Condition of participation: Reporting OASIS information.

- 484.50 Condition of participation: Patient rights.
- 484.55 Condition of participation: Comprehensive assessment of patients.
- 484.60 Condition of participation: Care planning, coordination of services, and quality of care.
- 484.65 Condition of participation: Quality assessment and performance improvement (QAPI).
- 484.70 Condition of participation: Infection prevention and control.
- 484.75 Condition of participation: Skilled professional services.
- 484.80 Condition of participation: Home health aide services.

Subpart C—Organizational Environment

- 484.100 Condition of participation: Compliance with Federal, State, and local laws and regulations related to health and safety of patients.
- 484.102 Condition of participation: Emergency preparedness.
- 484.105 Condition of participation: Organization and administration of services.
- 484.110 Condition of participation: Clinical records.
- 484.115 Condition of participation: Personnel qualifications.

Subpart A—General Provisions**§ 484.1 Basis and scope.**

(a) *Basis*. This part is based on:

(1) Sections 1861(o) and 1891 of the Act, which establish the conditions that an HHA must meet in order to participate in the Medicare program and which, along with the additional requirements set forth in this part, are considered necessary to ensure the health and safety of patients; and

(2) Section 1861(z) of the Act, which specifies the institutional planning standards that HHAs must meet.

(b) *Scope*. The provisions of this part serve as the basis for survey activities for the purpose of determining whether an agency meets the requirements for participation in the Medicare program.

§ 484.2 Definitions.

As used in subparts A, B, and C, of this part—

Branch office means an approved location or site from which a home health agency provides services within a portion of the total geographic area served by the parent agency. The parent home health agency must provide supervision and administrative control of any branch office. It is unnecessary for the branch office to independently meet the conditions of participation as a home health agency.

Clinical note means a notation of a contact with a patient that is written, timed, and dated, and which describes signs and symptoms, treatment, drugs administered and the patient's reaction or response, and any changes in physical or emotional condition during a given period of time.

In advance means that HHA staff must complete the task prior to performing any hands-on care or any patient education.

Parent home health agency means the agency that provides direct support and administrative control of a branch.

Primary home health agency means the HHA which accepts the initial referral of a patient, and which provides services directly to the patient or via another health care provider under arrangements (as applicable).

Proprietary agency means a private, for-profit agency.

Public agency means an agency operated by a state or local government.

Quality indicator means a specific, valid, and reliable measure of access, care outcomes, or satisfaction, or a measure of a process of care.

Representative means the patient's legal representative, such as a guardian, who makes health-care decisions on the patient's behalf, or a patient-selected representative who participates in making decisions related to the patient's care or well-being, including but not limited to, a family member or an advocate for the patient. The patient determines the role of the representative, to the extent possible.

Subdivision means a component of a multi-function health agency, such as the home care department of a hospital or the nursing division of a health department, which independently meets the conditions of participation for HHAs. A subdivision that has branch offices is considered a parent agency.

Summary report means the compilation of the pertinent factors of a patient's clinical notes that is submitted to the patient's physician.

Supervised practical training means training in a practicum laboratory or other setting in which the trainee demonstrates knowledge while providing covered services to an individual under the direct supervision of either a registered nurse or a licensed practical nurse who is under the supervision of a registered nurse.

Verbal order means a physician order that is spoken to appropriate personnel and later put in writing for the purposes of documenting as well as establishing or revising the patient's plan of care.

Subpart B—Patient Care**§ 484.40 Condition of participation: Release of patient identifiable OASIS information.**

The HHA and agent acting on behalf of the HHA in accordance with a written contract must ensure the confidentiality of all patient identifiable information contained in the clinical record, including OASIS data, and may not release patient identifiable OASIS information to the public.

§ 484.45 Condition of participation: Reporting OASIS information.

HHAs must electronically report all OASIS data collected in accordance with § 484.55.

(a) *Standard: Encoding and transmitting OASIS data*. An HHA must encode and electronically transmit each completed OASIS assessment to the CMS system, regarding each beneficiary

with respect to which information is required to be transmitted (as determined by the Secretary), within 30 days of completing the assessment of the beneficiary.

(b) *Standard: Accuracy of encoded OASIS data*. The encoded OASIS data must accurately reflect the patient's status at the time of assessment.

(c) *Standard: Transmittal of OASIS data*. An HHA must—

(1) For all completed assessments, transmit OASIS data in a format that meets the requirements of paragraph (d) of this section.

(2) Successfully transmit test data to the QIES ASAP System or CMS OASIS contractor.

(3) Transmit data using electronic communications software that complies with the Federal Information Processing Standard (FIPS 140–2, issued May 25, 2001) from the HHA or the HHA contractor to the CMS collection site.

(4) Transmit data that includes the CMS-assigned branch identification number, as applicable.

(d) *Standard: Data Format*. The HHA must encode and transmit data using the software available from CMS or software that conforms to CMS standard electronic record layout, edit specifications, and data dictionary, and that includes the required OASIS data set.

§ 484.50 Condition of participation: Patient rights.

The patient and representative (if any), have the right to be informed of the patient's rights in a language and manner the individual understands. The HHA must protect and promote the exercise of these rights.

(a) *Standard: Notice of rights*. The HHA must—

(1) Provide the patient and the patient's legal representative (if any), the following information during the initial evaluation visit, in advance of furnishing care to the patient:

(i) Written notice of the patient's rights and responsibilities under this rule, and the HHA's transfer and discharge policies as set forth in paragraph (d) of this section. Written notice must be understandable to persons who have limited English proficiency and accessible to individuals with disabilities;

(ii) Contact information for the HHA administrator, including the administrator's name, business address, and business phone number in order to receive complaints.

(iii) An OASIS privacy notice to all patients for whom the OASIS data is collected.

(2) Obtain the patient's or legal representative's signature confirming

that he or she has received a copy of the notice of rights and responsibilities.

(3) Provide verbal notice of the patient's rights and responsibilities in the individual's primary or preferred language and in a manner the individual understands, free of charge, with the use of a competent interpreter if necessary, no later than the completion of the second visit from a skilled professional as described in § 484.75.

(4) Provide written notice of the patient's rights and responsibilities under this rule and the HHA's transfer and discharge policies as set forth in paragraph (d) of this section to a patient-selected representative within 4 business days of the initial evaluation visit.

(b) *Standard: Exercise of rights.* (1) If a patient has been adjudged to lack legal capacity to make health care decisions as established by state law by a court of proper jurisdiction, the rights of the patient may be exercised by the person appointed by the state court to act on the patient's behalf.

(2) If a state court has not adjudged a patient to lack legal capacity to make health care decisions as defined by state law, the patient's representative may exercise the patient's rights.

(3) If a patient has been adjudged to lack legal capacity to make health care decisions under state law by a court of proper jurisdiction, the patient may exercise his or her rights to the extent allowed by court order.

(c) *Standard: Rights of the patient.* The patient has the right to—

(1) Have his or her property and person treated with respect;

(2) Be free from verbal, mental, sexual, and physical abuse, including injuries of unknown source, neglect and misappropriation of property;

(3) Make complaints to the HHA regarding treatment or care that is (or fails to be) furnished, and the lack of respect for property and/or person by anyone who is furnishing services on behalf of the HHA;

(4) Participate in, be informed about, and consent or refuse care in advance of and during treatment, where appropriate, with respect to—

(i) Completion of all assessments;

(ii) The care to be furnished, based on the comprehensive assessment;

(iii) Establishing and revising the plan of care;

(iv) The disciplines that will furnish the care;

(v) The frequency of visits;

(vi) Expected outcomes of care, including patient-identified goals, and anticipated risks and benefits;

(vii) Any factors that could impact treatment effectiveness; and

(viii) Any changes in the care to be furnished.

(5) Receive all services outlined in the plan of care.

(6) Have a confidential clinical record. Access to or release of patient information and clinical records is permitted in accordance with 45 CFR parts 160 and 164.

(7) Be advised of—

(i) The extent to which payment for HHA services may be expected from Medicare, Medicaid, or any other federally-funded or federal aid program known to the HHA,

(ii) The charges for services that may not be covered by Medicare, Medicaid, or any other federally-funded or federal aid program known to the HHA,

(iii) The charges the individual may have to pay before care is initiated; and

(iv) Any changes in the information provided in accordance with paragraph (c)(7) of this section when they occur. The HHA must advise the patient and representative (if any), of these changes as soon as possible, in advance of the next home health visit. The HHA must comply with the patient notice requirements at 42 CFR 411.408(d)(2) and 42 CFR 411.408(f).

(8) Receive proper written notice, in advance of a specific service being furnished, if the HHA believes that the service may be non-covered care; or in advance of the HHA reducing or terminating on-going care. The HHA must also comply with the requirements of 42 CFR 405.1200 through 405.1204.

(9) Be advised of the state toll free home health telephone hot line, its contact information, its hours of operation, and that its purpose is to receive complaints or questions about local HHAs.

(10) Be advised of the names, addresses, and telephone numbers of the following Federally-funded and state-funded entities that serve the area where the patient resides:

(i) Agency on Aging,

(ii) Center for Independent Living,

(iii) Protection and Advocacy Agency,

(iv) Aging and Disability Resource Center; and

(v) Quality Improvement Organization.

(11) Be free from any discrimination or reprisal for exercising his or her rights or for voicing grievances to the HHA or an outside entity.

(12) Be informed of the right to access auxiliary aids and language services as described in paragraph (f) of this section, and how to access these services.

(d) *Standard: Transfer and discharge.* The patient and representative (if any), have a right to be informed of the HHA's

policies for transfer and discharge. The HHA may only transfer or discharge the patient from the HHA if:

(1) The transfer or discharge is necessary for the patient's welfare because the HHA and the physician who is responsible for the home health plan of care agree that the HHA can no longer meet the patient's needs, based on the patient's acuity. The HHA must arrange a safe and appropriate transfer to other care entities when the needs of the patient exceed the HHA's capabilities;

(2) The patient or payer will no longer pay for the services provided by the HHA;

(3) The transfer or discharge is appropriate because the physician who is responsible for the home health plan of care and the HHA agree that the measurable outcomes and goals set forth in the plan of care in accordance with § 484.60(a)(2)(xiv) have been achieved, and the HHA and the physician who is responsible for the home health plan of care agree that the patient no longer needs the HHA's services;

(4) The patient refuses services, or elects to be transferred or discharged;

(5) The HHA determines, under a policy set by the HHA for the purpose of addressing discharge for cause that meets the requirements of paragraphs (d)(5)(i) through (d)(5)(iii) of this section, that the patient's (or other persons in the patient's home) behavior is disruptive, abusive, or uncooperative to the extent that delivery of care to the patient or the ability of the HHA to operate effectively is seriously impaired. The HHA must do the following before it discharges a patient for cause:

(i) Advise the patient, representative (if any), the physician(s) issuing orders for the home health plan of care, and the patient's primary care practitioner or other health care professional who will be responsible for providing care and services to the patient after discharge from the HHA (if any) that a discharge for cause is being considered;

(ii) Make efforts to resolve the problem(s) presented by the patient's behavior, the behavior of other persons in the patient's home, or situation;

(iii) Provide the patient and representative (if any), with contact information for other agencies or providers who may be able to provide care; and

(iv) Document the problem(s) and efforts made to resolve the problem(s), and enter this documentation into its clinical records;

(6) The patient dies; or

(7) The HHA ceases to operate.

(e) *Standard: Investigation of complaints.* (1) The HHA must—

(i) Investigate complaints made by a patient, the patient's representative (if any), and the patient's caregivers and family, including, but not limited to, the following topics:

(A) Treatment or care that is (or fails to be) furnished, is furnished inconsistently, or is furnished inappropriately; and

(B) Mistreatment, neglect, or verbal, mental, sexual, and physical abuse, including injuries of unknown source, and/or misappropriation of patient property by anyone furnishing services on behalf of the HHA.

(ii) Document both the existence of the complaint and the resolution of the complaint; and

(iii) Take action to prevent further potential violations, including retaliation, while the complaint is being investigated.

(2) Any HHA staff (whether employed directly or under arrangements) in the normal course of providing services to patients, who identifies, notices, or recognizes incidences or circumstances of mistreatment, neglect, verbal, mental, sexual, and/or physical abuse, including injuries of unknown source, or misappropriation of patient property, must report these findings immediately to the HHA and other appropriate authorities in accordance with state law.

(f) Standard: Accessibility.

Information must be provided to patients in plain language and in a manner that is accessible and timely to—

(1) Persons with disabilities, including accessible Web sites and the provision of auxiliary aids and services at no cost to the individual in accordance with the Americans with Disabilities Act and Section 504 of the Rehabilitation Act.

(2) Persons with limited English proficiency through the provision of language services at no cost to the individual, including oral interpretation and written translations.

§ 484.55 Condition of participation: Comprehensive assessment of patients.

Each patient must receive, and an HHA must provide, a patient-specific, comprehensive assessment. For Medicare beneficiaries, the HHA must verify the patient's eligibility for the Medicare home health benefit including homebound status, both at the time of the initial assessment visit and at the time of the comprehensive assessment.

(a) Standard: Initial assessment visit.

(1) A registered nurse must conduct an initial assessment visit to determine the immediate care and support needs of the patient; and, for Medicare patients, to determine eligibility for the Medicare

home health benefit, including homebound status. The initial assessment visit must be held either within 48 hours of referral, or within 48 hours of the patient's return home, or on the physician-ordered start of care date.

(2) When rehabilitation therapy service (speech language pathology, physical therapy, or occupational therapy) is the only service ordered by the physician who is responsible for the home health plan of care, and if the need for that service establishes program eligibility, the initial assessment visit may be made by the appropriate rehabilitation skilled professional.

(b) Standard: Completion of the comprehensive assessment. (1) The comprehensive assessment must be completed in a timely manner, consistent with the patient's immediate needs, but no later than 5 calendar days after the start of care.

(2) Except as provided in paragraph (b)(3) of this section, a registered nurse must complete the comprehensive assessment and for Medicare patients, determine eligibility for the Medicare home health benefit, including homebound status.

(3) When physical therapy, speech-language pathology, or occupational therapy is the only service ordered by the physician, a physical therapist, speech-language pathologist or occupational therapist may complete the comprehensive assessment, and for Medicare patients, determine eligibility for the Medicare home health benefit, including homebound status. The occupational therapist may complete the comprehensive assessment if the need for occupational therapy establishes program eligibility.

(c) Standard: Content of the comprehensive assessment. The comprehensive assessment must accurately reflect the patient's status, and must include, at a minimum, the following information:

(1) The patient's current health, psychosocial, functional, and cognitive status;

(2) The patient's strengths, goals, and care preferences, including information that may be used to demonstrate the patient's progress toward achievement of the goals identified by the patient and the measurable outcomes identified by the HHA;

(3) The patient's continuing need for home care;

(4) The patient's medical, nursing, rehabilitative, social, and discharge planning needs;

(5) A review of all medications the patient is currently using in order to identify any potential adverse effects

and drug reactions, including ineffective drug therapy, significant side effects, significant drug interactions, duplicate drug therapy, and noncompliance with drug therapy.

(6) The patient's primary caregiver(s), if any, and other available supports, including their:

(i) Willingness and ability to provide care, and

(ii) Availability and schedules;

(7) The patient's representative (if any);

(8) Incorporation of the current version of the Outcome and Assessment Information Set (OASIS) items, using the language and groupings of the OASIS items, as specified by the Secretary. The OASIS data items determined by the Secretary must include: clinical record items, demographics and patient history, living arrangements, supportive assistance, sensory status, integumentary status, respiratory status, elimination status, neuro/emotional/behavioral status, activities of daily living, medications, equipment management, emergent care, and data items collected at inpatient facility admission or discharge only.

(d) Standard: Update of the comprehensive assessment. The comprehensive assessment must be updated and revised (including the administration of the OASIS) as frequently as the patient's condition warrants due to a major decline or improvement in the patient's health status, but not less frequently than—

(1) The last 5 days of every 60 days beginning with the start-of-care date, unless there is a—

(i) Beneficiary elected transfer;

(ii) Significant change in condition; or

(iii) Discharge and return to the same HHA during the 60-day episode.

(2) Within 48 hours of the patient's return to the home from a hospital admission of 24 hours or more for any reason other than diagnostic tests, or on physician-ordered resumption date;

(3) At discharge.

§ 484.60 Condition of participation: Care planning, coordination of services, and quality of care.

Patients are accepted for treatment on the reasonable expectation that an HHA can meet the patient's medical, nursing, rehabilitative, and social needs in his or her place of residence. Each patient must receive an individualized written plan of care, including any revisions or additions. The individualized plan of care must specify the care and services necessary to meet the patient-specific needs as identified in the comprehensive assessment, including identification of the responsible

discipline(s), and the measurable outcomes that the HHA anticipates will occur as a result of implementing and coordinating the plan of care. The individualized plan of care must also specify the patient and caregiver education and training. Services must be furnished in accordance with accepted standards of practice.

(a) *Standard: Plan of care.* (1) Each patient must receive the home health services that are written in an individualized plan of care that identifies patient-specific measurable outcomes and goals, and which is established, periodically reviewed, and signed by a doctor of medicine, osteopathy, or podiatry acting within the scope of his or her state license, certification, or registration. If a physician refers a patient under a plan of care that cannot be completed until after an evaluation visit, the physician is consulted to approve additions or modifications to the original plan.

(2) The individualized plan of care must include the following:

- (i) All pertinent diagnoses;
- (ii) The patient's mental, psychosocial, and cognitive status;
- (iii) The types of services, supplies, and equipment required;
- (iv) The frequency and duration of visits to be made;
- (v) Prognosis;
- (vi) Rehabilitation potential;
- (vii) Functional limitations;
- (viii) Activities permitted;
- (ix) Nutritional requirements;
- (x) All medications and treatments;
- (xi) Safety measures to protect against injury;

(xii) A description of the patient's risk for emergency department visits and hospital re-admission, and all necessary interventions to address the underlying risk factors.

(xiii) Patient and caregiver education and training to facilitate timely discharge;

(xiv) Patient-specific interventions and education; measurable outcomes and goals identified by the HHA and the patient;

(xv) Information related to any advanced directives; and

(xvi) Any additional items the HHA or physician may choose to include.

(3) All patient care orders, including verbal orders, must be recorded in the plan of care.

(b) *Standard: Conformance with physician orders.* (1) Drugs, services, and treatments are administered only as ordered by a physician.

(2) Influenza and pneumococcal vaccines may be administered per agency policy developed in consultation with a physician, and after an

assessment of the patient to determine for contraindications.

(3) Verbal orders must be accepted only by personnel authorized to do so by applicable state laws and regulations and by the HHA's internal policies.

(4) When services are provided on the basis of a physician's verbal orders, a nurse acting in accordance with state licensure requirements, or other qualified practitioner responsible for furnishing or supervising the ordered services, in accordance with state law and the HHA's policies, must document the orders in the patient's clinical record, and sign, date, and time the orders. Verbal orders must be authenticated and dated by the physician in accordance with applicable state laws and regulations, as well as the HHA's internal policies.

(c) *Standard: Review and revision of the plan of care.* (1) The individualized plan of care must be reviewed and revised by the physician who is responsible for the home health plan of care and the HHA as frequently as the patient's condition or needs require, but no less frequently than once every 60 days, beginning with the start of care date. The HHA must promptly alert the relevant physician(s) to any changes in the patient's condition or needs that suggest that outcomes are not being achieved and/or that the plan of care should be altered.

(2) A revised plan of care must reflect current information from the patient's updated comprehensive assessment, and contain information concerning the patient's progress toward the measurable outcomes and goals identified by the HHA and patient in the plan of care.

(3) Revisions to the plan of care must be communicated as follows:

(i) Any revision to the plan of care due to a change in patient health status must be communicated to the patient, representative (if any), caregiver, and all physicians issuing orders for the HHA plan of care.

(ii) Any revisions related to plans for the patient's discharge must be communicated to the patient, representative, caregiver, all physicians issuing orders for the HHA plan of care, and the patient's primary care practitioner or other health care professional who will be responsible for providing care and services to the patient after discharge from the HHA (if any).

(d) *Standard: Coordination of care.* The HHA must:

(1) Assure communication with all physicians involved in the plan of care.

(2) Integrate orders from all physicians involved in the plan of care

to assure the coordination of all services and interventions provided to the patient.

(3) Integrate services, whether services are provided directly or under arrangement, to assure the identification of patient needs and factors that could affect patient safety and treatment effectiveness and the coordination of care provided by all disciplines.

(4) Coordinate care delivery to meet the patient's needs, and involve the patient, representative (if any), and caregiver(s), as appropriate, in the coordination of care activities.

(5) Ensure that each patient, and his or her caregiver(s) where applicable, receive ongoing education and training provided by the HHA, as appropriate, regarding the care and services identified in the plan of care. The HHA must provide training, as necessary, to ensure a timely discharge.

(e) *Standard: Written information to the patient.* The HHA must provide the patient and caregiver with a copy of written instructions outlining:

(1) Visit schedule, including frequency of visits by HHA personnel and personnel acting on behalf of the HHA.

(2) Patient medication schedule/instructions, including: medication name, dosage and frequency and which medications will be administered by HHA personnel and personnel acting on behalf of the HHA.

(3) Any treatments to be administered by HHA personnel and personnel acting on behalf of the HHA, including therapy services.

(4) Any other pertinent instruction related to the patient's care and treatments that the HHA will provide, specific to the patient's care needs.

(5) Name and contact information of the HHA clinical manager.

§ 484.65 Condition of participation: Quality assessment and performance improvement (QAPI).

The HHA must develop, implement, evaluate, and maintain an effective, ongoing, HHA-wide, data-driven QAPI program. The HHA's governing body must ensure that the program reflects the complexity of its organization and services; involves all HHA services (including those services provided under contract or arrangement); focuses on indicators related to improved outcomes, including the use of emergent care services, hospital admissions and re-admissions; and takes actions that address the HHA's performance across the spectrum of care, including the prevention and reduction of medical errors. The HHA must maintain documentary evidence of its QAPI

program and be able to demonstrate its operation to CMS.

(a) *Standard: Program scope.* (1) The program must at least be capable of showing measurable improvement in indicators for which there is evidence that improvement in those indicators will improve health outcomes, patient safety, and quality of care.

(2) The HHA must measure, analyze, and track quality indicators, including adverse patient events, and other aspects of performance that enable the HHA to assess processes of care, HHA services, and operations.

(b) *Standard: Program data.* (1) The program must utilize quality indicator data, including measures derived from OASIS, where applicable, and other relevant data, in the design of its program.

(2) The HHA must use the data collected to—

(i) Monitor the effectiveness and safety of services and quality of care; and

(ii) Identify opportunities for improvement.

(3) The frequency and detail of the data collection must be approved by the HHA's governing body.

(c) *Standard: Program activities.* (1) The HHA's performance improvement activities must—

(i) Focus on high risk, high volume, or problem-prone areas;

(ii) Consider incidence, prevalence, and severity of problems in those areas; and

(iii) Lead to an immediate correction of any identified problem that directly or potentially threaten the health and safety of patients.

(2) Performance improvement activities must track adverse patient events, analyze their causes, and implement preventive actions.

(3) The HHA must take actions aimed at performance improvement, and, after implementing those actions, the HHA must measure its success and track performance to ensure that improvements are sustained.

(d) *Standard: Performance improvement projects.* Beginning January 13, 2018 HHAs must conduct performance improvement projects.

(1) The number and scope of distinct improvement projects conducted annually must reflect the scope, complexity, and past performance of the HHA's services and operations.

(2) The HHA must document the quality improvement projects undertaken, the reasons for conducting these projects, and the measurable progress achieved on these projects.

(e) *Standard: Executive responsibilities.* The HHA's governing

body is responsible for ensuring the following:

(1) That an ongoing program for quality improvement and patient safety is defined, implemented, and maintained;

(2) That the HHA-wide quality assessment and performance improvement efforts address priorities for improved quality of care and patient safety, and that all improvement actions are evaluated for effectiveness;

(3) That clear expectations for patient safety are established, implemented, and maintained; and

(4) That any findings of fraud or waste are appropriately addressed.

§ 484.70 Condition of participation: Infection prevention and control.

The HHA must maintain and document an infection control program which has as its goal the prevention and control of infections and communicable diseases.

(a) *Standard: Prevention.* The HHA must follow accepted standards of practice, including the use of standard precautions, to prevent the transmission of infections and communicable diseases.

(b) *Standard: Control.* The HHA must maintain a coordinated agency-wide program for the surveillance, identification, prevention, control, and investigation of infectious and communicable diseases that is an integral part of the HHA's quality assessment and performance improvement (QAPI) program. The infection control program must include:

(1) A method for identifying infectious and communicable disease problems; and

(2) A plan for the appropriate actions that are expected to result in improvement and disease prevention.

(c) *Standard: Education.* The HHA must provide infection control education to staff, patients, and caregiver(s).

§ 484.75 Condition of participation: Skilled professional services.

Skilled professional services include skilled nursing services, physical therapy, speech-language pathology services, and occupational therapy, as specified in § 409.44 of this chapter, and physician and medical social work services as specified in § 409.45 of this chapter. Skilled professionals who provide services to HHA patients directly or under arrangement must participate in the coordination of care.

(a) *Standard: Provision of services by skilled professionals.* Skilled professional services are authorized, delivered, and supervised only by

health care professionals who meet the appropriate qualifications specified under § 484.115 and who practice according to the HHA's policies and procedures.

(b) *Standard: Responsibilities of skilled professionals.* Skilled professionals must assume responsibility for, but not be restricted to, the following:

(1) Ongoing interdisciplinary assessment of the patient;

(2) Development and evaluation of the plan of care in partnership with the patient, representative (if any), and caregiver(s);

(3) Providing services that are ordered by the physician as indicated in the plan of care;

(4) Patient, caregiver, and family counseling;

(5) Patient and caregiver education;

(6) Preparing clinical notes;

(7) Communication with all physicians involved in the plan of care and other health care practitioners (as appropriate) related to the current plan of care;

(8) Participation in the HHA's QAPI program; and

(9) Participation in HHA-sponsored in-service training.

(c) *Supervision of skilled professional assistants.* (1) Nursing services are provided under the supervision of a registered nurse that meets the requirements of § 484.115(k).

(2) Rehabilitative therapy services are provided under the supervision of an occupational therapist or physical therapist that meets the requirements of § 484.115(f) or (h), respectively.

(3) Medical social services are provided under the supervision of a social worker that meets the requirements of § 484.115(m).

§ 484.80 Condition of participation: Home health aide services.

All home health aide services must be provided by individuals who meet the personnel requirements specified in paragraph (a) of this section.

(a) *Standard: Home health aide qualifications.* (1) A qualified home health aide is a person who has successfully completed:

(i) A training and competency evaluation program as specified in paragraphs (b) and (c) respectively of this section; or

(ii) A competency evaluation program that meets the requirements of paragraph (c) of this section; or

(iii) A nurse aide training and competency evaluation program approved by the state as meeting the requirements of § 483.151 through § 483.154 of this chapter, and is

currently listed in good standing on the state nurse aide registry; or

(iv) The requirements of a state licensure program that meets the provisions of paragraphs (b) and (c) of this section.

(2) A home health aide or nurse aide is not considered to have completed a program, as specified in paragraph (a)(1) of this section, if, since the individual's most recent completion of the program(s), there has been a continuous period of 24 consecutive months during which none of the services furnished by the individual as described in § 409.40 of this chapter were for compensation. If there has been a 24-month lapse in furnishing services for compensation, the individual must complete another program, as specified in paragraph (a)(1) of this section, before providing services.

(b) *Standard: Content and duration of home health aide classroom and supervised practical training.* (1) Home health aide training must include classroom and supervised practical training in a practicum laboratory or other setting in which the trainee demonstrates knowledge while providing services to an individual under the direct supervision of a registered nurse, or a licensed practical nurse who is under the supervision of a registered nurse. Classroom and supervised practical training must total at least 75 hours.

(2) A minimum of 16 hours of classroom training must precede a minimum of 16 hours of supervised practical training as part of the 75 hours.

(3) A home health aide training program must address each of the following subject areas:

(i) Communication skills, including the ability to read, write, and verbally report clinical information to patients, representatives, and caregivers, as well as to other HHA staff.

(ii) Observation, reporting, and documentation of patient status and the care or service furnished.

(iii) Reading and recording temperature, pulse, and respiration.

(iv) Basic infection prevention and control procedures.

(v) Basic elements of body functioning and changes in body function that must be reported to an aide's supervisor.

(vi) Maintenance of a clean, safe, and healthy environment.

(vii) Recognizing emergencies and the knowledge of instituting emergency procedures and their application.

(viii) The physical, emotional, and developmental needs of and ways to work with the populations served by the HHA, including the need for respect for

the patient, his or her privacy, and his or her property.

(ix) Appropriate and safe techniques in performing personal hygiene and grooming tasks that include—

(A) Bed bath;

(B) Sponge, tub, and shower bath;

(C) Hair shampooing in sink, tub, and bed;

(D) Nail and skin care;

(E) Oral hygiene;

(F) Toileting and elimination;

(x) Safe transfer techniques and ambulation;

(xi) Normal range of motion and positioning;

(xii) Adequate nutrition and fluid intake;

(xiii) Recognizing and reporting changes in skin condition; and

(xiv) Any other task that the HHA may choose to have an aide perform as permitted under state law.

(xv) The HHA is responsible for training home health aides, as needed, for skills not covered in the basic checklist, as described in paragraph (b)(3)(ix) of this section.

(4) The HHA must maintain documentation that demonstrates that the requirements of this standard have been met.

(c) *Standard: Competency evaluation.* An individual may furnish home health services on behalf of an HHA only after that individual has successfully completed a competency evaluation program as described in this section.

(1) The competency evaluation must address each of the subjects listed in paragraph (b)(3) of this section. Subject areas specified under paragraphs (b)(3)(i), (iii), (ix), (x), and (xi) of this section must be evaluated by observing an aide's performance of the task with a patient. The remaining subject areas may be evaluated through written examination, oral examination, or after observation of a home health aide with a patient.

(2) A home health aide competency evaluation program may be offered by any organization, except as specified in paragraph (f) of this section.

(3) The competency evaluation must be performed by a registered nurse in consultation with other skilled professionals, as appropriate.

(4) A home health aide is not considered competent in any task for which he or she is evaluated as unsatisfactory. An aide must not perform that task without direct supervision by a registered nurse until after he or she has received training in the task for which he or she was evaluated as "unsatisfactory," and has successfully completed a subsequent evaluation. A home health aide is not

considered to have successfully passed a competency evaluation if the aide has an "unsatisfactory" rating in more than one of the required areas.

(5) The HHA must maintain documentation which demonstrates that the requirements of this standard have been met.

(d) *Standard: In-service training.* A home health aide must receive at least 12 hours of in-service training during each 12-month period. In-service training may occur while an aide is furnishing care to a patient.

(1) In-service training may be offered by any organization and must be supervised by a registered nurse.

(2) The HHA must maintain documentation that demonstrates the requirements of this standard have been met.

(e) *Standard: Qualifications for instructors conducting classroom and supervised practical training.* Classroom and supervised practical training must be performed by a registered nurse who possesses a minimum of 2 years nursing experience, at least 1 year of which must be in home health care, or by other individuals under the general supervision of the registered nurse.

(f) *Standard: Eligible training and competency evaluation organizations.* A home health aide training program and competency evaluation program may be offered by any organization except by an HHA that, within the previous 2 years:

(1) Was out of compliance with the requirements of paragraphs (b), (c), (d), or (e) of this section; or

(2) Permitted an individual who does not meet the definition of a "qualified home health aide" as specified in paragraph (a) of this section to furnish home health aide services (with the exception of licensed health professionals and volunteers); or

(3) Was subjected to an extended (or partially extended) survey as a result of having been found to have furnished substandard care (or for other reasons as determined by CMS or the state); or

(4) Was assessed a civil monetary penalty of \$5,000 or more as an intermediate sanction; or

(5) Was found to have compliance deficiencies that endangered the health and safety of the HHA's patients, and had temporary management appointed to oversee the management of the HHA; or

(6) Had all or part of its Medicare payments suspended; or

(7) Was found under any federal or state law to have:

(i) Had its participation in the Medicare program terminated; or

(ii) Been assessed a penalty of \$5,000 or more for deficiencies in federal or state standards for HHAs; or

(iii) Been subjected to a suspension of Medicare payments to which it otherwise would have been entitled; or

(iv) Operated under temporary management that was appointed to oversee the operation of the HHA and to ensure the health and safety of the HHA's patients; or

(v) Been closed, or had its patients transferred by the state; or

(vi) Been excluded from participating in federal health care programs or debarred from participating in any government program.

(g) *Standard: Home health aide assignments and duties.* (1) Home health aides are assigned to a specific patient by a registered nurse or other appropriate skilled professional, with written patient care instructions for a home health aide prepared by that registered nurse or other appropriate skilled professional (that is, physical therapist, speech-language pathologist, or occupational therapist).

(2) A home health aide provides services that are:

(i) Ordered by the physician;

(ii) Included in the plan of care;

(iii) Permitted to be performed under state law; and

(iv) Consistent with the home health aide training.

(3) The duties of a home health aide include:

(i) The provision of hands-on personal care;

(ii) The performance of simple procedures as an extension of therapy or nursing services;

(iii) Assistance in ambulation or exercises; and

(iv) Assistance in administering medications ordinarily self-administered.

(4) Home health aides must be members of the interdisciplinary team, must report changes in the patient's condition to a registered nurse or other appropriate skilled professional, and must complete appropriate records in compliance with the HHA's policies and procedures.

(h) *Standard: Supervision of home health aides.* (1)(i) If home health aide services are provided to a patient who is receiving skilled nursing, physical or occupational therapy, or speech-language pathology services, a registered nurse or other appropriate skilled professional who is familiar with the patient, the patient's plan of care, and the written patient care instructions described in § 484.80(g), must make an onsite visit to the patient's home no less frequently than every 14 days. The

home health aide does not have to be present during this visit.

(ii) If an area of concern in aide services is noted by the supervising registered nurse or other appropriate skilled professional, then the supervising individual must make an on-site visit to the location where the patient is receiving care in order to observe and assess the aide while he or she is performing care.

(iii) A registered nurse or other appropriate skilled professional must make an annual on-site visit to the location where a patient is receiving care in order to observe and assess each aide while he or she is performing care.

(2) If home health aide services are provided to a patient who is not receiving skilled nursing care, physical or occupational therapy, or speech-language pathology services, the registered nurse must make an on-site visit to the location where the patient is receiving care no less frequently than every 60 days in order to observe and assess each aide while he or she is performing care.

(3) If a deficiency in aide services is verified by the registered nurse or other appropriate skilled professional during an on-site visit, then the agency must conduct, and the home health aide must complete a competency evaluation in accordance with paragraph (c) of this section.

(4) Home health aide supervision must ensure that aides furnish care in a safe and effective manner, including, but not limited to, the following elements:

(i) Following the patient's plan of care for completion of tasks assigned to a home health aide by the registered nurse or other appropriate skilled professional;

(ii) Maintaining an open communication process with the patient, representative (if any), caregivers, and family;

(iii) Demonstrating competency with assigned tasks;

(iv) Complying with infection prevention and control policies and procedures;

(v) Reporting changes in the patient's condition; and

(vi) Honoring patient rights.

(5) If the home health agency chooses to provide home health aide services under arrangements, as defined in section 1861(w)(1) of the Act, the HHA's responsibilities also include, but are not limited to:

(i) Ensuring the overall quality of care provided by an aide;

(ii) Supervising aide services as described in paragraphs (h)(1) and (2) of this section; and

(iii) Ensuring that home health aides who provide services under arrangement have met the training or competency evaluation requirements, or both, of this part.

(i) *Standard: Individuals furnishing Medicaid personal care aide-only services under a Medicaid personal care benefit.* An individual may furnish personal care services, as defined in § 440.167 of this chapter, on behalf of an HHA. Before the individual may furnish personal care services, the individual must meet all qualification standards established by the state. The individual only needs to demonstrate competency in the services the individual is required to furnish.

Subpart C—Organizational Environment

§ 484.100 Condition of participation: Compliance with Federal, State, and local laws and regulations related to the health and safety of patients.

The HHA and its staff must operate and furnish services in compliance with all applicable federal, state, and local laws and regulations related to the health and safety of patients. If state or local law provides licensing of HHAs, the HHA must be licensed.

(a) *Standard: Disclosure of ownership and management information.* The HHA must comply with the requirements of part 420 subpart C, of this chapter. The HHA also must disclose the following information to the state survey agency at the time of the HHA's initial request for certification, for each survey, and at the time of any change in ownership or management:

(1) The names and addresses of all persons with an ownership or controlling interest in the HHA as defined in § 420.201, § 420.202, and § 420.206 of this chapter.

(2) The name and address of each person who is an officer, a director, an agent, or a managing employee of the HHA as defined in § 420.201, § 420.202, and § 420.206 of this chapter.

(3) The name and business address of the corporation, association, or other company that is responsible for the management of the HHA, and the names and addresses of the chief executive officer and the chairperson of the board of directors of that corporation, association, or other company responsible for the management of the HHA.

(b) *Standard: Licensing.* The HHA, its branches, and all persons furnishing services to patients must be licensed, certified, or registered, as applicable, in accordance with the state licensing authority as meeting those requirements.

(c) *Standard: Laboratory services.* (1) If the HHA engages in laboratory testing outside of the context of assisting an individual in self-administering a test with an appliance that has been cleared for that purpose by the Food and Drug Administration, the testing must be in compliance with all applicable requirements of part 493 of this chapter. The HHA may not substitute its equipment for a patient's equipment when assisting with self-administered tests.

(2) If the HHA refers specimens for laboratory testing, the referral laboratory must be certified in the appropriate specialties and subspecialties of services in accordance with the applicable requirements of part 493 of this chapter.

§ 484.102 Condition of participation: Emergency preparedness.

The Home Health Agency (HHA) must comply with all applicable Federal, State, and local emergency preparedness requirements. The HHA must establish and maintain an emergency preparedness program that meets the requirements of this section. The emergency preparedness program must include, but not be limited to, the following elements:

(a) *Emergency plan.* The HHA must develop and maintain an emergency preparedness plan that must be reviewed, and updated at least annually. The plan must do all of the following:

(1) Be based on and include a documented, facility-based and community-based risk assessment, utilizing an all-hazards approach.

(2) Include strategies for addressing emergency events identified by the risk assessment.

(3) Address patient population, including, but not limited to, the type of services the HHA has the ability to provide in an emergency; and continuity of operations, including delegations of authority and succession plans.

(4) Include a process for cooperation and collaboration with local, tribal, regional, State, and Federal emergency preparedness officials' efforts to maintain an integrated response during a disaster or emergency situation, including documentation of the HHA's efforts to contact such officials and, when applicable, of its participation in collaborative and cooperative planning efforts.

(b) *Policies and procedures.* The HHA must develop and implement emergency preparedness policies and procedures, based on the emergency plan set forth in paragraph (a) of this section, risk assessment at paragraph (a)(1) of this section, and the

communication plan at paragraph (c) of this section. The policies and procedures must be reviewed and updated at least annually. At a minimum, the policies and procedures must address the following:

(1) The plans for the HHA's patients during a natural or man-made disaster. Individual plans for each patient must be included as part of the comprehensive patient assessment, which must be conducted according to the provisions at § 484.55.

(2) The procedures to inform State and local emergency preparedness officials about HHA patients in need of evacuation from their residences at any time due to an emergency situation based on the patient's medical and psychiatric condition and home environment.

(3) The procedures to follow up with on-duty staff and patients to determine services that are needed, in the event that there is an interruption in services during or due to an emergency. The HHA must inform State and local officials of any on-duty staff or patients that they are unable to contact.

(4) A system of medical documentation that preserves patient information, protects confidentiality of patient information, and secures and maintains the availability of records.

(5) The use of volunteers in an emergency or other emergency staffing strategies, including the process and role for integration of State or Federally designated health care professionals to address surge needs during an emergency.

(c) *Communication plan.* The HHA must develop and maintain an emergency preparedness communication plan that complies with Federal, State, and local laws and must be reviewed and updated at least annually. The communication plan must include all of the following:

(1) Names and contact information for the following:

(i) Staff.

(ii) Entities providing services under arrangement.

(iii) Patients' physicians.

(iv) Volunteers.

(2) Contact information for the following:

(i) Federal, State, tribal, regional, or local emergency preparedness staff.

(ii) Other sources of assistance.

(3) Primary and alternate means for communicating with the HHA's staff, Federal, State, tribal, regional, and local emergency management agencies.

(4) A method for sharing information and medical documentation for patients under the HHA's care, as necessary, with other health care providers to maintain the continuity of care.

(5) A means of providing information about the general condition and location of patients under the facility's care as permitted under 45 CFR 164.510(b)(4).

(6) A means of providing information about the HHA's needs, and its ability to provide assistance, to the authority having jurisdiction, the Incident Command Center, or designee.

(d) *Training and testing.* The HHA must develop and maintain an emergency preparedness training and testing program that is based on the emergency plan set forth in paragraph (a) of this section, risk assessment at paragraph (a)(1) of this section, policies and procedures at paragraph (b) of this section, and the communication plan at paragraph (c) of this section. The training and testing program must be reviewed and updated at least annually.

(1) *Training program.* The HHA must do all of the following:

(i) Initial training in emergency preparedness policies and procedures to all new and existing staff, individuals providing services under arrangement, and volunteers, consistent with their expected roles.

(ii) Provide emergency preparedness training at least annually.

(iii) Maintain documentation of the training.

(ii) Demonstrate staff knowledge of emergency procedures.

(2) *Testing.* The HHA must conduct exercises to test the emergency plan at least annually. The HHA must do the following:

(i) Participate in a full-scale exercise that is community-based or when a community-based exercise is not accessible, an individual, facility-based. If the HHA experiences an actual natural or man-made emergency that requires activation of the emergency plan, the HHA is exempt from engaging in a community-based or individual, facility-based full-scale exercise for 1 year following the onset of the actual event.

(ii) Conduct an additional exercise that may include, but is not limited to the following:

(A) A second full-scale exercise that is community-based or individual, facility-based.

(B) A tabletop exercise that includes a group discussion led by a facilitator, using a narrated, clinically-relevant emergency scenario, and a set of problem statements, directed messages, or prepared questions designed to challenge an emergency plan.

(iii) Analyze the HHA's response to and maintain documentation of all drills, tabletop exercises, and emergency events, and revise the HHA's emergency plan, as needed.

(e) *Integrated healthcare systems.* If a HHA is part of a healthcare system consisting of multiple separately certified healthcare facilities that elects to have a unified and integrated emergency preparedness program, the HHA may choose to participate in the healthcare system's coordinated emergency preparedness program. If elected, the unified and integrated emergency preparedness program must do all of the following:

(1) Demonstrate that each separately certified facility within the system actively participated in the development of the unified and integrated emergency preparedness program.

(2) Be developed and maintained in a manner that takes into account each separately certified facility's unique circumstances, patient populations, and services offered.

(3) Demonstrate that each separately certified facility is capable of actively using the unified and integrated emergency preparedness program and is in compliance with the program.

(4) Include a unified and integrated emergency plan that meets the requirements of paragraphs (a)(2), (3), and (4) of this section. The unified and integrated emergency plan must also be based on and include all of the following:

(i) A documented community-based risk assessment, utilizing an all-hazards approach.

(ii) A documented individual facility-based risk assessment for each separately certified facility within the health system, utilizing an all-hazards approach.

(5) Include integrated policies and procedures that meet the requirements set forth in paragraph (b) of this section, a coordinated communication plan and training and testing programs that meet the requirements of paragraphs (c) and (d) of this section, respectively.

§ 484.105 Condition of participation: Organization and administration of services.

The HHA must organize, manage, and administer its resources to attain and maintain the highest practicable functional capacity, including providing optimal care to achieve the goals and outcomes identified in the patient's plan of care, for each patient's medical, nursing, and rehabilitative needs. The HHA must assure that administrative and supervisory functions are not delegated to another agency or organization, and all services not furnished directly are monitored and controlled. The HHA must set forth, in writing, its organizational structure,

including lines of authority, and services furnished.

(a) *Standard: Governing body.* A governing body (or designated persons so functioning) must assume full legal authority and responsibility for the agency's overall management and operation, the provision of all home health services, fiscal operations, review of the agency's budget and its operational plans, and its quality assessment and performance improvement program.

(b) *Standard: Administrator.* (1) The administrator must:

(i) Be appointed by and report to the governing body;

(ii) Be responsible for all day-to-day operations of the HHA;

(iii) Ensure that a clinical manager as described in paragraph (c) of this section is available during all operating hours;

(iv) Ensure that the HHA employs qualified personnel, including assuring the development of personnel qualifications and policies.

(2) When the administrator is not available, a qualified, pre-designated person, who is authorized in writing by the administrator and the governing body, assumes the same responsibilities and obligations as the administrator. The pre-designated person may be the clinical manager as described in paragraph (c) of this section.

(3) The administrator or a pre-designated person is available during all operating hours.

(c) *Clinical manager.* One or more qualified individuals must provide oversight of all patient care services and personnel. Oversight must include the following—

(1) Making patient and personnel assignments,

(2) Coordinating patient care,

(3) Coordinating referrals,

(4) Assuring that patient needs are continually assessed, and

(5) Assuring the development, implementation, and updates of the individualized plan of care.

(d) *Standard: Parent-branch relationship.* (1) The parent HHA is responsible for reporting all branch locations of the HHA to the state survey agency at the time of the HHA's request for initial certification, at each survey, and at the time the parent proposes to add or delete a branch.

(2) The parent HHA provides direct support and administrative control of its branches.

(e) *Standard: Services under arrangement.* (1) The HHA must ensure that all services furnished under arrangement provided by other entities or individuals meet the requirements of

this part and the requirements of section 1861(w) of the Act (42 U.S.C. 1395x (w)).

(2) An HHA must have a written agreement with another agency, with an organization, or with an individual when that entity or individual furnishes services under arrangement to the HHA's patients. The HHA must maintain overall responsibility for the services provided under arrangement, as well as the manner in which they are furnished. The agency, organization, or individual providing services under arrangement may not have been:

(i) Denied Medicare or Medicaid enrollment;

(ii) Been excluded or terminated from any federal health care program or Medicaid;

(iii) Had its Medicare or Medicaid billing privileges revoked; or

(iv) Been debarred from participating in any government program.

(3) The primary HHA is responsible for patient care, and must conduct and provide, either directly or under arrangements, all services rendered to patients.

(f) *Standard: Services furnished.* (1) Skilled nursing services and at least one other therapeutic service (physical therapy, speech-language pathology, or occupational therapy; medical social services; or home health aide services) are made available on a visiting basis, in a place of residence used as a patient's home. An HHA must provide at least one of the services described in this subsection directly, but may provide the second service and additional services under arrangement with another agency or organization.

(2) All HHA services must be provided in accordance with current clinical practice guidelines and accepted professional standards of practice.

(g) *Standard: Outpatient physical therapy or speech-language pathology services.* An HHA that furnishes outpatient physical therapy or speech-language pathology services must meet all of the applicable conditions of this part and the additional health and safety requirements set forth in § 485.711, § 485.713, § 485.715, § 485.719, § 485.723, and § 485.727 of this chapter to implement section 1861(p) of the Act.

(h) *Standard: Institutional planning.* The HHA, under the direction of the governing body, prepares an overall plan and a budget that includes an annual operating budget and capital expenditure plan.

(1) *Annual operating budget.* There is an annual operating budget that includes all anticipated income and expenses related to items that would,

under generally accepted accounting principles, be considered income and expense items. However, it is not required that there be prepared, in connection with any budget, an item by item identification of the components of each type of anticipated income or expense.

(2) *Capital expenditure plan.* (i) There is a capital expenditure plan for at least a 3-year period, including the operating budget year. The plan includes and identifies in detail the anticipated sources of financing for, and the objectives of, each anticipated expenditure of more than \$600,000 for items that would under generally accepted accounting principles, be considered capital items. In determining if a single capital expenditure exceeds \$600,000, the cost of studies, surveys, designs, plans, working drawings, specifications, and other activities essential to the acquisition, improvement, modernization, expansion, or replacement of land, plant, building, and equipment are included. Expenditures directly or indirectly related to capital expenditures, such as grading, paving, broker commissions, taxes assessed during the construction period, and costs involved in demolishing or razing structures on land are also included. Transactions that are separated in time, but are components of an overall plan or patient care objective, are viewed in their entirety without regard to their timing. Other costs related to capital expenditures include title fees, permit and license fees, broker commissions, architect, legal, accounting, and appraisal fees; interest, finance, or carrying charges on bonds, notes and other costs incurred for borrowing funds.

(ii) If the anticipated source of financing is, in any part, the anticipated payment from title V (Maternal and Child Health Services Block Grant) or title XVIII (Medicare) or title XIX (Medicaid) of the Social Security Act, the plan specifies the following:

(A) Whether the proposed capital expenditure is required to conform, or is likely to be required to conform, to current standards, criteria, or plans developed in accordance with the Public Health Service Act or the Mental Retardation Facilities and Community Mental Health Centers Construction Act of 1963.

(B) Whether a capital expenditure proposal has been submitted to the designated planning agency for approval in accordance with section 1122 of the Act (42 U.S.C. 1320a-1) and implementing regulations.

(C) Whether the designated planning agency has approved or disapproved the proposed capital expenditure if it was presented to that agency.

(3) *Preparation of plan and budget.* The overall plan and budget is prepared under the direction of the governing body of the HHA by a committee consisting of representatives of the governing body, the administrative staff, and the medical staff (if any) of the HHA.

(4) *Annual review of plan and budget.* The overall plan and budget is reviewed and updated at least annually by the committee referred to in paragraph (i)(3) of this section under the direction of the governing body of the HHA.

§ 484.110 Condition of participation: Clinical records.

The HHA must maintain a clinical record containing past and current information for every patient accepted by the HHA and receiving home health services. Information contained in the clinical record must be accurate, adhere to current clinical record documentation standards of practice, and be available to the physician(s) issuing orders for the home health plan of care, and appropriate HHA staff. This information may be maintained electronically.

(a) *Standard: Contents of clinical record.* The record must include:

(1) The patient's current comprehensive assessment, including all of the assessments from the most recent home health admission, clinical notes, plans of care, and physician orders;

(2) All interventions, including medication administration, treatments, and services, and responses to those interventions;

(3) Goals in the patient's plans of care and the patient's progress toward achieving them;

(4) Contact information for the patient, the patient's representative (if any), and the patient's primary caregiver(s);

(5) Contact information for the primary care practitioner or other health care professional who will be responsible for providing care and services to the patient after discharge from the HHA; and

(6)(i) A completed discharge summary that is sent to the primary care practitioner or other health care professional who will be responsible for providing care and services to the patient after discharge from the HHA (if any) within 5 business days of the patient's discharge; or

(ii) A completed transfer summary that is sent within 2 business days of a planned transfer, if the patient's care

will be immediately continued in a health care facility; or

(iii) A completed transfer summary that is sent within 2 business days of becoming aware of an unplanned transfer, if the patient is still receiving care in a health care facility at the time when the HHA becomes aware of the transfer.

(b) *Standard: Authentication.* All entries must be legible, clear, complete, and appropriately authenticated, dated, and timed. Authentication must include a signature and a title (occupation), or a secured computer entry by a unique identifier, of a primary author who has reviewed and approved the entry.

(c) *Standard: Retention of records.* (1) Clinical records must be retained for 5 years after the discharge of the patient, unless state law stipulates a longer period of time.

(2) The HHA's policies must provide for retention of clinical records even if it discontinues operation. When an HHA discontinues operation, it must inform the state agency where clinical records will be maintained.

(d) *Standard: Protection of records.* The clinical record, its contents, and the information contained therein must be safeguarded against loss or unauthorized use. The HHA must be in compliance with the rules regarding protected health information set out at 45 CFR parts 160 and 164.

(e) *Standard: Retrieval of clinical records.* A patient's clinical record (whether hard copy or electronic form) must be made available to a patient, free of charge, upon request at the next home visit, or within 4 business days (whichever comes first).

§ 484.115 Condition of participation: Personnel qualifications.

HHA staff are required to meet the following standards:

(a) *Standard: Administrator, home health agency.* (1) For individuals that began employment with the HHA prior to July 13, 2017, a person who:

(i) Is a licensed physician;

(ii) Is a registered nurse; or

(iii) Has training and experience in health service administration and at least 1 year of supervisory administrative experience in home health care or a related health care program.

(2) For individuals that begin employment with an HHA on or after July 13, 2017, a person who:

(i) Is a licensed physician, a registered nurse, or holds an undergraduate degree; and

(ii) Has experience in health service administration, with at least 1 year of supervisory or administrative

experience in home health care or a related health care program.

(b) *Standard: Audiologist.* A person who:

(1) Meets the education and experience requirements for a Certificate of Clinical Competence in audiology granted by the American Speech-Language-Hearing Association; or

(2) Meets the educational requirements for certification and is in the process of accumulating the supervised experience required for certification.

(c) *Standard: Clinical manager.* A person who is a licensed physician, physical therapist, speech-language pathologist, occupational therapist, audiologist, social worker, or a registered nurse.

(d) *Standard: Home health aide.* A person who meets the qualifications for home health aides specified in section 1891(a)(3) of the Act and implemented at § 484.80.

(e) *Standard: Licensed practical (vocational) nurse.* A person who has completed a practical (vocational) nursing program, is licensed in the state where practicing, and who furnishes services under the supervision of a qualified registered nurse.

(f) *Standard: Occupational therapist.* A person who—

(1)(i) Is licensed or otherwise regulated, if applicable, as an occupational therapist by the state in which practicing, unless licensure does not apply;

(ii) Graduated after successful completion of an occupational therapist education program accredited by the Accreditation Council for Occupational Therapy Education (ACOTE) of the American Occupational Therapy Association, Inc. (AOTA), or successor organizations of ACOTE; and

(iii) Is eligible to take, or has successfully completed the entry-level certification examination for occupational therapists developed and administered by the National Board for Certification in Occupational Therapy, Inc. (NBCOT).

(2) On or before December 31, 2009—

(i) Is licensed or otherwise regulated, if applicable, as an occupational therapist by the state in which practicing; or

(ii) When licensure or other regulation does not apply—

(A) Graduated after successful completion of an occupational therapist education program accredited by the accreditation Council for Occupational Therapy Education (ACOTE) of the American Occupational Therapy Association, Inc. (AOTA) or successor organizations of ACOTE; and

(B) Is eligible to take, or has successfully completed the entry-level certification examination for occupational therapists developed and administered by the National Board for Certification in Occupational Therapy, Inc., (NBCOT).

(3) On or before January 1, 2008—

(i) Graduated after successful completion of an occupational therapy program accredited jointly by the Committee on Allied Health Education and Accreditation of the American Medical Association and the American Occupational Therapy Association; or

(ii) Is eligible for the National Registration Examination of the American Occupational Therapy Association or the National Board for Certification in Occupational Therapy.

(4) On or before December 31, 1977—

(i) Had 2 years of appropriate experience as an occupational therapist; and

(ii) Had achieved a satisfactory grade on an occupational therapist proficiency examination conducted, approved, or sponsored by the U.S. Public Health Service.

(5) If educated outside the United States, must meet both of the following:

(i) Graduated after successful completion of an occupational therapist education program accredited as substantially equivalent to occupational therapist entry level education in the United States by one of the following:

(A) The Accreditation Council for Occupational Therapy Education (ACOTE).

(B) Successor organizations of ACOTE.

(C) The World Federation of Occupational Therapists.

(D) A credentialing body approved by the American Occupational Therapy Association.

(E) Successfully completed the entry level certification examination for occupational therapists developed and administered by the National Board for Certification in Occupational Therapy, Inc. (NBCOT).

(ii) On or before December 31, 2009, is licensed or otherwise regulated, if applicable, as an occupational therapist by the state in which practicing.

(g) *Standard: Occupational therapy assistant.* A person who—

(1) Meets all of the following:

(i) Is licensed or otherwise regulated, if applicable, as an occupational therapy assistant by the state in which practicing, unless licensure does apply.

(ii) Graduated after successful completion of an occupational therapy assistant education program accredited by the Accreditation Council for Occupational Therapy Education,

(ACOTE) of the American Occupational Therapy Association, Inc. (AOTA) or its successor organizations.

(iii) Is eligible to take or successfully completed the entry-level certification examination for occupational therapy assistants developed and administered by the National Board for Certification in Occupational Therapy, Inc. (NBCOT).

(2) On or before December 31, 2009—

(i) Is licensed or otherwise regulated as an occupational therapy assistant, if applicable, by the state in which practicing; or any qualifications defined by the state in which practicing, unless licensure does not apply; or

(ii) Must meet both of the following:

(A) Completed certification requirements to practice as an occupational therapy assistant established by a credentialing organization approved by the American Occupational Therapy Association.

(B) After January 1, 2010, meets the requirements in paragraph (f)(1) of this section.

(3) After December 31, 1977 and on or before December 31, 2007—

(i) Completed certification requirements to practice as an occupational therapy assistant established by a credentialing organization approved by the American Occupational Therapy Association; or

(ii) Completed the requirements to practice as an occupational therapy assistant applicable in the state in which practicing.

(4) On or before December 31, 1977—

(i) Had 2 years of appropriate experience as an occupational therapy assistant; and

(ii) Had achieved a satisfactory grade on an occupational therapy assistant proficiency examination conducted, approved, or sponsored by the U.S. Public Health Service.

(5) If educated outside the United States, on or after January 1, 2008—

(i) Graduated after successful completion of an occupational therapy assistant education program that is accredited as substantially equivalent to occupational therapist assistant entry level education in the United States by—

(A) The Accreditation Council for Occupational Therapy Education (ACOTE).

(B) Its successor organizations.

(C) The World Federation of Occupational Therapists.

(D) By a credentialing body approved by the American Occupational Therapy Association; and

(E) Successfully completed the entry level certification examination for occupational therapy assistants developed and administered by the

National Board for Certification in Occupational Therapy, Inc. (NBCOT).

(ii) [Reserved]

(h) *Standard: Physical therapist.* A person who is licensed, if applicable, by the state in which practicing, unless licensure does not apply and meets one of the following requirements:

(1)(i) Graduated after successful completion of a physical therapist education program approved by one of the following:

(A) The Commission on Accreditation in Physical Therapy Education (CAPTE).

(B) Successor organizations of CAPTE.

(C) An education program outside the United States determined to be substantially equivalent to physical therapist entry level education in the United States by a credentials evaluation organization approved by the American Physical Therapy Association or an organization identified in 8 CFR 212.15(e) as it relates to physical therapists.

(ii) Passed an examination for physical therapists approved by the state in which physical therapy services are provided.

(2) On or before December 31, 2009—

(i) Graduated after successful completion of a physical therapy curriculum approved by the Commission on Accreditation in Physical Therapy Education (CAPTE); or

(ii) Meets both of the following:

(A) Graduated after successful completion of an education program determined to be substantially equivalent to physical therapist entry level education in the United States by a credentials evaluation organization approved by the American Physical Therapy Association or identified in 8 CFR 212.15(e) as it relates to physical therapists.

(B) Passed an examination for physical therapists approved by the state in which physical therapy services are provided.

(3) Before January 1, 2008 graduated from a physical therapy curriculum approved by one of the following:

(i) The American Physical Therapy Association.

(ii) The Committee on Allied Health Education and Accreditation of the American Medical Association.

(iii) The Council on Medical Education of the American Medical Association and the American Physical Therapy Association.

(4) On or before December 31, 1977 was licensed or qualified as a physical therapist and meets both of the following:

(i) Has 2 years of appropriate experience as a physical therapist.

(ii) Has achieved a satisfactory grade on a proficiency examination conducted, approved, or sponsored by the U.S. Public Health Service.

(5) Before January 1, 1966—

(i) Was admitted to membership by the American Physical Therapy Association;

(ii) Was admitted to registration by the American Registry of Physical Therapists; or

(iii) Graduated from a physical therapy curriculum in a 4-year college or university approved by a state department of education.

(6) Before January 1, 1966 was licensed or registered, and before January 1, 1970, had 15 years of fulltime experience in the treatment of illness or injury through the practice of physical therapy in which services were rendered under the order and direction of attending and referring doctors of medicine or osteopathy.

(7) If trained outside the United States before January 1, 2008, meets the following requirements:

(i) Was graduated since 1928 from a physical therapy curriculum approved in the country in which the curriculum was located and in which there is a member organization of the World Confederation for Physical Therapy.

(ii) Meets the requirements for membership in a member organization of the World Confederation for Physical Therapy.

(i) *Standard: Physical therapist assistant.* A person who is licensed, registered or certified as a physical therapist assistant, if applicable, by the state in which practicing, unless licensure does not apply and meets one of the following requirements:

(1)(i) Graduated from a physical therapist assistant curriculum approved by the Commission on Accreditation in Physical Therapy Education of the American Physical Therapy Association; or if educated outside the United States or trained in the United States military, graduated from an education program determined to be substantially equivalent to physical therapist assistant entry level education in the United States by a credentials evaluation organization approved by the American Physical Therapy Association or identified in 8 CFR 212.15(e); and

(ii) Passed a national examination for physical therapist assistants.

(2) On or before December 31, 2009, meets one of the following:

(i) Is licensed, or otherwise regulated in the state in which practicing.

(ii) In states where licensure or other regulations do not apply, graduated before December 31, 2009, from a 2-year college-level program approved by the

American Physical Therapy Association and after January 1, 2010, meets the requirements of paragraph (h)(1) of this section.

(3) Before January 1, 2008, where licensure or other regulation does not apply, graduated from a 2-year college level program approved by the American Physical Therapy Association.

(4) On or before December 31, 1977, was licensed or qualified as a physical therapist assistant and has achieved a satisfactory grade on a proficiency examination conducted, approved, or sponsored by the U.S. Public Health Service.

(j) *Standard: Physician.* A person who meets the qualifications and conditions specified in section 1861(r) of the Act and implemented at § 410.20(b) of this chapter.

(k) *Standard: Registered nurse.* A graduate of an approved school of professional nursing who is licensed in the state where practicing.

(l) *Standard: Social Work Assistant.* A person who provides services under the supervision of a qualified social worker and:

(1) Has a baccalaureate degree in social work, psychology, sociology, or other field related to social work, and has had at least 1 year of social work experience in a health care setting; or

(2) Has 2 years of appropriate experience as a social work assistant, and has achieved a satisfactory grade on a proficiency examination conducted, approved, or sponsored by the U.S. Public Health Service, except that the determinations of proficiency do not apply with respect to persons initially licensed by a state or seeking initial qualification as a social work assistant after December 31, 1977.

(m) *Standard: Social worker.* A person who has a master's or doctoral degree from a school of social work accredited by the Council on Social Work Education, and has 1 year of social work experience in a health care setting.

(n) *Standard: Speech-language pathologist.* A person who has a master's or doctoral degree in speech-language pathology, and who meets either of the following requirements:

(1) Is licensed as a speech-language pathologist by the state in which the individual furnishes such services; or

(2) In the case of an individual who furnishes services in a state which does not license speech-language pathologists:

(i) Has successfully completed 350 clock hours of supervised clinical practicum (or is in the process of accumulating supervised clinical experience);

(ii) Performed not less than 9 months of supervised full-time speech-language pathology services after obtaining a master's or doctoral degree in speech-language pathology or a related field; and

(iii) Successfully completed a national examination in speech-language pathology approved by the Secretary.

PART 485—CONDITIONS OF PARTICIPATION: SPECIALIZED PROVIDERS

■ 11. The authority citation for part 485 continues to read as follows:

Authority: Secs. 1102 and 1871 of the Social Security Act (42 U.S.C. 1302 and 1395(hh)).

■ 12. In the table below, for each section and paragraph indicated in the first two columns, remove the reference indicated in the third column and add the reference indicated in the fourth column:

Section	Paragraphs	Remove	Add
§ 485.58	Introductory text	and 484.4	and 484.115.
§ 485.70	(c) and (e)	§ 484.4	§ 484.115.

PART 488—SURVEY, CERTIFICATION, AND ENFORCEMENT PROCEDURES

■ 13. The authority citation for part 488 continues to read as follows:

Authority: Secs. 1102, 1128l, 1864, 1865, 1871 and 1875 of the Social Security Act, unless otherwise noted (42 U.S.C 1302,

1320a–7j, 1395aa, 1395bb, 1395hh) and 1395ll.

§ 488.805 [Amended]

■ 14. In § 488.805, in the definition of “temporary management”, remove “§§ 484.4 and 484.14(c)” and add in its place “§§ 484.105(b) and 484.115”.

Dated: December 8, 2016.

Andrew M. Slavitt,
Acting Administrator, Centers for Medicare & Medicaid Services.

Dated: December 9, 2016.

Sylvia M. Burwell,
Secretary, Department of Health and Human Services.

Environmental Protection Agency

40 CFR Part 68

Accidental Release Prevention Requirements: Risk Management Programs
Under the Clean Air Act; Final Rule

ENVIRONMENTAL PROTECTION AGENCY**40 CFR Part 68**

[EPA-HQ-OEM-2015-0725; FRL-9954-46-OLEM]

RIN 2050-AG82

Accidental Release Prevention Requirements: Risk Management Programs Under the Clean Air Act**AGENCY:** Environmental Protection Agency (EPA).**ACTION:** Final rule.

SUMMARY: The Environmental Protection Agency (EPA), in response to Executive Order 13650, is amending its Risk Management Program regulations. The revisions contain several changes to the accident prevention program requirements including an additional analysis of safer technology and alternatives as part of the process hazard analysis for some Program 3 processes, third-party audits and incident investigation root cause analysis for Program 2 and Program 3 processes; enhancements to the emergency preparedness requirements; increased public availability of chemical hazard information; and several other changes to certain regulatory definitions and data elements submitted in risk management plans. These amendments seek to improve chemical process safety, assist local emergency authorities in planning for and responding to accidents, and improve public awareness of chemical hazards at regulated sources.

DATES: This final rule is effective on March 14, 2017.

ADDRESSES: The EPA has established a docket for this action under Docket ID No. EPA-HQ-OEM-2015-0725. All documents in the docket are listed on the <http://www.regulations.gov> Web site. Although listed in the index, some information is not publicly available, e.g., Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the Internet and will be publicly available only in hard copy form. Publicly available docket materials are available electronically through <http://www.regulations.gov>.

I. General Information**A. Executive Summary****1. Purpose of the Regulatory Action**

The purpose of this action is to improve safety at facilities that use and distribute hazardous chemicals. In response to catastrophic chemical facility incidents in the United States, including the explosion that occurred at the West Fertilizer facility in West, Texas, on April 17, 2013 that killed 15 people (on May 11, 2016, ATF ruled that the fire was intentionally set).¹ President Obama issued Executive Order 13650, "Improving Chemical Facility Safety and Security," on August 1, 2013.²

Section 6(a)(i) of Executive Order 13650 requires that various Federal agencies develop options for improved chemical facility safety and security that identify "improvements to existing risk management practices through agency programs, private sector initiatives, Government guidance, outreach, standards, and regulations." One existing agency program is the Risk Management Program implemented by EPA under section 112(r) of the Clean Air Act (CAA) (42 U.S.C. 7412(r)). Section 6(c) of Executive Order 13650 requires the Administrator of EPA to review the chemical hazards covered by the Risk Management Program and expand, implement and enforce the Risk Management Program to address any additional hazards.

EPA proposed changes to its Risk Management Program regulations (40 CFR part 68) on March 14, 2016 (81 FR 13637) after publishing a "Request for Information" notice or "RFI" that solicited comments and information from the public regarding potential changes to the Risk Management

¹ See ATF Announces \$50,000 Reward in West, Texas Fatality Fire, <https://www.atf.gov/news/pr/atf-announces-50000-reward-west-texas-fatality-fire>.

² For more information on the Executive Order see <https://www.whitehouse.gov/the-press-office/2013/08/01/executive-order-improving-chemical-facility-safety-and-security>.

Program regulations (July 31, 2014, 79 FR 44604). While developing the proposed rulemaking, EPA convened a Small Business Advocacy Review (SBAR) panel to receive input from Small Entity Representatives (SERs). EPA also hosted a public hearing on March 29, 2016 to provide interested parties the opportunity to present data, views or arguments concerning the proposed action.

The Risk Management Program regulations have been effective in preventing and mitigating chemical accidents in the United States. However, EPA believes that revisions could further protect human health and the environment from chemical hazards through advancement of process safety management based on lessons learned.

2. Summary of the Major Provisions of the Regulatory Action

This action amends EPA's Risk Management Program regulations at 40 CFR part 68. These regulations apply to stationary sources (also referred to as "facilities") that hold specific "regulated substances" in excess of threshold quantities. These facilities are required to assess their potential release impacts, undertake steps to prevent releases, plan for emergency response to releases, and summarize this information in a risk management plan (RMP) submitted to EPA. The release prevention steps vary depending on the type of process, but progressively gain granularity and rigor over three program levels (*i.e.*, Program 1, Program 2, and Program 3).

The major provisions of this rule include several changes to the accident prevention program requirements, as well as enhancements to the emergency response requirements, and improvements to the public availability of chemical hazard information. Each of these revisions is introduced in the following paragraphs of this section and described in greater detail in sections IV through VI, later in this preamble.

Certain revised provisions would apply to a subset of the processes based on program levels described in 40 CFR part 68 (or in one case, to a subset of processes within a program level). A full description of these program levels is provided in section II of this preamble.

a. Accident Prevention Program Revisions

This action includes three changes to the accident prevention program requirements. First, the rule requires all facilities with Program 2 or 3 processes to conduct a root cause analysis as part of an incident investigation of a catastrophic release or an incident that

could have reasonably resulted in a catastrophic release (*i.e.*, a near-miss). This provision is intended to reduce the number of chemical accidents by requiring facilities to identify the underlying causes of an incident so that they may be addressed. Identifying the root causes, rather than isolating and correcting solely the immediate cause of the incident, will help prevent similar incidents at other locations, and will yield the maximum benefit or lessons learned from the incident investigation.

Second, the rule requires regulated facilities with Program 2 or 3 processes to contract with an independent third-party, or assemble an audit team led by an independent third-party, to perform a compliance audit after the facility has an RMP reportable accident.

Compliance audits are required under the existing rule, but are allowed to be self-audits (*i.e.*, performed by the owner or operator of the regulated facility). This provision is intended to reduce the risk of future accidents by requiring an objective auditing process to determine whether the owner or operator of the facility is effectively complying with the accident prevention procedures and practices required under 40 CFR part 68.

The third revision to the prevention program adds an element to the process hazard analysis (PHA), which is updated every five years. Specifically, owners or operators of facilities with Program 3 regulated processes in North American Industrial Classification System (NAICS) codes 322 (paper manufacturing), 324 (petroleum and coal products manufacturing), and 325 (chemical manufacturing) are required to conduct a safer technology and alternatives analysis (STAA) as part of their PHA, and to evaluate the practicability of any inherently safer technology (IST) identified. The current PHA requirements include consideration of active, passive, and procedural measures to control hazards. These revisions support the analysis of those measures and adds consideration of IST alternatives. The provision is intended to reduce the risk of serious accidental releases by requiring facilities in these sectors to conduct a careful examination of potentially safer technology and designs that they could implement in lieu of, or in addition to, their current technologies.

b. Emergency Response Enhancements

This action also enhances the rule's emergency response requirements. Owners or operators of all facilities with Program 2 or 3 processes are required to coordinate with the local emergency response agencies at least once a year to determine how the source is addressed

in the community emergency response plan and to ensure that local response organizations are aware of the regulated substances at the source, their quantities, the risks presented by covered processes, and the resources and capabilities at the facility to respond to an accidental release of a regulated substance.

Additionally, all facilities with Program 2 or 3 processes are required to conduct notification exercises annually to ensure that their emergency contact information is accurate and complete. This provision is intended to reduce the impact of accidents by ensuring that appropriate mechanisms and processes are in place to notify local responders when an accident occurs. One of the factors that can contribute to the severity of chemical accidents is a lack of effective coordination between a facility and local emergency responders. Increasing such coordination and establishing appropriate emergency response procedures can help reduce the effects of accidents.

This action also requires that all facilities subject to the emergency response program requirements of subpart E of the rule (or "responding facilities") conduct field exercises and tabletop exercises. The frequency of these exercises shall be established in consultation with local emergency response officials, but at a minimum, full field exercises will be conducted at least once every ten years and tabletop exercises conducted at least once every three years. Responding facilities that have an RMP reportable accident, and document the response activities in an after-action report comparable to the exercise evaluation reports may use that response to satisfy the field exercise requirements. Furthermore, owner and operators of responding facilities that conduct exercises to meet other Federal, state or local exercise requirements may satisfy the RMP exercise requirements provided that the scope of the exercise includes the objectives of an RMP exercise. The purpose of this provision is to reduce the impact of accidents by ensuring that emergency response personnel understand their roles in the event of an incident, that local responders are familiar with the hazards at a facility, and that the emergency response plan is up-to-date. Improved coordination with emergency response personnel will better prepare responders to respond effectively to an incident and take steps to notify the community of appropriate actions, such as shelter-in-place or evacuation.

c. Enhanced Availability of Information

This action includes various enhancements to the public availability of chemical hazard information. The rule requires all facilities to provide certain basic information to the public, upon request. The owner or operator of the facility shall provide ongoing notification of availability of information elements on a company Web site, social media platforms, or through some other publicly accessible means. The rule also requires all facilities to hold a public meeting for the local community within 90 days of an RMP reportable accident. This provision will ensure that first responders and members of the community have easier access to appropriate facility chemical hazard information, which can significantly improve emergency preparedness and their understanding of how the facility is addressing potential risks.

EPA proposed requirements for facilities to provide certain information to the Local Emergency Planning Committee (LEPC), Tribal Emergency Planning Committee (TEPC)³ or other local emergency response agencies. However, rather than prescribe information elements that must be provided upon request, EPA is requiring the owner or operator of a stationary source to share information that is relevant to emergency response planning as part of the coordination activities that occur annually between facility representatives and local emergency response agencies.

In addition to the major provisions described previously in this section, this action discusses comments received on other aspects of the proposed action including revisions to the list of regulated substances, location of stationary sources (related to their proximity to public receptors), requirements for emergency shutdown systems, compliance dates, technical

corrections and revisions to the RMP requirements.

3. Costs and Benefits

a. Summary of Potential Costs

Approximately 12,500 facilities have filed current RMPs with EPA and are potentially affected by the revised rule. These facilities range from petroleum refineries and large chemical manufacturers to water and wastewater treatment systems; chemical and petroleum wholesalers and terminals; food manufacturers, packing plants, and other cold storage facilities with ammonia refrigeration systems; agricultural chemical distributors; midstream gas plants; and a limited number of other sources, including Federal installations that use RMP-regulated substances.

Table 1 presents the number of facilities according to the latest RMP reporting as of February 2015 by industrial sector and chemical use.

TABLE 1—NUMBER OF AFFECTED FACILITIES BY SECTOR

Sector	NAICS codes	Total facilities	Chemical uses
Administration of environmental quality programs (<i>i.e.</i> , governments).	924	1,923	Use chlorine and other chemicals for treatment.
Agricultural chemical distributors/wholesalers.	111, 112, 115, 42491	3,667	Store ammonia for sale; some in NAICS 111 and 115 use ammonia as a refrigerant.
Chemical manufacturing	325	1,466	Manufacture, process, store.
Chemical wholesalers	4246	333	Store for sale.
Food and beverage manufacturing	311, 312	1,476	Use—mostly ammonia as a refrigerant.
Oil and gas extraction	211	741	Intermediate processing (mostly regulated flammable substances and flammable mixtures).
Other	44, 45, 48, 54, 56, 61, 72	247	Use chemicals for wastewater treatment, refrigeration, store chemicals for sale.
Other manufacturing	313, 326, 327, 33	384	Use various chemicals in manufacturing process, waste treatment.
Other wholesale	423, 424	302	Use (mostly ammonia as a refrigerant).
Paper manufacturing	322	70	Use various chemicals in pulp and paper manufacturing.
Petroleum and coal products manufacturing.	324	156	Manufacture, process, store (mostly regulated flammable substances and flammable mixtures).
Petroleum wholesalers	4247	276	Store for sale (mostly regulated flammable substances and flammable mixtures).
Utilities	221	445	Use chlorine (mostly for water treatment) and other chemicals.
Warehousing and storage	493	1,056	Use mostly ammonia as a refrigerant.
Total	12,542	

Table 2 presents a summary of the annualized costs estimated in the regulatory impact analysis.⁴ In total,

EPA estimates annualized costs of \$131.2 million at a 3% discount rate

and \$131.8 million at a 7% discount rate.

³Note for the purposes of this document the term TEPC can be substituted for LEPC, as appropriate.

⁴A full description of costs and benefits for this final rule can be found in the *Regulatory Impact Analysis—Accidental Release Prevention Requirements: Risk Management Programs Under*

the Clean Air Act, Section 112(r)(7). This document is available in the docket for this rulemaking (Docket ID Number EPA-HQ-OEM-2015-0725).

TABLE 2—SUMMARY OF ANNUALIZED COSTS
[Millions, 2015 dollars]

Provision	3 (percent)	7 (percent)
Third-party Audits	\$9.8	\$9.8
Incident Investigation/Root Cause	1.8	1.8
STAA	70.0	70.0
Coordination	16.0	16.0
Notification Exercises	1.4	1.4
Facility Exercises	24.7	24.7
Information Sharing with the Public	3.1	3.1
Public Meeting	0.4	0.4
Rule Familiarization	3.9	4.6
Total Cost *	131.2	131.8

* Totals may not sum due to rounding.

The largest average annual cost of the final rule is the STAA costs (\$70.0 million), followed by the exercise costs (\$24.7 million), coordination (\$16 million), and third-party audits (\$9.8 million). The remaining provisions impose average annual costs under \$5 million each, including rule familiarization (\$3.9–4.6 million), information sharing with the public (\$3.1 million), incident investigation/root cause analysis (\$1.8 million), notification exercises (\$1.4 million), and public meetings (\$0.4 million).

b. Summary of Potential Benefits

EPA anticipates that promulgation and implementation of this rule would result in a reduction of the frequency and magnitude of damages from releases. Accidents and releases from RMP facilities occur every year, causing fires and explosions; damage to property; acute and chronic exposures of workers and nearby residents to hazardous materials; and resulting in serious injuries and death. Although we are unable to quantify what specific

reductions may occur as a result of these revisions, we are able to present data on the total damages that currently occur at RMP facilities each year. The data presented is based on a 10-year baseline period, summarizing RMP accident impacts and, when possible, monetizing them. EPA expects that some portion of future damages would be prevented through implementation of this final rule. Table 3 presents a summary of the quantified damages identified in the analysis.

TABLE 3—SUMMARY OF QUANTIFIED DAMAGES
[Millions, 2015 dollars]

	Unit value	10-year total	Average/year	Average/accident
On-site				
Fatalities	\$8.6	\$497.8	\$49.8	\$0.33
Injuries	0.05	105.2	10.5	0.69
Property Damage		2,054.9	205.5	1.4
On-site Total		2,657.9	265.8	1.8
Offsite				
Fatalities	8.6	8.6	0.86	0.01
Hospitalizations	0.4	6.8	0.68	0.004
Medical Treatment	0.001	14.8	1.5	0.01
Evacuations*	0.0	7.0	0.70	0.004
Sheltering in Place*	0.0	40.9	4.1	0.03
Property Damage		11.4	1.1	0.007
Offsite Total		89.5	8.9	0.06
Total		2,747.3	274.7	1.8

* The unit value for evacuations is less than two hundred dollars and for sheltering in place is less than one hundred dollars so when expressed in rounded millions the value represented in the table is zero.

EPA monetized both on-site and offsite damages. EPA estimated total average annual on-site damages of \$265.8 million. The largest monetized average annual on-site damage was on-site property damage, which resulted in average annual damage of approximately \$205.5 million. The next

largest impact was on-site fatalities (\$49.8 million) and injuries (\$10.5 million).

EPA estimated total average annual offsite damages of \$8.9 million. The largest monetized average annual offsite damage was from sheltering in place (\$4.1 million), followed by medical

treatment (\$1.5 million), property damage (\$1.1 million), fatalities (\$0.86 million), evacuations (\$0.7 million), and hospitalizations (\$0.68 million).

In total, EPA estimated monetized damages from RMP facility accidents of \$274.7 million per year. The 10-year RMP baseline suggests that considering

only the monetized impacts of RMP accidents would mean that the rule's costs may outweigh the portion of avoided impacts from improved prevention and mitigation that were monetized. The annualized cost of the final rule (approximately \$142 million annually) is approximately 52% of the average annual monetized costs in the 10-year baseline. However, the monetized impacts omit many important categories of accident impacts including lost productivity, the costs of emergency response, transaction costs, property value impacts in the surrounding community (that overlap with other benefit categories), and environmental impacts. Also not

reflected in the 10-year baseline costs are the impacts of non-RMP accidents at RMP facilities and any potential impacts of rare high consequence catastrophes. A final omission is related to the information provision. Reducing the probability of chemical accidents and the severity of their impacts, and improving information disclosure by chemical facilities, as the provisions intend, would provide benefits to potentially affected members of society. Table 4 summarizes four broad social benefit categories related to accident prevention and mitigation including prevention of RMP accidents, mitigation of RMP accidents, prevention and mitigation of non-RMP accidents at RMP facilities, and prevention of major

catastrophes. The table explains each and identifies ten associated specific benefit categories, ranging from avoided fatalities to avoided emergency response costs. Table 4 also highlights and explains the information disclosure benefit category and identifies two specific benefits associated with it: Improved efficiency of property markets and allocation of emergency resources.

When considering the rule's likely benefits that are due to avoiding some portion of the monetized accident impacts, as well as the additional non-monetized benefits described previously, EPA believes the costs of the rule are reasonable in comparison to its benefits.

TABLE 4—SUMMARY OF SOCIAL BENEFITS OF FINAL RULE PROVISIONS

Broad benefit category	Explanation	Specific benefit categories
Accident Prevention	Prevention of future RMP facility accidents	<ul style="list-style-type: none"> • Reduced Fatalities. • Reduced Injuries. • Reduced Property Damage. • Fewer People Sheltered in Place. • Fewer Evacuations. • Avoided Lost Productivity. • Avoided Emergency Response Costs. • Avoided Transaction Costs. • Avoided Property Value Impacts.* • Avoided Environmental Impacts. • Improved efficiency of property markets. • Improved emergency response resource allocation.
Accident Mitigation	Mitigation of future RMP facility accidents	
Non-RMP accident prevention and mitigation	Prevention and mitigation of future non-RMP accidents at RMP facilities.	
Avoided Catastrophes	Prevention of rare but extremely high consequence events.	
Information Disclosure	Provision of information to the public	

*These impacts partially overlap with several other categories such as reduced health and environmental impacts.

B. Does this action apply to me?

This rule applies to those facilities (referred to as “stationary sources” under the CAA) that are subject to the chemical accident prevention requirements at 40 CFR part 68. This includes stationary sources holding

more than a threshold quantity (TQ) of a regulated substance in a process. Table 5 provides industrial sectors and the associated NAICS codes for entities potentially affected by this action. The Agency's goal is to provide a guide for readers to consider regarding entities that potentially could be affected by this

action. However, this action may affect other entities not listed in this table. If you have questions regarding the applicability of this action to a particular entity, consult the person(s) listed in the introductory section of this action under the heading entitled **FOR FURTHER INFORMATION CONTACT.**

II. Background

A. Events Leading to This Action

Recent catastrophic chemical facility incidents in the United States prompted President Obama to issue Executive Order 13650, “Improving Chemical Facility Safety and Security,” on August 1, 2013.⁶ The purpose of the Executive Order is to enhance the safety and security of chemical facilities and reduce risks associated with hazardous chemicals to owners and operators, workers, and communities. The Executive Order establishes the Chemical Facility Safety and Security Working Group (“Working Group”), co-chaired by the Secretary of Homeland Security, the Administrator of EPA, and the Secretary of Labor or their designated representatives at the Assistant Secretary level or higher, and composed of senior representatives of other Federal departments, agencies, and offices. The Executive Order requires the Working Group to carry out a number of tasks whose overall aim is to prevent chemical accidents. In addition to the tragedy at the West Fertilizer facility in West, Texas, on April 17, 2013,⁷ a number of other incidents have demonstrated a significant risk to the safety of American workers and communities. On March 23, 2005, explosions at the BP Refinery in Texas City, Texas, killed 15 people and injured more than 170 people.⁸ On April 2, 2010, an explosion and fire at the Tesoro Refinery in Anacortes, Washington, killed seven people.⁹ On

⁶ For more information on the Executive Order see <https://www.whitehouse.gov/the-press-office/2013/08/01/executive-order-improving-chemical-facility-safety-and-security>.

⁹ CSB. May 2014. Investigation Report: Catastrophic Rupture of Heat Exchanger, Tesoro

August 6, 2012, at the Chevron Refinery in Richmond, California, a fire involving flammable fluids endangered 19 Chevron employees and created a large plume of highly hazardous chemicals that traveled across the Richmond, California, area.¹⁰ Nearly 15,000 residents sought medical treatment due to the release. On June 13, 2013, a fire and explosion at Williams Olefins in Geismar, Louisiana, killed two people and injured many more.¹¹

Section 6 of the Executive Order is entitled “Policy, Regulation, and Standards Modernization.” This section, among other things, requires certain Federal agencies to consider possible changes to existing chemical safety and security regulations. To solicit comments and information from the public regarding potential changes to EPA’s Risk Management Program regulations (40 CFR part 68), on July 31, 2014, EPA published an RFI (79 FR 44604). Information collected through the RFI informed the proposed rulemaking that was published on March 14, 2016 (81 FR 13637).

EPA received a total of 61,716 public comments on the proposed rulemaking. Several public comments were the result of various mass mail campaigns and contained numerous copies of letters or petition signatures. Approximately 61,467 letters and signatures were contained in these several comments. The remaining comments include 235 submissions with unique content, 10 duplicate submissions, and 4 non-germane submissions. In addition to these public submissions, EPA also received 8

Anacortes Refinery, Anacortes, Washington, April 2, 2010. Report No. 2010-08-I-WA. http://www.csb.gov/assets/1/7/Tesoro_Anacortes_2014-May-01.pdf.

¹¹ CSB. October 2016. Case Study: Williams Geismar Olefins Plant Reboiler Rupture and Fire, Geismar, Louisiana. Incident Date: June 13, 2013, No. 2013-03-I-LA. US Chemical Safety and Hazard Investigation Board, Washington, DC <http://www.csb.gov/williams-olefins-plant-explosion-and-fire/>.

written comments and had 22 members of the public provide verbal comments at a public hearing on March 29, 2016. Discussion of public comments can be found in topics included in this final rule and in the Response to Comments document,¹² available in the docket for this rulemaking.

B. Overview of EPA’s Risk Management Program Regulations

Both EPA’s 40 CFR part 68 RMP regulation¹³ and Occupational Safety and Health Administration’s (OSHA) 29 CFR 1910.119 Process Safety Management (PSM) standard were authorized in the CAA Amendments of 1990. This was in response to a number of catastrophic chemical accidents occurring worldwide that had resulted in public and worker fatalities and injuries, environmental damage, and other community impacts. OSHA published the PSM standard in 1992 (57 FR 6356, February 24, 1992), as required by section 304 of the 1990 CAAA, using its authority under 29 U.S.C. 653.

The 1990 CAA Amendments added accidental release provisions under section 112(r). The statute required EPA to develop a list of at least 100 regulated substances for accident prevention and related thresholds (CAA section 112(r)(3) through (5)), and authorized EPA to issue accident prevention regulations (CAA section 112(r)(7)(A)). The statute also required EPA to develop “reasonable regulations” requiring facilities with over a TQ of a regulated substance to undertake accident prevention steps and submit a “risk management plan” to various local, state, and Federal planning entities (CAA section 112(r)(7)(B)).

¹² 2016. EPA Response to Comments on the 2016 Proposed Rulemaking Amending EPA’s Risk Management Program Regulations. This document is available in the docket for this rulemaking.

¹³ 40 CFR part 68 is titled, “Chemical Accident Prevention Provisions,” but is more commonly known as the “RMP regulation,” the “RMP rule,” or the “Risk Management Program.” This document uses all three terms to refer to 40 CFR part 68. The term “RMP” refers to the document required to be submitted under subpart F of 40 CFR part 68, the Risk Management Plan. See <https://www.epa.gov/rmp> for more information on the Risk Management Program.

EPA published the RMP regulation in two stages. The Agency published the list of regulated substances and TQs in 1994 (59 FR 4478, January 31, 1994) (the “list rule”)¹⁴ and published the RMP final regulation, containing risk management requirements for covered sources, in 1996 (61 FR 31668, June 20, 1996) (the “RMP rule”).^{15 16} Both the OSHA PSM standard and the EPA RMP rule aim to prevent or minimize the consequences of accidental chemical releases through implementation of management program elements that integrate technologies, procedures, and management practices. In addition to requiring implementation of management program elements, the RMP rule requires covered sources to submit (to EPA) a document summarizing the source’s risk management program—called a Risk Management Plan (or RMP). The RMP rule required covered sources to comply with its requirements and submit initial RMPs to EPA by June 21, 1999. Each RMP must be revised and updated at least once every five years from the date the plan was initially submitted.

EPA later revised the list rule and the RMP rule. EPA modified the regulated list of substances by exempting solutions with less than 37% concentrations of hydrochloric acid (62 FR 45130, August 25, 1997). EPA also deleted the category of Department of Transportation Division 1.1 explosives, and exempted flammable substances in gasoline used as fuel and in naturally occurring hydrocarbon mixtures prior to initial processing (63 FR 640, January 6, 1998).

EPA subsequently modified the RMP rule five times. First, in 1999, EPA revised the facility identification data and contact information reported in the RMP (64 FR 964, January 6, 1999). Next, EPA revised assumptions for the worst case scenario analysis for flammable substances and clarified what the Agency means by chemical storage not incidental to transportation (64 FR 28696, May 26, 1999). After the Chemical Safety Information, Site Security and Fuels Regulatory Relief Act (CSISSFRA) was enacted on August 5, 1999, EPA excluded regulated

flammable substances when used as a fuel or held for sale as a fuel at a retail facility (65 FR 13243, March 13, 2000). Later, EPA restricted access to offsite consequence analysis (OCA) data for the public and government officials to minimize the security risks associated with posting the information on the Internet (65 FR 48108, August 4, 2000). Finally, EPA revised the RMP executive summary to remove a requirement to describe the OCA; revised reporting deadlines for RMP reportable accidents and emergency contact changes; and made other minor revisions to RMP facility contact information (69 FR 18819, April 8, 2004).

The RMP rule establishes three “program levels” for regulated processes:

Program 1 applies to processes that would not affect the public in the case of a worst-case release and that have had no accidents with specific offsite consequences within the past five years. Program 1 imposes limited hazard assessment requirements, requires coordination with local response agencies, and requires submission of an RMP.

Program 2 applies to processes not eligible for Program 1 or subject to Program 3, and imposes streamlined prevention program requirements, including safety information, hazard review, operating procedures, training, maintenance, compliance audits, and incident investigation elements. Program 2 also imposes additional hazard assessment, management, and emergency response requirements.

Program 3 applies to processes not eligible for Program 1 and either subject to OSHA’s PSM standard under Federal or state OSHA programs or classified in one of ten specified industry sectors identified by their 2002 NAICS codes listed at § 68.10(d)(1). These industries were selected because they had a higher frequency of the most serious accidents as compared to other industry sectors. The ten NAICS codes and the industries they represent are 32211 (pulp mills), 32411 (petroleum refineries), 32511 (petrochemical manufacturing), 325181 (alkalies and chlorine manufacturing), 325188 (all other basic inorganic chemical manufacturing), 325192 (cyclic crude and intermediate manufacturing), 325199 (all other basic chemical manufacturing), 325211 (plastics material and resin manufacturing), 325311 (nitrogenous fertilizer manufacturing), or 32532 (pesticide and other agricultural chemicals manufacturing).¹⁷ Program 3

imposes elements nearly identical to those in OSHA’s PSM standard as the accident prevention program. The Program 3 prevention program includes requirements relating to process safety information (PSI), PHA, operating procedures, training, mechanical integrity, management of change (MOC), pre-startup review, compliance audits, incident investigations, employee participation, hot work permits, and contractors. Program 3 also imposes the same hazard assessment, management, and emergency response requirements that are required for Program 2.

The RMP rule has been effective in preventing and mitigating chemical accidents in the United States and protecting human health and the environment from chemical hazards. However, major incidents, such as the West, Texas explosion,¹⁸ highlight the importance of reviewing and evaluating current practices and regulatory requirements, and applying lessons learned from other incident investigations to advance process safety where needed.

III. Additional Information

A. Agency’s Authority for Taking This Action

The statutory authority for this action is provided by section 112(r) of the CAA as amended (42 U.S.C. 7412(r)). Each of the portions of the Risk Management Program rule we are amending in this document are based on EPA’s rulemaking authority under section 112(r)(7) of the CAA (42 U.S.C. 7412(r)(7)). A more detailed discussion of the underlying statutory authority for the current requirements of the Risk Management Program rule appears in the action that proposed the Risk Management Program (58 FR 54190, 54191–93, October 20, 1993). The prevention program provisions discussed in this preamble (auditing, incident investigation, and safer technologies alternatives analysis) address the “prevention and detection of accidental releases.” The emergency coordination and exercises provisions in this rule modify existing provisions that provide for “response to such release by the owners or operators of the sources of such releases” (CAA section 112(r)(7)(B)(i)). This paragraph in the

325180 in the 2012 and 2017 code versions (other basic inorganic chemical manufacturing). NAICS code 325192 is now revised NAICS code 325194 (cyclic crude, intermediate, and gum and wood chemical manufacturing) in the 2012 and 2017 code versions.

¹⁸ CSB, January 2016, Final Investigation Report, West Fertilizer Company Fire and Explosion, West, TX, April 17, 2013. REPORT 2013–02–I–TX. <http://www.csb.gov/west-fertilizer-explosion-and-fire/>.

¹⁴ Documents and information related to development of the list rule can be found in the EPA docket for the rulemaking, docket number A–91–74.

¹⁵ Documents and information related to development of the RMP rule can be found in EPA docket number A–91–73.

¹⁶ 40 CFR part 68 applies to owners and operators of stationary sources that have more than a TQ of a regulated substance within a process. The regulations do not apply to chemical hazards other than listed substances held above a TQ within a regulated process.

¹⁷ NAICS codes 325181 and 325188 are now combined and represented as revised NAICS code

statute calls for EPA's regulations to recognize differences in "size, operations, processes, class and categories of sources." In this document, we maintain the distinctions in prevention program levels and in response actions authorized by this provision. The information disclosure provisions discussed in this document generally assist in the development of "procedures and measures for emergency response after an accidental release of a regulated substance in order to protect human health and the environment." This information disclosure ensures the emergency plans for impacts on the community are based on more relevant and accurate information than would otherwise be available and ensures that the public can become an informed participant in such emergency planning.

Various commenters suggested that particular provisions of the proposed rulemaking were not consistent with CAA section 112(r) or other relevant statutes. We address these comments in each relevant section of the preamble and in the Response to Comments document,¹⁹ available in the docket for this rulemaking. Some commenters also suggested that EPA has not complied with the requirements in CAA section 112(r)(7)(D) for the Administrator to "consult with the Secretary of Labor and the Secretary of Transportation" and "coordinate any requirements under this paragraph with any requirements established for comparable purposes by the Occupational Safety and Health Administration or the Department of Transportation."

EPA disagrees with these comments. Under section 6 of Executive Order 13650, "Improving Chemical Facility Safety and Security," the Executive Order Working Group, chaired by EPA, OSHA, and Department of Homeland Security (DHS), was tasked with enhancing safety at chemical facilities by identifying key improvements to existing risk management practices through guidance, policies, procedures, outreach, and regulations. As part of this task, the Working Group conducted extensive interagency coordination, and solicited public comment on potential options for improving chemical facility safety. EPA's coordination efforts included discussions with numerous Federal agencies, including OSHA and the Department of Transportation (DOT), on potential changes to the Risk Management Program rule. As EPA

explained in the preamble to the proposed rulemaking, the OSHA PSM standard and EPA RMP regulation are closely aligned in content, policy interpretations, Agency guidance, and enforcement. Since the inception of these regulations, EPA and OSHA have coordinated closely on their implementation in order to minimize regulatory burden and avoid conflicting requirements for regulated facilities. This coordination has continued throughout the development of this rule and on OSHA's initial steps toward proposing potential changes to the PSM standard. EPA's coordination with DOT was less extensive because nothing in this rule changes its basic applicability provisions, which apply the rule only to stationary sources, and exclude transportation. However, EPA continues to coordinate with DOT through ongoing Executive Order activities, which includes updates on RMP regulatory development, and this coordination is sufficient to meet EPA's obligations under CAA section 112(r)(7)(D). As with OSHA, EPA has a long history of close coordination with DOT on implementation of the RMP, particularly where potential transportation-related issues arise, and the Agency fully intends for such coordination to continue.

B. List of Regulated Substances

As part of its work under Executive Order 13650, the Working Group solicited public comment on potential changes to the list of regulated substances for the Risk Management Program, including what actions to take to address ammonium nitrate (AN). EPA did not propose revisions to the list of regulated substances. Instead, EPA explained the actions other agencies in the Executive Order Working Group are considering to address AN and indicated that EPA will coordinate any potential changes to the list of substances in 40 CFR part 68 with the actions of these other agencies. EPA received several comments related to revising the list of regulated substances and whether to expand the list to include AN.

1. Discussion of Comments on the List of Regulated Substances

A couple of commenters expressed support for expanding the scope of regulated substances under the RMP rule. One private citizen stated that EPA should broaden the range of chemicals covered under RMP and account for effects on vulnerable populations including children and the elderly. A professional organization asserted that EPA should update the list of regulated

substances and require facilities to "evaluate the risk of a reactive chemical accident and take appropriate measures, even if the chemicals in question are not on the list."

However, multiple commenters supported EPA's decision not to revise the list of regulated substances in this action. These commenters opposed adding toxic or flammable substances to the list of regulated substances in a separate action. One industry commenter opposed the addition of combustible dust to the list, arguing that it is already regulated under OSHA and constitutes a low risk to the public.

EPA will consider these comments when determining whether to propose revisions to the list of substances.

2. Discussion of Comments on AN

Many commenters supported regulating AN in the RMP rule. Several commenters requested that EPA consider the danger to the public from AN, and other reactive chemicals, in its rulemaking. A state agency further asked EPA to ensure that calculations for the OCA consider the unique explosive characteristics of fertilizer grade ammonium nitrate (FGAN) and develop specific RMP guidance for regulated FGAN facilities. One commenter supported adding AN to the list of regulated substances but requested unique requirements for AN formulated as an explosive or blasting agent and FGAN. Another commenter claimed that EPA failed to address Executive Order 13650 by failing to address AN in the proposed rulemaking.

However, EPA also received comments opposed to adding AN to the list of regulated substances. One commenter stated that EPA didn't have authority to regulate FGAN under the CAA and urged the Agency against including FGAN under the RMP regulations. Another commenter supported EPA's decision not to change current threshold quantities and toxic endpoints.

An industry trade association requested EPA's support and recognition of its voluntary private sector comprehensive inspection and assessment organization and FGAN guidelines for fertilizer retail facilities.

EPA acknowledges that there is both support and opposition to regulating AN and will consider these comments when determining whether to take further action on this issue. In the interim, EPA encourages fertilizer retailers to review and use existing guidance. OSHA compiles several resources on their Fertilizer Industry Guidance on Storage and Use of Ammonium Nitrate Web

¹⁹ 2016. EPA Response to Comments on the 2016 Proposed Rulemaking Amending EPA's Risk Management Program Regulations. This document is available in the docket for this rulemaking.

page at https://www.osha.gov/dep/fertilizer_industry/.

EPA disagrees with the commenter that indicated that EPA failed to address Executive Order 13650 when we chose not to propose to list AN in the list of regulated substances for the RMP regulations. In the proposed rulemaking, EPA explained that other agencies, including OSHA and DHS, are considering modifications to their regulations, and EPA will coordinate any potential changes to the list of substances in 40 CFR part 68 with the actions of these other agencies.

IV. Prevention Program Requirements

A. Incident Investigation and Accident History Requirements

1. Summary of Proposed Rulemaking

a. Definitions, § 68.3

EPA proposed to revise the definition of “catastrophic release” in § 68.3 to include impact categories identical to the description of accidental releases required to be reported under the accident history reporting requirements in § 68.42. The proposed definition, in § 68.3, would replace the phrase “that presents imminent and substantial endangerment to public health and the environment” with impacts categories including impacts that resulted in:

- On-site: Deaths, injuries, or significant property damage; or
- Offsite: Known deaths, injuries, evacuations, sheltering in place, property damage, or environmental damage.

EPA proposed to define “root cause” in § 68.3 to mean a fundamental, underlying, system-related reason why an incident occurred that identifies a correctable failure(s) in management systems.

b. Incident Investigation Sections, §§ 68.60 and 68.81

EPA proposed a number of revisions to the incident investigation provisions. EPA proposed to revise § 68.60, which is applicable to Program 2 processes, and § 68.81, which is applicable to Program 3 processes, by revising paragraph (a) to add subparagraphs (a)(1) and (a)(2) to better clarify the scope of incidents that must be investigated. Proposed subparagraph (a)(1) applied to an incident that resulted in a catastrophic release and clarifies that the owner or operator must investigate the incident even if the process involving the regulated substance is destroyed or decommissioned. Proposed subparagraph (a)(2) applied to a near-miss, which is an incident that could

reasonably have resulted in a catastrophic release. EPA also proposed removing the phrase “of a regulated substance” from paragraph (a) because it is duplicative. The definition of “catastrophic release” refers to releases of regulated substances.

EPA also proposed to add a new paragraph (c) to § 68.60 requiring that an incident investigation team be established and consist of at least one person knowledgeable in the process involved and other persons with appropriate knowledge and experience to thoroughly investigate and analyze the incident. This is similar to the existing requirement in § 68.81(c) for Program 3 processes. EPA proposed that current § 68.60(c) through (f) would become § 68.60(d) through (g).

EPA proposed to revise the redesignated paragraph (d) in § 68.60 and current paragraph (d) in § 68.81 to revise the incident investigation report requirements. EPA proposed to change the word “summary” to “report” and require facility owners or operators to complete incident investigation reports within 12 months unless the implementing agency approves, in writing, an extension of time.

In addition, EPA proposed to amend and add new subparagraphs in the redesignated paragraph (d) in § 68.60 and current paragraph (d) in § 68.81 requiring additional elements in an incident investigation report. Specifically, EPA proposed to:

- Revise paragraph (d)(1) to require the time and location of the incident in the investigation report;
- Revise paragraph (d)(3) to specify that the description of the incident be in chronological order and provide all relevant facts;
- Add paragraph (d)(4) to require that the investigation report include the name and amount of the regulated substance involved in the release or near miss and the duration of the event;
- Add paragraph (d)(5) to require a description of the consequences, if any, of the incident;
- Add paragraph (d)(6) to require a description of emergency response actions taken;
- Renumber current paragraph (d)(4) to (d)(7) and require additional criteria related to the factors contributing to the incident, including the initiating event, direct and indirect contributing factors, and root causes. EPA also proposed to add language to paragraph (d)(7) to require that root causes be determined through the use of a recognized method.
- Renumber the current paragraph (d)(5) to (d)(8) and add language to require a schedule for addressing recommendations resulting from the

investigation to be included in the investigation report.

Finally, in the redesignated § 68.60(g), EPA proposed to add the word incident before investigation and change “summaries” to “reports” for consistency.

c. Accident History, § 68.42

EPA also proposed to amend the five-year accident history section to require reporting of categories of root causes identified in the root cause analysis proposed to be required in §§ 68.60(d)(7) and 68.81(d)(7).

d. Hazard Review, § 68.50

For the Hazard review section, EPA proposed to amend subparagraph (a)(2) by adding a phrase at the end to require the owner or operator to consider findings from incident investigations.

e. Process Hazard Analysis (PHA), § 68.67

In the PHA section, EPA proposed to add subparagraph (c)(2) to require the owner or operator to address findings from incident investigations, as well as any other potential failure scenarios (e.g., incidents that occurred at other similar facilities and or processes, failure mechanisms discovered in literature or from other sources of information).

f. Updates, § 68.190

In the Updates section, EPA proposed to amend paragraph (c) to require the owner or operator to report any accidents covered by § 68.42 and conduct incident investigations required under § 68.60 and/or § 68.81 prior to de-registering a process or stationary source that is no longer subject to the RMP rule.

2. Summary of Final Rule

EPA is not finalizing the proposed definition for catastrophic release and is instead maintaining the existing definition. Additionally, EPA is finalizing a modified version of the proposed definition of the term “root cause.” In the final definition EPA deleted the phrase “that identifies a correctable failure(s) in management systems.”

EPA is not finalizing the proposed revisions to the five-year accident history section in the final rule.

EPA is finalizing the following provisions as proposed:

- Hazard review section, § 68.50;
- Incident investigation section §§ 68.60 and 68.81;
- Process hazard analysis (PHA) section, § 68.67, to add subparagraph (c)(2).

- Updates section, § 68.190.

3. Discussion of Comments and Basis for Final Rule Provisions

EPA's rationale for modifying the accident investigation provisions to explicitly require root cause analysis for investigations of catastrophic releases and near miss events and to have the findings of these investigations integrated into the PHA remains generally the same as in the proposed rulemaking. In the discussion that follows and in the Response to Comment document, we explain the modifications to our approach and the basis for these modifications.²⁰ The most significant change in approach is to retain the catastrophic release definition. As became apparent in the comments, our view that having a common definition of reportable accidental release and catastrophic release would simplify and clarify compliance was outweighed by the potential burden of inadvertently expanding the number of investigated accidental releases. We continue to require investigations of near misses, but have provided additional guidance as to what we intend by the term. Other changes from the proposal are similarly intended to clarify terms used in the rule. Identification of root cause categories in accident history reporting has been eliminated because identifying root cause categories only provides limited information for understanding the root cause which is best attained by reviewing the complete incident investigation report. Implementing agencies and/or local emergency planners may still obtain the investigation report through direct contact with the facility. The changes we adopt in this final rule strike a balance between ensuring facilities and planners learn about the causes of catastrophic releases and near misses while also better targeting the reporting to minimize burden.

a. Definitions

Catastrophic release. Although EPA received some support for the proposed definition of "catastrophic release," many commenters were opposed to the revision. Many commenters, including government agencies, industry trade associations, and facilities, argued that EPA's proposed definition of "catastrophic release" (1) expands its scope, rather than clarifying it, (2) is redundant of OSHA's authority to

regulate workplace safety by including on-site damage or injuries, and (3) exceeds the CAA authority to regulate only ambient air beyond a facility's property.

EPA also received some comments identifying other concerns with the proposed change to the definition of "catastrophic release." Some commenters, including a few facilities, said that the proposed definition is too vague, and some commenters noted that terms such as "injuries," "significant property damage," "environmental damage," and "major" are not defined. A facility and a private citizen commented that the wording of the definition implies that a "catastrophic release" could include a fire, regardless of whether an actual release of regulated material occurs due to the fire, and also implies that releases involving on-site environmental damage would not be considered catastrophic.

Many commenters, including a state government agency, facilities, and industry trade associations, argued that EPA's proposed definition of "catastrophic release" would regulate workplace safety concerns that are outside EPA's authority to regulate under the CAA. Commenters asserted that EPA has authority to address through regulation and enforcement offsite impacts of facility releases, not on-site impacts. A facility asserted that the proposed definition inappropriately expands the scope of EPA's reach into workplace safety by requiring investigations of releases that would also include impacts to on-site workers or property. An industry trade association stated that the definition ignores Congress's express prohibition against EPA "exercising statutory authority to prescribe or enforce standards or regulations affecting occupational safety and health." This commenter further argued that on-site injuries should be excluded from the proposed definition because OSHA already has jurisdiction in this area and because these often do not pose any risk to public health or the environment.

A facility stated that the proposed revision directly contradicts EPA's long-held interpretation that the references in section 112(r)(2)(A) to "ambient" air limit the Agency's authority to activities with offsite consequences. The commenter asserted that in the proposed rulemaking the EPA does not acknowledge the contradiction from its previous position or explain what new statutory authority exists or why it now has the authority to regulate workplace incidents.

Due to the large number of comments opposing the proposed revision to the

definition of "catastrophic release," EPA has decided not to finalize the proposed language. EPA believed that providing a consistent trigger for accident investigations and reportable accidents under the accident history requirements of § 68.42 would simplify compliance for the regulated community. EPA acknowledges that the proposed revision may have inadvertently expanded the definition and therefore the type of accident that could trigger an investigation. Some reportable incidents under the accident history provision may not pose an imminent and substantial threat to public health and the environment (see 40 CFR 68.3 (*Catastrophic release*)). Due to EPA's decision to retain the existing "catastrophic release" definition and not go forward with the proposed revision, the authority issues raised in comments are moot. However, contrary to one commenter's claim, it has never been EPA's position that the references in section 112(r) to "ambient" air limit the Agency's authority to regulate only activities with offsite consequences. On the contrary, it has been the Agency's longstanding position that incidents that primarily or even exclusively impact on-site receptors are potentially relevant to protection of the public and the environment from the risks of an accidental release. As EPA explained in the Response to Comments document for the original RMP rule, certain on-site accident impacts are relevant because they "may reflect safety practices at the source" and because "accidental releases from covered processes which resulted in deaths, injuries, or significant property damage on-site, involve failures of sufficient magnitude that they have the potential to affect offsite areas."²¹

For similar reasons, requiring investigation of accidents with on-site impacts is not redundant to OSHA's authority when such accidents have the potential to affect offsite areas.

Root cause. Many commenters opposed the proposed definition of "root cause." These commenters, which included industry trade associations, facilities, and a private citizen, said that EPA should revise the definition of "root cause" to remove "system-related" and "management system," reasoning that not all incidents are due to system failures. One commenter also stated that the definition assumes that there is only

²¹ EPA, Risk Management Plan Rule: Summary and Response to Comments, Excerpt from Volume 1: Table of Contents, Introduction, and Sections 3, 16 and 17, May 24, 1996, pp 3–11 and 17–4. Document No. EPA-HQ-OEM-2015-0725-0153, <https://www.regulations.gov/document?D=EPA-HQ-OEM-2015-0725-0153>.

²⁰ 2016, EPA Response to Comments on the 2016 Proposed Rulemaking Amending EPA's Risk Management Program Regulations. This document is available in the docket for this rulemaking.

one root cause and that the failure is correctable, when there can be many causes and the investigators may not be able to determine what is “correctable.” An association of government agencies agreed that the investigation should identify all root causes of failure, regardless of whether they are deemed correctable or related to the management system. An industry trade association stated that EPA should not define “root cause” and instead should defer to facilities to rely on standard definitions from independent safety organizations. Another industry trade association also argued that EPA does not need to define “root cause” because current incident investigator requirements, which call for the investigator to uncover “the factors that contributed to the incident,” are sufficient. Other industry trade associations commented that it is very misleading and may lead to incorrect enforcement proceedings to require a facility to identify a management system failure as a root cause of incidents whose true root cause is a design deficiency, equipment failure, or misuse of equipment.

EPA agrees with some of the comments, and is finalizing the proposed definition of “root cause” with modifications. EPA deleted the language regarding identifying correctable failure(s) in management systems. In response to the comment that the definition assumes that there is only one root cause, EPA agrees that there are often multiple root causes. The final rule defines “root cause” in the singular, but does not preclude the possibility of more than one root cause. EPA agrees with the comments that support investigations identifying all root causes, and the Agency notes that the root cause requirements in the final rule require the owner or operator to identify “root causes.”

b. Accident History Reporting

Some government agencies, an industry trade association, and a professional association agreed that the RMP accident history should include the root causes of incidents. However, other commenters, including industry trade associations and a facility, stated that the existing reporting requirements in § 68.42 are sufficient, and that requiring root cause reporting in the five-year accident history is an additional burden that is not offset by improved performance.

Although EPA believes there could be some benefit to identifying root cause categories within a facility’s accident history, in most cases, the Agency believes the incident investigation

report must be reviewed in order to fully understand root causes attributed to that incident. Implementing agency officials can obtain investigation reports during inspections or by using the Agency’s information gathering authorities when needed. Therefore, EPA did not finalize the proposed requirement.

c. Changes to Hazard Review (§ 68.50) and Process Hazard Analysis (PHA) (§ 68.67) Requirements

Hazard review and PHA. Some commenters, including several government agencies, a professional organization, and an industry trade association, supported the requirement to include incident investigation findings in the hazard review. Other commenters opposed the requirement. Some of these commenters stated that the OSHA PSM standard already requires PHAs to address previous incidents, and EPA’s changes are therefore unnecessary. One industry trade association commented that, as written, the proposal would require facilities to include all findings from all investigations for the facility’s entire history.

Another commenter argued that incident investigation findings should not be required for PHAs because PHA teams typically use established techniques and requiring the “findings from incident investigations” to be included would not be a good fit for these types of assessments.

EPA disagrees with commenters and is finalizing these requirements as proposed, so that findings from incident investigations are considered when hazard reviews are conducted. EPA notes that the basic purpose of a hazard review is to identify what process equipment malfunctions or human errors could potentially lead to accidental releases, and then to identify what safeguards are needed in order to prevent such malfunctions and errors from occurring. An obvious source of information about such malfunctions and errors is information gained from investigating incidents that have previously occurred within the covered process. For this reason, the Program 3 analog to the hazard review, the PHA, already requires the owner or operator to identify any previous incidents that had a likely potential for catastrophic consequences when conducting the PHA.

EPA therefore not only disagrees with the commenter who stated that including findings from incident investigations within the PHA “would not be a good fit” for the PHA (as the existing rule already contains this

requirement), but also believes that this requirement should be incorporated into the hazard review. EPA also disagrees that widely-used PHA (or hazard review) techniques preclude consideration of prior incidents—all PHA and hazard review techniques that EPA is aware of are easily adapted to allow consideration of prior incident scenarios. The commenter provided the example of the Hazard and Operability Study (HAZOP) PHA technique as an example of a technique for PHAs that is widely accepted but does not consider prior incidents. EPA disagrees that the HAZOP may not be adapted to consider prior incident causes. In fact, this PHA technique, which EPA acknowledges is widely used, is specifically intended to identify process deviations that can lead to undesirable consequences, as well as the causes and consequences of such deviations, and safeguards necessary to protect against the deviation from occurring. Incident scenarios are a key source of knowledge for conducting this technique. According to the Center for Chemical Process Safety (CCPS) “Guidelines for Hazard Evaluation Procedures—Second Edition with Worked Examples” (AIChE/CCPS, 1992, pp 143) “the knowledge-based HAZOP Analysis study can help ensure that the company’s practices, and therefore its experience, have indeed been incorporated in the design.” The CCPS Guidelines also provide a specific example of how incident information can be incorporated into the HAZOP:

As a more specific example, consider the discharge from a centrifugal pump. The guide-word HAZOP approach would apply the guide word “Reverse” to identify the need for a check valve. The knowledge-based HAZOP approach might also identify the need for a check valve *because an actual problem was experienced with reverse flow* . . . [emphasis added].

In response to the comment regarding the requirements of OSHA PSM, EPA notes that this final rule requirement is applicable to Program 2 covered processes, which are not subject to the OSHA PSM standard.

Other potential failure scenarios. Some commenters opposed including “other potential failure scenarios” in the process hazards analysis (PHA). A state agency and an industry trade association stated that it is unclear what “any other potential failure scenarios” means. The state agency also said that facilities may not have access to or knowledge of issues at similar facilities. A facility said that EPA should provide a clearinghouse of “potential failure scenarios” so that facilities will have access to them. An industry trade association commented that a literature

review would not provide much information and would be costly to conduct.

In response, as stated in the preamble to the proposed rulemaking, other potential failure scenarios can include incidents that occurred at other similar facilities and or processes, failure mechanisms discovered in literature, or from other sources of information. EPA believes that it is appropriate to research information about other potential scenarios and consider these scenarios when conducting a (PHA). Regarding the comment to provide a clearinghouse of scenarios, given the variety of processes and stationary sources, and ongoing changes to technologies, it would be difficult to establish a one-stop resource that would identify all potential failure scenarios for all processes covered under the rule. However, EPA believes that owners and operators are in the best position to obtain incident information relevant to their own covered processes. In most cases, industry trade associations will be a useful source for this information. Such information is also commonly available in trade journals, at industry conferences, in industry newsletters, in the Chemical Safety Board's accident investigation reports, in reference publications (e.g., Lees' Loss Prevention in the Process Industries²²), and through other professional networks. EPA therefore believes that information about other potential failure scenarios that are potentially relevant to a covered process should not be costly for the owner or operator to conduct and will benefit both the regulated stationary sources and its surrounding community.

Regarding the comment that this provision will require the owner or operator to review findings from all incident investigations for the facility's entire history—EPA agrees that the owner or operator should review all available incident information, but notes that the rule does not require the owner or operator to retain incident investigation reports for more than five years. However, if the owner or operator has access to incident information beyond that period, they should incorporate it into their hazard review as appropriate.

d. Destroyed or Decommissioned Processes

EPA received various comments regarding the proposed rulemaking's requirement for investigation of

incidents that resulted in destruction or decommissioning of a process. Several commenters, including local agencies, facilities, an advocacy group, and an association of government agencies, expressed support for the requirement that an incident investigation with a root cause analysis be performed for incidents involving processes units that were destroyed or will be decommissioned. A local agency and a facility explained that this information could improve safety for other processes at the same facility or at other facilities.

EPA also received comments opposing incident investigations for destroyed or decommissioned processes. A facility and industry trade associations commented that there is no benefit to requiring investigations in cases where a process is decommissioned or destroyed.

EPA also received comments in opposition to registration requirements for decommissioned processes. A facility and an industry trade association said that there is no incremental safety benefit to requiring a destroyed or decommissioned unit to remain registered under RMP until after the incident investigation is complete. The commenters argued that this requirement imposes additional paperwork burdens without any additional safety benefit.

EPA is finalizing this requirement as proposed. The Agency agrees with the commenters who support this requirement because it will ensure that when incidents occur, particularly incidents so severe that the owner or operator elects to decommission the process involved or where the process is destroyed in the incident, lessons are learned as a result, both for the benefit of the owner/operator, and potentially for other stationary sources with similar processes.

In response to the comments opposed to the registration requirements for decommissioned processes, EPA believes that the additional paperwork burden regarding such requirements is minimal, as the processes would have already been registered in the source's most recent RMP. New accident history information may be added to the RMP without performing a full update. Following that correction, if the affected process has been decommissioned or destroyed, and if the source has multiple covered processes, the owner or operator would update their RMP to reflect the loss of the affected process (this would be required whether or not the incident was investigated). If the affected process was the only process at the source, after completing the investigation and correcting the existing

RMP, the owner or operator would submit a deregistration notice for the source to EPA. Deregistration is already required by § 68.190(c) when a source is no longer subject to Part 68. Therefore, from a paperwork standpoint, the primary effect of this change would be the timing of when deregistration occurs. EPA believes the potential benefits of the knowledge gained from the incident investigation warrant this delay in deregistering a source.

e. Near Misses

In the proposed rulemaking, EPA did not propose a definition for the term "near miss," although EPA did include the term in proposed revisions to §§ 68.60 and 68.81, paragraph (a)(2), in the phrase: "Could reasonably have resulted in a catastrophic release (i.e., was a near miss)." EPA also sought public comment on whether to include a formal definition for the term. EPA received comments both supporting and opposing a definition of "near miss."

Requests to define "near miss." Several commenters, including government agencies, industry trade associations, facilities, and an advocacy group, recommended defining "near miss" to reduce vagueness, uncertainty around which incidents require investigation, and the reliance on owners and operators to define the term. A local agency and an industry trade association suggested providing examples of near misses in guidance. A local agency said that EPA should clarify whether a release is considered a "near miss" if it was a controlled release. Other commenters, including a state agency and an industry trade association, opposed a regulatory definition of the term, stating that facilities should be permitted to determine what qualifies as a "near miss" that requires investigation. A state agency also said that EPA should not define "near miss" because it would be challenging to provide a definition that is suitable for all industry sectors. An industry trade association stated that the rule raises constitutional due process concerns because the rule lacks specificity to define the "near miss" standard and fails to provide adequate notice to the regulated community as to what the RMP rule will require.

EPA is finalizing the language in paragraph (a)(2) of §§ 68.60 and 68.81 as proposed, and has elected not to finalize a regulatory definition of "near miss" to identify incidents that require investigation. The criteria for determining incidents that require investigation will continue to include events that "could reasonably have resulted in a catastrophic release."

²² Lees, Frank P. 2012. Loss Prevention in the Process Industries, Fourth Edition. Butterworth-Heinemann. <http://www.sciencedirect.com/science/book/9780123971890>.

Under the final rule, this criterion, rather than a definition of “near miss,” applies to determine which incidents require investigation. However, the rule makes clear that a “near miss” is an example of an event that “could reasonably have resulted in a catastrophic release.” EPA agrees with commenters who said it would be difficult to address in a single definition the various types of incidents that may occur in RMP-regulated sectors that should be considered near misses, and therefore be investigated. Instead, facility owners or operators will need to decide which incidents “could reasonably have resulted in a catastrophic release.” This may be based on the seriousness of the incident, the process(es) involved, and the specific conditions and circumstances involved. In the 1996 Response to Comments on the original rule, EPA acknowledged that the range of incidents that reasonably could have resulted in a catastrophic release is very broad and cannot be specifically defined.²³ EPA decided to leave it up to the owner or operator to determine whether an incident could reasonably have resulted in a catastrophic release and to investigate such incidents.

EPA understands from the comments that there was some uncertainty about the term near miss. EPA’s experiences with RMP facility inspections and incident investigations show there have been incidents that were not investigated, even though under slightly different circumstances, the incident could have resulted in a catastrophic release. While most of these events did not result in deaths, injuries, adverse health or environmental effects, or sheltering-in-place, the Agency believes that in some cases, if circumstances had been slightly different, a catastrophic release could reasonably have occurred.

As described in the preamble to the proposed rulemaking, and as noted by one commenter, there is a CCPS definition of “near miss.” CCPS defines a “near miss” as an event in which an accident causing injury, death, property damage, or environmental impact, could have plausibly resulted if circumstances had been slightly different.

For example, a runaway reaction that is brought under control by operators is a near miss that may need to be investigated to determine why the problem occurred, even if it does not directly involve a covered process both because it may have led to a release

from a nearby covered process or because it may indicate a safety management failure that applies to a covered process at the facility. Similarly, fires and explosions near or within a covered process, any unanticipated release of a regulated substance, and some process upsets could potentially lead to a catastrophic release.

CCPS’s “Process Safety Leading and Lagging Metrics—You Don’t Improve What You Don’t Measure” explains that a near miss has three essential elements.²⁴ These include:

- An event occurs, or a potentially unsafe situation is discovered;
- The event or unsafe situation had reasonable potential to escalate; and
- The potential escalation would have led to adverse impacts.

The CCPS document and the CCPS “Guidelines for Investigating Chemical Process Incidents” contain many examples of near misses, which can be an actual event or discovery of a potentially unsafe situation.²⁵ Examples of incidents that should be investigated include some process upsets, such as: excursions of process parameters beyond pre-established critical control limits; activation of layers of protection such as relief valves, interlocks, rupture discs, blowdown systems, halon systems, vapor release alarms, and fixed vapor spray systems; and activation of emergency shutdowns.

Near misses should also include any incidents at nearby processes or equipment outside of a regulated process if the incident had the potential to cause a catastrophic release from a nearby regulated process. An example would be a transformer explosion that could have impacted nearby regulated process equipment causing it to lose containment of a regulated substance. Near misses could also include process upsets such as activation of relief valves, interlocks, blowdown systems, or rupture disks.

The intent is not to include every minor incident or leak, but focus on serious incidents that could reasonably have resulted in a catastrophic release, although EPA acknowledges this will require subjective judgment. EPA will update existing RMP guidance to reflect the revised RMP requirements and will provide guidance to identify what types

of incidents could be considered near misses.

The concept of “near miss” has a meaning in industry and in the chemical engineering profession. In this preamble and in guidance, EPA has explained the concept and has identified sources that explain the term, and EPA believes that this satisfies any due process concerns raised by commenters related to the definition of this term. These sources put the regulated community on notice of EPA’s expectations under the rule and thus also address the due process concerns raised by commenters regarding notice to the regulated community as to what the RMP rule will require. EPA expects that by expanding the root cause analysis requirement to near misses that could have resulted in a catastrophic incident, some stationary sources will be able to take corrective actions before another similar, but catastrophic incident occurs in the future. For example, as discussed in the March 14, 2016 RMP proposed rulemaking (81 FR 13637), incidents at Tosco Refinery, Georgia Pacific, Shell Olefins, Morton International, BP Texas City Refinery and Millard Refrigerated Services all involved near-misses or less serious incidents involving the same cause as the later catastrophic release.

Industry suggestions for clarifying near misses. A few industry trade associations commented that the examples of near misses that EPA provided in the NPRM, such as excursions of process parameters and activation of protections devices such as relief valves, should not be considered “near misses.” The commenters said that many of these examples are safeguards that are designed to be used to prevent catastrophic releases. An industry trade association also proposed a definition of “near miss” that would be limited only to scenarios where the final safeguard or layer of protection is activated, such that a release would have occurred if not for that control.

In response to these comments, EPA agrees that not all excursions of process parameters outside control levels or all instances of protective device activation should necessarily be considered to be near misses. EPA expects that activation of protective devices should be investigated when the failure of such devices could have reasonably resulted in a catastrophic release. However, EPA does not agree that near miss investigations should only include situations that resulted in activation of a final safeguard or layer of protection. This may be appropriate in some cases, but in others, multiple layers of protection may quickly fail. EPA

believes that owners and operators must use reasonable judgement to decide which incidents, if they had occurred under slightly different circumstances, could reasonably have resulted in a catastrophic release, and investigate those incidents.

f. Investigation Timeframe

EPA received many comments in support of a shorter investigation timeframe. Many commenters, including a local agency and a professional association, stated that 12 months is too long to complete most investigations, and some commenters said that the timeframe should be shortened to five or six months. Some commenters also stated there should be a shorter timeframe, but with the ability to request an extension.

Other commenters, including state and local agencies and industry trade associations, said that EPA should allow for 12 months to complete an investigation and also allow extensions for especially large or complex incidents. Some commenters also recommended requiring interim reports. An industry trade association asked EPA to clarify that the 12-month period is only for completing the investigation report, not for implementing the recommendations in the report.

Other commenters, including facilities and industry trade associations, said that EPA should not impose any deadline for completing incident investigations. A few commenters, including a facility and industry trade associations, commented that an arbitrary deadline does not account for the complexity of the incident, the types of process units involved, or the need to retain outside consultants or experts to complete the investigation.

After considering these comments, EPA has decided to finalize the requirement to complete incident investigations within twelve months as proposed. EPA believes that this timeframe will provide a reasonable amount of time to conduct most investigations, while also ensuring that investigation findings are available relatively quickly in order to assist in preventing future incidents. For very complex incident investigations that cannot be completed within 12 months, EPA is allowing an extension of time if the implementing agency approves such an extension, in writing. EPA encourages owners and operators to complete incident investigations as soon as practicable, and believes that 12 months is typically long enough to complete even complex incident investigations. However, EPA provided

flexibility for facilities to request more time to complete investigations when they consult with their implementing agency and receive written approval for an extension.

g. Incident Investigation Team

Some commenters, including a Federal agency, local government agencies, an association of government agencies, and an industry trade association, supported the proposed requirements under § 68.60(c) for the owner or operator of a Program 2 process to establish an incident investigation team consisting of at least one person knowledgeable in the process involved and other persons with appropriate knowledge and experience to thoroughly investigate and analyze the incident. Other commenters opposed these requirements. A facility commented that the incident investigation team requirements are unnecessary because they are already covered by the OSHA PSM standard. A private citizen commented that the requirement assumes that all investigations will be conducted by a team, when it is possible for a competent individual to perform all aspects of the investigation if given access and support by the facility owner or operator. The commenter also stated that although the proposed rulemaking provides significant information on who may perform a third-party audit, it does not specify the qualifications of persons who may perform investigations and certify investigation reports.

EPA is finalizing the Program 2 incident investigation requirements, as proposed. The Agency agrees with the commenters who support requiring at least one person on the investigation team to be knowledgeable in the process involved and other persons with appropriate knowledge and experience in incident investigation techniques, as EPA believes these provisions are necessary to ensure that facilities thoroughly investigate and analyze incidents and their root causes.

EPA disagrees that these incident investigation team requirements are already covered by the OSHA PSM standard. The requirements for Program 3 processes in the current rule already include a provision for incident investigation teams; however, the incident investigation team requirements in this rule apply to Program 2 processes, which by definition are not covered by the OSHA PSM standard. EPA agrees that the requirement assumes that all investigations will be conducted by a team. EPA believes that all incident investigations, whether conducted on

Program 2 or Program 3 processes, should involve a team of at least two people, particularly given the requirement under the final rule for investigations to include analysis of root causes. However, beyond the requirements specified in the final rule (*i.e.*, to establish an investigation team consisting of at least one person knowledgeable in the process involved and other persons with appropriate knowledge and experience to thoroughly investigate and analyze the incident), the Agency does not believe it is necessary to specify additional qualification criteria for incident investigation team members.

h. Root Causes

Support for root cause requirements. Many commenters, including government agencies, advocacy groups, a facility, and others, expressed support for the requirements to determine root causes through the use of a recognized method and to include information on root causes in investigation reports. The commenters supported these provisions as a way to prevent future incidents. Most of these commenters also expressed support for applying the root cause analysis requirement to both catastrophic release incidents and to incidents that could reasonably have resulted in a catastrophic release (*i.e.* near misses). These commenters stated that conducting root cause analysis on near misses would allow the owner or operator to identify and make corrective actions before a catastrophic incident occurs. Some commenters also supported EPA's proposal to allow the use of any recognized method to complete a root cause analysis.

EPA agrees with these comments and believes that requiring root cause analyses for catastrophic releases and near misses, and including root cause information in incident investigation reports is vital for understanding the nature of these events. EPA is finalizing, as proposed, the requirements that root causes must be determined through the use of a recognized method and that information on root causes must be included in investigation reports. As previously noted, however, the final rule includes a modified version of the proposed definition of the term "root cause." The phrase "that identifies a correctable failure(s) in management systems" from the proposed definition has been deleted.

Opposition for root cause requirements. EPA also received many comments opposing the proposed root cause analysis requirements. Some commenters, including industry trade associations and Federal agencies, said

that requiring the owner or operator to conduct a root cause analysis versus other investigation methods is unnecessary. Some of these commenters also argued that root cause analysis assumes that there is an underlying management or system-related cause behind every incident, which may not be the case and which EPA has failed to prove. An industry trade association and a facility stated that EPA should not require facilities to select from a predetermined list of root causes so as to avoid forcing them to fit their findings into a category that may not be appropriate.

Regarding these comments, EPA agrees that root cause analysis may result in identifying causes that are not always an underlying management or system-related cause, but still believes that the analysis is necessary to understand why the accident occurred so that the causes can be addressed. Therefore, we have modified the definition of “root cause” to remove the phrase “that typically identifies a correctable failure(s) in management systems” in order to remove the implication that all incidents involve correctable management system failures. EPA also notes that the final rule does not require facilities to select from a predetermined list of root causes or force them to fit their findings into an inappropriate category.

Many commenters argued that EPA should not require root cause analyses for near misses. A Federal agency, industry trade associations, and some facilities stated that EPA should not require root cause analyses for near misses because the requirement would increase compliance burdens and costs on facilities and take attention away from other safety activities. A few industry trade associations also argued that the quality of safety reviews will be diluted by applying the requirement to low-consequence, high-frequency events. One industry trade association stated that requiring a root cause analysis for near misses creates a false equivalency between near misses and actual catastrophic releases.

While EPA acknowledges that requiring root cause analyses for near misses may impose some additional burden on facilities, the Agency disagrees that the burden is unwarranted or that it will take attention away from other safety activities. The Agency notes that catastrophic release near miss events are infrequent events, and therefore do not typically divert attention from other safety activities. However, EPA believes that investigation of such incidents, when they occur, should be a high

priority safety activity for regulated stationary sources, because these investigations can lead to the correction of problems which could ultimately prevent much more serious and costly catastrophic release incidents.

EPA also disagrees that the final rule applies the root cause investigation requirement to low-consequence, high-frequency events. The final rule requires root cause investigations only for incidents that resulted in, or could reasonably have resulted in, a catastrophic release. Such incidents are unusual. Based on accident history information reported to EPA, most regulated sources have never experienced a catastrophic release incident, and the Agency also believes that near misses will also be relatively rare events. The final rule does not presume any “equivalency” between near misses and actual catastrophic releases. The Agency notes that actual catastrophic releases may be more difficult to investigate if the incident requires extensive cleanup, damage assessment, evidence collection, etc.—activities that are unlikely to be necessary for near miss events. However, lessons learned from catastrophic releases and near misses should both benefit the source and its surrounding community, whether or not such events are viewed as equivalent.

Root cause requirements for Program 2 facilities. Some commenters opposed requiring root cause analyses for Program 2 processes. An industry trade association said that since most incidents happen at facilities with Program 3 facilities, it is unnecessary to expand this requirement to Program 2 facilities. Another industry trade association said root cause analyses should only be required at Program 3 facilities because the methodology is most appropriate for complex incidents.

While it is true that most RMP-reportable incidents occur at Program 3 processes, EPA decided that there was little justification for limiting the root cause requirements to only Program 3 processes, because some serious accidents also occur at Program 2 processes. Also, the Agency notes that some of the accidents at Program 2 processes occur at publicly owned water and wastewater treatment facilities that are not in Program 3 only because they are not located in a state with an OSHA-approved State Plan. Unlike state and local government employees at facilities in states with OSHA-approved State Plans, state and local government employees at facilities in states under Federal OSHA authority are not covered by the OSHA PSM standard. This results in regulated processes at these

sources being placed in Program 2, even though the processes generally pose the same risk as similar processes at publicly owned water or wastewater treatment processes that are located at sources in OSHA State Plan states.

Incident investigation methodology. One commenter argued that EPA does not have authority to specify a specific incident investigation and analysis methodology and should remove all references to or requirement for any named investigation or analysis method from its proposed rulemakings. The commenter cited various provisions of the CAA and the language within the Memorandum of Understanding between CSB and EPA and asserted that CSB is the lead entity for accident investigations and has the authority to specify a named investigation method. Other commenters, including a state agency and facilities, said that EPA has not provided examples of how to determine what is a recognized method or which consensus bodies are to be used to determine recognized methods.

EPA disagrees with these comments. While the final rule does not require use of a specific incident investigation or analysis method (the final rule allows the owner or operator to determine root causes using “a recognized method”), nothing in the CAA precludes EPA from requiring sources to conduct incident investigations. Contrary to the commenter’s suggestion, the legislative history specifically contemplates EPA requiring accident investigations (see Senate Report at 242–43²⁶). The Agency notes that the existing RMP rule already contains such a requirement applicable to Program 2 and Program 3 processes. Like other risk management provisions, CAA section 112(r)(7)(B)(i) requires investigation requirements to be reasonable, but nothing in the statute otherwise limits EPA from requiring the investigation to address the issue of the underlying root cause of the accident.

Nothing in this final rule interferes with the ability of the CSB to conduct its accident investigations. The incident investigation provision we adopt is designed to have the facility learn from its accidents and near misses in order to identify ways to improve the facility’s prevention program. The root cause investigations in this rule serve a distinct purpose from the oversight purposes of the CSB.

EPA also disagrees that we should specify recognized investigation methods or point to specific governing

²⁶ Senate Committee on Environment and Public Works, Clean Air Act Amendments of 1989, Senate Report No. 228, 101st Congress, 1st Session (1989)—“Senate Report”.

bodies for such methods. Investigation methods evolve over time, and new methods may be developed, so any list promulgated by EPA in this rule may soon be obsolete. The Agency took a similar approach in the PHA requirements for the existing rule, where it listed several potential methods, but also included the option to use an appropriate equivalent methodology. EPA recommends that owners and operators consult available literature on root cause investigation. For example, CCPS has published *Guidelines for Investigating Chemical Process Incidents*, which provides extensive guidance on incident investigations, near miss identification, root cause analysis, and other related topics.²⁷

i. Other Incident Investigation Report Requirements

A few commenters, including a Federal agency, expressed support for the proposal to require additional information to be included in incident investigation reports. Several other commenters expressed opposition to various proposed incident investigation report requirements. A facility said that EPA's proposed changes are unnecessary because each of the proposed items is already required under the OSHA PSM standard. Some industry trade associations opposed requiring facilities to include the results of the root cause analysis in the incident investigation report, saying this could increase the likelihood of lawsuits against the facility if those reports are made public, or could result in the release of confidential business information.

EPA believes that providing the additional required information is vital for understanding the nature of the incident and should be included in the incident investigation report. Some facility owners or operators may already voluntarily include root cause information and other elements required under this rule (e.g., time and location of incident, name and amount of substance involved in the release, etc.) in incident investigation reports prepared to comply with the RMP rule. However, §§ 68.60 and 68.81 are being revised to require this information to ensure clarity and consistency among reports. While the OSHA PSM standard contains the same incident investigation reporting requirements as the existing RMP rule for Program 3 processes, prior to this rule, neither regulation required

reporting of root cause information nor the other report elements required in this rule. EPA disagrees with the conjecture that there may be an increased possibility of lawsuits is a good reason not to include root causes and other factual incident information in incident investigation reports. We note that the current rule requires a report that discusses factors contributing to the incident and recommendations resulting from the investigation, so to the extent that litigants would seek to use reports to establish cause or preventability of an incident, the litigation risk is there already. To the extent that the root cause discussion contains CBI, the existing rule provides methods for asserting CBI claims. Identifying root causes can prevent future incidents, thereby reducing accidental release impacts.

B. Third-Party Audits

EPA proposed to require owners or operators of certain RMP facilities to perform third-party audits, in order to prevent accidents and ensure compliance with part 68 requirements. The third-party audits are similar to the compliance audits already required by §§ 68.58 and 68.79, but EPA expects that independent compliance audits will assist stationary sources to come fully into compliance with the applicable prevention program requirements. The details of these requirements are described further.

1. Summary of Proposed Rulemaking

a. Definitions

EPA proposed to define "third-party audit" in § 68.3 as a compliance audit conducted pursuant to the requirements of § 68.59 and/or § 68.80, by an entity (individual or firm) meeting the competency, independence and impartiality criteria in those sections.

b. Compliance Audit Requirements Under §§ 68.58 and 68.79

EPA proposed changes to §§ 68.58 and 68.79 to require third-party compliance audits for both Program 2 and Program 3 processes, under certain conditions and to clarify existing requirements for compliance audits. EPA proposed to edit §§ 68.58(a) and 68.79(a) to add the language "for each covered process" to clarify that all compliance audits, self and third-party, shall address compliance with the provisions of Subpart C or D for each covered process. EPA also added a sentence at the end of the paragraph to reference when a compliance audit must be a third-party audit.

EPA also proposed to add paragraphs (f) through (h) in §§ 68.58 and 68.79. Paragraph (f) identified third-party audit applicability. EPA proposed that the next required compliance audit for an RMP facility would be a third-party audit when one of the following conditions apply:

- An accidental release, meeting the criteria in § 68.42(a), from a covered process has occurred; or
- An implementing agency requires a third-party audit based on noncompliance with the requirements of this subpart, including when a previous third-party audit failed to meet the competency, independence, or impartiality criteria of § 68.59(b) or § 68.80(b).

Proposed paragraph (g) described the procedure when an implementing agency requires a third-party audit and proposed an internal appeals process. EPA proposed to require an implementing agency to provide written notice to the facility owner or operator stating the reasons for the implementing agency's preliminary determination that a third-party audit is necessary. The owner or operator would have an opportunity to respond by providing information to, and consulting with, the implementing agency. The implementing agency would then provide a final determination to the owner or operator. If the final determination requires a third-party audit, the owner or operator would have an opportunity to appeal the final determination. EPA proposed that the implementing agency would provide a written, final decision on the appeal to the owner or operator after considering the appeal.

Proposed paragraph (h) described the schedule for completing third-party audits. The proposed language required the audit and associated report to be completed, and submitted to the implementing agency within 12 months of when any third-party audit is required or within three years of completion of the previous compliance audit, whichever is sooner. The provision also allowed an implementing agency to specify a different schedule.

c. Third-Party Compliance Audit Requirements in §§ 68.59 and 68.80

EPA proposed new §§ 68.59 and 68.80, which included requirements for both third-party compliance audits and third-party auditors. In paragraph (a), EPA proposed that owners or operators engage a third-party auditor to evaluate compliance with the provisions of subpart C or D (as applicable) when the applicability criteria of § 68.58(f) or § 68.79(f) are met.

²⁷ CCPS 2003. Center for Chemical Process Safety, *Guidelines for Investigating Chemical Process Incidents*, 2nd Edition, NY: AIChE.

Auditor qualifications. In paragraph (b), EPA proposed third-party auditor qualifications and required facility owners and operators to document that the third-party auditor or audit team meets competency and independence criteria of the rule. Specifically, EPA proposed that facility owners or operators determine and document that the third-party auditors meet the competency criteria in paragraph (b)(1) and the independence criteria in paragraph (b)(2).

EPA proposed competency criteria for auditors, requiring third-party auditors to be:

- Knowledgeable with the requirements of part 68;
- Experienced with the facility type and processes being audited and the applicable recognized and generally accepted good engineering practices (RAGAGEP);
- Trained or certified in proper auditing techniques; and
- A licensed Professional Engineer (PE) or include a licensed PE on the audit.

EPA also proposed independence and impartiality criteria that would apply to the third-party auditor or auditing team, and to each audit team member, individually. Specifically, the criteria would have required the auditor/audit team to:

- Act impartially when performing all activities under this section;
- Receive no financial benefit from the outcome of the audit, apart from payment for the auditing services;
- Not have conducted past research, development, design, construction services, or consulting for the owner or operator within the last 3 years. For purposes of this requirement, consulting does not include performing or participating in third-party audits pursuant to § 68.59 or § 68.80;
- Not provide other business or consulting services to the owner or operator, including advice or assistance to implement the findings or recommendations in an audit report, for a period of at least 3 years following submission of the final audit report;
- Ensure that all personnel involved in the audit sign and date the conflict of interest statement in § 68.59(d)(8); and
- Ensure that all personnel involved in the audit do not accept future employment with the owner or operator of the stationary source for a period of at least 3 years following submission of the final audit report. For purposes of this requirement, employment does not include performing or participating in third-party audits pursuant to § 68.59 or § 68.80.

In addition, in paragraph (b)(3), the proposed rulemaking required the auditor to have written policies and procedures to ensure that all personnel comply with the applicable competency, independence, and impartiality requirements.

Audit report. EPA proposed requirements for the audit report in paragraph (c). In paragraph (c)(1) EPA specified the scope and content of these reports, including a statement to be signed by the third-party auditor certifying that the third-party audit was performed in accordance with the requirements of subpart C or D, as applicable. EPA also proposed to require that the final third-party audit reports identify any adjustments made by the third-party auditor to any draft third-party audit reports provided to the owners or operators for their review or comment.

Proposed paragraph (c)(2) included requirements for third-party auditors to retain reports and records. Proposed paragraph (c)(3) required the audit report to be submitted to the implementing agency at the same time, or before, it is provided to the owner or operator. Proposed paragraph (c)(4) provided that the audit report and related records could not be claimed as attorney-client communications or as attorney work products, even if written for or reviewed by legal staff.

Third-party audit findings. EPA proposed in paragraph (d)(1), to require owners or operators, as soon as possible, but no later than 90 days after receiving the final audit report, to determine an appropriate response to each of the findings in the audit report, and develop and provide to the implementing agency a findings response report. EPA proposed that the findings response report would include:

- A copy of the final audit report;
- An appropriate response to each of the audit report findings;
- A schedule for promptly addressing deficiencies; and
- A statement, signed and dated by a senior corporate officer, certifying that appropriate responses to the findings in the audit report have been identified and deficiencies were corrected, or are being corrected, consistent with the requirements of subpart C or D of 40 CFR part 68.

EPA proposed in paragraph (d)(2), to require the owner or operator to implement the schedule to address deficiencies identified in the audit findings response report, and document the action taken to address each deficiency, along with the date completed.

Proposed paragraph (d)(3) required the owner or operator to provide a copy of documents required under paragraphs (d)(1) and (d)(2) to the owner or operator's audit committee of the Board of Directors, or other comparable committee, if one exists.

Recordkeeping. Finally, EPA proposed recordkeeping requirements for the owner or operator in paragraph (e). The proposal would have required the owner or operator to retain records at the stationary source, including: The two most recent third-party audit reports, related findings response reports, documentation of actions taken to address deficiencies, and related records; and copies of all draft third-party audit reports. Those sections would further have required the owner or operator to provide draft third-party audit reports, or other documents, to the implementing agency upon request. EPA proposed that requirements would not apply to any documents that are more than five years old.

2. Summary of Final Rule

Regulated entities must engage a third-party to conduct an independent compliance audit when they (1) have an RMP reportable accident or (2) have been notified by an implementing agency of a determination of either conditions that could lead to an accidental release or problems with a prior third-party audit.

EPA is finalizing the proposed requirements for third-party auditors with modifications that include:

- Revising the applicability criteria for third-party audits required by implementing agencies from noncompliance to conditions that could lead to an accidental release;
- Providing for a third-party audit team, led by an independent third-party, which may now include a wide variety of additional, non-independent personnel, including facility employees and other personnel;
- Eliminating the competency criterion that the auditor be a PE;
- Revising the third-party auditor independence criteria to increase the number and diversity of qualified and available auditors; and
- Removing the requirement that either or both draft and final audit reports be submitted to implementing agencies.

EPA believes these changes address many of the most significant public comments EPA received on the proposed third-party audit requirements.

a. Definitions

In the final rule, EPA revised the definition of “third-party audit” to reflect the changes in §§ 68.59 and 68.80, which, when applicable, require that an owner or operator must either engage a third-party auditor or assemble an auditing team led by a third-party auditor. EPA also deleted the reference to impartiality, because impartiality is a criterion under the independence criteria in §§ 68.59(c)(2) and 68.80(c)(2) and there is no need to highlight this term individually.

b. Compliance Audit Requirements Under §§ 68.58 and 68.79

EPA is finalizing paragraph (a) as proposed. This includes clarifying language “for each covered process” added to §§ 68.58(a) and 68.79(a).

EPA is finalizing the applicability requirements set forth in §§ 68.58(f)(1) and 68.79(f)(1) as proposed but modifies the criterion in §§ 68.58(f)(2) and 68.79(f)(2) to apply when an implementing agency requires a third-party audit due to conditions at the stationary source that could lead to an accidental release of a regulated substance, or when a previous third-party audit failed to meet the competency or independence criteria of § 68.59(c).

EPA is also finalizing the implementing agency notifications and appeals process in paragraph (g), as proposed. However, the final rule language includes minor editorial revisions. The language of subparagraph (g)(1) requires the implementing agency to provide written notice to the owner or operator that describes the basis for the determination. The language of §§ 68.58(g)(3) and 68.79(g)(3) was modified to delete the unnecessary phrase “of this section.”

EPA has modified and clarified the schedule for completing a third-party audit in paragraph (h) as follows:

- EPA deleted the language requiring the auditor to submit the audit report to the implementing agency.
- The final rule requires a third-party audit to be completed within 12 months, unless a different timeframe is specified by the implementing agency. However, EPA made changes to simplify and clarify the schedule requirements.
 - Subparagraph (h)(1) requires a third-party audit to be completed within 12 months of an RMP reportable accident.
 - Subparagraph (h)(2) requires a third-party audit to be completed within 12 months of the date of the implementing agency’s final determination, or if appealed, within 12

months of the date of the final decision on the appeal.

c. Third-Party Compliance Audit Requirements in §§ 68.59 and 68.80

EPA is finalizing paragraph (a) as proposed but modified the language slightly to clarify that the owner or operator shall engage a third-party to conduct an audit to evaluate compliance with subpart C or D as applicable.

Third-party auditors and auditing teams. In the final rule, EPA added paragraph (b) to provide options for assembling a third-party auditor or an audit team. In addition to engaging a fully independent third-party auditing firm, owners or operators may assemble auditing teams that include competent and independent third-party auditor team leaders and other qualifying, non-independent personnel. The owner or operator shall either:

- Engage a third-party auditor meeting all of the competency and independence criteria of the rule (subparagraph (b)(1)); or
- Assemble an auditing team, led by a third-party auditor meeting all of the competency and independence criteria. The team may include:
 - Other employees of the third-party auditor firm meeting the independence criteria of the rule; and
 - Other personnel not employed by the third-party auditor firm (subparagraph (b)(2)).²⁸

Auditor qualifications. The final rule retains the third-party auditor qualification requirements in paragraph (b) of the proposed rulemaking but redesignated as paragraph (c). The qualification requirements set forth in this paragraph apply only to the third-party auditors. The third-party auditor qualifications are clarified and modified as described further in this preamble.

In the final rule, EPA simplified the introductory paragraph to indicate that the owner or operator shall determine and document that the third-party auditor(s) meets the competency and

²⁸ “Other personnel” may be facility personnel, personnel from any other facilities owned or controlled by the owner or operator, and/or any non-independent second or third-party consultants or contractors the owners or operators choose to include on the auditing teams they assemble under subparagraph (b)(2). In addition, the auditing teams may include other employees of the third-party auditor firm who meet the independence criteria of subparagraph (c)(2). Such personnel need not individually meet the final rule’s third-party auditor competency criteria as long as the independent third-party audit team leader, pursuant to his/her evaluation of audit team member competencies under subparagraph (d)(2), determines that the full audit team includes all of the competencies required to successfully complete the audit pursuant to the requirements in the final rule.

independence requirements set forth in the subparagraphs.

Subparagraph (c)(1) identifies competency criteria that apply to third-party auditors.²⁹ EPA is finalizing the competency criteria as proposed, except to delete the requirement for a licensed PE to conduct the audit or participate on the audit team.

Subparagraph (c)(2) identifies independence criteria that apply to third-party auditors. EPA is amending and finalizing the proposed independence criteria as follows:

- EPA is deleting the phrase “and impartiality” from the title because the impartiality requirement is listed as one of several criteria, and it is unnecessary to highlight the term separately.
- EPA clarified that retired employees qualify as third-party auditors when financial attachments are limited to retirement and/or health plans.
- EPA revised the timeframe that limits third-party auditors past and future research, development, design, construction services, or consulting services to two years. EPA further clarified that if the firm employs personnel that did conduct these services within the prescribed timeframe, then these personnel may not participate in the audit.
- The final rule requires third-party audit personnel to sign and date a conflict of interest statement documenting that they meet the independence criteria.
- The limitation regarding future employment with the owner or operator has been modified to apply to only third-party personnel involved in the audit and the timeframe decreased to two years.

EPA is finalizing subparagraph (c)(3), as proposed, to require auditors to have written policies and procedures to ensure that all personnel comply with the qualification criteria—except to delete the word impartiality from the criteria description.

Third-party auditor responsibilities. EPA is adding requirements for the owner or operator to provide certain responsibilities to the third-party auditor.³⁰ Paragraph (d) requires the

²⁹ The competency criteria do not apply to other personnel, not employed by the third-party auditor firm, that participate on the auditing team (e.g., facility personnel).

³⁰ EPA is finalizing auditor responsibilities to ensure that third-party auditors maintain certain responsibilities when audit teams are comprised of both third-party auditor personnel and other personnel. EPA did not propose roles and responsibilities for independent third-party auditors because, in the proposed approach, independent third-party auditors were responsible for conducting all auditing activities.

owner or operator to ensure that the third-party auditor:

- Manages the audit and participates in audit initiation, design, implementation, and reporting;
- Determines appropriate roles and responsibilities for the audit team members based on the qualifications of each team member;
- Prepares the audit report and where there is a team, documents the full audit team's views in the final audit report;
- Certifies the final audit report and its contents as meeting the requirements of the rule; and
- Provides a copy of the audit report to the facility owner or operator.

Audit report. EPA is redesignating and finalizing audit report requirements under paragraph (e) of the final rule with modifications. EPA reorganized and added one report requirement to the proposed subparagraphs (c)(1)(i) to (c)(1)(v). These are subparagraphs (e)(1) to (e)(6) in the final rule.

EPA also amended the audit report provisions in the final rule to simplify the applicable provisions and simplify the requirements for preparing and handling the third-party audit reports:

- Subparagraph (e)(1) requires the report to identify all persons participating on the audit team, including their employers and/or affiliations. The report must also document that third-party auditors meet the competency criteria of the rule;³¹
- EPA added an additional requirement under subparagraph (e)(2) for the auditor to describe in the report, or incorporate by reference, policies and procedures to ensure all third-party personnel comply with the competency and independence criteria of the rule;
- Proposed subparagraphs (c)(ii) and (c)(iii) are finalized as proposed and redesignated as (e)(3) and (e)(4). The report must document the auditor's compliance evaluation for each covered process and document the findings of the audit, including any identified deficiencies;
- Subparagraph (e)(5) requires the report to summarize any significant revisions between draft and final versions of the report;
- Subparagraph (e)(6) requires the auditor or audit team leader to sign and date a certification. The certification is finalized as proposed except to remove the last sentence that acknowledges penalties for submitting false information;

³¹ Note-only third-party auditors must meet the competency criteria of the rule—does not apply to other personnel on an audit team.

- EPA deleted the provision that required the auditor to maintain copies of all reports and records;³²
- EPA deleted the provision that required the auditor to submit the report to the implementing agency at the same time as it would be provided to the owner or operator; and
- EPA deleted the provision limiting attorney-client privilege.

Third-party audit findings. EPA is finalizing requirements for the owner or operator to prepare a findings response report; develop a schedule to address deficiencies; and submit the findings response report and schedule to the Board of Directors. These requirements are redesignated to paragraph (f) of the final rule with the following modifications to the findings response report:

- EPA deleted the proposed requirement to submit the findings response report to the implementing agency; and
- EPA amended the owner/operator certification in the findings response report to add a sentence indicating that the owner or operator has engaged a third-party to perform or lead an audit team to conduct a third-party audit in accordance with the requirements of 40 CFR 68.80. EPA also modified the final sentence of the certification to clarify that submitting false information includes making false material statements, representations, or certifications.³³

EPA is finalizing requirements in subparagraph (f)(2) to develop a schedule to address deficiencies as proposed, except to modify the title of the provision to schedule implementation and correct citations to redesignated paragraphs.

EPA is also finalizing the requirement in subparagraph (f)(3) to submit the findings response report and implementation schedule to the board of directors as proposed with minor modifications to update citations to redesignated paragraphs, and capitalize Board of Directors in the title. In addition, the end of the last sentence was changed to reference a comparable committee, or individual, if applicable.

Recordkeeping. EPA is finalizing the recordkeeping requirements as proposed in paragraph (d) with the following modifications:

³² EPA retains its authority under Section 114 of the CAA to require regulated entities to make such records available to the Agency, as appropriate, upon request or during inspections. EPA is finalizing recordkeeping requirements under paragraph (g) of the final rule.

³³ This change was made to track the language of Section 113(c)(2)(A) of the CAA which makes it illegal for regulated entities to “make any false material statement, representation, or certification.”

• The paragraph has been redesignated as paragraph (g) in the final rule;

• EPA eliminated the proposed subparagraphs and moved the language of proposed subparagraph (e)(1) into the main paragraph with edits to clarify that the owner or operator shall retain at the stationary source the two most recent final third-party audit reports;

• EPA eliminated the proposed requirement for owners or operators to retain copies of all draft third-party audit reports (subparagraph (e)(2) of the proposed rulemaking); and

• EPA amended the recordkeeping provision for Program 3 processes in § 68.80(e) to delete the sentence that applied the recordkeeping provisions to any documents that were five-years old or less. This revision is consistent with current recordkeeping compliance audits under § 68.79(e) and corrects an error in the proposed rulemaking text.

3. Discussion of Comments and Basis for Final Rule Provisions

Several comments supported the proposed third-party audit requirements, including one stating that the commenter found that internal audits often fail to identify systemic process safety deficiencies. However, many commenters opposed the proposed third-party compliance audit provisions, including some who expressed general opposition, reasoning that existing requirements and mechanisms are working. Some comments argued that the costs outweigh the benefits associated with this provision or that audits by internal resources are more cost-effective and less disruptive, while still providing adequate assessment and encouraging compliance.

EPA has retained a third-party audit requirement in the final rule. We continue to rely on the rationale expressed in the proposed rulemaking. However, in the final rule, we have modified the requirements for the audit team to expand the potential membership while still retaining the critical role of the independent auditor in the review of the compliance program. In the discussion that follows and in the Response to Comment document, we explain the modifications to our approach and the basis for these modifications.³⁴ While the RMP rule does not prohibit accidental releases, an accidental release can be an indication of a prevention program that both needs

³⁴ 2016. EPA Response to Comments on the 2016 Proposed Rulemaking Amending EPA's Risk Management Program Regulations. This document is available in the docket for this rulemaking.

improvement and that may benefit from an audit by someone independent from the source's historic program and the management of the source. The requirements finalized in this rule are not based on a wide finding that the original compliance audit requirement of the RMP rule does not have value; instead, we promulgate this requirement to target a subgroup that have had indications of potential problems not detected and addressed by the traditional audit structure.

EPA believes it is appropriate to require a subset of RMP-regulated facilities to engage competent and independent third-party auditors following an RMP-reportable accident or identification of conditions at the stationary source that could lead to an accidental release of a regulated substance. The purpose of the third-party audit is to assist the owners and operators in determining whether facility procedures and practices to comply with subparts C and/or D of the RMP rule (*i.e.*, the prevention program requirements) are adequate and being followed. Thus, EPA is finalizing requirements for third-party audits when required under § 68.58 and/or § 68.79, to require that owners and operators ensure that third-party auditors meet qualification criteria, audits are conducted and documented, and findings are addressed pursuant to the requirements of § 68.59 and/or § 68.80, as applicable. EPA notes that under part 68, sources with any Program 2 and/or Program 3 processes are already required to conduct compliance audits every three years. This rule does not change the requirement that RMP facilities regularly conduct RMP compliance audits but provides only that, in specific situations, those audits be performed by a third-party or a team led by a third-party, pursuant to the schedule in § 68.58(h) and/or § 68.79(h) of the rule.

EPA considered, but did not adopt, changes to the final rule that would establish additional processes or programs under which EPA or other regulatory agencies must first approve or credential third-party auditors before owners or operators can engage them. Nor did EPA modify the rule to establish or reference additional independent auditor accreditation programs or auditor accreditation oversight committees or otherwise require potential third-party auditors to be accredited by an independent auditing or accreditation body before owners or operators may engage the auditors under this rule. For some programs, external accreditation of third-party auditors adds additional

rigor to the process of ensuring the competence and independence of the auditors but such external accreditation can be time-consuming and add financial costs. EPA believes that the level of effort and resources necessary to establish these programs would cause unnecessary delays in implementing third-party compliance audit requirements and are not warranted for the small universe of facilities that may be subject to these requirements.

Comments on significant issues relating to third-party audits are summarized and discussed further in this preamble. The following also discusses EPA's basis for the third-party audit provisions adopted in this final rule.

a. Third-Party Auditing Constitutional Law and Agency Authority Issues

EPA's enforcement authority. Several commenters stated that EPA should rely on its existing enforcement authority, including the ability to require third-party audits in particular enforcement proceedings, rather than requiring third-party audits more generally. Another encouraged EPA to focus on enforcing existing audit requirements. Similarly, another recommended that EPA address facilities deemed to be incapable of performing objective self-auditing through EPA's enforcement authorities. One commenter argued that the proposed third-party audit requirements violate the U.S. Constitution's Fifth Amendment Due Process Clause because the proposal seeks to outsource EPA's inspectional duties to a third-party and force facility owners or operators to accept and implement the third-party's findings without processes to protect the due process rights of those subject to the audits. A few commenters stated that the proposed third-party auditing provisions are an unlawful and unconstitutional circumvention of Congressional appropriations limits on EPA's enforcement budget. Specifically, the commenters argued that the Anti-Deficiency Act prohibits EPA from augmenting its enforcement budget by mandating that third parties oversee the RMP program.

EPA disagrees with the commenters. Third-party audits do not constitute enforcement, nor do they substitute for inspections by implementing agencies, and as such, EPA believes that they do not violate either the Due Process Clause of the Fifth Amendment, or the Anti-Deficiency Act. In addition, as discussed further in this preamble, EPA believes that there is no violation of the Due Process Clause of the Fifth Amendment regarding implementation of third-party audit findings.

The third-party audits required in this final rule are compliance audits, similar to the current self-audit requirements, only conducted by a team led by a third-party auditor. The Senate Environment and Public Works Committee identified program audits "by company personnel . . . or outside consultants" as an element of prevention program rules within the range of authorities provided EPA. *See* Senate Report at 243.³⁵ The findings of a third-party audit are intended to identify noncompliance that was not discovered by facility personnel during self-audits, and are not intended primarily to bring such findings to the attention of government regulators. In fact, the audits are designed primarily to benefit owners or operators by assisting them to identify both actual noncompliance as well as operational or equipment deficiencies, previously unidentified risk factors, and accident release and/or regulatory noncompliance precursor conditions which, if uncorrected, could lead to releases and/or enforcement actions. Proactively addressing deficiencies, risk factors, and precursor conditions to accidental releases and regulatory noncompliance will provide financial, regulatory, and environmental benefits for facility owners and operators and communities. EPA has reasonably targeted third-party audit requirements at facilities that have had RMP reportable incidents that may demonstrate weaknesses in prior self-assessments and at facilities of heightened concern for implementing agencies.

Furthermore, third-party compliance audits in no way constitute regulatory inspections of, or enforcement at, RMP-regulated facilities. This rule is clear that third-party auditors' or third-party audit teams' findings are not, in and of themselves, determinations of regulatory violations. Nor are the audit reports or related documentation required to be automatically submitted to implementing agencies. EPA believes there is no violation of the Due Process Clause of the Fifth Amendment regarding implementation of third-party audit findings. Owners or operators must address all third-party audit findings, the rule provides that addressing the audit findings may include, where appropriate, determining that some specific findings were based on incorrect factual assumptions or were otherwise inappropriate to implement. Thus, as described further

³⁵ Senate Committee on Environment and Public Works, Clean Air Act Amendments of 1989, Senate Report No. 228, 101st Congress, 1st Session 211 (1989)—"Senate Report."

in this preamble, the owner or operator of a stationary sources may determine an appropriate response to the findings in the audit report, and are not required to accept findings when they can justifiably decline to adopt them, and EPA believes that determining appropriate responses, and addressing of deficiencies, risk factors, and precursor conditions to accidental releases and regulatory noncompliance pursuant to the third-party audit regulatory requirements, do not constitute violations of the Due Process Clause of the Fifth Amendment.

Finally, nothing in this rule relieves the EPA of any of its responsibilities under the CAA or implies that EPA will not continue to use its enforcement authorities under the CAA or devote resources to monitoring and enforcing this rule. The third-party auditing regulatory requirements simply ensure that regulated entities will, in a carefully-defined subset of circumstances, take reasonable measures to assess and ensure their own compliance.

Security and CBI concerns. A few commenters expressed security concerns associated with third-party compliance audits. One commenter was concerned with ensuring proper treatment of confidential information by third-party auditors, and asserted that the proposed rulemaking does not address whether or not a facility will be able to limit the release of sensitive information once a third-party auditor is involved. Another comment was received stating that facility and process security are concerns for the commercial explosives industry, and recommended that EPA eliminate the third-party audit requirements. This commenter reasoned that internal staff at explosives sites would have undergone mandatory background checks but third-party auditors wouldn't necessarily be subject to the same security screening. A few commenters stated that attempts to find auditors with appropriate security clearances would further limit the pool of available qualified auditors. One commenter asserted that the third-party compliance audit requirements create legal concerns given that the third parties would be privy to potential CBI or information that should be protected under attorney-client privilege.

EPA acknowledges commenters concerns; however, facility owners or operators routinely obtain and review the internal policies, procedures, and qualifications of a wide range of consultants and contractors before engaging them in order to assess their qualifications to perform consulting or contractual services. EPA is confident

owners and operators will be able to ensure that third-party auditor personnel meet applicable security criteria.

Regarding concerns that the third-party compliance audit requirements create legal concerns given that the third-parties would be privy to potential CBI, the contracts or other agreements between owner/operators and third-party auditors can address how any potential confidential business information is handled by the third-party.

With regard to information that arguably should be protected under evidentiary privileges, EPA's view is that the third-party audit reports and related records under this rule, like other documents prepared pursuant to part 68 requirements, such as process safety information, PHAs, operating procedures and others, are not documents produced in anticipation of litigation. With respect to the attorney-client communication privilege specifically, the third-party auditor is arms-length and independent of the stationary source being audited. The auditor lacks an attorney-client relationship with counsel for the audited entity. Therefore, in EPA's view, neither the audit report nor the records related to the audit report provided by the third-party auditor are attorney-client privileged (including documents originally prepared with assistance or under the direction of the audited source's attorney). Nevertheless, EPA recognizes that the ultimate decision maker on questions of evidentiary privileges are the courts. Therefore, this rule does not contain a specific regulatory provision prohibiting assertion of these privileges.

b. Requirement To Conduct Compliance Audit for Each Covered Process

EPA received several comments regarding the clarification in §§ 68.58(a) and 68.79(a) of the proposed rulemaking that all RMP audits must address "each covered process" at a facility. Some commenters opposed this clarification. A few commenters indicated that this would be a change, and asserted that EPA has endorsed guidance from the CCPS allowing facilities with a large number of covered processes to audit a representative sample of processes.

One commenter argued that it was punitive for an accidental release from one process to automatically trigger a third-party audit requirement for all covered processes. A few commenters stated that requiring that all RMP-covered processes at the facility be audited regardless of what process triggered the requirement to perform the

third-party audit would result in duplication of efforts with little benefit where processes at multi-process facilities are on different auditing schedules and third-parties are required to audit processes that were recently audited and not related to the incident that triggered the third-party audit. One commenter stated that requiring audits of processes that are not part of an incident would tie-up plant resources for longer than needed, which was particularly notable to the commenter because these processes would very likely still be operating after the incident and at the time of the audit.

Finally, commenters asserted that it is unfair and more burdensome to require larger facilities with multiple processes to audit each covered process, arguing that they would essentially be auditing all the time, where small facilities with one or two processes would have a lesser auditing burden.

EPA disagrees with commenters that believe it is punitive or redundant to require an audit of all RMP-covered processes at the facility, including those not involved in an RMP-reportable accident. Under existing rules, each facility compliance audit must address each covered process at least every three years. The third-party audit required under this rule simply replaces the next scheduled self-compliance audit, which must address each covered process.

EPA has consistently maintained that, at least every three years, owners or operators must, under the RMP rule, certify that they have evaluated compliance with the prevention program requirements for *each covered process*. "In EPA's General Risk Management Guidance, issued in 2004 and updated in 2009, in Chapter 6, "Prevention Program (Program 2)" Section 6.7 "Compliance Audits (§ 68.58)", under the heading "What Do I Need to Do?" it states "At least every three years, you must certify that you have evaluated compliance with the prevention program requirements for *each covered process*" [emphasis added]. In addition, Chapter 7 of this guidance, "Prevention Program (Program 3)" Section 7.9 "Compliance Audits (§ 68.79)," states "You must conduct an audit of the process to evaluate compliance with the prevention program requirements at least once every three years." While EPA does list the 1993 edition of CCPS Guidelines for Auditing Process Safety Management Systems as a reference source within this guidance, EPA disagrees that the CCPS guidelines endorse allowing large facilities to audit a representative sample of covered processes.

EPA has also clearly stated its position within the Notice of Proposed Rulemaking preamble for the initial RMP regulation, and in the Response to Comments for that rule. In response to a question concerning whether facilities could stagger compliance audits where there are multiple processes at a facility, EPA stated, in the Response to Comments document, that a source “may choose to audit different processes on different schedules (if) over each three-year period, all covered processes are audited.”³⁶ Furthermore, while OSHA’s original PSM compliance audit guidelines may have allowed for auditing a sample of processes, the current guidelines are consistent with EPA’s General Risk Management Guidance. See OSHA’s “Appendix C to § 1910.119—Compliance Guidelines and Recommendations for Process Safety Management (Nonmandatory).” EPA’s decision to retain, in §§ 68.59(e)(3) and 68.80(e)(3) of the final rule, the requirements for the third-party audit reports to document the auditor’s evaluation, for each covered process, of the owner or operator’s compliance with the prevention program provisions is thus consistent with both the initial RMP rule and EPA’s longstanding interpretation of the scope of the rule.

EPA also disagrees with commenters’ burden argument for larger companies and facilities with a larger number of processes. These larger facilities typically also have more personnel and resources, where smaller facilities with fewer processes may have fewer employees, so the burden of auditing is proportionate for these facilities. Furthermore, larger facilities with more processes, in general, are likely to have more potential opportunities for accidental releases due to their size, complexity, and scale of operations. Therefore, it is appropriate for such facilities’ auditing responsibilities to be commensurate to their size, complexity, and scale of operations.

c. Third-Party Audit Applicability

Some commenters generally supported the proposed applicability requirements. However, many commenters opposed the requirements, requesting that EPA narrow, limit, or eliminate these requirements.

RMP-reportable accident criterion. A commenter encouraged EPA to develop a narrower range of circumstances that can trigger a third-party audit to ensure they will not become an overwhelming

compliance function, and detract from the performance-based aspects of RMP. Other commenters recommended limiting the requirements to: Releases that result in offsite impacts, such as offsite deaths, serious injuries, or significant environmental contamination; Program 3 facilities; facilities with multiple releases or multiple major accidents; or incidents that result in significant impacts to workers, or to the community. Another commenter stated that third-party audits should not be required automatically, but should only be required if the facility has experienced an accidental release that meets the criteria in § 68.42(a) and EPA makes the determination that there is good cause for the audit, in light of the particular circumstances and facts surrounding the release in question. One commenter stated that the accidental release trigger was not an effective way to improve public safety and urged EPA to adopt a more proactive and targeted approach.

EPA disagrees with commenters that third-party compliance audits will become an overwhelming compliance function. EPA has limited applicability of third-party audits to circumstances in which an RMP reportable accident has occurred or where conditions exist at the source that could lead to a release. In responding to the previous comments, it is necessary to provide context for how infrequently third-party auditing will, in practice, be necessary under the final rule, both in absolute numbers of such audits and their number relative to the full universe of RMP-regulated stationary sources already subject to the RMP rule’s self-auditing requirements.

Currently, there are approximately 12,000 stationary sources with Program 2 and/or Program 3 processes. The final rule requires third-party compliance audits only under the following two conditions:

- If there has been an RMP reportable accident (*i.e.*, an accidental release from an RMP facility meeting the five-year accident history criteria as described in § 68.42(a)); or
- If an implementing agency makes a determination that a third-party audit at an RMP facility is necessary, based on conditions “that could lead to an accidental release of a regulated substance” or a prior third-party audit at the facility.

EPA does not expect these criteria to impact a large percentage of stationary sources with Program 2 and/or Program 3 processes. For example, comparing the number of facilities which in past years have had an RMP reportable accident (averages approximately 150/year), with

the number of current stationary sources with Program 2 and/or Program 3 processes, would represent less than 2% of stationary sources subject to this requirement, due to an accident, on an annual basis. For more information on the number of RMP reportable accidents over a ten-year period see section IX.A of this preamble.

EPA also disagrees with suggestions to limit the applicability of third-party compliance audits to releases with offsite impacts, deaths, injuries, or significant environmental impacts. The purpose of the third-party audit is to help reduce the risk of future accidents by requiring an independent and objective audit to determine whether the owner or operator of the facility is effectively meeting the prevention program requirements of the RMP rule. Stationary sources that have had accidents and/or substantial noncompliance with Risk Management Program requirements may pose a greater risk to the surrounding communities. EPA agrees that releases with offsite impacts, deaths, injuries, or significant environmental impacts are potential indicators of noncompliance with RMP prevention program requirements. But so are accidental releases that involve significant property damage on-site, or known offsite evacuations, sheltering in place, property damage, or environmental damage of any degree.

The existing self-audit requirements under §§ 68.58 and 68.79 incorporate a proactive evaluation of prevention program requirements for Program 2 and Program 3 processes. However, when a facility has an accidental release or noncompliance that could lead to an accidental release of a regulated substance, EPA has determined that further self-auditing may be insufficient to prevent accidents and ensure safe operation. Therefore, we believe it is appropriate to require such stationary sources to undergo third-party auditing to better assist owners and operators and implementing agencies to determine whether the procedures and practices developed by the owner and/or operator under subparts C and/or D of the RMP rule (*i.e.*, the prevention program requirements) are adequate and being followed. EPA believes this approach will improve public safety overall by preventing future accidents at the source.

Overlap between incident investigations and third-party audits. Many commenters recommended that EPA focus on incident investigations after accidental releases rather than third-party audits. Some commenters reasoned that incident investigations are

³⁶EPA. May 24, 1996. Risk Management Plan Rule, Summary and Response to Comments. Volume 1, p. 15–2. Docket No. A–91–73, Document No. IX–C–1.

the activities that are most likely to mitigate both the severity of future incidents and the potential for recurrence. Some commenters stated that third-party audits should not be required when an incident investigation is also required because both of these activities require substantial internal resources and the incident investigation is more responsive to health and safety concerns. Some commenters also stated that requiring a facility to conduct the third-party audit after an accidental release has the potential to dilute resources from the facility's efforts to complete a comprehensive incident investigation and implement associated improvements. One commenter suggested that an incident investigation be required immediately after a catastrophic release but not a third-party audit, and that EPA could then require the stationary source's next three-year compliance audit (after the completion of the incident investigation) to have some degree of independence to assess the effectiveness of the changes made in response to the incident investigation.

EPA disagrees with commenters. Following an accident, incident investigations often reveal that facilities have deficiencies in some prevention program requirements related to that process. Incident investigations generally only evaluate the affected process, and do not necessarily address all covered processes at a facility, or even all prevention program elements for the affected process. However, compliance audits entail a systematic evaluation of the full prevention program for all covered processes, and EPA expects that third-party audits should identify deficiencies in any other covered processes at such facilities.

EPA believes that conducting the third-party compliance audits immediately after an accidental release is necessary to identify and correct existing noncompliance at prevention program facilities that could lead to future releases. EPA acknowledges that conducting third-party audits at the same time as incident investigations may impact the availability of facility resources for these activities. However, this is not a sufficient argument to delay the independent audit. Facilities may hire personnel from different firms to conduct the two activities or, for some facilities with knowledgeable internal staff to conduct investigations, they may only need to hire the third-party.

Although we agree with the commenter that suggested that compliance audits assess the effectiveness of changes made in response to an incident investigation, we disagree that this assessment must

be made by a third-party. The owner or operator will resume the three-year schedule to conduct self-compliance audits after the third-party audit and, at that time, the facility owner or operator may consider the findings of the incident investigation and the third-party compliance audit when assessing compliance with prevention program requirements.

Implementing agency criterion. Many commenters argued that the third-party audit trigger associated with implementing agency findings of noncompliance should either be eliminated or significantly revised. Commenters expressed concerns with allowing an implementing agency to require a third-party audit based on a noncompliance determination. Commenters were also concerned about the potential for inconsistent or arbitrary decisions by implementing agencies, and a few commenters were concerned about the potential for abuse of this mechanism by implementing agencies. One commenter expressed due process concerns related to the triggers for third-party compliance audits, stating that the proposed rulemaking fails to provide the regulated facility an opportunity to contest implementing agency allegations of noncompliance. Commenters also requested clarification on whether an implementing agency could require a third-party compliance audit following a site inspection by the implementing agency.

In response to comments, EPA has revised the third-party audit applicability criterion by requiring the implementing agency to base a determination on conditions at the stationary source that could lead to an accidental release of a regulated substance, rather than on noncompliance. An implementing agency may determine that a third-party audit is necessary following inspections, audits, or facility visits, if conditions are observed at the stationary source that could lead to an accidental release of a regulated substance. The implementing agency may choose to take other action following an inspection, as appropriate.

Conditions at a stationary source that could lead to an accidental release may include, but are not be limited to, significant deficiencies with process equipment containing regulated substances, such as unaddressed deterioration, rust, corrosion, inadequate support, and/or other lack of maintenance that could lead to an accidental release. The presence of small "pinhole" releases, that do not meet the criteria in § 68.42(a) for RMP-regulated accidental releases, could also constitute conditions that could lead to

a larger accidental release of a regulated substance. The occurrence of several prior accidental releases that did not meet the reporting criteria in § 68.42(a) at or from a facility could also constitute conditions which could lead to potentially more severe accidental releases. These releases may be a potential indicator that an owner or operator is not complying with RMP prevention program requirements and would benefit from a third-party audit to prevent future accidental releases.

EPA believes that having the implementing agency evaluate whether conditions exist that could lead to an accidental release better addresses the types of situations where a third-party audit would be most effective and will minimize the potential for inconsistent or arbitrary decisions made by implementing agencies. EPA also believes that the revised criterion is responsive to commenters' requests to narrow the applicability of these requirements. The criterion focuses on conditions with the potential to lead to accidental releases, rather than authorizing implementing agencies to require third-party audits under a potentially wide range of circumstances, including minor noncompliance.

In the final rule, a facility owner or operator has an opportunity to challenge the underlying findings when an implementing agency requires a third-party audit. Sections 68.58(g) and 68.79(g) describe the notification and appeals process. The implementing agency must provide written notice to the facility owner or operator that describes the basis for the implementing agency's determination. Within 30 days, the owner or operator may consult with, and provide information and data to the implementing agency on the preliminary determination. The implementing agency will then consider this information and provide a final determination to the owner or operator. EPA believes this appeal process provides due process to the owner or operator and is sufficient to eliminate any potential inconsistent use or abuse of authority.

Previous third-party audit criterion. A few commenters suggested deleting the failure of a previous third-party audit to meet the competency, independence, or impartiality criteria as a criterion for potentially requiring a subsequent third-party audit. These commenters reasoned that EPA has not shown that the auditor criteria will necessarily lead to better outcomes. A commenter questioned whether it was reasonable for EPA to declare a previous audit that was otherwise conducted in good faith, to be null and void, arguing that stationary

sources could find it burdensome and difficult to track auditor qualification criteria.

EPA disagrees with commenters' assertions that stationary sources will find it burdensome or difficult to apply the third-party auditor competency and independence criteria in this rule to identify qualified third-party auditors. See sections IV.B.3.i and IV.B.3.j of this preamble for a discussion of auditor qualifications in the final rule as well as an explanation for why EPA believes that independent auditors can provide a fresh perspective on compliance audits that will enable an owner or operator to improve the source's risk management program.

If the implementing agency has concerns about a previous third-party audit, which involved an auditor that failed to meet the qualification criteria for competency and independence, and the agency is concerned about the quality and/or adequacy of the audit and/or its findings, then the implementing agency may choose to require that another third-party audit be conducted. The final rule establishes a procedure for owners or operators to challenge the regulators' determinations.

Regarding the comment concerning auditor criteria leading to better outcomes, this issue was addressed in the preamble to the proposed rulemaking, and is also discussed extensively in section IV.B.3.h of this preamble.

Alternative criteria suggestions. EPA received a comment recommending that EPA require third-party compliance audits for all Program 2 and Program 3 facilities every three years, reasoning that this alternative option is a more preventative measure than the proposed applicability.

A few commenters, including a state government agency, suggested that EPA consider limiting the requirement to perform third-party audits to specific NAICs codes. Some of these commenters further recommended that certain types of facilities be excluded from the requirement, including water and wastewater treatment facilities and retail anhydrous ammonia facilities. A local government agency commented that EPA should consider limiting the requirement to perform third-party audits to the petroleum manufacturing, chemical manufacturing, and paper manufacturing industries only.

As part of the SBAR panel process for the proposed rulemaking, SERs suggested that EPA consider excluding or exempting small businesses from the rule's third-party auditing requirements or providing small businesses with

special flexibility to use less-than-fully-independent third-party auditors such as retired facility employees not otherwise meeting all of the proposed rulemaking's independence criteria. The SERs noted that the requirements in the proposed rulemaking for every member of the third-party auditing team to individually meet all of the proposed rulemaking's competency and independence criteria would be especially costly and burdensome to small businesses.

EPA disagrees with the suggestion to require all facilities with Program 2 and/or Program 3 processes conduct third-party compliance audits every three years, because the Agency believes that this would impose a very large economic burden on the regulated industry. EPA is also concerned that there may not be a sufficient number of independent auditors available to perform third-party audits at the frequency that this approach would demand.

Upon review of these comments in the context of EPA's overall approach to this rule, EPA has determined that it is unnecessary to add an exceptions or exemptions process for third-party auditor competency and independence to the final RMP rule, or to exempt small facilities or facilities within select industry sectors from the third-party auditing requirements. First, EPA expects that the current approach to require third-party audits following an RMP reportable accident, or based upon an implementing agency's determination, will impact approximately 150 facilities per year. In the Initial Regulatory Flexibility Assessment (IRFA)³⁷ for the proposed rulemaking, EPA determined that relatively few small businesses have reportable accidents and therefore this provision will typically not apply to small facilities. Therefore, it is unnecessary to exempt small facilities or revise the auditor qualifications for small facilities.

Additionally, EPA believes that the revised third-party auditor qualifications in this final rule will make it easier for owners and operators to find suitable third-party auditors and third-party audit team leaders to comply with the third-party audit provisions, making it unnecessary to add additional exceptions or an exception process to the final rule. EPA agrees with

commenters' requests to provide additional flexibility to allow retired facility employees to conduct a third-party audit and has revised the auditor qualification criteria to address this request (see section IV.B.3.j of this preamble for more information).

Finally, EPA disagrees with commenters that request EPA exclude facilities within specific sectors from third-party applicability. EPA based applicability of third-party audits on whether a source had an RMP reportable accident or whether conditions exist that could lead to an accidental release. EPA believes that these criteria are potential indicators for noncompliance with prevention program requirements and therefore warrant an evaluation by a third-party. If a specific industry sector does not typically have accidental releases, then this provision will not likely apply. Furthermore, EPA modified the third-party auditor qualification criteria to make it simpler for all businesses, small, medium, and large and in all sectors, to find qualified third-party auditors. Therefore, it is unnecessary to exclude or limit third-party audit applicability to specific industry sectors.

d. Implementing Agency Notification and Appeals

A few commenters asserted that the appeals process associated with third-party compliance audits is insufficient. One commenter stated that the proposed appeals process does not preclude the excessive or baseless use of the claim by agency staff nor detail the quality or quantity of information that a facility could present to overcome a agency's determination and the requirement to perform a third-party audit. Commenters also recommended adding an additional independent party to the appeals process. One commenter stated that EPA should clearly provide for judicial review of decisions on appeals by including regulatory language specifying that EPA's decision "constitutes final agency action for purposes of judicial review." Another commenter stated that EPA should make the deadline for appeals at least 60 days and should expressly provide for extensions.

EPA disagrees with the comments requesting an independent party be added to the appeals process. This approach would create unacceptable delays while the implementing agency and the facility identifies an appropriate third-party. EPA believes the appeals process set out in the final rule provides sufficient opportunities for the owner or operator to challenge an implementing agency's determination.

³⁷ The IRFA can be found in Chapter 7 of the *Regulatory Impact Analysis for Proposed Revisions to the Accidental Release Prevention Requirements: Risk Management Programs Under the Clean Air Act, Section 112(r)(7)*. This document is available in the docket for this rulemaking (Docket ID Number EPA-HQ-OEM-2015-0725).

Sections 68.58(g) and 68.79(g) describe the notification and appeals process for when an implementing agency requires a third-party audit. The implementing agency must provide written notice to the facility owner or operator that describes the basis for the implementing agency's determination. Within 30 days, the owner or operator may consult with, and provide information and data to, the implementing agency on the preliminary determination. The implementing agency will then consider this information and provide a final determination to the owner or operator. Then there is an appeals process, in which the owner or operator may appeal the final determination to the EPA Regional Administrator, or for determinations made by other implementing agencies, the administrator or director of such implementing agency.

It is important to note that the final determination regarding the applicability of these provisions is not an enforcement determination. It is a notification regarding the applicability of an existing regulatory requirement, a requirement that does not apply to all stationary sources, all the time, but when an agency determines that it would apply, the owner or operator is notified, given an opportunity to consult, and appeal further within the agency. Part 68 already includes final agency determinations regarding regulatory requirements in Section 68.220, and the process set out in this final rule for appeals of third-party audit determinations is similar.

In response to comments about the short time frames, EPA has determined that the 30-day timeframe to submit an appeal, which follows an initial 30-day time period for the owner or operator to provide information and data to, and consult with, the implementing agency, is adequate and will ensure timely consideration of the information presented. EPA believes there is sufficient time built into the initial notification and consultation process, and the subsequent appeals process, particularly considering that the provisions apply to third-party audits required due to accidents or conditions at the facility that could lead to an accidental release of a regulated substance, and taking into account the need, in these circumstances, to take prompt action to identify and correct deficiencies.

e. Schedule for Conducting a Third-Party Audit

One commenter supported the proposed 12-month timeframe to

complete a third-party audit. However, a few commenters opposed the proposed schedule. One commenter said that it would not be reasonable or appropriate to require completion of an audit report within twelve months by default. Some comments suggested modifying the rule to allow extensions of time to conduct third-party audits. Some comments sought clarification concerning the timing of a third-party audit. One commenter stated that the proposal seems to include inconsistent requirements for the required timing of third-party audits. Another commenter stated that, although it seems that EPA intended to require the third-party audit to be completed within 12 months of a triggering event, the deadline would be even sooner if the next scheduled triennial compliance audit is fewer than 12 months away. A few commenters encouraged EPA to clarify that conducting a third-party audit would count as the scheduled compliance audit and reset the clock on the three-year compliance audit schedule.

In response to comments, EPA has revised the regulatory text to clarify that the schedule for conducting a third-party audit, unless a different timeframe is specified by the implementing agency, is within 12 months of an RMP reportable accident or within 12 months of the date of the implementing agency's final determination. If the final determination is appealed, the third-party audit is required within 12 months of the date of the final decision on the appeal. EPA believes that the 12-month timeframe in the final rule provides sufficient time for owners or operators to complete a third-party audit while avoiding unnecessary delays in identifying and addressing noncompliance. Additionally, the final rule allows the implementing agency to specify a different timeframe for conducting third-party audits. This allows flexibility for an implementing agency to grant an extension, or to specify a shorter timeframe, to complete the audit, as appropriate. For example, an implementing agency may grant an extension if a source can demonstrate that it has had difficulty finding a qualified third-party auditor to conduct or lead the audit team, or that the audit will require extra time due to the complexity or number of processes, due to extensive damage to the facility following an incident, or due to resource constraints. Alternatively, the implementing agency may specify a shorter timeframe to complete the audit after considering the severity of the release or determining that unsafe conditions exist at the source.

EPA acknowledges that in some cases, the default result of these timeframes may be that a gap of greater than three years may occur between completion of the previous compliance audit and a subsequent third-party audit (e.g., if an accident triggering a third-party audit occurs shortly before the facility's next regular compliance audit is due). In these cases, the owner or operator will still have 12 months to complete the third-party audit unless a different timeframe is specified by the implementing agency. Finally, stationary sources are required to audit compliance at least every three years, and a third-party compliance audit counts toward meeting this recurring requirement for purposes of determining the timing of the stationary source's next compliance audit.

f. Process by Which Owners or Operators Select Third-Party Auditors

In the preamble to the proposed rulemaking, EPA sought comment on potential alternative approaches to determining auditor competency and independence, such as requiring third-party auditors to be accredited by EPA or an independent auditing or accreditation body or board. EPA received a range of public comments on this issue. Commenters disagreed about whether facility owners and operators should be responsible for determining and documenting third-party auditor qualifications for competence and independence. A few commenters, including local agencies and industry trade associations, supported having the facility, rather than a regulatory agency, determine their third-party auditors' qualifications. Another industry trade association agreed that auditor competency should be determined and documented by individual owners and operators but asserted that it should be the auditors' responsibility to determine whether they qualify as independent. Other commenters, however, including a state agency, facilities, and industry trade associations, asserted that it is burdensome to the owners and operators to require them to self-select qualified auditors that they determined to be competent and independent. One commenter stated that a facility cannot easily obtain and review a third-party auditing firm's internal policies and procedures each time it engages a third-party auditor. Two commenters further questioned whether facility owners and operators would be sufficiently able to assess a third-party's qualifications to perform the required audits.

A few commenters expressed support for establishing an accreditation program for auditing firms while others

stated that determinations of third-party auditor competency and independence are more properly performed by regulatory agencies. A state agency suggested, as an alternative, establishing an auditor oversight committee to include representatives from the facility, local agencies, and the community. Another state agency commented that an oversight committee would be needed to ensure that the process is truly independent if the auditor is hired by the owner or operator and not by the implementing agency. One commenter suggested that EPA approve third-party auditors based on technical and other qualifications and provide a list of those determined to be acceptable to industry. Some local agencies suggested that the implementing agency should approve or assist the facility in selecting a third-party auditor. One local agency stated that existing accreditation from a recognized auditing body should be allowed but not be the only prerequisite for being qualified to conduct a third-party audit. An advocacy group suggested that if an auditor failed to identify a crucial hazard that could have prevented a catastrophic event, the auditor should lose its accreditation until it corrects the problems that led to the failure.

EPA has considered these comments and believes that establishing an accreditation program for third-party auditors would add time and costs to the process of third-party auditor selection and engagement. Therefore, in this final rule EPA has elected, instead, to focus on streamlining the auditor competency and independence criteria. Owners and operators are responsible for determining and documenting that the third-party auditors are qualified pursuant to the rule's competency and independence criteria. EPA believes this approach is consistent with commenters' requests that the process for engaging the auditors should be straightforward and allow for reasonable judgement of the owner or operator in selecting third-party auditors. Owners and operators routinely obtain and review the internal policies, procedures, and qualifications of a wide range of consultants and contractors before engaging them in order to assess their qualifications to perform consulting or contractual services. EPA is confident that owners and operators will be able to assess third-party auditor qualifications in a similar manner.

g. Auditors and Audit Team Structure

In the preamble to the proposed rulemaking, EPA invited comment on how to determine the roles and responsibilities for third-party auditors

and how to structure third-party audit teams. Many commenters, including a Federal government agency, a state government agency, facilities, and industry associations, stated that facilities should have the flexibility to utilize internal staff who are much more familiar with the facility and covered processes than outside consultants. A facility commented that in the past it has used third-party auditors and determined that the facility's existing internal audit process provided an audit of equal or greater value than that of the third-party. Industry trade associations also asserted that the use of facility staff was more effective than third-party auditors because crucial time is not lost in learning about the facility. Another industry trade association stated that, in addition to identifying deficiencies, the most effective audits identify opportunities for improvement, which the commenter asserted is why audits that are conducted by or overseen by corporate staff or staff from other facilities within a company with similar processes can be more effective than strictly third-party audits. A professional association stated that companies must determine their own policies, procedures, and programs for performing audits. Similarly, an industry trade association stated that owners and operators should be allowed to choose whether in-house personnel or a third-party auditor conduct the compliance audit, as long as the organization can demonstrate that the auditor is qualified.

Industry trade associations commented that EPA's proposed approach may have unintended consequences on the effectiveness of audits by setting up an adversarial relationship between the regulated facility and the third-party auditor and creating a scenario that discourages the free flow of information between the facility and the auditor. Furthermore, an industry trade association commented that this fundamental change to the RMP audit program will likely cause companies to separate RMP and PSM audits. The commenter argued that such a change would demonstrate that EPA had failed in this rulemaking to satisfy its statutory obligation to develop a coordinated approach with OSHA. An individual commenter recommended the Institute of Nuclear Power Operations evaluation team model, which is a hybrid of a self-audit and a third-party audit by well qualified individuals. An industry trade association suggested setting up an industry sharing option (similar to the Occupational Safety and Health

Administration's Voluntary Protection Program, which uses qualified personnel from other regulated facilities or company employees from a different plant to perform audits at facilities being evaluated under the program) in lieu of third-party auditing firms.

A Federal government agency recommended that third-party auditors be required to consult with facility employees and their representatives when conducting audits, reasoning that this requirement would be consistent with the language in the CAA at 29 U.S.C. 651 *et seq.* and EPA guidance on worker participation during EPA audits and inspections. And although opposed to the proposed requirement for third-party audits, an industry trade association asserted that there can be value in having/adding a third-party individual on or in coordination with a self-audit team, reasoning that the addition of the third-party auditor contributes to the development of the internal experts and expertise.

In response to commenters' suggestions to allow more flexibility on the composition of the audit team, EPA is finalizing an approach that allows owners or operators to meet their third-party auditing obligations either by:

- Engaging third-party auditors meeting all applicable competency and independence criteria, as originally proposed, or
- By assembling an auditing team which is led by a third-party auditor but may include other audit team members. The audit team may be comprised of:
 - A team leader—this must be an employee of the third-party auditor firm who meets all of the competency and independence criteria of the rule;
 - Other employees of the third-party auditor firm—these personnel must meet the independence criteria of the rule; and
 - Other personnel not employed by the third-party auditor firm (*e.g.* facility personnel or employees of another consulting firm with specialized expertise). These personnel are not required to meet the competency and/or independence criteria of the rule.

EPA agrees with commenters who suggest that allowing facility personnel and other knowledgeable but non-independent contractors and consultants to participate in the audit would improve the audit teams' performance and outcomes. This change addresses, among other things, the commenters' concerns that requiring the audit team and all of its individual members to meet the full independence criteria would exclude too many potential team members with critical sector or facility-specific experience.

This approach allows qualified personnel from other regulated facilities or company employees to participate in the audit and enables facility personnel to provide input during the compliance audit.

Although some commenters suggested that facility's existing internal audit process provided an audit of equal or greater value than that of a third-party, EPA believes that an independent, third-party perspective can provide insight on the facility's risk management program that may not otherwise be identified during an internal compliance audit. EPA further disagrees that this change to the RMP audit program will cause companies to separate RMP and PSM audits. EPA believes that the flexible approach for assembling a third-party audit that includes both independent and facility personnel will allow facilities to continue to conduct RMP and PSM audits simultaneously, as appropriate.

h. Auditor Qualifications and Responsibilities

General comments on qualification criteria. Many commenters stated that the requirements in the proposed rulemaking for every member of the third-party auditing team to individually meet all of the proposed rulemaking's competency and independence criteria will severely reduce the number of qualified auditors available and raise the costs of auditing for facilities. One facility argued that the auditor qualification requirements are arbitrary and should be withdrawn. Specifically, the commenter described the findings from the EPA-Wharton pilot study and concluded that this study undermines EPA's assertion in the proposal that rigid qualifications are necessary for a successful RMP third-party audit program. A professional association recommended that EPA require companies to develop, implement, and maintain effective policies, procedures, and programs for performing RMP audits. Such policies, procedures, and programs could themselves establish basic third-party auditor competency and independence criteria.

EPA agrees with commenters that the proposed qualification criteria could limit availability of qualified auditors and raise costs of audits. Therefore, EPA is finalizing an approach that allows owners or operators to comply with third-party auditing requirements either by engaging third-party auditors that meet all applicable competency and independence criteria, as originally proposed; or by assembling an auditing team, led by a third-party auditor, that

includes other personnel (e.g., consultants or facility employees).

EPA disagrees with commenters who argue that auditor qualifications are unnecessary for a successful third-party audit program. EPA's goal, in proposing criteria for auditor qualifications, was to ensure clarity and objectivity as to the minimum expected standards third-party auditors must meet for competency and independence. Since EPA is not finalizing requirements for third-party auditors to be qualified or accredited by an outside independent accreditation board, nor to meet competency and independence criteria in external consensus standards or protocols, the final rule must necessarily specify third-party auditor competency and independence criteria. Such criteria are necessary to ensure that owners and operators are able to successfully identify and engage fully qualified, competent and independent third-party auditors.

Consensus standards. EPA did not propose that consensus standards apply to third-party audits or auditors. However, in the preamble to the proposed rulemaking, EPA sought comment regarding potentially relevant and applicable consensus standards and protocols that might apply to the third-party auditors or audits that could be incorporated into the rule. Some commenters recommended that EPA use existing guidelines and standards including the CCPS "Guidelines for Auditing Process Safety Management Systems" and National Fire Protection Association codes and standards. One commenter stated that establishing protocols for auditing would assist in ensuring that a third-party audit is being performed to some type of recognized standard. However, the commenter stated that it is not aware of the establishment of such a standard at this time and noted that EPA might be required to work with a standard setting organization to develop the standard, if such a standard was to be provided to facilities and auditors. One commenter stated that the International Code Council (ICC) administers exams for building, fire, plumbing, and many other trade inspectors. An industry trade association commented that it opposed a requirement that consensus standards and protocols be incorporated into compliance audits and asserted that such a requirement was not within the scope of Executive Order 13650.

A few commenters, including a local government agency, noted that consensus standards may result in the bar for acceptable procedures being set low. Although noting that consensus standards could offer some minimum

criteria to follow, a commenter stated that applying consensus standards to third-party compliance audits could be problematic because they are the lowest high-bar industry has agreed to, which runs the risk of lowering the bar for select companies or the consultants hired to perform the audit.

EPA acknowledges that consensus standards and protocols are referenced in a range of Federal and state regulations and can play useful roles in third-party verification programs. California's Underground Storage Tank program is an example of a program that relies on consensus standards in which designated operators are required to pass an exam administered by the ICC in order to be certified to conduct audits.³⁸ However, EPA has determined that reference to such standards and protocols is unnecessary for third-party compliance audits conducted under this rule because the final rule identifies qualification criteria for competency and independence for third-party auditors and third-party auditor team leaders.

EPA is also finalizing third-party auditor responsibilities in §§ 68.59(d) and 68.80(d). This provides the third-party auditor with minimum expectations for conducting the compliance audit. The owner or operator shall ensure that the third-party auditor:

- Manages the audit and participates in audit activities including: Initiation, design, implementation, and reporting;
- Determines appropriate roles and responsibilities for the audit team members;
- Prepares the audit report and ensures all audit team members' views are reflected in the final audit report;
- Certifies the final audit report and its contents as meeting the requirements of the rule and
- Provides a copy of the audit report to the facility owner or operator.

Third-party auditors must evaluate the audit team members' qualifications to determine appropriate audit roles and responsibilities in order to produce audit outcomes and final audit reports meeting the applicable rule requirements. This approach recognizes that audit team members may have varying levels of knowledge and experience with the RMP rule requirements, the stationary source being audited, the applicable or relevant

³⁸ See, e.g., CA UST Regulations (CCR, Title 23, Division 3, Chapter 16), Amended and Effective July 1, 2012) at § 2715 (Certification, Licensing, and Training Requirements for Underground Storage Tank Owners, Operators, Installers, Service Technicians, and Inspectors). http://www.swrcb.ca.gov/ust/regulatory/docs/title23_d3_c16.pdf

engineering practices, and proper auditing techniques. EPA believes it is appropriate for the third-party auditor to be responsible for these determinations and that this approach allows the owners or operators and the third-party audit team leader to successfully collaborate to assemble an effective auditing team.

i. Third-Party Auditor Competency Criteria

Almost all of the public comments on the proposed third-party auditor competency criteria focused on the requirement for the auditor to be a licensed Professional Engineer (PE) or include a licensed PE on the audit team. PE organizations supported the proposed requirement arguing that many facilities that would require third-party audits are designed, constructed, and maintained by PEs, who are subject to professional ethical standards that require objectivity. Some of these commenters described the supply of PEs as being sufficient to meet the demand for the third-party auditors under the approach in the proposed RMP rule.

However, a large number of commenters opposed the proposed PE competency criterion. Many commenters stated that they saw no value in requiring a PE because PEs do not specifically have process safety or auditing skills. Several commenters questioned whether there are a sufficient number of PEs with appropriate experience to meet the need for RMP audits. As an industry trade association observed, even though the number of PEs may be large, there may be an insufficient number of PEs that have third-party audits as an area of expertise. A facility asserted that every PE cannot practice in every state, and if a PE is part of the audit team, he or she must be licensed in the state affected by the RMP incident.

As part of the feedback for the SBAR Panel for the proposed rulemaking, SERs suggested that EPA consider allowing other qualified, credentialed personnel besides PEs to qualify as third-party auditors. Such other personnel could, SERs suggested, be degreed chemists, degreed chemical engineers, Certified Safety Professionals (CSP), Certified Industrial Hygienists (CIH), Certified Fire Protection Specialists (CFPS), Certified Hazardous Materials Managers (CHMM), Certified Professional Environmental Auditors (CPEA) or Certified Process Safety Auditors (CPSA). SERs indicated that these credentials also include ethical obligations to provide sound independent advice. Many other commenters also suggested that

professionals with process safety management experience who have other credentials subject to ethical standards should also be allowed to give facilities a larger choice for their third-party auditors. Another facility and an industry trade association commented argued that the owner or operator is in the best position to assess who is qualified to perform the audit. Two commenters characterized the EPA-Wharton Pilot Study on Third-Party Audits³⁹ as suggesting that relevant industry and process specific experience, training, and regulatory knowledge are the essential qualifications of RMP auditors and that the PE requirement should be withdrawn.

EPA agrees with commenters that stated it is unnecessary for third-party auditors to be PEs and that a variety of qualified personnel can potentially be effective third-party auditors or third-party audit team leaders. Consequently, EPA deleted the PE requirement from the final rule. EPA believes it is sufficient for the third-party auditor or third-party audit team leader to be:

- Knowledgeable with the requirements of the RMP rule;
- Experienced with the stationary source type and processes being audited and applicable recognized and generally accepted good engineering practices; and
- Trained or certified in proper auditing techniques.

Third-party auditors can meet the requirement to be knowledgeable with the RMP rule requirements, and the requirement to be experienced with the stationary source type and processes being audited and applicable recognized and generally accepted good engineering practices through a variety of ways, including prior experience and training. Third-party auditors can meet the requirement to be trained or certified in proper auditing techniques by completing courses in environmental or safety auditing, obtaining certifications from recognized professional bodies, or having prior process safety auditing experience.

EPA has also established third-party auditor responsibilities in §§ 68.59(d) and 68.80(d). If the third-party auditor

believes that a necessary skill or expertise is lacking in the auditing team, the owner or operator and third-party auditor are responsible for augmenting the audit team with the additional team members needed to supply the missing skill or expertise. For example, an owner or operator may choose to designate an employee competent in using an infrared camera to participate on a third-party auditing team. Such an audit team member would be acceptable, even though the individual does not meet the independence criteria and lacks specific knowledge of the stationary source type and processes being audited, as long as the third-party audit team leader evaluates the employee's qualifications to perform the specific role the employee will perform in the audit. The same standard would also apply to the participation of any other personnel the owner or operator might choose to include when assembling the third-party audit team.

j. Third-Party Auditor Independence Criteria

A few commenters, including a Federal and two local government agencies, supported the proposed provisions for ensuring auditor independence. Some local government agencies agreed that the proposed requirement for auditors to have written policies and procedures to ensure that personnel comply with the proposed competency, independence, and impartiality requirements is appropriate. Several commenters, however, warned that the independence criteria would be difficult to monitor and enforce. Conversely, many commenters opposed the third-party auditor independence criteria, arguing that the criteria are too restricted and will limit the availability of third-party auditors and the quality of the audits.

Availability of third-party auditors. Some commenters warned that the proposed auditor independence criteria would have the unintended consequence of reducing the quality of the audits and/or the availability of sufficiently qualified auditors. A few commenters suggested that the lack of ability for employees to participate on the audit team could lead to an adversarial relationship, inhibiting the impartial fact-finding an audit is supposed to facilitate. Some commenters stated that the independence criteria would, in practice, discourage open and productive auditor-source dialog, that auditor unfamiliarity with the audited facilities could turn the audits into "check-the-box" exercises, and that new and unfamiliar auditors will feel

³⁹EPA conducted a pilot study with the Wharton School of the University of Pennsylvania on the efficacy of voluntary third-party RMP audits. For relevant reports from this pilot, see R. Barrish, R. Antoff, & J. Brabson, Dep't of Natural Resources & Env. Control, Third Party Audit Pilot Project in the State of Delaware, Final Report (June 6, 2000) http://opim.wharton.upenn.edu/risk/library/2000_RAB,RA,JB_3rdPartyAudit_Delaware.pdf and EPA Region 3, Third-Party Pilot Project in the Commonwealth of Pennsylvania, Final Report (February 2001).

pressure to be “trigger happy” on finding deficiencies. An industry trade association suggested that facilities should be allowed to petition for a relaxation of these requirements if auditors cannot be identified.

As part of the SBAR Panel process, some SERs raised concerns about the extent of the independence criteria and suggested this would limit the availability of qualified auditors. Specifically, these SERs were concerned that the independence criteria would rule out, as third-party auditors, all of the members of any auditing firm employing any personnel who previously worked for or otherwise engaged in consulting services with the owner or operator. This was deemed problematic because, in the SERs’ experience, many, if not most, otherwise qualifying audit firms hire retired personnel specifically because the personnel have sector, company, and/or facility-specific experience with firms subject to the RMP rule. Numerous other commenters observed that consulting firms perform a wide variety of work for RMP facilities of which only a fraction is auditing but the new restrictions could cause those firms to exit the auditing market rather than risk losing their other business lines.

In order to address concerns about the availability of auditors, EPA modified the third-party auditor independence criteria in the final rule to enable more firms and individuals to qualify as third-party auditors or third-party audit team leaders. The final rule modifications provide additional flexibility while still ensuring that audit teams are managed and operated independently to produce the types of enhanced audit outcomes commonly associated with independent auditors per the literature and evidence described in the preamble to the proposed rulemaking and in this document.

EPA made many significant changes to the third-party independence criteria. The most significant modification to the third-party audit requirements is that only employees of the independent third-party audit firm must meet the independence criteria of § 68.59(c)(2) and/or § 68.80(c)(2). For third-party audit teams, the team leader must meet both the competency and independence criteria of § 68.59(c) and/or § 68.80(c) and all other employees of the third-party auditor firm that participate on the team need only meet the independence criteria. Third-party audit teams may also include other personnel, such as consultants or facility employees and these personnel are not subject to the

third-party qualification criteria of the final rule.

EPA also revised the timeframe within which third-party auditors cannot provide business or consulting services to two years. EPA also added language indicating that if a third-party-firm employs personnel who have provided business or consulting services to the facility within the prescribed timeframe (*i.e.* within two years of the audit) then the third-party audit firm must ensure that these personnel do not participate on the audit team. Additionally, EPA clarified in regulatory language the circumstances in which a retired employee may participate in a third-party audit. Viewed as a whole, these changes serve to increase the types of personnel who may potentially serve as independent third-party auditors. Therefore, EPA believes it will be unnecessary for facility owners or operators to petition for a relaxation of auditor qualifications.

Criteria limiting past and future business or consulting services and future employment. A large number of commenters specifically opposed the proposed independence provisions, particularly the requirement that an auditor cannot have provided other consulting services to the owner or operator in the prior three years and cannot accept future employment for three years following submission of the final audit report. Some commenters stated that third-party auditing is entirely unnecessary for RMP facilities because there is no evidence to believe that internal auditors working for, or employed by, facility owners or operators would deliberately fail to conduct honest and complete audits because of their prior, current, or future financial or employment ties to the owners or operators. Many commenters stated that to disqualify auditors who have performed certain services for the owner or operator of a facility within the past three years would disqualify those auditors who are most familiar with a source’s operations, and facilities would be forced to select auditors who are unfamiliar with the facility and its processes. Many commenters emphasized that audit teams should include personnel with direct, personal familiarity with the facility (including facility employees) to ensure effective RMP compliance audits. Commenters stated that this could be of concern particularly for plants with complex engineered processes requiring site-specific expertise.

In response to these comments, in the final rule EPA has modified the three-year prohibition on auditors providing prior consulting services to (other than

auditing services) or subsequently being employed by the owner or operator to a two-year prohibition. This prohibition applies only to employees of the third-party auditor firm. Owners or operators can assemble a third-party audit team led by a third-party auditor that meets both the competency and independence criteria of the final rule. The third-party audit team can also include other non-independent personnel such as current or former employees of the facility or other persons with prior site-specific experience. This revision, itself, will enable a much broader and more diverse set of auditors to serve on the audit teams, including knowledgeable facility personnel, other personnel employed at different facilities owned by the regulated company, and a variety of second or third-party personnel such as consultants and contractors. Only employees of the third-party auditor firm leading the audit team are subject to the independence criteria of the final rule and only the individual leading the third-party audit team is subject to both the competency and independence criteria of the final rule.

Retired employees. Commenters and SERs supported allowing company retirees to participate on audit teams.

EPA agrees with commenters. EPA modified the final rule to clearly identify that retired employees who otherwise satisfy the third-party auditor independence criteria may still qualify as independent if their sole continuing financial attachments to the owner or operator are employer-financed or managed retirement and/or health plans. This revision clarifies that owners or operators can hire retired employees with specialized knowledge or experience with the source type or facility to participate in third-party audits.

Effectiveness of self-audits. Three trade associations stated that EPA failed to adequately demonstrate through statistical or other analyses that the RMP rule’s self-auditing requirement was deficient or that independent auditor certification is necessary. Some commenters stated that the proposed third-party auditing requirements and criteria are unnecessary because the record does not demonstrate widespread RMP self-auditing-related fraud. One association referenced the CSB’s report on the Texas City refinery accident as suggesting that management’s failure to implement prior self-audit recommendations is of greater concern than self-audit inadequacy, per se.

While third-party auditing is useful for minimizing the potential for fraudulent behavior or reporting, EPA believes that helping to prevent or

minimize fraud is but one positive independent third-party auditing outcome. In fact, the third-party auditing requirements are intended to improve auditing practices and outcomes by also correcting biases shown by the literature to be associated with self-auditing. These biases are compelling precisely because they are not the hallmark solely of fraudulent firms but are exhibited commonly by entities with no overt or covert malicious intent to be inaccurate or unfair in their auditing or reporting.⁴⁰

EPA's recent experience demonstrates that in some cases self-auditing is deficient. In the preamble to the proposed rulemaking, EPA referenced enforcement settlements requiring third-party auditing of settlement agreement implementation and compliance at facilities handling CAA section 112(r) chemicals. One such settlement is the administrative order on consent issued by Region 1, in 2015, to Mann Distribution LLC and 3134 Post Road LLC (Respondents) to address Resource Conservation and Recovery Act (RCRA) and CAA section 112(r)(1) (the "general duty clause") violations found during an April 4, 2013 inspection at a chemical distribution facility in Warwick, Rhode Island. Like the Risk Management Program requirements, section 112(r)(1) of the CAA addresses safe operation and prevention of accidental releases. Unsafe conditions found during the inspection included, among other things, failure to have a fire suppression system, failure to inspect a fire alarm, co-location of incompatible chemicals, and many RCRA generator violations. The facility also had a prior history of noncompliance. The order required Respondents to, among other things, implement an independent third-party inspection program. The Respondents agreed to the program because they wanted to maximize the benefits of implementing the administrative order on consent by accelerating the improvement of the culture of compliance and safety at the facility.

Since the proposed rulemaking was published, EPA has received and

reviewed the Mann independent third-party inspection team's audit reports. These reports state that the third-party team found several compliance and safety issues the facility owner and operator had not independently found or corrected. The suite of audits uncovered and tracked the correction of these deficiencies. EPA has also received feedback from a facility representative and its third-party auditor about the program. All of the involved parties—EPA, facility representative, and the third-party auditor—agreed that the new and independent third-party auditing required pursuant to the enforcement order was beneficial for both correcting specific deficiencies and improving a culture of compliance. The suite of four third-party inspections improved the company's hazardous materials management plan, plan implementation, and emergency response program. As of March 2016, corrections to issues identified by the third-party auditors produced results including safer storage of chemicals that are oxidizers, improved integrity testing and maintenance of chemical storage tanks; better emergency egress, training, and coordination with the fire department; and improvements in container storage (such as better labeling and more aisle space). After a year of audits, the audit team leader provided some constructive suggestions about how EPA could modify third-party audit requirements in the future. For example, she felt that one of the order's auditor independence criterion (a five-year ban on future work with the company) was excessive as such a requirement, in light of New England's contracting manufacturing/industrial market, might serve as a disincentive to the participation as third-party auditors by highly qualified professionals and firms. Also, although this order did not require that the audit team include a PE, the auditor said she was aware that EPA was considering requiring PEs for future audits and believed that such a requirement would be unnecessary because good practice suggests that team make-up and qualifications should be determined on a case-by-case basis.

EPA agrees with the commenters stating that auditors with facility-specific experience can contribute insights that independent auditors lacking such experience would be unlikely to contribute. EPA addressed this comment in the final rule by, among other things, modifying the final rule to allow owners or operators to include non-independent employees, contractors, or consultants with facility-

specific experience on the third-party auditing teams.

EPA continues, however, to believe that the "fresh eyes" and perspectives that third-parties contribute to audit teams support the approach in this rule to third-party auditing for the small subset of RMP facilities that have RMP reportable accidents or conditions at their stationary sources that could lead to an accidental release of a regulated substance. In this context, EPA has assessed available empirical research suggesting why independent auditors lacking prior facility-specific experience can actually produce better audit outcomes than personnel with prior site-specific experience. This research suggests independent personnel can audit the facilities they monitor with "fresh eyes" and thus be more likely to identify issues of concern. While the research that follows primarily involves government inspectors, EPA believes that the findings correlate to designing effective third-party auditing programs.

One such study concerns the relationship of inspector experience and product recalls in the medical device industry.⁴¹ The study's authors explain:

Plant inspections enable supply chain partners to manage quality risk in global supply chains. However, surprisingly little research examines the behavioral aspects of inspectors' work. Drawing on insights from the experience, learning, and complacency literatures, we examine the how well plant inspection outcomes predict future recalls and analyze the effect of inspector experience on both the information content of plant inspections as well as the prevalence of product recalls. Using secondary data spanning a 7-year period in the medical device industry and a recurrent event Cox Proportional Hazard model, our results show that inspection outcomes contain information and hence predict future product recalls, and that this relationship is moderated by inspector experience. . . . [T]he hazard of recalls at a plant increases if the same inspector continues to inspect the plant, independent of the inspection outcome. Recall hazard increases by 48% the second time an inspector visits a plant, and 63% by the third visit. These results indicate the need to rotate inspectors among plants and have important implications for managers, regulatory agencies, and theory.

The authors' views on the drivers for these outcomes are informative. Although significant literature exists indicating that sending the same auditor or inspector to repeatedly inspect a facility can lead to familiarity, that

weakens an auditor's independence and compromises audit outcomes,⁴² these were not the above study's primary findings. Rather, the authors found that the worsening inspection outcomes over time were likely primarily due to inspector complacency. In the authors' words,

The stale, routine nature of the job, and the familiarity which comes from repeat visits to a site, can lead to complacency and lower the information contained in an inspection, even when the investigator has no clear incentive to 'go easier' on an inspection site.

These complacency effects "may outweigh the benefits [such repeat visits have on inspector] learning." Another analysis of 426,831 unannounced inspections by state government inspectors from July 2003 through March 2010 found that new inspectors tend to have "fresher eyes" in their first visit to a restaurant, reporting 12.7–17.5% more violations than the second visit of a repeat inspector, and that this effect is more pronounced when the previous inspector had a longer relationship with the restaurant.⁴³

Findings such as these, and the policy implications that flow from such studies, address human behavioral and psychological influences that appear to be common to inspection and auditing regimes. Thus, although not expressly required by this rule, EPA encourages owners or operators, when assembling both third-party audit teams and conducting self-audits under the RMP rule, to include on their teams a mix of personnel previously familiar, and unfamiliar, with the specific facilities they are tasked with auditing.

Finally, EPA agrees with commenters that it is critical that facility owners and operators implement corrective actions to address findings from compliance audits. Therefore, the final rule requires the owner or operator to certify in the findings response report that deficiencies are being corrected. As an additional measure to ensure accountability, EPA is also requiring a copy of the findings response report and schedule to implement deficiencies to be submitted to the auditing committee

of the Board of Directors or other comparable committee or individual, if applicable.

Validity of examples of third-party audits. Commenters sought to criticize the many examples of third-party auditing provided by EPA in the preamble to the proposed rulemaking, including mandatory and voluntary programs by regulators and industry trade associations, on the grounds that these other regulations and programs operate in a different context from that of the RMP rule (*i.e.*, that the literature and empirical data on the effectiveness of third-party auditing cited by EPA do not specifically address regulatory compliance auditing at RMP facilities). These commenters stated that most or all of EPA's examples of other Federal, state, and voluntary or industry independent auditing do not relate to RMP rule compliance, and therefore limit the transferability of these programs' design features and outcomes to the RMP context. The associations further stated that there is no evidence showing:

- A systemic problem with RMP facilities' self-audits or that employees or contractors act unethically or are biased;
- A lack of auditor independence creates bias leading to accidents;
- Third-party audits would have successfully prevented past accidental releases; or
- The root causes of a significant number of past accidents at RMP facilities were deficient self-audits.

EPA disagrees with commenters. Because RMP facilities were not previously required to have third-party compliance audits, statistically valid outcome data specifically on RMP rule third-party auditing does not currently exist. As EPA has described, however, there is a considerable and growing body of literature and empirical data on the effectiveness of third-party auditing, generally. These literature and data occur in many contexts that involve a diverse set of statutes and voluntary standards. In fact, some of these contexts are similar to RMP auditing.

In the preamble to the proposed rulemaking, EPA presented many examples of Federal and state agencies and trade association third-party verification programs. Like the RMP rule, some of those programs are expressly described by their managers as designed to improve regulatory compliance, prevent or reduce risks, or improve safety at the same or similar facility types and operations as are regulated by the RMP rule. These programs reflect industry recognition that third-party auditing does, in fact,

produce better outcomes relative to self-auditing in a variety of settings. Such programs include:⁴⁴

- *Responsible Care.* This program is described by ACC as identifying, and acting to address potential hazards and risks associated with their products, processes, distribution and other operations.⁴⁵ Responsible Care's Guiding Principles include "mak[ing] continual progress toward a goal of no accidents, injuries or harm to human health and the environment from products and operations and openly report health, safety, environmental and security performance."⁴⁶ The Responsible Care management system process includes mandatory certification, by auditors described by ACC as accredited and independent, to ensure the program participants have a structure and system in place to measure, manage and verify performance.⁴⁷ The Responsible Care Web site provides, "A key part of the Responsible Care Management System process is mandatory certification by an independent, accredited auditor."⁴⁸

- *The API Process Safety Site Assessment Program (PSSAP).* According to API, the PSSAP "is focused on higher risk activities in petroleum refining and petrochemical facilities. This program primarily involves the assessment of a site's process safety systems by independent and credible third-party teams of industry-qualified process safety expert assessors."⁴⁹ Using industry-developed protocols, API describes the process safety site assessments as evaluating the quality of written programs and effectiveness of field implementation for the following process safety areas that

⁴⁴ EPA has not formally evaluated these programs and standards or their outcomes. This discussion is not a formal Agency review or endorsement.

will be evaluated: Process Safety Leadership; MOC; Mechanical Integrity (focused on fixed equipment); Safe Work Practices; Operating Practices; Facility Siting; Process Safety Hazards; and HF Alkylation/RP 751.⁵⁰

- *Center for Offshore Safety (COS)*. This strategy for promoting safety and protection of the environment includes third-party auditing and certification of the COS member company's SEMS and accreditation of the organizations (Audit Service Providers) providing the audit services. The Center serves the U.S. offshore oil and gas industry with the purpose of adopting standards of excellence to ensure continuous improvement in safety and offshore operational integrity. The third-party audits are intended to ensure that COS member companies are implementing and maintaining Safety and Environmental Management Systems (SEMS) throughout their deepwater operations.⁵¹ COS states expressly that "the highest level of safety for offshore drilling, completions, and operations [is promoted through] independent third-party auditing and certification."⁵²

- *ChemStewards*[®]. ChemStewards is a SOCMA program intended to promote continuous performance improvement in batch chemical manufacturing. The program offers a three-tiered approach to participation. Each tier includes a third-party verified management system.⁵³ On its Web site, SOCMA describes the environmental benefits of the program as including improving environmental performance, decrease releases and waste disposal costs, and positioning members to meet current and future compliance requirements.⁵⁴ The associated training materials explain the on-site audit elements of the third-party verification program.⁵⁵

Additionally, the supporting literature and data described by EPA in the proposed rulemaking preamble remain relevant to RMP compliance auditing, notwithstanding the varied contexts they describe, because such literature addresses cross-cutting human biases and behaviors, common to all auditor and audit types, that can be addressed

or corrected through independent third-party auditing.⁵⁶ EPA thus finds that the state of the science, evidence, and data on the effectiveness of independent third-party auditing programs supports requiring independent third-party audits for RMP facilities with accidental releases or conditions that could lead to an accidental release of a regulated substance.

k. Third-Party Audit Report

Draft reports. EPA received numerous comments regarding the proposed third-party audit reporting requirements. While no commenters objected to the requirement to prepare an audit report, most commenters opposed the proposed requirements to submit draft and final reports to the implementing agency. Many commenters felt that a requirement to submit draft reports before they have been vetted by internal operations and management teams could have the unintended consequence of incomplete or inaccurate information being distributed. Some of the commenters added that the owner or operator should be able to ensure that the audit report does not contain confidential business information. Finally, some commenters stated that the proposed requirement to document all changes made by the owner or operator to audit report drafts would chill communications and information exchange during audits.

EPA agrees with commenters. The final rule requires the third-party auditor to prepare an audit report and provide it to the owner or operator, but does not require that the draft or final reports be submitted to the implementing agency. However, the third-party auditor must summarize in the audit report any significant revisions between draft and final versions of the report.

Submitting reports to the implementing agency. Many commenters, including industry trade associations and facilities, objected to the proposed requirement that third parties submit their reports to the implementing agency at the same time, or before, the reports are sent to the

source. These commenters felt that this would prevent facilities from being allowed to correct factual errors or present evidence that the auditors either missed or were not aware of, which could markedly change the audit's recommendations. Some commenters who opposed distribution of audit reports to the implementing agency warned of the potential release of confidential business information.

EPA agrees with commenters and deleted provisions that require the third-party auditor to submit audit reports to the implementing agency.

Attorney-client communications. EPA received several comments regarding the proposed limitation on claiming the audit report and related records as attorney-client communications or attorney work products. One commenter agreed with EPA that the audit report should not be protected from disclosure under the attorney-client privilege. Many commenters opposed EPA's proposal to prohibit companies from asserting attorney-client privilege and attorney work product privilege over third-party audits and related documents. The commenters argued that EPA lacked authority to do this and that these privileges are essential for purposes of legal representation. One commenter stated that attorney-client privilege is a long-established common-law rule of evidence, and asserted that any attempt to abrogate it across the board is likely a violation of the Sixth Amendment. Similarly, another commenter stated that the proposed limitations on attorney-client privilege seem contrary to due process and legal rights that should be afforded the owner or operators of the facility.

It remains EPA's position, as stated in the preamble to the proposed rulemaking, that with respect to the attorney work product privilege, the audit report and related records are produced to document compliance. Audit reports and related records are similar to other documents prepared pursuant to RMP rule requirements (e.g., process safety information, PHAs, operating procedures) and are not produced in anticipation of litigation. They are analogous to work or management practice records that show a regulated operation was performed. With respect to the attorney-client communication privilege, the third-party auditor is arms-length and independent of the stationary source being audited. The auditor lacks an attorney-client relationship with counsel for the audited entity. Therefore, in EPA's view, neither the audit report nor the records related to the audit report provided to the third-

party auditor, including documents originally prepared with assistance or under the direction of the audited source's attorney, should be considered attorney-client privileged. Nevertheless, EPA recognizes that the ultimate decision makers on questions of evidentiary privileges are the courts. Therefore, this rule does not contain a specific regulatory provision prohibiting assertion of these privileges.

l. Findings Response Report, Timeframe, and Response to Audit Findings

EPA received several comments relating to the proposed requirement for the owner or operator to develop a findings response report within 90 days of receiving the final audit report, and to provide the report to the implementing agency and the owner or operator's audit committee of the Board of Directors. EPA also received comments opposing various aspects of the proposed requirements for findings response reports.

Timeframe. Some commenters supported these proposed requirements. One commenter urged EPA to shorten the required reporting from 90 days to 30 days, arguing that deficiencies in compliance indicate a risk of a catastrophic release that could harm the facility, its employees, and the community. The commenter reasoned that 30 days is enough time to review the audit report and develop a schedule to address deficiencies.

Other commenters objected to the proposed timeframe for preparing and submitting the findings response report, stating that 90 days provides for an insufficient timeframe for preparing the report. A few commenters recommended a six-month timeframe. One commenter asserted that EPA has not demonstrated that a 90-day period to develop a findings response report is achievable. As an alternative to extending the timeframe for all facilities, a few commenters urged EPA to consider allowing facilities to obtain extensions as needed to adequately address the concerns raised by third-party auditors.

EPA is finalizing the requirement that the owner or operator prepare a findings response report as soon as possible, but no later than 90 days after receiving the final audit report as proposed. EPA believes this timeframe is appropriate for the owner or operator to consider the findings of the audit report and determine a response to each of the audit's findings. This approach allows the owner or operator an opportunity to establish a schedule to implement corrective actions that can extend

beyond the 90-day period for developing the findings response report and balances the need to promptly respond to the audit findings. EPA notes that, in many instances, an owner or operator may receive prior information about the audit's findings before receiving a final audit report, particularly when the third-party audit team includes facility personnel. This will give the owner or operator additional time to consider its responses.

Submitting findings response report to implementing agency. Some commenters opposed the proposed requirement to submit a findings response report to the implementing agency. One such commenter stated that EPA has not demonstrated a need for universal submission of an action plan to respond to audit findings and schedule. Commenters also expressed legal concerns about the findings response report. These commenters raised concerns about not being able to dispute purported violations or deficiencies identified by third-party auditors. Some commenters asserted that refusing to afford companies the opportunity to dispute audit findings raises fundamental due process concerns.

EPA agrees with the commenters and has eliminated the requirement to submit findings response reports to the implementing agency in the final rule. The audit report, findings response report and related records must be retained at the stationary source in accordance with the recordkeeping requirements in §§ 68.59(g) and 68.80(g).

Eliminating the requirement to submit the findings response report to the implementing agency also responds to commenters legal concerns. The owner or operator can determine an appropriate response to each of the audit report findings. This is similar to existing self-compliance audit requirements for the owner or operator to promptly determine and document an appropriate response to each of the findings of the compliance audit.

In addition, there is no need for a process to dispute findings as the relevant requirement in the final rule for each of the findings in the audit report is to determine an appropriate response. In determining an appropriate response, owners or operators may follow EPA's existing guidance for addressing PHA team findings and recommendations, which is based on OSHA's 29 CFR 1910.119, *Process Safety Management of Highly Hazardous Chemicals—Compliance Guidelines and Enforcement Procedures* for resolving

such findings.⁵⁷ Under these guidelines, EPA considers an owner or operator to have resolved a finding or deficiency when the owner or operator either has adopted or implemented the associated recommendations or has justifiably declined to do so. An owner or operator can justifiably decline to adopt a recommendation where the owner or operator can document, in writing and based upon adequate evidence, that one or more of the following conditions is true:

- The analysis upon which the recommendation is based contains material factual errors;
 - The recommendation is unnecessary to protect public health and safety or the health and safety of the owner or operator's employees, or the employees of contractors;
 - An alternative measure would provide a sufficient level of protection;
- or
- The recommendation is infeasible.

Where a recommendation is rejected, the owner or operator must communicate this to the audit team and expeditiously resolve any subsequent recommendations of the team. Provided that the owner or operator addresses the audit report's findings by implementing the findings or by justifiably declining to do so, the owner or operator complies with the requirement. If an implementing agency concludes that a justification is inadequate and brings an enforcement action regarding this requirement, then the owner or operator may dispute the enforcement action through the normal adjudication process.

m. Owner or Operator Certification to Findings Response Report

Certification burden. EPA received comments regarding the certification to the findings response report. A few commenters opposed the proposed certification requirement. Some commenters argued that the certification requirement increases the regulated community's burden, but provides no corresponding benefit. Other comments urged EPA to incorporate the "reasonable inquiry" concept from Title V compliance certifications into the proposed certification framework. These commenters described the "reasonable

⁵⁷ See page 7–7 of EPA's General Guidance on Risk Management Programs for Chemical Accident Prevention (40 CFR part 68), EPA–550–B–04–001, April 2004 <https://www.epa.gov/rmp/guidance-facilities-risk-management-programs-rmp>; and replacement pages B–21 and B–22 of OSHA 29 CFR 1910.119, *Process Safety Management of Highly Hazardous Chemicals—Compliance Guidelines and Enforcement Procedures* CPL 2–2.45A CH–1, September 13, 1994 https://www.osha.gov/OshDoc/Directive_pdf/CPL02-02-045_CH-1_20150901.pdf.

inquiry” concept as requiring certification based on “information and belief formed after reasonable inquiry.” The commenters argued that this was necessary because a senior official signing a certification could not be expected to have or obtain personal knowledge of all the facts potentially relevant to the findings response report. Similarly, a facility encouraged EPA to coordinate the certification statement in this rule with the certification statement that is already required under CAA Title V. One commenter stated that EPA’s rules regarding self-audits impose a less stringent certification requirement, and recommended that a less stringent standard may be appropriate here, too, if the third-party compliance audit provisions are finalized.

In this rule, EPA is requiring a senior corporate officer, or an official in an equivalent position, to certify in the findings response report that:

- He or she engaged a third-party to perform or lead an audit team to conduct a third-party audit in accordance with the requirements of 40 CFR 68.59 or 68.80,
- The attached RMP compliance audit report was received, reviewed, and responded to under the senior officer’s direction or supervision by qualified personnel, and
- Appropriate responses to the findings have been identified and deficiencies were corrected, or are being corrected, consistent with the requirements of subparts C or D of 40 CFR part 68.

EPA believes these requirements and the associated certification are consistent with equivalent certification requirements in many EPA regulations, including in the CAA Title V regulations (40 CFR 70.5(d)).⁵⁸

EPA agrees that senior corporate officials do not necessarily have high levels of technical expertise; however, these officials and entities include key managers responsible for establishing internal corporate accountability and overseeing corporate prioritization, budgeting, and operations. Indeed, the Security and Exchange Commission (SEC) requires other specified documents to be provided to such individuals, committees, and boards for similar reasons.⁵⁹ Finally, EPA believes

that the certification will minimize corporate failures to properly address and implement compliance audit findings and recommendations. Adopting a less stringent standard would not be appropriate. EPA expects that the senior corporate official certification of the audit findings will improve facility and public confidence that third-party audit report findings and recommendations are promptly and properly addressed.

Senior corporate officer or equivalent official. Comments were received requesting clarification of the terms “senior corporate officer, or official in an equivalent position.” Some commenters recommended that EPA incorporate the “responsible official” definition from the CAA’s Title V operating permit program for major stationary sources which allows for certification by corporate leadership or a “duly authorized representative” appointed by corporate officials.

One commenter stated that the certification requirement risks infringing on the senior corporate official’s Fifth Amendment privilege against self-incrimination. The commenter stated that the Supreme Court has held that the privilege protects against compulsory disclosures to the government when those disclosures have “the direct and unmistakable consequences of incriminating” the disclosing party, and concluded that the proposed certification requirement may compel precisely those sorts of disclosures. The commenter went on to state that the certification necessarily admits the existence of “deficiencies” which can only be interpreted as violations of the CAA and which could certainly be a significant link in a chain of evidence tending to establish guilt in a criminal case. One commenter also argued that the certification requirement raises First Amendment concerns by compelling speech that does not serve a sufficient government interest to avoid running afoul of the right to free speech because it is unclear what government interest the certification advances and the relevant section of the rule is not narrowly tailored to that interest.

the term audit committee is defined as “[a] committee (or equivalent body) established by and amongst the board of directors of an issuer for the purpose of overseeing the accounting and financial reporting processes of the issuer and audits of the financial statements of the issuer” (if no such committee exists with respect to an issuer, the entire board of directors of the issuer). See Securities and Exchange Commission, 17 CFR 240.10A-3—Listing standards relating to audit committees (68 FR 18818, April 16, 2003, as amended at 70 FR 1620, January 7, 2005; 73 FR 973, January 4, 2008).

EPA disagrees with this recommendation to allow delegation of the certification to a duly authorized representative. The certification indicates that the compliance audit report was received, reviewed, and responded to under the senior corporate officer’s direction or supervision by qualified personnel. Similar to the requirement to submit the findings response report to the audit committees of the Board of Directors, a senior corporate official ensures accountability and overseeing corporate prioritization, budgeting, and operations.

Furthermore, the language of the certification cites the actions that are taken by the owner or operator pursuant to these requirements, and includes, among other things, a statement that based on personnel knowledge and experience, or inquiry of personnel involved in evaluating the report findings and or inquiry of personnel involved in evaluating the report findings and determining appropriate responses to the findings, the information submitted herein is true, accurate, and complete. This language is equivalent to the language in certifications that support submissions under Title V of the CAA. EPA continues to believe that it is important for a senior corporate official, or an official in an equivalent position, sign such a certification, ensuring that the owner or operator is aware of the findings and responses, and will be correcting the deficiencies, pursuant to these requirements. For smaller entities without corporate officials, the official in an equivalent position for purposes of this requirement may include the owner or operator, or designated representatives of the owner or operator, including facility manager, operations manager, or another official at or above that level. Regarding comments concerning self-incrimination in connection with the certification requirement, the certification does not contain an acknowledgement of a violation. It merely describes the actions taken by the owner or operator pursuant to the third-party audit requirements, and states that the information submitted is true, accurate, and complete. The certification and report are not required to be automatically submitted to the implementing agency.

n. Schedule Implementation

EPA received comments supporting the proposed requirement for owners and operators to “promptly” address deficiencies noted in audit reports. A few commenters stated that there should be no specific timeframe for addressing deficiencies identified during a third-

⁵⁸“(d) Any application form, report, or compliance certification submitted pursuant to these regulations shall contain certification by a responsible official of truth, accuracy, and completeness. This certification and any other certification required under this part shall state that, based on information and belief formed after reasonable inquiry, the statements and information in the document are true, accurate, and complete.”

⁵⁹Under Section 3(a)(58) of the Exchange Act as added by Section 205 of the Sarbanes-Oxley Act,

party audit, reasoning that there will be a wide variety of possible site-specific actions that an owner or operator may take to address audit findings. Another commenter believed it was appropriate to require “prompt” correction of deficiencies, but encouraged EPA to provide guidelines on what would be considered “prompt” action.

Some commenters recommended specific timeframes for addressing deficiencies. One commenter recommended that deficiencies be corrected “promptly” and no later than six months absent a written extension from EPA. A few commenters recommended that facilities be required to promptly implement corrective actions and that deficiencies be addressed within 18 months. However, some of these commenters stated that facilities should be given the opportunity to request an extension, if needed, from the implementing agency. Another commenter recommended that facilities be given 24 months to correct deficiencies after the facility has identified an appropriate response, with the deficiencies presenting the highest risk of injury being addressed first.

One commenter recommended that EPA allow stationary sources to develop a reasonable schedule for correcting audit findings that would be based on the types of audit findings and the resulting efforts to implement them appropriately, rather than at a pace that may impede sound and sustainable implementation processes. One commenter stated that the proposal does not account for the likelihood that plans and schedules for addressing deficiencies may need to change. To account for needed changes, the commenter recommended that EPA should clarify that the details of the schedule are not binding.

EPA disagrees with commenters that suggested incorporating a prescribed schedule for addressing findings in the final rule and we are finalizing the schedule implementation provision of §§ 68.59(f)(2) and 68.80(f)(2) as proposed. The owner or operator’s third-party audit findings response report must include “a schedule for promptly addressing deficiencies” but does not prescribe a specific timeframe or due dates by which the deficiencies must be addressed. Thus, under the final rule, the owner or operator must exercise best judgement to determine how, and when, to prioritize and address actions, consistent with the normal definition of “promptly” as

meaning quickly, without delay.⁶⁰ EPA finds that this approach best provides the flexibility owners or operators will need to address a potentially very wide range of deficiencies and other findings noted in third-party audit reports. This allows the facility owner or operator to develop a reasonable schedule for correcting audit findings that would be based on the types of audit findings and the resulting efforts to implement them appropriately.

EPA also disagrees with commenters’ suggestions to request a schedule extension from the implementing agency. The implementing agency will not receive a copy of the final audit report or findings response report and therefore it is inappropriate to request an extension to address deficiencies identified in the findings response report. In the event that a schedule must change due to unforeseen circumstances, EPA recommends that the owner or operator document the reasons for the change and update the schedule to reflect revised dates.

o. Submitting Reports to the Board of Directors

EPA received comments both supporting and opposing the proposed requirement to submit the audit report to the audit committee of the Board of Directors. Those in support reasoned that it will make the Board of Directors aware of the deficiencies, and noted that the requirement will allow the Board of Directors the opportunity to properly budget for corrective actions.

Several commenters, including facilities and industry trade associations, opposed the proposed requirement to submit the audit report to the Board of Directors, arguing that it is generally unnecessary or inappropriate to do so. These commenters stated that the requirement would unduly constrain facilities that may have other processes to involve facility leadership in responding to findings from third-party audits. Similarly, an industry trade association reasoned that this requirement subverts company policy established under the rule’s management provisions and that the program would be most effective if each company is allowed to determine the most appropriate chain of command and reporting. The commenter also warned that such a requirement could set a precedent for other regulatory programs, which could result in Boards of Directors receiving a deluge of technical information that they do not

have time to address and that they are in no position to interpret.

One commenter recommended that EPA provide definitions for Board of Directors and audit committee to avoid ambiguity. The commenter also recommended that EPA specify a timeframe for this report to be submitted to the Board’s audit committee. Furthermore, the commenter urged EPA to address how this requirement would be documented as completed or what documentation would be required to demonstrate that the owner or operator does not have an audit committee or comparable committee.

Boards of Directors and their audit committees play an important role in establishing internal corporate accountability and overseeing corporate prioritization, budgeting, and operations. EPA believes that providing the audit committee of the Board of Directors with third-party audit findings will ensure the committees and their Boards of Directors are aware of any deficiencies and have the opportunity to properly budget for any required corrective actions in a timely manner. EPA expects that this approach will improve facility and public confidence that third-party audit report findings and recommendations are promptly and properly addressed.

Therefore, the final rule requires the owner or operator to immediately, upon its completion, provide to the audit committee of the Board of Directors, or other comparable committee or individual, if applicable a copy of the:

- Findings response report; and
- Implementation schedule to address deficiencies identified in the audit findings response report.

EPA does not agree that we should define “Board of Directors” and “audit committee.” Facility owners or operators should consider their corporate structure to determine if there is, in fact, a committee or individual that may serve to oversee auditing and compliance oversight. The closing clause in §§ 68.59(e)(3) and 68.80(e)(3), “if applicable,” replaces the corresponding language in the proposed rulemaking, “if one exists.” “If applicable,” in this context, is intended to clarify that owners or operators not otherwise required by law to have an audit committee of the Board of Directors or that have not, otherwise, established or designated a comparable committee or individual, are not subject to the requirements in §§ 68.59(e)(3) and 68.80(e)(3).

Finally, in response to concerns about demonstrating compliance with this requirement, EPA recommends that the facility document how the owner or

⁶⁰ See definition of “promptly,” Cambridge English Dictionary, at <http://dictionary.cambridge.org/us/dictionary/english/promptly>.

operator complied with this requirement and maintain that documentation with the findings response report. This may include identifying who received a copy of the report and the date it was provided. If there is no audit committee of the Board of Directors or a comparable committee or individual, then the owner or operator should consider documenting that no committee or individual exists.

p. Third-Party Audit Recordkeeping

Some commenters supported the proposed third-party audit recordkeeping requirements. However, some commenters opposed the requirement to retain copies of the draft audit report. A few commenters opposed the requirement that records be retained at the stationary source.

EPA agrees with commenters that opposed maintaining draft audit reports. Therefore, EPA is not finalizing the proposed requirement in §§ 68.59(e)(2) and 68.80(e)(2) for owners or operators to retain copies of all draft third-party audit reports. The final rule requires that the owner or operator retain as records certain documents at the stationary source, including the two most recent final third-party audit reports, related findings response reports, documentation of actions taken to address deficiencies, and related records. The final audit report must include a summary of any significant revisions between draft (if any) and final versions of the report.

The final rule also requires the owner or operator to retain records at the stationary source in order to ensure that records are readily available to stationary source staff to review and utilize and for implementing agency inspectors to access during site inspections. These documents may be retained electronically as long as they are immediately and easily accessible to the owner or operator and the owner or operator retains the signed original documents, where appropriate.

q. Other Comments

One commenter encouraged EPA to correct what it described as a grammatical error within §§ 68.58(a) and 68.79(a). Specifically, the commenter urged EPA to correct the plural reference to the owner or operator by changing the word “they” to “it” to make it clear that only one of the entities needs to conduct an audit.

EPA is not making this recommended revision. Both the owner and operator are responsible to evaluate compliance with the prevention program requirements of the rule and we do not believe that this language has been

confusing. However, to clarify, we do agree that as long as the audit is performed, only one of the entities needs to have conducted the audit.

C. Safer Technology and Alternatives Analysis (STAA)

1. Summary of Proposed Rulemaking

EPA proposed to modify the PHA provisions in § 68.67 by adding paragraph (c)(8) to require certain industry sectors to conduct a safer technology and alternatives analysis (STAA) and to evaluate the feasibility of any inherently safer technology (IST) identified. EPA proposed to limit the requirement to owners or operators of facilities with Program 3 regulated processes in North American Industrial Classification System (NAICS) codes 322 (paper manufacturing), 324 (petroleum and coal products manufacturing), and 325 (chemical manufacturing).

In the proposed rulemaking, EPA specified that the STAA would consider, in the following order of preference:

- IST or inherently safer design (ISD),
- Passive measures,
- Active measures, and
- Procedural measures.

EPA further indicated that the owner or operator would be able to evaluate a combination of these risk management measures to reduce risk at the process.

EPA also proposed to add several definitions that relate to an STAA in § 68.3. EPA proposed active measures to mean risk management measures or engineering controls that rely on mechanical, or other energy input to detect and respond to process deviations. Some examples of active measures included alarms, safety instrumented systems, and detection hardware (such as hydrocarbon sensors).

EPA proposed feasible to mean capable of being successfully accomplished within a reasonable time, accounting for economic, environmental, legal, social, and technological factors. EPA further clarified in the definition that environmental factors would include consideration of potential transferred risks for new risk reduction measures.

For inherently safer technology or design, the proposed definition meant risk management measures that:

- Minimize the use of regulated substances,
- Substitute less hazardous substances,
- Moderate the use of regulated substances, or

- Simplify covered processes in order to make accidental releases less likely or the impacts of such releases less severe. The proposed definition of “passive measures” meant risk management measures that use design features that reduce the hazard without human, mechanical, or other energy input. EPA provided examples of passive measures that included pressure vessel designs, dikes, berms, and blast walls.

Finally, EPA proposed procedural measures to mean risk management measures such as policies, operating procedures, training, administrative controls, and emergency response actions to prevent or minimize incidents. EPA sought comment on these proposed revisions.

2. Summary of Final Rule

After review and consideration of public comments, EPA is finalizing the STAA provision in § 68.67(c)(8), and related definitions in § 68.3, as proposed, with the following modifications:

- EPA is substituting the term “practicability” for “feasibility” in proposed § 68.67(c)(8)(ii) of the PHA requirements;
- EPA is substituting the term “practicability” for “feasible” in the definition in § 68.3 and substituting the phrase “the capability” for “capable,” while retaining the remaining definition as proposed; and
- EPA is revising the definition of “passive measures” by clarifying that these measures not only reduce a hazard but reduce the frequency or consequence of a hazard.

Significant comments on the proposed STAA provisions and related definitions are discussed in section IV.C.3 of this preamble.

3. Discussion of Comments and Basis for Final Rule Provisions

Many commenters from environmental advocacy groups and some state agencies expressed support for the proposal to require an STAA to improve process safety. However, some believed that implementation of feasible safer alternatives, particularly IST, should be required and that STAA requirements should apply to a greater universe of facilities and not just those in the chemical manufacturing, petroleum refining and paper manufacturing industries. Many commenters, mostly from industry, requested that EPA remove IST and design requirements from the rule entirely for a variety of reasons, or requested significant clarifications to applicability if the STAA provision is finalized.

As noted previously, except for substituting the term “practicable” for “feasible” and some other definition changes, EPA is finalizing the STAA provisions as proposed. We continue to rely on the rationale expressed in the proposed rulemaking. In the discussion that follows and in the Response to Comment document, we explain our consideration of the comments and our analysis and response.⁶¹

We recognize there may be multiple, rational approaches to STAA. We determined that it was reasonable to require STAA for sectors that have had a high per facility incidence of reportable accidental releases and where the complexity and variety of methods of chemical handling demonstrate the potential for process safety revisions. We do this in part to balance potential accidental release rate reduction and cost. There are some sectors, such as water treatment, with known ISTs that we do not require to evaluate or implement ISTs under this rule. In the water treatment sector in particular, the sector’s lower accidental release rates do not demonstrate that requiring thousands of facilities to conduct STAA would result in a significant drop in accidental releases.⁶² In contrast, even if some of the sectors we have identified for the STAA requirement already may have voluntarily undertaken an STAA approach (at least at new facilities), accidental release rates remain higher for these industries, technologies advance over time, and ensuring a minimum level of application of the STAA approach limits the disincentives for sector members to be leaders in adoption of safer technologies. We do not mandate the adoption of any IST found to be practicable in part because we recognize that a passive measure or other approach on the STAA hierarchy may also be effective at risk reduction; we continue to leave the adoption of particular accident prevention approaches to owners’ and operators’ reasonable judgment. We discuss other factors that have led us to select particular industries for STAA and particular requirements in our STAA

⁶¹ 2016. EPA Response to Comments on the 2016 Proposed Rulemaking Amending EPA’s Risk Management Program Regulations. This document is available in the docket for this rulemaking.

⁶² An intentionally-caused release through the criminal act of a third-party would be an accidental release because the emission would be unanticipated from the perspective of the owner or operator of the stationary source. Where the location of a water treatment source could expose large populations to regulated substances, we believe it is appropriate for such sources to work with local emergency planners and homeland security officials to reduce the risk. Nevertheless, such isolated cases do not justify a mandate across the industry in place of a case-specific review.

approach in response to particular comments.

a. Legal Issues

Various commenters raised potential legal issues or challenges regarding the STAA requirements based on CAA authority, Congressional intent, deficient analysis or substantiation, vagueness of requirements, and jurisdiction.

Several industry associations and individual companies commented that EPA lacked the legal authority to require assessment of STAA in general and IST/ISD in particular. One argued that the authority for RMPs rests in subparagraph (B) of CAA section 112(r)(7), while the authority for design and equipment changes rests in subparagraph (A). Several argued that EPA did not adequately explain its change of position from the one adopted in the 1996 final RMP rule, which did not require the assessment or implementation of IST. In light of EPA’s position that the 1996 final RMP rule and EPA’s program implementation provided incentives to adopt IST, some argued that requiring STAA analysis without requiring implementation of changes would offer no new benefit to public health and safety; these commenters suggested that IST had been informally used already for decades where it was feasible. Another commenter said the STAA requirement could effectively ban certain chemicals without the authority to do so. Others noted that IST consideration would lead to increased liability issues for facilities because, even if a source was not required to implement IST by rule, should an accident happen, plaintiffs could cite the failure to adopt the IST in a court case. A commenter criticized the requirement as too amorphous to be meaningfully implemented and enforced in a non-arbitrary manner. Other commenters said IST is more properly within the authority of OSHA, that EPA’s record did not reveal consultations and coordination with OSHA as required by CAA section 112(r)(7)(D), and that subsequent to the enactment of the 1990 CAA Amendments, Congress had denied both EPA and DHS the authority to require IST when it rejected bills requiring or authorizing IST.

In contrast to the comments discussed previously, a coalition of environmental, labor, community and other public groups, as well as a mass mail campaign, commented that EPA must adopt STAA in its final rule not only for NAICS codes we proposed but for all facilities where STAA is feasible. In the commenters’ view, the proposed

amendments are inconsistent with the statute’s prevention objectives and its preference for measures that completely eliminate potential hazards because only certain sectors are required to undertake STAA while others only have requirements imposed after accidental releases. Additionally, the commenters argue that the authority to “make distinctions” among classes of facilities in CAA section 112(r)(7)(A) and to “recognize differences” among types of sources in CAA section 112(r)(7)(B) does not include the authority to exempt entire sectors from STAA; even if the statute gave such authority, EPA failed to explain how it is relying on that authority. Finally, the commenters contended EPA’s action was arbitrary and capricious by failing to account for the significant value STAA could provide to facilities, workers, and communities by not only removing hazards but by saving money through removing potential liability and sometimes improving industrial efficiency.

EPA disagrees with the comments that the CAA does not authorize the STAA provisions of this final rule. Both subparagraphs (A) and (B) of CAA section 112(r)(7) authorize STAA and IST in particular. EPA cited all of paragraph (7) as authority for “[e]ach of the portions of the Risk Management Program rule we propose to modify.” 81 FR 13646, March 14, 2016.⁶³ The authority section for 40 CFR part 68 references CAA section 112(r) and is not limited to particular paragraphs and subparagraphs. The proposed rulemaking also noted that subparagraph (A) had been invoked in the rulemaking petition on IST. Therefore, EPA provided sufficient notice that we contemplated action under any authority under CAA section 112(r)(7). Nevertheless, we also view that our authority to require STAA assessments or an IST review is consistent with subparagraph (B). Under subparagraph (B), EPA has broad authority to develop “reasonable regulations . . . for the prevention of accidental releases.”

Further support for IST can be found in both the Conference Report accompanying the 1990 CAA Amendments and the Senate Report explaining the provisions of the Senate bill that closely mirrors enacted provisions. In discussing the “Hazard Assessments” required by section

⁶³ We note that our more extensive discussion of authority for the RMP rule provided in the 1993 proposal focused on CAA 112(r)(7)(B)(i) and (ii), 58 FR 54191–93 (October 20, 1993), which the proposal for the Modernization rule referenced for additional authority discussion.

112(r)(7)(B), the Conference Report specifies that such assessments “shall include . . . a review of the efficacy of various release prevention and control measures, including process changes or substitution of materials.”⁶⁴ Conference Report at 340–41. The STAA analysis is such a review.⁶⁵ The Senate Report identifies as “release prevention measures” many of the techniques that are now known as IST—substitution of less hazardous materials, reduction in the severity of the conditions of processing and complexity of the process, and decreasing volumes of chemicals in storage.⁶⁶ Senate Report at 242. That subsequent Congresses did not enact additional legislation on IST is irrelevant to what was enacted and intended at the time of enactment.

The proposed rulemaking, 81 FR 13646, March 14, 2016, provided an extensive discussion of developments concerning IST since the 1996 final RMP rule. As we explained, EPA adopted a rule in 1996 that provided incentives for IST without a specific mandate to either conduct studies of IST or implement IST measures. From 1996 on, EPA has recognized that good PHA techniques will often identify opportunities to make new and existing processes and operation inherently safer. However, in the 1996 rule and thereafter, we also recognized that IST is not the only way to prevent accidents, and that sometimes IST can be impractical, especially for existing sources.

The STAA approach we adopt in this action places IST in a hierarchy that allows for sources to choose non-IST approaches to accident prevention, such as passive mitigation, active mitigation, and administrative controls. While the EPA did not, in 1996, expressly require facilities to analyze and implement IST specifically, this rule places IST in a set of options to be studied. EPA relies on sources making rational decisions once presented with STAA studies and selecting prevention approaches that optimize the cost of the measures taken and costs avoided (e.g., liability,

operational efficiency, image). Such an approach is similar to the approach to energy assessments recently taken in the major source and area source boiler rules under CAA section 112(d) and affirmed in *U.S. Sugar Corp v. EPA*.⁶⁷

We acknowledge that many sources have conducted STAA analyses already. For these sources, the cost of implementing the new STAA requirement should be lessened. The requirement we promulgate in this rule captures those slower in considering IST in high accident industries rather than harms leaders. There are no specific chemicals banned by this final rule. While we recognize that companies have moved away from certain processes, such as those that involve the storage of large quantities of methyl isocyanate, in order to make facilities safer, we leave process design decisions to the reasonable judgment of owners and operators under this action.

EPA disagrees with the comments concerning IST being more properly within the authority of OSHA. It is plain from the history of the 1990 Amendments that both agencies were given authority to prevent accidents, and that Congress contemplated EPA adopting some IST measures as appropriate. Furthermore, EPA has a history of prior coordination with OSHA to define and promote STAA when developing the EPA and OSHA, Chemical Safety Alert: Safer Technology and Alternatives (EPA 550-F-15-003; June 2015).⁶⁸

Not only for STAA, but also for other provisions of this final rule, the record adequately reflects EPA’s coordination and consultation with Department of Labor (DOL)/OSHA and DOT. As an initial matter, both DOL and DOT were part of the Working Group under Executive Order 13650. That order and report of the Working Group reflect consultation and direction regarding the development of the this final rule. Second, we note that EPA’s decision to not consider the regulation of AN at this time explicitly is based on an effort to coordinate any potential regulatory requirements for this substance with actions contemplated by other agencies, including OSHA. Third, while the content of interagency deliberations are not for the record for judicial review under CAA section 307(d), multiple agencies have an opportunity to review a draft rule under Executive Order 12866 *Regulatory Planning and Review*. Finally, OSHA had representatives

attend the SBAR panel which discussed the development of the proposed rulemaking. All of this is a matter of public record in the docket for this rulemaking.

Consistent with the structure of the RMP rule, EPA has placed IST among the methods a facility may choose to adopt to prevent accidents. Commenters who argue that we have failed to require accident prevention by not mandating the adoption of IST measures for all facilities wherever feasible fail to acknowledge that non-IST methods for preventing accidents may be reasonable in some circumstances. To the extent that these regulations are imposed under subparagraph (B), these regulations have an overriding requirement to be reasonable. While it is true that similar quantities of chemicals under the same conditions present similar hazards regardless of sector, various sectors present different likelihood of release. Some sectors handle chemicals differently under conditions that are more likely to lead to severe releases. The record reflects that the likelihood of severe accidents is greater in the sectors that must conduct STAA analysis under this final rule. Thus, it is reasonable to have different requirements for these sectors than for others. Independent of whether any new IST/ISD is adopted, there is a cost to conducting an STAA analysis. EPA has reasonably limited STAA analysis requirements to sectors that we view as most likely to likely to have more frequent, severe releases that are most likely to be benefit from STAA review. Inherent in our approach is distinguishing among classes and types of facilities. We expect that the adoption of STAA analysis requirements in this final rule will advance IST not only in the sectors targeted by the rule, but also more generally as experience is gained and opportunities for technology transfer are developed.

b. Applicability

Limiting applicability of STAA provisions. While some commenters supported EPA’s proposal to limit applicability of STAA provisions to the petroleum refining, chemical manufacturing, and paper manufacturing sectors, other commenters objected to this aspect of the proposal. Many commenters, including a mass mail campaign joined by approximately 300 commenters, expressed concern that the proposed rulemaking arbitrarily determined which industries have feasible and worthwhile alternatives, and which communities and facilities would benefit from STAAs. These commenters

⁶⁴ H. Rep. 101–952, Clean Air Act Amendments of 1990 Conference Report to Accompany S. 1630, 101st Cong., 2d Session, 340–41, October 26, 1990.

⁶⁵ EPA chose to incorporate into the prevention program provisions several of the hazard assessment elements mentioned in the conference report and to limit the hazard assessment portions of 40 CFR subpart B to the offsite consequence analysis and accident history in order to better conform the RMP rule to the format of the PSM rule. 58 FR 54194 (October 20, 1993).

⁶⁶ Clean Air Act Amendments of 1989, Report of the Committee on Environment and Public Works, U.S. Senate together with Additional and Minority Views to Accompany S. 1630, S. Report No. 101–228, 101st Congress, 1st Session, p. 242, December 20, 1989.

⁶⁷ *United States Sugar Corp. v. EPA*, 830 F.3d 579 (D.C. Cir. 2016).

⁶⁸ https://www.epa.gov/sites/production/files/2015-06/documents/alert_safer_tech_alts.pdf.

asserted that limiting the requirement to certain industry sectors would exempt other sectors that pose a significant threat to the public. Commenters argue that focusing on accident rate to target sectors for STAA was not a credible way to forecast and prevent rare catastrophic events that tend to fall out of existing patterns.

Some commenters urged EPA to apply the STAA requirement to all sources, or all Program 3 sources. Other commenters, including another mass mail campaign joined by approximately 17,250 commenters, recommended that EPA require assessment and implementation of STAA for industries where safer alternatives are feasible or well demonstrated, such as water supply, wastewater treatment, power generation, food and beverage manufacturing, and others. Several other commenters indicated that EPA should apply the STAA provisions to facilities with the largest worst case scenario populations, or to the 2,000 high-risk facilities cited in EPA's 2017–2019 National Enforcement Initiative (NEI). A few commenters suggested that EPA implement a pilot program requiring IST implementation for a subset of sectors considered extremely high risk, such as wastewater or drinking water treatment plants, bleach plants, refineries using hydrogen fluoride and for those facilities among the 2,000 high-risk facilities cited in the EPA's NEI 2017–2019 proposal. A few commenters believe that the proposed STAA requirements have failed to address the disproportionate health and safety threats in communities of color and low-income communities, and want the STAA provisions to apply to all RMP facilities.

In this rule, EPA is finalizing the STAA provisions as proposed, which limits applicability of the STAA requirements to Program 3 processes in the petroleum refining, chemical manufacturing, and paper manufacturing sectors. EPA does not believe that the final provisions have been limited arbitrarily, or that the Agency's decision to limit applicability of the STAA provisions to the petroleum refining, chemical manufacturing, and paper manufacturing sectors implies that other sectors do not have viable safer technology alternatives. In the proposed rulemaking, EPA acknowledged that most RMP-regulated sectors could identify safer technologies and alternatives. However, the Agency proposed to limit the applicability of the STAA provisions to facilities in complex manufacturing sectors with high accident rates. EPA took this

approach in order to target these provisions to the industrial sectors with the potential to achieve the greatest safety improvements through consideration of safer technology alternatives. EPA explained that sources involved in complex manufacturing operations have the greatest range of opportunities to identify and implement safer technology, particularly in the area of inherent safety, because these sources generally produce, transform, and consume large quantities of regulated substances under sometimes extreme process conditions and using a wide range of complex technologies. Therefore, such sources can often consider the full range of inherent safety options, including minimization, substitution, moderation, and simplification, as well as passive, active, and procedural measures. Further, EPA noted that RMP facilities in the three selected sectors have been responsible for a relatively large number of accidents, deaths, and injuries, and the most costly property damage.⁶⁹ Facilities in these sectors also have significantly higher accidents rates as compared to other sectors.⁷⁰ EPA agrees that there is no way to forecast rare catastrophic events; however, we believe it is appropriate to target sectors that have had a large number of accidents and have the greatest opportunity to identify safer technologies.

While EPA does not believe it is necessary to require all sources, all Program 3 sources, or all sources in industry sectors where feasible safer technology alternatives have been identified to perform an STAA, the Agency encourages such sources to consider performing an STAA, and to determine practicability of IST or ISD considered, even if they are not subject to the STAA provisions of the final rule.

EPA does not agree that only sources with large worst-case scenario populations, or only sources on EPA's high risk facility list should be required to comply with the STAA provisions. EPA believes it is not appropriate to apply the STAA provisions only to sources with specified worst case

⁶⁹ For more information, see Chapter 6 of the *Regulatory Impact Analysis—Accidental Release Prevention Requirements: Risk Management Programs Under the Clean Air Act, Section 112(r)(7)*. This document is available in the docket for this rulemaking (Docket ID Number EPA–HQ–OEM–2015–0725).

⁷⁰ For more information, see EPA, January 27, 2016. Technical Background Document for Notice of Proposed Rulemaking: Risk Management Programs under the Clean Air Act, Section 112(r)(7). This document is available in the docket for this rulemaking (Docket ID Number EPA–HQ–OEM–2015–0725).

scenario populations for several reasons. First, EPA's OCA requirements allow regulated facilities to use any commercially or publicly available air dispersion modeling techniques, provided the techniques account for the modeling conditions specified in the rule and are recognized by industry as applicable as part of current practices. This flexibility can result in two similar facilities obtaining significantly different endpoint distances (and vulnerable zone populations) simply through choosing different modeling techniques. By linking the STAA requirement to the worst case scenario, EPA could inadvertently cause some facilities to recalculate their OCA using a different modeling approach, simply to avoid the STAA requirement, and without actually implementing process changes that might reduce the facility's worst case scenario. Second, linking the STAA requirement to large worst case scenario populations would effectively bias the applicability of the requirement to facilities in densely populated areas, and potentially exempt equally hazardous facilities in or near less densely populated communities. Third, this application of the STAA requirement would disregard the criteria that EPA has used in the proposed rulemaking—accident history and facility complexity, which EPA believes provide a stronger rationale for limiting the applicability of the requirement. In addition, EPA believes that targeting the STAA requirements to the larger and more complex processes will benefit minority communities, who are located closer to larger facilities with more complex chemical processes and who bear a larger portion of risk from chemical accidents. Lastly, distribution of worst-case scenario population information is restricted under the CAA, and this would effectively prohibit the public from knowing which facilities are required to perform an STAA.

For similar reasons, EPA does not agree with commenters' suggestions to develop a pilot program to apply to a subset of high risk facilities or to apply the STAA requirement to facilities on EPA's high risk facility list. This list is generated, in part, using worst case scenario population information (chemical quantities and accident history are also considered, although sector accident frequency is not), and therefore the list may not be publicized by EPA.

Apply to facilities using different incident rate methodology. Several commenters objected to EPA's methodology for selecting industrial sectors subject to STAA requirements using an incident rate based on the

number of RMP-reportable accidents per facility in the industry sector. These commenters expressed concern that the proposal to require STAA's from only three NAICS codes is based on an incorrect approach to, and interpretation of, incident rates. An industry trade association commented that looking at the number of accidents per facility does not allow for direct comparisons as it does not account for the relative number of employees at a facility. This commenter argued that EPA should recalculate this value using the number of accidents per hours worked or the number of accidents per full time worker, and reasoned that such a calculation would be more consistent with the incident rate calculations conducted by the Occupational Safety and Health Administration (OSHA) and the Bureau of Labor Statistics (BLS). Another industry trade association remarked that EPA's methodology ignores not only the size of the facility but also the quantity of chemicals and the number of covered process units at a given facility. According to this commenter, upon normalizing the petroleum refining sector's accident rate to account for the number of process units and the diversity of facilities being compared, the accident rate for this sector is lower than for most other sectors. The commenter also expressed concern that EPA's proposal to subject this sector to the STAA requirement ignores the industry's significant recent safety improvements that EPA itself has noted in the NPRM, and that industries such as poultry processing have higher incident rates than petroleum refining or chemical manufacturing, even though these industries are not subject to the STAA requirement.

A trade association representing the paper manufacturing industry urged EPA to remove the STAA requirement for that sector. The industry trade association stated that paper manufacturing should not be considered a "complex" manufacturing process, and cited EPA's Technical Background Document⁷¹ which, according to the commenter, does not categorize paper manufacturing facilities as "complex." Additionally, the commenter remarked that the paper manufacturing industry has a much lower level incident risk than other sectors based on injuries offsite, and stated that of the roughly 15,000 offsite injuries mentioned by EPA, the paper manufacturing industry

was responsible for only two. Citing Exhibit 6–4 of EPA's Regulatory Impact Analysis for the proposed rulemaking, the commenter asserted that the entire U.S. paper manufacturing sector has been responsible for the fewest offsite injuries out of any industrial sector over the ten-year study period. This commenter concluded that implementing the requirement for the paper industry would not enhance public safety, and that the industry has made significant strides to increase safety procedures in recent years.

Another commenter stated that EPA's use of routine incident rates in selecting industry sectors to conduct STAA's was faulty because frequent smaller incidents cannot be used to reliably predict infrequent catastrophic events.

EPA acknowledges that there were other possible methods of selecting industry sectors that would be subject to STAA requirements. All of the methods offered by commenters—normalizing accident rates by FTE, number of process units, chemical quantities, etc.—were considered but ultimately rejected by the Agency. EPA does not believe normalizing accident rates by FTE or chemical quantity is appropriate because prior research has shown that the interaction between these factors and incident rates is complex, and that none of these variables, by itself, is a suitable proxy for the relative risk of a catastrophic chemical release incident at a facility.⁷² Likewise, selecting industry sectors for applicability of the rule's STAA provisions using an approach similar to that used for OSHA personal injury statistics (e.g., OSHA lost workday injury and illness rates) would not identify sectors with higher chemical process risks. These OSHA rate data generally scale directly with the number of employees because most of the incidents measured in these metrics involve single-person injuries (e.g., overexertion, sprains and strains, slips, trips, falls, injuries due to contact with objects and equipment, etc.).⁷³ In other words, facilities with more employees are more likely to suffer higher amounts of these "lost workday" injuries, but not necessarily higher numbers of chemical release incidents.

Furthermore, EPA chose not to normalize accident rates by the number

of process units for two reasons. First, regulated sources have significant discretion in determining covered process boundaries—some petroleum refineries and large chemical manufacturing facilities containing numerous unit process operations have chosen to consider their entire plant as a single covered process, while other similar plants have divided their stationary source into dozens of different covered processes. Therefore, normalizing accident rates by the number of processes could result in a less accurate reflection of a sector's historical accident propensity. More importantly, even if a higher accident rate at a large facility is due, in part, to the facility having more covered processes, that fact does not reduce its risk to the surrounding community. For the community, it is the frequency of accidents at its neighbor that matters, not the rate per process. In fact, the relatively higher likelihood of accidental releases at such sources further warrants their consideration, and potential application, of safer alternative technologies.

EPA disagrees that its approach ignores recent safety improvements on the part of the petroleum refining sector. The Agency views the application of safer technology alternatives as an approach to hazard control that can be applied throughout the life-cycle of a facility. A facility's recent implementation of a safer technology alternative does not foreclose consideration of additional safer technologies in the future. Facilities that have already implemented safer technology alternatives should document their implementation in their next PHA, determine whether there is additional information that should be considered in their STAA, and continue to consider additional safer alternatives during subsequent PHA re-validation cycles.

EPA agrees that the poultry processing sector, when that sector is considered separately from other food and beverage industry sectors, has a slightly higher RMP facility incident rate than the petroleum refining sector. However, EPA did not include the poultry processing sector under the final rule STAA provision because the poultry processing sector, by itself, does not delineate a meaningful technological subgrouping of RMP facilities. Poultry processing facilities are just one of many different types of food and beverage manufacturing and processing facilities covered under the RMP regulation. The common technology among these facilities that results in their coverage under the RMP

⁷¹ EPA, January 27, 2016. Technical Background Document for Notice of Proposed Rulemaking: Risk Management Programs under the Clean Air Act, Section 112(r)(7). This document is available in the docket for this rulemaking (Docket ID Number EPA-HQ-OEM-2015-0725).

⁷² Elliott, M.R., Kleindorfer, P.R., and Lowe, R.A., The Role of Hazardousness and Regulatory Practice in the Accidental Release of Chemicals at U.S. Industrial Facilities, Risk Analysis, Vol. 23, No. 5, 2003.

⁷³ See, e.g., "Nonfatal Occupational Injuries and Illnesses Requiring Days Away from Work, 2014," U.S. Department of Labor, Bureau of Labor Statistics, November 19, 2015. Available at <http://www.bls.gov/news.release/osh2.nr0.htm>.

regulation is ammonia refrigeration. While EPA is aware that some RMP facilities in the poultry processing sector have had serious chemical accidents, the Agency does not believe that these accidents are usually related to the fact that these facilities process poultry. Rather, they generally relate to the design, maintenance, or operation of the ammonia refrigeration system at the facility, and are similar to the causes of accidents involving ammonia refrigeration systems at other types of food and beverage processing facilities. Therefore, when considering the accident rates of RMP-covered poultry processing facilities, EPA believes the proper approach is to combine RMP facilities in this sector with RMP facilities in all other sectors in the food and beverage industry, as indicated in the RIA for the final rule.⁷⁴ When this is done, the accident frequency for the food and beverage manufacturing sector is significantly lower than the accident frequency for the petroleum refining sector.

EPA disagrees with the commenter that argued the paper manufacturing sector should be exempt from the STAA provision of the final rule because the sector has had fewer accidents with offsite injuries, or because the sector was not characterized as “complex” by EPA’s economic analysis. While it is true that the paper manufacturing sector has had fewer accidents with offsite injuries than other sectors, this is partly due to the relatively small number of RMP facilities (70) in the paper manufacturing sector. Additionally, the great majority of the offsite injuries reported by RMP facilities resulted from a single accident at the Chevron Richmond refinery, therefore it is inappropriate to compare offsite injuries from the paper manufacturing sector to the total of all offsite injuries that occurred during the ten-year period analyzed.⁷⁵

More importantly, offsite injury is only one of several types of accident

consequences that require reporting under the RMP rule. Other reportable consequences include deaths, injuries, and significant property damage on-site, and known offsite deaths, evacuations, sheltering-in-place, property damage and environmental damage. When all RMP-reportable accident consequences for a sector are considered, and normalized by the number of sources in the sector, the paper manufacturing sector has the second highest accident rate among all sectors regulated under the RMP rule. EPA believes this approach is a better gauge of the historical accident propensity for a sector than considering only accidents with offsite injuries.

While it is also true that EPA did not characterize the paper manufacturing sector as “complex” in the Technical Background Document⁷⁶ and for estimating the costs of most rule provisions within the RIA, it did do so for purposes of the STAA provision, and arguably could have done so for all rule provisions. Paper manufacturing facilities, and particularly large integrated pulp and paper mills, are clearly more complex than most other RMP facilities, which only involve chemical storage (e.g., agricultural ammonia distribution facilities) or simple chemical processes (e.g., water treatment). The main purpose for EPA’s broad characterization of certain sectors as “complex” and all others as “simple” for certain rule provisions within the RIA was because the Agency judged that the cost of implementing those rule provisions would vary primarily by the complexity of the processes involved, and that a rough two-tier division of regulated sources (e.g., simple vs. complex) would suffice to establish cost estimates for those rule provisions. However, EPA did not use this two-tier division for purposes of estimating the costs of the rule’s STAA provision. For the STAA provision, EPA included paper manufacturing as a sector that involves “complex manufacturing operations.” EPA chose to apply the STAA requirement to sources involved in complex manufacturing operations because these sources have the greatest range of opportunities to identify and implement safer technology, particularly in the area of inherent safety. These sources generally produce, transform, and consume large quantities of regulated substances under sometimes extreme process conditions

and using a wide range of complex technologies. For more information, see the preamble discussion in the proposed rulemaking at 81 FR 13688, March 14, 2016.

EPA disagrees that the agency used “routine” incident rates to select industry sectors covered by the STAA provision. Accidents meeting EPA reporting criteria include accidental releases from covered processes that result in deaths, injuries, and significant property damage on-site, and known offsite deaths, injuries, evacuations, sheltering-in-place, property damage and environmental damage. EPA believes that such accidents generally either resulted in, or could reasonably have resulted in, a catastrophic release of a regulated substance, and are therefore an appropriate criterion to consider when identifying industrial sectors that may benefit public safety the most by analyzing safer alternative technologies.

Eliminate or exempt batch toll chemical manufacturers. In the context of exempting batch toll processors from the STAA provision, some commenters recommended that processes governed by government agency specifications or through a contractual relationship with a customer should not be subject to the STAA provision because in these cases, the customer specifies the manufacturing process. According to one commenter, the customer is subject to regulation, often from the FDA or EPA. An industry trade association requested that EPA explicitly state in the body of the regulation that the STAA requirement would not apply to processes in whole or in part specified by a government agency or through any contractual obligation.

EPA disagrees with the suggestion to exempt batch toll manufacturers from the STAA requirement. Safer technology alternatives include many options beyond chemical substitution. For example, IST could involve minimization of stored raw material chemicals, making process changes that make it less likely to release the chemical (moderation), or reducing complexity in the process in order to make accidents less likely (simplification). Therefore, even where a contractual relationship or regulation requires a regulated batch toll manufacturing facility to use a particular regulated substance in specified quantities, owners and operators of batch toll manufacturing facilities should still consider other potential IST measures besides chemical substitution. The facility must also consider potential safer alternatives beyond IST, such as passive measures instead of or in combination with active

⁷⁴ *Regulatory Impact Analysis—Accidental Release Prevention Requirements: Risk Management Programs Under the Clean Air Act, Section 112(r)(7)*. This document is available in the docket for this rulemaking (Docket ID Number EPA-HQ-OEM-2015-0725).

⁷⁵ According to the CSB, “approximately 15,000 people from the surrounding communities sought medical treatment at nearby medical facilities for ailments including breathing problems, chest pain, shortness of breath, sore throat, and headaches. Approximately 20 of these people were admitted to local hospitals as inpatients for treatment.” CSB, January 2015, Final Investigation Report: Chevron Richmond Refinery Pipe Rupture and Fire, Chevron Richmond Refinery #4 Crude Unit, Richmond, California, August 6, 2012, Report No. 2012-03-I-CA, http://www.csb.gov/assets/1/16/Chevron_Final_Investigation_Report_2015-01-28.pdf.

⁷⁶ EPA, January 27, 2016, Technical Background Document for Notice of Proposed Rulemaking: Risk Management Programs under the Clean Air Act, Section 112(r)(7). This document is available in the docket for this rulemaking (Docket ID Number EPA-HQ-OEM-2015-0725).

measures, or active measures instead of procedural measures. Toll manufacturers may use RMP chemicals for purposes in addition to making a formulated product, such as for cleaning equipment, wastewater treatment or refrigeration, for which chemical substitution may not be prohibited by regulation or contractual relationship. Also, the final rule does not require regulated sources to implement IST or ISD considered, so there is no conflict between this final rule and other regulations that may apply to RMP-regulated facilities subject to STAA requirements. For example, an owner or operator would be in compliance with the STAA requirement to consider potential chemical substitution as part of the analysis if he or she determines that a chemical substitution is not practicable because the substitution is prohibited by another regulation. The owner or operator would still need to consider other types of IST (minimization, moderation, or simplification), and passive, active, and procedural measures in the analysis.

Applicability to water treatment facilities. Some commenters, including professionals and a mass mail campaign joined by approximately 300 commenters, urged that water supply and wastewater treatment facilities should be subject to the proposed STAA provision. A number of commenters expressed concern about threats posed by water and wastewater facilities and related operations. Several commenters asserted that technologically and economically feasible alternatives are available for water supply and wastewater treatment facilities, and suggested that exploring the implementation of these alternatives would be beneficial for the safety of workers, personnel, and communities associated with the facilities. One commenter stated that the costs for water facilities to convert to safer alternatives are feasible, and remarked that it is possible to adopt IST without disrupting operations.

Alternatively, a few industry trade associations and government organizations stated that STAA should not be applied to water facilities citing that any STAA requirement would be repetitive and counterproductive and that drinking water utilities already have to consider a variety of public health and safety factors under the Safe Drinking Water Act (SDWA).

EPA disagrees with commenters who suggest subjecting water and wastewater treatment facilities to STAA requirements. EPA's approach to applying the STAA requirement was to identify industry sectors with the

greatest accident frequency at RMP-regulated facilities within the sector, and with the greatest opportunity to apply STAA risk management measures. While EPA agrees that water supply and wastewater treatment facilities often have feasible alternatives available, according to RMP accident history data, the sector is among the least accident-prone sectors covered under the risk management program. Therefore, the final rule does not apply the STAA requirement to the water and wastewater treatment sector. EPA acknowledges that drinking water utilities already may have considered alternative technologies for their disinfection process while addressing safety and health considerations, risk tradeoffs and compliance with the SDWA.

Limit applicability to major process changes or after accidents. A few commenters want EPA to consider having a requirement similar to that required by Contra Costa County for facilities to conduct an STAA whenever major process changes are proposed and in the aftermath of accidents, when there are often significant opportunities for making process improvements as equipment is rebuilt or repaired. One commenter noted that the CCHS program requires an ISS analysis during the design of new processes, for PHA recommendations, or for major changes resulting from incident investigation recommendations, root cause analysis or MOC review that could reasonably result in a major chemical accident or release. This commenter noted that California's proposed refinery regulations are following the same requirements as the CCHS program. Other commenters recommended that instead of requiring STAA analyses at least every five years in conjunction with the a PHA revalidation, EPA should require the analysis only after accidents.

Another commenter recommended modifying the wording in section 68.67(c)(8) to limit the provisions to new processes or major modifications to existing processes. The commenter also remarked that stationary sources' management of change (MOC) programs should be updated to account for process changes and allow for reassessment of the IST analysis. The commenter concluded that this will ensure that existing IST components are not removed, replaced, or changed without revalidating the IST feasibility criteria.

EPA disagrees that the STAA requirement should be triggered only by a major process change. While the Agency acknowledges that a major

process change could be an opportune time to evaluate safer technology alternatives, the Agency is concerned that requiring STAA reviews only after major process changes could result in some processes rarely or never being evaluated for safer technology alternatives. This could occur if few or no major changes occurred during the life of the process. Also, limiting the STAA to only major process changes could create a disincentive to upgrading processes if facilities chose not to make improvements to avoid having to perform an STAA. EPA is also concerned that there is no common definition or understanding of the term "major process change" that could easily be applied to the wide range of processes affected by the STAA requirement. Therefore, while EPA agrees that integrating STAA reviews into a facility's MOC program (and other prevention programs) may often be beneficial, the Agency believes it is appropriate to incorporate the STAA provision into the PHA section of § 68.67, rather than the MOC section of § 68.75. Nevertheless, EPA encourages owners and operator to also consider safer technology alternatives whenever major process changes are planned.

EPA is revising the PHA requirements in § 68.67 to require that the PHA address findings from incident investigations as well as any other potential failure scenarios. Other potential failure scenarios may include those introduced from major process changes or new designs or those discovered as a result of an accident investigation. Thus, EPA believes that the PHA with its requirement to encompass IST review as part of the PHA process, would cover the same process changes whether they result from an incident investigation, MOC action or other process change.

Finally, EPA disagrees that the STAA requirement should be triggered only by accidental releases. Although the Agency agrees that accidental releases may indeed signal to the owner or operator that safer technology alternatives should be considered, the Agency prefers that owners and operators evaluate safer technologies before accidents occur, with the aim of ultimately preventing such accidents. Also, similar to the Agency's objection to requiring STAA reviews only after major process changes, requiring an STAA only after an accident would mean that many processes subject to this provision may never undergo an STAA.

Limit applicability of STAA requirements to the design phase of a process. Several commenters, including

industry trade associations suggested that EPA should not require STAA for existing facilities or processes. Numerous commenters, including facilities, industry trade associations, local agencies, and a Federal agency, stated that an STAA is more appropriate during the design phase of a new process or facility, or during significant modifications. Some commenters, including a local agency, encouraged EPA to require STAA to consider the highest level of hazard control (referring to the “hierarchy of controls”) that is feasible during the design phase or whenever a facility makes a change. Another commenter stated that adding a new regulatory requirement, particularly for existing operations, is unnecessary to address inherently safer design, and that safer technology reviews should not be part of a PHA.

In contrast, other commenters urged that safer technologies analyses are an ongoing need and should not be limited to new facilities. A state agency and an individual urged that IST should be performed for all new projects, processes, or stationary sources throughout various phases of a project’s life cycle. According to the commenter, performing a separate IST analysis for the entire existing process approximately every five years allows evaluators to see the big picture rather than just the minute details associated with a typical PHA process.

EPA disagrees that STAA analyses should only be required during the initial design phase of a facility. While the greatest potential opportunities for using IST occur early in process design and development, many IST options may still be practicable after the initial design phase. Furthermore, STAA involves more than just IST. Safer technology alternatives also include passive measures, active measures, and procedural measures, and these measures can be modified and improved after the initial design of a facility. EPA notes that many RMP-regulated facilities were originally constructed decades ago, yet major enhancements have been reported in some plants that have been operating for many years.⁷⁷ CCPS explains that inherently safer strategies can be evaluated throughout the lifecycle of a process, including operations, maintenance and modification, and EPA agrees with this approach.

Lastly, EPA disagrees that the PHA is not an appropriate risk management

program element in which to integrate the STAA. EPA believes that safer technologies can and should be evaluated during the full life-cycle of a covered process, and the PHA is the fundamental and recurring risk management program element concerned with overall analysis and control of process hazards. By integrating the STAA with the PHA, every process subject to the provision will undergo an STAA, every five years. EPA believes that five-year revalidation will give the owner or operator the opportunity to identify new risk reduction strategies, as well as revisit strategies that were previously evaluated to determine whether they are now practicable.

Owners and operators of new construction facilities that will be subject to the RMP rule should consider performing the STAA portion of their initial PHA well enough in advance of facility construction so that the full range of inherently safer designs is considered, and include this evaluation in the initial PHA for the process.

c. Definitions

Feasible definition. Many commenters, including a facility, several trade associations and an environmental advocacy group, remarked that EPA did not sufficiently explain any of the five factors (“economic, environmental, legal, social and technological”) for facilities to consider in the proposed definition of “feasible,” and asserted that the examples provided by EPA are unhelpful and vague. The commenters argue that the proposed rulemaking does not provide sufficient guidance on the feasibility component of the STAA review. As such, the commenters conclude that these factors are so expansive and vague that they do not provide any clear guidance as to how feasibility of IST should be determined, and therefore have no place in the RMP rule. According to one commenter, even if the five measures are properly defined, they do not address the full range of issues in the operational life of a project rather than just the processing phase.

A mass mail campaign joined by approximately 300 commenters warned that “accounting for” these factors could be used as an excuse to avoid necessary implementation measures.

An industry trade association said that it does not want EPA to elaborate further on the proposed STAA requirement. One commenter stated that it would be very subjective and difficult to prescribe in regulations what is “feasible” for a facility and that any “one-size fits all” approach to process

safety would limit employers’ ability to react to real facts on the ground. In regards to incorporating ISTs into safety programs, the commenter asserted that only facility operators know whether IST is appropriate given the complexities of their unique operating environments, and no one program will work for all facilities.

EPA believes that the same tools and methods that facilities currently use for their PHA can be used to identify and measure hazards and risks of any safer alternative options. Further explanation of the economic, environmental, legal, social and technological factors included in the “practicability” definition of this final rule can be found in NJDEP’s Guidance for Toxic Catastrophe Prevention Act (TCPA)-Inherently Safer Technology (IST) Review, Attachment 1 Feasibility guidance.⁷⁸

EPA did not define the various factors, such as “economic” or “social” used in the proposed definition of “feasible” or in the revised term “practicability.” The examples in the proposed rulemaking preamble are taken from the guidelines provided by CCPS, and are not exclusive of other situations. EPA believes that the definition of “practicability” in the final rule provides sufficient flexibility for the owner or operator to determine whether an IST or ISD considered could be successfully accomplished. EPA does not believe that we should further define “economic or social factors” in the rule because further specificity of these terms would likely be too prescriptive and would not encompass all the possible conditions and outcomes that might be encountered when determining the practicability of an IST or ISD considered in the STAA. EPA expects that facility owners and operators will use their expertise and make reasonable judgements when considering the appropriate meaning of economic or social factors so that any decisions regarding possible implementation of IST is not driven towards changes that would cause unintended adverse consequences.

Finally, EPA disagrees with commenters’ assertion that accounting for the factors in the definition of “practicability” could be used as an excuse to avoid necessary implementation measures. EPA is not requiring IST or ISD implementation in the final rule and, therefore, further clarifying the practicability definition will not impact IST or ISD implementation.

⁷⁸ http://www.nj.gov/dep/enforcement/tcpa/downloads/IST_guidance.pdf.

⁷⁷ CCPS. 2009. Inherently Safer Chemical Processes: A Life Cycle Approach, 2nd ed., American Institute of Chemical Engineers, CCPS New York, Wiley, p. 25.

Consistency of feasible definition with other programs. A commenter encouraged EPA to incorporate the definition of “feasibility” provided in the Contra Costa County Safety Program Guidance Document. Another commenter stated that the proposed definition of “feasibility” is consistent with California’s proposed California Accidental Release Prevention (CalARP) regulations and the Contra Costa County and the City of Richmond’s Industrial Safety Ordinances. However, a state agency, commented that there is an inconsistency with CalARP’s definition of “feasible” in that the proposed EPA definition omits the terms “health” and “safety,” and the commenter encouraged EPA to add these terms to the list of factors to consider in a determination of feasibility.

EPA based the feasible definition on the CCHS definition of “feasible” but modified the definition to add language acknowledging that environmental factors include a consideration of the potential to transfer risks or introduce new risks to a process or source. The practicability definition in the final rule maintains this language.

EPA disagrees with the suggestion to add the terms “health” and “safety” to the definition. The primary reason for EPA to consider ISTs in a STAA is to reduce risks to health and safety of the public by mitigating the frequency and severity of accidental releases. EPA believes this is adequately addressed in the definition of “inherently safer technology or design” of this final rule and including these factors in the definition of “practicability” would be redundant.

Suggested revisions to feasible definition. One commenter argued that the term “within a reasonable time” in the definition of “feasible” could allow facilities to avoid implementation, and urged EPA to exclude a time based factor from the final definition. This commenter also argued that EPA should not make any level of cost, no matter how minimal, an excuse to not implement any IST measures, but rather should recognize that IST measures should be implemented unless doing so would cause an extremely serious adverse economic effect, such as a facility shutdown. A facility noted that the proposed feasibility analysis does not allow sufficient time to complete the necessary work and recommended that the timeframe be determined on a case by case basis. A state agency commented that the feasibility of an IST must consider factors such as timeliness of implementation and costs. This commenter expressed concern that the definition of “feasible” would allow for

the implementation of IST options that may not be economically justifiable compared to other equally protective options.

Some commenters recommended deleting the explanation of environmental factors in the feasible definition. These commenters warned that this language is too specific in comparison with the general terms included in the definition. One commenter expressed concern that the language shows an industry bias and suggested using the following alternative definition: “Feasible means capable of being successfully accomplished within a reasonable time, accounting for economic, environmental, legal, social, and technological factors weighed against the immediate and long-term benefits to safety and health. A claim of infeasibility shall not be based solely on evidence of reduced profits.”

EPA disagrees with the commenters. Cost is a consideration when determining whether a risk management measure can be successfully accomplished and because EPA is not requiring implementation of any IST, we see no reason to exclude this factor from a practicability determination. EPA also disagrees with the suggestion to limit consideration of reduced profits when assessing a risk management measure because the Agency believes that cost is a valid consideration for practicability. Identifying an amount of an allowable cost for an IST is not something that can be prescribed in the regulation because cost decisions are highly dependent on the economics involving a particular process, facility and industry.

EPA also disagrees that incorporating consideration of a reasonable timeframe will allow facilities to avoid implementation. EPA is not requiring IST implementation and we acknowledge that there may exist practical limits on whether some projects or process designs can be done to enhance safety. If a risk management measure cannot be accomplished within a reasonable time, then the facility should ensure that other safeguards are in place to prevent accidents instead of relying on the uncertainty of completing a long-term project that is dependent on future conditions such as process design, operating budgets, etc.

Finally, as other commenters have noted, some ISTs involving chemical substitution or significant process redesign can result in new hazards or risks being introduced, and these should be considered when deciding the practicability of an IST. Thus, EPA is retaining the explanation of

environmental factors in the practicability definition in this final rule.

Definition should be stronger than OSHA definition of “feasible.” One commenter urged EPA to adopt a definition that is stronger than or at least as protective of health and safety as the OSHA definition of “feasible” to provide an appropriate minimum level of protection under CAA—42 U.S.C. 7412(r)(7) that EPA should not go below. The commenter states that under the OSHA standard, a protective measure is technologically feasible if, using existing technology or technology that is reasonably expected to be developed, a typical facility could achieve the standard in most operations most of the time. Additionally, the protective measure is economically feasible if its costs do not threaten the existence or competitive structure of an industry. The commenter contends that OSHA’s definition has been interpreted by courts to mean that the mere expense of a measure, alone, cannot trump the implementation of safety measures that are “capable of being done.” The commenter believes that EPA should not set a weaker definition that would make it less likely that IST or other prevention measures would be implemented under § 7412(r) than under OSHA’s definition. Doing so would be both inconsistent with the objectives of § 7412(r) to protect the public and with the existing framework facilities follow under OSHA requirements, could lead to confusion for facilities and in the courts, and result in an overall reduction in safety measures.

EPA disagrees with the commenter and believes the approach in the final rule to consider the practicability of IST or ISD considered is consistent with the intent of CAA and will not lead to an overall reduction in safety measures. The current rule already requires the PHA to consider active, passive and procedural risk management measures in § 68.67; however, the requirements do not prescribe exactly which type or exactly what engineering and administrative controls must be implemented. The regulations allow facilities to use their specific knowledge and expertise of the process to meet the PHA requirement to “identify, evaluate and control the hazard” [emphasis added]. EPA is finalizing a requirement for certain sectors to conduct a STAA that also considers IST in the hierarchy of controls. However, requiring facilities to implement IST instead of using passive, active or procedural safeguards can involve extensive and very expensive changes to a facility’s

process, depending on the IST, especially if it involves substitution of alternative chemicals and/or major process redesign. EPA believes that a practicability consideration should address whether an IST or ISD can be accomplished technologically, is economically possible, does not result in an increase in hazards or other risks that cannot be controlled, or cannot be successfully accomplished because of other considerations. Therefore, EPA disagrees that the practicability definition should be stronger than (or even similar to) OSHA's interpretation of feasible.

Harmonize feasible definition with OSHA. A facility noted that the proposed definition of "feasible" in § 68.3 could cause the potential for confusion because the proposed rulemaking preamble states that OSHA has indicated that it would be unable to adopt the term feasible, as defined in this notice, under its PSM standard if OSHA considers similar revisions involving IST. This is an illustration of the need to harmonize the requirements of EPA RMP requirements with that of OSHA PSM.

A few commenters, including facilities and industry associations, urged harmonization with OSHA's definition of "feasibility" and requirements. A facility and an industry trade association warned of the confusion that could ensue if "feasibility" is defined inconsistently between EPA and OSHA, and encouraged EPA to use the term "practicability" instead. Similarly, an industry trade association urged EPA to use the term "practical" in place of "feasible." The industry trade association argued that what is deemed feasible is often not practical for a number of reasons, and asserted that any decision to alter a technology involves a complex variety of factors such as operating costs, associated risk, energy consumption and greenhouse gas emissions. The commenter concluded that only facility owners should ultimately be able to define what is feasible or practical for their facility. In contrast, a state agency encouraged use of the term "feasible" rather than "practical." An industry trade association asserted that neither term should be the basis for the analysis.

EPA agrees with commenters and is revising the rule to replace the term "feasible" with "practicability." EPA proposed to use the term "feasibility" as part of the STAA analysis as it is already widely used in the technical literature discussing IST. However, because OSHA is considering similar revisions to its PSM standard involving

IST and in order to eliminate the potential for confusion of different meanings of the term "feasible,"⁷⁹ EPA has decided to use the term "practicability" while retaining the same definition and meaning used for "feasible" in the proposed rulemaking.

Hierarchy of controls. A commenter noted that California's proposed regulations for refineries and EPA's proposed regulations would require that the facility look for inherently safer means to reduce the hazards, but if there is not a means to reduce the hazard, the facility would go through a hierarchy of prevention methods and select the highest level of prevention. This commenter and another requested that EPA use the term "Hierarchy of Control," which is a term that is already understood, instead of adding a brand new term.

EPA does not use the term hierarchy of control (nor substitutes a new term for it) but instead explicitly explains the concept in the regulation by stating that the owner or operator shall consider risk management measures in the following order of preference:

- Inherently safer technology or design,
- Passive measures,
- Active measures, and
- Procedural measures.

EPA believes this is consistent with proposed CalARP regulations⁸⁰ for Hierarchy for Hazard Control Analysis, which require refineries to eliminate hazards using first order inherent safety measures; to reduce any remaining hazards using second order inherent safety measures; and to address any remaining risks in the following sequence and priority by using passive safeguards, active safeguards, and procedural safeguards.

Passive measures. A commenter recommended revising the definition of "passive measures" to "mean risk reduction measures designed to reduce the probability or the consequences of an accidental regulated chemical release without human intervention" to better reflect that EPA probably meant "reducing the hazard" as an aspect of risk management. The commenter views "hazard" as the inherent capacity of a substance to cause an adverse effect, while "risk" is the probability that an adverse effect will occur, if one uses OSHA's definition of the terms. In addition, the commenter said that the

definition of "other energy inputs" needs revision, and suggested replacing the phrase "energy inputs" with "human intervention" to meet the intent of the definition. This commenter expressed concern that the word "other" in the phrase "other energy input" mischaracterizes pressure vessel designs, dikes, etc. as energy inputs. This commenter also suggested that passive "design features" could include mechanical or energy intervention measures and the commenter cited examples such as automatic fire suppression systems and automatic vapor ignition.

EPA agrees with the commenter's suggestion to revise the definition of "passive measures" to address the frequency and consequence of the hazard. EPA based the proposed definition of "passive measures" on the definition used by CCPS, which defined "passive" as "minimizing the hazard through process and equipment design features that reduce either the frequency or consequence of the hazard without the active functioning of any device, *i.e.*, providing a dike wall around a storage tank of flammable liquids."⁸¹ Thus the intent of the CCPS definition appears to be on aspects of both hazard and risk reduction. EPA is modifying the "passive measures" definition in the final rule to clarify that passive measures reduce the frequency or consequence of the hazard.

EPA disagrees that the word "other" in "other energy inputs" characterizes pressure vessel designs and dikes as energy inputs and also disagrees that passive design features would include automatic fire suppression systems or automatic vapor ignition (in which a flare is ignited). These types of measures would most likely be considered to be active measures. CCPS, in their Guidelines for Hazard Evaluation Procedures,⁸² cites a fire protection system as an active safeguard because a fusible link or other engineered device must function to successfully trip the system.

IST/ISD. A number of commenters, requested clarification on the definition of IST, ISD or Inherently Safer Measures. A few wanted clarification as to what would qualify as "safer" in this context. One labor union expressed general support for the proposed definition of IST. One commenter asked

⁷⁹ 81 FR 13667, March 14, 2016.

⁸⁰ Draft California Accidental Release Prevention Program (ARP) Regulations, California Governor's Office of Emergency Services, July 5, 2016, p. 83 <http://www.caloes.ca.gov/FireRescueSite/Documents/CalARP%20Proposed%20Regs%202016.pdf>.

⁸¹ CCPS. 2009, Inherently Safer Chemical Processes: A Life Cycle Approach. 2nd ed., p. 10. <https://www.regulations.gov/document?D=EPA-HQ-OEM-2015-0725-0253>.

⁸² CCPS. 2008, Guidelines for Hazard Evaluation Procedures. 3rd ed., p. 234. <http://www.aiche.org/ccps/publications/books/guidelines-hazard-evaluation-procedures-3rd-edition>.

EPA to ensure that there is a distinction between IST and less effective controls and management methods. This commenter argued that chemical substitution and process changes are the most effective methods to protect workers and the public from incidents and that these “inherently” safer options should be distinguished from less effective controls and management methods. The commenter cited lesser effective controls from the NJDEP IST compliance, such as safer extremely hazardous substance risk location, protection of storage vessels from weather conditions, changes in truck traffic patterns, addition of EHS leak detectors, use of closed circuit television systems, labeling of valves and equipment, revising procedures, installing a simulation training station, and adding light towers for EHS leak alarms. The commenter requested that EPA develop a precise definition for IST and Inherently Safer Design (ISD).

EPA disagrees with the commenters’ suggestions to provide a distinction between IST and other controls and management methods. EPA believes that determining effective risk management strategies for a facility is a site-specific determination and EPA encourages any improvement that will could lead to inherently safer conditions. Therefore, EPA is finalizing the definition of IST/ISD as proposed.

EPA based its definition of inherently safer technologies (IST) or design (ISD) on the four inherently safer strategies as explained in the *Inherently Safer Chemical Processes: A Life Cycle Approach* by CCPS.⁸³ These four types of strategies have been widely recognized by the industry and best encompass the concepts and principles of applying inherent safety, which focuses on eliminating or reducing the hazards associated with a set of conditions.

As the 2010 CCPS Final Report: Definition for Inherently Safer Technology (IST) in Production, Transportation, Storage and Use⁸⁴ states:

IST (Inherently Safer Technology), also known as Inherently Safer Design (ISD), permanently eliminates or reduces hazards to avoid or reduce the consequences of incidents. IST is a philosophy, applied to the design and operation life cycle, including

manufacture, transport, storage, use, and disposal. IST is an iterative process that considers such options, including *eliminating a hazard, reducing a hazard, substituting a less hazardous material, using less hazardous process conditions, and designing a process to reduce the potential for, or consequences of, human error, equipment failure, or intentional harm.* [emphasis added]

The CCPS guidance is organized by these four strategies and provides many examples of each type of strategy. NJDEP also uses descriptions of the four strategies to identify available IST alternatives in their inherently safer technology review requirements.⁸⁵ Although some NJ facilities may have reported some controls that others might not strictly view as IST, EPA does not believe that IST should be limited only to chemical substitution and process changes. Some changes such as better labeling of equipment are cited as examples of process simplification in CCPS’ IST Checklist. Changes involving transportation of chemicals and storage location are also cited in the checklist because inherent safety can involve reduction of hazard, and does not require complete elimination of a hazard.

d. General Comments on STAA Requirements

Suggestions for minimal elements for STAA methodology. An environmental advocacy group noted that in the proposed rulemaking, EPA states that owners and operators may use “any available methodology or guidance” to conduct their STAA, but urged EPA to define the minimum basic elements that owners or operators must include in their STAA. The commenter believed the STAA should include an analysis of the technical, economic, legal/regulatory, social, and hazards implications of each major technology option, and noted that the sample methodologies and guidance listed in the proposed rulemaking may not include all of these elements. The commenter urged EPA to require the economic analysis to include potential liabilities, costs, avoided costs, and savings associated with each major STAA option evaluated.

EPA does not believe it should specify factors other than those already present in the PHA and STAA requirements, including the definition of “practicability.” EPA believes that various resources and guidance exist (as well as existing PHA methodologies,

such as HAZOP, What-If? Method, or checklists or a combination of these as discussed in Chapter 8 of CCPS’ book, *Inherently Safer Chemical Processes: A Life Cycle Approach*⁸⁶) that can assist facilities in understanding how IST can reduce hazards and risk and in determining practicability of IST or ISD considered in the STAA. Facilities can follow, for example, guidance for IS Review Documentation found in CCPS’ *Inherently Safer Chemical Processes*, which suggests documenting the summary of the approach used for the IS review (*i.e.*, methodology, checklist, etc.), names and qualifications of the review team, IS alternatives considered, as well as those already implemented or included in the design, results of each consideration including those not considered and why, documentation of feasibility and rationale for rejection of IS opportunities.

While some facilities may choose to conduct an economic analysis of potential liabilities, costs, avoided costs, and savings associated with each major STAA option evaluated, EPA is only requiring facilities to determine whether IST is practicable and document this determination. It may not be always be possible to estimate avoided costs and savings for a particular IST.

STAA is not a suitable replacement for other prevention program measures. An association of governments expressed concern that analyses will not prevent accidents because human factors such as operational bias towards production rather than safety, failures to manage changes, failures to provide adequate training for employees and failures to follow standards cannot be eliminated by a safer technology analysis. The association warned that the analysis could be used as a substitute for appropriate emergency preparedness and accident prevention programs. The commenter also believed that adoption of safer technology without a holistic review of risk transfers might be dangerous.

EPA does not believe or intend that a safer technology analysis as part of the exiting PHA would negate the need or requirements for facilities to follow other RMP rule provisions, such as training, managing change, and following RAGAGEP. Rather this analysis is designed to supplement or enhance the ways that hazards or risks of an accidental release can be eliminated or reduced by possibly more rigorous risk reduction measures.

⁸⁶ CCPS. 2009. *Inherently Safer Chemical Processes: A Life Cycle Approach*, 2nd ed., American Institute of Chemical Engineers, CCPS New York, Wiley.

Facilities can evaluate the feasibility of potential safer technologies and this evaluation can and should take into account any known transfers of risk, as well as other considerations. For this reason, EPA is not prescribing that facilities adopt any particular safer alternative and is allowing any decision on implementation of IST to be made based upon a facility's judgement using accepted hazard analysis and their knowledge of their processes, hazards, risks and methods to control hazards. EPA does not believe the analysis could be used as a substitute for appropriate emergency preparedness and accident prevention programs—existing requirements in these areas are still in place and this final rule also provides more emphasis on emergency coordination and response (for more information see section V of this preamble).

STAA guidance, regulatory incentives and voluntary partnership programs. An industry trade association suggested the establishment of a working group to develop decision framework and guidance materials for STAAs. The commenter remarked that creation of a working group would be more effective than mandating RMP facilities to conduct STAAs with insufficient guidance. A commenter recommended that the working group should consider existing voluntary programs that include a safer alternatives assessment, and should consider the possibility of establishing a public-private partnership. The commenter further explained that the working group should explore how EPA could leverage these programs by providing regulatory incentives to those who participate in and fulfill the requirements of the voluntary programs. The commenter also suggested that a partnership could be created based on the core principles adopted by industry (*i.e.*, stewardship) programs and the lessons learned from existing and past voluntary partnership programs. The commenter stated that such a program could provide technical assistance and tools to help create awareness and instill a quality culture of safety and security. The commenter provided a white paper with more detailed discussion on the potential purposes, components, incentives and requirements for a voluntary partnership program to improve chemical safety and security.

EPA appreciates the commenters' suggestions for developing guidance, regulatory incentives and partnership programs for STAAs. EPA is finalizing a regulatory provision requiring Program 3 industry sectors in NAICS codes 322, 324, and 325 to conduct an

STAA as part of the PHA and determine the practicability of IST or ISD considered. EPA disagrees that STAA should be limited to a voluntary partnership program; however, EPA will further consider the merits of a potential voluntary partnership program with industry to engage in improved process safety practices.

EPA believes the STAA requirements are flexible and allow the use of industry expertise to best decide which safer technologies and alternatives to consider, and to determine the practicability of IST or ISD considered in the STAA. EPA will develop guidance for complying with RMP PHA and STAA requirements before sources must comply with the STAA provision required in this action. A draft of this guidance will be available for public comment.

Making STAA information available to LEPCs. A facility is concerned that the proposed requirement to share information pertaining to inherently safer technology or design with the local LEPC would require specific detailed information that the LEPC may not consider relevant. While the facility expressed willingness to share appropriate information with the LEPC, the facility does not believe the LEPC would be interested in the minute details of the changes in process units. An industry trade association stated that not requiring implementation while requiring facilities to provide LEPCs the date of implementation or planned implementation could cause confusion.

EPA agrees that providing LEPCs with detailed information regarding process changes involving IST or ISD may not always be relevant or necessary to community emergency preparedness or can be confusing. The final rule eliminates the proposed requirements under § 68.205 to provide information to the LEPC, upon request (including IST information). For more information about how the final rule addresses sharing information with LEPCs or emergency response officials, see section VI.A. of this preamble.

e. Including STAA as a PHA Requirement

Appropriateness of PHA techniques or process for STAA. A few local agencies expressed support for STAA measures being used as a method of addressing PHA recommendations. Commenters, including a local agency, encouraged the review of the STAA at least every five years.

However, several commenters opposed including STAA in the PHA. Two trade associations commented that requiring PHA teams to evaluate the

feasibility of IST has the potential to undermine the effectiveness of the PHA process. The commenters argued that regulating IST is infeasible because there is no simple answer when it comes to managing risk. The same two trade associations and one facility asserted that a PHA review of an existing process considers the adequacy of the existing controls for that process while an IST review is entirely different. The commenters believe an IST review involves a comparison to a different technology and an operation-specific and site-specific evaluation based on engineering judgment, in which many variables are considered that include hazards, the location of the facility, surrounding populations, exposures, technical feasibility and economic feasibility. A state agency and an industry trade association warned that requiring STAA during the PHA would be inappropriate because the structure of a PHA does not facilitate such an analysis.

A facility expressed concern that none of the PHA methodologies described in the NPRM require this type of comparison, arguing that IST/ISD methodologies are similar, but not identical, to PHA analysis techniques. The facility stated that it would be wrong to assume that STAA can be directly incorporated into existing PHA methodologies. A trade association commented that in order to have PHA team members perform a comparative analysis on alternatives, the PHA team would be required to compile relevant process safety information for the alternatives in order to perform the IST analysis.

One commenter believes that IST needs to be evaluated outside of the PHA process because the node-to-node hazard and operability study (HAZOP) approach is minutely focused, does not look at the bigger picture and reduces the impact of IST to localized risk reduction measures rather than making the whole process inherently safer. The commenter stated that a separate IST analysis for the entire existing process is needed and could be performed every five years but separately from the PHA since different team participants (such as technical experts) are usually needed.

One trade association and a facility believed that IST analyses are not practical to conduct as part of a PHA for a defined process with defined chemicals. The commenters claimed that to consider a substitute, a facility operator would need to design the new process before being able to conduct the analysis. Some facility commenters reasoned that design and hazard reviews for new facilities can take place years

before any PHA. An industry trade agency suggested that EPA should include appropriate lead-time and grandfathering provisions so as not to disrupt projects already in the design or construction phase. Finally, an industry trade association asserted that IST decisions are very complex and should not be determined by any government agency, and recommended that EPA delete the proposed STAA provisions.

EPA believes that IST analysis can be incorporated in the existing RMP PHAs by using PHA techniques such as HAZOP, What-If? Method, or checklists or a combination of these as discussed in Chapter 8 of CCPS' book, *Inherently Safer Chemical Processes: A Life Cycle Approach*.⁸⁷ These techniques themselves are not requirements, but tools available to help the facility owner or operator to identify, evaluate and control the hazards involved in the process.

While developing the original RMP rule, EPA noted some commenters strongly opposed any requirement for safer technology analyses because PHA teams regularly suggest viable, effective (and inherently safer) alternatives for risk reduction. In the preamble to the original RMP rule, EPA agreed with these commenters, indicating that "application of good PHA techniques often reveals opportunities for continuous improvement of existing processes and operations without a separate analysis of alternatives."⁸⁸ While these comments in 1996 led us to not require STAA in the original rule, further developments in STAA, and EPA's own experience with implementation of the rule, now indicate that a specific mandate to conduct STAA reviews as part of the PHA will encourage facilities who were performing PHAs that were of lower quality but legally compliant with the old rule, to perform better PHAs.

Therefore, EPA disagrees with commenters that argue it is not appropriate to include an STAA in the PHA. In fact, the RMP PHA requirements include other aspects of an analysis that is typically associated with process design. For example, the PHA must also address stationary source siting issues which involve the location and proximity of the source to local population and their numbers.

Nevertheless, EPA agrees that for situations where an IST would involve a new process that is entirely different

from the current process, the process design would have to exist or be developed, and process safety information be compiled, to conduct a PHA for this new process. EPA does not expect facility owners or operators to research and create new process designs or conduct research into all possibilities for the use of new chemicals. Instead, the STAA should focus on the known and existing substitute processes and chemicals that have been demonstrated to be in use commercially.

If a facility is considering a chemical substitution or process change that involves a significant redesign of their process, such efforts involved with redesign and its evaluation may need to be undertaken as part of a practicability study.⁸⁹ The definition of "practicability" allows for consideration of technological factors, which could include whether the potential safer alternative can be designed and operated to meet the process functions needed. However, not all IST involves substituting a chemical or an entirely new process and there are other types of other IST measures (minimization, moderation or simplification) that can be considered to address various points within the current process where hazards and risks exist. Furthermore, the final rule does not require the facility to implement IST measures.

Facilities may, if desired, conduct a separate IST analysis of each covered process, outside of the PHA, if desired, as long as it is done in same timeframe as the PHA and the results are documented. If a facility does not have staff capable to identify and evaluate alternatives, the facility owner or operator may require outside assistance from engineering firms or consultants.

The RMP PHA requirements require the facility owner or operator to identify risk management measures that eliminate or reduce the risks from the process hazards. If the facility has already performed such IST analysis in the past, then the owner or operator should consider these analyses when updating or revalidating their PHAs and determine whether there is new information that should be considered as part of conducting the current STAA.

Involvement and training of employees and team members. An industry trade association expressed

⁸⁹ EPA modified the final rule to replace the term "feasible" defined in § 68.3 with "practicability." When evaluating the practicability of an IST, the facility owner or operator would determine whether the IST is capable of being successfully accomplished within a reasonable time, accounting for economic, environmental (including consideration of potential transferred risks for new risk reduction measures), legal, social, and technological factors.

concern about the potential experience limitations of the PHA team. The commenter stated that team members may lack the expertise required to assess all alternative technologies, and said that in the case of inadequate experience the STAA should be considered within the management of change element of the RMP and the facility's ongoing risk assessment analysis. Two trade associations commented that a PHA and an IST analysis serve two entirely different engineering functions and the teams that conduct these reviews are staffed differently. The two associations further commented that small facilities do not have staff design engineers to conduct an IST review, which means the facility would be required to absorb the cost of retaining them even though there is no requirement that their findings be implemented.

One Federal agency commented that throughout the SBAR panel process, SERs noted that this analysis would require additional staffing such as design engineers, in addition to the chemical and mechanical engineers already staffed for PHA analyses. The SERs added that most small facilities do not have design engineers on staff and as a result, would need to incur additional expenses to retain them.

Another commenter stated that conducting a full IST/ISD review based on yet-unproven technologies typically is an extremely complex endeavor (particularly for a chemical production process), and would require very different PHA teams that could adequately assess IST/ISD (e.g., to adequately study how the hypothetical use of new IST/ISD might create additional, unanticipated hazards throughout a process).

Another commenter suggested that the PHA/hazard review team should be properly educated in inherent safety analysis. A professional organization encouraged the participation of workers in the STAA process, but urged that these employees must have proper training and education to participate. Some commenters recommended engaging workers in the alternatives and feasibility assessment process and making sure they have the ability to report anonymously and hold whistleblower authority. One commenter urged EPA to explicitly state that union representatives and workers can participate fully in the STAA.

EPA believes that limiting the applicability of the STAA requirement to only those facilities in Program 3 in the petroleum and coal products manufacturing (NAICS code 324), chemical manufacturing (NAICS code

⁸⁷ CCPS. 2009. *Inherently Safer Chemical Processes: A Life Cycle Approach*, 2nd ed., American Institute of Chemical Engineers, CCPS New York, Wiley.

⁸⁸ See 61 FR 31699, June 20, 1996.

325) and paper manufacturing (NAICS codes 322) minimizes the burden of the requirement for many small businesses. Of those approximately 1,557 facilities that are subject to the STAA requirements, approximately 40% of them are owned by small entities, however, about 86% of these small entity-owned facilities have 20 or more full-time equivalent employees.⁹⁰ EPA agrees that team members conducting an STAA should be properly trained and knowledgeable on how to conduct the analysis. The facility owner or operator is responsible for ensuring that facility personnel have the proper training to conduct STAAs or hire consultants with the appropriate qualifications. EPA expects that some facilities in NAICS codes 322, 324, and 325 will have staff qualified to conduct the analysis. If the facility owner or operator determines that two different teams should conduct the PHA and STAA, then they may choose to conduct a separate STAA of each entire process, outside of the PHA as long as it is done in same timeframe as the PHA and the results are documented.

As discussed in the RIA, the technical practicability assessment considers the extent of process redesign, its engineering implications, and possible costs. EPA estimates that most facilities except the large facilities in NAICS codes 322, 324, and 325 will seek help from consultants (*i.e.*, engineering firms) to conduct STAA and determine the practicability of IST/ISD considered. However, EPA does not expect facilities to spend resources evaluating hypothetical untested alternatives that they believe are not proven within their industry.

Finally, the final rule provides facility owners or operators the flexibility to use facility personnel with expertise and experience with facility processes and their industry to conduct STAAs and determine the practicability of IST/ISD considered. However, EPA does not believe the RMP rule is the appropriate mechanism to address worker rights or whistleblower protections.

Overlap or conflict with PHA analysis. A few industry trade associations and a facility expressed concern that an IST analysis would detract from the goal and focus of the PHA process to identify hazards to be addressed and to identify opportunities for continuous improvement of operations. For example, one commenter was concerned that in an effort to ensure compliance

with new safer alternative technology analysis regulations, PHA teams may be distracted from identifying and addressing the hazards of existing processes by spending too much time assessing potential alternative technologies with which they have no experience. Two commenters elaborated, stating that requiring IST or ISD “consideration” based on a laundry-list of “factors” would substantially increase the already extensive time that is required to complete a PHA, and favor subjective reviews over objective reviews of actual safety problems and the most direct and timely techniques required to resolve them.

EPA disagrees with the commenters. The RMP PHA requirements are not only to identify hazards but also to incorporate measures to reduce or mitigate those hazards. Under § 68.67(a), the rule requires the owner or operator to identify, evaluate and control the hazards involved in the process. Several commenters acknowledge that some companies already evaluate “safer alternatives” during their PHAs when it is efficient to consider fundamental process changes. EPA disagrees that consideration of additional inherently safer measures necessarily precludes addressing hazards and applying other risk reduction measures in the hierarchy of controls. If facility owners or operators are concerned that an IST assessment could preclude other aspects of the PHA, they may choose to conduct the STAA separately from the PHA, as long as it is performed on the same timeframe and documented.

IST already incorporated as part of PHA or otherwise considered. Another industry trade association remarked that STAA requirements are already a component of the PHA and concluded that costs of the new requirement would be redundant, but that these costs are incommensurate with the much lower risks faced by facilities in their industry. One trade association disagrees with requiring STAA as part of the PHA because currently approved PHA methodologies already provide for successful risk mitigation (reducing risks to personnel and the environment to ‘acceptable’ levels), including the consideration of inherently safer design technologies by the PHA team where appropriate. A commenter noted that some companies already evaluate “safer alternatives” during their PHAs when it is efficient to consider fundamental process changes. However, they consider available, proven technologies, not “potentially” safer technology that may be noted in literature, but not yet in use anywhere within their industry. Another industry trade association

remarked on the importance of process safety information for alternatives and its availability to the PHA team. A process safety organization commented that they believe the existing provisions to conduct a PHA automatically includes the team to consider safer alternatives as appropriate and applicable. An industry trade association said that many of the activities being reported as IST in NJDEP’s IST Implementation Summary, were activities that already occur as a matter of course in most facilities.

A facility and multiple industry trade associations remarked that other programs such as the Department of Homeland Security’s Chemical Facility Anti-Terrorism Standards (CFATS) already provide incentives for facilities to promote safe practices, and implement safer alternatives and designs. Several commenters urged EPA to avoid burdensome requirements that overlap with the CFATS program at additional cost without added benefit. An industry trade association noted that CFATS allows facilities to move to a lower risk tier or out of the program if risk profiles are reduced and vulnerabilities are minimized, resulting in roughly 3,000 facilities that have changed processes or inventories in ways that have enabled them to be excluded from the program. This commenter notes that DHS’s risk performance-based approach does not mandate solutions, recognizes the unique situation of each facility, and embraces a public-private sector effort for implementation of safer measures. The commenter further indicated that mandating the adoption of government-selected ISTs would be unduly burdensome, particularly for smaller chemical facilities, and could hinder their overall efforts at improving security.

While EPA recognizes that some facilities may already consider ISTs as part of a PHA, whether as part of a voluntary program or through other incentives, EPA believes that all facilities in NAICS 322, 324, and 325 industry sectors should consider IST to ensure that they are considering all the options to operate their facility safer. EPA expects that these regulatory requirements will raise industry awareness of IST possibilities and will reduce risk. EPA is not mandating implementation or adoption of any particular IST and will rely on facility expertise to reduce the hazard and mitigate risk without causing undesirable consequences such as reducing product quality or transferring risk to some other point in the supply chain.

⁹⁰Regulatory Impact Analysis, Accidental Release Prevention Requirements: Risk Management Programs Under the Clean Air Act, Section 112(r)(7), using data from Exhibit 7–3 and 7–5.

Furthermore, EPA disagrees with commenters that asserted that the STAA requirements will overlap with other regulatory requirements and result in an increased burden with no corresponding benefit. In its 2007 Interim Rule for CFATS,⁹¹ DHS stated that Section 550 of the Homeland Security Appropriations Act of 2007 prohibited the Department from disapproving a site security plan “based on the presence or absence of a particular security measure,” including ISTs.⁹² DHS noted that, even so, covered chemical facilities are certainly free to consider IST options, and their use may reduce risk and regulatory burdens. Therefore, because DHS does not require IST or the assessment of IST, EPA does not believe there is an “overlap” in requirements. Furthermore, DHS requirements address site security measures, and not measures designed to reduce accidental releases.

Potential for risk tradeoff or risk transfer. Some commenters, including an association of government agencies and an industry trade association, encouraged a holistic review of IST to avoid or minimize risk transfers. A few commenters stated that, for example, a facility adopting a safer technology may increase transportation requirements of hazardous materials and increase risks of incidents outside of the facility, including necessitating more exotic emergency response equipment or preparation. One commenter noted that minimization frequently involves the decrease of on-site storage and could result in the potential for additional shutdowns and startups due to insufficient raw materials. The same commenter further indicated that substitution of a purportedly safer alternative may introduce environmental or safety risks that are not realized until much later.

In contrast, an advocacy group urged EPA to consider that the commenters citing risk transfer are often industry funded and, in the opinion of the commenter, overlook risk transfer that is caused by actions of the facilities themselves. A process safety organization stated that EPA should not require an STAA as part of a new prevention program, as part of the existing PHA/hazard review, or as a

requirement under CAA section 112(r) because the definition of “inherently safer alternatives” has always been very debatable and use of these alternatives may not result in the overall reduction of the total quantitative risk of the facility. The organization expressed concerns that a verbatim statement of consideration and/or implementation of inherent safer options has the potential for unintended outcomes, such as risk transfer, risk accumulation, increased opportunities for terrorism, and other undesirable tradeoffs. This commenter recommended that EPA should not require the IST analysis because few technologies would be inherently safer with respect to all hazards, there may not be a clear implementation path for all situations, and facilities would have to address multiple tradeoffs in the decision making process. The commenter warned that improper implementation of a “safer” alternative may have negative consequences. Some commenters note that an absolute safer alternative is highly dependent on the hazard, the process, the technology and the facility. For every process there could be different type of alternative chemical use.

EPA recognizes the risk transfer concerns raised by the commenters. However, EPA believes that the final rule allows the owner or operator to consider the potential for quantitative risk reduction, risk transfers and tradeoffs when determining whether it is practicable to implement ISTs or ISDs considered. EPA agrees that some technologies may not be inherently safer with respect to all hazards, may not be implementable for all situations and may involve multiple tradeoffs in the decision making process. IST is a relative concept dependent on the hazard, the technology, and the facility. Therefore, EPA is requiring facilities to only consider IST as a possibility for addressing hazards rather than requiring ISTs be implemented. The final rule gives the facility owner or operator the flexibility to assess IST as well as passive, active, and procedural measures to reduce risk associated with a process and to determine the practicability of any IST considered based on various factors (including those involving risk transference).

Current PHA requirements and other risk reduction measures already adequate address risks. Several facilities and industry trade associations urged that existing requirements and principles, such as PHA and Layer of Protection Analysis (LOPA), are sufficient for determining if proper safeguards are in place in existing process units. Industry trade

associations said that LOPA or similar risk-based analyses are more easily implemented and cost effective than IST, and stated that risk-based analyses also minimize risk shifting. A state agency urged EPA to require a LOPA but to ensure that it is clearly separated from the STAA.

Some facilities and an industry trade association remarked that industry has proven capable of reducing hazards from current operations by using active, passive, or procedural measures. A facility and an industry trade association asked why the proposed rulemaking is not specifically focused on STAAs for new or potential processes when, according to the commenters, nothing indicates that IST evaluations have become more beneficial or less expensive for existing process units since the 1996 RMP rule.

A facility asserted that current regulations that require compliance with RAGAGEP already ensure that appropriate controls are implemented in equipment and processes. One commenter expressed concerns that the STAA evaluation will become a paperwork exercise that will not result in any increase to safety. This commenter suggests that EPA require a review of safer technology or IST only when the PHA results show that a technology or design scenario does not meet the company’s appropriate risk tolerance/reduction requirements.

EPA believes that where feasible, reducing or eliminating hazards through change in materials, chemistry, or process variables is preferable to adding layers of safety to a process. While layers of passive, active or procedural controls will reduce the risk, they will do nothing to reduce the nature of the hazard itself. Failure of control devices or human error can result in an accidental release. However, an inherent safer strategy seeks to preferentially remove the hazard at the source, as opposed to accepting the hazard and attempting to mitigate the effects.⁹³ In addition to eliminating or reducing a hazard, IST can also minimize the impact of a release or terminate the accident sequence before there are major impacts on people, property or the environment.

EPA agrees with other commenters who have indicated that the PHA can and should consider IST as hazard reduction or risk management measures where feasible and appropriate. Opportunities for the application of the

⁹¹ See 72 FR 17718, April 9, 2007, <https://www.gpo.gov/fdsys/pkg/FR-2007-04-09/pdf/E7-6363.pdf>.

⁹² Section 550 has since been replaced by the Protecting and Securing Chemical Facilities from Terrorist Attacks Act of 2014, Public Law 113–254. However, the prohibition on DHS disapproving a security plan based on the presence or absence of a particular security measure remains. See 6 U.S.C. 622(c)(1)(B).

⁹³ CCPS. 2009. Inherently Safer Chemical Processes: A Life Cycle Approach. 2nd ed. American Institute of Chemical Engineers, Center for Chemical Process Safety. pp. 10–11.

inherently safer strategy of simplification can be evaluated for each safety device or procedure during a PHA as well as in review of mechanical integrity program practices and procedures. CCPS provides examples for this.⁹⁴ Although we agree that the general principles of PHA combined with LOPA may at times be appropriate to address the risk of an accidental release, EPA believes that facility owners or operators should consider IST first in the hierarchy of risk reduction measures to reduce and/or control the hazards of a process.

Consideration of untested and unproven technologies. One commenter was concerned that any potential IST considered should not have to include untested and unproven technologies. An industry trade association urged that technology takes time to mature and become acceptable and safe for widespread use. Concerns were that facilities might be encouraged to substitute novel and untested controls for existing controls and layers of protection that are in place at existing processes to control and manage risks, detracting from actual safety performance. One commenter was concerned that operators should not be required to update or replace technology on a year-in, year-out basis simply because new technologies are introduced into the marketplace. One commenter stated that any alternative considered should be easy to be applied and should have been properly tested.

EPA agrees that a facility owner or operator may conclude that IST measures that have not been tested or used commercially should not be considered. It may be difficult to evaluate the practicability of hypothetical technologies or those that are still undergoing research and testing.

f. General Opposition to STAA

Benefits and cost of STAA not adequately explained or justified. Commenters warned that analysis of existing facilities and processes is unlikely to provide significant insights or opportunities for safety improvement, but may be very costly. A facility and a number of trade associations asserted that IST analysis would not meaningfully increase safety. Stating that safer technology would have been adopted if it made business sense to do so, a facility remarked that the STAA requirement is unnecessary.

An industry trade association and a facility expressed concern that the

process of retrofitting existing facilities would be expensive and could result in facilities shutting down. Several commenters agreed with EPA conclusions made in the 1996 RMP rule regarding an IST analysis mandate where the agency stated, "EPA does not believe that a requirement that sources conduct searches or analyses of alternative processing technologies for new or existing processes will produce additional benefits beyond those accruing to the rule already." The commenters, including a facility and industry trade associations, warned that EPA changed its position on whether or not a mandatory IST analysis leads to any incremental benefits, without any clear rebuttal, analysis, explanation, or substantiation of benefits from the STAA and urged EPA to withdraw the STAA mandate from the proposed rulemaking. An industry trade association, agreeing with EPA's 1996 assessment, remarked that the new conclusion was made without regard for the nature of the reported accidents or any scientific support. Many commenters stated that requiring STAAs would create a burden for industries that would not produce any significant benefits if the existing process has already had risks addressed by a PHA. A few commenters asserted that, for most facilities, an IST analysis would likely produce limited options that would not justify the cost and effort of the exercise itself.

Two industry trade associations contend that there is no data to suggest that requiring an STAA analysis provides any measurable benefit or reduces the frequency or severity of incidents or any empirical studies showing that STAA effectively improves process safety. They believe that the analysis of the New Jersey data for facilities conducting IST analysis since 2008, shows no decrease in reportable accidents and that revising the RMP rule will likely have a negligible effect at great cost to covered facilities. Commenters asked whether or not EPA's analysis of the IST programs implemented by New Jersey and Contra Costa County has yielded any concrete data demonstrating that the programs have successfully reduced hazardous safety risks over voluntary adoption. One commenter urged EPA to withdraw the proposed IST requirement until EPA has conducted such an analysis.

Several trade associations commented that the regulatory burden of requiring costly IST reviews tends to stifle innovation. The commenters asserted that for those companies already looking to improve safety by implementing IST options, a formal IST review would add

costs to a process by forcing them to document the activities they are already performing. They further indicated that small operations might not have the manpower or expertise to do this and lack the resources to hire it out cost effectively. The same commenters further stated that for companies that do not implement IST options, the IST review becomes a "paper exercise" where they document why it is "infeasible" to implement these options. Another commenter argued that if EPA only intends for an analysis to be conducted and not for the technologies to be implemented, then the proposal should be withdrawn on the basis that it provides no benefit to the public.

One trade association commented that there is no value in having a facility perform an IST assessment if one was already performed earlier in the lifecycle of the process or to repeat the same STAA every five years on the same process. The association asserts that nothing new will be learned from doing so.

According to a facility and some industry trade associations, the claim in the proposed rulemaking preamble that voluntary adoption of IST is becoming more prevalent indicates that the incremental benefits of mandatory adoption are decreasing, which the commenters remarked would be in line with the 1996 decision not to require IST analysis.

EPA believes that the STAA should identify potential process changes including IST that, if implemented, would result in owners or operators using less hazardous substances, minimizing the amount of regulated substances present in a process, moderating process conditions, reducing process complexity, or implementing passive, active, or procedural changes to make processes safer. Such changes help prevent accidents by either eliminating the possibility of an accidental release entirely, by making a process more fault-tolerant, such that a minor process upset or equipment malfunction does not result in a serious accidental release, and by reducing the severity of releases that do occur. The STAA provision does not actually require the owner or operator to implement any changes, so facilities will only incur additional costs beyond the analysis when the benefits of the change make adoption of the change reasonable for the facility.

IST is widely recognized as a concept or principle that can be used in process safety management along with other types of hazard reduction measures to eliminate or reduce the frequency and/or impact of accidents. As recognized in

⁹⁴ CCPS. 2009. Inherently Safer Chemical Processes: A Life Cycle Approach. 2nd ed. American Institute of Chemical Engineers, Center for Chemical Process Safety. pp. 112–113.

process safety technical literature, the benefit of using practicable IST as the first choice for accident prevention is more likely permanent risk reduction. Some trade associations agree that individual companies often consider inherently safer approaches or safer alternatives as a matter of course. In fact, one of the key elements under ACC's Responsible Care, Process Safety Code⁹⁵ requires ACC member companies to consider inherently safer approaches as one of many risk reduction measures when conducting a process safety risk assessment.

Since 1996, EPA has seen that advances in ISTs and safer alternatives are becoming more widely available and are being adopted by some companies. Voluntary implementation of some ISTs has been identified through surveys and studies and potential opportunities have been identified through EPA enforcement cases and CSB incident investigations.⁹⁶ The Contra Costa County Health Services (CCHS) and New Jersey Department of Environmental Protection (NJDEP) IST regulations requirements to consider IST have resulted in some facilities adopting IST measures.⁹⁷ The concept of IST is more widely understood and accepted within the chemical process industry than it was 20 years ago. Innovations and research in chemical process safety have evolved and continue to evolve. Industries change and update their processes over time for a variety of reasons and when possible, EPA believes that opportunities to improve chemical process safety using all available means—not only passive, active, and procedural measures—should also be considered.

EPA disagrees that increasing voluntary adoption of IST means that incremental benefits of mandatory adoption are decreasing. Benefits derived by those implementing IST do not negate any potential benefits from those who have not. As stated in the 1996 rule, “EPA encourages sources to continue to examine and adopt viable alternative processing technologies, system safeguards, or process modifications to make new and existing processes and operations inherently safer.”⁹⁸ For those facilities who have

not considered adopting any IST or have only done so in limited fashion, EPA believes that there is value in requiring facilities with extremely hazardous substances to evaluate whether they can improve risk management of current hazards through potential implementation of ISTs or risk management measures that are more robust and reliable than ones currently in use at the facility. For those facilities who have already considered IST, EPA believe facilities should re-evaluate whether any improvements in hazard or risk reduction can be made and we believe the five-year re-validation timeframe of the PHA is an appropriate time period for such re-evaluation.

EPA did not perform any further analysis of the NJDEP or Contra Costa County IST data. The main purpose of providing these reports was to demonstrate that regulations involving IST in these two jurisdictions resulted in implementation of IST at some of their facilities and to explain what types of IST were implemented. NJDEP's 2010 IST Implementation Summary report⁹⁹ on IST reports submitted by NJ facilities since August 2008 is available in the docket and discusses 143 additional IST measures reported to have been implemented or scheduled to be implemented by 41 of the 85 facilities submitting reports. CCHS and Richmond CA annual performance review and evaluation reports on the Industrial Safety Ordinance include a summary of Inherently Safer Systems (ISS) results from their nine total facilities, as well as the actual ISS data reported by each facility. Three of these reports are in the docket for this rulemaking.¹⁰⁰

Because the requirements involve prevention of accidents before they occur, it is difficult to provide a quantitative assessment that the requirement would reduce a certain number of accidents. The assertion of increase in the number of NJ accidents reported cannot be explained as a result of implementation or non-implementation of IST because there are other factors involved. For example, the number of NJ facilities reporting over the years varies, which can affect the number of reportable accidents and not all NJ facilities may have implemented IST. In principle, because of the “inherentness” of any actual IST changes, there should be a hazard and

risk reduction for a particular RMP chemical, because IST eliminates or minimizes the opportunities for a chemical release in a more rigorous fashion than relying on a device or human intervention. EPA recognizes that IST will not eliminate all hazard or risk and that reliance of other risk reduction measures will probably still be needed for other points in a process.

Contra Costa County commented that it has seen improvements at existing facilities with existing processes subject to its ISS requirements.¹⁰¹ The county indicated that facilities have eliminated unnecessary vessels, shortened piping and replaced chemicals with less toxic chemicals. CCHS has seen that by considering ISS, facilities have looked at the highest level of risk reduction such as using passive means (such as a change in metallurgy) instead of relying on administrative means (such as increased piping inspections).

As some commenters indicated, some facilities have been evaluating IST as a best practice for decades and, in most cases, have already taken steps to implement beneficial technologies where it is practicable and cost-effective to do so. In those situations, where IST was previously evaluated but not implemented, facilities should review the analysis to determine if new information is available that would affect the analysis. The facility should document the STAA and practicability of IST and ISD considered.

Inconsistent STAA implementation. A facility remarked that the lack of clarity and consensus about the methodology, definitions or standards for STAA would contribute to burden and could lead to inconsistent implementation of STAA across companies.

EPA does not expect to see “one-size-fits-all” implementation of STAA by sources. The STAA requirements are not prescriptive in nature, but more similar to a performance-based standard (like other provisions of the RMP regulations) that give facilities the flexibility and allow facility owners and operators to exercise reasonable judgement to determine what technology or risk reduction measures work best for their particular chemical use, process or facility. However, in an effort to ensure a consistent understanding of EPA's expectations for conducting an STAA and determining practicability of IST and IST considered, the rule defines several terms related to the STAA, such as practicability, inherently safer technology or design, passives measures, active measures and

procedural measures. EPA has also cited various references and technical sources of information that explain the concepts and principles of STAA and provided examples.¹⁰²

Impact to agribusinesses. One commenter stated that the proposed mandate for regulated facilities to consider STAA as a part of the PHA, and to evaluate the feasibility of IST, will fail to generate tangible RMP outcomes in the fertilizer industry or with other ag-industry RMP regulated chemicals, beyond what the current PHA requirements and procedural measures can accomplish in controlling hazards. The commenter further asserted that the administrative and recordkeeping burden associated with this portion of the proposed rulemaking will undoubtedly increase costs on the agribusiness industry at a time when margins across the industry are thin to non-existent. The same commenter indicated that these requirements will cause many small agricultural fertilizer retail facilities to close.

EPA is not requiring agricultural fertilizer retail facilities to perform STAA and thus there should be no burden to this particular industry as a result of the STAA provision. The STAA requirement in the PHA will only apply to Program 3 facilities in chemical manufacturing (NAICS code 324), petroleum and coal products manufacturing (NAICS code 325) and paper manufacturing (NAICS code 322).

Feasibility costs. One trade association stated that the cost of determining feasibility was wholly underestimated by EPA because feasibility study costs can be quite large depending upon the type of project, but still be only a fraction of the cost of what it would take to implement any projects determined to be feasible. The commenter noted that a typical project consists of conceptual level design, feasibility level design, and then engineering and implementation. The association member's experience with hundreds of projects is that the cost of

a conceptual level design is about 1% of the total project cost and the cost of a feasibility level design is 1% to 2% of the total project cost.

EPA acknowledges that for some industries, evaluation of chemical substitution and process redesign will involve a greater level of effort and resources to consider the practicability of such changes. EPA has revised the cost estimates in the RIA to reflect the greater effort involved in conducting such practicability studies.

g. Model STAA Provisions After Other Regulatory Programs

Several commenters suggested that the STAA requirement align with similar requirements by CCHS and NJDEP. Some of these comments are addressed under other STAA topic headings, as appropriate. Other specific comments are discussed further in this preamble.

Establishing qualifications for IST review team. One commenter recommended expanding on the NJDEP requirement which specifies that an IST review team should be "a team of qualified experts, convened by the owner or operator, whose members shall have expertise in environmental health and safety, chemistry, design and engineering, process controls and instrumentation, maintenance, production and operations, and chemical process safety." This commenter also wanted EPA to require the names, qualification, and experience of team members to be stated in the review report and to explicitly specify that workers and union representatives can fully participate in the STAA. Another commenter noted that the proposed STAA requirement does not require employee participation and stated that employees have deep experience and knowledge of the processes and are best equipped to determine inherently safer technology or design, but cautioned that workers must have adequate education and training to participate in STAAs.

EPA notes that § 68.67 requires the PHA to be performed by a team with expertise in engineering and process operations, and the team shall include at least one employee who has experience and knowledge specific to the process being evaluated. Also, one member of the team must be knowledgeable in the specific process hazard analysis methodology being used. These same qualifications apply to team members involved in conducting the STAA. EPA believes most PHA reports already include the names and qualifications of team members in the report, and we do not believe it is necessary to prescribe a regulatory

requirement to address this issue. EPA already requires Program 3 facilities to consult with their employees and their representatives on the conduct and development of process hazard analysis and on the development of other elements of process safety management, and EPA believes it would be inappropriate to incorporate additional provisions related to worker participation in the PHA requirements of § 68.67.

Establishing goals. A Federal agency recommended incorporating a goal setting requirement similar to that of CCC's ISO, expressing concern that a lack of goal setting requirements could allow regulatory requirements to be satisfied even if analyses fail to identify or control major hazards. The commenter explains that there is no RMP requirement to reduce risks to "as low as reasonably practicable," or "ALARP", while CCHS ISO requires facilities to select and implement ISS to the greatest extent feasible and as soon as administratively practicable.

EPA disagrees with commenters. EPA did base some components of the STAA requirement on NJDEP and CCHS regulations (see discussion in section in IV.C.3.c Definitions of this preamble). Also see further discussion in section in IV.C.3.k of this preamble regarding documentation of feasibility. NJDEP and CCHS require a separate Inherently Safer Technology review or Inherently Safer Systems Analysis (ISSA), but NJ requires IST updates (covering both new and existing processes) on the same schedule as the PHA. CCHS requires an ISSA for existing and new processes every five years, but the analysis can be done as part of a PHA. CCHS also requires that an ISSA for any major changes (which could be result of accident investigation). EPA is requiring that the five-year PHA revalidation address the findings from all incident investigations required under section 68.81, as well as any other potential failure scenarios.

EPA did not propose to require any implementation of any IST. EPA proposed to require facilities to determine the feasibility of IST options, but the final rule allows flexibility for facility owners or operators to decide whether to implement an IST in order to allow them to balance the appropriateness of the technology for their process, costs, risk transfer and other requirements that would have to be met along with possible integration with the use of existing risk reduction measures in place. In the final rule, EPA also replaced the term "feasibility" with "practicability."

¹⁰² CCPS. 2009, Inherently Safer Chemical Processes: A Life Cycle Approach. 2nd ed., <https://www.regulations.gov/document?D=EPA-HQ-OEM-2015-0725-0253>; CCPS. July 2010. Final Report: Definition for Inherently Safer Technology in Production, Transportation, Storage, and Use, <https://www.regulations.gov/document?D=EPA-HQ-OEM-2015-0725-0274>; Contra Costa Hazardous Materials Program. June 15, 2011. Industrial Safety Ordinance Guidance Document, Attachment C—Inherently Safer Systems Checklist. Guidance for Toxic Catastrophe Prevention Act (TCPA), Inherently Safer Technology (IST), <https://www.regulations.gov/document?D=EPA-HQ-OEM-2015-0725-0142>.

Requiring risk reduction to be “as low as reasonably practicable (ALARP)” is a standard that can be seen as stricter than the “to the greatest extent feasible” requirement set by CCHS and could require implementation of risk reduction measures “except where they are ruled out because they involve grossly disproportionate sacrifices.”¹⁰³ EPA does not believe that adopting a requirement that facilities reduce risks to “ALARP” is advisable for the RMP program because there are no set standards to define what level of risk is reasonably practicable for the variety of chemicals, processes, and hazards involved.

h. Feasibility

Insufficient guidance and clarity for methodology for comparing risks. A facility, a local agency, and industry trade associations, among others, remarked that IST cannot be meaningfully and consistently implemented because there is no consensus in science or among the industry on its definition, how to implement it, or how to measure its effect. Stating that the concept of IST is vague, an industry trade association said that multiple factors are taken into account when making a determination of feasibility, including materials used for equipment.

One commenter stated that the feasibility factors in the proposed STAA provision also provide no guidance on how to measure or balance risks or hazards. This commenter notes that there is no simple way to measure whether one process is safer than another or when a process is “safe enough” as discussed in the July 2010 DHS report by CCPS. The commenter indicated that the proposed rulemaking does not address a multitude of critical questions: What does the PHA team measure? Does the team evaluate reduction in particular hazards or in overall risk? Is that reduction measured quantitatively or qualitatively? Who or what is the required beneficiary of that reduction—the employees, the adjacent community, the environment? What level of risk is tolerable? If EPA requires STAA analysis under the final RMP rule, it will necessarily need to become involved in measuring, evaluating, and determining the tolerable level of risk. It is unlikely that EPA has the expertise or bandwidth to take this on.

EPA based its definition of IST upon CCPS’ descriptions of inherently safer strategies and its definition of “practicability” upon CCHS’ definition

of “feasible” in their Industrial Safety Ordinance. EPA has existing requirements under § 68.67 for facilities to evaluate and control hazards in the process and to establish a system to address the PHA’s team findings and recommendations. Management response to hazard evaluation studies and recommended options involve risk management considerations that are developed based on a facility’s risk tolerance criteria. EPA has not prescribed how facilities define or manage risk, whether it involves conforming to minimum standards such as codes or tries to reduce risk to as low as reasonably practical or whether it uses risk matrices or assesses qualitative or quantitative risk. EPA expects only that facilities consider IST as one of the types of risk management measures employed. Much of the structure of the RMP rule requires owners and operators to collect information and relies on them to make reasonable judgments in light of that information. The requirement here is no different. EPA only requires the analysis. There is no mandate to implement IST under this rule. For further information, EPA recommends consulting Chapter 9—Hazard Identification and Risk Analysis in the 2007 CCPS Guidelines for Risk Based Process Safety.¹⁰⁴

Efforts involved for determining feasibility. One commenter asserted that EPA has failed to consider the substantial complexity of the activities it is proposing to require, and the significant burden that will be placed on facilities with multiple or complex RMP regulated processes. The commenter cited issues involved with many chemical manufacturing processes that involve multiple optimizations of complicated reactions and integration of many processes with each other. The commenter cited as an example, the efforts involved by the National Academy of Sciences (NAS) to identify and evaluate the many individual alternative paths to methyl isocyanate (MIC) production for potential safer operations.¹⁰⁵ The commenter stated that each alternative then had implications for the facility, the customer, the surrounding community and numerous other factors that needed to be identified, considered and

weighed carefully. The commenter further explained that these factors included the costs of the chemicals, labor and energy requirements, new capital expenditures, quality of the product and revenues expected from its production, environmental impacts anticipated from the process, regulatory constraints, environmental policy and regulations and influence of local community on company decision making. The commenter indicated that many of these characteristics involve a substantial degree of uncertainty. The commenter also stated that the framework for decision-making discussed by NAS is akin to the proposed EPA requirement to perform a feasibility analysis for all ISTs considered. The commenter concluded that under the EPA proposal, complex chemical manufacturing RMP facilities would be required to go through this analysis multiple times for each and every regulated process.

EPA believes a practicability determination for any considered IST or ISD is necessary to ensure the facility owner or operator seriously considers whether IST or ISD modifications could further reduce risks and prevent accidents at the facility. EPA expects that facilities will only evaluate chemical substitutes that have already been shown to be commercially viable and does not expect facility owners or operators to expend a major effort on hypothetical or untested chemical substitutes or uses.

Insufficient time to complete a feasibility analysis. One commenter stated that when evaluating IST, a facility owner may at times be able to reject an alternative based on determining a single basis of infeasibility. The commenter asserted that if there is no known rationale for infeasibility, a facility may need to conduct lengthy and costly engineering studies, which would require a unit revamp on an existing process unit. The commenter further stated that under such circumstances, feasibility or practicality must consider unit congestion and constructability in addition to all of the issues associated with a new process. The commenter indicated that this need to perform detailed engineering study/design, in many cases, is indicative of impracticability. The commenter concluded that the proposed rulemaking allows four years after the rule become final for each PHA to consider IST/ISD alternatives for covered processes and, in the event the EPA decides to include this requirement in the final rule, facility owners should be allowed a second PHA cycle, following the four-

¹⁰⁴ CCPS. 2007. Guidelines for Risk Based Process Safety. American Institute of Chemical Engineers, CCPS, NY, Wiley. Chapter 9—Hazard Identification and Risk Analysis.

¹⁰⁵ National Research Council of the National Academy of Sciences, The Use and Storage of Methyl Isocyanate (MIC) at Bayer CropScience, 2012. <https://www.nap.edu/catalog/13385/the-use-and-storage-of-methyl-isocyanate-mic-at-bayer-cropscience>.

¹⁰³ <http://www.hse.gov.uk/risk/theory/alarplance.htm>.

year applicability, where the determination of feasibility or practicality requires engineering studies and design. Another commenter stated that the feasibility analysis outlined in the proposed regulation is ill-defined and doesn't allow sufficient time for the work to be properly completed.

EPA allows that where a practicability evaluation is complex and resource intensive and may not be completed within the four-year compliance timeframe from the final rule or within the five years between PHA reviews, a facility should document during their PHA review that the IST is under consideration and that the practicability of implementing the technology is unknown and still undergoing evaluation.

Practicability decisions made by facilities or outside parties. An environmental advocacy group argued that, if decisions are left up to facilities themselves, the economic interests of the facilities will outweigh considerations of public health. The advocacy group concluded that an independent body should be tasked with reviewing facilities' IST/ISD evaluations to determine whether or not such technologies are feasible and to prevent facility self-regulation. One local agency asserted that stationary sources rather than a regulatory body should determine the feasibility of ISD and document their decision.

EPA disagrees that practicability decisions should be made by outside parties. These decisions are based on site-specific circumstances that a third-party may not have the experience to evaluate. EPA believes it would not be practical for many reasons including: The delay that may result in finding a third-party to assess practicability; the variety of factors that must be considered in establishing a basis for choosing an outside party (e.g. there may not be enough qualified third-parties with the expertise and resources to evaluate the various options and processes for the number of facilities subject to this provision); and the need to protect CBI and sensitive information that could reveal security vulnerabilities.

Feasible definition does not take into account removal of existing safeguards. One commenter stated that the proposed definition for feasible precludes any reasonable basis for replacing existing controls and safeguards that have already been identified and implemented to address the risks. This commenter believes that since all the engineering and administrative controls necessary to address risk have already been identified and implemented in an

operating plant, it is not appropriate to require a repeated analysis of alternatives that that are not feasible for an operating plant.

EPA disagrees with the commenter. The definition of "practicability" in the final rule is not intended to be used to judge the reasonableness or effectiveness of existing risk reduction measures, but whether new IST measures could be implemented. The STAA requirements allow a combination of risk measures to be used to achieve the desired risk reduction; therefore, they do not necessarily preclude the use of existing controls and safeguards.

Feasibility factors go beyond scope of a PHA. One commenter asserted that requiring consideration of the five factors mentioned in the proposed definition of "feasibility" goes beyond the scope of a PHA.

EPA disagrees. While the PHA identifies the hazards, the RMP PHA requirements require the facility to identify the risk management measures applicable to eliminating or reducing the risks from the process hazards. EPA believes that it is appropriate for a facility to consider the five feasibility (now practicability) factors ("economic, environmental, legal, social and technological") for evaluating the appropriateness of implementing for potential IST measures because some IST can involve significant costs or involve impacts that go beyond the facility.

Feasibility does not take into account full supply chain. An industry trade organization and a facility warned that the proposed definition of "feasible" does not sufficiently consider costs and benefits and fails to take into account the full supply chain. Facilities pressured to take these measures, such as reducing inventories of products, would prevent companies from meeting customers' needs. For example, downstream users may not even be able to receive an alternative product.

EPA disagrees that the practicability determination does not allow facilities to take into account costs and benefits and the effect on the full supply chain. The STAA requirements do not require any implementation of any particular IST. EPA expects that facility owners or operators will seriously consider the merits and consequences of ISTs for their facilities and use their expertise and judgement to ensure safety while not severely affecting the economic viability of their businesses. Facilities can consider the effects in their supply chain (downstream and upstream) when evaluating potential IST options.

i. IST Implementation

Several industry trade associations and a facility expressed support for EPA's decision not to require implementation of feasible safer alternatives and noted that the best approach would be to allow operators to decide which measures, methods, or IST components would be feasible at their facilities. An industry trade organization requested that EPA include language stating that "the scope of the STAA for a regulated process will be based on the expert judgment of owners and operators" because only the facility is uniquely qualified to determine what types of changes are feasible and practical. The commenter cited an example where reducing the volume of chlorine dioxide on-site at a paper mill may not be practical because a minimum amount is needed to ensure that production of pulp and paper can continue when operation of the chlorine dioxide generator is momentarily disrupted due to maintenance or other issues. The commenter also cited another example in which eliminating the use of chlorine dioxide for bleaching may not provide the necessary characteristics of the finished product.

Many commenters, including multiple mass mail campaigns joined by approximately 24,610 commenters and advocacy groups, urged that upon identifying alternatives in an analysis, facilities should be required to switch to the safest cost-effective chemicals and technologies available. Among other reasons, one commenter cited the need to implement feasible alternatives because the NAS report on the Bayer CropScience accident stated that feasible alternatives should be attempted before moving on to specification of risk management equipment and procedures.¹⁰⁶ This commenter notes that existing safeguards used have not prevented accidents from occurring and that CAA section 7412(r)(7)(B)(i), directs that regulations and guidance under this provision must "*provide, to the greatest extent practicable, for the prevention and detection of accidental releases of regulated substances and for response to such releases.*" [Emphasis added] In addition, this commenter states that not requiring implementation of IST also creates a competitive disadvantage for those facilities that do so voluntarily, as compared to other facilities who will avoid taking available preventative safety measures to maximize short-term profits. This commenter wants EPA to

¹⁰⁶National Research Council, *The Use and Storage of Methyl Isocyanate (MIC) at Bayer CropScience*, at 4-53 (2012).

require a timeframe for implementation of IST for those facilities who plan to implement IST as this will prevent accidents from happening sooner. A commenter urged that required implementation of feasible alternatives would reduce the risks associated with a catastrophic release, including from terrorist attacks, and would be important for protection of public health.

One commenter wanted IST to be implemented wherever feasible because IST is likely to be more effective and less costly in the long run than other safeguards, noting that the existing rule requires that facilities implement the recommendations from a conventional PHA. This commenter also stated that EPA should model its implementation requirements on California's Contra Costa County Industrial Safety Ordinance, which directs companies to "select and implement each inherently safer system identified to the greatest extent feasible and as soon as administratively practicable" or consider California's Department of Industrial Relations current proposed requirements for refineries which directs each facility to "implement all recommendations" from inherent safety analyses, unless the facility can demonstrate that a recommendation is factually flawed or infeasible on grounds other than cost alone.

An industry trade association said that in their industry, operations are diverse and are constantly evolving, making it difficult to implement IST. A few industry trade associations warned that substitution is not a legitimate option for their industries, for manufacturing of agricultural products or in fragrance industry, for example. Stating that active ingredients in fragrances are extremely specific and non-fungible, an industry association commented that any substitution of fragrance ingredients should be done at the point of design to minimize the threat to fragrance businesses. The commenter requested that EPA provide a clear statement acknowledging the infeasibility of substitution in the fragrance industry. Some commenters stated that the analysis would be of no benefit for their facility because a Federal permit requires it to use certain processes.

EPA agrees that the facility is in the best position to decide what safeguards or risk reduction measure can be employed to eliminate or reduce process hazards. Facilities must consider safeguards, in the following order of preference: IST, passive, active or procedural measures; however, the rule does not automatically require the

facility to implement the measures preferentially in that order. EPA recognizes that for any particular hazard point, any one of the four types of safeguards may not exist or may not be practicable for a variety of reasons. EPA also recognizes that facilities may wish to employ more than one safeguard.

The purpose of the STAA requirement is to ensure that facilities consider the available options and for them to find the best method for the facility to address accidental releases. The hierarchy of control methods in an STAA analysis—IST/ISD, passive, active, administrative—is consistent with the language of CAA section 112(r)(7)(B)(i) in that it systematically provides for the identification of practicable control methods while also recognizing that the regulation must be reasonable. This approach is consistent with the current PHA requirements which provide flexibility for the owner or operator to decide which safeguards are appropriate to prevent accidental releases. We expect STAA analyses to lead to new control approaches at sources where management finds such approaches to be reasonable and practicable.

EPA is not requiring implementation of IST at any facility because we believe that only the facility has the expertise and resources to determine whether implementation of any IST or ISD should be undertaken, taking into account that many factors must be considered when substituting a chemical or modifying a process, including cost, risk transfers, technological hurdles, etc. Facilities that choose to adopt the use of IST or ISD can eliminate or reduce hazards by using different materials and/or process conditions, which would make accidental releases less likely, or the impacts of such releases less severe. The results of the practicability determination must be documented as part of the current PHA requirements in § 68.67(e), which requires the owner or operator to document actions to be taken and resolution of recommendations.

Also EPA does not believe we should establish a required timeframe for any planned implementation of IST. Planning, design, equipment modification and cost to implement IST can vary tremendously depending on the technology and scope of the project and could only be best determined by the facility involved in such implementation.

EPA acknowledges that chemical substitution or whole design processes may be not practicable for some processes for a variety of reasons and

that facilities should document these reasons for any particular IST that were considered by the facility for purposes of complying with the STAA requirements.

j. Security and Risk

Terrorism. A commenter cited an increased risk of global and domestic terrorism as a reason to broaden the applicability of STAA requirements to cover transportation and storage of liquid chlorine. Another commenter stated that the existing RMP provisions already require the PHA team to consider safer alternatives, and warned that explicitly stating consideration or implementation of IST can expose facilities to risks, such as increased opportunity for terrorism, risk transfer, and risk accumulation. The commenter remarked that chemicals handled are highly dependent on the processes employed, so it would be difficult or impossible to identify an absolute safer alternative. The commenter concluded that facilities should assess the total risk reduced by implementation and stated that any alternative considered should be easily applied and properly tested.

EPA acknowledges that transportation and storage of liquid chlorine can pose risks, not only from accidental releases, but from intentionally caused releases. However, EPA is limiting the scope of applicability of the STAA requirements in order to balance the regulatory and administrative burdens of assessing IST against the accident rate and possible opportunities to employ IST because of process complexity for various industries. EPA believes that the industries subject to the STAA provisions are also more likely than others to have the expertise and resources to properly assess and implement IST.

In response to the commenter's concern that explicitly stating consideration or implementation of IST can expose facilities to risks, EPA believes that the STAA provisions in the final rule provide enough flexibility for owners and operators to consider a hierarchy of risk management measures to minimize the hazard of a process without prescribing an approach that could compromise facility security or transfer or increase risks. The STAA requirement does not require IST implementation but instead allows the facility owner or operator to determine whether an IST considered would achieve a reduction in risk, specific to the hazard being addressed. More specifically, the STAA requirement allows for a combination of risk management measures to be used to achieve the desired risk reduction. This

flexibility acknowledges that there is not always an absolute safer alternative to a chemical, which is highly dependent on the process or application and the chemical involved. EPA is also requiring the facility to evaluate the practicability of any IST or ISD considered to account for economic, environmental, legal, social, and technical factors. Environmental factors would include consideration of potential transferred risks for new risk reduction measures. This allows facilities to carefully consider whether an IST could create new risks or security concerns, including those involving terrorism.

Security concerns related to STAA documentation. An industry trade association urged that if (or when) IST becomes applicable to a certain process, methods should be available for additional review. For example, the commenter said that documentation of safer technology information should be considered from a homeland security and critical infrastructure perspective.

EPA agrees that documentation that could reveal vulnerabilities at an RMP-regulated facility must be secured. Therefore, although EPA is requiring facility owners and operators to document STAA and practicability determinations, EPA is not requiring this information to be submitted to implementing agencies, LEPCs or local emergency response officials. These entities have the ability to request documentation, at which point representatives of the facility and the requesting agency can discuss the security concern and involve security agencies as appropriate.

k. STAA Documentation

Extent of STAA documentation. Some commenters urged EPA to require sufficient, detailed documentation of feasibility and alternatives considered. One commenter asserted that requiring sufficient documentation of alternatives would facilitate the incorporation of safer design principles into the PHA and would enhance the integrity of the process and encouraged a more extensive documentation of feasibility similar to the program in Contra Costa County, California. An advocacy group suggested that entities should be required to document economic benefits as well and quantify specific economic benefits of adopting safer options, such as reduced liability and insurance costs, public benefits such as savings to municipalities for reduced emergency response, and savings to workers and affected residents for medical care, property damage, etc.

An industry trade association asserted that any requirement for entities to determine or document feasibility would be beyond EPA's authority and would be inappropriate because it does not provide sufficient detail of what would be required in a "determination" or information about how the determination was considered. An industry trade association expressed general opposition to a documentation requirement. A state agency requested clarification as to what type of documentation would be required in order to demonstrate compliance.

EPA is not specifying any particular form of documentation for STAA given the potential complexity of analysis, variety of risk reduction measures involved and the factors that may be considered for feasibility and/or implementation. Facilities should retain any reports, analysis, findings and recommendations used to comply with the STAA requirements for the life of the process as is required by § 68.67(g). For IST/ISD measures considered, facilities should document the analysis and methodology used to evaluate or consider IST, its feasibility and the recommendations of the review team. Facilities may follow, for example, guidance for IS Review Documentation found in CCPS's Inherently Safer Chemical Processes, which suggests documenting the summary of the approach used for the IS review (*i.e.*, methodology, checklist, etc), names and qualifications of the review team, IS alternatives considered, as well as those already implemented or included in the design, results of each consideration including those not considered and why, documentation of feasibility and rationale for rejection of IS opportunities. Facilities must provide in their RMP, any inherently safer technology or design measures implemented since the last PHA, if any, and the technology category (substitution, minimization, simplification and/or moderation) (§ 68.175(e)(7)).

CBI. A facility contended that changes in process technology involving IST or ISD could be considered CBI, have a substantial impact on the strategic competitive nature of their operation and necessitates provisions to ensure that CBI claims can be asserted for IST or ISD implementation. An environmental advocacy group stated that facilities should have the ability to withhold CBI based on existing standards when they submit their STAA to EPA.

EPA is not requiring the STAA or its documentation within the PHA to be automatically submitted to EPA nor to

anyone else, but such analysis or documentation must be kept as records under the recordkeeping requirements of § 68.200 and be available for inspection or review by EPA. Owners or operators may assert claims of CBI for information requested by EPA following the procedures in §§ 68.151 and 68.152 if the information meets the criteria set forth in 40 CFR 2.301.

l. Availability and/or Submission of STAA Documentation

Many commenters, including multiple mass mail campaigns joined by approximately 22,260 commenters, a Federal agency, and advocacy groups, stated that RMP facilities should be required to submit their STAA information to EPA. An environmental advocacy group suggested that the collection of STAAs is vital for the establishment of a clearinghouse of safer technology and alternatives and that EPA should certify STAAs for accuracy and completeness. One commenter suggested that by requiring the submission of STAAs to EPA, the Agency will enhance the quality of STAA assessments and feasibility analysis. This commenter also believed STAA submission would better inform enforcement under the CAA's General Duty Clause by providing the Agency with world class knowledge of feasible safer alternatives and effects taken under the EPA's 2017–2019 NEI approved on February 18, 2016.

Two local agencies stated that STAA information should be retained on-site at the facility for inspection or be submitted upon request to be reviewed by EPA and implementing agencies. One commenter said that information on IST should be maintained at the stationary source.

In contrast, other commenters, including multiple industry trade associations, remarked that EPA should not require RMP-regulated facilities to submit STAA information to EPA. Some industry trade associations argued that EPA or any other implementing agency will likely lack the required knowledge, resources, or expertise to evaluate an STAA or feasibility determination. An industry trade association asserted that EPA should have no role in analyzing or approving the plans. An industry association argued that any requirement for approval of STAAs by EPA would be too similar to a permitting program and would thus be against Congress' intent as per CAA section 112(r)(7)(F).

Some commenters suggested that the submitted STAA information should be included in the RMP National Database and facilities be allowed to withhold CBI based on current RMP CBI

protections and facility-specific, element-specific, up-front substantiation of security claims. A professional organization encouraged EPA to use the STAA summary information provided in the RMPs to gather helpful data and incorporate lessons learned. One commenter reasoned that collection of STAA data is necessary for EPA and other regulatory agencies to carry out their regulatory responsibilities. Another commenter asserted that incorporating summary STAA information into RMPs will facilitate knowledge of successful practices as well as knowledge of barriers.

Two commenters suggested that EPA collect information from facilities that change program levels within RMP or deregister entirely in order to collect valuable lessons learned for future use about IST preventive measures and reducing on-site quantities. One commenter expressed concern that the current deregistration reason codes are not sufficient to allow EPA to collect basic information about lessons learned from deregistered facilities and suggested adding a code representing "implemented IST/ISO" paired with a field to indicate the nature of the change.

Some commenters wanted more detailed information about STAA to be provided in the RMP. Suggested additional information included: Descriptions of the alternatives evaluated; description of each option chosen for implementation and timeline; reasons for not implementing IST such as (1) cost; (2) technical feasibility; (3) conflicts with other regulatory requirements or good practices; (4) other hazards; (5) other (indicate reason) or by listing one of the factors included in the definition of "feasible:" time, economic, environmental, legal, social, or technological; and an attestation and checklist demonstrating a comprehensive accounting of potential benefits, savings, and avoided costs associated with each major option.

One commenter recommended that an independent body be in place to carefully review the facilities' IST/ISD evaluations to assist in determining whether or not such technologies are feasible and to prevent facilities from self-regulating.

Some commenters wanted STAA and documentation to be made publicly available, and allowed with reasonable protections, for genuine CBI and trade secrets. An advocacy group recommended allowing public comment and response on facilities' STAAs. A few commenters wanted STAA summaries to be available to at-risk

communities and the public both online and offline, including at public meetings required at § 68.210.

Reasons given by commenters for providing public availability of STAA included:

- To hold companies accountable and facilitate significant process safety changes with appropriate public discussion and oversight from other stakeholders;
- To ensure right-to-know and transparency for affected workers and communities;
- To provide comments on the STAA and get implementing agency response;
- To have facilities that have adopted IST receive public credit for their positive steps; and
- To ensure opportunities for at-risk communities to engage with facilities about alternatives and prevention plans.

EPA is not requiring automatic submission of STAA information or documentation to EPA or requiring that it be made available to the public. EPA acknowledges there is much public interest in having STAA and documentation available to them, but STAA will be part of a PHA which can be a lengthy (*e.g.*, the sectors subject to STAA requirements have multiple processes and some PHAs are hundreds of pages) technically complex document that could contain not only CBI, but sensitive security information involving process or equipment vulnerabilities. Some commenters' suggested solution of having facilities sanitize submitted documents and provide upfront justification of CBI claims would entail a significant level of burden upon industry and EPA. It would not be practical or good use of resources to have thousands of documents submitted to EPA, to any other body or with the RMP submission. EPA can inspect documents on-site or request their submission from facilities as needed.

EPA believes that primary utility of STAA information for the public is whether or not facilities are implementing IST and the nature of that change. EPA is requiring that basic information on IST being implemented be provided in the RMP submission in accordance with § 68.175(e)(7). Facilities must provide in their RMP any inherently safer technology or design measures implemented since the last PHA, if any, and the technology category (substitution, minimization, simplification and/or moderation). In the event of a public meeting held after an accident, EPA encourages facilities to provide information about any IST or other safer technology alternatives that the facility is using or could be using and suggests that the public use this

forum to inquire about ISTs implemented at the facility.

EPA is not adopting an approval process for STAA analyses, either by an independent board, by the implementing agency, or by any emergency planning entity. We recognize nothing in the statute prohibits the adoption of an approval process. The language of CAA section 112(r)(7)(F) is directed towards the need for an operating permit under Title V of the CAA and therefore has no bearing on whether the underlying substantive rule may establish an approval process. In CAA section 112(r)(7)(B)(iii), the statute specifically requires EPA's rules to establish a system that provides for review and, if necessary revision of RMPs (see 40 CFR 68.220).

Nevertheless, the approach we adopt in this final rule, which requires the owner or operator to conduct a STAA review and document its review in general and its reasoning for not adopting practicable IST/ISD, is consistent with the overall approach of the RMP rule to rely on the development and assessment of information to lead owners and operators to adopt reasonable measures to prevent accidents.

m. Clearinghouse

Some commenters, including a Federal agency, a state agency, environmental advocacy groups, and a local agency, supported the establishment of a publicly available online clearinghouse providing information about the feasibility and efficacy of safer substances and processes. A Federal agency commented that such a database would also be a useful resource for insurers, chemical process vendors, emergency responders, academic researchers, and other government agencies, such as OSHA.

One commenter remarked that such a clearinghouse should be dedicated to the topic of safer technology and alternatives and should be managed by either EPA, another Federal agency, or an independent third-party rather than industry-funded academics or institutions. One commenter suggested that a clearinghouse could be developed by EPA or a third-party such as CCPS or Texas A&M's Mary Kay O'Connor Process Safety Center.

A few industry trade associations remarked that the creation of a clearinghouse would be redundant with some resources already publicly available. For example, one trade association asserted that it has effectively created its own clearinghouse through the publication and maintenance of its own publicly available publications, semi-annual

conferences, and regular member exchange forums. Additionally, this organization stated that it hosts a technology symposium every other year, where members can learn about new technologies, both from members sharing their experiences and directly from vendors and consultants. Another trade association suggested that the searchable database of all patents and patent applications available from the US Patent and Trademark Office can be used as a clearing house for safer technology and that information on unpatented technologies is readily available through the internet and other means.

Another industry trade association warned that a government clearinghouse would not reduce chemical accidents because each chemical process is highly complex and unique and it would be difficult to find value in a massive database of technologies. A commenter warned that any clearinghouse would be required to have many ground rules so as to clarify what factors were at play in the IST decision. The commenter expressed concern that the clearinghouse could be harmful or not useful if the information was selective in detail because an IST selected by a stationary source may be narrow in scope for a specific set of risks to be avoided or mitigated. The commenter also stated that it is possible companies would provide information lacking enough detail to be useful. Another commenter cautioned that one type of technology, system or design that works for one facility or process may not work for another facility or process, due to differing processes and other conditions.

EPA is not finalizing a provision to establish a clearinghouse in this rule. EPA will further consider the comments and suggestions on establishing a safer technologies and alternatives information clearinghouse should we pursue an effort to develop and establish such a clearinghouse in the future. Currently, industry and other stakeholders can share chemical safety and security best practices, including those involving safer technologies and alternatives, at the Executive Order 13650 best practices Web site.¹⁰⁷ EPA encourages stakeholders to review information shared through this forum and to submit best practices on safer alternatives or other best practices that serve to improve chemical safety and security.

D. Stationary Source Location and Emergency Shutdown

EPA discussed the importance of location of stationary sources and their emergency shutdown capabilities in the preamble of the proposed rulemaking. However, EPA did not propose any provisions related to these issues.

1. Discussion of Comments on Stationary Source Location

The location of stationary sources, and the location and configuration of regulated processes and equipment within a source, can significantly affect the severity of an accidental release. The location of the stationary source in relation to public and environmental receptors may exacerbate the impacts of an accidental release, such as blast overpressures or concentrations of toxic gases, or conversely may allow such effects to dissipate prior to reaching receptors. EPA requested comments on whether to consider stationary source location requirements for future rulemakings, including the scope of such requirements, or whether the Agency should publish guidance. EPA received multiple comments on this issue.

Commenters indicated that EPA should use stricter standards for calculating blast radius areas for new and existing facilities to ensure that communities, schools, and hospitals are outside of the blast impact. One commenter stated that EPA should use information availability requirements to better inform and protect local communities from accidents. A Federal agency and state/local agency requested that EPA consider the stationary source location issue in future rulemakings. A professional organization requested that EPA consider a 2014 Fire Protection Research Foundation report in future requirements for stationary source location.

Several commenters argued that facilities should be located where no damage could occur to people and homes, asserting that the proposed rulemaking does not go far enough to ensure public safety. Some of these commenters specifically mentioned the Rancho LPG facility in San Pedro, California, and asked that EPA review the siting of this facility due to the danger it poses to the surrounding community.

A local agency and an advocacy group asked that EPA consider IST or risk reduction methodologies and the importance of buffer zones in siting of new stationary sources. Multiple state and local agencies and an association of government agencies requested new

guidance and tools for localities to clarify additional requirements for stationary source location. One commenter stated that EPA should consider reverse 911 calls to public receptors in setting requirements.

However, numerous commenters opposed adding provisions to address stationary source location issues in the proposed rulemaking, citing OSHA's PSM regulations and the lack of authority in the CAA. One commenter stated that EPA should not propose any additional requirements on the location of stationary sources. Multiple comments indicated that states and localities, not EPA, should regulate the siting of facilities.

EPA will consider these comments when determining whether to develop guidance or propose stationary source location requirements in a future action.

2. Discussion of Comments on Emergency Shutdown

The RMP regulation requires owners and operators of stationary sources to develop and implement written operating procedures for the safe and timely emergency shutdown of Program 2 and Program 3 processes, to ensure operator training for these procedures, and for maintaining the mechanical integrity of emergency shutdown systems. However, the regulation does not explicitly require that all covered processes must include emergency shutdown systems.

EPA requested comment on whether emergency shutdown system requirements should be considered for future rulemakings, including the scope of such requirements, or whether the Agency should publish guidance.

Many commenters supported additional regulations and/or guidance on emergency shutdown systems regulations and/or guidance. Local agencies stated that EPA should issue regulations or guidance requiring that all processes be built such that they can be placed in a safe state during an emergency. Another local agency recommended that EPA publish guidance on emergency shutdown systems to assist regulated entities in evaluating various alternatives, but argued that including emergency shutdown systems in a future rulemaking would be infeasible for existing locations. One commenter stated that EPA should consider reverse 911 calls to public receptors in setting requirements. A state/local agency expressed support for emergency shutdown systems requirements in a future rulemaking, to include operating procedures and annual testing.

¹⁰⁷ <https://www.osha.gov/chemicalexecutiveorder/LLIS/index.html>.

However, several commenters argued that EPA should not propose any additional requirements—regulations or guidance—on emergency shutdown systems. These commenters asserted that existing regulation and facility practices address emergency shutdown issues. One commenter supported EPA's decision to forgo an emergency shutdown system requirement, arguing that exclusion is consistent with RMP's performance-based nature, but opposed EPA's suggestion to issue a guidance document. Another commenter opposed a "one-size-fits-all" rule or guidance for emergency shutdown systems and argued that EPA should propose specific regulatory text in a future rulemaking should it decide to regulate emergency shutdown.

EPA will consider these comments when determining whether to develop guidance or propose emergency shutdown system requirements in a future action.

V. Emergency Response Preparedness Requirements

A. Emergency Response Program Coordination With Local Responders

1. Summary of Proposed Rulemaking

EPA proposed to require owners or operators of "responding" and "non-responding" stationary sources to coordinate response needs with local emergency planning and response organizations to ensure that resources and capabilities are in place to respond to an accidental release of a regulated substance. Responding stationary sources also would be required to comply with the emergency response program provisions of § 68.95 when the outcome of coordination activities demonstrated that local public emergency response capabilities were not adequate to appropriately respond to an accidental release at the stationary source, or when the LEPC or equivalent requested in writing that the owner or operator comply with the requirements of § 68.95. "Non-responding" stationary sources need not have complied with § 68.95 provided that the coordination activities indicated that adequate local public emergency response capabilities are available to appropriately respond to accidental releases at the source, appropriate mechanisms are in place to notify emergency responders when there is a need for a response, and the LEPC or equivalent has not requested in writing that the owner or operator comply with the requirements of § 68.95.

The proposed coordination provisions would have required coordination to occur at least annually, and more

frequently if necessary to address changes at the source, in the source's emergency action plan, in local authorities' response resources and capabilities, or in the local community emergency response plan. The owner or operator would also have been required to document coordination activities, including the names of individuals involved and their contact information, dates of coordination activities, and the nature of coordination activities. The proposed coordination provisions of § 68.93 also would have required sources with regulated toxic substances to coordinate response actions with the LEPC or equivalent, and sources with only regulated flammable substances to coordinate with the local fire department. This language is similar to the language in § 68.90(b)(1) and (2) of the original rule, which requires that sources with toxic substances held above threshold quantities be included in the community emergency response plan developed under EPCRA, and sources with only regulated flammable substances held above threshold quantities coordinate response actions with the local fire department.

The proposed rulemaking retained all emergency response program provisions from § 68.95 of the original rule, and made two additions. The first was to modify § 68.95(a)(1)(i) to require that release notification procedures included procedures to notify Federal and state emergency response agencies, in addition to the existing rule's requirement to notify the public and local emergency response agencies. The second addition was to modify § 68.95(a)(4) to require the owner or operator to review and update the emergency response program annually, or more frequently if necessary, to incorporate recommendations and lessons learned from emergency response exercises, incident investigations, or other available information. The proposed rulemaking also would have replaced the phrase "local emergency planning committee" with the acronym "LEPC."

2. Summary of Final Rule

In this rule, EPA has retained the proposed term "Responding stationary source" as a heading for § 68.90(a) and "Non-responding stationary source" as a heading for § 68.90(b), as an indication of whether or not a facility is required to comply with the emergency response program provisions of § 68.95. Section 68.90(a) is otherwise unchanged from the existing rule, as are § 68.90(b)(1), (2), and (3). EPA is also adopting as proposed paragraphs § 68.90(b)(4) and (5), which require the owner or operator

of a non-responding stationary source to perform the annual coordination activities required under § 68.93, and the emergency notification exercises required under § 68.96(a), respectively.

The final rule adopts as proposed § 68.93, but with some changes, which are discussed in the following sections. Section 68.93 requires the owner or operator to coordinate response needs with local emergency planning and response organizations to determine how the source is addressed in the community emergency response plan and to ensure that local response organizations are aware of the regulated substances at the source, their quantities, the risks presented by covered processes, and the resources and capabilities at the facility to respond to an accidental release of a regulated substance.

Section 68.93(a) requires coordination to occur at least annually, and more frequently if necessary, to address changes at the source, in the source's emergency response and/or emergency action plans, and/or in the local community emergency response plan.

Section 68.93(b) requires coordination to include providing to the local emergency planning and response organizations, the facility's emergency response plan if one exists, emergency action plan, updated emergency contact information, and any other information that local emergency response planning and response organizations identify as relevant to local emergency planning. For responding stationary sources, § 68.93(b) also requires coordination to include consulting with local emergency response officials to establish appropriate schedules and plans for field and tabletop exercises required under § 68.96(b). Lastly, § 68.93(b) require the owner or operator to request an opportunity to meet with the LEPC (or equivalent) and/or local fire department as appropriate to review and discuss these materials.

Section 68.93(c) adopts as proposed the coordination documentation provisions without revision. Under § 68.93(c), the owner or operator is required to document coordination with local authorities, including the names of individuals involved in coordination and their contact information, dates of coordination activities, and the nature of coordination activities.

EPA is finalizing several modifications to § 68.95. EPA has adopted the proposed addition to § 68.95(a)(1)(i), which requires that release notification procedures include procedures to notify Federal and state emergency response agencies, in addition to public and local emergency

response agencies. The final rule also adopts as proposed revisions to § 68.95(a)(4), with some modifications. The final rule requires the owner or operator to review and update the emergency response plan as appropriate based on changes at the source or new information obtained from coordination activities, emergency response exercises, incident investigations, or other available information, and ensure that employees are informed of the changes.

3. Discussion of Comments and Basis for Final Rule Provisions

Many commenters, including industry trade associations, advocacy groups, professional organizations, facilities, Federal and state agencies, and others supported EPA's efforts to increase emergency response program coordination between facilities and local responders. Other commenters including industry trade associations and regulated facilities stated the proposal would potentially duplicate other Federal or state requirements or voluntary efforts, or suggested that EPA should increase enforcement efforts rather than impose additional requirements in certain areas.

Although ATF ruled that the fire at West Fertilizer in West, Texas was intentionally set,¹⁰⁸ the incident highlighted the need for better coordination between facility staff and local emergency responders. The approach EPA adopts in the final rule retains the proposed rulemaking's promotion of coordination between facilities and responders while recognizing the concerns of many of the commenters about LEPCs and owners and operators making determinations about the abilities and roles of owners and operators as well as LEPCs. We preserve local flexibility under our approach. Public comments on each proposed provision to the emergency response coordination and emergency response program provisions of Subpart E are discussed further in this preamble, along with EPA's responses and decisions for the final rule.

a. Designation of "Responding" and "Non-Responding" Stationary Sources

Some commenters objected to EPA's proposal to designate all sources as either responding or non-responding sources. These commenters pointed out these discrete categories do not accurately represent the realities of emergency response, which can include

many different degrees of involvement by facilities and local communities in planning, preparing for and responding to accidental release events. One commenter stated that all facilities, regardless of whether they are responding or non-responding facilities, should have a partnership with the LEPC or local emergency responders. Another commenter stated that even facilities with full on-site emergency response capability would likely rely on local public responders to order and manage shelter-in-place actions or evacuations. Another commenter stated that all facilities are responsible for and must be prepared to deal with the regulated substances they handle and there should be no such thing as a "non-responding" stationary source, but this does not mean every facility needs a technician-level hazmat response team. This commenter stated that every facility must be able to immediately notify emergency response agencies when a release having the potential to impact the public occurs, take actions to protect the lives of employees and the public, minimize or contain the release, and coordinate with local response agencies who respond to the release.

EPA agrees there is a wide spectrum of planning, preparedness, and response arrangements available to facilities and local communities, and the two categories of "responding" and "non-responding" facilities do not fully capture this continuum. EPA also acknowledges there is some overlap between the obligations of non-responding and responding facilities. For example, both non-responding and responding facilities must have mechanisms or procedures in place to notify emergency responders about accidental releases, and both types of sources must coordinate emergency response activities with local responders (and under the final rule, these coordination activities must occur annually and be documented, as further described further in this preamble). Because the outcome of coordination activities may result in different types of response arrangements involving regulated facilities and communities, EPA understands that a facility's designation as "responding" or "non-responding" does not, by itself, explain all facets of emergency preparedness and response for the facility.

These designations are still useful, however, because "responding" facilities must meet certain requirements that "non-responding" facilities are not required to meet. Responding facilities must comply with all of the provisions of § 68.95, which include developing an emergency

response plan, developing procedures for the use, inspection, and testing of emergency response equipment, conducting training for employees in relevant procedures, and updating the emergency response plan to reflect changes at the source. Any facility that plans to use its employees to take response actions beyond those specified in its emergency action plan under 29 CFR 1910.38 as a result of an accidental release at the source—which could include, for example, donning emergency air breathing apparatus in order to enter an area where a toxic gas leak has occurred with the intention of stopping or controlling the release—would be expected to have obtained appropriate equipment and training, and to address these activities in its emergency response program, even if the facility is also relying on local responders to supplement its own response, or to manage offsite response actions such as evacuations and sheltering-in-place. Therefore, in the final rule, EPA has retained the proposed terms "Responding stationary source" as a heading for § 68.90(a) and "Non-responding stationary source" as a heading for § 68.90(b), as an indication of whether or not a facility is required to comply with the emergency response program provisions of § 68.95.

b. Evaluating Resources and Capabilities of Local Responders

The proposed rulemaking would have made the owner or operator's decision to develop an emergency response program contingent on the outcome of local coordination activities. Under the NPRM, in order to be a non-responding facility, the owner or operator would have been required not only to coordinate with local responders and have appropriate notification mechanisms in place, but also to confirm that adequate local public emergency response capabilities are available to appropriately respond to any accidental release of the regulated substances at the stationary source.

EPA received numerous comments objecting to this provision. Many commenters, including industry trade associations, government agencies, an association of government agencies, facilities, and other commenters, expressed concern over ambiguity in the terms "adequate" response capabilities and "appropriate" response. One commenter noted that unless they are notified by the LEPC or fire department, facilities will not know when a change in community response capabilities or resources occurs. Another commenter pointed out there is no accepted standard for community emergency

¹⁰⁸ See ATF Announces \$50,000 Reward in West, Texas Fatality Fire, <https://www.atf.gov/news/pr/atf-announces-50000-reward-west-texas-fatality-fire>.

response capability applicable nationwide, and that response resources and capabilities can only be evaluated in the context of the overall community's response plan.

EPA has not adopted this provision in the final rule. While EPA believes it is important for regulated facilities and local responders to share information on response resources and capabilities, the Agency acknowledges the capabilities and resources of local response organizations are subject to numerous influences, including other potential demands within the community for local response resources, local government organization and budgets, Federal, state, and local regulations, and others. Few if any of these factors are within the purview of the owners and operators of individual regulated facilities, and therefore in many cases, owners and operators will not be in a position to judge the adequacy of local response capabilities and resources.

c. Developing an Emergency Response Program Upon Receiving a Written Request From the LEPC

The NPRM would also have required the owner or operator to develop an emergency response program in accordance with § 68.95 upon receiving a written request to do so from the LEPC or local response authorities. Numerous commenters objected to this provision. These commenters indicated that the provision would allow or incentivize LEPCs to absolve themselves of their emergency response obligations under EPCRA, even if this may not be in the best interest of the overall emergency response. Several commenters stated that allowing local authorities to "opt out" of their responsibilities would undermine the mission of those authorities, and that relying on facilities to fulfill emergency response obligations if an LEPC "opts out" may not be within these facilities' authority or capability. Several commenters also expressed concern that EPA's proposal did not include criteria LEPCs must meet before requesting a facility become a responding facility. One commenter representing an association of state government response commissions stated that this provision would cause the vast majority of LEPCs to request facilities become responding facilities.

EPA disagrees the proposed provision would have absolved local responders of their responsibilities under EPCRA or allowed them to disregard their other response obligations. The proposed provisions would have had no effect on local authorities' community emergency planning responsibilities under EPCRA. Also, even in situations where regulated

sources maintain full emergency response capabilities, local responders would still be responsible for managing the aspects of the response external to the source, such as community evacuations and sheltering-in-place. Nevertheless, EPA has decided not to finalize this provision because of the objections raised by commenters, and because it would have allowed local governments to place emergency response program obligations on the owners or operators of regulated facilities without requisite knowledge of the facility's operations, business practices, financial condition, and other relevant factors. Also, commenters pointed out that many facilities—particularly small businesses—would as a practical matter simply be unable to manage all of their own response needs, which could include maintaining a full hazardous materials response team, as well as firefighting capabilities. In the preamble to the original rule, EPA acknowledged that small businesses would often be unable to manage these duties.

d. Emergency Response Coordination Activities

Many commenters, including industry trade associations, advocacy groups, facilities, government agencies, professional organizations, and others supported EPA's proposed requirements for improved emergency response coordination between facilities and local responders. Several commenters recommended EPA clarify what is meant by "coordination." Some commenters opposed EPA's proposed coordination requirements on the basis that these activities were already required under other regulations, or were being carried out voluntarily. Other commenters expressed concerns about an historical lack of participation by LEPCs in emergency response coordination activities, or that the proposed coordination provisions would place increased burdens on local responders.

In the final rule, EPA has adopted as proposed the emergency response coordination provisions of § 68.93, with some changes. One significant change relates to the modified applicability provisions discussed previously. In addition to removing the two provisions from § 68.90 of the final rule that would have made the owner or operator's decision to develop an emergency response program contingent on the outcome of local coordination activities, and required the owner or operator to develop an emergency response program upon receiving a written request to do so from the LEPC or local

response authorities, EPA has also removed the proposed language in § 68.93 that placed the focus of coordination on ensuring response resources and capabilities are in place. This language has been replaced with language that places the focus of coordination on sharing information related to emergency planning.

EPA has also clarified what coordination activities are required. In the final rule, under § 68.93 the owner or operator is required to provide local authorities with information about the regulated substances at the source, their quantities, the risks presented by covered processes, and the resources and capabilities at the facility to respond to an accidental release of a regulated substance. Section 68.93(a) requires coordination to occur at least annually, and under § 68.93(b), the owner or operator is also required to provide the facility's emergency response plan if one exists, the emergency action plan required under 29 CFR 1910.38, updated emergency contact information, and any other information local emergency planning and response organizations identify as relevant to local emergency planning. EPA notes that under 29 CFR 1910.38(b), OSHA requires emergency action plans to be kept in writing, unless an employer has 10 or fewer employees, in which case they may communicate the plan orally to employees. Under the final rule, if the owner or operator has a written emergency action plan, that written plan should be provided to local authorities, but if the plan is an oral plan, the owner or operator may also communicate the plan orally to local authorities.

In requiring "any other information that local emergency planning and response organizations identify as relevant to local emergency planning," EPA is encouraging local emergency officials to consider what other facility information may aid them in preparing for emergencies at the source beyond those specific elements identified in § 68.93 and § 68.93(b), and request such information from the owner or operator when conducting annual coordination activities. Such information could include accident histories, portions of incident investigation reports relevant to emergency response, incident after-action reports, records of notification exercises, field and tabletop exercise evaluation reports, etc. The owner or operator is required to provide any information requested by local emergency planning and response organizations, to the extent the information is relevant to local emergency planning.

EPA disagrees with commenters who suggested not adopting the proposed emergency response coordination requirements on the basis that they are already required under other regulations, or are being carried out voluntarily. While it is true that in some cases, other Federal or state regulations contain emergency response coordination provisions similar to those in the final rule, many regulated sources are not subject to other regulations with requirements comparable to those in the final rule. Also, in locations without functional LEPCs, other local response authorities may be carrying out local emergency planning functions, and these organizations may be unable to rely on authorities granted to LEPCs under EPCRA to obtain needed information. Where regulated sources are already subject to other Federal or state emergency response coordination requirements comparable to those in the final rule, compliance with those regulations may be used to demonstrate compliance with the final rule, to the extent the activities meet the specific requirements of the rule. Similarly, while EPA agrees that some facilities may already voluntarily carry out the coordination activities required under the final rule, not all regulated facilities do so. Facilities that already carry out these activities voluntarily may also use them to demonstrate compliance with the final rule to the extent the activities meet the specific requirements of the rule.

EPA understands some communities do not have functional LEPCs, but has accounted for this possibility by requiring coordination to be with “local emergency planning and response organizations.” This term is intended to encompass all manner of local public emergency planning and response organizations. In many cases this will be the LEPC, but in other cases it may be a local emergency management agency, a local fire department, or another local response organization (or, if appropriate, multiple organizations). These non-LEPC planning entities can use this provision to obtain necessary planning information even when they lack the authority granted LEPCs under EPCRA 303(d)(3). Regardless of whether or not their community has an active LEPC, EPA expects owners and operators of regulated sources to make good faith efforts to carry out the coordination activities required in the final rule. If local emergency planning and response organizations decline to participate in coordination activities, or the owner or operator cannot identify any appropriate local emergency

planning and response organization with which to coordinate, the owner or operator should document their coordination efforts, and continue to attempt to perform coordination activities at least annually.

EPA is also aware that increasing regulated facilities’ emergency response coordination obligations will often place increased demands on local emergency planning and response organizations through increased coordination requests made by the owners or operators of regulated sources located in their communities. This is an unavoidable consequence of increasing the owner or operator’s emergency response coordination obligations. However, the final rule’s emergency response coordination requirements are intended to be a straightforward information exchange for both regulated sources and local response organizations, and therefore should not be highly burdensome for either party. Also, the regulatory requirements for coordination have been placed on the owner or operator, rather than local emergency planning and response organizations. Therefore, local response organizations are not obligated to participate in the coordination activities specified in the final rule. In our estimate of the burden of the rule, we have conservatively projected an estimate of the cost of coordination on local responders. EPA expects in most cases, local responders will participate in these coordination activities because it is in their best interest to have up-to-date information about the risks posed by regulated stationary sources in their community and sources’ emergency response plans.

e. Frequency of Emergency Response Coordination Activities

Many commenters, including state or local agencies and industry trade associations, expressed support for EPA’s proposal to require annual emergency response coordination activities between owners and operators and local emergency response officials. Commenters noted such ongoing coordination could help clarify roles and responsibilities and refresh contacts. Some commenters expressed concerns that annual coordination may be difficult or impractical if a source is remote or if local authorities refuse to participate. One commenter suggested that coordination activities should occur on a regular basis at an appropriate frequency determined by the facility and when there is a significant change to the source’s emergency plan.

EPA has decided to finalize as proposed the requirement at § 68.93(a)

for coordination to occur at least annually and more frequently if necessary. EPA agrees with the majority of commenters that believe that regular ongoing coordination is useful to address changes at the source and in the local community emergency plan. EPA believes most sources are located close enough to local responders to make annual coordination activities practical. Where necessary, owners and operators and local authorities may conduct coordination activities remotely (e.g., using conference calls, webinars, email, etc.). EPA does not agree the frequency of coordination should be left completely up to the source. Sources and local response organizations may choose to coordinate more frequently than annually, but the Agency believes annual emergency coordination between regulated sources and local responders is necessary to the development and maintenance of effective response plans,¹⁰⁹ and unlikely to impose an undue burden on any source.

f. Annual Coordination Meetings

In the proposed rulemaking, EPA did not specifically propose to require that the owner or operator “meet with” local authorities to conduct annual coordination. However, in the preamble to the proposal, EPA did indicate that as part of the coordination, the owner or operator and the local response authorities should “work together” to determine who will respond if an incident occurs, and what would be an appropriate response. Additionally, in the information availability section of the preamble to the proposed rulemaking, EPA requested comment on whether the Agency should require owners and operators to meet with LEPCs and emergency responders. Several commenters recommended EPA clarify that coordination activities should include regular meetings between the owner or operator and local authorities. These commenters noted that such regular meetings would provide opportunities for both parties to exchange, update, and discuss information relating to emergency response planning. One commenter noted that annual meetings would allow the owner or operator to communicate potentially security-sensitive information needed for emergency preparedness and response. A few commenters noted that while they were in favor of coordination meetings, the owner or operator should not be held to a requirement for such meetings in situations where local authorities are

¹⁰⁹ See preamble discussion in proposed rulemaking, 81 FR 13671, March 14, 2016.

unable or unwilling to participate. Another commenter stated that coordination meetings should occur, but the frequency of such meetings should be left up to the owner or operator and local authorities to decide.

In § 68.93(b) of the final rule, as part of the required annual coordination activities, EPA is requiring the owner or operator to request an opportunity to meet with the local emergency planning committee (or equivalent) and/or local fire department. The purpose of the annual coordination meeting is to allow the owner or operator to update and discuss the information being provided to local authorities, and to allow local authorities to provide the owner or operator with updated information on how the source is addressed in the community emergency response plan. The annual coordination meeting will also provide an opportunity for local authorities to request any other information that may be relevant to local emergency planning, and for the owner or operator to provide this information. In the final rule, EPA has worded the meeting requirement to only require the owner or operator to request such a meeting, so that the owner or operator would not be required to hold a meeting if local authorities are unable or unwilling to participate. The forum for coordination meetings is left up to the reasonable judgement of the owner or operator and local response authorities. They may choose to hold a meeting specifically for this purpose, or combine the coordination meeting with another appropriate meeting, such as a regularly scheduled LEPC meeting, if both parties agree to the arrangement. Where necessary, owners and operators and local authorities may hold meetings remotely (e.g., via conference call or webinar).

g. Coordination of Exercise Frequencies and Plans

In § 68.96(b) of the final rule the owner or operator of a responding stationary source is required, as part of their emergency response coordination activities, to consult with local emergency response officials to establish appropriate frequencies and plans for tabletop and field exercises. This provision was added because numerous commenters, including industry associations, facilities, government agencies, and others, objected to the potentially high burden associated with conducting field exercises every five years and tabletop exercises every year. An association of government agencies noted that requiring field exercises every five years and tabletop exercises every year would place substantial burdens on LEPCs and

response agencies, particularly as these organizations are often composed of volunteers. This commenter recommended that the frequency and scope of field and tabletop exercises be determined as part of the coordination process. EPA adopted a modified form of this provision (which is discussed further in the following preamble section on Emergency Response Exercises) in the final rule, and therefore added language to § 68.93 (b) to also require that for responding stationary sources, coordination must include consulting with local emergency response officials to establish appropriate schedules and plans for field and tabletop exercises.

EPA understands there may be cases where local emergency response agencies are unable or unwilling to coordinate with a regulated stationary source on exercise frequencies and plans, or to participate in exercises. In such cases, the owner or operator may establish appropriate exercise frequencies and plans on their own, provided they meet the minimum requirements set forth in § 68.96. Also, the owner or operator should revisit their exercise schedules and plans at the next annual coordination opportunity with local response officials, so that these officials are given an opportunity for input on exercise schedules and plans, even if they remain unable to participate in the exercises.

h. Documentation of Coordination Activities

Many commenters, including state and local agencies and industry trade associations, expressed support for EPA's proposal to require documentation of coordination activities. Several commenters requested EPA clarify how facilities should document coordination activities when local responders are not available or responsive to a facility's attempts to coordinate. Some commenters suggested that EPA require facilities make a reasonable attempt to make arrangements to coordinate with local responders and document any failure to complete such arrangements. One commenter suggested facilities should be required to seek a written or electronic acknowledgement from local responders of coordination efforts, or, if unavailable, document any efforts made to coordinate. A few commenters expressed opposition to the requirement for documentation of coordination. One indicated that such documentation could "serve as a basis for mutual accusations or second-guessing between first responders and the RMP-regulated facility in the aftermath of an

emergency." Another indicated that fire departments in California have found CalARP requirements to document emergency coordination to be a large burden. A third commenter stated that if facilities are included in the community response plan, this should be all the documentation needed to demonstrate coordination.

EPA has decided to finalize the requirement at § 68.93(c) for coordination to be documented, as proposed (the final rule reverses the order that the coordination and documentation provisions appear in the regulatory text). The final rule does not specifically require the owner or operator to seek acknowledgement from local responders of coordination efforts. The owner or operator may seek such acknowledgement if desired, but local authorities are not required to provide it. EPA believes the required documentation elements, which include the names of individuals involved in coordination activities and their contact information, the dates of coordination activities, and the nature of coordination activities, should clearly demonstrate whether local responders were involved in coordination, without requiring any other specific acknowledgement from local responders. EPA agrees with commenters that suggested the owner or operator should document any unsuccessful attempts to coordinate with local response organizations. The final rule does not specifically require the owner or operator to document unsuccessful coordination attempts, but EPA believes it will be in the owner or operator's best interest to do so, and allow the owner or operator to demonstrate their good faith efforts to conduct coordination activities in the event an implementing agency requests this information.

EPA does not agree with commenters' objections to documentation of coordination activities. If response to an emergency goes badly, documentation of prior coordination is more likely to clarify deficiencies than obscure or exacerbate them. The objection that documentation could cause a large burden on fire departments is not applicable to this provision, as the requirement for documentation in this rule is placed on the owner or operator rather than local responders, and in any case, the Agency does not view the documentation requirement as highly burdensome. Most of the documents the final rule requires the owner or operator to provide to local authorities are either already required to exist (i.e., emergency response plan and emergency action plan), or should require minimal effort

to produce (*i.e.*, updated emergency contact information, names and contact information of individuals involved in coordination activities, dates of coordination activities, and the nature of coordination activities). EPA views these documentation requirements as straightforward and minimally burdensome.

During coordination meetings, EPA encourages owners and operators to provide local emergency response officials with additional documentation relating to emergency planning if those officials request it. The annual coordination provisions require the owner or operator to ensure local response organizations are aware of the regulated substances at the source, their quantities, the risks presented by covered processes, and the resources and capabilities at the facility to respond to an accidental release of a regulated substance. The final rule also requires the owner or operator to provide any other information local emergency planning and response organizations identify as relevant to local emergency planning. In most cases, the Agency believes the most efficient way for the owner or operator to provide such information is to not only discuss it during annual coordination meetings, but also to provide appropriate documentation to local authorities.

Lastly, EPA does not agree that a facility's inclusion in the community response plan is sufficient documentation to demonstrate annual coordination. EPA notes that community emergency response plans are not prepared or maintained by stationary sources, and that EPCRA does not require community emergency plans to be updated annually. Without regular emergency response coordination activities involving local authorities, the owner or operator could remain unaware of important changes in the community emergency plan, and local responders could remain unaware of changes at the source that could potentially affect the response to an accidental release.

EPA believes there is a wide range of potential outcomes from emergency response coordination activities, but the primary purpose of such coordination should be the regular sharing of information between the owner or operator and local response authorities. Both the owner or operator and local responders should benefit from this exchange by becoming more aware of each organization's response capabilities, resources, and procedures. Based on these increased coordination activities, both regulated sources and

local response organizations will be better able to adapt their response plans and procedures to updated information. This information exchange could also prompt some facilities to enhance their existing response capabilities, and even to develop a full emergency response program where none previously existed. Conversely, such increased coordination could result in local authorities, in consultation with an owner or operator, deciding that local public responders are better positioned to respond to releases of regulated substances at the source than the facility itself. Additionally, coordination could lead to development of mutual aid agreements with neighboring facilities, arrangements with response contractors, or other means to improve community and/or facility response plans, procedures, and resources. Such measures could enhance both the community's and facility's ability to effectively respond to emergencies without necessarily requiring a facility to maintain its own hazardous materials response team and/or fire brigade, unless the owner or operator, after coordinating with local authorities, decides this is the most effective approach.

i. Changes to Emergency Response Program Provisions

The proposed rulemaking contained two substantive changes to the emergency response program provisions of § 68.95. The first change would have modified the emergency response plan provision in § 68.95(a)(1)(i) that requires the plan to include procedures for informing the public and local emergency response agencies about accidental releases, to also require these procedures to inform appropriate Federal and state emergency response agencies about accidental releases. EPA received no comments on this provision, and therefore is finalizing it as proposed.

The second change would have modified § 68.95(a)(4). Under the existing rule, this provision requires the emergency response program to include procedures to review and update the emergency response plan to reflect changes at the stationary source and ensure employees are informed of changes. The proposed change would have required the owner or operator to review and update the emergency response plan annually, or more frequently if necessary, to incorporate recommendations and lessons learned from emergency response exercises, incident investigations, or other available information.

Some commenters stated that requiring annual updates to the facility emergency response plan is unnecessary, and that EPA should allow updates to be performed less frequently, such as every three or five years, unless changes occur. Others stated that the proposed requirement was vague and should be clarified. A few commenters, including an industry trade association and a private citizen, commented that EPA's proposed requirement to require annual updates to emergency response plans incorrectly assumes the owner or operator will know when changes in community emergency response resources and capabilities occur. One facility requested EPA clarify in the final rule that facilities would not be deemed noncompliant if changes in local authorities' response plans or capabilities occur without notification to the facility. A private citizen suggested EPA add a requirement for local response authorities to provide a copy of the local community emergency response plan to the facility.

The final rule has adopted a modified version of the proposed emergency response plan update provision. Under the final rule, the owner or operator must review and update the emergency response plan as appropriate based on changes at the source or new information obtained from coordination activities, emergency response exercises, incident investigations, or other available information, and ensure that employees are informed of the changes. EPA agreed with commenters who stated that requiring annual emergency response plan updates is unnecessary. EPA is not finalizing a requirement to update the emergency response plan annually, because while coordination activities will occur annually, they may not always generate information that necessitates changes to the facility's emergency response plan. Other events that could trigger updates to the emergency response plan, such as incident investigations and field and tabletop exercises, may also occur less frequently than annually, and may or may not produce information that could affect the emergency response plan. Therefore, EPA has decided to finalize a more flexible update provision. Under the final rule, the owner or operator is required to update the emergency response plan, but only when changes at the source, or new information obtained from coordination activities, exercises, incident investigations, or other information sources make it appropriate to change the plan.

EPA disagrees with commenters who stated the owner or operator will be unaware of changes in community

emergency response resources that could affect the source's emergency response plan. EPA believes the annual coordination provision should ensure the owner or operator is kept up to date on relevant changes in the community emergency response plan. EPA agrees with commenters that the owner or operator should not be held responsible for updating the facility emergency response plan to reflect changes in the local community emergency response plan if local response officials do not provide the necessary information. However, the Agency is not requiring local authorities to provide a complete copy of the local community emergency plan to the owner or operator. Local authorities may provide it if they choose, and in some cases the community emergency response plan may be publicly available information. However, the local community emergency response plan may also contain a significant amount of information that is not relevant to the owner or operator, so local response authorities may prefer to provide only the information from the community emergency response plan that relates to the stationary source.

In the final rule, the Agency has also included a requirement to ensure employees are informed of any changes to the emergency response plan. This requirement was already in § 68.95(a)(4) of the existing rule, but had inadvertently been omitted from the proposed rulemaking language that revised this section. One commenter noted this issue, and stated that workers should continue to be involved in reviewing the emergency response plan. EPA agrees, and therefore has restored this provision in the final rule.

Lastly, EPA is finalizing the proposal to replace the term "local emergency planning committee" with the acronym "LEPC." EPA received no comments on this issue.

B. Facility Exercises

1. Summary of Proposed Rulemaking

In § 68.96 of the NPRM, EPA proposed to require three types of emergency response exercises under Subpart E of the RMP rule—notification, field, and tabletop exercises. Under § 68.96(a), EPA proposed to require all stationary sources with any Program 2 or Program 3 process to conduct annual notification exercises that would include contacting the Federal, Tribal, state, and local public emergency response authorities and other external responders that would respond to accidental releases at the source. EPA also proposed that these exercises be

documented and written records maintained for a period of five years.

Under § 68.96(b), EPA proposed that responding stationary sources develop and implement an exercise program that includes field and tabletop exercises. Under § 68.96(b)(1), field exercises would have been required at least once every five years, and within one year of any accidental release meeting the accident history reporting requirements of § 68.42. Under § 68.96(b)(2), tabletop exercises would have been required annually, except during the calendar year when a field exercise was conducted. Also under these provisions, when planning field and tabletop exercises, EPA proposed to require the owner or operator to coordinate with local public emergency responders and invite them to participate in exercises.

Lastly, under § 68.96(b)(3), EPA proposed to require the owner or operator to prepare an evaluation report for both field and tabletop exercises, within 90 days of the exercise. The report would require a description of the exercise scenario, names and organizations of each participant, an evaluation of the exercise results including lessons learned, recommendations for improvement or revisions to the emergency response exercise program and emergency response program, and a schedule to promptly address and resolve recommendations. In the preamble to the proposed rulemaking, EPA indicated the report would also include an evaluation of the adequacy of coordination with local emergency response authorities, and other external responders, as appropriate.

2. Summary of Final Rule

EPA is finalizing the notification exercise provisions of § 68.96(a) as proposed but with modifications. Under § 68.96(b), the final rule requires responding stationary sources to develop and implement an exercise program that includes both field and tabletop exercises; however, EPA is modifying the exercise frequency to allow an owner or operator to establish a schedule in coordination with local officials, with minimum timeframes prescribed in the rule. Exercises must involve facility emergency response personnel and, as appropriate, emergency response contractors. When planning emergency response field and tabletop exercises, the owner or operator must coordinate with local public emergency response officials and invite them to participate in the exercise.

a. Field Exercises

Section 68.96(b)(1) requires the owner or operator to conduct field exercises involving a simulated accidental release of a regulated substance. Under § 68.96(b)(1)(i), as part of the coordination with local emergency response officials required by § 68.93, the owner or operator is required to consult with these local officials to establish an appropriate frequency for field exercises. However, in all cases, the owner or operator must conduct a field exercise at least once every ten years.

Section 68.96(b)(1)(ii) identifies the scope of the field exercises including tests of: Notification procedures; procedures and measures for emergency response actions (including evacuations and medical treatment); and communications systems. Field exercises must also involve: Mobilizing of facility emergency response personnel, including contractors, as appropriate; coordinating with local emergency responders; deploying emergency response equipment; and any other action identified in the emergency response program, as appropriate.

b. Tabletop Exercises

Section 68.96(b)(2) requires the owner or operator to conduct tabletop exercises involving the simulated accidental release of a regulated substance. Under § 68.96(b)(2)(i), as part of the coordination with local emergency response officials required by § 68.93, the owner or operator is required to consult with these officials to establish an appropriate frequency for tabletop exercises. However, in all cases, the owner or operator must conduct a tabletop exercise at least once every three years.

Section 68.96(b)(2)(ii) requires tabletop exercises to include discussions of: Procedures to notify the public and the appropriate Federal, state, and local emergency response agencies; procedures and measures for emergency response including evacuations and medical treatment; identification of facility emergency response personnel and/or contractors and their responsibilities; coordination with local emergency responders; procedures for equipment deployment; and any other action identified in the emergency response plan, as appropriate.

c. Documentation and Alternatives

EPA is finalizing the documentation provisions of § 68.96(b)(3) as proposed. The owner or operator must prepare an

exercise evaluation report within 90 days of each field and tabletop exercise.

The final rule also adds § 68.96(c) to describe alternative means of meeting RMP exercise requirements. Under § 68.96(c)(1), the owner or operator may satisfy the requirement to conduct notification, field and/or tabletop exercises through exercises conducted to meet other Federal, state or local exercise requirements, provided such exercises meet the RMP exercise requirements of § 68.96(a) and/or (b), as appropriate.

Under § 68.96(c)(2), the owner or operator may satisfy the requirement to conduct notification, field and/or tabletop exercises by responding to an accidental release, provided the response includes the actions indicated in § 68.96(a) and/or (b), as appropriate. When response to an accidental release is used to meet field and/or tabletop exercise requirements, the final rule requires the owner or operator to prepare an after-action report comparable to the exercise evaluation report required in § 68.96(b)(3), within 90 days of the incident.

3. Discussion of Comments and Basis for Final Rule Provisions

Many commenters, including industry trade associations, facilities, government agencies, environmental advocates, private citizens, and others supported EPA's proposal to incorporate emergency response exercise requirements into the RMP rule. Most commenters supported EPA's proposal to require notification exercises. Many commenters also supported incorporating requirements for field and tabletop exercises into the RMP rule, but some of these commenters also recommended various changes to the proposed provisions. Other commenters, including industry trade associations, facilities, and others, recommended eliminating field and/or tabletop exercises. The approach adopted in this rule increases the flexibility for local responders and stationary source owners and operators to tailor their exercises to their communities and to their resources. Public comments on each proposed requirement within the emergency response exercise provisions of Subpart E are discussed further in this preamble, along with EPA's decisions for the final rule.

a. Notification Exercises

Almost all commenters that addressed EPA's proposed notification exercise requirements supported those requirements as proposed. Many of these commenters stated notification

systems must be tested regularly to ensure they function successfully in the event of an emergency. A few commenters recommended changes to the notification exercise requirement. One commenter suggested notification exercises should occur every five years unless changes occur (*e.g.*, management, operation, or physical changes), in which case they should occur within 60 days of the change. Another commenter supported a requirement to confirm emergency contact information but opposed a requirement to send an actual "test" notification, stating this would be an unnecessary burden on facilities and responding organizations. A different commenter requested EPA exempt RCRA-permitted facilities from annual notification exercise requirements, where the RMP-regulated process is also covered by a RCRA permit, stating the proposed requirements are duplicative of RCRA requirements.

EPA disagrees notification exercises should occur every five years unless changes occur, because the Agency believes five years is too long of a gap to confirm whether emergency notification information is correct and emergency notification systems function properly. For example, EPA notes that emergency contact information provided in RMPs frequently changes, particularly when facilities go several years between RMP updates. For this reason, in 2004 the Agency modified the RMP submission requirements to require emergency contact information provided in RMPs to be corrected within one month of any change in that information. EPA also disagrees management, operational, and physical changes at the facility necessarily represent appropriate triggers for verification of emergency response contact information. In some cases, such changes may affect emergency notification, but notification systems and procedures may also be affected by other changes, such as changes in the community emergency response plan. While EPA believes it would be beneficial for the owner or operator to update their emergency contact information and confirm the functionality of notification systems whenever relevant changes occur, in some cases changes that affect emergency contact information and notification systems may be infrequent, and result in facility personnel and local responders becoming unfamiliar with stationary source emergency notification procedures. EPA believes a requirement for annual notification exercises will ensure that emergency contact information and notification systems

remain relatively current, and also provide regular training for facility personnel and local responders.

EPA also disagrees that requiring an actual test of the facility's notification system is unnecessary. Requiring annual testing of notification systems should prevent situations where emergency notification systems are only found to be ineffective when they are most needed. Short of actually using the emergency notification system during an accidental release, performing a test of the facility's emergency notification system is the most practical way to evaluate whether or not the system is functional.

EPA expects the notification exercise will involve testing of on-site notification equipment and procedures, including contacting each entity listed on the facility's notification list to verify the contact information and identify that the facility is conducting a notification exercise. Therefore, EPA does not believe testing notification mechanisms is unduly burdensome. EPA also disagrees with exempting RCRA-permitted facilities from the notification exercise requirement. However, in the final rule, EPA has added § 68.96(c) to clarify that exercises conducted to meet other Federal, state, or local exercise requirements will also satisfy the requirements of this rule, provided such exercises meet all of the applicable requirements of the RMP exercise provision.

Due to the significant support for and minimal opposition to the proposed notification exercise requirements of § 68.96(a), EPA is finalizing those requirements without modification. Therefore, under the final rule, all regulated sources with any Program 2 or Program 3 process must conduct an exercise of the source's emergency response notification mechanisms at least once each calendar year. During listening sessions conducted under Executive Order 13650, members of the public expressed significant concerns about ineffective emergency notification systems and procedures during accidental release events at regulated sources, and about receiving little or no information on procedures for evacuation and sheltering-in-place. In most cases, community notification, evacuation, and sheltering are managed by local authorities after receiving an emergency notification from the regulated source. EPA encourages owners and operators to work with local authorities to perform joint comprehensive testing of facility and community notification systems where possible, and to provide updated information to local communities on

evacuation and sheltering procedures. In some cases, regulated facilities provide direct notification to nearby residents and other members of the community when an accident has occurred. These may include audible and/or visual alarms and sirens, reverse 911 calling systems, or other direct notification systems. Where such systems are in place, annual notification exercises should include tests of those systems during the exercise. In either case, EPA recommends regulated sources and communities work together after conducting notification exercises to evaluate the effectiveness of notification, evacuation, and sheltering systems and procedures, and make improvements to those systems and procedures as appropriate, based on lessons learned during exercises.

b. Field and Tabletop Exercises

EPA received numerous comments on the proposed field and tabletop exercise provisions. Most commenters, including industry trade associations, facilities, government agencies, environmental advocates, and others provided general support for including field and tabletop exercise requirements in part 68, although many also recommended changes to the required frequency of field and tabletop exercises, expressed concerns regarding any requirement for local public responders to be involved in exercises, or recommended other changes to the proposed requirements. Several other commenters entirely opposed adding field and tabletop exercise requirements to the rule. In general, these commenters stated that field and tabletop exercises were unduly burdensome on both facilities and local responders, and exercises are unnecessary because annual coordination activities would be sufficient to prepare facility employees and local responders to respond to accidental releases.

EPA disagrees with comments that recommend completely eliminating requirements for field and/or tabletop exercises in the final rule. The Agency views exercises as an important component of an emergency response program for responding stationary sources, because it allows these sources to implement their emergency response plans, test their actual response procedures and capabilities, identify potential shortfalls, and take corrective action. EPA also continues to believe both field and tabletop exercises will provide essential training for facility personnel and local responders in responding to accidental releases, and will ultimately mitigate the effects of such releases at RMP facilities.

Therefore, in the final rule, EPA is requiring all responding stationary sources to perform field and tabletop exercises. However, in the final rule EPA has also modified some provisions of § 68.96 in order to address public comments. These changes are discussed in more detail in the following sections.

c. Frequency of Exercises

The greatest number of comments on the proposed field and tabletop exercise provisions related to the required frequency for exercises. While several commenters supported EPA's proposed requirements for annual tabletop exercises and field exercises every five years, some commenters recommended requiring more frequent field exercises, while others recommended requiring field and/or tabletop exercises less frequently, and still others argued that EPA should retain the requirement for field and tabletop exercises but allow owners and operators to have flexibility in the scheduling of exercises.

Support for more frequent field exercises. Commenters who argued for more frequent field exercises included non-governmental organizations, government agencies, and others. These commenters stated that EPA's proposed five-year frequency for field exercises was insufficient. One commenter argued a five-year timeframe for field exercises does not conform to CAA section 112(r)(7)(B)(i), which states "the Administrator shall promulgate reasonable regulations and appropriate guidance to provide, to the greatest extent practicable, for the prevention and detection of accidental releases of regulated substances and for response to such releases by the owners or operators of the sources of such releases." This commenter also stated that more frequent exercises are necessary so that response personnel would gain more experience. Several other commenters who recommended more frequent exercises noted that sources subject to the New Jersey Toxic Catastrophe Prevention Act (TCPA) regulations are required to conduct annual field exercises. Other commenters argued more frequent field exercises are needed due to the potential for personnel turnover that results in the loss of institutional knowledge and collaborative relationships between covered facility owners/operators and community emergency responders.

EPA disagrees that CAA section 112(r)(7) requires EPA to establish a requirement for more frequent exercises. The statute itself in CAA section 112(r)(7)(B)(i) does not contain a requirement for emergency response exercises, therefore, nothing in the

statute mandates a frequency for such exercises if the EPA decides some exercises may be reasonable. The requirement to conduct emergency response exercises derives from EPA's authority to set "reasonable regulations" that include "procedures and measures for emergency response after an accidental release of a regulated substance in order to protect human health and the environment." CAA section 112(r)(7)(B)(ii) further requires owners and operators to prepare and implement a risk management plan that includes, among other things, "a response program providing for specific actions to be taken in response to an accidental release of a regulated substance so as to protect human health and the environment, including procedures for informing the public and local agencies responsible for responding to accidental releases, emergency health care, and employee training measures." This statutory language provides the Administrator with discretion to decide what components of an emergency response program are reasonable to include in regulations.

EPA believes exercising emergency response plans is a reasonable requirement in order to ensure that emergency response programs will work well in the event of an accidental release. However, EPA is cognizant of the resources (e.g., staffing, cost, expertise) that exercises demand both from stationary sources and from local responders. To ensure the reasonableness of the exercise requirement, EPA has provided flexibility for stationary sources and local emergency responders to set schedules for such exercises. Given the differences among communities and stationary sources impacted by the national Risk Management Program rule, the reasonable minimum frequency for exercises will vary by locale from that which is appropriate under the NJ TCPA requirements.

EPA disagrees with commenters who recommended requiring field exercises more frequently than every five years. EPA notes that its own regulatory impact analysis for the NPRM projected the emergency response exercise provisions to be the costliest provision of the NPRM, and the Agency is concerned that a requirement for even more frequent field exercises could be prohibitively expensive for some facilities and local responders.

Regarding commenters' concerns about the potential that less frequent exercises may result in response personnel gaining less experience, and for personnel turnover to result in the

loss of institutional knowledge and relationships between facility operators and community emergency responders, EPA shares such concerns, but must balance those concerns with the potentially higher burdens that more frequent exercises could place on facility response personnel and community responders. Also, EPA believes the annual emergency response coordination requirements of § 68.93 will foster strong ongoing relationships between facility personnel and local responders, and prevent the loss of institutional knowledge. Furthermore, the timeframes EPA is establishing in the final rule are minimum expectations and we encourage owners and operators to establish appropriate schedules for exercises, in consultation with local officials, considering factors such as hazards, organizations (including facility personnel training needs and personnel turnover), budgets, resource demands, regulations, or other factors.

Arguments for less frequent exercises. Commenters who argued for less frequent field and/or tabletop exercises included industry associations, government agencies, facilities, local responders, private citizens, and others. These commenters stated that requiring field exercises every five years and tabletop exercises every year would be overly burdensome on facilities and local responders. Some of these commenters submitted data to EPA to substantiate their burden estimates. One commenter recommended reducing the required exercise frequency because holding exercises as frequently as proposed by EPA would discourage regular participation by facility personnel and local responders. Several commenters recommended the frequency of field and tabletop exercises be left to the discretion of the source and/or local responders, so that the exercise schedule could be tailored to the individual circumstances of sources and local communities. These commenters also stated that exercises—and particularly field exercises—can be very costly for both sources and local responders. They also indicated that setting a single exercise frequency for all sources does not account for the differing situations faced by different sources and communities. In some cases, these commenters argued, requiring too-frequent exercises could potentially divert resources away from other important safety activities. One commenter representing an association of state emergency planning officials supported an exercise requirement, but recommended the frequency for both field and tabletop exercises be

determined by collaboration between the source and local responders during the emergency response coordination process.

EPA found these comments compelling. EPA's own projections in the Regulatory Impact Analysis for the proposed rulemaking indicated that exercises would be the costliest provision of the proposed rulemaking, and in order to limit these costs, one alternative considered in the NPRM was to require only tabletop exercises. Additionally, the Agency is sympathetic to the concerns raised by emergency response officials and others that participation in exercises by local responders can be burdensome, particularly in smaller communities with volunteer responders and fewer response resources, as well as in communities where multiple RMP facilities are present—which would place proportionally greater demands on responders who desire to participate in the RMP facility exercises held within their jurisdiction. EPA is also mindful of the concerns raised by small business owners and their representatives both during SBAR panel process and in comments submitted to EPA, who pointed out that exercises could potentially place a relatively larger burden on small businesses.

For these reasons, in the final rule EPA has modified the provision for frequency of both field and tabletop exercises to allow sources and local responders to work together to establish an exercise frequency appropriate to their situation. However, as EPA continues to believe that both field and tabletop exercises are an important component of an emergency response program, the Agency does not believe any responding source should be allowed to reach an agreement that practically exempts the source from the exercise program requirements. This could happen if a source reached agreement with local responders to hold exercises extremely infrequently. Therefore, the Agency is also establishing a minimum required exercise frequency of ten years for field exercises, and three years for tabletop exercises. The Agency believes even the smallest sources will be able to hold field exercises at least once each decade, and in many cases EPA expects sources will hold field exercises more frequently. The Agency set the frequency for tabletop exercises to be more frequent than field exercises because tabletop exercises require less time and fewer resources to plan and conduct than field exercises, and therefore EPA believes sources will be

able to perform tabletop exercises at least every three years.

Under the final rule, owners and operators are required to coordinate with local responders to establish an exercise frequency that works for both organizations. In establishing the exercise frequency, owners or operators and local responders may account for whatever factors they deem appropriate. Owners or operators and local authorities may also adjust exercise frequencies as needed to account for changes in hazards, organizations, budgets, resource demands, regulations, or other factors, provided that field exercises occur at least every ten years, and tabletop exercises occur at least every three years. The agency notes that some RMP facilities may be subject to a more frequent schedule for exercises under other (*e.g.*, state or local) regulations. In such cases, the owner or operator should comply with the more stringent exercise frequency requirement. By doing so, they will ensure that they also meet the required exercise frequency for the RMP exercise requirements.

d. Local Responder Participation in Exercises and Exercise Planning

EPA proposed to require owners and operators to coordinate with local public emergency response officials when planning emergency response field and tabletop exercises, and invite them to participate in exercises. While most public comments on this issue supported the idea that local response officials should be involved in exercise planning and execution, many comments submitted by industry associations, facilities, government agencies, and others expressed concerns that local responders could easily become overburdened by any requirement to participate in planning or conducting exercises. These commenters pointed out that in many communities, local response organizations may be staffed with volunteers, or may have multiple RMP facilities within their jurisdiction, such that local response organizations could be significantly impacted by a requirement to participate in exercises. These commenters agreed that local responders should be invited to participate in exercises, but recommended that EPA not require local authorities to participate in planning or conducting exercises, and not hold facilities accountable if local response organizations decline to participate. Comments submitted by industry associations and facilities also recommended EPA address the possibility that exercises may

sometimes need to be postponed if local response organizations are unable to participate due to actual emergencies or lack of resources. These commenters recommended that EPA allow extensions of the required timeframe for conducting the next exercise, or allow the owner or operator to meet the exercise requirement by conducting the exercise as soon as possible without participation by local responders, if necessary.

In addition to coordinating with local response authorities to establish an exercise frequency, the final rule also requires the owner or operator to coordinate with local public emergency response officials when planning field and tabletop exercises, and to invite local responders to participate in exercises. EPA agrees with the many commenters who stated that any requirement for local responders to participate in planning or conducting exercises could in some cases overburden local response organizations or make it difficult for regulated facilities to timely meet the exercise requirements. EPA is aware of, and various public comments have noted, the fact that in the past some sources have been unable to locate local response organizations who are able or willing to perform such coordination activities. Therefore, while the final rule requires the owner or operator to coordinate with local public responders to establish field and tabletop exercise frequencies and plan exercises, and invite local emergency responders to participate in exercises, the final rule does not require local responders to participate in any of these activities.

In most cases, the LEPC, fire department, or equivalent local emergency response authority would be the appropriate party for the owner or operator to conduct exercise planning and coordination. EPA believes these local response authorities will usually be willing to perform emergency response coordination activities, including exercise coordination activities, with regulated sources. In many cases, EPA expects that exercise planning can be included as part of the annual coordination meetings required under § 68.93. In other cases, the owner or operator and local responders may choose to hold separate exercise planning meetings. EPA also understands that in some cases local responders may elect to limit their participation in exercise coordination activities because of limitations on their available time and resources. However, if the owner or operator is unable to identify a local emergency response organization with which to coordinate

field and tabletop exercise schedules and plans and participate in exercises, or the appropriate local response organizations are unable or unwilling to participate in these activities, then the owner or operator may unilaterally establish appropriate exercise frequencies and plans, and if necessary hold exercises without the participation of local responders. In these cases, the owner or operator must still ensure that field exercises occur at least every ten years, and tabletop exercises occur at least every three years. Additionally, the owner or operator should continue to make ongoing efforts to locate appropriate local public response officials for purposes of emergency response and exercise coordination and participation.

As EPA believes the final rule provides the owner or operator with ample flexibility to establish and modify exercise schedules, EPA sees no reason to provide for additional extensions of time for conducting exercises in the event that local responders cannot participate, or if for some other reason the exercise must be rescheduled. EPA recommends that owners and operators and local response organizations take such contingencies into account when establishing exercise schedules, so there is still time to complete the field or tabletop exercise within the allotted timeframe (*i.e.*, at least every ten years for field exercises and at least every three years for tabletop exercises) in the event the exercise must be postponed.

e. Exercise Scope

Some commenters recommended EPA clarify the required scope of exercises. One commenter indicated that if EPA does require exercises, the Agency should allow some variation in the scope of exercises based on the needs and resources of the community.

In the preamble to the proposed rulemaking, EPA explained that field exercises involve the actual performance of emergency response functions during a simulated accidental release event. Field exercises involve mobilization of firefighters and/or hazardous materials response teams, activation of an incident command structure, deployment of response equipment, evacuation or sheltering of facility personnel as appropriate, and notification and mobilization of law enforcement, emergency medical, and other response personnel as determined by the scenario and the source's emergency response plan. Field exercises include tests of:

- Procedures for informing the public and the appropriate Federal, state, and

local emergency response agencies about an accidental release;

- Procedures and measures for emergency response after an accidental release of a regulated substance including evacuations and medical treatment;

- Communications systems;
- Mobilization of facility emergency response personnel, including contractors as appropriate;
- Coordination with local emergency responders;
- Equipment deployment, and
- Other actions identified in the source's emergency response plan, as appropriate.

Tabletop exercises are discussion-based exercises without the actual deployment of response equipment. During tabletop exercises, responders typically assemble in a meeting location and simulate procedural and communications steps for response to a simulated accidental release, as determined by the scenario and the source's emergency response plan. Tabletop exercises include tests of:

- Procedures for informing the public and the appropriate Federal, state, and local emergency response agencies about an accidental release;
- Procedures and measures for emergency response after an accidental release of a regulated substance including evacuations and medical treatment;
- Identification of facility emergency response personnel and/or contractors and their responsibilities;
- Coordination with local emergency responders;
- Procedures for deploying emergency response equipment, and
- Other actions identified in the source's emergency response plan, as appropriate.

EPA believes these elements allow ample flexibility for the owner and operator, in consultation with local emergency response officials, to choose appropriate exercise scenarios. Involving local response officials in selecting exercise frequencies and in planning exercises should ensure that RMP facility exercises are consonant with the needs and resources of regulated facilities and local communities. By involving local public responders in the exercise scenario itself, responders may also be able to test or simulate important offsite emergency response actions that are usually managed by local public emergency response officials, such as community notification, public evacuations, and sheltering in place, and EPA encourages sources and local response officials to design exercise

scenarios where these functions are also tested. Responding stationary sources that rely on response contractors to perform emergency response functions during accidental releases should also ensure that response contractors participate in field and tabletop exercises.

In preparing the exercise evaluation report required under § 68.96(b)(3), the owner or operator should evaluate all aspects of the exercise, including, to the extent possible, any offsite aspects of the exercise such as community notification, evacuation, and sheltering in place. In many cases, this will require the owner or operator to involve local response officials in the exercise evaluation.

f. Post-Accident Exercises

In the NPRM, in addition to requiring periodic field and tabletop exercises, EPA proposed to require the owner or operator to hold a field exercise within one year of any accidental release required to be reported under § 68.42. Many commenters objected to this requirement. These commenters stated that this provision could potentially overtax facility and local responders, who would be required to deploy once for the incident, and again for the exercise following the incident.

EPA agrees with these comments, and therefore has decided not to finalize the requirement to conduct a field exercise within one year of an accidental release.

g. Alternatives for Meeting RMP Exercise Requirements

Several commenters indicated EPA should allow sources to meet the periodic field exercise requirements through the actual deployment of emergency response resources and personnel during accidental release events. Other commenters indicated that many regulated facilities are already subject to exercise requirements under other Federal, state, or local regulations, or through an industry code of practice, and these exercises should suffice to meet the exercise requirements of the proposed rulemaking. Comments from state regulatory agencies indicated that one agency already requires more frequent field exercises under state law, and another state government agency is considering imposing more frequent exercise requirements.

EPA generally agrees with these comments. The Agency does not want to establish exercise requirements that conflict with other Federal, state, or local laws. Therefore, in the final rule, EPA has added § 68.96(c) to describe alternative means of meeting exercise requirements. This section allows the

owner or operator to meet requirements for notification, field, and/or tabletop exercises either through exercises conducted to meet other Federal, state, or local exercise requirements (or under a facility's industry code of practice or another voluntary program) or by responding to an actual accidental release event, provided the exercise or response includes the actions required for exercises under § 68.96(a) and (b), as appropriate.

h. Joint Exercises

Several commenters, including industry associations and regulated facilities, indicated that some companies have formed mutual aid associations among several neighboring or nearby facilities so that participating facilities can share response personnel and resources in order to aid one another in responding to accidental release events at any member's facility. These commenters recommended that in such situations, or situations where there are clusters of regulated facilities located close together, EPA should not require each facility to conduct a field exercise, but rather allow these facilities to meet their periodic field exercise obligation by conducting a single joint exercise, where all participating facilities perform simulated response actions to an exercise scenario staged at one member-facility's site. These commenters indicated that this approach would reduce the exercise demands on small and medium-sized facilities, as well as local responders.

EPA agrees with these comments, and encourages owners and operators of neighboring RMP facilities to consider planning and conducting joint exercises. However, sources that participate in joint exercises must ensure that their participation meets all of the provisions of § 68.96(a) and/or (b), as appropriate. As commenters have noted, RMP facilities participating in mutual aid agreements with other nearby facilities already coordinate response actions and resources with those facilities, and EPA believes conducting joint exercises among these facilities will more accurately simulate their behavior in the event of an actual release event, and further enhance the ability of these facilities and surrounding communities to effectively respond to accidental releases. Even where such mutual aid agreements are not currently in place, EPA believes the owners and operators of neighboring regulated facilities should consider whether joint facility exercises may have benefits for participating facilities, local responders, and surrounding communities. Such benefits could include improved

identification and sharing of response resources, enhanced training for facility personnel and local responders, improvements in facility procedures and practices resulting from information sharing, and others. EPA also agrees that joint exercises may be particularly beneficial for small businesses. While the Agency believes that even small sources can design and conduct field and tabletop exercises that are appropriate to the size, hazards, and capabilities of the source, joint exercises involving multiple neighboring small sources would allow these sources to pool resources together in order to carry out more extensive exercise scenarios that could better simulate serious accidental release events. In areas where multiple RMP facilities are located close together, joint exercises could also reduce the overall burden of exercises on local response organizations, who might otherwise be asked to participate in multiple separate exercises.

i. Exercise Documentation

While most commenters who addressed the issue of exercise documentation acknowledged the need for exercise evaluation reports to be prepared, some commenters expressed concerns about specific aspects of the proposed exercise documentation requirements. Some commenters objected to the proposed rulemaking's requirement to prepare the evaluation report within 90 days, stating that evaluation reports for large exercises could take longer than 90 days to prepare, and that EPA should allow extensions of the required timeframe where appropriate. Still other commenters objected to the possibility that exercise evaluation reports that indicate deficiencies outside the control of an owner or operator could potentially be used by EPA in an enforcement action against the owner or operator. Other commenters stated EPA should not require exercise reports to include the names and associations of exercise participants, because this information could be difficult to obtain and would risk the privacy of exercise participants without any benefit.

EPA is finalizing the exercise documentation requirements of § 68.96(b)(3) as proposed. EPA is also requiring in § 68.96(c)(2), documentation of a response to an accidental release in order for the response to be used to satisfy the RMP field exercise requirements. The owner or operator must prepare an after-action report comparable to (and in lieu of) the exercise evaluation report required in § 68.96(b)(3), within 90 days of the incident, when the owner or operator

uses the response to an accidental release to meet their field or tabletop exercise requirement. This provision is necessary because documenting the response to an accidental release may differ from documenting the results of an exercise. For example, instead of documenting the “exercise scenario,” the owner or operator would document the nature of the accidental release prompting the response. Also, there may be additional aspects of the response to an accidental release that should be documented, such as any injuries, first aid and/or medical treatment that occurred. To the extent possible, the owner or operator should ensure that additional items such as these are documented in the after-action report, as well as information equivalent or comparable to that documented in an exercise evaluation report.

EPA disagrees with commenters who contend that 90 days is insufficient time to develop an exercise evaluation report (or after-action report), or that extensions of time should be granted for development of evaluation reports in certain circumstances. Unlike incident investigations, where report completion may require extensive and time-consuming evidence collection and forensic analysis, the basic elements required to be documented in an exercise evaluation report should be known relatively quickly after the conclusion of the exercise.

Regarding commenters concerns about the use of exercise evaluation reports in enforcement actions—an exercise report is like any other record required to be developed under 40 CFR part 68. Whether or not an exercise evaluation report would be used in an EPA enforcement action would depend on the specific facts and circumstances of the case.

EPA disagrees that exercise evaluation reports should not contain the names and associations of exercise participants. Under the final rule, the frequency of both field and tabletop exercises is mainly left to the reasonable judgement of the owner or operator and local response officials. In some cases, exercises may occur infrequently, and EPA believes that maintaining a written record including, among other things, the identification and affiliation of exercise participants will be useful in planning future exercises.

VI. Information Availability Requirements

EPA proposed requirements for making information available to LEPCs or emergency response officials, and the public in order to ensure that communities have the necessary

chemical hazard information to protect the health and safety of first responders and residents. The following sections provide an overview of the proposed and final rule provisions, public comments received, and EPA’s responses.

A. Disclosure Requirements to LEPCs or Emergency Response Officials

1. Summary of Proposed Rulemaking

EPA proposed that owners and operators of all RMP-regulated facilities provide certain information to LEPCs or local emergency response officials upon request. EPA stated that the facility should make this information available in a manner that is understandable and avoids technical jargon, convey it without revealing CBI or trade secret information, and adequately explain any findings, results, or analysis being provided.

EPA proposed that the owner or operator be required to develop the following chemical hazard information for all regulated processes and provide it, upon request, to the LEPC or local emergency response officials:

- *Information on regulated substances.* Information related to the names and quantities of regulated substances held in a process;
- *Accident history information.* The facility’s five-year accident history information required to be reported under § 68.42;
- *Compliance audit reports.*

Summaries of compliance audit reports developed in accordance with §§ 68.58, 68.59, 68.79, or 68.80, as applicable;

- *Incident investigation reports.* Summaries of incident investigation reports developed in accordance with § 68.60(d) or § 68.81(d), as applicable;
- *Inherently Safer Technologies (IST).*

For each process in NAICS codes 322, 324, and 325, a summary of the IST or ISD identified that the owner or operator has implemented or plans to implement;

- *Exercises.* Information on emergency response exercises required under § 68.96 including, at a minimum, schedules for upcoming exercises, reports for completed exercises, and other related information.

2. Discussion of Comments and Basis for Final Rule Provisions

Overall, commenters agreed that providing communities, local planners, and local first responders with appropriate chemical hazard-related information is critical to ensuring the health and safety of the first responders and local communities. Commenters that supported the proposed

requirements provided general support and offered no suggested changes other than to expand the IST requirement to apply to all facilities; require facilities to submit IST analyses to the LEPC; and make IST analyses available to the public.

However, most commenters, including professionals (e.g., consultants or technical/process safety experts), state agencies, facilities, and industry trade associations, did not support the requirement for facilities to submit specific chemical hazard-related information to LEPCs and local emergency response agencies, as the appropriate mechanism to ensure that local responders and planners have the information they need to mitigate chemical risks. Commenters provided several reasons for their objections including:

- A lack of data supporting the Agency’s concern that LEPCs are not receiving the information they need to develop local emergency response plans;
- Unnecessary redundancy with existing requirements, such as data reported under EPCRA;
- Data proposed is too broad and does not provide useful information pertinent to emergency response planning;
- The data may overwhelm LEPCs with technical information and the concern that most LEPCs lack the expertise needed to use this information to develop local emergency response plans; and
- Security concerns regarding how the information is maintained and handled by the LEPC or emergency response officials.

Of those commenters that did not support the proposed requirements, several stated that EPA provided no data supporting the Agency’s concern that some LEPCs were not receiving the information they needed to develop local emergency response plans. These commenters pointed to EPA’s 2008 National Survey of Local Emergency Planning Committees (LEPCs),¹¹⁰ which did not reveal any concerns about RMP facilities withholding information from LEPCs. According to these commenters, LEPCs indicated in the survey that they were able to obtain RMP data from EPA, the state, or RMP facilities and noted their greatest obstacle was lack of funding. In addition, commenters pointed out that the Executive Order 13650 Working Group report, Actions to Improve Chemical Facility Safety and

¹¹⁰ 2008 Nationwide Survey of Local Emergency Planning Committees (LEPCs). <https://www.epa.gov/epcra/nationwide-survey-local-emergency-planning-committees>.

Security—A Shared Commitment, May 2014¹¹¹ contains no findings about facilities ignoring LEPC requests for information or that lack of information provided to the LEPCs was an issue, but rather the report stated that LEPCs had concerns about managing all of the information provided under various laws and regulations, understanding how each chemical is regulated, and how to properly respond to an emergency involving specific chemicals. In addition, these commenters stated that while some CSB investigations^{112 113 114} highlighted a lack of emergency preparedness and recommended strengthening local infrastructures supporting LEPCs, they did not find that facilities refused to cooperate with the community or withheld chemical information from LEPCs.

Multiple commenters, including professionals, state and local government agencies, facilities, and industry trade associations, also stated that the information elements that EPA proposed to require facilities to share with LEPCs are already available to them through the EPCRA or reported in RMPs, which are also already available to the LEPCs. Several commenters noted that communication between LEPCs and facilities is satisfactory via the EPCRA process and stated that LEPCs were able to obtain RMP data from EPA. One commenter requested the EPA refocus its efforts into collecting required data from “outlier facilities who are not providing required chemical hazard information” rather than impose a duplicative requirement for the creation and distribution of data.

Many commenters also asserted that the scope of information required by the proposed provision was too broad. These commenters argued that incident

investigation summaries, compliance audit summaries, and IST or ISD implementation summaries would not provide useful information for emergency planning and that the proposed information requirements were unnecessarily detailed. Several of these commenters also suggested that the type and format of the information should be determined by individual LEPCs. Furthermore, commenters expressed concern that the information in these summaries would be too technical and LEPC staff may not have the expertise to understand the information being submitted or extrapolate information that may be useful.

Multiple commenters raised concerns regarding the security of sensitive chemical and facility information that would be shared with LEPCs under the proposed requirements. These commenters indicated that LEPCs would be unable to keep the information secure because they lack procedures and resources to properly vet those who would have access to the information, and that the information would be considered “public information” once it is provided to the LEPC. These commenters indicated that there are multiple ways for the public to access sensitive information from LEPCs through information requests from the public. Commenters also suggested that these requirements to disclose information to LEPCs interfere with the Department of Homeland Security’s (DHS) Chemical Facility Anti-Terrorism Standards (CFATS). Commenters further suggested that since much of this information might reveal security vulnerabilities at facilities, providing this information to LEPCs increases the risk of terrorism or criminal use of the information which could cause harm to first responders and the community.

EPA also received comments regarding how the information should be provided to LEPCs and the timeframe for providing that information. Many commenters suggested the information should be provided through existing systems in a format which is useful to LEPCs or local emergency responders for developing their local emergency plans. Several states and a state association suggested LEPCs and emergency response officials should determine what information is useful and necessary to developing preparedness and response plans. An industry trade association suggested that information should not be in an electronic format but should be communicated to LEPCs, local emergency officers, neighbor groups, and Community Advisory Panels at

regular intervals. Two state agencies commented that RMP information should be incorporated into existing management systems and that providing information in a stand-alone single document was of little value to emergency planners. A few commenters suggested that the format of the information should be determined by the individual LEPC. Finally, several commenters proposed that the information be relayed during the annual coordination meeting between LEPCs and facility personnel.

In response to these comments, EPA maintains that it is very important to ensure that LEPCs or local emergency response officials have the chemical information necessary for developing local emergency response plans, however, EPA believes it is unnecessary to specify in the RMP rule the types or format of information that LEPCs or emergency response officials may request. EPCRA section 303(d)(3) already provides the necessary authority to allow LEPCs to request information needed to develop the local emergency response plan. Additionally, EPCRA requires facilities to provide Safety Data Sheets (SDSs) and inventory information to LEPCs to assist emergency planners and responders. Under EPCRA section 312(f), fire departments have the authority to inspect these facilities to better understand the risk associated with these chemicals and how to deal with those risks in the local emergency response plan.

As pointed out by the commenters, the proposed requirements could be perceived as limiting the flexibility of LEPCs and emergency response officials to collect the information they need to develop a local emergency response plan that addresses their community’s specific chemical risks. Furthermore, the proposed requirements would have owners or operators preparing information summaries on an annual basis, regardless of whether the LEPC requests the information, and EPA agrees that this is overly burdensome for facility owners and operators. This could also result in reports being sent to the LEPCs or emergency response officials without the necessary context to help officials to understand the information contained within the reports and utilize it for planning purposes.

Without acknowledging any inconsistency with CFATS or other regulatory structure, EPA recognizes both the security concerns that commenters expressed and the challenges associated with securing arguably sensitive information.

¹¹⁴ CSB. July 10, 2007. CSB News Release: CSB Chairman Merritt Describes the Lessons from Five Years of Board Investigations to Senate Committee, Urges Additional Resources and Clearer Authorities for Federal Safety Efforts. <http://www.csb.gov/csb-chairman-merritt-describes-the-lessons-from-five-years-of-board-investigations-to-senate-committee-urges-additional-resources-and-clearer-authorities-for-federal-safety-efforts/>.

Therefore, EPA has decided not to finalize § 68.205 of the proposed rulemaking, and is instead adding language to the emergency response coordination provisions of § 68.93, which requires the owner or operator to provide “any other information that local emergency planning and response organizations identify as relevant to local emergency planning.” (For more information see section V.A. of this preamble.) Under this structure, assertions of Chemical-terrorism Vulnerability Information (CVI) status for certain information can be addressed on a case-by-case basis by the stationary source, the LEPC, DHS, and other appropriate entities.

EPA agrees with commenters that this approach will allow LEPCs and other local emergency officials to obtain the information they require to meet their emergency response planning needs. It will also allow local emergency planners and response officials to ask questions of facility personnel about the risks associated with the chemical hazards at the facility and about appropriate mitigation and response techniques to use in the event of a chemical release. It further allows the facility owner or operator and the LEPC to identify information that may need to be maintained securely and discuss strategies to secure the information or to provide only information that is pertinent to emergency response planning without revealing security vulnerabilities.

The LEPC or local emergency response officials may request information such as accident histories, portions of compliance audit reports relevant to emergency response planning, incident investigation reports, records of notification exercises, field and tabletop exercise evaluation reports, or other information relevant to community emergency planning. For example, this may include requesting information on changes made to the facility that affect risk such as incorporating safer alternatives. Furthermore, EPA directs commenters who indicated that the IST analyses should apply to all facilities and be submitted to the public to refer to sections IV. C. and VI. B. in this preamble.

B. Information Availability to the Public

1. Summary of Proposed Rulemaking

Under § 68.210(a), EPA proposed to add a reference to 40 CFR part 1400, which addresses the restrictions on disclosing “offsite consequence analysis” (OCA) information under the CSISSFRRA.

Under § 68.210(b), EPA proposed to require the owner or operator of a stationary source to distribute certain chemical hazard information for all regulated processes to the public in an easily accessible manner, such as on a company Web site. EPA proposed to require the owner or operator to distribute, as applicable:

- Names of regulated substances held in a process;
- SDSs for all regulated substances at the facility;
- The facility’s five-year accident history required under § 68.42;
- Emergency responses program information concerning the source’s compliance with § 68.10(f)(3) or the emergency response provisions of subpart E, including:
 - Whether the source is a responding stationary source or a non-responding stationary source;
 - Name and phone number of local emergency response organizations with which the source last coordinated emergency response efforts, pursuant to § 68.180; and
 - For sources subject to § 68.95, procedures for informing the public and local emergency response agencies about accidental releases.

- Information on emergency response exercises required under § 68.96, including schedules for upcoming exercises, reports for completed exercises as described in § 68.96(b)(3), and any other related information; and
- LEPC contact information, including LEPC name, phone number, and Web site address as available.

EPA proposed to add § 68.210(c), to require that the owner or operator update and submit information required under § 68.210(b) every calendar year, including all applicable information that was revised since the last update.

EPA also proposed to redesignate the current § 68.210(b), which addresses the non-disclosure of classified information by the Department of Defense or other Federal agencies or their contractors, as § 68.210(e). In new § 68.210(f), EPA proposed to require that an owner or operator asserting CBI provide a sanitized version of the information required under this section to the public. Assertion of claims of CBI and substantiation of CBI claims was proposed to be in the same manner as currently required in §§ 68.151 and 68.152 for information contained in the RMP required under subpart G.

2. Summary of Final Rule

EPA is finalizing § 68.210(b) with changes to address public comments. Under the final rule, § 68.210(b) requires the owner or operator to make certain

chemical hazard information for all regulated processes at a stationary source available to the public upon request. The information that shall be provided is the same as proposed, except EPA is revising the exercise information element. Under § 68.210(b)(5) of the final rule, upon receiving a request for the information from a member of the public, the owner or operator is required to provide a list of scheduled exercises required under § 68.96, rather than summary information for those exercises, as proposed.

Section 68.210(c) is now titled “Notification of availability of information,” and it changes the manner by which the facility informs the public about what chemical hazard information is available upon request and how the public may obtain such information. The owner or operator shall provide the public with an ongoing notification of the following: (1) The required information elements in § 68.210(b)(1) through (6) that is available to the public upon request, (2) instructions for requesting the information elements and (3) where to access any other available information on community emergency preparedness.

Section 68.210(d) requires that the owner or operator provide the requested information listed under § 68.210(b) to the public within 45 days of receiving a request.

Finally, EPA is finalizing several sections as proposed, including:

- § 68.210(a), RMP availability;
- § 68.210(f), which addresses the non-disclosure of classified information by the Department of Defense or other Federal agencies or their contractors (this was formerly proposed as § 68.210(e)); and
- § 68.210(g), which relates to CBI, redesignated from § 68.210(f).

3. Discussion of Comments and Basis for Final Rule Provisions

a. Legal Issues

An industry trade association and a facility stated that legislation subsequent to the CAA narrowed EPA’s authority to mandate public disclosure of RMP information. Relevant legislation described by the commenters includes (1) the 1999 CSISSFRRA, (2) the Critical Infrastructure Information Act (CIIA), (3) the Chemical Facilities Anti-Terrorism Standards Act of 2007, and (4) the Protecting and Securing Chemical Facilities from Terrorist Attacks Act of 2014.

Another industry trade association commented that requiring private companies to publish qualitative or

quantitative environmental information inappropriately seeks to delegate EPA's own duties to communicate with and deal with public requests to the regulated entity.

A few industry trade associations argued that the proposed information disclosure requirements are compelled speech that may violate the first amendment. An industry trade association commented that EPA's proposal to require disclosure of RMP information and chemical hazard information raises constitutional issues, as it amounts to compelled commercial speech. The commenter described compelled commercial speech as subject to an intermediate-level of scrutiny, and asserted that, unless EPA can affirmatively prove that (1) its asserted interest is substantial, (2) the speech regulation directly and materially advances that interest, and (3) the regulation is narrowly tailored to that interest, then the compelled commercial speech will likely be found to be unconstitutional.

The information disclosures required by the final rule are fully consistent with the statutes and regulatory programs identified by the commenters as enacted after the 1990 CAA Amendments. CSISSFRRA specified that portions of RMPs containing OCA information, any electronic data base created from those portions, and any statewide or national ranking derived from such information is subject to restrictions on disclosure (CAA sections 112(r)(7)(H)(i)(III) and 112(r)(7)(H)(v)). Regulations promulgated jointly by EPA and the Department of Justice further define OCA information in 40 CFR 1400.2(j). The final rule does not require disclosure of release scenarios or rankings based on such scenarios, nor does it make available any information based on such scenarios. The CIIA restricts information "not customarily in the public domain." CFATS creates a category of information, CVI, which further restricts certain information generated to implement CFATS (see 6 CFR 27.400). In promulgating CFATS, DHS announced its intent to preserve Federal release disclosure, emergency planning, and accident prevention statutes, including EPCRA and CAA section 112(r) (72 FR 17714, April 9, 2007). In this final rule, EPA has not promulgated the new mandatory disclosure of STAA and incident investigation information that we had proposed, thereby eliminating the tension between these after-enacted programs and modernization of the risk management program. The information required to be disclosed by this rule largely draws on information otherwise

in the public domain and simplifies the public's access to it.

This final rule requires an owner or operator of a stationary source to alert the public, via any one of a wide variety of methods, of how to access information about the source that is publicly available. Other statutes and regulatory programs, or other provisions of the risk management program, require the stationary source to assemble the information that the rule would make available upon request (e.g., accident history, SDSs, and aspects of the emergency response program). The burden of making this information directly available from the source is minimal. The public's ability to participate in emergency planning and readiness is materially advanced by being better informed about accident history, types of chemicals present, and how to interact with the stationary source. EPA has been selective in identifying what information a source must make available; for example, we have not required the facility to provide an RMP to the public. Having the source provide the information set out in § 68.210 directly to the public promotes accident prevention by facilitating public participation at the local level.

b. RMP Availability (§ 68.210(a))

EPA did not receive any comments on this issue.

c. Chemical Hazard Information (§ 68.210(b))

Comments on making information available to the public. EPA received multiple comments that supported the proposed provisions. These comments generally indicated that the revisions would strengthen the community's "right to know." A mass mail campaign joined by approximately 450 commenters provided general support for the disclosure of information to the public. EPA also received comments stating that the RMP and accompanying chemical hazard information would be valuable to communities in order to understand the risks involved.

Many commenters opposed the proposed information provisions. Multiple commenters, including state agencies, facilities, and industry trade associations, argued that the proposed provisions for public disclosure of information have the potential to create a security risk, with several commenters expressing opposition to the proposed provisions because they appear to conflict with CFATS or other existing information security requirements. Two diverse groups of commenters remarked that OCA data should remain accessible to the public only through Federal

reading rooms, but an advocacy group remarked that keeping information solely in reading rooms would limit access by the public. Some commenters stated that the information requirement was already available through EPCRA or Freedom of Information Act (FOIA) requests, while others stated that EPA had not given enough reasoning for how the increase in information disclosure to the public would result in a safer community in proportion to the burdens imposed on facilities.

EPA continues to believe that providing chemical hazard information to the general public will allow people that live or work near a regulated facility to improve their awareness of risks to the community and to be prepared to protect themselves in the event of an accidental release. EPA believes that this information should be more easily accessible to the public than the existing approaches to access information under EPCRA or through FOIA requests. However, EPA acknowledges the security concerns raised by commenters and is committed to ensuring a balance between making information available to the public and safeguarding that information. Therefore, EPA is finalizing an approach that requires facility owners and operators to notify the public that certain information is available upon request. This allows community members¹¹⁵ an opportunity to request chemical hazard information from a facility, so they can take measures to protect themselves in the event of an accidental release, while allowing facility owners and operators to identify who is requesting the information. EPA worked closely with Federal partners, including DHS, to develop information availability requirements that strike a balance between security concerns and the need for sharing chemical hazard information with the public. EPA believes that this approach is consistent with existing requirements to secure sensitive information under CSISSFRRA and CFATS. Furthermore, EPA is committed to safeguarding OCA information in accordance with requirements specified in CSISSFRRA, which allows for any member of the public to access paper copies of OCA information for a limited number of facilities. This OCA information remains accessible to the public only in Federal Reading Rooms.

EPA believes that the current approach to notify the public that information is available upon request

¹¹⁵ Community members can include a wide variety of stakeholders that work or live near an RMP-regulated facility.

strikes an appropriate balance between various concerns, including information availability, community right-to-know, minimizing facility burden, and minimizing information security risks.

Scope of information to be shared.

Commenters provided suggestions on the scope of information to be disclosed. An advocacy group commented that information on chemical hazards, safer alternatives (such as information on ISTs), incidents, inspections, and training should all be made publically available. Some commenters remarked that the public should be given information on the schedules and types of emergency response drills performed; how to adequately protect oneself during a release; where to evacuate; how the decision to evacuate will be made and communicated; and how the all-clear signal will be given. However, several commenters objected to making exercise reports available to the public. These commenters stated that providing the public with information about potential weaknesses in a facility or community field response could reveal security vulnerabilities. A few other commenters stated that only information that could improve community awareness of risks should be made available to the public, such as names of regulated substances held in a process above threshold quantities, names and phone numbers of local emergency response organizations, and LEPC contact information.

Some commenters recommended making available to the public the same information elements proposed for disclosure to LEPCs (*i.e.* STAA/IST, incident investigation reports and third-party compliance audits), while several other commenters opposed these suggestions. For example, a mass mail campaign suggested that facilities disclose STAA directly to the public. However, one trade association opposed publicly disclosing STAA, citing that the information would be highly technical and potentially confusing to the general public and may involve the disclosure of confidential, proprietary or other sensitive information. The association further argued that facilities would be put in a position where they must publicly defend IST evaluations and decisions.

Some commenters stated that incident investigation reports should be included in the scope of information delivered to the general public, while others said that providing such reports would be burdensome and confusing to the public. Other commenters argued specifically against making root cause analyses available to the public indicating that this greatly increases the

likelihood that facilities will have to respond to lawsuits. One commenter expressed concern that disclosing root cause analyses would discourage facilities from performing meaningful analyses.

A state agency commented that third-party compliance audit reports should be made publicly available to assure the public that appropriate investigation has been done and appropriate steps are being taken to avoid future incidents. A group of commenters argued that emergency contact information should not be shared publicly online because it will encourage unwanted telemarketing and email spam and solicitations.

EPA agrees with commenters that who suggested that only information that could improve community awareness of risks should be made available to the public. EPA disagrees with commenters that suggest making additional information available to the public, such as STAA reports, incident investigation reports (with root cause analyses), and third-party audit reports. As some commenters indicated, much of the information in these reports can be technically complicated and potentially confusing for the general public. Furthermore, this information is not always relevant to community emergency preparedness and could potentially reveal CBI or security vulnerabilities. Therefore, the Agency is finalizing the following chemical hazard information elements to be made available to the public, upon request:

- Names of regulated substances held in a process;
- SDS for all regulated substances located at the facility;
- Five-year accident history information required to be reported under § 68.42;
- The following summary information concerning the source's compliance with § 68.10(f)(3) or the emergency response provisions of subpart E:
 - Whether the source is a responding stationary source or a non-responding stationary source;
 - Name and phone number of local emergency response organizations with which the owner or operator last coordinated emergency response efforts, pursuant to § 68.180; and
 - For responding stationary sources (*i.e.*, those subject to § 68.95), procedures for informing the public and local emergency response agencies about accidental releases;
 - A list of scheduled exercises required under § 68.96; and
 - LEPC contact information, including the LEPC name, phone number, and Web address as available.

EPA expects that making the information available upon request will minimize security vulnerabilities as well as unwanted telemarketing and email spam and solicitations.

EPA agrees with commenters that members of the public do not necessarily need access to exercise evaluation reports. Therefore, to address concerns that summary information of facility exercise may be confusing to the public and could reveal security vulnerabilities, EPA is revising § 68.210(b)(5) to remove the requirement to provide summary information about exercises and only require a list of scheduled exercises required under § 68.96. EPA believes that one benefit of sharing exercise schedules is to avoid unnecessary public alarm when exercises are conducted. However, EPA expects that facility owners and operators will use good security practices when revealing details about upcoming exercises.

d. Notification of Availability of Information (§ 68.210(c))

EPA proposed requiring the owner or operator to make chemical hazard information publicly available and update the information every calendar year. Many commenters supported the use of a streamlined, one-stop Web format for disseminating information to the public. Several commenters opposed posting information for the public on facility Web sites due to security concerns. Some commenters argued that EPA should utilize existing online public information resources (such as the Agency's Web site or available RMP*Info or Enforcement and Compliance History Online (ECHO))¹¹⁶ databases) to share information, while a few commenters concluded that appropriate state level agencies should be responsible for making information available to the public.

Many other commenters remarked on the variety of options to disseminate information suggested by EPA, including local libraries, government buildings, or the Internet, and stated that this fragmented approach would not improve public access to information. One commenter cited that EPA should ensure availability of information to those without Internet or electronic media access, and another commenter suggested that hard copies should be made available for those without access to online resources, in addition to information published on an EPA Web site. Another commenter remarked that information should be made available only after an email

¹¹⁶ <https://echo.epa.gov/?redirect=echo>.

request is made directly to the facility. An advocacy group commented that information on accidental releases should be reported, immediately, to the public through the Internet, radio, telephone, and television.

Commenters also provided suggestions on the format of the information. Some of these commenters suggested that a one to two-page summary of information would be sufficient for the public.

EPA is committed to ensuring that chemical hazard information is available to the public in an easily accessible manner; however, the Agency acknowledges commenters' security concerns associated with providing information to the public and the additional burden that may fall on owners or operators that do not have Web sites or other means to publicly and routinely post such information. In response to these concerns, EPA is requiring that owners and operators notify the public that certain information is available along with instructions on how to request the information. The facility owner or operator must ensure that the notification is ongoing through a publicly accessible means, such as a Web site or social media platform.

The facility owner or operator can notify the public that information is available in a variety of ways. For example, the owner or operator could make the notification of information availability by using free or low cost Internet platforms, file sharing services, and social media tools that are designed to be able to share information with the public. As another option, the facility could post hard copy notices at publicly accessible locations, such as at a public library, or a local government office. If the facility has the means to handle public visitors, it could choose to have notices available at the facility's public visitor location. The facility could also provide notices that information is available to the public by email. EPA encourages the facility owner or operator coordinate information distribution with the LEPC or local emergency response officials to determine the best way to reach public stakeholders in their communities. Facility owners and operators may also want to consider outreach efforts that would allow the public to provide input on the best way to make this notification available. The owner or operator shall document whatever method and the location of the notification in the RMP pursuant to § 68.160(b)(21).

EPA believes that providing this notification to the general public would allow people that live or work near a

regulated facility to gather the information they need to improve their awareness of risks to the community and to prepare to protect themselves in the event of an accidental release. The notice shall specify what information is available and provide instructions for how to obtain the information. The facility owner or operator shall also identify where to access information on community preparedness, if available, including shelter-in-place and evacuation procedures. The facility should work with the LEPC and local emergency responders to distribute and convey relevant information on appropriate shelter-in-place and evacuation procedures.

e. Timeframe To Provide Information Following a Request (§ 68.210(d))

One commenter expressed concern that requiring public information to be updated annually would be an unnecessary burden on facilities. In contrast, another state agency reasoned that the public should not have to request information, it should be readily available. An advocacy group requested that a version of the chemical hazard information provided by the facility be made on an annual basis.

While EPA agrees that requiring facilities to annually update their information could be unnecessarily time-consuming, EPA encourages facilities to update their chemical hazard information as needed to ensure that accurate information can be made available to the requester within the required timeframe. Therefore, § 68.210(d) requires that the facility owner or operator provide the information under § 68.210(b) to the requester within 45 days of receiving a request. EPA selected 45 days because that timeframe is consistent with the requirement for public provision of facility chemical inventory information (*i.e.*, "Tier II information") under § 312(e)(3)(D) of EPCRA, which states, "a State emergency response commission or local emergency planning committee shall respond to a request for Tier II information under this paragraph no later than 45 days after the date of receipt of the request."

f. Classified Information (§ 68.210(f))

EPA received no comments on this issue.

g. CBI (§ 68.210(g))

Several commenters stated that the public information disclosure requirement would place CBI at risk, and therefore EPA should eliminate this requirement. Other commenters requested that EPA clarify that CBI

would still be protected from public dissemination. Many commenters requested that EPA require that certain information in STAA reports either may not be claimed as CBI or should require up-front substantiation of confidentiality claims. Some commenters suggested that CBI claims for STAA information include a certification by the owner or operator or a senior official. Other commenters recommended that EPA prohibit STAA reports from being claimed as CBI. Two commenters stated that it may not be practical or possible to provide the public with a useful STAA document after removing appropriate CBI.

EPA is finalizing § 68.210(f) relating to CBI as proposed, but renumbered the paragraph as § 68.210(g). EPA acknowledges and shares industry's concerns pertaining to protection of CBI information. By incorporating a CBI provision in the information availability section of the rule EPA is emphasizing the facility owner or operator's right to protect CBI. EPA has also limited the types of information to be disclosed to eliminate matters likely to contain CBI (*e.g.*, names of regulated substances; SDSs) as well as to include information elements for which CBI cannot be claimed (*e.g.* five-year accident history information and emergency response program information). Section 68.151 clearly identifies what information cannot be claimed as CBI and § 68.152 identifies the procedure for how to protect CBI. EPA believes that the RMP rule adequately addresses CBI concerns. Furthermore, EPA is not requiring STAA reports to be submitted to LEPCs or the public in the final rule and therefore, no CBI concerns exist for these reports.

An owner or operator of a stationary source asserting that a chemical name is CBI shall provide a generic category or class name as a substitute. If an owner or operator has already claimed CBI for a portion of the RMP, then that claim still applies for the disclosure elements the information availability provisions of the rule. The owner or operator should provide a sanitized version as described in the RMP* eSubmit User's Manual. This policy is consistent with existing guidance and practices.¹¹⁷

¹¹⁷ For more information on CBI, see Chapter 9 of the General Guidance on Risk Management Programs for Chemical Accident Prevention (40 CFR part 68), March 2009. <https://www.epa.gov/sites/production/files/2013-11/documents/chap-09-final.pdf>.

C. Public Meetings

1. Summary of Proposed Rulemaking

EPA proposed to require all facilities to hold public meetings within 30 days after any RMP reportable accident to share information concerning the accident with the public including: When the accident occurred; the nature of the accident; chemicals involved and quantities released; on-site and offsite impacts; notifications made to emergency responders; weather conditions (if known); initiating event and contributing factors (if known); and operational changes (if any) that have resulted from the investigation of the release. EPA also proposed that at this public meeting, facilities would provide other relevant chemical hazard information such as the names and SDSs for regulated substances at the facility; accident history information for the facility; information on the emergency response and exercise programs; and LEPC contact information.

2. Summary of Final Rule

In the final rule, EPA is requiring all facilities to hold a public meeting after an RMP-reportable accident, but is extending the timeframe for the public meeting to 90 days in response to comments. The public meeting provision proposed as § 68.210(d) is redesignated as § 68.210(e) in the final rule. The owner or operator shall document in the RMP whether a public meeting has been held following an RMP reportable accident, pursuant to § 68.160(b)(22).

3. Discussion of Comments and Basis for Final Rule Provisions

EPA received a wide range of comments on the proposed public meeting requirements—comments generally in support of or against the requirement for public meetings; concerns about sufficient attendance or availability of information at public meetings; comments on the appropriate timeframe for the meetings; and comments on alternative options.

a. Attendance at Public Meetings

Many commenters opposed requirements for public meetings. Some commenters opposed based on their experience that public meetings held under CSISSFRRA were not well attended. One commenter said the public would not attend a meeting after a minor incident, but a public meeting for an event with major offsite impacts should include a report summarizing the incident. Some commenters questioned the benefit of such a meeting

if a facility is in compliance with regulatory requirements.

Other commenters offered ideas for improving or gauging public interest. For example, one commenter suggested that EPA establish minimum requirements for sources to notify the public of upcoming meetings but did not offer suggestions for what those requirements should be. Another commenter suggested that polls could be used to prescreen members of the public who would like to attend or participate in the public meeting, in order to establish effective participation.

EPA recognizes concerns about attendance at public meetings. When the CSISSFRRA was enacted in 1999, it required owners or operators of all facilities regulated under the RMP rule to hold a public meeting within 180 days of enactment.¹¹⁸ The purpose of the public meeting was to discuss the OCA information that was restricted under other portions of CSISSFRRA. Relatively few of these meetings were hosted by facilities that had recently suffered an RMP-reportable accident. The Agency expects that after a reportable accident occurs, attendance at public meetings will be higher than was the case at many public meetings held under CSISSFRRA because of interest generated by the accident itself (e.g., an emergency response or media reports). This public meeting requirement applies only following an RMP reportable accident, so this provision has a much lower burden than the CSISSFRRA public meeting requirement because of the relatively few number of RMP reportable accidents that occur annually. CSB highlighted in their comments that public meetings held shortly after accidents occur have the greatest level of participation.

EPA supports commenters' suggestions to find practical strategies to increase attendance and encourages public participation at public meetings; however, we are not incorporating these suggestions as mandatory requirements in the final rule. Facilities have the flexibility to encourage attendance at meetings by means that are appropriate and effective in their communities. This could include methods suggested by commenters, such as polling nearby residents to gauge interest.

b. Applicability Criteria and Timeframe

Comments on applicability criteria. One commenter requested clarification

on the meaning of “reportable accident” that would trigger a public meeting. Another commenter remarked that multiple meetings may be necessary in certain circumstances, for instance if the investigation report has not been finalized. Commenters also suggested that public meetings should be required of all program level facilities while others indicated that a “one-size-fits-all” approach was not appropriate. Several commenters requested that public meetings be required only when an incident generated offsite impacts. Finally, another commenter suggested EPA require periodic public meetings regardless of accident history.

The term “reportable accident” refers to accidents required to be reported in the five-year accident history required under § 68.42 of the existing rule, which include accidental releases from covered processes that resulted in deaths, injuries, or significant property damage on site, or known offsite deaths, injuries, evacuations, sheltering in place, property damage, or environmental damage. EPA agrees that in some cases, multiple public meetings may help to fully describe the circumstances of an accident. While EPA is requiring the owner or operator to hold only one public meeting after an RMP-reportable accident, the Agency encourages owners and operators to hold additional meetings if appropriate. The final rule requires public meetings for regulated sources, regardless of program level, if the facility has an RMP-reportable accident. The Agency does not view the public meeting requirement as a “one-size fits all” requirement. Sources have flexibility to structure public meetings as appropriate to their circumstances and the needs of the surrounding community. EPA recommends that facility owners and operators engage in community outreach to determine how best to structure the public meetings. Involving the public in advance of the meeting will help to ensure public participation in meetings. EPA considered requiring public meetings only after accidents with offsite impacts but decided to apply the requirement to all RMP-reportable accidents because even though some RMP-reportable accidents have only on-site impacts, those accidents are often serious enough to raise safety concerns within the surrounding community.

Finally, EPA is not requiring periodic public meetings, regardless of accident history, in the final rule. EPA believes that public interest in a meeting is highest after an accident, and notes that many commenters indicated that public

¹¹⁸Chemical Safety Information, Site Security and Fuels Regulatory Relief Act, Public Law 106–40, August 5, 1999. See <http://www.gpo.gov/fdsys/pkg/STATUTE-113/pdf/STATUTE-113-Pg207.pdf>.

meetings required by CSISSFRA were not well attended.

Comments on timeframe. Several commenters expressed support for the proposed 30-day timeframe. Other commenters said that a 30-day timeframe would be too long, as the greatest need for a public meeting occurs within 2 weeks after an accident. However, many commenters stated the 30-day timeframe for a public meeting is too short, as a facility is unlikely to complete an incident investigation in that timeframe. Commenters warned that incomplete information would not be appropriate to share with the public and could breed distrust between the public and facilities over the lack of complete data. Some commenters cited the burden placed on facilities to schedule and prepare for a meeting, especially during an incident investigation and other post-incident actions. Commenters recommended alternative timeframes for public meetings after an accident including: 60 days, 90 days, 120 days, six months, nine months, and 12 months or after the investigation is completed. One commenter suggested that EPA provide an opportunity to extend the public meeting timeframe with reasonable justification. Another commenter suggested that EPA allow the LEPC to consult on or determine when to hold the public meeting after an RMP reportable accident.

EPA acknowledges concerns raised by commenters about diverting facility resources from post-accident investigations, and the potential for a facility to lack complete information about an accident if the investigation hasn't yielded sufficient information to share with the public within 30 days. Therefore, EPA has revised the timeframe in the final rule for the public meeting to be held no later than 90 days after an RMP reportable accident. EPA expects that sources will either have completed the incident investigation required under § 68.60 or § 68.81 prior to holding the public meeting, or will have developed sufficient information relevant to community members' concerns to allow a productive meeting. Even if the accident investigation is not complete, a 90-day timeframe should allow the owner or operator to share appropriate information about the accident with the local community. The facility could discuss the progress of the investigation so far and next steps planned.

Some comments expressed the view that attendance at a public meeting is higher when the meeting takes place very soon after an accident occurs. The 90-day timeframe in the final rule is a

maximum timeframe, and EPA encourages facilities to take into consideration when public interest may be highest when scheduling the public meeting. EPA recognizes that in some cases, such as for complex, protracted investigations, the facility may need to hold the public meeting prior to completing the incident investigation. In such cases, the owner or operator should consider holding a second public meeting after completing the incident investigation, or sharing information about results of the investigation through another means, such as a Web site, social media, with the LEPC or local emergency response officials, or distributing information directly to people who attended the public meeting and expressed interest in the additional information.

EPA does not believe that it is necessary to add a provision that would allow an extension of the 90-day timeframe with reasonable justification. Such a provision would add complexity to the requirement. Furthermore, EPA believes that by extending the timeframe to 90 days this allows sufficient time for the facility to gather information to share with the public after an accident.

EPA is not finalizing any requirements for LEPCs or local emergency response officials with respect to post-accident public meetings. EPA received many comments that opposed increasing LEPC responsibilities in the final rule, citing resource limitations and significant existing responsibilities. While a facility should communicate closely with LEPCs or local emergency response officials after an RMP reportable accident, and may combine public meetings with LEPC meetings or other events as long as those events/meetings are available for public participation, the facility bears the responsibility for the public meeting. The final rule places no additional burden on LEPCs or local emergency response officials with respect to requirements for post-accident public meeting.

c. Scope of Information Provided at Public Meetings

Public commenters provided various recommendations regarding how much and what type of information should be provided at public meetings. One commenter asserted public meetings are useless since the local media relay information about incidents, such as when and where the incident occurred and emergency response information. Another commenter said public meetings after an accident would be redundant, as the information required to be shared would already be made

available to the public for all reportable accident investigations. A few commenters said that completed STAAAs should be covered in public meetings. One commenter stated that information about the nature of chemical risks within a community and emergency response protocols during an accidental release or another dangerous event would be the best information to share during a public meeting. Another commenter requested clarification about what information is required to be shared at a public meeting.

EPA disagrees with commenters who stated that public meetings are useless or redundant to other sources of information. EPA believes that public meetings, particularly when held after an accident, will often provide easier access for community members to appropriate facility chemical hazard information, which can significantly improve the community's emergency preparedness and understanding of how the facility is addressing potential risks. Public meetings also provide an opportunity for the public to ask questions or share their concerns with appropriate facility staff and local government officials in attendance.

Public meetings must address information about the incident as well as other relevant chemical hazard information such as that described in § 68.210(b) (*i.e.*, names of regulated substances held in a process; SDSs; accident history information; emergency response program information; a list of scheduled exercises and LEPC contact information). The facility representative should describe the risks that are associated with the facility, and what the facility is doing to protect the public from those risks. In addition, the facility personnel should relay information that would assist the public to prepare for accidental releases. It would be extremely useful to have LEPC and local emergency response officials participate in the meeting to discuss the community emergency response plan and explain how the facility is incorporated into that plan. This would provide an opportunity for the facility representative and local officials to discuss the process for public emergency notification procedures, for sheltering in place or evacuating, and where to obtain further updates on the status of an emergency incident. The discussion should also address how the public can access community emergency response plans and identify what the community may expect to see during a field exercise.

In the final rule, EPA maintains the requirement for information in § 68.42 to be addressed at the public meeting.

The facility will have the flexibility to structure the public meeting to focus on areas most relevant to a particular accident, considering the interests of the community. EPA is not requiring that completed STAAAs be included, in part because this information is not pertinent to community emergency response planning and also in part because the opportunity for the public to engage in a completed STAA analysis, which may contain CBI or trade secret information, may compromise confidentiality and create security vulnerabilities at the facility.

d. Alternatives to Facility-Hosted Public Meetings

One commenter argued that a facility hosting a public meeting would be redundant when LEPCs already hold public meetings. EPA also received comments that EPA regions or LEPCs should host and facilitate a public meeting instead of the facility, or that facilities should be required to meet with LEPCs or local emergency responders instead of the public. Others requested that LEPCs be able to decline to facilitate a public meeting required by this rule because of their already substantial responsibilities, or that public meetings should be held only at the request of LEPCs or local emergency response agencies regardless of whether a regulated substance was involved, or that they should be held only at the request of the public. Commenters also indicated that small businesses should be allowed to post information that is required to be disclosed, in lieu of a public meeting.

EPA disagrees with the commenters. LEPCs hold meetings with the public to discuss issues related to community planning. The public meetings required by § 68.210(e) in the final rule are intended to be a venue for facility personnel to address questions and concerns raised by the public following an RMP reportable accident at a facility. While communication between the facility and the LEPC is essential, it cannot replace communication between knowledgeable facility staff and the public. LEPCs are encouraged to participate in public meetings, and may collaborate with the owner or operator to host the meeting in conjunction with an LEPC meeting if appropriate. However, LEPCs are not required to co-host or participate in public meetings.

Finally, EPA believes that small businesses should also host public meetings following an RMP reportable accident to allow community members an opportunity to talk with facility personnel. EPA encourages small businesses to find ways to reduce costs

of public meetings such as by hosting the meetings at inexpensive venues, such as local schools, community centers, or churches.

VII. Risk Management Plan Streamlining, Clarifications, and RMP Rule Technical Corrections

A stationary source subject to the RMP rule is required to submit an RMP in a method and format specified by the EPA, pursuant to § 68.150(a). The CAA and 40 CFR subpart G require that the RMP indicate compliance with the regulations at 40 CFR part 68 and also include information regarding the hazard assessment, prevention program, and emergency response program. The RMP also includes stationary source registration information, such as name, location and contact information. The EPA may review RMPs for a variety of reasons, including information gathering, inspection preparation, errors in submissions, and changes requiring a correction or re-submission of the RMP. The CAA requires that RMPs be made available to states, local entities responsible for planning or responding to accidental releases at the source, the CSB, and the public. As a result, the information provided in an RMP is intended to be easily understood, thus encouraging the public, local entities, and governmental agencies to interact with stationary sources on issues related to accident prevention and preparedness.

EPA is deferring proposed revisions to delete or revise data elements in the current rule; however, EPA is adding several RMP data elements in subpart G based on the revised rule requirements discussed in this document. This includes data elements to address compliance with:

- Third-party audit requirements,
- IST analysis requirements in the PHA;
- Emergency response preparedness requirements including information on local coordination and emergency response exercises; and
- Information sharing provisions.

By adding these data elements to the RMP requirements in subpart G, EPA will be able to evaluate a stationary source's compliance with these rule requirements. EPA is also finalizing technical corrections as proposed.

A. Revisions to § 68.160 (Registration)

EPA is adding the following RMP data elements that relate to the information sharing provisions discussed in this document:

- § 68.160(b)(21) requires the method of the communication and location of the notification that chemical hazard-

related information is available to the public, as set forth in § 68.210(c); and

- § 68.160(b)(22) requires the date of most recent public meeting, as set forth in § 68.210(e).

EPA revised § 68.160(b)(21) to clarify that when identifying how a notification is made, the owner or operator should describe both the method of the communication and the location. For example, if the owner or operator is modifying a Web site to identify that information is available upon request, then EPA expects that the owner or operator will identify in the RMP that the notification is being made through a Web site and then provide the Web address of the notification.

Alternatively, if the notification is made via a printed notice, then the owner or operator should identify that a printed notice is available and explain how to obtain the printed materials. EPA received no comments on these provisions.

B. Revisions to § 68.170 (Prevention Program/Program 2)

EPA is revising:

- § 68.170(i) by adding a requirement that the owner or operator identify whether the most recent compliance audit was a third-party audit, pursuant to §§ 68.58 and 68.59; and

- § 68.170(j) by clarifying that the date of the most recent incident investigation be the completion date of the investigation. This would be the date on the final incident investigation report.

EPA received no comments on these provisions.

C. Revisions to § 68.175 (Prevention Program/Program 3)

EPA is revising:

- § 68.175(e) by amending the introductory sentence in paragraph (e) to apply to information on the PHA or PHA update and revalidation information. EPA is moving the date of completion of the most recent PHA or update and the requirement to identify the technique used to subparagraph (e)(1). EPA is deleting the requirement to identify the expected date of completion of any changes resulting from the PHA. Additional PHA information moves to subparagraph (e)(2) through (6) and a new requirement to address inherently safer technology or design measures implemented (if any) and the technology category is in subparagraph (e)(7). This is similar to the proposed revisions but reorganized to simplify the proposed subparagraph (e)(2) and move to a new subparagraph (e)(7);

- § 68.175(k) by adding a requirement that the owner or operator identify whether the most recent compliance audit was a third-party audit, pursuant to §§ 68.79 and 68.80; and

- § 68.175(l) by clarifying that the date of the most recent incident investigation be the completion date of the investigation. This would be the date on the final incident investigation report.

EPA received no comments on these provisions.

D. Revisions to § 68.180 (Emergency Response Program)

Subpart G § 68.180 contains the emergency response program data elements that must be included in the RMP. EPA proposed revisions to add emergency response exercises and revise local coordination provisions of the rule in order to improve coordination with local response authorities and bolster emergency response capabilities and preparedness for accidental releases.

1. Summary of Proposed Rulemaking

- In § 68.180(a) EPA proposed to delete the phrase “the following information.” The text in subparagraphs (a)(1) through (3) were reorganized and/or replaced and EPA proposed to delete subparagraphs (a)(4) through (6).

- In subparagraph (a)(1), EPA proposed to require the RMP to identify the name, organizational affiliation, phone number, and email address of local emergency planning and response organizations with which the stationary source last coordinated emergency response efforts, pursuant to § 68.10(f)(3) or § 68.93.

- Subparagraph (a)(2) included proposed requirements to identify whether coordination with the local emergency response organizations is occurring at least annually, pursuant to § 68.93(a).

- Finally, in subparagraph (a)(3) EPA proposed to require the RMP to identify a list of Federal or state emergency plan requirements to which the stationary source is subject.

- In § 68.180(b), EPA proposed to replace the current text with a requirement to identify whether the facility is a responding or non-responding stationary source, pursuant to § 68.90. EPA proposed subparagraph (b)(1) to apply to non-responding stationary sources and subparagraph (b)(2) to apply to responding stationary sources.

- *Non-responding stationary sources.* In subparagraphs (b)(1)(i) through (iii) the owner or operator would be required to identify whether the owner or

operator has confirmed that local responders are capable of responding to accidental releases at the source, whether appropriate notification mechanisms are in place, and whether a notification exercise occurs at least annually.

- *Responding stationary sources.* In subparagraphs (b)(2)(i) through (v) the owner or operator would be required to identify whether the LEPC or local response entity requested that the stationary source be a responding facility; whether the stationary source complies with requirements in § 68.95; whether a notification exercise occurs at least annually, as required in § 68.96(a); whether a field exercise is conducted every five years and after any RMP reportable accident, pursuant to § 68.96(b)(1)(i); and whether a tabletop exercise occurs at least annually, except during the calendar year when a field exercise is conducted, as required in § 68.96(b)(2)(i).

EPA proposed to delete § 68.180(c), which required the owner or operator to list other Federal or state emergency plan requirements to which the stationary source is subject.

2. Summary of Final Rule

EPA is completely revising and reorganizing subpart G § 68.180 into the following three parts: Requirements for all stationary sources under paragraph (a), requirements for non-responding stationary sources under paragraph (b)(1), and requirements for responding stationary sources under paragraph (b)(2). EPA believes that reorganizing subpart G § 68.180 will clarify the reporting requirements, reduce errors in submitted RMPs, and improve compliance with the RMP requirements. The revisions to subpart G § 68.180 will also improve EPA’s ability to evaluate a facility’s compliance with the Emergency Response Program requirements.

EPA is amending and finalizing the proposed revisions to require specific information rather than attestations of compliance. EPA is not finalizing the proposed provisions that pertain to LEPCs requesting a stationary source to comply with emergency response program requirements of § 68.95 so EPA is eliminating those requirements under § 68.180.

EPA is finalizing § 68.180(a) as proposed except that subparagraph (a)(2) requires the RMP to identify the date of the most recent coordination with the local emergency response organizations, pursuant to § 68.93(a) (rather than attesting that coordination occurs annually).

EPA is finalizing § 68.180(b) introductory paragraph as proposed. In the final rule subparagraph (b)(1) applies to non-responding stationary sources and subparagraph (b)(2) applies to responding stationary sources. EPA is amending and finalizing the subparagraph as follows:

- *Non-responding stationary sources.*

In subparagraphs (b)(1)(i) through (iii) the owner or operator is required to identify whether the stationary source is included in the community emergency response plan developed under EPCRA (for stationary sources with any regulated toxic substance); the date of the most recent coordination with the local fire department (for stationary sources with only regulated flammable substances); what notification mechanisms are in place; and the date of the most recent notification exercise.

- *Responding stationary sources.* In subparagraphs (b)(2)(i) through (iv) the owner or operator is required to identify the date of the most recent review and update of the emergency response plan required in § 68.95(a)(4); the date of the most recent notification, as required in § 68.96(a); the date of the most recent field exercise, pursuant to § 68.96(b)(1)(i); and the date of the most recent tabletop exercise, as required in § 68.96(b)(2)(i).

3. Discussion of Comments and Basis for Final Rule Provisions

EPA received one comment indicating that the revision to § 68.180 is unclear and that the ‘data elements’ of the proposal do not distinguish between responding and non-responding stationary sources.

EPA believes that the data elements do distinguish between responding and non-responding stationary sources. A stationary source will be required to identify whether they are “responding” or “non-responding” and responding stationary sources and will answer questions accordingly. EPA will revise its online RMP submission system, RMP*eSubmit, to include the additional data elements, and expects that the submission system will provide clarity for stationary source owners and operators on how to submit responses.

E. Technical Corrections

1. Revisions to § 68.10 (Applicability)

EPA is correcting a typographical error in § 68.10(b)(2). Section 68.10(b)(2) uses the term public receptor and indicates that public receptor is defined in § 68.30; however, the term public receptor is defined in § 68.3, not § 68.30. The revised rule language corrects this typographical error. EPA received no

comments and is finalizing this provision as proposed.

2. Revisions to § 68.48 (Safety Information)

EPA proposed to remove the word “material” from the term Material Safety Data Sheet in § 68.48(a)(1) to conform with OSHA’s revised terminology for SDS.

Discussion of comments on safety information provisions. A commenter recommended that EPA’s revision to § 68.48 should not require facilities to ensure that safety data sheets meet OSHA’s hazard communication standard requirements. This commenter argued that operators are given their safety data sheets by vendors and do not have control over their content.

EPA disagrees with the commenter. The current rule requires the owner or operator to maintain Material Safety Data Sheets (MSDS) that meets the OSHA hazard communication standard requirements of 29 CFR 1910.1200(g). In 2012, OSHA made changes to its Hazard Communication Standard at 29 CFR 1910.1200 in order to align with the U.N. Globally Harmonized System of Classification and Labelling of Chemicals (GHS), Revision 3 (77 FR 17574, March 26, 2012). One change was in nomenclature from “Material Safety Data Sheets” to “Safety Data Sheets.” Consequently, OSHA revised the name of the MSDS to Safety Data Sheets (SDS) in the PSM standard at 1910.119(d)(1)(vii) (78 FR 9311, February 8, 2013). Chemical producers and users had to comply with SDS requirements by June 1, 2015.¹¹⁹ EPA’s technical correction is solely to be consistent with the revised OSHA requirements and EPA is finalizing this amendment as proposed.

3. Revisions to §§ 68.54 and 68.71 (Training)

The RMP rule requires initial and refresher training for employees operating a Program 2 or Program 3 covered process. Since the inception of the rule, however, there has been confusion on the types of employees that are considered workers operating a covered process. Although “employee” is not defined in § 68.3, EPA has traditionally interpreted an employee to be any worker that is involved in operating a process, including supervisors. This is consistent with the OSHA definition of “employee” set forth at 29 CFR 1910.2(d). EPA proposed amendments to clarify that employees

“involved in” operating a process are subject to the training requirements of the rule. EPA further proposed a provision to clarify that the term employee includes supervisors responsible for directing process operations. EPA is finalizing these amendments as proposed.

Discussion of comments on training provisions. Several commenters suggested that the proposed revisions to § 68.54 are unclear. These commenters indicated that EPA should provide greater clarification regarding the length of time employers should train their employees, which employees need training, and the distinction between employees “operating” a process and employees “involved in operating” a process.

EPA directs readers to review the Guidance for Facilities on Risk Management Programs for Chemical Accident Prevention (40 CFR part 68) (or General Risk Management Program Guidance), which clarifies expectations for training requirements.¹²⁰ The guidance does not specify a specific amount or type of training and allows the owner or operator to develop a training approach that is facility-specific and tailored to the needs of the facility’s employees. The revised language to require training for employees “involved in” operating a process is intended to include employees that operate a process, as well as supervisors of those employees, and other employees that may occasionally be involved in process operations, such as process engineers and maintenance technicians. For employees other than operators and supervisors, EPA expects that initial and refresher training will be appropriate to the employee’s responsibilities in operating the process.

If a supervisor is involved in decision-making for process operations, such as making changes to operating parameters, developing or approving operating procedures, or conducting emergency operations, then EPA expects that the supervisor receives initial and refresher training appropriate to the supervisor’s responsibilities. In such cases, the training of a supervisor might not need to be as extensive as that of an operator, but EPA expects that the supervisor training will include process operations for which the supervisor might have decision-making authority.

4. Revisions to § 68.65 (PSI)

EPA is revising § 68.65(a) in order to remove irrelevant text regarding the timeframe for initial development of PSI and to more clearly demonstrate that PSI must be kept up-to-date. EPA is revising § 68.65(a) to remove the phrase “In accordance with the schedule set forth in § 68.67” and is adding the phrase: “and shall keep PSI up-to-date.” EPA expects that revising § 68.65(a) in this manner will help Program 3 facilities to better comply with PSI requirements and further clarifies the requirement that PSI must be completed prior to conducting a PHA.

Finally, in order to be consistent with OSHA and the GHS, EPA is replacing “Material Safety Data Sheet” with “Safety Data Sheet” in the note to § 68.65(b). EPA received no comments and is finalizing these revisions as proposed.

5. Revisions to § 68.130—List of Substances

EPA is revising Tables 1 and 4 in § 68.130 as follows:

Table 1 to § 68.130—List of Regulated Toxic Substances and TQs for Accidental Release Prevention. EPA is correcting a typographical error in the Chemical Abstracts Service (CAS) number (no.) for allyl alcohol in Table 1 in § 68.130. The incorrect CAS no. of 107–18–61 for allyl alcohol is corrected to 107–18–6.

Table 4 to § 68.130—List of Regulated Flammable Substances and TQs for Accidental Release Prevention. EPA is correcting a typographical error to the CAS no. for 1, 3-Butadiene, to read 106–99–0, instead of 196–99–0, revising to right justify the first CAS nos. column and deleting the second CAS nos. column because it is redundant. EPA received no comments on these provisions and is finalizing the revisions as proposed.

6. Revisions to § 68.200 (Recordkeeping)

EPA is revising § 68.200 to clarify that records must be maintained at the stationary source. EPA received no comments on this provision and is finalizing the revision as proposed.

VIII. Compliance Dates

The initial Risk Management Program rule applied 3 years after promulgation of the rule on June 20, 1996, which is consistent with the last sentence of CAA section 112(r)(7)(B)(i). The statute does not directly address when amendments should become applicable. The provisions of this action modify terms of the existing rule, and, in some cases, clarify existing requirements.

¹¹⁹ OSHA Fact Sheet—Hazard Communication Standard Final Rule. <https://www.osha.gov/dsg/hazcom/HCSFactsheet.html>.

¹²⁰ General Guidance for Facilities on Risk Management Programs for Chemical Accident Prevention (40 CFR part 68), March 2009. <https://www.epa.gov/rmp/guidance-facilities-risk-management-programs-rmp>.

A. Summary of Proposed Rulemaking

EPA proposed modifications to § 68.10 to establish compliance dates for an owner operator to comply with the revised rule provisions as follows:

- Require compliance with emergency response coordination activities within one year of an effective date of a final rule;
- Provide up to three years for the owner or operator of a non-responding stationary source to develop an emergency response program in accordance with § 68.95 following an LEPC or equivalent's written request to do so;
- Comply with new provisions (*i.e.*, third-party compliance audits, root cause analyses as part of incident investigations, STAA, emergency response exercises, and information availability provisions), unless otherwise stated, four years after the effective date of the final rule; and
- Provide regulated sources one additional year (*i.e.*, five years after the effective date of the final rule) to correct or resubmit RMPs to reflect new and revised data elements.

B. Summary of Final Rule

EPA is finalizing the compliance dates as proposed, except that EPA is deleting language requiring the owner or operator of a non-responding stationary source to develop an emergency response program following an LEPC's written request to do so. Instead, the final provides three years for the owner or operator of a non-responding stationary source to develop an emergency response program in accordance with § 68.95 when the owner or operator determines that they meet the applicability criteria for responding stationary sources in § 68.90.

C. Discussion of Comments

Some commenters provided support for one or more of the compliance dates; however, many commenters were concerned that the timeframes were too long or in some cases too short.

1. General Comments

One commenter argued that the compliance dates should be set at one to two years after the effective date of the rule because the rule provisions are procedural and do not involve capital expenditures. A facility requested that EPA clarify that annual compliance dates and required reoccurring tasks have flexible yearly due dates to allow facilities to perform thorough evaluations without the pressure of tight yearly deadlines.

EPA agrees with commenters that annual compliance dates and required reoccurring tasks should have flexible yearly due dates. This will allow the facility owner or operator and local emergency response officials to schedule coordination activities or exercises based on availability of personnel and minimize unnecessary pressure to comply with a rigid timeframe.

However, EPA disagrees that the compliance dates for all provisions should be shortened to one or two years. EPA believes that additional time is necessary for facility owners and operators to understand the revised rule; train facility personnel on the revised provisions, learn new investigation techniques, as appropriate; research safer technologies; arrange for emergency response resources and response training; incorporate change into their risk management programs; and establish a strategy to notify the public that certain information is available upon request. Furthermore, EPA intends to publish guidance for certain provisions, such as STAA, root cause analysis, and emergency response exercises. Once these materials are complete, owners and operators will need time to familiarize themselves with the new materials and incorporate them into their risk management programs.

2. Third-Party Compliance Audits

One commenter expressed concern that the lack of qualified auditors would result in compliance delays and the three-year timeframe could result in an excessive burden on facilities if there is a limited availability of qualified auditors. The commenter further cited the inability to plan for a third-party audit based on the applicability criteria as a reason for the owner or operator to be unable to comply within the timeframe.

Other commenters urged for shorter timeframes with one commenter pointing out that this provision is triggered by an accident and should therefore be under an accelerated compliance date. Two commenters suggested a three-year compliance date, with the one commenter arguing that there already enough people to perform third-party audits.

EPA disagrees with commenters and is finalizing a four-year compliance date for third-party audits. This means that for any RMP reportable accident occurring later than four years after the effective date of the rule, the owner or operator of a source must conduct a third-party audit. The four-year compliance timeframe will allow

potential auditors enough time to establish internal protocols and identify personnel that meet the competency and independence criteria necessary to serve as a third-party auditor. These auditors will also need time to advertise their availability to conduct third-party audits so facility owners and operators can identify potential auditors before there is a need to conduct a third-party compliance audit.

3. Incident Investigations and Root Cause Analysis

Many commenters argued that the proposed four-year compliance date is too long. Commenters offered alternative timeframes such as 12 months, 18 months, and three years. A local agency suggested a one-year compliance date, arguing that many complex facilities are already conducting root cause analyses. One commenter argued that provisions that are triggered by an accident should be required in an accelerated timeframe. Other commenters argued that the compliance date should be required as soon as possible.

EPA disagrees with the commenters and is finalizing a four-year compliance date for incident investigations involving root cause analyses. For any incident that occurs four years after the effective date of the final rule and results in (*e.g.* an RMP reportable accident) or could reasonably have resulted in a catastrophic release, the owner or operator must investigate the incident and conduct a root cause analysis. This will allow facility owners and operators sufficient time to establish training and program development activities. EPA encourages facility owner or operators that are already conducting root cause analyses to continue to do so for any incident that resulted in (*e.g.* an RMP reportable accident) or could reasonably have resulted in a catastrophic release during the compliance timeframe.

4. STAA

A local agency supported the four-year compliance timeframe but numerous commenters argued that the proposed timeframe is too long. Many commenters, including mass mail campaigns joined by approximately 14,000 commenters and multiple advocacy groups, requested that EPA expedite compliance with STAA requirements. A mass mail campaign joined by approximately 300 commenters stated that the proposed compliance period is unlawful and arbitrarily long. The commenter argued that EPA has no lawful legal basis to extend the STAA compliance date

beyond three years. Another commenter suggested that EPA should consider following the NJ model to implement IST requirements and require an initial review report within 120 days of the rule's effective date.

However, other commenters thought the proposed timeframe was too short. One commenter cited the complexity of the IST/ISD analysis as a reason to extend the compliance date into a second PHA cycle to allow more time for engineering studies and design. Another commenter supported the U.S. Small Business Administration (SBA) recommendation to defer the STAA requirement for three years for small facilities so that EPA can gather information on their experience and assess how often safer alternatives were identified and at what cost.

EPA disagrees with commenters and is establishing a four-year compliance date for STAA. EPA believes that in many cases sources will prefer to perform a full PHA update when implementing the STAA requirements. Sources subject to this provision are among the largest and most complex sources regulated under 40 CFR part 68, and therefore PHAs and PHA updates at these sources typically require a significant level of effort. Since PHA updates are normally done at five year intervals, EPA believes it would be appropriate to allow most sources to adopt these provisions in their normal PHA update cycle if they so choose. Sources that performed their most recent PHA update immediately prior to this rule's effective date will have up to four years to perform their next PHA update and adopt the STAA provisions. Most sources could schedule their PHA updates to incorporate the new STAA provisions on their normal PHA update schedule. EPA also intends to publish guidance on STAA and once complete, facility owners and operators will need time to familiarize themselves with the new materials and incorporate them into their risk management programs.

EPA disagrees with the recommendation to defer the STAA requirement for three years for small facilities in order to allow EPA to gather information. STAA for a source is a site-specific determination and would be difficult to compare among facilities. EPA believes it would be impractical to gather/analyze information on STAA implementation to determine the utility of the provision for small facilities.

5. Emergency Response Coordination

EPA received comments supporting the proposed one-year compliance date for emergency response coordination activities. One commenter requested

clarification on how to calculate the annual coordination activities, recommending that it be based on a calendar year.

EPA agrees with commenters and is finalizing a one-year compliance date for emergency response coordination activities. EPA believes that a flexible schedule is appropriate for scheduling annual coordination and agrees with the recommendation to base the coordination on a calendar year timeframe.

6. Emergency Response Program

One commenter suggested that EPA should allow a minimum timeframe of 12 months for a non-responding facility to transition to a responding facility. The commenter further suggested incorporating an extension request to local agencies in the event of compliance delays that fall outside the owner/operator's control (such as budget constraints or inability to procure response resources). Another commenter expressed support for the timeframe to develop an emergency response program; however, expressed concerns with the ongoing costs associated with that requirement.

EPA is finalizing a three-year compliance date for a facility owner or operator to develop an emergency response program once he or she determines a need for a program. EPA is not incorporating an extension request to address compliance delays that may fall outside the owner or operator's control. EPA notes that the two provisions from § 68.90 of the proposed rule that would have made the owner or operator's decision to develop an emergency response program contingent on the outcome of local coordination activities, and required the owner or operator to develop an emergency response program upon receiving a written request to do so from the LEPC or local response authorities, were not included in the final rule. EPA believes that by making these changes, the regulatory provisions that would potentially have caused many sources to convert from being non-responding sources to responding sources have been removed from the final rule. However, as the emergency coordination provisions of the final rule require regulated sources to coordinate annually with local responders and to document coordination activities, EPA acknowledges that it is possible that these more frequent coordination activities may still prompt some sources to implement an emergency response program (*i.e.*, for a non-responding source to become a responding source). In such cases, EPA believes a three-year

timeframe is appropriate to establish a program that meets the requirements of § 68.95.

7. Facility Exercises

One commenter objected to the proposed four-year compliance date for emergency response exercises arguing that exercises should be required within one year of when coordination activities must begin.

EPA disagrees with the commenter and is finalizing a four-year compliance date for conducting emergency response exercises. This means that the owner or operator has four years after the effective date of this rule to conduct a notification exercise, consult with local emergency response officials to establish a schedule for conducting tabletop and field exercises, and complete at least one tabletop or field exercise. EPA believes that this timeframe will allow owners and operators to develop an exercise program that is appropriate for their facility, train personnel, and coordinate with local emergency response officials. EPA also expects to develop guidance on emergency response exercises and facility owners and operators will require time to familiarize themselves with the guidance.

8. Information Availability

A professional organization stated that the proposed timeline for information sharing should be shortened to three years for information that is shared with the public. The commenter recommended that information sharing with facility workers should begin immediately after the implementation of the rule. Another commenter asserted that the proposed rulemaking provisions and compliance dates are inappropriate for the sharing of information, arguing that provisions triggered by an accident should be required in an accelerated timeframe.

EPA disagrees with commenters and is finalizing a four-year compliance date for information availability provisions. This means that four years after the effective date of the rule, the facility owner or operator must have notifications in place to inform the public that information specified in § 68.210(b) is available upon request. For any RMP reportable accident occurring later than four years after the effective date of the rule, the owner or operator of a source must hold a public meeting within 90 days of the accident. EPA believes that this timeframe is sufficient to allow facility staff an opportunity to determine the best method for providing notifications to the public and to assemble and format

information to prepare to respond to information requests.

9. Update and Resubmit RMP

EPA received no comments on the proposed five-year compliance date for owners or operators to update RMPs to reflect the new and revised data elements in subpart G of the rule. EPA is finalizing a five-year compliance date for this provision, as proposed. This timeframe will allow owners and

operators an opportunity to begin to comply with revised rule provisions prior to certifying compliance in the RMP. Additionally, the Agency will revise its online RMP submission system, RMP* eSubmit, to include the additional data elements, and sources will not be able to update RMPs with new or revised data elements until the submission system is ready. Also, once it is ready, allowing an additional year

for sources to update RMPs will prevent potential problems with thousands of sources submitting updated RMPs on the same day.

D. Compliance Date Examples

The following examples demonstrate the compliance dates for the final rule as described in Table 6: Final Rule Provisions and Corresponding Compliance Dates.

TABLE 6—FINAL RULE PROVISIONS AND CORRESPONDING COMPLIANCE DATES

Rule provision	Compliance date	Initiated after an RMP reportable accident?
Third-party audit	March 15, 2021	Yes.
Root cause analysis	March 15, 2021	Yes (also required after near misses).
STAA	March 15, 2021	No.
Emergency response coordination activities	March 14, 2018	No.
Owner/operator determines that the facility is subject to the emergency response program requirements of § 68.95.	Within three years of the determination ...	No.
Emergency response exercises	March 15, 2021	No.
Information sharing	March 15, 2021	Partially-public meeting within 90 days.
Update RMP	March 14, 2022	No (but previously existing correction requirements of § 68.195 still apply).

Example 1: Provisions That Apply to a Non-Responding Stationary Source

Source A (see Table 7) is a non-responding stationary source with a regulated process subject to Program 2 requirements. Source A's owner submitted the latest RMP update to EPA on January 20, 2015 and completed its latest compliance audit on August 11, 2017. The source is not in NAICS 322, 324, or 325, and therefore is not subject to the STAA provisions. The source has not had any RMP reportable accidents since the effective date of the final rule.

In this example, the following provisions apply:

- Annual emergency response coordination activities in accordance with § 68.93;
- Notification exercises (§ 68.96(a)); and
- Information availability provisions (§ 68.210).

The owner or operator must coordinate response needs with local emergency planning and response organizations as described in § 68.93 (i.e., to determine how the source is addressed in the community emergency response plan and to ensure that local response organizations are aware of the regulated substances at the source, their quantities, the risks presented by covered processes, and the resources and capabilities at the facility). Coordination activities must occur annually and be documented.

Source A is a non-responding facility, and the owner or operator is required to conduct annual notification exercises. The owner or operator is also required to provide ongoing public notification that certain information is available to the public upon request.

Finally, beginning five years after the rule effective date, the owner or operator must update the RMP to include all revised data elements specified in subpart G. In this case, the owner or operator would update their RMP no later than January 20, 2020 (the source's next scheduled five-year update), and again by March 14, 2022 (the required resubmission date for the final rule).

Table 8: Summary of provisions that apply to a non-responding stationary source summarizes the provisions that apply to Source A.

TABLE 7—EXAMPLE 1, SOURCE A

Source A—Program 2, non-responding stationary source		
Date of last RMP update	Last compliance audit	Last accident
January 20, 2015 ..	August 11, 2017 ...	N/A.

TABLE 8—SUMMARY OF PROVISIONS THAT APPLY TO A NON-RESPONDING STATIONARY SOURCE

Applicable provisions	Additional information	When to complete*
Emergency response coordination activities.	Occurs annually	Complete coordination activities before March 14, 2018 and document coordination.
Notification exercise	Occurs annually	Complete first notification exercise by March 15, 2021.
Information availability provisions		
Information to the public	Ongoing. Includes notification that specifies the information that is available and provides instructions on how to obtain, and links to community preparedness information.	Complete first calendar year notification by March 15, 2021.
Update RMP	Owner's next five-year resubmission date occurs prior to effective date for provision, so owner must update RMP twice.	Update RMP on regular schedule (by January 20, 2020) and again to include new information by March 14, 2022.

If the Source A's owner or operator determines that the facility is subject to the emergency response program requirements (*i.e.*, the facility has toxic substances and is not included in the community emergency response plan or the facility has flammable substances and has not coordinated response actions with the local fire department), then he or she would have three years from the determination date to develop and implement an emergency response plan, obtain equipment, and train personnel in relevant procedures.

Once the owner has developed an emergency response program, the source is a responding facility and must also comply with tabletop and field exercise requirements for responding facilities.

Example 2A: Provisions That Apply to a Responding Stationary Source

Source B (see Table 9) is a responding stationary source with a process subject to Program 3 requirements. Its latest RMP update was submitted June 30, 2020. Its latest compliance audit was performed on April 6, 2020. The source is not in NAICS 322, 324, or 325, and

therefore is not subject to the STAA provisions, and the source has not had any RMP reportable accidents since the effective date of a final rule.

TABLE 9—EXAMPLE 2A, SOURCE B

Source B—Program 3, responding stationary source		
Date of last RMP update	Last compliance audit	Last accident
June 30, 2020	April 6, 2020	N/A.

In this example, the following provisions apply:

- Annual emergency response coordination activities in accordance with § 68.93;
- Emergency response exercises (§ 68.96); and
- Information availability provisions (§ 68.210).

The owner or operator must coordinate response needs with local emergency planning and response organizations as described in § 68.93. Coordination activities must occur annually and be documented.

Additionally, since Source B is a responding facility, the owner or

operator is required to conduct annual notification exercises and tabletop and field exercises. The frequency of the tabletop and field exercises will be determined in consultation with local emergency response officials, but at a minimum, shall be every three years for tabletop exercises and every ten years for field exercises. EPA expects that within four years of the effective date of the final rule, that the owner or operator will consult with local emergency response officials to establish a schedule for conducting at least one tabletop and/or field exercise.

The owner or operator is also required to provide ongoing public notification that certain information is available the public upon request.

Finally, by five years after the rule effective date, the owner or operator must update the RMP to include all revised data elements specified in subpart G. Table 10: Summary of provisions that apply to Source B summarizes the provisions that apply in this example.

TABLE 10—SUMMARY OF PROVISIONS THAT APPLY TO SOURCE B

Applicable provisions	Additional information	When to complete *
Emergency response coordination activities.	Occurs annually	Complete coordination activities before March 14, 2018.
Emergency response exercises (§ 68.96)		
Notification exercise	Occurs annually	Complete first notification exercise by March 15, 2021.
Field and tabletop exercises	Tabletop exercise every three years, field exercise once every ten years.	Complete first tabletop or field exercise by March 15, 2021.
Information availability provisions		
Information to the public	Ongoing. Includes notification that specifies the information that is available, provides instructions on how to obtain, and links to community preparedness information.	Complete first calendar year notification by March 15, 2021.
Update RMP	Update RMP to include new information by March 15, 2021.

Example 2B: Additional Provisions That Apply to a Responding Stationary Following an RMP Reportable Accident.

See Table 11.

TABLE 11—EXAMPLE 2B, SOURCE B

Source B—Program 3, responding stationary source		
Date of last RMP update	Last compliance audit	Last accident
June 30, 2020	April 6, 2020	July 5, 2021.

In this example, Source B has an accidental release on July 5, 2021 that meets the reporting requirements of § 68.42. As a result of the accident, Source B's owner is required to comply

with the following additional provisions:

- Third-party audit provisions of § 68.80;
- Incident investigation and root cause analysis requirements of § 68.81; and
- Public meeting within 90 days of an RMP reportable accident, pursuant to § 68.210(e).

Chronologically, the first provision that applies is the requirement to host a public meeting. Section 68.210(e) requires the owner or operator to hold a public meeting within 90 days after the accident to inform the public about the accident, including information

required under § 68.42, and other relevant information.

An incident investigation must be initiated promptly, but no later than 48 hours following the incident. The incident investigation provisions require the owner or operator to complete an incident investigation that includes a root cause analysis and other elements specified in § 68.81(d), and an incident investigation report, within 12 months of the incident, unless the implementing agency approves an extension of time.

The third-party audit provisions require the owner or operator to hire a third-party auditor to perform a third-

party compliance audit and complete an audit report within 12 months of the accident (unless the implementing agency approves an extension). The owner or operator must also complete an audit findings response report within 90 days of receiving the audit report from the third-party auditor. The owner or operator must also provide the audit findings response report, as well as a schedule to address deficiencies identified in the audit findings response report and documentation of actions taken to address deficiencies, to the owner or operator's audit committee of

the Board of Directors, or other comparable committee or individual, if applicable.

By five years after the rule effective date, the owner or operator must update the RMP to include all revised data elements specified in subpart G and § 68.42. Finally, if the owner or operator's response to the incident utilizes the facility's emergency response plan, tested the objectives of an exercise as described in § 68.96(b)(1)(ii), and documents response actions as described in § 68.96(b)(3), then the owner or operator

may use the response to satisfy the field exercise requirements of the final rule.

Table 12 summarizes the additional provisions that apply to Source B following an RMP reportable accident (in addition to complying with new requirements triggered by an RMP reportable accident, the owner or operator must annually coordinate response needs with local emergency planning and response organizations, document coordination activities, and comply with the other information disclosure provisions as previously described).

TABLE 12—SUMMARY OF ADDITIONAL PROVISIONS THAT APPLY TO SOURCE B FOLLOWING AN RMP REPORTABLE ACCIDENT

Applicable provisions following an RMP reportable accident:	Compliance date	Additional information	When to complete *
Public meeting	March 15, 2021	The accident occurred after the compliance date for this provision, therefore, schedule a meeting within 90 days after the RMP reportable accident.	Hold public meeting by October 3, 2021.
Incident investigations	March 15, 2021	The accident occurred after the compliance date for this provision, therefore, initiate within 48 hours, complete investigation and root cause analysis within 12 months.	Complete report by July 5, 2022.
Third-party audit	March 15, 2021	The accident occurred after the compliance date for this provision, therefore, complete within 12 months of the RMP reportable accident.	Complete third-party audit by July 5, 2022 Complete findings response report within 90 days of completing audit.
Field exercise	March 15, 2021	May use the response to satisfy the field exercise requirements of the rule when all objectives of the exercise are tested and the response is documented.	Document the response within 90 days of the incident (<i>i.e.</i> , by October 3, 2021), if using response to satisfy field exercise requirements.
Accident history information in RMP.	Correct RMP within 6 months of accident (existing requirement).	Correct RMP by January 5, 2022.

Example 3: Compliance Date Example for Sources Subject to STAA Requirements

Source C (see Table 13) is a petroleum refinery in NAICS 32411. Its latest RMP update was submitted on March 31, 2018. Its latest PHA revalidation was completed on March 7, 2017.

TABLE 13—EXAMPLE 3, SOURCE C

Source C—Program 3, NAICS 32411	
Date of last RMP update	Last PHA revalidation
March 31, 2018	March 7, 2017.

Because the source is in NAICS 32411, it is subject to the STAA provisions of § 68.67(c)(8). Therefore, March 15, 2021, the owner or operator must complete a PHA revalidation that addresses safer technology and alternative risk management measures, and determine the practicability of the ISTs and ISDs considered.

By March 14, 2018 the owner or operator of Source C must comply with the emergency response coordination provisions, and by March 15, 2021, the owner or operator must also comply with other applicable rule provisions including: Third-party audits; incident investigations; emergency response

exercises; and information availability (including public meetings).

By March 14, 2022, the owner or operator of Source C must update the RMP to include all revised data elements specified in subpart G. Table 14: Compliance date example for sources subject to STAA requirements, summarizes the STAA provisions that apply to Source C.

TABLE 14—COMPLIANCE DATE EXAMPLE FOR SOURCES SUBJECT TO STAA REQUIREMENTS

Applicable provisions	Additional information	When to complete *
STAA	Occurs every five years as part of PHA revalidation	By March 15, 2021.
Update RMP	By March 14, 2022.

IX. Statutory and Executive Order Reviews

Additional information about these statutes and Executive Orders can be found at <https://www.epa.gov/laws-regulations/laws-and-executive-orders>.

A. Executive Order 12866: Regulatory Planning and Review and Executive Order 13563: Improving Regulation and Regulatory Review

This action is an economically significant regulatory action that was submitted to the Office of Management and Budget (OMB) for review. Any changes made in response to OMB recommendations have been documented in the docket. The EPA prepared a Regulatory Impact Analysis (RIA) of the potential costs and benefits associated with this action. This RIA is available in the docket and is summarized here (Docket ID Number EPA-HQ-OEM-2015-0725).

1. Why EPA Is Considering This Action

In response to catastrophic chemical facility incidents in the United States, President Obama issued Executive Order 13650, "Improving Chemical Facility Safety and Security," on August 1, 2013. The Executive Order establishes the Chemical Facility Safety and Security Working Group (Working Group), co-chaired by the Secretary of Homeland Security, the Administrator of EPA, and the Secretary of Labor or their designated representatives at the Assistant Secretary level or higher, and comprised of senior representatives of other Federal departments, agencies, and offices. The Executive Order requires the Working Group to carry out a number of tasks whose overall goal is to prevent chemical accidents.

Section 6(a)(i) of Executive Order 13650 requires the Working Group to develop options for improved chemical facility safety and security that identify "improvements to existing risk management practices through agency programs, private sector initiatives, Government guidance, outreach, standards, and regulations." Section 6(c) of Executive Order 13650 requires the Administrator of EPA to review the Risk Management Program. As part of this effort to solicit comments and information from the public regarding potential changes to EPA's RMP regulations (40 CFR part 68), on July 31, 2014, EPA published an RFI (79 FR 44604).

EPA believes that the RMP regulations have been effective in preventing and mitigating chemical accidents in the United States; however, EPA believes that revisions could further protect

human health and the environment from chemical hazards through advancement of PSM based on lessons learned. These revisions are a result of a review of the existing Risk Management Program and information gathered from the comments on the proposed rulemaking, SBAR panel, public hearing, RFI, and Executive Order listening sessions, and are finalized under the statutory authority provided by CAA section 112(r) as amended (42 U.S.C. 7412(r)).

2. Description of Alternatives to the Final Rule

EPA analyzed in the RIA the requirements finalized in this action as well as several alternatives for each.

a. Third-Party Audits (Program 2 §§ 68.58 and 68.59 and Program 3 §§ 68.79 and 68.80)

The existing rule requires Program 2 and Program 3 processes to conduct a compliance audit at least once every three years. The revised rule requires facilities to contract with an independent third-party, or assemble an audit team led by an independent third-party, to conduct the next scheduled compliance audit following an RMP reportable accident or after an implementing agency determines that certain circumstances exist that suggest a heightened risk for an accident. The third-party would have to be someone with whom the facility does not have an existing or recent relationship and who meets specific qualification criteria. The low cost alternative applies only for Program 2 and Program 3 processes after an RMP reportable accident or at the request of the implementing agency. The medium cost alternative applies every three years for all compliance audits conducted for all Program 3 processes. The high cost alternative applies every three years for all compliance audits conducted for Program 2 and Program 3 processes.

b. Incident Investigations/Root Cause Analysis (§§ 68.60 and 68.81)

The rule requires facilities to conduct a root cause analysis as part of an incident investigation following an RMP reportable accident or an incident that could reasonably have resulted in an RMP reportable accident (*i.e.*, "near miss"). A root cause analysis is a formal process to identify underlying reasons for failures that lead to accidental releases. These analyses usually require someone trained in the technique. The low cost alternative applies the provision only to RMP reportable accidents or near misses in Program 3 processes. The medium/high cost

alternative applies to RMP reportable accidents or near misses involving Program 2 and Program 3 processes.

c. STAA (§ 68.67)

Under the final rule, facilities in NAICS codes 322 (paper manufacturing), 324 (petroleum and coal products manufacturing), and 325 (chemical manufacturing) with Program 3 processes are required to conduct a STAA for each process as part of their PHA, which occurs every five years. The STAA includes two parts: The initial analysis to identify alternatives, and a practicability study to determine the costs and assess the reasonableness of implementing technology alternatives. The final rule is the low cost alternative, which applies to all facilities with Program 3 processes in NAICS codes 322, 324, and 325. The medium cost alternative applies the requirement to all Program 3 processes. The high cost alternative applies the requirement to all Program 3 processes and require facilities to implement practicable IST/ISD.

d. Emergency Response Program Coordination With Local Responders (§§ 68.90, New 68.93, and 68.95)

Under the final rule, all facilities with Program 2 or Program 3 processes are required to coordinate with local response agencies annually to determine how the source is addressed in the community emergency response plan and to ensure that local response organizations are aware of the regulated substances at the source, their quantities, the risks presented by covered processes, and the resources and capabilities at the facility to respond to an accidental release of a regulated substance. The owner or operator must document coordination activities.

Alternatives to this provision are similar to the finalized requirements. One alternative that imposes the same costs as the final rule option includes an option for local officials to request that a facility owner or operator comply with the emergency response program requirements of § 68.95. This would be analogous to the requirements under the Oil Pollution Prevention regulation (40 CFR part 112) where all facilities subject to the FRP provisions at § 112.20 are required to prepare and implement an emergency response plan for oil discharges into navigable waters or adjoining shorelines.

e. Facility Exercises (§ 68.96)

Notification exercises. All facilities with Program 2 or Program 3 processes are required to conduct a notification

exercise annually to ensure that the contact list to be used in an emergency is complete, accurate, and up-to-date.

Tabletop and field exercises. The rule requires responding facilities to conduct exercises of their emergency response plans and invite local emergency response officials to participate. Under the low cost alternative, facilities would conduct tabletop exercises every three years. Under the final rule, which is the medium cost alternative, facilities will establish the frequency of exercises in consultation with local emergency response officials, but at a minimum, full field exercises will be conducted at least once every ten years and tabletop exercises conducted at least once every three years. Responding facilities that have an RMP reportable accident, and document the response activities in an after-action report comparable to the exercise evaluation reports may use that response to satisfy the field exercise requirements. Furthermore, owner and operators of responding facilities that conduct exercises to meet other Federal, state or local exercise requirements may satisfy the RMP exercise requirements provided that the scope of the exercise includes the objectives of an RMP exercise. Under the high cost alternative, facilities would conduct full field exercises annually.

f. Information Availability (§ 68.210)

The rule requires all facilities to provide certain basic chemical hazard information to the public, upon request. The owner or operator of the facility shall provide ongoing notification of availability of information elements on a company Web site, social media platforms, or through some other publicly accessible means. The information to be disclosed includes names of regulated substances at the facility; SDS; accident history information; emergency response program information; and LEPC or local response agency contact information.

EPA proposed requirements for facilities to provide certain information to the LEPC, Tribal Emergency Planning Committee (TEPC) or other local emergency response agencies. However, rather than prescribe information elements that must be provided upon request, EPA is requiring the owner or operator of a stationary source to share information that is relevant to emergency response planning as part of the coordination activities that occur annually between facility representatives and local emergency response agencies.

Finally, the rule requires facilities to hold a public meeting for the local

community within 90 days of an RMP reportable accident. The medium cost alternative would require Program 2 and Program 3 facilities to hold a public meeting at least once every five years and within 90 days of an RMP reportable accident. The high cost alternative would require all facilities (*i.e.*, including Program 1 facilities) to hold a public meeting at least once every five years and immediately following an RMP reportable accident.

3. Summary of Costs

Approximately 12,500 facilities have filed current RMPs with EPA and are potentially affected by the revised rule. These facilities range from petroleum refineries and large chemical manufacturers to water and wastewater treatment systems; chemical and petroleum wholesalers and terminals; food manufacturers, packing plants, and other cold storage facilities with ammonia refrigeration systems; agricultural chemical distributors; midstream gas plants; and a limited number of other sources that use RMP-regulated substances.

Table 15 presents the number of facilities according to the latest RMP reporting as of February 2015 by industrial sector and chemical use.

TABLE 15—NUMBER OF AFFECTED FACILITIES BY SECTOR

Sector	NAICS codes	Total facilities	Chemical uses
Administration of environmental quality programs (<i>i.e.</i> , governments)	924	1,923	Use chlorine and other chemicals for treatment.
Agricultural chemical distributors/wholesalers	111, 112, 115, 42491	3,667	Store ammonia for sale; some in NAICS 111 and 115 use ammonia as a refrigerant.
Chemical manufacturing	325	1,466	Manufacture, process, store.
Chemical wholesalers	4246	333	Store for sale.
Food and beverage manufacturing	311, 312	1,476	Use mostly ammonia as a refrigerant.
Oil and gas extraction	211	741	Intermediate processing (mostly regulated flammable substances and flammable mixtures).
Other	44, 45, 48, 54, 56, 61, 72	248	Use chemicals for wastewater treatment, refrigeration, store chemicals for sale.
Other manufacturing	313, 326, 327, 33	384	Use various chemicals in manufacturing process, waste treatment.
Other wholesale	423, 424	302	Use (mostly ammonia as a refrigerant).
Paper manufacturing	322	70	Use various chemicals in pulp and paper manufacturing.
Petroleum and coal products manufacturing	324	156	Manufacture, process, store (mostly regulated flammable substances and flammable mixtures).
Petroleum wholesalers	4247	276	Store for sale (mostly regulated flammable substances and flammable mixtures).
Utilities	221	445	Use chlorine (mostly for water treatment) and other chemicals.
Warehousing and storage	493	1,056	Use mostly ammonia as a refrigerant.
Total	12,542	

Table 16 presents a summary of the annualized costs estimated in the RIA.

In total, EPA estimates annualized costs of \$131.2 million at a 3% discount rate

and \$131.8 million at a 7% discount rate.

TABLE 16—SUMMARY OF ANNUALIZED COSTS
[Millions, 2015 dollars]

Provision	3%	7%
Third-party Audits	\$9.8	\$9.8
Incident Investigation/Root Cause	1.8	1.8
STAA	70.0	70.0
Coordination	16.0	16.0
Notification Exercises	1.4	1.4
Facility Exercises	24.7	24.7
Information Sharing (Public)	3.1	3.1
Public Meeting	0.4	0.4
Rule Familiarization	3.9	4.6
Total Cost *	131.2	131.8

* Totals may not sum due to rounding.

The largest average annual cost of the final rule is the STAA costs (\$70.0 million), followed by the exercise costs (\$24.7 million), coordination (\$16 million), and third-party audits (\$9.8 million). The remaining provisions impose average annual costs under \$5 million each, including rule familiarization (\$3.9 to 4.6 million), information sharing (public) (\$3.1 million), incident investigation/root cause analysis (\$1.8 million), notification exercises (\$1.4 million), and public meetings (\$0.4 million).

The rule includes three prevention program provisions—third-party audits, root cause analysis, and STAA—involving information collection and analysis activities that can lead to a wide range of outcomes, and therefore costs, if and when the owner acts upon the findings and/or recommendations generated by the audit, investigation, or analysis. Although resolving audit and investigation findings is required under the existing rule provisions, and the rule does not require implementation of practicable IST alternatives, EPA

believes it is possible that there may be costs associated with resolving findings from the third-party audit and root cause analysis provisions that go beyond the costs of the existing provisions, and that some owners or operators may have additional costs due to voluntary implementation of IST. EPA acknowledged the wide range of outcomes from these provisions and the significant uncertainties associated with their costs, and requested information in the proposed rulemaking on whether these costs should accrue to the rule. EPA did not receive any data from commenters that illustrates the: Types of costs that result from independent audits (other than the cost of the audit) that are different from self-audit costs; the types of costs that result from root cause investigations as compared to non-root-cause investigations; and for the STAA provisions, information to project what changes facilities are likely to voluntarily undertake (e.g., cost data or studies for implementation of IST changes).

4. Summary of Potential Benefits

EPA anticipates that implementation of this rule will result in a reduction of the frequency and magnitude of damages from releases. Accidents and releases from RMP facilities occur every year, resulting in fires and explosions, property damage, acute and chronic exposures of workers and nearby residents to hazardous materials, and resultant damages to health. Although we are unable to quantify what specific damage reductions may occur as a result of these revisions, we are able to present data on the total damages that currently occur at RMP facilities each year. The data presented are based on a 10-year baseline period, summarizing RMP accident impacts and, when possible, monetizing them. EPA expects that some portion of future damages would be prevented through implementation of this rule. Table 17 presents a summary of the quantified damages identified in the analysis.

TABLE 17—SUMMARY OF QUANTIFIED DAMAGES
[Millions, 2015 dollars]

	Unit value	10-Year total	Average/year	Average/accident
On-site				
Fatalities	\$8.6	\$497.8	\$49.8	\$0.33
Injuries	0.05	105.2	10.5	0.69
Property Damage		2,054.9	205.5	1.4
On-site Total		2,657.9	265.8	1.8
Offsite				
Fatalities	8.6	8.6	0.86	0.01
Hospitalizations	0.4	6.8	0.68	0.004
Medical Treatment	0.001	14.8	1.5	0.01
Evacuations*	0.0	7.0	0.70	0.004
Sheltering in Place*	0.0	40.9	4.1	0.03
Property Damage		11.4	1.1	0.007
Offsite Total		89.5	8.9	0.06
Total		2,747.3	274.7	1.8

* The unit value for evacuations is less than two hundred dollars and for sheltering in place is less than one hundred dollars so when expressed in rounded millions the value represented in the table is zero.

EPA monetized both on-site and offsite damages. EPA estimated total average annual on-site damages of \$265.8 million. The largest monetized average annual on-site damage was on-site property damage, which resulted in average annual damage of approximately \$205.5 million. The next largest impact was on-site fatalities (\$49.8 million) and injuries (\$10.5 million).

EPA estimated total average annual offsite damages of \$8.9 million. The largest monetized average annual offsite damage was from sheltering in place (\$4.1 million), followed by medical treatment (\$1.5 million), property damage (\$1.1 million), fatalities (\$0.86 million), evacuations (\$0.7 million), and hospitalizations (\$0.68 million).

In total, EPA estimated monetized damages from RMP facility accidents of \$274.7 million per year. However, the monetized impacts omit many important categories of accident impacts including lost productivity, the costs of emergency response, transaction costs, property value impacts in the surrounding community (that overlap with other benefit categories), and environmental impacts. Also not reflected in the 10-year baseline costs are the impacts of non-RMP accidents at RMP facilities and any potential impacts of rare high consequence catastrophes. A final omission is related to the information provision. Reducing the probability of chemical accidents and the severity of their impacts, and improving information disclosure by

chemical facilities, as the provisions intend, would provide benefits to potentially affected members of society.

Table 18 summarizes four broad social benefit categories related to accident prevention and mitigation including prevention of RMP accidents, mitigation of RMP accidents, prevention and mitigation of non-RMP accidents at RMP facilities, and prevention of major catastrophes. The table explains each and identifies ten associated specific benefit categories, ranging from avoided fatalities to avoided emergency response costs. Table 18 also highlights and explains the information disclosure benefit category and identifies two specific benefits associated with it: Improved efficiency of property markets and allocation of emergency resources.

TABLE 18—SUMMARY OF SOCIAL BENEFITS OF FINAL RULE PROVISIONS

Broad benefit category	Explanation	Specific benefit categories
Accident Prevention	Prevention of future RMP facility accidents	<ul style="list-style-type: none"> • Reduced Fatalities. • Reduced Injuries. • Reduced Property Damage. • Fewer People Sheltered in Place. • Fewer Evacuations. • Avoided Lost Productivity. • Avoided Emergency Response Costs. • Avoided Transaction Costs. • Avoided Property Value Impacts.* • Avoided Environmental Impacts. • Improved efficiency of property markets. • Improved emergency response resource allocation.
Accident Mitigation	Mitigation of future RMP facility accidents	
Non-RMP accident prevention and mitigation	Prevention and mitigation of future non-RMP accidents at RMP facilities.	
Avoided Catastrophes	Prevention of rare but extremely high consequence events.	
Information Disclosure	Provision of information to the public	

* These impacts partially overlap with several other categories such as reduced health and environmental impacts.

5. Discussion of Comments on Estimated Costs and Benefits

a. General Comments

EPA costs underestimated or based on outdated information. Several commenters stated that EPA’s cost estimates in the RIA for the proposed rulemaking were generally inaccurate and underestimated the true costs that facilities will face. Some commenters indicated that EPA’s estimated labor rates were based on outdated (2014) information. Several commenters representing industry trade associations and regulated facilities expressed specific concerns about the estimated costs of each individual proposed rulemaking element, as well as EPA’s estimate of the costs of rule familiarization. Some of these commenters provided specific cost information or estimates to support their claims.

EPA considered this information and made substantial adjustments to the cost estimates for every rule provision, including rule familiarization. In addition to adjusting the cost estimate

for the final rule to incorporate cost information submitted by commenters, EPA also adjusted the estimate to delete costs associated with proposed rulemaking provisions that were not included in the final rule (e.g., information availability to LEPCs), and to account for structural changes between proposed and final rule provisions for certain rule elements (e.g., the final rule requires emergency field and tabletop exercises to be conducted less frequently than EPA had proposed). EPA also updated its estimated labor rates to the most recent (2015) values available from the Bureau of Labor Statistics.

Benefit concerns. Several commenters also addressed EPA’s assessment of benefits in their public comment submissions. While some commenters indicated that the proposed requirements would improve safety and prevent chemical releases, other commenters stated that the proposed requirements would not provide any benefits, or that the costs associated with the rule would severely outweigh any benefits. Other commenters

indicated that EPA had failed to quantify any benefits of the rule, making a cost-benefit comparison impossible. Other commenters stated that EPA overestimated benefits or inappropriately counted benefits that actually accrue from OSHA’s PSM standard as benefits of the proposed rulemaking. One commenter also stated that EPA’s benefit categories would be offset by unstated additional costs, including losses in reputation or brand value, higher insurance premiums, and difficulty hiring and retaining workers that facilities may incur as a result of an accident.

EPA disagrees that the proposed rulemaking would not provide benefits or that the costs of the rule would necessarily outweigh its benefits. As EPA explains in the RIA for the final rule, the benefits of the final rule include reductions in the number of people killed, injured, and evacuated or otherwise inconvenienced by sheltering in place; reductions in the damage caused to property on-site and offsite including product, equipment, and buildings; reductions in damages to the

environment and ecosystems; and reductions in resources diverted to extinguish fires and clean up affected areas. The final rule also provides other benefits, such as increased public information, which in addition to helping to minimize the impacts of accidents on the offsite public, may also lead to more efficient property markets in areas near RMP facilities.

EPA acknowledges that it is not possible to estimate quantitative benefits for the final rule. EPA has no data to project the specific impact on accidents made by each final rule provision. The accidents themselves have highly variable impacts that are difficult to predict. However, it is clear from the RMP accident data and other available data that chemical accidents can impose substantial costs on firms, employees, emergency responders, the community, and the broader economy. Reducing the risk of such accidents and the severity of the impacts when accidents occur, and improving information provision, as the final rule intends, provides benefits to the potentially affected members of society.

EPA disagrees that the final rule takes credit for benefits that should accrue to the OSHA PSM standard. None of the provisions contained in the final rule are duplicated in the OSHA PSM standard. EPA also disagrees that regulated facilities will suffer losses in reputation or brand value, higher insurance premiums, or have difficulty hiring and retaining workers as a result of the final rule. If, as EPA expects, the final rule results in the prevention of accidents, then it should have the opposite of these effects, to the extent they relate to chemical accidents.

b. Estimate of Rule Familiarization Costs

Several industry trade associations stated that EPA's estimate of the costs of rule familiarization were too low. These commenters stated that EPA's estimate only included time spent by management level employees but should be expanded to include the cost of training all relevant facility employees. Some of these commenters recommended alternate approaches to estimating the costs of rule familiarization that included estimates of time spent by additional labor categories (e.g., attorneys, engineers, production staff, etc.). One commenter also recommended that EPA consider adjusting its rule familiarization estimate to better track with the estimate used by the NJ DEP for revisions to the NJ TCPA regulations.

EPA agrees with these comments, and adjusted its rule familiarization estimate accordingly, resulting in an increase of

the estimated costs of rule familiarization.

c. Third-Party Audit Costs

Many commenters including industry trade associations and facilities stated that EPA's estimate of the costs of third-party audits was too low. Many commenters also stated that third-party auditor fees will be much higher than EPA's estimate, partially due to the low availability of qualified auditors. Several commenters submitted cost information from external audits to support their estimates.

EPA generally agrees with these comments. Shortly after the proposed rulemaking was published, EPA received cost information relating to a series of third-party audits conducted by a facility as a result of an enforcement action taken by EPA under CAA section 112(r). The average cost of these audits was approximately double EPA's estimate in the proposed rulemaking, and comparable to cost estimates submitted by commenters. Therefore, EPA adjusted its cost estimate for this provision of the final rule accordingly, resulting in the estimated costs of third-party audits under the final rule nearly doubling. EPA notes that the third-party audit provisions of the final rule also relaxed, to some extent, the independence and competency criteria for third-party auditors. The Agency believes that these changes will increase the availability of qualified auditors, and therefore make such audits less costly than might otherwise have been the case.

d. Incident Investigation/Root Cause Costs

Several commenters stated that EPA's estimate of costs of incident investigations and root cause analysis was inaccurately low. Some of these commenters suggested that the required number of investigations will increase significantly as a result of EPA's proposal to re-define the term "catastrophic release," and that this would cause the cost of this rule element to increase substantially. Other commenters stated that incident investigations require more labor hours than were accounted for in EPA's cost estimate, and that the Agency needs to significantly raise its estimate in order to account for these issues. Some of these commenters submitted cost information to support their estimates.

Although EPA disagrees that its proposed changes to the definition of "catastrophic release" would have increased the number of investigations required under the rule, the Agency elected not to finalize the proposed

changes to that definition, so no increase in incident investigation costs will result from it. Regarding commenters' concerns that EPA had not accounted for enough labor hours for investigations in the RIA for the proposed rulemaking, after considering these comments, the Agency generally agrees that its estimate was too low. EPA incorporated the cost information submitted by commenters into its estimate for the final rule. EPA also notes that unlike the estimate for the proposed rulemaking, the final rule economic estimate did not assume that investigations of near misses would require fewer labor hours than investigations of actual release events. This change also accounted for some of the increase in the estimated cost of this rule element. Overall, these changes resulted in the estimated cost of this rule element approximately doubling for the final rule.

e. STAA Costs

STAA costs too low. EPA received several comments stating that the Agency's estimate of costs for the proposed STAA provisions was too low. Most of these comments addressed both EPA's estimate of the cost of the initial study of safer technology options, as well as the Agency's estimate of costs for the required evaluation of the practicability of IST considered during the STAA.¹²¹ Some commenters submitted alternate cost estimate information for both the initial analysis of options and the practicability study.

EPA notes that in general, commenter's cost estimates for the initial analysis were higher than EPA's estimates, although not in every case. EPA incorporated these estimates into the RIA as appropriate—the Agency assumed that cost estimates for the STAA initial analysis submitted by trade associations representing a particular category of facilities (e.g., refineries, complex chemical manufacturers, etc.) were the best representation of estimated costs for those categories of facilities, and adjusted its own estimate accordingly. In most cases, this cause the estimated costs for the STAA initial analysis to increase.

Practicability study costs. For the practicability study, several commenters stated that EPA's estimate was far too low, and indicated that EPA should adopt an alternate approach that estimated the cost of the practicability study as a fixed fraction of the cost of the project being considered.

¹²¹ EPA used the term "feasible" rather than "practicability" in the proposed rulemaking.

After reviewing these comments, EPA conducted additional research on this subject which confirmed that these commenters were generally correct on this point. EPA therefore adjusted its approach to estimating the costs of practicability studies accordingly, which resulted in a significant increase for the cost of this provision. EPA's research on this topic and the resulting cost estimation approach is explained in detail in Appendix D to the RIA for the final rule.

STAA implementation. EPA also received several comments stating that the Agency should assume that the STAA provision will result in some facilities implementing safer technologies, and include the costs associated with such implementation in its economic estimate.

EPA disagrees with these comments. While the Agency agrees that some facilities may elect to implement IST, the final rule does not require facilities to do so. Therefore, the Agency believes that implementation of IST will result from the owner or operator's own judgement that it is beneficial for the source, after considering all relevant factors. The STAA required under this rule may facilitate such decision making, but does not require it.

f. Emergency Response Program Coordination With Local Responders' Costs

Emergency response program costs. The Agency received several comments relating to the proposed emergency coordination provisions. Some of the comments on this topic related to the Agency's projected estimate of the cost for some sources to develop an emergency response program, stating that EPA's estimate of these costs was too low.

EPA is not finalizing the proposed rulemaking provisions that it believes would have resulted in many sources developing emergency response programs. Therefore, these "new responder" costs were not included in the RIA for the final rule.

Annual coordination burden. EPA also received comments that stated its estimate of burden for the annual coordination provision, a modified form of which is included in the final rule, were too low. One commenter provided emergency coordination cost information for large complex facilities, which was substantially higher than EPA's estimate for the category of facilities.

EPA incorporated the emergency coordination cost information into the revised economic estimate in the RIA for the final rule. EPA also revised its

estimate for this element to account for the fact that changes to the annual coordination provision in the final rule, as well as the Agency's decision not to finalize a portion of the information availability provisions of the proposed rulemaking, may result in greater information exchange occurring during annual coordination meetings than was estimated under the proposed rulemaking. Under the information availability provisions of the proposed rulemaking, the owner or operator would have been required to annually provide certain information to local emergency responders. The final rule does not include this provision; however, the annual coordination provisions in the final rule require the owner or operator to provide local response officials with information relevant to emergency planning upon request. The net effect of these changes was to more than double the estimated costs of the annual emergency response coordination provision of the final rule.

g. Facility Exercise Costs

Several commenters disagreed with EPA's approach to estimating the costs of emergency response exercises, and in general, characterized EPA's estimate as too low. Two of these commenters submitted alternate cost estimates for this provision. However, the cost estimate provided by one commenter did not appear to apply to facilities represented by the commenter's industry association. The information submitted by the other commenter appeared credible, but projected costs for large complex facilities that were lower than EPA's estimate.

As a result of these comments EPA determined that its NPRM cost estimate for large complex facilities was inflated, and lowered its estimate to better reflect industry experience. The Agency also notes that the final rule requires emergency exercises to be conducted less frequently than was proposed in the NPRM. The net effect of the structural changes to the final rule and EPA's adjustment of its cost estimation approach resulting from public comments was to substantially reduce the estimated costs of this rule provision.

h. Information Availability Costs

EPA received some comments stating that EPA's estimate of costs for the proposed rulemaking's information availability provisions was too low. These commenters indicated that EPA underestimated the time required for facilities to prepare information required to be disclosed to the public, and that EPA underestimated the cost of

holding public meetings. One commenter indicated that renting space for a public meeting would cost as much as \$10,000 per day.

Based on these comments, EPA increased its cost estimate for the public information availability provision for large complex facilities. EPA did not change its cost estimate for public meetings because commenter's high estimates of the costs of public meeting space did not comport with EPA's research and prior experience with the costs of public meetings.

B. Paperwork Reduction Act (PRA)

The information collection activities in this rule have been submitted for approval to the OMB under the PRA. The Information Collection Request (ICR) document that the EPA prepared has been assigned EPA ICR number 2537.02 and OMB Control Number 2050-0216. You can find a copy of the ICR in the docket for this rule, and it is briefly summarized here.

This ICR amends a previously approved ICR (1656.15), OMB Control No. 2050-0144. That ICR covers the risk management program rule, originally promulgated on June 20, 1996; the current rule, including previous amendments, is codified as 40 CFR part 68. This ICR addresses the following information requirements that are part of the revised rule:

(1) Make certain information related to the risk management program available to the public, upon request;

(2) Hold a public meeting within 90-days of an accident subject to reporting under § 68.42 (*i.e.*, an RMP reportable accident);

(3) Hire a third-party to perform or lead a compliance audit after an RMP reportable accident or after an implementing agency determines that conditions at the stationary source could lead to an accidental release of a regulated substance or identifies problems with the prior third-party audit;

(4) Conduct and document a root cause analysis after an RMP reportable accident or a near miss;

(5) Conduct and document a STAA for a subset of Program 3 facilities in North American Industrial Classification System (NAICS) codes 322 (paper manufacturing), 324 (petroleum and coal products manufacturing), and 325 (chemical manufacturing);

(6) Meet and coordinate with local responders annually to exchange emergency response planning information;

(7) Conduct an annual notification drill to verify emergency contact information; and

(8) Responding facilities conduct and document emergency response exercises including:

- A field exercise at least every ten years, and
- A tabletop exercise at least every three years.

EPA believes that the RMP regulations have been effective in preventing and mitigating chemical accidents in the United States. However, EPA is revising the rule to further protect human health and the environment from chemical hazards through advancement of PSM based on lessons learned—resulting in better coordination between facilities, LEPC's, and the public. State and local authorities will use the information in RMPs to modify and enhance their community response plans. The agencies implementing the RMP rule will use RMPs to evaluate compliance with part 68 and to identify sources for inspection because they may pose significant risks to the community. Citizens may use the information to assess and address chemical hazards in their communities and to respond appropriately in the event of a release of a regulated substance. These revisions are a result of a review of the existing Risk Management Program and are finalized under the statutory authority provided by section 112(r) of the CAA as amended (42 U.S.C. 7412(r)).

Some of the elements mandated in the regulation for the RMP may require the submittal of data viewed as proprietary, trade secret, or confidential. As described previously, EPA has adopted procedures for sources to claim certain information as confidential business information. EPA encourages facilities that have CBI claims to submit substantiation with the RMP.

Respondents/affected entities:

Manufacturers, utilities, warehouses, wholesalers, food processors, ammonia retailers, and gas processors.

Respondent's obligation to respond:

Mandatory (CAA sections 112(r)(7)(B)(i) and (ii), CAA section 112(r)(7)(B)(iii), 114(c), CAA 114(a)(1)).

Estimated number of respondents:

14,280.

Frequency of response: On occasion.

Total estimated burden: 1,778,244 hours (per year). Burden is defined at 5 CFR 1320.3(b).

Total estimated cost: \$130,578,842 (per year), includes \$8,285,600 annualized capital or operation & maintenance costs.

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information

unless it displays a currently valid OMB control number. The OMB control numbers for the EPA's regulations in 40 CFR are listed in 40 CFR part 9. When OMB approves this ICR, the Agency will announce that approval in the **Federal Register** and publish a technical amendment to 40 CFR part 9 to display the OMB control number for the approved information collection activities contained in this final rule.

C. Regulatory Flexibility Act (RFA)

Pursuant to section 603 and 609(b) of the RFA the EPA prepared an initial regulatory flexibility analysis (IRFA) for the proposed rulemaking and convened a Small Business Advocacy Review (SBAR) Panel to obtain advice and recommendations from small entity representatives that potentially would be subject to the rule's requirements. Summaries of the IRFA and Panel recommendations are presented in the proposed rulemaking at 81 FR 13637, March 14, 2016.

As required by section 604 of the RFA, the EPA prepared a final regulatory flexibility analysis (FRFA) for this action. The FRFA addresses the issues raised by public comments on the IRFA for the proposed rulemaking. The complete FRFA is available for review in the docket and is summarized here.

1. Statement of Need and Rule Objectives

The purpose of this action is to improve safety at facilities that use and distribute hazardous chemicals. In response to catastrophic chemical facility incidents in the United States, including the explosion that occurred at the West Fertilizer facility in West, Texas, on April 17, 2013 that killed 15 people (on May 11, 2016, ATF ruled that the fire was intentionally set),¹²² President Obama issued Executive Order 13650, "Improving Chemical Facility Safety and Security," on August 1, 2013. Section 6(a)(i) of Executive Order 13650 requires that various Federal agencies develop options for improved chemical facility safety and security, including modernizing regulations. As a result, EPA is finalizing revisions to the Risk Management Program (40 CFR part 68).¹²³

EPA believes that the RMP regulations have been effective in preventing and

mitigating chemical accidents in the United States; however, EPA believes that revisions could further protect human health and the environment from chemical hazards through the advancement of process safety based on lessons learned. These revisions are a result of a review of the existing Risk Management Program and information gathered from the comments on the proposed rulemaking, SBAR panel, public hearing, RFI, and Executive Order listening sessions, and are finalized under the statutory authority provided by CAA section 112(r) as amended (42 U.S.C. 7412(r)). For more information on the proposed rulemaking, SBAR panel and outreach efforts for this action, see the docket for this rulemaking (Docket ID Number EPA-HQ-OEM-2015-0725).

2. Significant Comments on the IRFA

a. General Comments

A Federal elected official, Federal agency, facility, and multiple industry trade associations commented that EPA is not fulfilling its obligations under the Regulatory Flexibility Act because the Agency did not provide itself with enough time to consider the comments of either the SBAR panel report or the SERs in the proposed rulemaking. Many of these commenters asked that the SBAR panel recommendations be incorporated in the final rule.

A facility stated that the proposed rulemaking will be burdensome to small facilities. An association of government agencies expressed concern that the costs of a more prescriptive risk management program will fall on small communities. An industry trade association and Federal agency claimed that the proposed rulemaking imposes a disproportionate burden on small facilities and asserted that EPA should eliminate impractical, unjustifiable, or non-cost-effective requirements. Several industry trade associations and a facility commented that the proposed rulemaking will result in more facilities being required to become responders, which will be costly and difficult for small businesses.

Multiple facilities commented that EPA should withdraw its proposed rulemaking and coordinate more closely with OSHA's PSM rulemaking. An industry trade association stated that OSHA's PSM program and EPA's RMP proposal is creating confusion for small entities in the water sector. The commenter asked that EPA update guidance documents and delay further development of RMP revisions until OSHA's PSM SBAR panel process is complete.

¹²² See ATF Announces \$50,000 Reward in West, Texas Fatality Fire, <https://www.atf.gov/news/pr/atf-announces-50000-reward-west-texas-fatality-fire>.

¹²³ For more information on the Executive Order see <https://www.whitehouse.gov/the-press-office/2013/08/01/executive-order-improving-chemical-facility-safety-and-security>.

EPA disagrees that the Agency did not fulfill its obligations under the Regulatory Flexibility Act or that the Agency did not consider the comments of the SBAR panel and SERs in the proposed or final rules. In many locations throughout the proposed rulemaking, EPA discussed SBAR panel recommendations and requested public comments on regulatory alternatives recommended by the SBAR panel. EPA also made numerous adjustments to the final rule to incorporate regulatory alternatives that were suggested by SERs where those alternatives were also supported by public comments and were consistent with the Agency's policy goals. For example, EPA incorporated SBAR panel recommendations by relaxing the competency and independence criteria for third-party auditors; reducing the frequency for conducting facility exercises; and not finalizing the proposed revision to the definition of "catastrophic release."

EPA also disagrees that the final rule is disproportionately burdensome on small entities. In fact, the costliest final rule provisions—STAA and facility exercises—affect relatively few small entities. EPA minimized the effect of the STAA provisions on small entities by applying these requirements to a narrowly-defined set of facilities in three select industry sectors. EPA minimized the impact of the exercise requirements on small entities by applying these requirements only to responding facilities, which tend to more often be large facilities. EPA also removed language from the final rule that would potentially have required numerous small entities to become responding facilities.

Regarding comments requesting that EPA withdraw its rulemaking and coordinate more closely with OSHA, EPA notes that it did coordinate with OSHA in the development of the proposed and final rules, and that OSHA has also completed a SBAR panel as an initial step toward proposing potential changes to the PSM standard, which may include some changes that are similar to those in this rule. However, EPA does not believe it is necessary for the Agency to conduct its rulemaking on exactly the same timeline as OSHA. The 1990 CAA Amendments contained separate timelines for the initial OSHA and EPA rulemakings and has no provisions restricting timeframes for either agency amending its rules.

b. Third-Party Audits

A facility and an industry trade association stated that EPA's assertion that the proposed requirements for

third-party audits will have "fairly low impact on small businesses" is false and the requirement should be withdrawn entirely. Another industry trade association commented that third-party audits will be especially costly to small facilities. An industry trade association commented that the requirement for third-party audits will lead to a lack of auditor availability, a particularly difficult problem for small businesses.

EPA disagrees that the final rule's third-party audit requirements have a disproportionately high impact on small businesses. EPA notes that the third-party audit provisions will only affect facilities that experience an RMP reportable accident. Over the last ten years, RMP facilities reported approximately 150 accidents per year, and over 75% of these accidents occurred at large businesses.¹²⁴ Based on comments expressed by SERS and others, EPA also relaxed the final rule's independence criteria to allow the owner or operator to use third-party audit teams that include some non-independent members, including employees of the stationary source being audited. Also, the final rule allows a third-party audit team to include retired employees of the facility being audited, if their sole continuing financial attachments to the owner or operator are employer-financed or managed retirement and/or health plans. The audit team can also include other persons who previously provided consulting services as an employee or contractor of the owner or operator, provided those services were not provided within the last two years (whereas the proposed rulemaking would have required a three-year prohibition on previous employment). EPA believes these changes will increase the availability of auditors and therefore make third-party audits more cost-effective for small business owners.

c. Facility Exercises

Multiple state agencies, facilities and a Federal agency commented that the increase in mandatory field exercises for Program 2 and Program 3 facilities would adversely affect small RMP facilities and small communities. An industry trade association stated that the proposed rulemaking for facility coordination with local responders should be more flexible based on the size of the community and its existing local response capabilities.

¹²⁴ EPA, 2016. Regulatory Impact Analysis—Accidental Release Prevention Requirements: Risk Management Programs Under the Clean Air Act, Section 112(t)(7). Exhibit 7–9.

A consultant/engineer stated that small utilities who lack a local emergency agency with first responder capabilities will have difficulty meeting the proposed requirements. The commenter requested that EPA exempt small entities from the emergency response program requirement and offer increased assistance to LEPCs in small communities.

A Federal agency stated that LEPC concerns should be addressed in a guidance document instead of a rulemaking.

EPA notes that the final rule includes significant changes to the exercise requirements to address concerns expressed by the SBAR panel, individual SERs and other commenters. First, the final rule allows owners and operators to work with local response officials to establish an exercise schedule that works for both parties, provided the owner or operator holds a field exercise at least once every ten years, and a tabletop exercise at least once every three years. Second, the field and tabletop exercise requirements only apply to responding facilities, so non-responding facilities, which include the majority of small businesses regulated under the RMP rule, are not required to comply with them. Lastly, EPA did not finalize proposed rulemaking provisions that would have required many small businesses to become responding facilities.

d. Public Meetings and Information Disclosure

A Federal agency stated that the public meeting requirement should include small business flexibility, allowing small business to post the required information to be disclosed instead of organizing a public meeting.

While EPA did not implement the recommendation to allow small businesses to post required information in lieu of holding a public meeting, EPA notes that the public meeting requirement, like the third-party audit requirement, only applies to facilities after an RMP-reportable accident, which minimizes its impact on small businesses. Also, EPA revised the public meeting requirements to extend the timeframe within which the meeting must be held (from 30 to 90 days after an RMP reportable accident).

3. SBA Office of Advocacy Comments and EPA Response

The SBA Office of Advocacy comments urged EPA to consider small business concerns and provide flexibility to reduce the impact of the proposed rulemaking on small businesses. The following sections

describe SBA recommendations and how EPA has revised the rule to provide additional flexibility that benefits small businesses.

a. Third-Party Audits

Duplicative of existing requirements. SBA suggested that third-party audits are too burdensome for small businesses and should be eliminated or reduced significantly in scope. SBA argued that the requirements are duplicative of the existing requirements for self-audits and incident investigations and suggested that EPA waive the requirements if an implementing agency conducts an inspection as a result of a reportable release or facility noncompliance.

EPA disagrees that third-party audits are duplicative of existing requirements. Following an accident, incident investigations often reveal that facilities have deficiencies in some prevention program requirements related to that process. Incident investigations generally only evaluate the affected process, and do not necessarily address all covered processes at a facility, or even all prevention program elements for the affected process. However, compliance audits entail a systematic evaluation of the full prevention program for all covered processes, and EPA expects that third-party audits should identify deficiencies in any other covered processes at such facilities.

Additionally, EPA does not agree that third-party audits should be waived if EPA conducts an inspection. Third-party audits do not constitute enforcement, nor do they substitute for inspections by implementing agencies. The audits are designed primarily to benefit owners or operators by assisting them to identify both actual noncompliance as well as operational or equipment deficiencies, previously unidentified risk factors, and accident release and/or regulatory noncompliance precursor conditions which, if uncorrected, could lead to releases and/or enforcement actions. Proactively addressing deficiencies, risk factors, and precursor conditions to accidental releases and regulatory noncompliance will provide financial, regulatory, and environmental benefits for facility owners and operators, including small businesses, and communities.

Finally, EPA has reasonably targeted third-party audit requirements at facilities that have had RMP reportable incidents that may demonstrate weaknesses in prior self-assessments and at facilities of heightened concern for implementing agencies. Most small businesses do not have RMP reportable releases and the implementing agency

criteria focuses on conditions with the potential to lead to accidental releases, rather than authorizing implementing agencies to require third-party audits under a potentially wide range of circumstances, including minor noncompliance. Therefore, EPA does not expect that this provision will be burdensome for small facilities.

Applicability. SBA recommended that EPA limit the requirement to Program 3 facilities with major accidents with offsite impacts.

EPA disagrees with this approach. EPA based applicability of third-party audits on whether a source had an RMP reportable accident or whether conditions exist that could lead to an accidental release. EPA believes that these criteria are potential indicators for noncompliance with prevention program requirements and therefore warrant an evaluation by a third-party.

Auditor qualifications. SBA expressed concerns with the auditor qualifications in the proposed rulemaking arguing that it would be difficult to find auditors with no financial connection to the facility (such as retirees). SBA recommended that EPA allow small businesses with less than 250 employees to submit a waiver request of the independence criteria based on limited availability of independent auditors. SBA also expressed concern over the PE criterion for third-party auditors and recommended that EPA consider other accreditations¹²⁵ to satisfy the competency criterion for third-party auditors. SBA recommended EPA consider other criteria in place of the PE criterion to allow additional flexibility such as years of experience, number of audits conducted at a specific facility type, and active involvement in developing industry standards.

In order to address concerns about the availability of auditors, EPA modified the third-party auditor qualification criteria in the final rule to enable more firms and individuals to qualify as third-party auditors or third-party audit team leaders. The most significant modification to the third-party auditor qualification criteria is that only employees of the independent third-party audit firm must meet the independence criteria of § 68.59(c)(2) and/or § 68.80(c)(2). For third-party audit teams, the team leader must meet both the competency and independence

¹²⁵ SERs suggested other accreditations including: degreed chemists, degreed chemical engineers, Certified Safety Professionals (CSP), Certified Industrial Hygienists (CIH), Certified Fire Protection Specialists (CFPS), Certified Hazardous Materials Managers (CHMM), Certified Professional Environmental Auditors (CPEA) or Certified Process Safety Auditors (CPSA).

criteria of § 68.59(c) and/or § 68.80(c) and all other employees of the third-party auditor firm that participate on the team need only meet the independence criteria. Third-party audit teams may also include other personnel, such as consultants or facility employees and these personnel are not subject to the third-party qualification criteria of the final rule.

EPA also revised the timeframe within which third-party auditors cannot provide business or consulting services to two years. EPA added language indicating that if a third-party firm employs personnel who have provided business or consulting services to the facility within the prescribed timeframe (*i.e.* within two years of the audit) then the third-party audit firm must ensure that these personnel do not participate on the audit team. Additionally, EPA clarified in regulatory language the circumstances in which a retired employee may participate in a third-party audit and deleted the PE requirement from the final rule. Viewed as a whole, these changes serve to increase the types of personnel who may potentially serve as independent third-party auditors. Therefore, EPA believes it will be unnecessary for facility owners or operators to petition for a relaxation of auditor qualifications.

b. Incident Investigations and Root Cause Analysis

SBA recommended that EPA limit the scope of this requirement to apply only to reportable releases in order to reduce the burden on small businesses. SBA further recommended that EPA retain the existing definition of “catastrophic release.”

EPA is finalizing the scope of the incident investigation requirement to apply to an incident that resulted in a catastrophic release or could reasonably have resulted in a catastrophic release (*i.e.* a near miss). However, EPA is not finalizing the proposed definition for catastrophic release and is instead maintaining the existing definition. In the final rule, EPA is clarifying what we mean by near miss to address uncertainty about the term.

c. STAA

SBA recommended mandating an IST analysis only at the design stage of new processes. Alternatively, to reduce the burden for small entities, SBA recommended delaying the provision for small firms (with less than 250 employees) until three years after the rule’s compliance date for larger firms in order to allow EPA a chance to review the utility of the provision. SBA

also recommended that EPA exclude processes that are governed by specifications established by a government agency or by a customer through a contractual relationship.

EPA is finalizing the STAA provision as proposed. EPA disagrees that STAA analyses should only be required during the initial design phase of a facility. While the greatest potential opportunities for using IST occur early in process design and development, many IST options may still be practicable after the initial design phase. Furthermore, STAA involves more than just IST. Safer technology alternatives also include passive measures, active measures, and procedural measures, and these measures can be modified and improved after the initial design of a facility. EPA notes that many RMP-regulated facilities were originally constructed decades ago, yet major enhancements have been reported in some plants that have been operating for many years.¹²⁶ CCPS explains that inherently safer strategies can be evaluated throughout the lifecycle of a process, including operations, maintenance and modification, and EPA agrees with this approach.

EPA also disagrees with the suggestion to exempt certain groups (such as batch toll manufacturers) from the STAA requirement. Safer technology alternatives include many options beyond chemical substitution or minimization. Therefore, even where a contractual relationship or regulation requires a regulated batch toll manufacturing facility to use a particular regulated substance in specified quantities, owners and operators of batch toll manufacturing facilities may still consider other potential safer alternatives, such as passive, active, or procedural measures. Also, the final rule does not require regulated sources to implement IST or ISD considered, so there is no conflict between this final rule and other regulations that may apply to RMP-regulated facilities subject to STAA requirements. For example, an owner or operator would be in compliance with this rule if he or she determines that a chemical substitution is not practicable if the substitution is prohibited by another regulation.

Finally, EPA is not delaying compliance dates for small businesses to allow time for evaluating the provision at large facilities. STAA for a source is a site-specific determination and would

be difficult to compare among facilities. EPA believes it would be impractical to gather/analyze information on STAA implementation to determine the utility of the provision for small facilities.

d. Emergency Response Program Coordination With Local Responders

SBA recommended that EPA adopt compliance flexibility for small businesses by limiting their responsibility to making good faith efforts to coordinate with local responders. SBA further suggested that EPA remove the provision to allow LEPCs to require sources to develop emergency response programs. SBA also suggested that EPA provide guidance to local responders, rather than expand existing regulations, and focus on implementing and enforcing emergency planning requirements for LEPCs. Finally, SBA recommended providing guidance on expectations for coordination between a facility and local responders as well as clarifying a facility's obligations for preparing an emergency response program.

EPA is not finalizing the provision that would have required the source to develop an emergency response program following a written request from the LEPCs or local response authorities. Furthermore, the final rule clarifies requirements for coordination activities between facility personnel and local responders. EPA understands some communities do not have functional LEPCs, but has accounted for this possibility by requiring coordination to be with "local emergency planning and response organizations." This term is intended to encompass all manner of local public emergency planning and response organizations. In many cases this will be the LEPC, but in other cases it may be a local emergency management agency, a local fire department, or another local response organization. These non-LEPC planning entities can use this provision to obtain necessary planning information even when they lack the authority granted LEPCs under EPCRA 303(d)(3). Regardless of whether or not their community has an active LEPC, EPA expects owners and operators of regulated sources to make good faith efforts to carry out the coordination activities required in the final rule. If local emergency planning and response organizations decline to participate in coordination activities, or the owner or operator cannot identify any appropriate local emergency planning and response organization with which to coordinate, the owner or operator should document their coordination efforts, and continue

to attempt to perform coordination activities at least annually.

The rule also clarifies requirements for facilities that must develop an emergency response program in accordance with § 68.95. Responding facilities must comply with all of the provisions of § 68.95, which include developing an emergency response plan, developing procedures for the use, inspection, and testing of emergency response equipment, conducting training for employees in relevant procedures, and updating the emergency response plan to reflect changes at the source. Any facility that plans to use its employees to take response actions beyond those specified in its emergency action plan under 29 CFR 1910.38 as a result of an accidental release at the source—which could include, for example, donning emergency air breathing apparatus in order to enter an area where a toxic gas leak has occurred with the intention of stopping or controlling the release—would be expected to have obtained appropriate equipment and training, and to address these activities in its emergency response program, even if the facility is also relying on local responders to supplement its own response, or to manage offsite response actions such as evacuations and sheltering-in-place.

e. Exercises

SBA recommends requiring small businesses to only conduct tabletop exercises and eliminate the field exercises requirement of the proposed rulemaking.

EPA is requiring that responding facilities conduct both tabletop and field exercises; however, we have revised the frequency to reduce the burden on all facilities. The rule requires the owner or operator to conduct both tabletop and field exercises involving a simulated accidental release of a regulated substance. As part of the coordination with local emergency response officials required by § 68.93, the owner or operator is required to consult with these local officials to establish an appropriate frequency for tabletop and field exercises. However, in all cases, the owner or operator must conduct a field exercise at least once every ten years and a tabletop exercises at least once every three years. Additionally, EPA encourages several nearby or adjacent facilities to conduct joint exercises, and this may prompt small facilities to pool their response resources, thereby reducing the exercise and emergency response burden on each facility.

¹²⁶ CCPS. 2009. *Inherently Safer Chemical Processes: A Life Cycle Approach*, 2nd ed., American Institute of Chemical Engineers, CCPS New York, Wiley, p. 25.

f. Information Availability

Availability of information for LEPCs.

SBA suggests that EPA require a one-page summary of information relevant for emergency response to an accident at the facility. SBA also expressed concern with the recordkeeping requirement of the proposed provision and suggested that EPA require the information be provided within a reasonable time period after receiving a request to allow the facility time to develop the information.

EPA maintains that it is very important to ensure that LEPCs or local emergency response officials have the chemical information necessary for developing local emergency response plans, however, EPA believes it is unnecessary to specify in the RMP rule the types or format of information that LEPCs or emergency response officials may request. Therefore, EPA has eliminated this provision in the final rule. EPCRA section 303(d)(3) already provides the necessary authority to allow LEPCs to request information needed to develop the local emergency response plan. Additionally, EPCRA requires facilities to provide SDSs and inventory information to LEPCs to assist emergency planners and responders. Under EPCRA section 312(f), fire departments have the authority to inspect these facilities to better understand the risk associated with these chemicals and how to deal with those risk in the local emergency response plan.

EPA added language to the emergency response coordination provisions of § 68.93, which requires the owner or operator to provide “any other information that local emergency planning and response organizations identify as relevant to local emergency planning.” This approach will allow LEPCs and other local emergency officials to obtain the information they require to meet their emergency response planning needs. It will also allow local emergency planners and response officials to ask questions of facility personnel about the risks associated with the chemical hazards at the facility and about appropriate mitigation and response techniques to use in the event of a chemical release.

Availability of information for the public. SBA recommends that EPA improve public awareness of existing sources of information through its own Web site or other public forums rather than requiring small businesses to repackage existing information. Alternatively, SBA suggests requiring facilities to indicate where this information can be obtained.

The final rule requires the owner or operator to make certain chemical hazard information for all regulated processes at a stationary source available to the public upon request. The facility must provide ongoing notification to the public about what chemical hazard information is available upon request, how the public may obtain such information, and where to access any other available information on community emergency preparedness. The facility owner or operator must provide information to the requester within 45 days of receiving a request.

Public meetings. SBA recommends allowing small businesses to post information that would be disclosed at a public meeting rather than require them to host meetings. Furthermore, SBA suggests that EPA should provide a longer time period for holding a public meeting to allow the owner or operator more time to gather information and adequately prepare for the meeting.

In the final rule, EPA is requiring all facilities to hold a public meeting after an RMP-reportable accident, but is extending the timeframe for the public meeting to 90 days in response to comments. EPA believes that small businesses should host public meetings following an RMP reportable accident to allow community members an opportunity to talk with facility personnel. EPA encourages small businesses to find ways to reduce costs of public meetings such as by hosting the meetings at inexpensive venues, such as local schools, community centers, or churches.

4. Estimate of the Number of Small Entities to Which the Final Rule Applies

The RMP rule affects a broad range of sectors (296 separate NAICS codes are listed in RMP filings; 240 of these are associated with small entities). The RMP data include facility and parent company name, as well as the number of full time equivalents (FTE) for the facility and the NAICS codes. To develop an estimate of the number of small entities, the analysis required a series of reviews of the data to identify the large entities and the small entities that were part of small firms owning multiple facilities. For more information on the analysis to estimate the number of small entities, see section 7.2 of the RIA.

5. Projected Reporting, Recordkeeping and Other Compliance Requirements of the Final Rule

Under the final rule, all facilities are required to make certain information available to the public upon request.

Program 2 and Program 3 facilities are also required to provide information upon request to local response officials during annual coordination meetings. Program 1 facilities will likely not have to spend more than an hour per year on this disclosure because the information disclosed to the public is information every facility should have readily available and because the additional information that will be provided, upon request, to local responders relates to provisions that do not apply to Program 1 facilities. Therefore, the FRFA has not considered Program 1 small facilities in the analysis of impacts.

Program 2 and Program 3 facilities will incur the same costs for the other provisions except for the STAA. Each facility will be required to update information to be disclosed annually, coordinate with the local responders, and conduct a notification drill annually. If the facility is a responder, it will have to hold exercises every three to ten years, including at least one full field exercise every ten years. Program 3 facilities in NAICS codes 322, 324, and 325 will have to conduct an STAA as part their PHA every five years.

If a facility has an accident, it will incur costs to hold a public meeting within 90 days of an RMP reportable accident. The facility will also incur costs for obtaining an independent third-party to conduct their next scheduled compliance audit and to conduct a root cause analysis as part of the incident investigation. In the event of a near miss, facilities will also be required to conduct a root cause investigation. Section 7.3.1 of the RIA describes the costs of the final rule for small entities.

6. Steps Taken To Minimize Economic Impact to Small Entities

The RIA analyzed the proposed new requirements and revisions to existing requirements as well as several alternatives for each. In most cases, EPA chose regulatory alternatives that had reduced impacts on small businesses relative to other alternatives that EPA considered. In this section, we discuss each final rule provision and explain how the provision minimizes impacts on small businesses and which of the SBAR Panel recommendations were implemented.

a. Third-Party Audits (Program 2 §§ 68.58 and 68.59 and Program 3 §§ 68.79 and 68.80)

EPA is finalizing a requirement for the owner or operator to engage a third-party auditor to conduct a compliance audit when required by an implementing agency due to conditions

at the stationary source that could lead to an accidental release of a regulated substance or following an RMP reportable accident. Limiting the applicability of this provision to sources that have had RMP reportable accidents minimizes its impact to the overall universe of RMP facilities, and

particularly to small businesses. As indicated in Exhibit 5–18 of the RIA, the estimated cost of the high option (\$196 million annualized) is nearly 20 times higher than the estimated costs of the preferred option (\$9.9 million annualized). Furthermore, a majority of the costs for the option would likely be

borne by large businesses as historically, most RMP accidents have occurred at facilities that do not meet SBA small business criteria. Table 19 shows the number of accidents from 2004–2013 that occurred at small and large facilities.

TABLE 19—PERCENTAGE OF ACCIDENTS AT SMALL AND LARGE RMP FACILITIES, 2004–2013

Sector	Program 1		Program 2		Program 3		Total
	Small	Large	Small	Large	Small	Large	
NAICS 325—Chemical Manufacturing	0	6	1	5	53	465	530
NAICS 311, 312—Food/Beverage Manufacturers	0	0	2	0	58	210	270
NAICS 322—Paper Manufacturing	0	0	0	0	9	37	46
NAICS 331, 332, 333, 334, 336, 339—Other Manufacturing	0	0	4	0	12	27	43
NAICS 11, 12, 15, 42491—Agricultural Chemical Distributors	0	0	0	0	91	65	156
NAICS 4246, 4247—Chemical/petroleum wholesale	0	2	0	0	7	29	38
NAICS 4244, 4245—Other wholesale	0	0	0	0	7	13	20
NAICS 493—Warehouse	0	1	0	0	18	53	72
NAICS 324—Petroleum and Coal Products Manufacturing	2	6	0	0	15	146	169
NAICS 22131, 22132—Water/POTW	0	0	14	20	17	24	75
NAICS 211—Oil/Gas exploration	4	4	1	0	10	34	53
Other	3	7	7	4	7	17	45
Total	9	26	29	29	304	1,120	1,517

While the third-party audit provision should have a fairly low impact on small businesses, the SBAR Panel made additional recommendations to further minimize the impacts of this provision on small businesses, which EPA considered for this final rule. Of the suggested recommendations, EPA revised the provision to require that only a third-party leading the audit team must meet the independence and competency criteria of the rule, and also by allowing that a retired employee of the source can participate in the audit. EPA also did not finalize the competency criterion that required a PE to participate in the audit.

b. Incident Investigation/Root Cause Analysis (§§ 68.60 and 68.81)

In the final rule, EPA is requiring a root cause investigation for any P2 or P3 reportable accident or near miss. Although the Agency chose the higher cost option, this provision is estimated to be one of the least costly provisions of the final rule. In fact, the costs for both options considered were nearly indistinguishable—as indicated in Exhibit 5–18 of the RIA, both the low and preferred options are estimated to cost approximately \$1.8 million annually. Therefore, EPA believes that the additional safety benefit of requiring owners and operators of Program 2 processes to also conduct root cause analyses after incidents and near misses is warranted. Of the suggested SBAR recommendations, EPA clarified that

near miss investigations are not intended to cover minor accidents or minor near misses that could not reasonably have resulted in a catastrophic release. EPA also chose not to finalize the proposed definition of “catastrophic release,” which some SERs had indicated could increase the number of investigations required.

c. STAA (§ 68.67)

For STAA, EPA is finalizing the least costly option. The final rule, which applies the STAA requirement to P3 processes in NAICS 322 (paper manufacturing), 324 (petroleum and coal products manufacturing), and 325 (chemical manufacturing), costs \$80.0 million annually and is approximately \$40 million less costly than the medium option (\$120.4 million annually), which would have applied the requirement to all P3 processes, and likely far less costly than the high option, which would require implementation of practicable safer alternatives for all P3 processes. Although the SBAR panel provided recommendations, EPA finalized this provision as proposed, and estimates that it will affect relatively few small businesses given the narrow focus of the provision’s applicability.

d. Emergency Response Program Coordination With Local Responders (§§ 68.90, 68.93, and 68.95)

The final rule requires all facilities with P2 or P3 processes to coordinate with local response agencies annually

and document coordination activities. This provision does not have alternatives, but the SBAR panel did provide recommendations on streamlining the provision. In response to these and other recommendations, EPA modified the extent of required coordination, removed the requirement for the outcome of coordination to dictate whether a source must implement an emergency response program, and eliminated the ability for LEPCs to mandate sources’ response capabilities.

e. Facility Exercises (§ 68.96)

Notification Exercises. The final rule requires all facilities with P2 or P3 processes to annually conduct an emergency notification exercise to ensure that their emergency contact list is complete, accurate, and up-to-date. This provision is expected to be one of the least costly rule provisions at \$1.4 million annually (only the public meetings provision is estimated to cost less). Therefore, EPA did not consider any alternatives to reduce the impact of this provision on small businesses, nor did the SBAR panel make any such recommendations.

Tabletop and Field Exercises. The final rule requires responding facilities to conduct a full field exercise at least once every ten years and tabletop exercises triennially. As this provision only affects responding facilities, which tend to more often be large facilities (see Exhibit 3–7 in the RIA), EPA has

implemented a rule that mitigates the impact on small entities. EPA also considered a low option that would only require triennial tabletop exercises. This option would have saved approximately \$8 million annually. EPA did not implement the low option because the Agency believes that periodic field exercises are an important component of a comprehensive emergency response program. In response to SBAR panel recommendations, EPA reduced the required frequency of exercises to minimize the impact of this provision on small businesses.

f. Information Availability (§ 68.210)

Under the final rule requirements, all facilities are required to make certain chemical hazard information available to the public, upon request. The owner or operator must provide an ongoing notification to the public that such information is available as well as instructions on how to request the information. Facilities are also required to hold public meetings within 90 days of any RMP reportable accident. Although EPA has not identified specific alternatives to minimize the impact of the information disclosure provisions on small businesses, the Agency believes that in general, smaller facilities will bear lower costs to comply with these provisions.

In response to the SBAR recommendations, EPA eliminated the proposed provision that would have had required specific information to be disclosed to LEPCs and extended the timeline for public meetings from 30 days to 90 days after an RMP reportable accident. In addition, information to be provided to the public is only required to be disclosed to the public upon request.

7. Small Business Compliance Guides

EPA is preparing a Small Entity Compliance Guide to help small entities comply with this rule. EPA expects that this guide will be made available on the EPA Web site prior to March 15, 2021, when facilities will have to comply with new and revised data elements for the final rule.

D. Unfunded Mandates Reform Act (UMRA)

This action contains a Federal mandate under UMRA, 2 U.S.C. 1531–1538, that may result in expenditures of \$100 million or more for state, local, and tribal governments, in the aggregate, or the private sector in any one year. Accordingly, the EPA has prepared a written statement required under section 202 of UMRA. The statement is

included in the docket for this action and briefly summarized here.

Over the 16 years of implementing the RMP program and, most recently through Executive Order 13650 listening sessions, webinars, consultations, and a public hearing, EPA has engaged states and local communities to discuss chemical safety issues. In the nine Executive Order 13650 Improving Chemical Facility Safety and Security listening sessions and webinars, held between November 2013 and January 2014, states and local communities identified lack of chemical facility participation and coordination in local emergency contingency planning as a key barrier to successful local community preparedness. Additionally, EPA has had consultations with states and local communities through participation in the National Association of SARA Title III Program Officials (NASTTPO) annual meetings to discuss key issues related to chemical facility and local community coordination and what areas of the RMP regulations need to be modernized to facilitate this coordination and improve local emergency preparedness and prevention. Key priority options discussed with NASTTPO states and local communities included: improving emergency response coordination between RMP facilities and LEPCs/first responder and requiring emergency response exercises of the RMP facility plan to involve LEPCs, first responders and emergency response personnel.

This action may significantly or uniquely affect small governments. The EPA consulted with small governments concerning the regulatory requirements that might significantly or uniquely affect them. Through the July 31, 2014, RFI (79 FR 44604), EPA sought feedback from governmental entities while formulating the proposed revisions in this action. Additionally, EPA participated in ongoing consultations with affected SERs (including small governmental entities) through the SBAR panel. EPA convened an SBAR panel in accordance with the requirements of the RFA, as amended by the Small Business Regulatory Enforcement Fairness Act (SBREFA). Finally, EPA hosted a public hearing on March 29, 2016 to provide interested parties the opportunity to present data, views or arguments concerning the rule.

Discussion of comments. EPA received comments concerning unfunded mandates. Several commenters, including state agencies and a professional organization, said that the proposed rulemaking adds to the unfunded mandate for LEPCs, which were never provided with any source of

Federal funding. A few state agencies said that the proposed field exercises in particular will be a significant unfunded cost for LEPCs that choose to participate. A state agency, an industry trade association, and an association of government agencies commented that these additional costs will adversely affect smaller RMP facilities and smaller communities with municipal-owned RMP facilities. The industry trade association also suggested that EPA should consult with these municipal governments on the impact these proposed requirements will have on their operating budgets. A professional organization stated that very few LEPCs are able to support themselves with fees or other taxes on regulated facilities.

EPA disagrees that this final rule adds to the burden to LEPCs and local emergency response organizations. EPA believes that the amendments to the local coordination requirements clarifies existing requirements. LEPCs are required to develop community emergency response plans and the revisions to the RMP rule are intended to ensure that facility representatives coordinate with LEPC and local emergency response officials in developing those plans. Furthermore, EPA provided flexibility in the final rule to allow LEPC and local emergency response officials to participate as their schedules allow. LEPC and local emergency response officials are encouraged, but not required, to participate in facility exercises.

EPA agrees that the final rule will bear costs for small facilities and small governments; however, EPA has built flexibility into the rule provisions to allow facility owners and operators to tailor their risk management programs to their facility specific circumstances. Third-party compliance audits, and public meetings apply only following an RMP reportable accident, root cause analysis applies only after a catastrophic release (e.g. an RMP-reportable accident) or after an incident that could reasonably have resulted in a catastrophic release. STAA analyses are limited to specific NAICS codes, and exercises apply only to responding facilities. EPA has further revised information availability requirement to be provided only upon request by a member of the public. These provisions should minimize costs of the final rule for small facilities.

E. Executive Order 13132: Federalism

This action does not have Federalism implications. The EPA believes, however, that these regulatory revisions may be of significant interest to local governments. Consistent with the EPA's

policy to promote communications between the EPA and state and local governments, and to better understand the concerns of local governments, EPA sought feedback through the July 31, 2014, RFI (79 FR 44604), through the SBREFA process, and a public hearing on March 29, 2016. EPA also hosted a conference call with governmental entities on May 4, 2016. A copy of the presentation and notes from the meeting are available in the docket for this action.¹²⁷

EPA received comments pertaining to Federalism implications for this action. An industry trade association asserted that EPA's proposal to allow local authorities to request that the owner or operator assume emergency response obligations, which the commenter argues divorces these organizations from their Federal, state, and/or local legal obligations, raises Federalism issues by undermining the fundamental mission of those entities and state delegations of more (or less) authority to local emergency response organizations. Similarly, other industry trade associations commented that EPA's proposed delegation of authority to LEPCs to designate facilities as responding stationary sources raises significant separation of powers and federalism concerns. As the basis for this argument, the commenters relied primarily on the Supreme Court decisions in *Printz v. United States* (521 U.S. 898 (1997)) and *New York v. United States* (505 U.S. 144 (1992)), in which the court held that Federal agencies cannot "commandeer" local governments to implement Federal regulatory programs.

A few commenters, including an associations of government agencies and an industry trade association, commented that the Agency had missed a valuable opportunity to engage local governments prior to the rule's publication, which the commenter described as counter to EPA's internal "Guidance on Executive Order 13132: Federalism" (Nov. 2008) that specifies that States and local governments must be consulted on rules if they impose substantial compliance costs, preempt state or local laws, and/or have substantial direct effects on state and local governments. Because the commenter does not believe that EPA has adequately engaged local government agencies, an association of government agencies requested that EPA delay advancing the proposed rulemaking and perform a local government impact analysis and

consultation with the nation's cities, counties, and mayors before finalizing the rule.

EPA is finalizing requirements for the stationary source owner or operator to coordinate annually with local emergency planning and response officials to ensure that the stationary source is included in the community emergency response plan (for toxic substances) and/or to coordinate response activities with local emergency responders (for flammable substances). However, after considering concerns raised by commenters related to providing LEPCs with the authority to require a stationary source to develop an emergency response program in accordance with § 68.95, EPA has eliminated this provision from the final rule. EPA did not intend this provision to undermine the fundamental mission of response agencies nor as a delegation of Federal authority. EPA expects that some stationary source owners or operators will self-identify a need to develop an emergency response program if the result of local coordination indicates that the stationary source is not included in the community emergency response plan (e.g., when an LEPC is inactive and there is no community emergency response plan or the existing plan is outdated).

EPA disagrees with comments that suggest that EPA did not engage local governments prior to the rule's publication. EPA followed the agency's internal guidance on Executive Order 13132 when determining whether to initiate consultation with state and local governments. Furthermore, through Executive Order 13650 listening sessions, webinars, consultations, and a public hearing, EPA has engaged states and local communities to discuss chemical safety issues. Additionally, EPA has consulted with states and local communities through participation in the NASTTPO annual meetings to discuss key issues related to chemical facility and local community coordination and what areas of the RMP regulations need to be modernized to facilitate this coordination and improve local emergency preparedness and prevention.

F. Executive Order 13175: Consultation and Coordination With Indian Tribal Governments

This action has tribal implications. However, it will neither impose substantial direct compliance costs on federally recognized tribal governments, nor preempt tribal law. There are approximately 260 RMP facilities located on tribal lands. Tribes could be

impacted by the final rule either as an owner or operator of an RMP-regulated facility or as a Tribal government when the Tribal government conducts emergency response or emergency preparedness activities under EPCRA.

The EPA consulted with tribal officials under the EPA Policy on Consultation and Coordination with Indian Tribes early in the process of developing this regulation to permit them to have meaningful and timely input into its development. EPA hosted a public hearing on March 29, 2016 that was open to all interested parties and hosted a total of two conference calls for interested tribal representatives on April 20, 2016 and April 26, 2016. A summary of each conference call is available in the docket for this action.¹²⁸ EPA did not receive any written comments from tribal representatives.

As required by section 7(a), the EPA's Tribal Consultation Official has certified that the requirements of the executive order have been met in a meaningful and timely manner. A copy of the certification is included in the docket for this action.

G. Executive Order 13045: Protection of Children From Environmental Health Risks and Safety Risks

This action is not subject to Executive Order 13045 because the EPA does not believe the environmental health risks or safety risks addressed by this action present a disproportionate risk to children. The EPA believes that the proposed revisions to the Risk Management Program regulations would further protect human health, including the health of children, through advancement of process safety. EPA did not receive any comments associated with this issue.

H. Executive Order 13211: Actions That Significantly Affect Energy Supply, Distribution or Use

This action is not a "significant energy action" because it is not likely to have a significant adverse effect on the supply, distribution, or use of energy. This action is not anticipated to have notable impacts on emissions, costs or energy supply decisions for the affected electric utility industry. EPA did not receive any comments associated with this issue.

I. National Technology Transfer and Advancement Act (NTTAA)

This action involves technical standards. The EPA is requiring third-party auditors to be experienced with applicable RAGAGEP, which include

¹²⁷ <https://www.regulations.gov/document?D=EPA-HQ-OEM-2015-0725-0425>.

¹²⁸ EPA-HQ-OEM-2015-0725-0419.

Voluntary Consensus Standards as well as other measures, for regulated processes being audited. Numerous different standards apply to processes regulated under the final rule and their application will vary depending on the particular process and chemicals involved. EPA is not listing all the various codes, standards and practices that would apply to the wide variety of chemical processes covered by this rule as doing so would be impracticable, given that this rule affects sectors across many industries and listing the applicable RAGAGEP measures would require the EPA to update that list every time there was a change in the industry standards or best practices. The final rule requires third-party auditors to be familiar with standards applicable to processes they audit, and to obtain their own copies of applicable standards where needed. Auditors must be knowledgeable of applicable consensus standards because the accident prevention program provisions of the existing rule (subparts C and D) require owners or operators to comply with RAGAGEP. Therefore, auditors must be knowledgeable of those practices in order to perform an effective audit. EPA did not receive any comments associated with this issue.

J. Executive Order 12898: Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations

The EPA believes the human health or environmental risk addressed by this action will not have potential disproportionately high and adverse human health or environmental effects on minority, low income, or indigenous populations. The results of this evaluation are included in the RIA, located in the docket. EPA received multiple comments relating to environmental justice concerns.

Discussion of comments on access to information. Several groups stated that communities need better transparency and access to information on hazards and investigations, training on response plans, and access to inspection and incident reports. A few advocacy groups commented that the rule should include specific elements to address disproportionate impacts. A few advocacy groups said that EPA should create a centralized database available through a Web site and local community centers and libraries that provides this information. A facility commented that a Web site is a poor method to communicate information to individuals in poor or rural communities that may not have access to computers or the Internet. The commenter also said that

LEPCs already hold public meetings to discuss emergency plans.

A couple advocacy groups stated that the RMP rule fails to ensure that at-risk communities near RMP facilities have the information they need to participate effectively in engagement with facilities. The groups also argued that the rule does not improve access to summaries of incident investigation reports, safety audits, and STAA, among other things, which are essential to ensuring fair treatment. Further, the groups commented that at-risk communities are not given access to information on prevention opportunities, and are not invited to participate in prevention analysis and planning. Another advocacy group said that the RMP rule should facilitate partnerships and interactions between facilities, local governments, and the community. A different group said that EPA should require a community meeting within 30 days of an incident, require publication of response and evacuation plans for affected areas, and establish an appeals process for communities to report when information and engagement opportunities are not provided as required, among other proposals.

EPA agrees with commenters that have requested better access to chemical hazard information at facilities in their communities and improved public transparency. EPA is finalizing a requirement for facility owners and operators to share information with the public that will assist neighboring communities to understand the hazards in their communities. Facility owners and operators must notify the public that specific information is available and provide instructions on how to request that information as well as how to access evacuation and shelter-in-place procedures for the community. Additionally, following an RMP reportable accident, facility owner and operators are required to host a public meeting within 90 days to communicate information about the accident. This allows sufficient time for facilities to gather information about the incident to share with the public. EPA believes that these provisions provides the public with more information that they can use to protect themselves and their families in the event of an accidental release at an RMP-regulated facility.

EPA has included other elements in the final rule that are intended to address disproportionate impacts of a release to surrounding communities. For example, EPA is requiring paper manufacturing, petroleum and coal products manufacturing, and chemical manufacturing facilities with Program 3 processes to analyze safer technologies

for each process in order to consider ways to reduce and remove hazards. EPA is also encouraging better coordination between local emergency response organizations and facility representatives annually and during facility exercises which will lead to more effective community emergency response plans and mitigate the impacts of an accidental release to the surrounding community. EPA encourages facility representatives to attend LEPC meetings along with the public to facilitate partnerships among these representatives.

EPA disagrees with commenters that suggest creating a centralized database available through a Web site and local community centers and libraries to provide this information. Establishing such a centralized database would be costly, difficult to maintain, information would quickly become outdated, and a centralized database could create security vulnerabilities. See section VI.B of this preamble for more information on information availability to the public.

EPA recognizes that some community residents want to participate in prevention planning and have access to incident investigation reports, safety audits, and STAA. However, community input can be effective in other ways that relate to community planning. EPA encourages community residents to become active in their LEPCs who are already working to reduce hazards for local communities. Providing access to facility reports outside of existing community planning activities could result in duplicative work and increased burden for communities, emergency responders, and facility staff.

Furthermore, developing a risk management program involves process hazards analyses and hierarchies of controls developed by trained professionals. Investigation reports, safety audits and STAA are often complicated and contain technical jargon, which can be difficult to understand without the proper training. Information in these reports can also reveal security vulnerabilities which may put communities in greater danger of terrorism if released.

Discussion of comments on meaningful involvement. A few commenters, including advocacy groups, said that the only meaningful involvement EPA has facilitated included collecting input to shape the proposed rulemaking. The commenters said that there is no analysis in the rule on whether or how the rule would facilitate meaningful involvement by at-

risk or environmental justice (EJ) communities.

EPA believes there were numerous opportunities for the public to provide meaningful input on this final rule. This final rule was developed following extensive public feedback through Executive Order 13650 listening sessions, public comments on the RFI and the proposed rulemaking, and the public hearing held on March 29, 2016. EPA has incorporated requirements in the final rule to prevent accidental releases, mitigate the impacts of releases that do occur, and share chemical hazard information with the public.

K. Congressional Review Act (CRA)

This action is subject to the CRA, and the EPA will submit a rule report to each House of the Congress and to the Comptroller General of the United States. This action is a "major rule" as defined by 5 U.S.C. 804(2).

List of Subjects in 40 CFR Part 68

Environmental protection, Administrative practice and procedure, Air pollution control, Chemicals, Hazardous substances, Intergovernmental relations, Reporting and recordkeeping requirements.

Dated: December 21, 2016.

Gina McCarthy, Administrator.

For the reasons set out in the preamble, title 40, chapter I, part 68, of the Code of Federal Regulations is amended as follows:

PART 68—CHEMICAL ACCIDENT PREVENTION PROVISIONS

■ 1. The authority citation for part 68 continues to read as follows:

Authority: 42 U.S.C. 7412(r), 7601(a)(1), 7661–7661f.

■ 2. Amend § 68.3 by adding in alphabetical order the definitions "Active measures", "CBI", "Inherently safer technology or design", "LEPC", "Passive measures", "Practicability", "Procedural measures", "Root cause", and "Third-party audit" to read as follows:

§ 68.3 Definitions.

* * * * *

Active measures mean risk management measures or engineering controls that rely on mechanical, or other energy input to detect and respond to process deviations. Examples of active measures include alarms, safety instrumented systems, and detection hardware (such as hydrocarbon sensors).

* * * * *

CBI means confidential business information.

* * * * *

Inherently safer technology or design means risk management measures that minimize the use of regulated substances, substitute less hazardous substances, moderate the use of regulated substances, or simplify covered processes in order to make accidental releases less likely, or the impacts of such releases less severe.

* * * * *

LEPC means local emergency planning committee as established under 42 U.S.C. 11001(c).

* * * * *

Passive measures mean risk management measures that use design features that reduce either the frequency or consequence of the hazard without human, mechanical, or other energy input. Examples of passive measures include pressure vessel designs, dikes, berms, and blast walls.

* * * * *

Practicability means the capability of being successfully accomplished within a reasonable time, accounting for economic, environmental, legal, social, and technological factors.

Environmental factors would include consideration of potential transferred risks for new risk reduction measures.

Procedural measures mean risk management measures such as policies, operating procedures, training, administrative controls, and emergency response actions to prevent or minimize incidents.

* * * * *

Root cause means a fundamental, underlying, system-related reason why an incident occurred.

* * * * *

Third-party audit means a compliance audit conducted pursuant to the requirements of § 68.59 and/or § 68.80, performed or led by an entity (individual or firm) meeting the competency and independence described in § 68.59(c) or § 68.80(c).

* * * * *

- 3. Amend § 68.10 by:
■ a. Revising paragraph (a);
■ b. Redesignating paragraphs (b) through (f) as paragraphs (f) through (j);
■ c. Adding new paragraphs (b) through (e); and
■ d. Revising the newly designated paragraph (f)(2).

The revisions and additions read as follow:

§ 68.10 Applicability.

- (a) Except as provided in paragraphs (b) through (e) of this section, an owner

or operator of a stationary source that has more than a threshold quantity of a regulated substance in a process, as determined under § 68.115, shall comply with the requirements of this part no later than the latest of the following dates:

- (1) June 21, 1999;
(2) Three years after the date on which a regulated substance is first listed under § 68.130;
(3) The date on which a regulated substance is first present above a threshold quantity in a process; or
(4) For any revisions to this part, the effective date of the final rule that revises this part.

(b) By March 14, 2018 the owner or operator of a stationary source shall comply with the emergency response coordination activities in § 68.93.

(c) Within three years of when the owner or operator determines that the stationary source is subject to the emergency response program requirements of § 68.95, pursuant to § 68.90(a), the owner or operator must develop and implement an emergency response program in accordance with § 68.95.

(d) By March 15, 2021, the owner or operator shall comply with the following provisions promulgated on January 13, 2017:

- (1) Third-party audit provisions in §§ 68.58(f), 68.58(g), 68.58(h), 68.59, 68.79(f), 68.79(g), 68.79(h), and 68.80;
(2) Incident investigation root cause analysis provisions in §§ 68.60(d)(7) and 68.81(d)(7);

(3) Safer technology and alternatives analysis provisions in § 68.67(c)(8);

(4) Emergency response exercise provisions of § 68.96, and;

(5) Availability of information provisions in § 68.210(b) through (e).

(e) By March 14, 2022, the owner or operator shall comply with the risk management plan provisions of subpart G of this part promulgated on January 13, 2017.

(f) * * *

(2) The distance to a toxic or flammable endpoint for a worst-case release assessment conducted under subpart B and § 68.25 is less than the distance to any public receptor, as defined in § 68.3; and

* * * * *

- 4. Amend § 68.12 by:
■ a. Revising paragraphs (c)(4) and (5), and adding paragraph (c)(6); and
■ b. Revising paragraphs (d)(4) and (5), and adding paragraph (d)(6).

The revisions and additions read as follows:

§ 68.12 General requirements.

* * * * *

(c) * * *

(4) Coordinate response actions with local emergency planning and response agencies as provided in § 68.93;

(5) Develop and implement an emergency response program, and conduct exercises, as provided in §§ 68.90 to 68.96; and

(6) Submit as part of the RMP the data on prevention program elements for Program 2 processes as provided in § 68.170.

(d) * * *

(4) Coordinate response actions with local emergency planning and response agencies as provided in § 68.93;

(5) Develop and implement an emergency response program, and conduct exercises, as provided in §§ 68.90 to 68.96; and

(6) Submit as part of the RMP the data on prevention program elements for Program 3 processes as provided in § 68.175.

■ 5. Amend § 68.48 by revising paragraph (a)(1) to read as follows:

§ 68.48 Safety information.

(a) * * *

(1) Safety Data Sheets (SDS) that meet the requirements of 29 CFR 1910.1200(g);

* * * * *

■ 6. Amend § 68.50 by revising paragraph (a)(2) to read as follows:

§ 68.50 Hazard review.

(a) * * *

(2) Opportunities for equipment malfunctions or human errors that could cause an accidental release, including findings from incident investigations;

* * * * *

■ 7. Amend § 68.54 by revising paragraphs (a), (b), and (d); and adding paragraph (e) to read as follows:

§ 68.54 Training.

(a) The owner or operator shall ensure that each employee presently involved in operating a process, and each employee newly assigned to a covered process have been trained or tested competent in the operating procedures provided in § 68.52 that pertain to their duties. For those employees already operating a process on June 21, 1999, the owner or operator may certify in writing that the employee has the required knowledge, skills, and abilities to safely carry out the duties and responsibilities as provided in the operating procedures.

(b) *Refresher training.* Refresher training shall be provided at least every three years, and more often if necessary, to each employee involved in operating a process to ensure that the employee

understands and adheres to the current operating procedures of the process. The owner or operator, in consultation with the employees operating the process, shall determine the appropriate frequency of refresher training.

* * * * *

(d) The owner or operator shall ensure that employees involved in operating a process are trained in any updated or new procedures prior to startup of a process after a major change.

(e) For the purposes of this section, the term employee also includes supervisors responsible for directing process operations.

■ 8. Amend § 68.58 by revising paragraph (a) and adding paragraphs (f) through (h) to read as follows:

§ 68.58 Compliance audits.

(a) The owner or operator shall certify that they have evaluated compliance with the provisions of this subpart for each covered process, at least every three years to verify that the procedures and practices developed under the rule are adequate and are being followed. When required as set forth in paragraph (f) of this section, the compliance audit shall be a third-party audit.

* * * * *

(f) *Third-party audit applicability.* The next required compliance audit shall be a third-party audit when one of the following conditions apply:

(1) An accidental release meeting the criteria in § 68.42(a) from a covered process at a stationary source has occurred; or

(2) An implementing agency requires a third-party audit due to conditions at the stationary source that could lead to an accidental release of a regulated substance, or when a previous third-party audit failed to meet the competency or independence criteria of § 68.59(c).

(g) *Implementing agency notification and appeals.* (1) If an implementing agency makes a preliminary determination that a third-party audit is necessary pursuant to paragraph (f)(2) of this section, the implementing agency will provide written notice to the owner or operator that describes the basis for this determination.

(2) Within 30 days of receipt of such written notice, the owner or operator may provide information and data to, and may consult with, the implementing agency on the determination. Thereafter, the implementing agency will provide a final determination to the owner or operator.

(3) If the final determination requires a third-party audit, the owner or

operator shall comply with the requirements of § 68.59, pursuant to the schedule in paragraph (h) of this section.

(4) *Appeals.* The owner or operator may appeal a final determination made by an implementing agency under paragraph (g)(2) of this section within 30 days of receipt of the final determination. The appeal shall be made to the EPA Regional Administrator, or for determinations made by other implementing agencies, the administrator or director of such implementing agency. The appeal shall contain a clear and concise statement of the issues, facts in the case, and any relevant additional information. In reviewing the appeal, the implementing agency may request additional information from the owner or operator. The implementing agency will provide a written, final decision on the appeal to the owner or operator.

(h) *Schedule for conducting a third-party audit.* The audit and audit report shall be completed as follows, unless a different timeframe is specified by the implementing agency:

(1) For third-party audits required pursuant to paragraph (f)(1) of this section, within 12 months of the release; or

(2) For third-party audits required pursuant to paragraph (f)(2) of this section, within 12 months of the date of the final determination pursuant to paragraph (g)(3) of this section. However, if the final determination is appealed pursuant to paragraph (g)(4) of this section, within 12 months of the date of the final decision on the appeal.

■ 9. Section 68.59 is added to subpart C to read as follows:

§ 68.59 Third-party audits.

(a) *Applicability.* The owner or operator shall engage a third-party to conduct an audit that evaluates compliance with the provisions of this subpart in accordance with the requirements of this section when either criterion of § 68.58(f) is met.

(b) *Third-party auditors and auditing teams.* The owner or operator shall either:

(1) Engage a third-party auditor meeting all of the competency and independence criteria in paragraph (c) of this section; or

(2) Assemble an auditing team, led by a third-party auditor meeting all of the competency and independence criteria in paragraph (c) of this section. The team may include:

(i) Other employees of the third-party auditor firm meeting the independence criteria of paragraph (c)(2) of this section; and

(ii) Other personnel not employed by the third-party auditor firm, including facility personnel.

(c) Third-party auditor qualifications. The owner or operator shall determine and document that the third-party auditor(s) meet the following competency and independence requirements:

(1) *Competency requirements.* The third-party auditor(s) shall be:

(i) Knowledgeable with the requirements of this part;

(ii) Experienced with the stationary source type and processes being audited and applicable recognized and generally accepted good engineering practices; and

(iii) Trained and/or certified in proper auditing techniques.

(2) *Independence requirements.* The third-party auditor(s) shall:

(i) Act impartially when performing all activities under this section;

(ii) Receive no financial benefit from the outcome of the audit, apart from payment for auditing services. For purposes of this paragraph, retired employees who otherwise satisfy the third-party auditor independence criteria in this section may qualify as independent if their sole continuing financial attachments to the owner or operator are employer-financed or managed retirement and/or health plans;

(iii) Not have conducted past research, development, design, construction services, or consulting for the owner or operator within the last two years. For purposes of this requirement, consulting does not include performing or participating in third-party audits pursuant to § 68.59 or § 68.80. An audit firm with personnel who, before working for the auditor, conducted research, development, design, construction, or consulting services for the owner or operator within the last two years as an employee or contractor may meet the requirements of this subsection by ensuring such personnel do not participate in the audit, or manage or advise the audit team concerning the audit;

(iv) Not provide other business or consulting services to the owner or operator, including advice or assistance to implement the findings or recommendations in an audit report, for a period of at least two years following submission of the final audit report;

(v) Ensure that all third-party personnel involved in the audit sign and date a conflict of interest statement documenting that they meet the independence criteria of this paragraph; and

(vi) Ensure that all third-party personnel involved in the audit do not accept future employment with the owner or operator of the stationary source for a period of at least two years following submission of the final audit report. For purposes of this requirement, employment does not include performing or participating in third-party audits pursuant to § 68.59 or § 68.80.

(3) The auditor shall have written policies and procedures to ensure that all personnel comply with the competency and independence requirements of this section.

(d) *Third-party auditor responsibilities.* The owner or operator shall ensure that the third-party auditor:

(1) Manages the audit and participates in audit initiation, design, implementation, and reporting;

(2) Determines appropriate roles and responsibilities for the audit team members based on the qualifications of each team member;

(3) Prepares the audit report and where there is a team, documents the full audit team's views in the final audit report;

(4) Certifies the final audit report and its contents as meeting the requirements of this section; and

(5) Provides a copy of the audit report to the owner or operator.

(e) *Audit report.* The audit report shall:

(1) Identify all persons participating on the audit team, including names, titles, employers and/or affiliations, and summaries of qualifications. For third-party auditors, include information demonstrating that the competency requirements in paragraph (c)(1) of this section are met;

(2) Describe or incorporate by reference the policies and procedures required under paragraph (c)(3) of this section;

(3) Document the auditor's evaluation, for each covered process, of the owner or operator's compliance with the provisions of this subpart to determine whether the procedures and practices developed by the owner or operator under this rule are adequate and being followed;

(4) Document the findings of the audit, including any identified compliance or performance deficiencies;

(5) Summarize any significant revisions (if any) between draft and final versions of the report; and

(6) Include the following certification, signed and dated by the third-party auditor or third-party audit team member leading the audit:

I certify that this RMP compliance audit report was prepared under my direction or

supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information upon which the audit is based. I further certify that the audit was conducted and this report was prepared pursuant to the requirements of subpart C of 40 CFR part 68 and all other applicable auditing, competency, independence, impartiality, and conflict of interest standards and protocols. Based on my personal knowledge and experience, and inquiry of personnel involved in the audit, the information submitted herein is true, accurate, and complete.

(f) *Third-party audit findings—(1) Findings response report.* As soon as possible, but no later than 90 days after receiving the final audit report, the owner or operator shall determine an appropriate response to each of the findings in the audit report, and develop a findings response report that includes:

(i) A copy of the final audit report;

(ii) An appropriate response to each of the audit report findings;

(iii) A schedule for promptly addressing deficiencies; and

(iv) A certification, signed and dated by a senior corporate officer, or an official in an equivalent position, of the owner or operator of the stationary source, stating:

I certify under penalty of law that I have engaged a third-party to perform or lead an audit team to conduct a third-party audit in accordance with the requirements of 40 CFR 68.59 and that the attached RMP compliance audit report was received, reviewed, and responded to under my direction or supervision by qualified personnel. I further certify that appropriate responses to the findings have been identified and deficiencies were corrected, or are being corrected, consistent with the requirements of subpart C of 40 CFR part 68, as documented herein. Based on my personal knowledge and experience, or inquiry of personnel involved in evaluating the report findings and determining appropriate responses to the findings, the information submitted herein is true, accurate, and complete. I am aware that there are significant penalties for making false material statements, representations, or certifications, including the possibility of fines and imprisonment for knowing violations.

(2) *Schedule implementation.* The owner or operator shall implement the schedule to address deficiencies identified in the audit findings response report in paragraph (f)(1)(iii) of this section and document the action taken to address each deficiency, along with the date completed.

(3) *Submission to Board of Directors.* The owner or operator shall immediately provide a copy of each document required under paragraphs (f)(1) and (2) of this section, when completed, to the owner or operator's

audit committee of the Board of Directors, or other comparable committee or individual, if applicable.

(g) *Recordkeeping.* The owner or operator shall retain at the stationary source, the two most recent final third-party audit reports, related findings response reports, documentation of actions taken to address deficiencies, and related records. This requirement does not apply to any document that is more than five years old.

■ 10. Amend § 68.60 by:

- a. Revising paragraph (a);
- b. Redesignating paragraphs (c) through (f) as paragraphs (d) through (g);
- c. Adding a new paragraph (c); and
- d. Revising the newly designated paragraphs (d) and (g).

The revisions and additions read as follows:

§ 68.60 Incident investigation.

(a) The owner or operator shall investigate each incident that:

(1) Resulted in a catastrophic release (including when the affected process is decommissioned or destroyed following, or as the result of, an incident); or

(2) Could reasonably have resulted in a catastrophic release (*i.e.*, was a near miss).

(c) An incident investigation team shall be established and consist of at least one person knowledgeable in the process involved and other persons with appropriate knowledge and experience to thoroughly investigate and analyze the incident.

(d) A report shall be prepared at the conclusion of the investigation. The report shall be completed within 12 months of the incident, unless the implementing agency approves, in writing, an extension of time. The report shall include:

- (1) Date, time, and location of incident;
- (2) Date investigation began;
- (3) A description of the incident, in chronological order, providing all relevant facts;
- (4) The name and amount of the regulated substance involved in the release (*e.g.*, fire, explosion, toxic gas loss of containment) or near miss and the duration of the event;
- (5) The consequences, if any, of the incident including, but not limited to: injuries, fatalities, the number of people evacuated, the number of people sheltered in place, and the impact on the environment;
- (6) Emergency response actions taken;
- (7) The factors that contributed to the incident including the initiating event,

direct and indirect contributing factors, and root causes. Root causes shall be determined by conducting an analysis for each incident using a recognized method; and

(8) Any recommendations resulting from the investigation and a schedule for addressing them.

(g) Incident investigation reports shall be retained for five years.

■ 11. Amend § 68.65 by revising the first sentence of paragraph (a) and the note to paragraph (b) to read as follows:

§ 68.65 Process safety information.

(a) The owner or operator shall complete a compilation of written process safety information before conducting any process hazard analysis required by the rule, and shall keep process safety information up-to-date. *

(b) * * *

Note to paragraph (b): Safety Data Sheets (SDS) meeting the requirements of 29 CFR 1910.1200(g) may be used to comply with this requirement to the extent they contain the information required by paragraph (b) of this section.

* * * * *

■ 12. Amend § 68.67 by:

- a. Revising paragraph (c)(2);
- b. Amending paragraph (c)(6) by removing the word “and;”
- c. Amending paragraph (c)(7) by removing the period at the end of the paragraph and adding “; and” in its place; and
- d. Adding paragraph (c)(8).

The revisions and additions read as follows:

§ 68.67 Process hazard analysis.

* * * * *

(c) * * *

(2) The findings from all incident investigations required under § 68.81, as well as any other potential failure scenarios;

* * * * *

(8) For processes in NAICS 322, 324, and 325, safer technology and alternative risk management measures applicable to eliminating or reducing risk from process hazards.

(i) The owner or operator shall consider, in the following order of preference inherently safer technology or design, passive measures, active measures, and procedural measures. A combination of risk management measures may be used to achieve the desired risk reduction.

(ii) The owner or operator shall determine the practicability of the inherently safer technologies and designs considered.

* * * * *

■ 13. Amend § 68.71 by adding paragraph (d) to read as follows:

§ 68.71 Training.

* * * * *

(d) For the purposes of this section, the term employee also includes supervisors with process operational responsibilities.

■ 14. Amend § 68.79 by revising paragraph (a) and adding paragraphs (f) through (h) to read as follows:

§ 68.79 Compliance audits.

(a) The owner or operator shall certify that they have evaluated compliance with the provisions of this subpart for each covered process, at least every three years to verify that the procedures and practices developed under the rule are adequate and are being followed. When required as set forth in paragraph (f) of this section, the compliance audit shall be a third-party audit.

* * * * *

(f) *Third-party audit applicability.*

The next required compliance audit shall be a third-party audit when one of the following conditions apply:

(1) An accidental release meeting the criteria in § 68.42(a) from a covered process at a stationary source has occurred; or

(2) An implementing agency requires a third-party audit due to conditions at the stationary source that could lead to an accidental release of a regulated substance, or when a previous third-party audit failed to meet the competency or independence criteria of § 68.80(c).

(g) *Implementing agency notification and appeals.* (1) If an implementing agency makes a preliminary determination that a third-party audit is necessary pursuant to paragraph (f)(2) of this section, the implementing agency will provide written notice to the owner or operator that describes the basis for this determination.

(2) Within 30 days of receipt of such written notice, the owner or operator may provide information and data to, and may consult with, the implementing agency on the determination. Thereafter, the implementing agency will provide a final determination to the owner or operator.

(3) If the final determination requires a third-party audit, the owner or operator shall comply with the requirements of § 68.80, pursuant to the schedule in paragraph (h) of this section.

(4) *Appeals.* The owner or operator may appeal a final determination made by an implementing agency under paragraph (g)(2) of this section within

30 days of receipt of the final determination. The appeal shall be made to the EPA Regional Administrator, or for determinations made by other implementing agencies, the administrator or director of such implementing agency. The appeal shall contain a clear and concise statement of the issues, facts in the case, and any relevant additional information. In reviewing the appeal, the implementing agency may request additional information from the owner or operator. The implementing agency will provide a written, final decision on the appeal to the owner or operator.

(h) *Schedule for conducting a third-party audit.* The audit and audit report shall be completed as follows, unless a different timeframe is specified by the implementing agency:

(1) For third-party audits required pursuant to paragraph (f)(1) of this section, within 12 months of the release; or

(2) For third-party audits required pursuant to paragraph (f)(2) of this section, within 12 months of the date of the final determination pursuant to paragraph (g)(3) of this section. However, if the final determination is appealed pursuant to paragraph (g)(4) of this section, within 12 months of the date of the final decision on the appeal.

■ 15. Section 68.80 is added to subpart D to read as follows:

§ 68.80 Third-party audits.

(a) *Applicability.* The owner or operator shall engage a third-party to conduct an audit that evaluates compliance with the provisions of this subpart in accordance with the requirements of this section when either criterion of § 68.79(f) is met.

(b) *Third-party auditors and auditing teams.* The owner or operator shall either:

(1) Engage a third-party auditor meeting all of the competency and independence criteria in paragraph (c) of this section; or

(2) Assemble an auditing team, led by a third-party auditor meeting all of the competency and independence criteria in paragraph (c) of this section. The team may include:

(i) Other employees of the third-party auditor firm meeting the independence criteria of paragraph (c)(2) of this section; and

(ii) Other personnel not employed by the third-party auditor firm, including facility personnel.

(c) *Third-party auditor qualifications.* The owner or operator shall determine and document that the third-party auditor(s) meet the following

competency and independence requirements:

(1) *Competency requirements.* The third-party auditor(s) shall be:

(i) Knowledgeable with the requirements of this part;

(ii) Experienced with the stationary source type and processes being audited and applicable recognized and generally accepted good engineering practices; and

(iii) Trained or certified in proper auditing techniques.

(2) *Independence requirements.* The third-party auditor(s) shall:

(i) Act impartially when performing all activities under this section;

(ii) Receive no financial benefit from the outcome of the audit, apart from payment for auditing services. For purposes of this paragraph, retired employees who otherwise satisfy the third-party auditor independence criteria in this section may qualify as independent if their sole continuing financial attachments to the owner or operator are employer-financed or managed retirement and/or health plans;

(iii) Not have conducted past research, development, design, construction services, or consulting for the owner or operator within the last two years. For purposes of this requirement, consulting does not include performing or participating in third-party audits pursuant to § 68.59 or § 68.80. An audit firm with personnel who, before working for the auditor, conducted research, development, design, construction, or consulting services for the owner or operator within the last two years as an employee or contractor may meet the requirements of this subsection by ensuring such personnel do not participate in the audit, or manage or advise the audit team concerning the audit;

(iv) Not provide other business or consulting services to the owner or operator, including advice or assistance to implement the findings or recommendations in an audit report, for a period of at least two years following submission of the final audit report;

(v) Ensure that all third-party personnel involved in the audit sign and date a conflict of interest statement documenting that they meet the independence criteria of this paragraph; and

(vi) Ensure that all third-party personnel involved in the audit do not accept future employment with the owner or operator of the stationary source for a period of at least two years following submission of the final audit report. For purposes of this requirement, employment does not include

performing or participating in third-party audits pursuant to § 68.59 or § 68.80.

(3) The auditor shall have written policies and procedures to ensure that all personnel comply with the competency and independence requirements of this section.

(d) *Third-party auditor responsibilities.* The owner or operator shall ensure that the third-party auditor:

(1) Manages the audit and participates in audit initiation, design, implementation, and reporting;

(2) Determines appropriate roles and responsibilities for the audit team members based on the qualifications of each team member;

(3) Prepares the audit report and where there is a team, documents the full audit team's views in the final audit report;

(4) Certifies the final audit report and its contents as meeting the requirements of this section; and

(5) Provides a copy of the audit report to the owner or operator.

(e) *Audit report.* The audit report shall:

(1) Identify all persons participating on the audit team, including names, titles, employers and/or affiliations, and summaries of qualifications. For third-party auditors, include information demonstrating that the competency requirements in paragraph (c)(1) of this section are met;

(2) Describe or incorporate by reference the policies and procedures required under paragraph (c)(3) of this section;

(3) Document the auditor's evaluation, for each covered process, of the owner or operator's compliance with the provisions of this subpart to determine whether the procedures and practices developed by the owner or operator under this rule are adequate and being followed;

(4) Document the findings of the audit, including any identified compliance or performance deficiencies;

(5) Summarize any significant revisions (if any) between draft and final versions of the report; and

(6) Include the following certification, signed and dated by the third-party auditor or third-party audit team member leading the audit:

I certify that this RMP compliance audit report was prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information upon which the audit is based. I further certify that the audit was conducted and this report was prepared pursuant to the requirements of subpart D of 40 CFR part 68 and all other applicable auditing,

competency, independence, impartiality, and conflict of interest standards and protocols. Based on my personal knowledge and experience, and inquiry of personnel involved in the audit, the information submitted herein is true, accurate, and complete.

(f) *Third-party audit findings*—(1) *Findings response report.* As soon as possible, but no later than 90 days after receiving the final audit report, the owner or operator shall determine an appropriate response to each of the findings in the audit report, and develop a findings response report that includes:

- (i) A copy of the final audit report;
- (ii) An appropriate response to each of the audit report findings;
- (iii) A schedule for promptly addressing deficiencies; and
- (iv) A certification, signed and dated by a senior corporate officer, or an official in an equivalent position, of the owner or operator of the stationary source, stating:

I certify under penalty of law that I have engaged a third-party to perform or lead an audit team to conduct a third-party audit in accordance with the requirements of 40 CFR 68.80 and that the attached RMP compliance audit report was received, reviewed, and responded to under my direction or supervision by qualified personnel. I further certify that appropriate responses to the findings have been identified and deficiencies were corrected, or are being corrected, consistent with the requirements of subpart D of 40 CFR part 68, as documented herein. Based on my personal knowledge and experience, or inquiry of personnel involved in evaluating the report findings and determining appropriate responses to the findings, the information submitted herein is true, accurate, and complete. I am aware that there are significant penalties for making false material statements, representations, or certifications, including the possibility of fines and imprisonment for knowing violations.

(2) *Schedule implementation.* The owner or operator shall implement the schedule to address deficiencies identified in the audit findings response report in paragraph (f)(1)(iii) of this section and document the action taken to address each deficiency, along with the date completed.

(3) *Submission to Board of Directors.* The owner or operator shall immediately provide a copy of each document required under paragraphs (f)(1) and (2) of this section, when completed, to the owner or operator's audit committee of the Board of Directors, or other comparable committee or individual, if applicable.

(g) *Recordkeeping.* The owner or operator shall retain at the stationary source the two most recent final third-party audit reports, related findings response reports, documentation of

actions taken to address deficiencies, and related records.

■ 16. Amend § 68.81 by revising paragraphs (a), (d) introductory text, (d)(1), (d)(3) through (5), and adding paragraphs (d)(6) through (8) to read as follows:

§ 68.81 Incident investigation.

(a) The owner or operator shall investigate each incident that:

(1) Resulted in a catastrophic release (including when the affected process is decommissioned or destroyed following, or as the result of, an incident); or

(2) Could reasonably have resulted in a catastrophic release (*i.e.*, was a near miss).

* * * * *

(d) A report shall be prepared at the conclusion of the investigation. The report shall be completed within 12 months of the incident, unless the implementing agency approves, in writing, an extension of time. The report shall include:

(1) Date, time, and location of incident;

* * * * *

(3) A description of the incident, in chronological order, providing all relevant facts;

(4) The name and amount of the regulated substance involved in the release (*e.g.*, fire, explosion, toxic gas loss of containment) or near miss and the duration of the event;

(5) The consequences, if any, of the incident including, but not limited to: injuries, fatalities, the number of people evacuated, the number of people sheltered in place, and the impact on the environment;

(6) Emergency response actions taken;

(7) The factors that contributed to the incident including the initiating event, direct and indirect contributing factors, and root causes. Root causes shall be determined by conducting an analysis for each incident using a recognized method; and

(8) Any recommendations resulting from the investigation and a schedule for addressing them.

* * * * *

■ 17. Revise § 68.90 to read as follows:

§ 68.90 Applicability.

(a) *Responding stationary source.* Except as provided in paragraph (b) of this section, the owner or operator of a stationary source with Program 2 and Program 3 processes shall comply with the requirements of §§ 68.93, 68.95, and 68.96.

(b) *Non-responding stationary source.* The owner or operator of a stationary

source whose employees will not respond to accidental releases of regulated substances need not comply with § 68.95 of this part provided that:

(1) For stationary sources with any regulated toxic substance held in a process above the threshold quantity, the stationary source is included in the community emergency response plan developed under 42 U.S.C. 11003;

(2) For stationary sources with only regulated flammable substances held in a process above the threshold quantity, the owner or operator has coordinated response actions with the local fire department;

(3) Appropriate mechanisms are in place to notify emergency responders when there is a need for a response;

(4) The owner or operator performs the annual emergency response coordination activities required under § 68.93; and

(5) The owner or operator performs the annual notification exercises required under § 68.96(a).

■ 18. Section 68.93 is added to subpart E to read as follows:

§ 68.93 Emergency response coordination activities.

The owner or operator of a stationary source shall coordinate response needs with local emergency planning and response organizations to determine how the stationary source is addressed in the community emergency response plan and to ensure that local response organizations are aware of the regulated substances at the stationary source, their quantities, the risks presented by covered processes, and the resources and capabilities at the stationary source to respond to an accidental release of a regulated substance.

(a) Coordination shall occur at least annually, and more frequently if necessary, to address changes: At the stationary source; in the stationary source's emergency response and/or emergency action plan; and/or in the community emergency response plan.

(b) Coordination shall include providing to the local emergency planning and response organizations: The stationary source's emergency response plan if one exists; emergency action plan; updated emergency contact information; and any other information that local emergency planning and response organizations identify as relevant to local emergency response planning. For responding stationary sources, coordination shall also include consulting with local emergency response officials to establish appropriate schedules and plans for field and tabletop exercises required under § 68.96(b). The owner or operator

shall request an opportunity to meet with the local emergency planning committee (or equivalent) and/or local fire department as appropriate to review and discuss these materials.

(c) The owner or operator shall document coordination with local authorities, including: The names of individuals involved and their contact information (phone number, email address, and organizational affiliations); dates of coordination activities; and nature of coordination activities.

■ 19. Amend § 68.95 by:

- a. Revising paragraph (a)(1)(i);
- b. Adding a sentence to the end of paragraph (a)(4); and
- c. Revising paragraph (c).

The revisions and addition read as follows:

68.95 Emergency response program.

(a) * * *

(1) * * *

(i) Procedures for informing the public and the appropriate Federal, state, and local emergency response agencies about accidental releases;

* * * * *

(4) * * * The owner or operator shall review and update the plan as appropriate based on changes at the stationary source or new information obtained from coordination activities, emergency response exercises, incident investigations, or other available information, and ensure that employees are informed of the changes.

* * * * *

(c) The emergency response plan developed under paragraph (a)(1) of this section shall be coordinated with the community emergency response plan developed under 42 U.S.C. 11003. Upon request of the LEPC or emergency response officials, the owner or operator shall promptly provide to the local emergency response officials information necessary for developing and implementing the community emergency response plan.

■ 20. Section 68.96 is added to subpart E to read as follows:

§ 68.96 Emergency response exercises.

(a) *Notification exercises.* At least once each calendar year, the owner or operator of a stationary source with any Program 2 or Program 3 process shall conduct an exercise of the stationary source's emergency response notification mechanisms required under § 68.90(a)(2) or § 68.95(a)(1)(i), as appropriate. Owners or operators of responding stationary sources may perform the notification exercise as part of the tabletop and field exercises

required in paragraph (b) of this section. The owner/operator shall maintain a written record of each notification exercise conducted over the last five years.

(b) *Emergency response exercise program.* The owner or operator of a stationary source subject to the requirements of § 68.95 shall develop and implement an exercise program for its emergency response program, including the plan required under § 68.95(a)(1). Exercises shall involve facility emergency response personnel and, as appropriate, emergency response contractors. When planning emergency response field and tabletop exercises, the owner or operator shall coordinate with local public emergency response officials and invite them to participate in the exercise. The emergency response exercise program shall include:

(1) *Emergency response field exercises.* The owner or operator shall conduct field exercises involving the simulated accidental release of a regulated substance (i.e., toxic substance release or release of a regulated flammable substance involving a fire and/or explosion).

(i) *Frequency.* As part of coordination with local emergency response officials required by § 68.93, the owner or operator shall consult with these officials to establish an appropriate frequency for field exercises, but at a minimum, shall conduct a field exercise at least once every ten years.

(ii) *Scope.* Field exercises shall include: Tests of procedures to notify the public and the appropriate Federal, state, and local emergency response agencies about an accidental release; tests of procedures and measures for emergency response actions including evacuations and medical treatment; tests of communications systems; mobilization of facility emergency response personnel, including contractors, as appropriate; coordination with local emergency responders; emergency response equipment deployment; and any other action identified in the emergency response program, as appropriate.

(2) *Tabletop exercises.* The owner or operator shall conduct a tabletop exercise involving the simulated accidental release of a regulated substance.

(i) *Frequency.* As part of coordination with local emergency response officials required by § 68.93, the owner or operator shall consult with these officials to establish an appropriate frequency for tabletop exercises, but at a minimum, shall conduct a field exercise at least once every three years.

(ii) *Scope.* The exercise shall include discussions of: Procedures to notify the public and the appropriate Federal, state, and local emergency response agencies; procedures and measures for emergency response including evacuations and medical treatment; identification of facility emergency response personnel and/or contractors and their responsibilities; coordination with local emergency responders; procedures for emergency response equipment deployment; and any other action identified in the emergency response plan, as appropriate.

(3) *Documentation.* The owner/operator shall prepare an evaluation report within 90 days of each exercise. The report shall include: A description of the exercise scenario; names and organizations of each participant; an evaluation of the exercise results including lessons learned; recommendations for improvement or revisions to the emergency response exercise program and emergency response program, and a schedule to promptly address and resolve recommendations.

(c) *Alternative means of meeting exercise requirements.* The owner or operator may satisfy the requirement to conduct notification, field and/or tabletop exercises through:

(1) Exercises conducted to meet other Federal, state or local exercise requirements, provided the exercise meets the requirements of paragraphs (a) and/or (b) of this section, as appropriate.

(2) Response to an accidental release, provided the response includes the actions indicated in paragraphs (a) and/or (b) of this section, as appropriate. When used to meet field and/or tabletop exercise requirements, the owner or operator shall prepare an after-action report comparable to the exercise evaluation report required in paragraph (b)(3) of this section, within 90 days of the incident.

■ 21. Amend § 68.130 by:

■ a. In Table 1, "List of Regulated Toxic Substances and Threshold Quantities for Accidental Release Prevention", under second column entitled "CAS No.", removing the number "107-18-61" adding "107-18-6" in its place; and

■ b. Revising Table 4, "List of Regulated Flammable Substances and Threshold Quantities for Accidental Release Prevention".

The revisions read as follows:

§ 68.130 List of substances.

* * * * *

TABLE 4 TO § 68.130—LIST OF REGULATED FLAMMABLE SUBSTANCES ¹ AND THRESHOLD QUANTITIES FOR ACCIDENTAL RELEASE PREVENTION
[CAS Number Order—63 Substances]

CAS No.	Chemical name	Threshold quantity (lbs)	Basis for listing
60-29-7	Ethyl ether [Ethane, 1,1'-oxybis-]	10,000	g
74-82-8	Methane	10,000	f
74-84-0	Ethane	10,000	f
74-85-1	Ethylene [Ethene]	10,000	f
74-86-2	Acetylene [Ethyne]	10,000	f
74-89-5	Methylamine [Methanamine]	10,000	f
74-98-6	Propane	10,000	f
74-99-7	Propyne [1-Propyne]	10,000	f
75-00-3	Ethyl chloride [Ethane, chloro-]	10,000	f
75-01-4	Vinyl chloride [Ethene, chloro-]	10,000	a, f
75-02-5	Vinyl fluoride [Ethene, fluoro-]	10,000	f
75-04-7	Ethylamine [Ethanamine]	10,000	f
75-07-0	Acetaldehyde	10,000	g
75-08-1	Ethyl mercaptan [Ethanethiol]	10,000	g
75-19-4	Cyclopropane	10,000	f
75-28-5	Isobutane [Propane, 2-methyl]	10,000	f
75-29-6	Isopropyl chloride [Propane, 2-chloro-]	10,000	g
75-31-0	Isopropylamine [2-Propanamine]	10,000	g
75-35-4	Vinylidene chloride [Ethene, 1,1-dichloro-]	10,000	g
75-37-6	Difluoroethane [Ethane, 1,1-difluoro-]	10,000	f
75-38-7	Vinylidene fluoride [Ethene, 1,1-difluoro-]	10,000	f
75-50-3	Trimethylamine [Methanamine, N, N-dimethyl-]	10,000	f
75-76-3	Tetramethylsilane [Silane, tetramethyl-]	10,000	g
78-78-4	Isopentane [Butane, 2-methyl-]	10,000	g
78-79-5	Isoprene [1,3-Butadiene, 2-methyl-]	10,000	g
79-38-9	Trifluorochloroethylene [Ethene, chlorotrifluoro-]	10,000	f
106-97-8	Butane	10,000	f
106-98-9	1-Butene	10,000	f
106-99-0	1,3-Butadiene	10,000	f
107-00-6	Ethyl acetylene [1-Butyne]	10,000	f
107-01-7	2-Butene	10,000	f
107-25-5	Vinyl methyl ether [Ethene, methoxy-]	10,000	f
107-31-3	Methyl formate [Formic acid, methyl ester]	10,000	g
109-66-0	Pentane	10,000	g
109-67-1	1-Pentene	10,000	g
109-92-2	Vinyl ethyl ether [Ethene, ethoxy-]	10,000	g
109-95-5	Ethyl nitrite [Nitrous acid, ethyl ester]	10,000	f
115-07-1	Propylene [1-Propene]	10,000	f
115-10-6	Methyl ether [Methane, oxybis-]	10,000	f
115-11-7	2-Methylpropene [1-Propene, 2-methyl-]	10,000	f
116-14-3	Tetrafluoroethylene [Ethene, tetrafluoro-]	10,000	f
124-40-3	Dimethylamine [Methanamine, N-methyl-]	10,000	f
460-19-5	Cyanogen [Ethanedinitrile]	10,000	f
463-49-0	Propadiene [1,2-Propadiene]	10,000	f
463-58-1	Carbon oxysulfide [Carbon oxide sulfide (COS)]	10,000	f
463-82-1	2,2-Dimethylpropane [Propane, 2,2-dimethyl-]	10,000	f
504-60-9	1,3-Pentadiene	10,000	f
557-98-2	2-Chloropropylene [1-Propene, 2-chloro-]	10,000	g
563-45-1	3-Methyl-1-butene	10,000	f
563-46-2	2-Methyl-1-butene	10,000	g
590-18-1	2-Butene-cis	10,000	f
590-21-6	1-Chloropropylene [1-Propene, 1-chloro-]	10,000	g
598-73-2	Bromotrifluoroethylene [Ethene, bromotrifluoro-]	10,000	f
624-64-6	2-Butene-trans [2-Butene, (E)]	10,000	f
627-20-3	2-Pentene, (Z)-	10,000	g
646-04-8	2-Pentene, (E)-	10,000	g
689-97-4	Vinyl acetylene [1-Buten-3-yne]	10,000	f
1333-74-0	Hydrogen	10,000	f
4109-96-0	Dichlorosilane [Silane, dichloro-]	10,000	f
7791-21-1	Chlorine monoxide [Chlorine oxide]	10,000	f
7803-62-5	Silane	10,000	f
10025-78-2	Trichlorosilane [Silane, trichloro-]	10,000	g
25167-67-3	Butene	10,000	f

¹ A flammable substance when used as a fuel or held for sale as a fuel at a retail facility is excluded from all provisions of this part (see § 68.126).

Note: Basis for Listing:
^a Mandated for listing by Congress.
^f Flammable gas.
^g Volatile flammable liquid.

■ 22. Amend § 68.160 by adding paragraphs (b)(21) and (22) to read as follows:

§ 68.160 Registration.
 * * * * *
 (b) * * *

(21) Method of communication and location of the notification that chemical hazard information is

available to the public, pursuant to § 68.210(c); and

(22) Whether a public meeting has been held following an RMP reportable accident, pursuant to § 68.210(e).

■ 23. Amend § 68.170 by revising paragraphs (i) and (j) to read as follows:

§ 68.170 Prevention program/Program 2.

* * * * *

(i) The date of the most recent compliance audit, the expected date of completion of any changes resulting from the compliance audit, and identify whether the most recent compliance audit was a third-party audit, pursuant to §§ 68.58 and 68.59.

(j) The completion date of the most recent incident investigation and the expected date of completion of any changes resulting from the investigation.

* * * * *

■ 24. Amend § 68.175 by:

■ a. Revising the introductory text of paragraph (e), and paragraphs (e)(1), (5), and (6);

■ b. Adding paragraph (e)(7); and

■ c. Revising paragraphs (k) and (l).

The revisions and addition read as follows:

§ 68.175 Prevention program/Program 3.

* * * * *

(e) The most recent process hazard analysis (PHA) or PHA update and revalidation information, pursuant to § 68.67, including:

(1) The date of completion of the most recent PHA or update and the technique used;

* * * * *

(5) Monitoring and detection systems in use;

(6) Changes since the last PHA; and

(7) Inherently safer technology or design measures implemented since the last PHA, if any, and the technology category (substitution, minimization, simplification and/or moderation).

* * * * *

(k) The date of the most recent compliance audit, the expected date of completion of any changes resulting from the compliance audit, and identify whether the most recent compliance audit was a third-party audit, pursuant to §§ 68.79 and 68.80.

(l) The completion date of the most recent incident investigation and the expected date of completion of any changes resulting from the investigation.

* * * * *

■ 25. Revise § 68.180 to read as follows:

§ 68.180 Emergency response program and exercises.

(a) The owner or operator shall provide in the RMP:

(1) Name, organizational affiliation, phone number, and email address of local emergency planning and response organizations with which the stationary source last coordinated emergency response efforts, pursuant to § 68.10(f)(3) or § 68.93;

(2) The date of the most recent coordination with the local emergency response organizations, pursuant to § 68.93 and

(3) A list of Federal or state emergency plan requirements to which the stationary source is subject.

(b) The owner or operator shall identify in the RMP whether the facility is a responding stationary source or a non-responding stationary source, pursuant to § 68.90.

(1) For non-responding stationary sources, the owner or operator shall identify:

(i) For stationary sources with any regulated toxic substance held in a process above the threshold quantity, whether the stationary source is included in the community emergency response plan developed under 42 U.S.C. 11003, pursuant to § 68.90(b)(1);

(ii) For stationary sources with only regulated flammable substances held in a process above the threshold quantity, the date of the most recent coordination with the local fire department, pursuant to § 68.90(b)(2);

(iii) What mechanisms are in place to notify the public and emergency responders when there is a need for emergency response; and

(iv) The date of the most recent notification exercise, as required in § 68.96(a).

(2) For responding stationary sources, the owner or operator shall identify:

(i) The date of the most recent review and update of the emergency response plan, pursuant to § 68.95(a)(4);

(ii) The date of the most recent notification exercise, as required in § 68.96(a);

(iii) The date of the most recent field exercise, as required in § 68.96(b)(1); and

(iv) The date of the most recent tabletop exercise, as required in § 68.96(b)(2).

■ 26. Amend § 68.190 by adding a sentence at the end of paragraph (c) to read as follows:

§ 68.190 Updates.

* * * * *

(c) * * * Prior to de-registration the owner or operator shall meet applicable reporting and incident investigation requirements in accordance with §§ 68.42, 68.60, and/or 68.81.

* * * * *

■ 27. Revise § 68.200 to read as follows:

§ 68.200 Recordkeeping.

The owner or operator shall maintain records supporting the implementation of this part at the stationary source for five years, unless otherwise provided in subpart D of this part.

■ 28. Revise § 68.210 to read as follows:

§ 68.210 Availability of information to the public.

(a) RMP availability. The RMP required under subpart G of this part shall be available to the public under 42 U.S.C. 7414(c) and 40 CFR part 1400.

(b) Chemical hazard information. The owner or operator of a stationary source shall provide, upon request by any member of the public, the following chemical hazard information for all regulated processes, as applicable:

(1) Regulated substances information. Names of regulated substances held in a process;

(2) Safety data sheets (SDS). SDSs for all regulated substances located at the facility;

(3) Accident history information. Provide the five-year accident history information required to be reported under § 68.42;

(4) Emergency response program. The following summary information concerning the stationary source's compliance with § 68.10(f)(3) or the emergency response provisions of subpart E:

(i) Whether the stationary source is a responding stationary source or a non-responding stationary source;

(ii) Name and phone number of local emergency response organizations with which the owner or operator last coordinated emergency response efforts, pursuant to § 68.180; and

(iii) For stationary sources subject to § 68.95, procedures for informing the public and local emergency response agencies about accidental releases;

(5) Exercises. A list of scheduled exercises required under § 68.96; and

(6) LEPC contact information. Include LEPC name, phone number, and web address as available.

(c) Notification of availability of information. The owner or operator shall provide ongoing notification on a company Web site, social media platforms, or through other publicly accessible means that:

(1) Information specified in paragraph (b) of this section is available to the public upon request. The notification shall:

(i) Specify the information elements, identified in paragraph (b) of this section, that can be requested; and

(ii) Provide instructions for how to request the information (e.g. email,

mailing address, and/or telephone or Web site request);

(2) Identify where to access information on community preparedness, if available, including shelter-in-place and evacuation procedures.

(d) *Timeframe to provide requested information.* The owner or operator shall provide the requested information under paragraph (b) of this section within 45 days of receiving a request from any member of the public.

(e) *Public meetings.* The owner or operator of a stationary source shall hold a public meeting to provide information required under § 68.42 as

well as other relevant chemical hazard information, such as that described in paragraph (b) of this section, no later than 90 days after any accident subject to reporting under § 68.42.

(f) *Classified information.* The disclosure of information classified by the Department of Defense or other Federal agencies or contractors of such agencies shall be controlled by applicable laws, regulations, or executive orders concerning the release of classified information.

(g) *CBI.* An owner or operator asserting CBI for information required under this section shall provide a sanitized version to the public.

Assertion of claims of CBI and substantiation of CBI claims shall be in the same manner as required in §§ 68.151 and 68.152 for information contained in the RMP required under subpart G of this part. As provided under § 68.151(b)(3), an owner or operator of a stationary source may not claim five-year accident history information as CBI. As provided in § 68.151(c)(2), an owner or operator of a stationary source asserting that a chemical name is CBI shall provide a generic category or class name as a substitute.

48 CFR Chapter 1

[Docket No. FAR 2016–0051, Sequence No. 9]

Federal Acquisition Regulation; Federal Acquisition Circular 2005–95; Introduction

AGENCY: Department of Defense (DoD), General Services Administration (GSA),

and National Aeronautics and Space Administration (NASA).

ACTION: Summary presentation of final rules.

SUMMARY: This document summarizes the Federal Acquisition Regulation (FAR) rules agreed to by the Civilian Agency Acquisition Council and the Defense Acquisition Regulations Council (Councils) in this Federal Acquisition Circular (FAC) 2005–95. A companion document, the *Small Entity Compliance Guide* (SECG), follows this FAC. The FAC, including the SECG, is available via the Internet at <http://www.regulations.gov>.

DATES: For effective dates see the separate documents, which follow.

FOR FURTHER INFORMATION CONTACT: The analyst whose name appears in the table below in relation to the FAR case. Please cite FAC 2005–95 and the specific FAR case number. For information pertaining to status or publication schedules, contact the Regulatory Secretariat Division at 202–501–4755.

RULES LISTED IN FAC 2005–95

Item	Subject	FAR Case	Analyst
I	Uniform Use of Line Items	2013–014	Francis.
II	Acquisition Threshold for Special Emergency Procurement Authority	2016–004	Francis.
III	Contractor Employee Internal Confidentiality Agreements or Statements	2015–012	Davis.
IV	Contracts Under the Small Business Administration 8(a) Program	2012–022	Uddowla.
V	Prohibition on Reimbursement for Congressional Investigations and Inquiries	2015–016	Delgado.

SUPPLEMENTARY INFORMATION:

Summaries for each FAR rule follow. For the actual revisions and/or amendments made by these rules, refer to the specific item numbers and subjects set forth in the documents following these item summaries. FAC 2005–95 amends the FAR as follows:

Item I—Uniform Use of Line Items (FAR Case 2013–014)

This final rule amends the FAR to establish standards for the uniform use of line items in Federal procurement. These standards are designed to improve the accuracy, traceability, and usability of procurement data. The implementation of these standards will facilitate the identification and traceability of spending from appropriation through expenditure, supporting automated collection of information using key identifiers. The implementation date for FAR 4.1002 through 4.1008 will be October 1, 2019.

The requirements in the rule have the potential to impact any entity, small or large, that does business with the Federal Government because the proposed rule would apply to purchases of items, including commercial items and commercially available off-the-shelf items, and purchases under the simplified acquisition threshold. Any small business that contracts with a Federal agency could be impacted to at least some extent.

Item II—Acquisition Threshold for Special Emergency Procurement Authority (FAR Case 2016–004)

This final rule amends the FAR by increasing the simplified acquisition threshold (SAT) for special emergency procurement authority from \$300,000 to \$750,000 (within the United States) and from \$1 million to \$1.5 million (outside the United States) for acquisitions of supplies or services that, as determined by the head of the agency, are to be used to support a contingency operation or to facilitate defense against or recovery from nuclear, biological, chemical, or radiological attack. This change implements Section 816 of the National Defense Authorization Act for Fiscal Year 2016 (Pub. L. 114–92). This rule provides contracting officers with more flexibility when contracting in support of contingency operations.

The rule is not anticipated to have a significant economic impact on small business entities, because the rule raises the SAT for special emergency procurements, an arena in which a smaller percentage of small businesses participate, as compared to larger businesses. This final rule does not place any new requirements on small entities.

Item III—Contractor Employee Internal Confidentiality Agreements or Statements (FAR Case 2015–012)

This final rule revises the FAR to implement section 743 of division E, title VII, of the Consolidated and

Further Continuing Appropriations Act, 2015 (Pub. L. 113–235) and successor provisions in subsequent appropriations acts. Section 743 prohibits the use of funds appropriated or otherwise made available by Division E or any other act, for a contract with an entity that requires employees and subcontractors of such entity to sign internal confidentiality agreements or statements prohibiting or otherwise restricting such employees or subcontractors from lawfully reporting waste, fraud, or abuse, to a designated investigative or law enforcement representative of a Federal department or agency authorized to receive such information (e.g., agency office of the Inspector General). This rule is not expected to have a significant impact on small entities contracting with the Government.

Item IV—Contracts Under the Small Business Administration 8(a) Program (FAR Case 2012–022)

This final rule amends the Federal Acquisition Regulation (FAR) to implement clarifications made by the Small Business Administration in its final rule, which published in the **Federal Register** at 76 FR 8222 on February 11, 2011. This final rule clarifies in the FAR the procedures and requirements used when contracting under the 8(a) program. Clarifications include the evaluation, offering, and acceptance process, procedures for acquiring SBA’s consent to procure an

8(a) requirement outside the 8(a) program, and the impact of exiting the 8(a) program in terms of the firm's ability to receive future 8(a) requirements and its current contractual commitments.

This final rule does not place any new requirements, financial or otherwise, on small entities, and serves mainly to provide more explicit guidance to Federal contracting officials.

Item V—Prohibition on Reimbursement for Congressional Investigations and Inquiries (FAR Case 2015–016)

This rule amends the FAR to implement section 857 of the Carl Levin and Howard P. 'Buck' McKeon National Defense Authorization Act for Fiscal Year 2015. Section 857 imposes additional requirements relative to the allowability of costs incurred by a contractor in connection with a congressional investigation or inquiry. Contracting officers need to be aware of these new restrictions on certain costs, which cannot be charged under contracts. Although small businesses subject to FAR part 31 will need to maintain accounting records, this rule does not place any new requirements on small entities.

Dated: December 21, 2016.

Federal Acquisition Regulation; Uniform Use of Line Items

AGENCY: Department of Defense (DoD), General Services Administration (GSA), and National Aeronautics and Space Administration (NASA).

ACTION: Final rule.

SUMMARY: DoD, GSA, and NASA are issuing a final rule amending the Federal Acquisition Regulation (FAR) to establish uniform use of line items in Federal procurement.

DATES: *Effective:* January 13, 2017. In order to provide agencies with time to transition their information systems, agencies have until October 1, 2019, to apply the requirements of FAR 4.1002 through 4.1008 of subpart 4.10.

FOR FURTHER INFORMATION CONTACT: Ms. Camara Francis, Procurement Analyst, at 202–550–0935 for clarification of content. For information pertaining to status or publication schedules, contact the Regulatory Secretariat Division at 202–501–4755. Please cite FAC 2005–95, FAR Case 2013–014.

SUPPLEMENTARY INFORMATION:

I. Background

DoD, GSA, and NASA published a proposed rule in the **Federal Register** at 79 FR 45408 on August 5, 2014, to establish uniform use of line items in Federal procurement. The uniform line item structure is designed to improve the accuracy, traceability, and usability of procurement data. The need for this rule stems from the lack of access to reliable and comprehensive data on Federal procurement actions that is essential to management and program decisions that result in delivering services to taxpayers in the most efficient and effective manner. Lack of standards for identifying and tracing tax dollars across the acquisition contributes to duplication in spending, gaps in reporting, and inefficiencies in management decisions. The implementation of these standards will facilitate the identification and traceability of spending from

appropriation through expenditure, supporting automated collection of information using key identifiers. Three respondents submitted comments on the proposed rule.

II. Discussion and Analysis

The Civilian Agency Acquisition Council and the Defense Acquisition Regulations Council (the Councils) reviewed the public comments in the development of the final rule. A discussion of the comments and the changes made to the rule as a result of those comments are provided as follows:

A. Summary of Significant Changes From the Proposed Rule

1. The rule provides agencies time to transition their information systems and appropriately train the workforce. Accordingly, agencies have until October 1, 2019, to apply the requirements of FAR 4.1002 through 4.1008 of subpart 4.10.

2. The term “line item unique identifier” was removed and replaced with “line item number” for consistency with the current version of the FAR text. The term “unique” is no longer necessary due to changes made by the Uniform Procurement Identification rule (FAR Case 2012–023) published in the **Federal Register** at 79 FR 61739 on October 14, 2014.

B. Analysis of Public Comments

1. Alternative Line Item Structure

Comment: One respondent suggested removing text that would allow offerors to propose their own alternative line item structure, because this would be counterproductive to the goal of standardized reporting.

Response: The language on alternative line items was intended to allow flexibility, consistent with the requirements at FAR subpart 4.10. To clarify that the Government is not requesting contractors to create line items inconsistent with the rule, the clause is renamed “Alternative Line Item Proposal” and the explanatory text will no longer use the term “structure,” as this seemed to be the cause of some confusion.

2. Accounting Classification Citation

Comment: One respondent asked if each subline item is expected to have its own accounting classification citation.

Response: It is not a requirement for each subline item to have its own accounting classification citation. However, each deliverable subline item is expected to have its own accounting classification citation. This should not be construed to mean that the same

accounting classification citation cannot apply to multiple line items.

Comment: One respondent opined that a contract line item number or subtitle item number should not be created for the sole purpose of addressing an accounting classification, because this information is already tracked in financial systems. The respondent also questioned the specificity of the required accounting data on subtitle item numbers, because this data could not be gathered effectively through automated means.

Response: Only a deliverable subtitle item is expected to have its own accounting classification citation. While it is true that some Government systems are integrated to trace accounting classification citations to specific line items, this is not the case for all systems and this rule allows for linking accounting classification citations directly to line items in contract writing systems.

3. Exceptions

Comment: One respondent recommended adding exceptions to the text related to the requirement to include accounting classification citations on line items.

Response: There is no need for an exception to include accounting classification citations on line items, as this is not required, but is allowed. The text at FAR 4.1003(c) is modified to make it clear that multiple accounting classification citations can be provided on a line item.

4. Implementation

Comment: One respondent requested pushing the implementation date of the line item requirement further into the future, beyond October 1, 2016, due to the associated burden.

Response: The implementation date of this requirement for uniform line item use is now set for October 1, 2019.

5. Contract Milestone

Comment: One respondent inquired if a contact milestone will be considered a deliverable for the purpose of assigning contract line item numbers, based on the proposed definition of "line item" in FAR 2.101.

Response: Yes, a deliverable line item can be created for a contract milestone, but it is not required to be used for this purpose.

6. Existing Systems

Comment: One respondent challenged the background of the case "funding traceability is limited to contract-level information" by pointing out that NASA has systems in place that can capture

financial data with great detail, including units and prices, descriptions, and accounting line information.

Response: This may be the case for some existing systems; however, not all Government systems have these capabilities.

Comment: One respondent pointed out that accounting information is already collected in Federal Procurement Data System—Next Generation (FPDS-NG) for appropriated funds, and questioned the need to gather more explicit accounting information that would burden contractors with tracking Government accounting lines.

Response: FPDS-NG captures data related to the preponderance of the spending on a contract, not details on contract line items. This rule does not require contractors to track any new information.

7. Delete Text (FAR 4.1003 & 4.1005(a)(4))

Comment: One respondent suggested removing the proposed text at FAR 4.1003(c) and 4.1005-1(a)(4), because contractors do not need to be informed of Government accounting information and because this information is already available to the Government in accounting and contract reporting systems.

Response: While some Government systems are capable of tracing accounting data to specific line items through other means, most of them are not. The recommended text is not removed from the final rule.

8. Exhibit Line Item

Comment: One respondent asked if the FAR Council plans to address exhibit lines and formally define them as part of the Governmentwide initiative for standardized line item structures.

Response: No, not at this time.

9. Acronyms

Comment: One respondent asked if the FAR Council intends to minimize the use of acronyms, specifically CLIN, SLIN, and ELIN.

Response: The FAR currently does not use SLIN or ELIN. The instances where the FAR uses CLIN were removed by this rule. Accordingly, there is no intent to address the use of these acronyms in this rule.

10. Defense Federal Acquisition Regulation Supplement (DFARS) Procedure, Guidance, and Information (PGI)

Comment: One respondent asked if there is a plan to incorporate the entire

DFARS PGI in the FAR for Governmentwide use, beyond DoD.

Response: This is outside the scope of this rule.

C. Other Changes

1. The definition of "line item" is modified to clarify that this term is inclusive of subtitle items when it is applicable.

2. The term "line item number" is now defined to clarify that a line item may be identified in a numeric or alphanumeric format.

3. FAR 4.1003(c) and 4.1005-1(a)(4) are modified to note that multiple accounting classification citations can be provided on a single line item.

4. FAR 4.1004 is modified to clarify that the characteristics in 4.1003 apply to subtitle items that are deliverable but not informational subtitle items.

5. The requirement to include the national stock number or special item number at FAR 8.406-4(c)(3)(i)(C) is removed.

6. FAR 15.203(a)(2) is amended to clarify the process for allowing and evaluating proposals with alternative line item structures.

III. Executive Orders 12866 and 13563

Executive Orders (E.O.s) 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). E.O. 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. This is a significant regulatory action and, therefore, was subject to review under Section 6(b) of E.O. 12866, Regulatory Planning and Review, dated September 30, 1993. This rule is not a major rule under 5 U.S.C. 804.

IV. Regulatory Flexibility Act

DoD, GSA, and NASA have prepared a Final Regulatory Flexibility Analysis (FRFA) consistent with the Regulatory Flexibility Act, 5 U.S.C. 601, *et seq.* The FRFA is summarized as follows:

This final rule establishes uniform use of line items in Federal procurement. The uniform use of line items is designed to improve the accuracy, traceability, and usability of procurement data. This rule continues Federal procurement efforts to more robustly implement the objectives of the Federal Funding Accountability and Transparency Act of 2006 (Pub. L. 109-282), including promoting achievement of rigorous

accountability of procurement dollars and processes.

The requirements in this rule have the potential to have an impact on any entity, small or large, that does business with the Federal Government, because the rule would apply to purchases of items, including commercial items and commercially available off-the-shelf items, and purchases under the simplified acquisition threshold. However, line item pricing is a common commercial practice; therefore, the impact may not be significant.

None of the public comments addressed the initial regulatory flexibility analysis.

Any small business that contracts with a Federal agency could be impacted to at least some extent. Using data from the Federal Procurement Data System, there were 107,172 such small entities in fiscal year (FY) 2010, 97,626 in FY 2011, 85,749 in FY 2012, and 73,987 in FY 2013 doing business with the Federal Government.

The rule could require some contractors to restructure their proposal pricing process as well as their systems to accommodate the line item identification system. This change may also require contractors to make changes to their pricing and electronic systems. Contractors may also have to develop more extensive pricing data to conform to a new line item structure. However, this consistent line item identification policy should be beneficial to contractors doing business with executive branch agencies. This is especially true if contractors already have contracts with the Department of Defense (DoD), because these identification standards are already in use. Accordingly, contractors that currently contract with DoD will not be impacted. There is no data at this time on cost impacts to contractors in making this change.

The rule contains no reporting, recordkeeping, or other compliance requirements on the vendor community.

DoD, GSA, and NASA have not identified any significant alternatives to accomplish the stated objectives of this rule that would reduce impact on small entities.

Interested parties may obtain a copy of the FRFA from the Regulatory Secretariat Division. The Regulatory Secretariat Division has submitted a copy of the FRFA to the Chief Counsel for Advocacy of the Small Business Administration.

V. Paperwork Reduction Act

The rule does not contain any information collection requirements that require the approval of the Office of Management and Budget under the Paperwork Reduction Act (44 U.S.C. chapter 35).

List of Subjects in 48 CFR Parts 2, 3, 4, 5, 7, 8, 9, 12, 14, 15, 16, 17, 27, 32, 42, 48, 49, and 52

Government procurement.

Dated: December 21, 2016.

William F. Clark,

Director, Office of Government-wide Acquisition Policy, Office of Acquisition Policy, Office of Government-wide Policy.

Therefore, DoD, GSA, and NASA amend 48 CFR parts 2, 3, 4, 5, 7, 8, 9, 12, 14, 15, 16, 17, 27, 32, 42, 48, 49, and 52 as set forth below:

■ 1. The authority citation for 48 CFR parts 2, 3, 4, 5, 7, 8, 9, 12, 14, 15, 16, 17, 27, 32, 42, 48, 49, and 52 continues to read as follows:

Authority: 40 U.S.C. 121(c); 10 U.S.C. chapter 137; and 51 U.S.C. 20113.

PART 2—DEFINITION OF WORDS AND TERMS

■ 2. Amend section 2.101 in paragraph (b)(2) by adding, in alphabetical order, the definitions “Line item”, “Line item number”, and “Subline item” to read as follows:

2.101 Definitions.

* * * * *

(b) * * *

(2) * * *

Line item means the basic structural element in a procurement instrument that describes and organizes the required product or service for pricing, delivery, inspection, acceptance, invoicing, and payment. The use of the term “line item” includes “subline item,” as applicable.

Line item number means either a numeric or alphanumeric format to identify a line item.

* * * * *

Subline item means a subset of a line item.

* * * * *

PART 3—IMPROPER BUSINESS PRACTICES AND PERSONAL CONFLICTS OF INTEREST

3.302 [Amended]

■ 3. Amend section 3.302 by removing the definition “Line item”.

PART 4—ADMINISTRATIVE MATTERS

■ 4. Revise subpart 4.10 to read as follows:

Subpart 4.10—Uniform Use of Line Items

Sec.

4.1000 Scope.

4.1001 Policy.

4.1002 Applicability.

4.1003 Establishing line items.

4.1004 Establishing subline items.

4.1005 Data elements for line items and subline items.

4.1005–1 Required data elements.

4.1005–2 Exceptions.

4.1006 Modifications.

4.1007 Solicitation alternative line item proposal.

4.1008 Solicitation provision.

SUBPART 4.10—Uniform Use of Line Items

4.1000 Scope.

This subpart prescribes policies and procedures for assigning line items and subline items and their identifiers. However, in order to provide agencies with time to transition their information systems, agencies have until October 1, 2019, to apply the requirements of 4.1002 through 4.1008.

4.1001 Policy.

In order to improve the accuracy, traceability, and usability of procurement data, procurement instruments shall identify the supplies or services to be acquired as separately identified line items and, as needed, subline items.

(a) Line items are established to define deliverables or organize information about deliverables. Each line item describes characteristics for the item purchased, *e.g.*, pricing, delivery, and funding information.

(b) Each line item may be subdivided into separate unique subsets (called subline items) to ease administration. If a line item has deliverable subline items, the line item is informational. Subline items differentiate between or among certain characteristics of the line item, such as colors or sizes, dates of delivery, destinations, or places of performance. Subline items are established to define deliverables or organize information about deliverables.

4.1002 Applicability.

The policies of this subpart shall apply to the following procurement instruments, to include amendments, modifications, and change orders thereto:

(a) Solicitations.

(b) Contracts, including, but not limited to, Governmentwide acquisition contracts (GWACs), multi-agency contracts (MACs), Federal Supply Schedule (FSS) contracts, indefinite-delivery contracts, and purchase orders.

(c) Agreements that include pre-priced supplies or services.

(d) Task and delivery orders.

4.1003 Establishing line items.

Establish separate line items for deliverables that have the following characteristics except as provided at 4.1005–2:

(a) Separately identifiable.

(1) A supply is separately identifiable if it has its own identification (*e.g.*, national stock number (NSN), item

description, manufacturer's part number).

(2) Services are separately identifiable if they have no more than one statement of work or performance work statement.

(3) If the procurement instrument involves a first article (see subpart 9.3), establish a separate line item for each item requiring a separate approval. If the first article consists of a lot composed of a mixture of items that will be approved as a single lot, a single line item may be used.

(b) Single unit price or total price.

(c) Single accounting classification citation. A single deliverable may be funded by multiple accounting classifications when the deliverable effort cannot be otherwise subdivided.

(d) Separate delivery schedule, destination, period of performance, or place of performance.

(e) Single contract pricing type (*e.g.*, fixed-price or cost-reimbursement).

4.1004 Establishing subline items.

Subline items may be used to facilitate tracking of performance, deliverables, payment, and contract funds accounting or for other management purposes. Subline items may be either deliverable or informational. The list of characteristics at 4.1003 applies to deliverable subline items, but it is not applicable to informational subline items. A line item with subline items shall contain only that information that is common to all subline items thereunder. All subline items under one line item shall be the same contract type as the line item.

(a) *Deliverable subline items.* Deliverable subline items may be used for several related items that require separate identification. For example, instead of establishing multiple separate line items, subline items may be established for—

(1) Items that are basically the same, except for minor variations such as—

(i) Size or color;

(ii) Accounting classification, but see also 4.1005-1(a)(4); or

(iii) Date of delivery, destination, or period or place of performance;

(2) Separately priced collateral functions that relate to the primary product, such as packaging and handling, or transportation; or

(3) Items to be separately identified at the time of shipment or performance.

(b) *Informational subline items.* (1) Informational subline items may be used by agencies for administrative purposes. This type of subline item identifies information that relates directly to the line item and is an integral part of it (*e.g.*, parts of an assembly or parts of a kit).

(2) Position informational subline items within the line item description, not in the quantity or price fields.

4.1005 Data elements for line items and subline items.

4.1005-1 Required data elements.

(a) Except as provided in 4.1005-2, each line item or subline item shall include in the schedule (described at 12.303(b)(4), 14.201-2, or 15.204-2, or in a comparable section of the procurement instrument), at a minimum, the following information as separate, distinct data elements:

(1) Line item or subline item number established in accordance with agency procedures.

(2) Description of what is being purchased.

(3) Product or Service Code (PSC).

(4) Accounting classification citation.

(i) Line items or deliverable subline items. If multiple accounting classifications for a single deliverable apply, include the dollar amount for each accounting classification in the schedule (or a comparable section of the procurement instrument).

(ii) Informational subline items. An accounting classification citation is not required. (See 4.1004).

(5)(i) For fixed-price line items:

(A) Unit of measure.

(B) Quantity.

(C) Unit price.

(D) Total price.

(ii) For cost-reimbursement line items:

(A) Unit of measure.

(B) Quantity.

(C) Estimated cost.

(D) Fee (if any).

(E) Total estimated cost plus any fee.

(b) If a contract contains a combination of fixed-price, time-and-materials, labor-hour, or cost-reimbursable line items, identify the contract type for each line item in the schedule (or a comparable section of the procurement instrument) to facilitate payment.

(c) Each deliverable line item or deliverable subline item shall have its own delivery schedule, destination, period of performance, or place of performance expressly stated in the appropriate section of the procurement instrument ("as required" constitutes an expressly stated delivery term). When a line item has deliverable subline items, the delivery schedule, destination, period of performance, or place of performance shall be identified at the subline item level, rather than the line item level.

(d) Terms and conditions in other sections of the contract (such as contract clauses or payment instructions) shall

also specify applicability to individual line items if not applicable to the contract as a whole.

4.1005-2 Exceptions.

(a) *Indefinite-delivery contracts*—(1) *General.* The following required data elements are not known at time of issuance of an indefinite-delivery contract, but shall be provided in each order at the time of issuance: Accounting classification, delivery date and destination, or period and place of performance.

(2) *Indefinite-delivery indefinite-quantity (IDIQ) and requirements contracts.* IDIQ and requirements contracts may omit the quantity at the line item level for the base award provided that the total contract minimum and maximum, or the estimate, respectively, is stated.

(b) *Item description and PSC.* These data elements are not required in the line item if there are associated deliverable subline items that include the actual detailed identification. When this exception applies, use a general narrative description for the line item.

(c) *Single unit price or single total price.* The requirement for a single unit price or single total price at the line item level does not apply if any of the following conditions are present:

(1) There are associated deliverable subline items that are priced.

(2) The line item or subline item is not separately priced.

(3) The supplies or services are being acquired on a cost-reimbursement, time-and-materials, or labor-hour basis.

(4) The procurement instrument is for services and firm prices have been established for elements of the total price, but the actual number of the elements is not known until performance (*e.g.*, a labor-hour contract for maintenance/repair). The contracting officer may structure these procurement instruments to reflect a firm or estimated total amount for each line item.

4.1006 Modifications.

(a) When a new item (such as an increased quantity) is added to the procurement instrument, assign a new line item number.

(b) If the modification relates to existing line items, the modification shall refer to those items.

4.1007 Solicitation alternative line item proposal.

Solicitations should be structured to allow offerors to propose alternative line items (see 4.1008 and 52.212-1(e)). For example, when soliciting certain items using units of measure such as kit, set,

or lot, the offeror may not be able to group and deliver all items in a single shipment.

4.1008 Solicitation provision.

Insert the provision at 52.204–22, Alternative Line Item Proposal, in all solicitations.

PART 5—PUBLICIZING CONTRACT ACTIONS

5.207 [Amended]

■ 5. Amend section 5.207 by removing from paragraph (a)(13) the word “Contract”.

PART 7—ACQUISITION PLANNING

■ 6. Amend section 7.105 by revising paragraph (b)(5)(iv) to read as follows:

7.105 Contents of written acquisition plans.

* * * * *

(b) * * *

(5) * * *

(iv) For each contract (and order) contemplated, discuss the strategy to transition to firm-fixed-price contracts to the maximum extent practicable. During the requirements development stage, consider structuring the contract requirements, *i.e.*, line items, in a manner that will permit some, if not all, of the requirements to be awarded on a firm-fixed-price basis, either in the current contract, future option years, or follow-on contracts. This will facilitate an easier transition to a firm-fixed-price contract, because a cost history will be developed for a recurring definitive requirement.

* * * * *

PART 8—REQUIRED SOURCES OF SUPPLIES AND SERVICES

■ 7. Amend section 8.402 by revising paragraph (f)(3) to read as follows:

8.402 General.

* * * * *

(f) * * *

(3) The items are clearly labeled on the order as items not on the Federal Supply Schedule and they conform to the rules for numbering line items at subpart 4.10; and

* * * * *

■ 8. Amend section 8.404 by adding paragraph (j) to read as follows:

8.404 Use of Federal Supply Schedules.

* * * * *

(j) *Line items.* When placing orders or establishing BPAs, ordering activities shall reference the special item number and the corresponding line or subline item awarded (established per 4.1005)

in the schedule. If an ordering activity contracting officer adds an item not on the Federal Supply Schedule in accordance with 8.402(f), establish a new line item in accordance with subpart 4.10.

■ 9. Amend section 8.406–1 by—
 ■ a. Redesignating paragraphs (d)(8) through (16) as paragraphs (d)(9) through (17), respectively; and
 ■ b. Adding a new paragraph (d)(8).
 The addition reads as follows:

8.406–1 Order placement.

* * * * *

(d) * * *

(8) Line item or subline item.

* * * * *

■ 10. Amend section 8.406–4 by revising paragraph (c)(3)(i)(C) to read as follows:

8.406–4 Termination for cause.

* * * * *

(c) * * *

(3) * * *

(i) * * *

(C) Line item number(s) and a brief description of the item(s).

* * * * *

PART 9—CONTRACTOR QUALIFICATIONS

9.307 [Amended]

■ 11. Amend section 9.307 by removing from third sentence of paragraph (b) “contract line item number” and adding “line item number” in its place.

PART 12—ACQUISITION OF COMMERCIAL ITEMS

12.303 [Amended]

■ 12. Amend section 12.303 by removing from paragraph (b)(3) the word “contract”.

■ 13. Amend section 12.603 by revising paragraph (c)(2)(v) to read as follows:

12.603 Streamlined solicitation for commercial items.

* * * * *

(c) * * *

(2) * * *

(v) A list of line item number(s) and items, quantities, and units of measure (including option(s), if applicable).

* * * * *

PART 14—SEALED BIDDING

■ 14. Amend section 14.201–2 by revising the first sentence of paragraph (b) to read as follows:

14.201–2 Part I—The Schedule.

* * * * *

(b) * * * Include a brief description of the supplies or services; *e.g.*, line

item number, national stock number/part number if applicable, title or name identifying the supplies or services, and quantities (see part 11). * * *

* * * * *

■ 15. Amend section 14.201–9 by revising paragraphs (b) introductory text and (b)(1) to read as follows:

14.201–9 Simplified contract format.

* * * * *

(b) *Contract schedule.* Include the following for each line item:

(1) Line item number.

* * * * *

PART 15—CONTRACTING BY NEGOTIATION

■ 16. Amend section 15.203 by revising paragraph (a)(2) to read as follows:

15.203 Requests for proposals.

(a) * * *

(2) Anticipated terms and conditions that will apply to the contract. The solicitation may authorize offerors to propose alternative terms and conditions. If the solicitation permits offerors to submit one or more additional proposals with alternative line items (see 52.204–22 or 52.212–1(e)), the evaluation approach should consider the potential impact of the alternative line items on other terms and conditions or the requirement (*e.g.*, place of performance or payment and funding requirements) (see 15.206);

* * * * *

■ 17. Amend section 15.404–1 by revising the second sentence of paragraph (g)(1) to read as follows:

15.404–1 Proposal analysis techniques.

* * * * *

(g) * * *

(1) * * * Unbalanced pricing exists when, despite an acceptable total evaluated price, the price of one or more line items is significantly over or understated as indicated by the application of cost or price analysis techniques. * * *

* * * * *

■ 18. Amend section 15.408 in Table 15–2 by—

■ a. Under the heading *I. General Instructions*, revising the first sentence of paragraph D. and removing from paragraph E. the word “contract”; and

■ b. Under the heading *II. Cost Elements*, removing from the first sentence of paragraph A. the word “contract”.

The revision reads as follows:

15.408 Solicitation provisions and contract clauses.

* * * * *

Table 15–2—Instructions for Submitting Cost/Price Proposals When Certified Cost or Pricing Data Are Required

* * * * *

I. General Instructions

* * * * *

D. You must show the relationship between line item prices and the total contract price. * * *

* * * * *

PART 16—TYPES OF CONTRACTS

16.203–4 [Amended]

■ 19. Amend section 16.203–4 by removing from paragraph (b)(4) “contract line items” and adding “line items” in its place.

■ 20. Amend section 16.505 by revising paragraph (a)(7)(iii) to read as follows:

16.505 Ordering.

(a) * * *

(7) * * *

(iii) For supplies and services, line item number, subline item number (if applicable), description, quantity, and unit price or estimated cost and fee (as applicable). The corresponding line item number and subline item number from the base contract shall also be included.

* * * * *

PART 17—SPECIAL CONTRACTING METHODS

17.106–1 [Amended]

■ 21. Amend section 17.106–1 by removing from the fifth sentence of paragraph (c)(1), “Table 15–2, Formats for Submission of Line Items” and adding “Table 15–2, III. Formats for Submission of Line Item” in its place.

17.203 [Amended]

■ 22. Amend section 17.203 by removing from paragraph (g)(2) “contract line item” and adding “line item” in its place.

17.208 [Amended]

■ 23. Amend section 17.208 by removing from paragraph (e) “basic contract line item” and adding “line item” in its place.

PART 27—PATENTS, DATA, AND COPYRIGHTS

27.406–1 [Amended]

■ 24. Amend section 27.406–1 by removing from the second sentence of paragraph (b) “contract line items” and adding “line items” in its place.

PART 32—CONTRACT FINANCING

32.903 [Amended]

■ 25. Amend section 32.903 by removing from paragraph (b) introductory text “contract line item” and adding “line item” in its place.

32.905 [Amended]

■ 26. Amend section 32.905 by removing from paragraph (b)(1)(iii) “contract line item” and adding “line item” in its place.

32.1004 [Amended]

■ 27. Amend section 32.1004 by removing from the introductory text and paragraph (a)(2)(v) “contract line item” and adding “line item” in their places (three times).

32.1110 [Amended]

■ 28. Amend section 32.1110 by removing from paragraph (f) “contract line item” and adding “line item” in its place.

PART 42—CONTRACT ADMINISTRATION AND AUDIT SERVICES

42.302 [Amended]

■ 29. Amend section 42.302 by removing from paragraph (b)(9) “contract line item” and adding “line item” in its place.

PART 48—VALUE ENGINEERING

48.104–2 [Amended]

■ 30. Amend section 48.104–2 by removing from paragraph (a)(4) “contract line item” and adding “line item” in its place.

PART 49—TERMINATION OF CONTRACTS

49.601–2 [Amended]

■ 31. Amend section 49.601–2 by removing from the introductory text of the Notice of Termination to Prime Contractors “items, etc.” and adding “line items, etc.” in its place.

49.603–2 [Amended]

■ 32. Amend section 49.603–2 by removing from paragraph (b)(1) “(i) item” and adding “(i) line item” in its place.

49.603–5 [Amended]

■ 33. Amend section 49.603–5 by removing from paragraph (b)(1) “(i) item” and adding “(i) line item” in its place.

49.603–7 [Amended]

■ 34. Amend section 49.603–7 by removing from paragraph (b)(1) “(i) item” and adding “(i) line item” in its place.

PART 52—SOLICITATION PROVISIONS AND CONTRACT CLAUSES

■ 35. Add section 52.204–22 to read as follows:

52.204–22 Alternative Line Item Proposal.

As prescribed in 4.1008, insert the following provision:

Alternative Line Item Proposal (JAN 2017)

(a) The Government recognizes that the line items established in this solicitation may not conform to the Offeror’s practices. Failure to correct these issues can result in difficulties in acceptance of deliverables and processing payments. Therefore, the Offeror is invited to propose alternative line items for which bids, proposals, or quotes are requested in this solicitation to ensure that the resulting contract is economically and administratively advantageous to the Government and the Offeror.

(b) The Offeror may submit one or more additional proposals with alternative line items, provided that alternative line items are consistent with subpart 4.10 of the Federal Acquisition Regulation. However, acceptance of an alternative proposal is a unilateral decision made solely at the discretion of the Government. Offers that do not comply with the line items specified in this solicitation may be determined to be nonresponsive or unacceptable.

(End of provision)

■ 36. Amend section 52.212–1 by revising the date of the provision and paragraph (e) to read as follows:

52.212–1 Instructions to Offerors—Commercial Items.

* * * * *

Instructions to Offerors—Commercial Items (JAN 2017)

* * * * *

(e) *Multiple offers.* Offerors are encouraged to submit multiple offers presenting alternative terms and conditions, including alternative line items (provided that the alternative line items are consistent with subpart 4.10 of the Federal Acquisition Regulation), or alternative commercial items for satisfying the requirements of this solicitation. Each offer submitted will be evaluated separately.

* * * * *

- 37. Amend section 52.212–4 by—
- a. Revising the date of the clause;
- b. Removing from paragraph (g)(1)(iii) “contract line item” and adding “line item” in its place;
- c. Removing from paragraph (i)(5)(i)(C) the word “contract”; and
- d. In Alternate I—
- 1. Revising the date of Alternate I; and
- 2. Removing from paragraph (i)(5)(i)(C) the word “contract”.

The revisions read as follows:

52.212-4 Contract Terms and Conditions—Commercial Items.

* * * * *

Contract Terms and Conditions—Commercial Items (JAN 2017)

* * * * *

Alternate I (JAN 2017) * **

* * * * *

■ 38. Amend section 52.212-5 by revising the date of the clause and paragraph (b)(55) to read as follows:

52.212-5 Contract Terms and Conditions Required To Implement Statutes or Executive Orders—Commercial Items.

* * * * *

Contract Terms and Conditions Required To Implement Statutes or Executive Orders—Commercial Items (JAN 2017)

* * * * *

Economic Price Adjustment—Labor and Material (JAN 2017)

* * * * *

■ 43. Amend section 52.222-32 by revising the date of the clause and removing from the fourth sentence of paragraph (f)(2) “contract line item” and adding “line item” in its place” to read as follows:

52.222-32 Construction Wage Rate Requirements—Price Adjustment (Actual Method).

* * * * *

Construction Wage Rate Requirements—Price Adjustment (Actual Method) (JAN 2017)

* * * * *

■ 44. Amend section 52.232-25 by—

- a. Revising the date of the clause;
- b. Removing from paragraph (a)(3)(iii) “contract line item” and adding “line item” in its place; and
- c. Removing from paragraph (d)(1)(iii) “contract line item” and adding “line item” in its place.

The revision reads as follows:

52.232-25 Prompt Payment.

* * * * *

Prompt Payment (JAN 2017)

* * * * *

■ 45. Amend section 52.232-26 by—

- a. Revising the section heading and the date of the clause;
- b. Removing from paragraph (a)(2)(iii) “contract line item” and adding “line item” in its place; and
- c. Removing from paragraph (c)(1)(iii) “contract line item” and adding “line item” in its place.

The revision reads as follows:

52.232-26 Prompt Payment for Fixed-Price Architect-Engineer Contracts.

* * * * *

Prompt Payment for Fixed-Price Architect-Engineer Contracts (JAN 2017)

* * * * *

■ 46. Amend section 52.232-27 by—

- a. Revising the section heading and the date of the clause;
- b. Removing from paragraph (a)(2)(iii) “contract line item” and adding “line item” in its place; and

■ c. Removing from paragraph (l)(1)(iii) “contract line item” and adding “line item” in its place.

The revision reads as follows:

52.232-27 Prompt Payment for Construction Contracts.

* * * * *

Prompt Payment for Construction Contracts (JAN 2017)

* * * * *

■ 47. Amend section 52.232-30 by—

- a. Revising the date of the clause;
- b. Removing from paragraph (b) introductory text “contract line item” and adding “line item” in its place;
- c. Removing from paragraph (b)(1) “contract line item” and adding “line item” in their places (six times);
- d. Removing from paragraph (b)(2) “contract line item” and adding “line item” in its place;
- e. Removing from paragraph (b)(3) “contract line item” and adding “line item” in their places (three times);
- f. Removing from paragraph (b)(4) “contract line item” and adding “line item” in its place;
- g. Removing from paragraph (e) “contract line item” and adding “line item” in its place; and
- h. Removing from paragraph (i)(4) “contract line item” and adding “line item” in its place;

The revision reads as follows:

52.232-30 Installment Payments for Commercial Items.

* * * * *

Installment Payments for Commercial Items (JAN 2017)

* * * * *

■ 48. Amend section 52.243-7 by revising the date of the clause and removing from paragraph (b)(5)(i) “contract line items” and adding “line items” in its place to read as follows:

52.243-7 Notification of Changes.

* * * * *

Notification of Changes (JAN 2017)

* * * * *

■ 49. Amend section 52.245-1 by revising the date of the clause and removing from paragraph (e)(3) “contract line items” and adding “line items” in its place to read as follows:

52.245-1 Government Property.

* * * * *

Government Property (JAN 2017)

* * * * *

■ 50. Amend section 52.247-60 by revising the date of the clause and adding a sentence to the end of paragraph (a)(1)(xi) to read as follows:

52.247–60 Guaranteed Shipping Characteristics.

* * * * *

Guaranteed Shipping Characteristics (JAN 2017)

- (a) * * *
 (1) * * *
 (xi) * * *

Number of complete units (line item) to be shipped in carrier's equipment.

* * * * *

■ 51. Amend section 52.248–1 in Alternate II by revising the date of the alternate and removing from paragraph (a) “contract line items” and adding “line items” in its place to read as follows:

52.248–1 Value Engineering.

* * * * *

Alternate II (JAN 2017) * * *

Federal Acquisition Regulation; Acquisition Threshold for Special Emergency Procurement Authority

AGENCY: Department of Defense (DoD), General Services Administration (GSA), and National Aeronautics and Space Administration (NASA).

ACTION: Final rule.

SUMMARY: DoD, GSA, and NASA are issuing a final rule amending the Federal Acquisition Regulation (FAR) to implement a section of the National Defense Authorization Act for Fiscal Year 2016 to raise the simplified acquisition threshold for special emergency procurement authority.

DATES: *Effective:* January 13, 2017.

FOR FURTHER INFORMATION CONTACT: Ms. Camara Francis, Procurement Analyst, at 202–550–0935, for clarification of content. For information pertaining to status or publication schedules, contact the Regulatory Secretariat Division at 202–501–4755. Please cite FAC 2005–95, FAR Case 2016–004.

SUPPLEMENTARY INFORMATION:**I. Background**

DOD, GSA, and NASA published a proposed rule in the **Federal Register** at 81 FR 39882 on June 20, 2016, to implement section 816 of the National Defense Authorization Act for Fiscal Year 2016 (Pub. L. 114–92). FAR 2.101, 13.003, 19.203, and 19.502–2 are being revised to increase the simplified acquisition threshold for special emergency procurement authority from \$300,000 to \$750,000 (within the United States) and from \$1 million to \$1.5 million (outside the United States). The rule would apply to acquisitions of supplies or services that, as determined by the head of the agency, are to be used to support a contingency operation or to facilitate defense against or recovery from nuclear, biological, chemical, or radiological attack. Two respondents provided comments on the proposed rule.

II. Discussion and Analysis

The Civilian Agency Acquisition Council and the Defense Acquisition Regulations Council (the Councils) reviewed the comments in the development of the final rule. A discussion of the comments is provided.

A. Summary of Changes

There was no change made to the rule as a result of the comments received. There were no comments on the Initial Regulatory Flexibility Analysis.

B. Analysis of Public Comments**1. Small Business**

Comment: The respondent identified that the proposed rule did not recognize that the automatic set-asides for small business would apply up to the threshold in paragraph (1)(ii) of the simplified acquisition threshold definition at FAR 2.101 in the case of an emergency acquisition in an outlying area as defined in FAR 2.101.

Response: The proposed rule did not address the issue of the outlying areas. While the comment is out of scope of this rule, the Councils will take the comment under consideration.

2. Increased Simplified Acquisition Threshold

Comment: The respondent opposes the increase in the special emergency procurement threshold, because increases to the acquisition threshold threaten to compromise the integrity of the Berry amendment, outsource critical portions of the domestic industrial base, and hurt American manufacturers.

Response: The Councils appreciate the comment and acknowledge the concern; however, the increase in the

special emergency procurement threshold is statutory in nature.

III. Executive Orders 12866 and 13563

Executive Orders (E.O.s) 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). E.O. 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. This is not a significant regulatory action and, therefore, was not subject to review under Section 6(b) of E.O. 12866, Regulatory Planning and Review, dated September 30, 1993. This rule is not a major rule under 5 U.S.C. 804.

IV. Regulatory Flexibility Act

DoD, GSA, and NASA have prepared a Final Regulatory Flexibility Analysis (FRFA) consistent with the Regulatory Flexibility Act, 5 U.S.C. 601, *et seq.* The FRFA is summarized as follows:

This final rule implements section 816 of the National Authorization Act for Fiscal Year (FY) 2016, Public Law 114–92. Therefore, the FAR is revised to raise the simplified acquisition thresholds for special emergency procurement authority.

The objective of this final rule is to increase the simplified acquisition thresholds for special emergency procurement authority from \$300,000 to \$750,000 (within the United States) and \$1 million to \$1.5 million (outside the United States) for acquisitions of supplies or services that, as determined by the head of the agency, are to be used to support a contingency operation or to facilitate defense against or recovery from nuclear, biological, chemical, or radiological attack.

The Civilian Agency Acquisition Council and the Defense Acquisition Regulations Council (the Councils) reviewed the public comments in the development of the final rule.

There was no change made to the rule as a result of the comments received. There were no comments on the Regulatory Flexibility Analysis.

DoD, GSA, and NASA do not expect this final rule to have a significant economic impact on a substantial number of small entities within the meaning of the Regulatory Flexibility Act, 5 U.S.C. 601, *et seq.*, because the rule raises the simplified acquisition threshold for special emergency procurements, an arena in which a smaller percentage of small businesses participate, as compared to larger businesses. Between \$300,000 and the increase to \$750,000, 188 total awards were made of which 45 or 24 percent were to small businesses in FY 2014, and 219 total awards were made of which 66 or 30 percent were to small businesses in FY

2015. Between \$1 million and the increase to \$1.5 million, 56 total awards were made of which 10 or 17 percent were to small businesses in FY 2014, and 29 total awards were made of which 9 or 31 percent were to small businesses in FY 2015.

The final rule imposes no reporting, recordkeeping, or other information collection requirements.

There are no known significant alternatives to the rule. The impact of this final rule on small business is not expected to be significant.

Interested parties may obtain a copy of the FRFA from the Regulatory Secretariat. The Regulatory Secretariat Division has submitted a copy of the FRFA to the Chief Counsel for Advocacy of the Small Business Administration.

V. Paperwork Reduction Act

The rule does not contain any information collection requirements that require the approval of the Office of Management and Budget under the Paperwork Reduction Act (44 U.S.C. chapter 35).

List of Subjects in 48 CFR Parts 2, 13, and 19

Government procurement.

Dated: December 21, 2016.

William F. Clark,

Director, Office of Government-wide Acquisition Policy, Office of Acquisition Policy, Office of Government-wide Policy.

Therefore, DoD, GSA, and NASA amend 48 CFR parts 2, 13, and 19 as set forth below:

■ 1. The authority citation for 48 CFR parts 2, 13, and 19 continues to read as follows:

Authority: 40 U.S.C. 121(c); 10 U.S.C. chapter 137; and 51 U.S.C. 20113.

PART 2—DEFINITIONS WORDS AND TERMS

2.101 [Amended]

■ 2. Amend section 2.101, in paragraph (b)(2), in the definition “Simplified acquisition threshold” by removing from paragraphs (1)(i) and (ii) “\$300,000” and “\$1 million” and adding “\$750,000” and “\$1.5 million” in their places, respectively.

PART 13—SIMPLIFIED ACQUISITION PROCEDURES

13.003 [Amended]

■ 3. Amend section 13.003 by removing from paragraph (b)(1) “\$300,000” and adding “\$750,000” in its place.

PART 19—SMALL BUSINESS PROGRAMS

19.203 [Amended]

■ 4. Amend section 19.203 by removing from paragraph (b) “\$300,000” and adding “\$750,000” in its place.

19.502–2 [Amended]

■ 5. Amend section 19.502–2 by removing from paragraph (a) “\$300,000” and adding “\$750,000” in its place.

Federal Acquisition Regulation; Contractor Employee Internal Confidentiality Agreements or Statements

AGENCY: Department of Defense (DoD), General Services Administration (GSA), and National Aeronautics and Space Administration (NASA).

ACTION: Final rule.

SUMMARY: DoD, GSA, and NASA are issuing a final rule amending the Federal Acquisition Regulation (FAR) to implement a section of the Consolidated and Further Continuing Appropriations Act, 2015, that prohibits the use of funds, appropriated or otherwise made available, for a contract with an entity that requires employees or subcontractors to sign an internal confidentiality agreement that restricts such employees or subcontractors from lawfully reporting waste, fraud, or abuse to a designated Government representative authorized to receive such information.

DATES: *Effective:* January 19, 2017.

Applicability: This rule applies to all solicitations and contracts, using fiscal year 2015 or subsequent fiscal year funds that do not already contain a comparable provision/clause.

FOR FURTHER INFORMATION CONTACT: Ms. Cecelia L. Davis, Procurement Analyst, at 202–219–0202 for clarification of content. For information pertaining to status or publication schedules, contact

the Regulatory Secretariat Division at 202–501–4755. Please cite FAC 2005–95, FAR Case 2015–012.

SUPPLEMENTARY INFORMATION:

I. Background

DoD, GSA, and NASA published a proposed rule in the **Federal Register** at 81 FR 3763 on January 22, 2016, to implement section 743 of Division E, Title VII, of the Consolidated and Further Continuing Appropriations Act, 2015 (Pub. L. 113–235) and its successor provisions in subsequent appropriations acts (and as extended in continuing resolutions) (*i.e.*, section 743 of Division E of Pub. L. 114–113). Section 743 prohibits the use of funds appropriated or otherwise made available by Division E or any other Act for a contract, grant, or cooperative agreement with an entity that requires employees or subcontractors of such entity seeking to report waste, fraud, or abuse to sign internal confidentiality agreements or statements prohibiting or otherwise restricting such employees or subcontractors from lawfully reporting such waste, fraud, or abuse to a designated investigative or law enforcement representative of a Federal department or agency authorized to receive such information.

Four respondents submitted comments on the interim rule.

II. Discussion and Analysis

The Civilian Agency Acquisition Council and the Defense Acquisition Regulations Council (the Councils) reviewed the public comments in the development of the final rule. A discussion of the comments and the changes made to the rule as a result of those comments are provided as follows:

A. Summary of Significant Changes From the Proposed Rule

The following significant changes are included in the final rule:

- Adds definitions of “internal confidentiality agreement or statement,” “subcontract,” and “subcontractor” (FAR 3.901, 52.203–18(a), and 52.203–19(a)).

- Clarifies that the representation applies to future internal confidentiality agreements or statements that restrict reporting of waste, fraud, or abuse related to the performance of a Government contract, and specifically cites the agency Office of the Inspector General as a designated investigative or law enforcement representative of a Federal department or agency authorized to receive such information (FAR 3.909–2, 52.203–18(d), 52.203–19(b), and 52.212–3(s)(3)).

- Clarifies that the contractor is required to give notice only to current employees and subcontractors that any prohibitions and restrictions of any preexisting confidentiality agreements or statements covered by the clause are no longer in effect, to the extent that such prohibitions and restrictions are in conflict with the prohibitions of the clause (FAR 52.203–19(c)).

B. Analysis of Public Comments

1. General Support for the Rule

Comment: All respondents were in general support of the rule. For example, one respondent stated its support of the intent of section 743 and the proposed rule to provide appropriate protection for employees looking to report waste, fraud, or abuse.

Response: Noted.

2. Internal Confidentiality Agreement or Statement

Several respondents raised questions about the meaning of “internal confidentiality agreements or statement” and their scope.

Comment: One respondent questioned use of the term “internal confidentiality agreement” to apply to an agreement with a subcontractor, because “internal” would imply an agreement with employees of the company.

The respondent questioned how the rule applies to subcontractors and subcontracts and suggested that the application to subcontractors is only through flowdown, rather than direct application to the prime contractor.

Response: Notwithstanding the word “internal,” which would normally apply to inside the company, the statute specifically addresses the situation in which the contractor requires employees or subcontractors to sign internal confidentiality agreements or statements.

The clause does flow down to subcontracts, but it also prohibits the prime contractor from requiring subcontractors to sign internal confidentiality agreements or statements.

Comment: One respondent asked whether the rule covers confidentiality agreements arising out of civil litigation. The respondent also questioned whether it applies to confidentiality agreements that employees sign at the behest of a Federal agency.

Response: A definition of “internal confidentiality agreement or statement” has been added to the final rule. This definition excludes confidentiality agreements arising out of civil litigation or confidentiality agreements that contractor employees or subcontractors sign at the behest of a Federal agency.

3. Definitions of “Entity,” “Employee,” and “Subcontractor”

a. “Entity”

Comment: One respondent noted that the proposed rule did not define “entity” and sometimes used the term “contractor” or “offeror” in a manner that appears to be intended to mean “entity.”

Response: The term “entity” is a well-known legal term, frequently used in the FAR with its standard dictionary meaning, and does not require further definition in the acquisition regulations. According to Black’s Law Dictionary, “entity” is a generic term inclusive of a person, partnership, organization, or business, which can be legally bound, and is uniquely identifiable from any other entity. All offerors and contractors are entities, but not all entities are offerors or contractors. The statute prohibits making funds available to entities that require employees or subcontractors to sign certain confidentiality agreements or statements due to this prohibition. Therefore, it is very possible that such entities will not submit offers or be awarded contracts. The terms “offeror” and “contractor” are used when the rule is specifically addressing an entity that has submitted an offer or bid or an entity that has been awarded a contract.

b. “Employee”

Comment: One respondent requested a definition of the term “employee.” The respondent suggested the term be defined to mean “any officer, partner, employee, or agent of a prime contractor,” consistent with the definition of “prime contractor employee” at FAR 3.502–1. The respondent noted that this definition would clarify that the term encompasses only current employees, reducing the burden of who would be covered for purposes of implementing the rule.

Response: The term “employee” is used throughout the FAR, generally without definition. The definition of “prime contractor employee” at FAR 3.502–1 was first included in the FAR in FAC 84–24 (February 6, 1987), to implement the Anti-Kickback Enforcement Act of 1986. According to the Senate Report 99–435, the statute added a definition of “prime contractor employee” to parallel the language of 41 U.S.C. 51, which prohibits payments to any prime contractor, or to any officer, partner, employee, or agent of a prime contractor. All of these separate terms were included in the expanded definition of “prime contractor employee” in order to cover all those persons that might be acting to benefit

or on behalf of the prime contractor when participating in a kick-back scheme. In general usage, an “officer” is an employee, but a “partner” is a co-owner, not an employee. An “agent” also is not necessarily an employee and instead is frequently a subcontractor. More importantly, the difference between an employee and an independent contractor is not an issue in this rule, because the rule equally covers both employees and subcontractors (including consultants).

However, the rule has been modified at FAR 52.203–19(c) to specify that the contractor is only required to notify current employees and subcontractors.

c. “Subcontractor”

Comment: Several respondents were concerned about limiting the meaning of the term subcontractor. One respondent stated that “subcontractor” should cover only current subcontractors that have fully executed subcontracts under which work is currently being performed. Both respondents commented that the subcontract should be directly in support of a Government contract. The respondents consider that it would be a substantial burden to cover subcontractors that they do business with commercially that do not operate under a Government contract (e.g., cafeteria and lawn services).

Response: Definitions of “subcontract” and “subcontractor” have been added to the final rule to specify that the term “subcontract” applies to contracts entered into by a prime contractor or by a subcontractor “to furnish supplies or services for performance of a prime contract or subcontract.” “Subcontractor” means any supplier, distributor, vendor, or firm (including a consultant) that furnishes supplies or services to or for a prime contractor or another subcontractor.

As stated in the responses in section II.B.2.b. of this preamble, the rule has been modified at FAR 52.203–19(c) to specify that the contractor is only required to notify current employees and subcontractors.

4. Clarify Scope of Representation

Comment: One respondent was concerned that the rule as proposed could be construed in a manner broader than the stated policy for the proposed rule. The policy states that the proposed rule is intended to reduce waste, fraud, and abuse in all Federal acquisitions. The respondent recommended that the rule be clarified that it only addresses those agreements or statements involving the employees or contractors

directly performing work on a Federal contract.

Response: The definition of “subcontractor” limits the applicability of the rule to subcontracts under the Government contract. However, the statute focuses on reporting of waste, fraud, and abuse related to the performance of a Government contract. It is very possible that employees of the contractor not directly employed on the Government contract may have information to report relating to waste, fraud, or abuse on such contract. Therefore, the prohibition applies to all employees of the contractor, whether or not they are directly employed on the Government contract.

5. Timeframe of Representation

One respondent recommended that the representation be revised to provide for prospective applicability.

Retrospective representation would require offerors to locate and review all of its employee and subcontract agreements, which could be a time-consuming and costly task. The respondent recommended that the rule be revised to require offerors to represent that “they have no such agreements in place with regard to current employees and current subcontracts used for performance of government contracts and it agrees that it will not enter into any new confidentiality agreements or statements that include prohibited limitations on reporting.”

Response: The rule does not require retrospective representation. It allows contractors to make a blanket notice of nonenforcement (FAR 52.203–19(b)). The respondent’s proposed wording requiring contractors to represent they have no such agreements in place with current employees or subcontractors appears more burdensome than the current rule. However, the representation has been modified to accept the latter part of the recommendation, changing it to read that the offeror “will not require its employees or subcontractors” to sign such internal confidentiality agreements or statements.

6. Reporting

Comment: One respondent recommended that the FAR clause be modified so that the scope of the reporting is limited to waste, fraud, and abuse related to the execution of Government contracts.

Response: The final rule has been amended at FAR 3.909–2 to specify that the policy applies to the reporting of waste, fraud, or abuse related to the performance of a Government contract.

The same change is also incorporated in the associated provision and clause.

Comment: Another respondent recommended that the rule should more precisely identify the “designated investigative or law enforcement representative of a Federal department or agency authorized to receive such information.” The respondent recommended that clarification would avoid creating a situation such as where the report is inadvertently made to the wrong agency, or to entities that have no responsibility for the procurement.

Response: The purpose of the quoted phrase is to eliminate protection for disclosures to unauthorized people. The final rule has been amended to add “(e.g., agency Office of the Inspector General)” at the end of FAR 52.203–18(d) and 52.203–19(b).

Comment: One respondent was concerned that the proposed rule does not apply to disclosures made to Congress.

Response: Other statutes cover disclosures to Congress (see e.g., the whistleblower rights at FAR 3.907 and 3.908). This statute does not address disclosure to Congress.

7. Notice Requirements

Comment: One respondent recommended that the preamble be amended to validate more flexible forms of notification, other than email, that could be selected by the contractor/offeror.

Response: The rule does not specify how the notification is to be made. The preamble to the proposed rule only used email as an example, stating that “This notice could be accomplished through normal business communication channels, such as email.”

8. Protection of Controlled Unclassified Information

Comment: One respondent recommended that the rule should address the interplay with procedures for handling controlled unclassified information. An employee or subcontractor who wished to report fraud, waste, or abuse, should still be responsible for the proper protection and handling of controlled unclassified information. When an agency has a reason to limit the reporting of waste, fraud, or abuse to a limited chain of individuals, the rule should be revised to respect those limits.

Another respondent stated concern that the rule does not acknowledge that contractors have a legitimate interest in protecting their privileged and confidential information. The respondent recommended a change to

the clauses to acknowledge the ability of contractors to protect this information.

Response: Information that is reported to the agency Office of the Inspector General is protected from further disclosure outside of the Government, respecting all markings on any data or confidential information that is received.

9. Safe Harbor

Comment: One respondent requested examples of or guidance about confidentiality agreements or statements that would help contractors comply. The respondent recommended that the rule should include definitive guidance as to language to be included in a confidentiality statement or agreement that would comply with the requirements of the statute. The respondent suggested the following:

“Neither the confidentiality provision contained in the _____ [insert title of agreement, statement, policy], nor confidentiality provisions contained in any existing employment or contract with _____ [insert name of contractor] shall be construed to prohibit or otherwise restrict you, as an employee or {sub}contractor of _____ [insert name of contractor] from lawfully reporting waste, fraud, or abuse to a designated investigative or law enforcement representative of a federal department or agency authorized to receive such information under the procurement.”

Response: Although the Councils do not consider it appropriate to prescribe specific language in the regulations, the language provided by the respondent is provided in full text in the preamble. The Councils concur that the sample contains appropriate language that could be included in an internal confidentiality agreement or statement, and could be tailored for use in the notice required by FAR 52.203–19(c).

10. Applicability to Contracts Valued at or Below the Simplified Acquisition Threshold (SAT) and for the Acquisition of Commercial Items

Comment: One respondent was pleased that the rule also applies to contracts and subcontracts for acquisitions in amounts not greater than the simplified acquisition threshold, and to contracts and subcontracts for the acquisition of commercial items, including commercially available off-the-shelf (COTS) items.

Response: Noted.

Comment: Another respondent recommended that the rule be revised to exclude contracts for commercial items, including COTS items, and purchases

below the simplified acquisition threshold.

- This rule would interfere with customary commercial practices and may deter certain valued commercial vendors from participating in Government procedures.
- Nothing in the statute indicates that commercial items or purchases below the simplified acquisition threshold are a significant source of this type of waste, fraud, or abuse.
- Government should determine whether commercial item suppliers routinely enter into such restrictive confidentiality agreements with their employees and subcontractors.
- The conclusion that the burdens imposed by this rule are minimal does not acknowledge the due diligence and effort necessary before a contractor can accurately represent compliance. According to the respondent, contractors will be required to review current internal confidentiality agreements, identify any conflicts with the regulatory requirement, and modify or enter into new confidentiality agreements to the extent necessary to ensure compliance.
- At a minimum, the clause should not require flowdown to commercial item subcontractors.

Response: This is an appropriations act restriction on use of funds, passed by Congress to protect the Government's interests in preventing waste, fraud, and abuse on Federal contracts. The FAR signatories and the Administrator for Federal Procurement Policy have determined that it would not be in the best interest of the Government to waive applicability of this statute to acquisitions valued at or below the SAT and contracts and subcontracts for the acquisition of commercial items (including COTS items). In response to the specific comments of the respondent, the Government has no insight into when a contractor requires internal confidentiality agreements or statements from its employees and subcontractors. The concern that this rule will interfere with common commercial practice implies that it is common commercial practice to require internal confidentiality agreements or statements. Nothing in the statute indicates that acquisitions below the SAT and for the acquisition of commercial items are not a significant source of waste, fraud, and abuse. (See also section IV of this preamble.) Furthermore, the rule imposes far less burden than envisioned by the respondent (see response to the comments in section II.B.11. of this preamble.)

Although the preamble for the proposed rule stated the clear intent to flow the clause down to subcontracts for the acquisition of commercial items, the rule did not actually implement this flowdown. The final rule implemented the flowdown requirement by adding the FAR clause 52.203–19 to the lists at 52.212–5(e) and 52.244–6.

11. Implementation Burden

Comment: Several respondents commented that implementation of the proposed requirements would be immensely burdensome, without implementation of the recommended changes to limit scope and applicability. In particular, one respondent was especially concerned about the significant burden for contractors to track and trace all existing confidentiality agreements and statements, which may be freestanding or incorporated into other agreements. According to the respondent, an offeror would have to review each agreement and statement to determine whether it would be covered and compliant.

Response: There is no requirement to track and trace all existing internal confidentiality agreements and statements. That is the purpose of the notification at FAR 52.203–19(c), to override the prohibitions and restrictions of any preexisting internal confidentiality agreements or statements covered by the clause that are in conflict with the new requirement.

12. Law Does Not Go Far Enough

Comment: One respondent was concerned that the law does not go far enough and should be expanded to—

- Eliminate “nondisclosure agreements” to hide any criminal activity, including but not limited to fraud, waste, and abuse;
- Be worldwide; and
- Not be limited to just businesses with Government contracts.

Response:

The final rule implements the requirements of the statute. The Councils note that—

- Certain crimes are covered by existing whistleblower statutes; see FAR 3.908–3 and 3.907;
- Agreements are covered worldwide, but only for agreements applying to disclosures made to U.S. Federal officials; and
- The FAR cannot cover businesses that do not have Government contracts.

C. Other Changes

The title of the FAR provision 52.203–18 and clause 52.203–19 were changed to include “or Statements” and the clause title was revised from

“Prohibition on Contracting with Entities that Require . . .” to “Prohibition on Requiring . . .” (since the contract has already been awarded).

III. Executive Orders 12866 and 13563

Executive Orders (E.O.s) 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). E.O. 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. This is a significant regulatory action and, therefore, was subject to review under Section 6(b) of E.O. 12866, Regulatory Planning and Review, dated September 30, 1993. This rule is not a major rule under 5 U.S.C. 804.

IV. Applicability to Contracts at or Below the Simplified Acquisition Threshold (SAT) and for Commercial Items, Including Commercially Available Off-the-Shelf (COTS) Items

Based on determinations by the FAR signatories (DoD, GSA, and NASA) and the Administrator for Federal Procurement Policy, in accordance with 41 U.S.C. 1905, 1906, and 1907, this rule applies to all solicitations and resultant contracts that are funded with fiscal year (FY) 2015 funds or subsequent FY funds that are subject to the same prohibition on confidentiality agreements, including contracts and subcontracts for acquisitions in amounts not greater than the SAT, and contracts and subcontracts for the acquisition of commercial items, (including COTS items). This is an appropriations act restriction that prohibits use of funds appropriated or otherwise made available by Division E of the Consolidated and Further Continuing Appropriations Act, 2015 (Pub. L. 112–235), or any other act, for a contract with an entity that requires employees or subcontractors to sign certain internal confidentiality agreements or statements. It is not in the best interest of the Federal Government to waive the applicability of section 743 to contracts and subcontracts in amounts not greater than the SAT, or for the acquisition of commercial items (including COTS items). In FY 2015, about 90 percent of all awards were below the SAT, and commercial procedures were used in more than 50 percent of all awards, so that excluding these awards from

application of the law would seriously weaken the impact of the law.

Because the emphasis of section 743 is to prohibit restrictions on the ability of employees and subcontractors to report waste, fraud, or abuse to appropriate Government authorities, it is not in the best interest of the Federal Government to waive the applicability of section 743 to contracts and subcontracts in amounts not greater than the SAT. The suggested exception would exclude a significant number of acquisitions and thereby further limit the number of contractor/subcontractor employees protected by section 743. Furthermore, this rule imposes a minimal burden on offerors and contractors, requiring only that offerors represent by submission of the offer that they will not require certain internal confidentiality agreements. Contractors only need to notify employees that the prohibition and restrictions of any preexisting internal confidentiality agreements covered by the clause, are no longer in effect to the extent that the restrictions are inconsistent with the prohibitions of the clause.

Therefore, contractors are not required to conduct an exhaustive and burdensome search of all preexisting agreements to conform to the rule.

V. Regulatory Flexibility Act

DoD, GSA, and NASA have prepared a Final Regulatory Flexibility Analysis (FRFA) consistent with the Regulatory Flexibility Act, 5 U.S.C. 601, *et seq.* The FRFA is summarized as follows:

This rule implements section 743 of Division E, Title VII, of the Consolidated and Further Continuing Appropriations Act, 2015 (Pub. L. 113–235) and successor provisions in subsequent appropriations acts (and as extended in continuing resolutions). Section 743 prohibits the use of funds appropriated or otherwise made available by Division E or any other Act for a contract, grant, or cooperative agreement with an entity that requires employees or subcontractors of such entity seeking to report waste, fraud, or abuse to sign internal confidentiality agreements or statements prohibiting or otherwise restricting such employees or subcontractors from lawfully reporting such waste, fraud, or abuse to a designated investigative or law enforcement representative of a Federal department or agency authorized to receive such information.

The objective of the rule is to remove restrictions on the ability of employees and subcontractors to report waste, fraud, or abuse to the appropriate Government authorities.

The legal basis for the rule is the above-cited statute.

There were no public comments in response to the initial regulatory flexibility analysis.

This rule will apply to all small entities that receive Government contracts awarded

using funds subject to the restriction of section 743, or successor provisions in subsequent appropriations acts with the same prohibition (and as extended in continuing resolutions). Based on FPDS data for FY 2014, this rule may affect up to 108,500 small entities per year (75,000 small entities receiving new awards, 33,500 modifications). However, it is doubtful that most small entities have any such prohibited internal confidentiality agreements with their employees and subcontractors.

There are no reporting or recordkeeping burdens associated with this rule and the other compliance requirements do not have significant impact, because the rule does not impose any significant burdens—it merely requires that contractors (1) not prohibit their employees and subcontractors from reporting fraud, waste, or abuse to appropriate Government authorities; and (2) notify employees previously subject to such agreements, that the prohibited sections of the agreements are no longer in effect (*e.g.*, an email to all affected employees).

The rule has no significant economic impact on small entities. DoD, GSA, and NASA did not identify any significant alternatives that would reduce the impact on small entities and still meet the objectives of the statute.

Interested parties may obtain a copy of the FRFA from the Regulatory Secretariat. The Regulatory Secretariat has submitted a copy of the FRFA to the Chief Counsel for Advocacy of the Small Business Administration.

VI. Paperwork Reduction Act

The rule does not contain any information collection requirements that require the approval of the Office of Management and Budget under the Paperwork Reduction Act (44 U.S.C. chapter 35).

List of Subjects in 48 CFR Parts 3, 4, and 52

Government procurement.

Dated: December 21, 2016.

William F. Clark,

Director, Office of Government-wide Acquisition Policy, Office of Acquisition Policy, Office of Government-wide Policy.

Therefore, DoD, GSA, and NASA amend 48 CFR parts 3, 4, and 52 as set forth below:

■ 1. The authority citation for 48 CFR parts 3, 4, and 52 continues to read as follows:

Authority: 40 U.S.C. 121(c); 10 U.S.C. chapter 137; and 51 U.S.C. 20113.

PART 3—IMPROPER BUSINESS PRACTICES AND PERSONAL CONFLICTS OF INTERESTS

■ 2. Amend section 3.900 by—
 ■ a. Removing from the introductory text “three different” and adding “various” in its place;

■ b. Redesignating paragraph (c) as paragraph (d); and

■ c. Adding a new paragraph (c).

The addition reads as follows:

3.900 Scope of subpart.

* * * * *

(c) Section 743 of Division E, Title VII, of the Consolidated and Further Continuing Appropriations Act, 2015 (Pub. L. 113–235) and its successor provisions in subsequent appropriations acts (and as extended in continuing resolutions), implemented in 3.909, applicable to all agencies.

* * * * *

■ 3. Amend section 3.901 by adding, in alphabetical order, definitions for “Internal confidentiality agreement or statement”, “Subcontract”, and “Subcontractor” to read as follows:

3.901 Definitions.

* * * * *

Internal confidentiality agreement or statement means a confidentiality agreement or any other written statement that the contractor requires any of its employees or subcontractors to sign regarding nondisclosure of contractor information, except that it does not include confidentiality agreements arising out of civil litigation or confidentiality agreements that contractor employees or subcontractors sign at the behest of a Federal agency.

Subcontract means any contract as defined in subpart 2.1 entered into by a subcontractor to furnish supplies or services for performance of a prime contract or a subcontract. It includes but is not limited to purchase orders, and changes and modifications to purchase orders.

Subcontractor means any supplier, distributor, vendor, or firm (including a consultant) that furnishes supplies or services to or for a prime contractor or another subcontractor.

■ 4. Add sections 3.909, 3.909–1, 3.909–2, and 3.909–3 to read as follows:

3.909 Prohibition on providing funds to an entity that requires certain internal confidentiality agreements or statements.

3.909–1 Prohibition.

(a) The Government is prohibited from using fiscal year 2015 and subsequent fiscal year funds for a contract with an entity that requires employees or subcontractors of such entity seeking to report waste, fraud, or abuse to sign internal confidentiality agreements or statements prohibiting or otherwise restricting such employees or subcontractors from lawfully reporting such waste, fraud, or abuse to a designated investigative or law

enforcement representative of a Federal department or agency authorized to receive such information. See section 743 of Division E, Title VII, of the Consolidated and Further Continuing Appropriations Act, 2015 (Pub. L. 113–235) and its successor provisions in subsequent appropriations acts (and as extended in continuing resolutions.)

(b) The prohibition in paragraph (a) of this section does not contravene requirements applicable to Standard Form 312 (Classified Information Nondisclosure Agreement), Form 4414 (Sensitive Compartmented Information Nondisclosure Agreement), or any other form issued by a Federal department or agency governing the nondisclosure of classified information.

3.909–2 Representation by the offeror.

(a) In order to be eligible for contract award, an offeror must represent that it will not require its employees or subcontractors to sign internal confidentiality agreements or statements prohibiting or otherwise restricting such employees or subcontractors from lawfully reporting waste, fraud, or abuse related to the performance of a Government contract to a designated investigative or law enforcement representative of a Federal department or agency authorized to receive such information (e.g., agency Office of the Inspector General). Any offeror that does not so represent is ineligible for award of a contract.

(b) The contracting officer may rely on an offeror’s representation unless the contracting officer has reason to question the representation.

3.909–3 Solicitation provision and contract clause.

When using funding subject to the prohibitions in 3.909–1(a), the contracting officer shall—

(a)(1) Include the provision at 52.203–18, Prohibition on Contracting with Entities that Require Certain Internal Confidentiality Agreements or Statements—Representation, in all solicitations, except as provided in paragraph (a)(2) of this section; and

(2) Do not insert the provision in solicitations for a personal services contract with an individual if the services are to be performed entirely by the individual, rather than by an employee of the contractor or a subcontractor.

(b)(1) Include the clause at 52.203–19, Prohibition on Requiring Certain Internal Confidentiality Agreements or Statements, in all solicitations and resultant contracts, other than personal services contracts with individuals.

(2) Modify existing contracts, other than personal services contracts with individuals, to include the clause before obligating FY 2015 or subsequent FY funds that are subject to the same prohibition on internal confidentiality agreements or statements.

PART 4—ADMINISTRATIVE MATTERS

- 5. Amend section 4.1202 by—
- a. Redesignating paragraphs (a)(3) through (33) as paragraphs (a)(4) through (34), respectively;
- b. Revising the heading and first sentence of the Note in newly redesignated paragraph (a)(22); and
- c. Adding new paragraph (a)(3).

The addition and revision reads as follows:

4.1202 Solicitation provision and contract clause.

(a) * * *

(3) 52.203–18, Prohibition on Contracting with Entities that Require Certain Internal Confidentiality Agreements or Statements—Representation.

* * * * *

(22) * * *

Note to paragraph (a)(22): By a court order issued on October 24, 2016, this paragraph (a)(22) is enjoined indefinitely as of the date of the order.

* * * * *

PART 52—SOLICITATION PROVISIONS AND CONTRACT CLAUSES

- 6. Add sections 52.203–18 and 52.203–19 to read as follows:

52.203–18 Prohibition on Contracting with Entities that Require Certain Internal Confidentiality Agreements or Statements—Representation.

As prescribed in 3.909–3(a), insert the following provision:

Prohibition on Contracting With Entities That Require Certain Internal Confidentiality Agreements or Statements—Representation (JAN 2017)

(a) *Definition.* As used in this provision— *Internal confidentiality agreement or statement, subcontract, and subcontractor,* are defined in the clause at 52.203–19, Prohibition on Requiring Certain Internal Confidentiality Agreements or Statements.

(b) In accordance with section 743 of Division E, Title VII, of the Consolidated and Further Continuing Appropriations Act, 2015 (Pub. L. 113–235) and its successor provisions in subsequent appropriations acts (and as extended in continuing resolutions), Government agencies are not permitted to use funds appropriated (or otherwise made available) for contracts with an entity that requires employees or subcontractors of such entity seeking to report waste, fraud, or abuse

to sign internal confidentiality agreements or statements prohibiting or otherwise restricting such employees or subcontractors from lawfully reporting such waste, fraud, or abuse to a designated investigative or law enforcement representative of a Federal department or agency authorized to receive such information.

(c) The prohibition in paragraph (b) of this provision does not contravene requirements applicable to Standard Form 312, (Classified Information Nondisclosure Agreement), Form 4414 (Sensitive Compartmented Information Nondisclosure Agreement), or any other form issued by a Federal department or agency governing the nondisclosure of classified information.

(d) *Representation.* By submission of its offer, the Offeror represents that it will not require its employees or subcontractors to sign or comply with internal confidentiality agreements or statements prohibiting or otherwise restricting such employees or subcontractors from lawfully reporting waste, fraud, or abuse related to the performance of a Government contract to a designated investigative or law enforcement representative of a Federal department or agency authorized to receive such information (e.g., agency Office of the Inspector General).

(End of provision)

52.203–19 Prohibition on Requiring Certain Internal Confidentiality Agreements or Statements.

As prescribed in 3.909–3(b), insert the following clause:

Prohibition on Requiring Certain Internal Confidentiality Agreements or Statements (JAN 2017)

(a) *Definitions.* As used in this clause— *Internal confidentiality agreement or statement* means a confidentiality agreement or any other written statement that the contractor requires any of its employees or subcontractors to sign regarding nondisclosure of contractor information, except that it does not include confidentiality agreements arising out of civil litigation or confidentiality agreements that contractor employees or subcontractors sign at the behest of a Federal agency.

Subcontract means any contract as defined in subpart 2.1 entered into by a subcontractor to furnish supplies or services for performance of a prime contract or a subcontract. It includes but is not limited to purchase orders, and changes and modifications to purchase orders.

Subcontractor means any supplier, distributor, vendor, or firm (including a consultant) that furnishes supplies or services to or for a prime contractor or another subcontractor.

(b) The Contractor shall not require its employees or subcontractors to sign or comply with internal confidentiality agreements or statements prohibiting or otherwise restricting such employees or subcontractors from lawfully reporting waste, fraud, or abuse related to the performance of a Government contract to a designated investigative or law enforcement

representative of a Federal department or agency authorized to receive such information (e.g., agency Office of the Inspector General).

(c) The Contractor shall notify current employees and subcontractors that prohibitions and restrictions of any preexisting internal confidentiality agreements or statements covered by this clause, to the extent that such prohibitions and restrictions are inconsistent with the prohibitions of this clause, are no longer in effect.

(d) The prohibition in paragraph (b) of this clause does not contravene requirements applicable to Standard Form 312 (Classified Information Nondisclosure Agreement), Form 4414 (Sensitive Compartmented Information Nondisclosure Agreement), or any other form issued by a Federal department or agency governing the nondisclosure of classified information.

(e) In accordance with section 743 of Division E, Title VII, of the Consolidated and Further Continuing Appropriations Act, 2015, (Pub. L. 113-235), and its successor provisions in subsequent appropriations acts (and as extended in continuing resolutions) use of funds appropriated (or otherwise made available) is prohibited, if the Government determines that the Contractor is not in compliance with the provisions of this clause.

(f) The Contractor shall include the substance of this clause, including this paragraph (f), in subcontracts under such contracts.

(End of clause)

- 7. Amend section 52.204-8 by—
- a. Revising the date of the provision;
- b. Redesignating paragraphs (c)(1)(iii) through (xxiv) as paragraphs (c)(1)(iv) through (xxv), respectively;
- c. In the note to newly redesignated paragraph (c)(1)(xvi), remove “paragraph (c)(1)(xv)” and add “paragraph (c)(1)(xvi)” in its place; and
- d. Adding a new paragraph (c)(1)(iii).

The revision and addition reads as follows:

52.204-8 Annual Representations and Certifications.

* * * * *

Annual Representations and Certifications (JAN 2017)

* * * * *

(c)(1) * * *
(iii) 52.203-18, Prohibition on Contracting with Entities that Require Certain Internal Confidentiality Agreements or Statements—Representation. This provision applies to all solicitations.

* * * * *

- 8. Amend section 52.212-3 by—
- a. Revising the date of provision;
- b. Removing from the introductory text of the provision “through (t)” and adding “through (u)” in its place;
- c. Removing from paragraph (b)(2), in the bracketed paragraph, “through (t)”

and adding “through (u)” in its place; and

- d. Adding paragraph (u).

The revision and addition reads as follows:

52.212-3 Offeror Representations and Certifications—Commercial Items.

* * * * *

Offeror Representations and Certifications—Commercial Items (JAN 2017)

* * * * *

(u)(1) In accordance with section 743 of Division E, Title VII, of the Consolidated and Further Continuing Appropriations Act, 2015 (Pub. L. 113-235) and its successor provisions in subsequent appropriations acts (and as extended in continuing resolutions), Government agencies are not permitted to use appropriated (or otherwise made available) funds for contracts with an entity that requires employees or subcontractors of such entity seeking to report waste, fraud, or abuse to sign internal confidentiality agreements or statements prohibiting or otherwise restricting such employees or subcontractors from lawfully reporting such waste, fraud, or abuse to a designated investigative or law enforcement representative of a Federal department or agency authorized to receive such information.

(2) The prohibition in paragraph (u)(1) of this provision does not contravene requirements applicable to Standard Form 312 (Classified Information Nondisclosure Agreement), Form 4414 (Sensitive Compartmented Information Nondisclosure Agreement), or any other form issued by a Federal department or agency governing the nondisclosure of classified information.

(3) *Representation.* By submission of its offer, the Offeror represents that it will not require its employees or subcontractors to sign or comply with internal confidentiality agreements or statements prohibiting or otherwise restricting such employees or subcontractors from lawfully reporting waste, fraud, or abuse related to the performance of a Government contract to a designated investigative or law enforcement representative of a Federal department or agency authorized to receive such information (e.g., agency Office of the Inspector General).

- 9. Amend section 52.212-5 by—
- a. Revising the date of clause;
- b. Redesignating paragraphs (a)(1) through (3) as paragraphs (a)(2) through (4), respectively;
- c. Adding a new paragraph (a)(1);
- d. Redesignating paragraphs (e)(1)(ii) through (xxii) as (e)(1)(iii) through (xxiii), respectively;
- e. In the note to newly redesignated paragraph (e)(1)(xvii), remove “paragraph (e)(1)(xvi)” and add “paragraph (e)(1)(xvii)” in its place; and
- f. Adding a new paragraph (e)(1)(ii).

The revision and additions read as follows:

52.212-5 Contract Terms and Conditions Required to Implement Statutes or Executive Orders—Commercial Items.

* * * * *

Contract Terms and Conditions Required to Implement Statutes or Executive Orders—Commercial Items (JAN 2017)

* * * * *

(a) * * *
(1) 52.203-19, Prohibition on Requiring Certain Internal Confidentiality Agreements or Statements (JAN 2017) (section 743 of Division E, Title VII, of the Consolidated and Further Continuing Appropriations Act, 2015 (Pub. L. 113-235) and its successor provisions in subsequent appropriations acts (and as extended in continuing resolutions)).

* * * * *

(e) * * *
(1) * * *
(ii) 52.203-19, Prohibition on Requiring Certain Internal Confidentiality Agreements or Statements (JAN 2017) (section 743 of Division E, Title VII, of the Consolidated and Further Continuing Appropriations Act, 2015 (Pub. L. 113-235) and its successor provisions in subsequent appropriations acts (and as extended in continuing resolutions)).

* * * * *

- 10. Amend section 52.213-4—
- a. Revising the date of the clause;
- b. Redesignating paragraphs (a)(1)(i) through (vi) as (a)(1)(ii) through (vii), respectively;
- c. Adding a new paragraph (a)(1)(i); and
- d. Revising paragraph (a)(2)(viii).

The revisions and addition reads as follows:

52.213-4 Terms and Conditions-simplified Acquisitions (Other Than Commercial Items).

* * * * *

Terms and Conditions—Simplified Acquisitions (Other Than Commercial Items) (JAN 2017)

(a) * * *
(1) * * *
(i) 52.203-19, Prohibition on Requiring Certain Internal Confidentiality Agreements or Statements (JAN 2017) (section 743 of Division E, Title VII, of the Consolidated and Further Continuing Appropriations Act, 2015 (Pub. L. 113-235) and its successor provisions in subsequent appropriations acts (and as extended in continuing resolutions)).

* * * * *

(2) * * *

(viii) 52.244–6, Subcontracts for Commercial Items (JAN 2017).

* * * * *

■ 11. Amend section 52.244–6 by—

■ a. Revising the date of the clause;

■ b. Redesignating paragraphs (c)(1)(iii) through (ix) as paragraphs (c)(1)(iv) through (c)(1)(xx);

■ c. In the note to newly redesignated paragraph (c)(1)(xiv), remove “paragraph (c)(1)(xiii)” and add “paragraph (c)(1)(xiv)” in its place; and

■ d. Adding a new paragraph (c)(1)(iii).

The revision and addition reads as follows:

52.244–6 Subcontracts for Commercial Items.

* * * * *

Subcontracts for Commercial Items (JAN 2017)

* * * * *

(c) * * *
(1) * * *

(iii) 52.203–19, Prohibition on Requiring Certain Internal Confidentiality Agreements or Statements (JAN 2017).

* * * * *

Federal Acquisition Regulation; Contracts Under the Small Business Administration 8(a) Program

AGENCY: Department of Defense (DoD), General Services Administration (GSA), and National Aeronautics and Space Administration (NASA).

ACTION: Final rule.

SUMMARY: DoD, GSA, and NASA are issuing a final rule amending the Federal Acquisition Regulation (FAR) to implement regulatory clarifications made by the Small Business Administration regarding the 8(a) program.

DATES: *Effective:* January 13, 2017.

FOR FURTHER INFORMATION CONTACT: Ms. Mahruba Uddowla, Procurement

Analyst, at 703–605–2868, or by email at mahruba.uddowla@gsa.gov, for clarification of content. For information pertaining to status or publication schedules, contact the Regulatory Secretariat Division at 202–501–4755. Please cite FAC 2005–95, FAR Case 2012–022.

SUPPLEMENTARY INFORMATION:

I. Background

DoD, GSA, and NASA published a proposed rule in the **Federal Register** at 79 FR 6135 on February 3, 2014, soliciting public comments regarding the implementation of regulatory clarifications made by the Small Business Administration (SBA) under section 8(a) of the Small Business Act (15 U.S.C. 637(a)). The proposed rule provided additional guidance for the evaluation, offering, and acceptance process; procedures for releasing a requirement for non-8(a) procurement; and information on the effect exiting the 8(a) program will have on its current contractual obligations and the firm’s ability to receive new 8(a) requirements. Six respondents submitted comments on the proposed rule.

II. Discussion and Analysis

The Civilian Agency Acquisition Council and the Defense Acquisition Regulations Council (the Councils) reviewed the comments in the development of the final rule. A discussion of the comments is provided.

A. Summary of Significant Changes

The final rule contains revisions to the language at FAR 19.804–6(a) to clarify that offers and acceptances are required for individual orders under multiple-award contracts that were not set aside for competition among 8(a) contractors. The final rule also revises the language at FAR 19.814(a) to indicate that the SBA Inspector General can request a formal size determination. In addition, the final rule revises the language at FAR 19.815 regarding the release of requirements from the 8(a) program. Language has been added to clarify that any follow-on 8(a) requirement shall remain in the 8(a) program unless there is a mandatory source for the requirement pursuant to FAR 8.002 or 8.003 or SBA agrees to release the requirement for procurement outside the 8(a) program.

B. Analysis of Public Comments

1. Support Proposed Changes

Comment: One respondent stated support for the changes made in the proposed rule.

Response: The Councils acknowledge receipt of this comment.

2. Potential Conflict With Other Statutorily Mandated Socioeconomic Programs

Comment: Two respondents expressed concern that the proposed language at FAR 19.815 appeared to be in conflict with other socioeconomic programs, such as the Javits-Wagner-O’Day (JWOD) Act (now codified at 41 U.S.C. chapter 85). The proposed rule at FAR section 19.815, Release for non-8(a) procurement, implies that the SBA Associate Administrator for Business Development will only consider releasing requirements from the 8(a) program when there are assurances that the requirement will be procured under another small business program. However, the proposed rule does not mention that another reason a requirement must be released is when it can be procured under a statutory authority other than the Small Business Act. For example, if the requirement has been placed on the Procurement List by the Committee for Purchase from People Who are Blind or Severely Disabled (AbilityOne), it must, by law, be procured under JWOD, using the procedures at FAR subpart 8.7. These respondents asked for further clarification of this point in the FAR.

Response: The purpose of FAR 19.815 is to clarify that the contracting officer must submit a formal request to the SBA Associate Administrator for the release of a requirement that is currently accepted into the 8(a) program, if he or she intends to procure the item from a non-8(a) source. It further clarifies the factors SBA will take into consideration when determining whether to release the requirement from the 8(a) program.

This clarification does not conflict or eliminate an agency’s obligation to follow the procedures at FAR 8.002, Priorities for use of mandatory Government sources, and FAR 8.003, Use of other mandatory sources. As stated in these sections of the FAR, an agency may consider satisfying its requirement(s) through a commercial source, such as a small business, only after it has exhausted the possibility of fulfilling its requirement through one of the mandatory sources identified in FAR 8.002 or 8.003. However, new language has been added at FAR 19.815(a) and (b), to clarify that a requirement accepted into the 8(a) program shall remain in the 8(a) program unless the requirement can be satisfied through one of the mandatory sources listed at FAR 8.002 or 8.003 or the SBA Associate Administrator for Business Development agrees to release it.

3. The Rule Gives Preference to 8(a) Program Participants Over Other Small Businesses or Other Small Business Socioeconomic Programs

Comment: One respondent remarked that FAR 19.800(d) appears to give preferential treatment to 8(a) awards over other small business or other socioeconomic goals. FAR 19.800(d) of the proposed rule states the following: “the contracting officer shall consider 8(a) set-asides or sole source awards before considering small business set-asides” This respondent stated that each agency should have autonomy in achieving its own socioeconomic goals.

Response: The language in question already existed in the FAR as 19.800(e), but was renumbered as 19.800(d) by the proposed rule. The intent of the language at FAR 19.800(d) of the proposed rule is to further convey the policy established at FAR 19.203(c), *i.e.*, for acquisitions above the simplified acquisition threshold (SAT), the contracting officer shall first consider small business socioeconomic contracting programs, such as the HUBZone program, the service-disabled veteran-owned small business (SDVOSB) program, the women-owned small business program (WOSB), and the 8(a) program, before considering a small business set-aside, thus allowing agencies to independently tailor acquisition strategies based on their small business and small business socioeconomic goaling achievements. Similar language appears in FAR subparts 19.13, 19.14, and 19.15, though it is adapted to suit the specific socioeconomic program under discussion, *i.e.*, HUBZone, SDVOSB program, or the WOSB program. For further information on the socioeconomic parity rules within the small business programs, refer to the final rule for FAR case 2011–004, Socioeconomic Program Parity, published in the **Federal Register** at 77 FR 12930 on March 2, 2012.

4. Further Clarification of 8(a) Offer and Acceptance Procedures Is Needed

Comment: A respondent recommended that the language at FAR 19.804–3(c)(2), which discusses sole source awards where the contracting officer has not nominated a specific 8(a) participant, be amended to allow the contracting officer to have input in the selection process and the opportunity to concur with SBA’s selection.

Response: The guidance provided in the FAR for “open” sole source requirements is consistent with SBA’s regulations at 13 CFR part 124. In open

sole source requirements, the agency provides input into the selection through its offering letter, including such criteria as the special capabilities or disciplines needed for contract performance. Concurrence with SBA’s selection is evidenced by the contracting officer’s signature on the tripartite agreement or, where SBA has delegated 8(a) contract execution functions to an agency, the contracting officer’s signature on the contract award document.

Comment: One respondent requested additional guidance to clarify when the contracting office may assume SBA’s acceptance of a requirement valued below the SAT that is not offered on behalf of a specific 8(a) participant. For acquisitions at or below the SAT, FAR 19.804–3(a)(2) states that the contracting office may assume SBA’s acceptance has occurred within two working days when the offer was made on behalf of a specific 8(a) participant; however, the FAR is silent regarding when the contracting officer may assume SBA’s acceptance of a requirement that was not offered on behalf of a specific 8(a) participant.

Response: Although the proposed rule contained minor editorial revisions in this paragraph, the basic guidance was not changed because it is consistent with SBA’s regulations. In order for SBA to make the decision to accept an offer of a requirement into the 8(a) program, it must have reasonable assurance that an eligible 8(a) participant is available.

In the case of a sole source requirement at or below the SAT, when the contracting officer has identified a specific 8(a) participant, SBA will normally respond within two working days. This quick turnaround is attributed to the fact that SBA will usually accept the requirement on behalf of the 8(a) program in support of the specific participant nominated in the offering letter. However, when a contracting officer submits an open requirement to SBA, *i.e.*, does not identify a specific participant for the performance of the sole source requirement, the matching process is more complicated, and SBA will require variable amounts of time to pair the offered requirement with an 8(a) participant possessing the competencies needed for successful performance. For this reason, a definitive time frame for assuming SBA’s acceptance of an open requirement below the SAT is not provided in the FAR.

5. Editorial Recommendations

Comment: One respondent recommended the inclusion of a definitions section, rather than defining

all the terms at FAR 19.800(a). This respondent suggested that the new Definitions section should define the terms “offering letter” and “competitive threshold.”

Response: The intent of the rule is to provide needed clarification of certain aspects of the 8(a) program relating to Federal procurement. In its present format, the definitions of certain terms such as “offering letter” and “competitive threshold” occur in the FAR section where the phrase is introduced and the primary discussion of these subjects takes place. For example, the meaning of the term “offering letter” is explained in FAR 19.804–2, Agency offering, which is the area where the subject matter is introduced and where the primary discussion of offering letters is located. Similarly, the discussion of “competitive threshold” occurs in two back-to-back sections of FAR subpart 19.8, where the term is defined and its primary discussion takes place.

Comment: One respondent stated that the language at FAR 19.816(a) pertaining to an 8(a) contractor’s eligibility to receive contracts after exiting the 8(a) program requires further explanation, since it appears to conflict with FAR 19.804–6 as well as section 19.816(c). This respondent suggested that the verbiage “except as provided in FAR 19.804–6 and paragraph 19.816(c)” be added to ensure these exceptions are made clear.

Response: FAR 19.816(a) has been revised to add “[e]xcept as provided in 19.816(c)” However, FAR 19.804–6 addresses different subject matter. FAR 19.804–6 discusses the conditions by which an 8(a) prime contractor may continue to accept new orders under its existing multiple-award, indefinite-delivery, indefinite-quantity contract. On the other hand, FAR 19.816 discusses the contractual obligations upon exiting the 8(a) program.

Comment: One respondent stated that the language at FAR 19.816(c) pertaining to a contractor’s eligibility to receive contracts after exiting the program should be further clarified. Based on the assumption that an 8(a) contractor would necessarily have new North American Industry Classification System (NAICS) code applicability upon exiting the program, the respondent recommended that additional language be added to stipulate that the contractor must have been eligible for contract award in the specific NAICS code(s) identified in the contract on the initial date specified for receipt of offers.

Response: The recommended change is unnecessary since 8(a) program

eligibility is already addressed in FAR sections 19.802, 19.803, and 19.805 of the rule.

Comment: Two respondents suggested a few minor editorial changes.

Response: All suggested minor editorial changes have been incorporated.

III. Executive Orders 12866 and 13563

Executive Orders (E.O.s) 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). E.O. 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. This is a significant regulatory action and, therefore, was subject to review under Section 6(b) of E.O. 12866, Regulatory Planning and Review, dated September 30, 1993. This rule is not a major rule under 5 U.S.C. 804.

IV. Regulatory Flexibility Act

DoD, GSA, and NASA have prepared a Final Regulatory Flexibility Analysis (FRFA) consistent with the Regulatory Flexibility Act, 5 U.S.C. 601, *et seq.* The FRFA is summarized as follows:

This final rule amends the FAR to implement regulatory changes that SBA made to the 8(a) program. The final rule clarifies procedures and requirements used when agencies are contracting under the 8(a) Program. Among other issues, these changes include clarification of the evaluation, offering, and acceptance process; procedures for acquiring SBA's consent to procure an 8(a) requirement outside the 8(a) program; and the impact of exiting the 8(a) program in terms of the firm's ability to receive future 8(a) requirements and its current contractual commitments. These revisions do not place any new requirements, financial or otherwise, on small entities, and serve mainly to provide more explicit guidance to Federal contracting officials.

There were no significant issues raised by the public in response to the Initial Regulatory Flexibility Analysis provided in the proposed rule.

Currently, the 8(a) Program has approximately 6,885 active Participants, and of these, approximately 1,289 are owned by Native Americans. These entities may be economically impacted by the changes addressed in this final rule.

This rule does not impose any new information collection requirements on small businesses. The rule will have no direct negative impact on any small business concern, since it merely provides clarification of existing procedures and

requirements used by agencies when contracting under the 8(a) Program.

There are no alternative approaches that will accomplish the stated objectives of the rule.

Interested parties may obtain a copy of the FRFA from the Regulatory Secretariat Division. The Regulatory Secretariat Division has submitted a copy of the FRFA to the Chief Counsel for Advocacy of the Small Business Administration.

V. Paperwork Reduction Act

The rule does not contain any information collection requirements that require the approval of the Office of Management and Budget under the Paperwork Reduction Act (44 U.S.C. chapter 35).

List of Subjects in 48 CFR Parts 5, 6, 18, 19 and 52.

Government procurement.

Dated: December 21, 2016.

William F. Clark,

Director, Office of Government-wide Acquisition Policy, Office of Acquisition Policy, Office of Government-wide Policy.

Therefore, DoD, GSA, and NASA amend 48 CFR parts 5, 6, 18, 19 and 52 as set forth below:

- 1. The authority citation for 48 CFR parts 5, 6, 18, 19 and 52 continues to read as follows:

Authority: 40 U.S.C. 121(c); 10 U.S.C. chapter 137; and 51 U.S.C. 20113.

PART 5—PUBLICIZING CONTRACT ACTIONS

- 2. Amend section 5.205 by revising paragraph (f) to read as follows:

5.205 Special situations.

* * * * *

(f) *Section 8(a) competitive acquisition.* When a national buy requirement is being considered for competitive acquisition limited to eligible 8(a) participants under subpart 19.8, the contracting officer must transmit a synopsis of the proposed contract action to the GPE. The synopsis may be transmitted to the GPE concurrent with submission of the agency offering (see 19.804–2) to the Small Business Administration (SBA). The synopsis should also include information—

- (1) Advising that the acquisition is being offered for competition limited to eligible 8(a) participants;
- (2) Specifying the North American Industry Classification System (NAICS) code;
- (3) Advising that eligibility to participate may be restricted to 8(a) participants in either the developmental

stage or the developmental and transitional stages; and

(4) Encouraging interested 8(a) participants to request a copy of the solicitation as expeditiously as possible since the solicitation will be issued without further notice upon SBA acceptance of the requirement for the section 8(a) program.

* * * * *

PART 6—COMPETITION REQUIREMENTS

- 3. Revise section 6.204 to read as follows:

6.204 Section 8(a) competition.

(a) To fulfill statutory requirements relating to section 8(a) of the Small Business Act, as amended by Public Law 100–656, contracting officers may limit competition to eligible 8(a) participants (see subpart 19.8).

(b) No separate justification or determination and findings is required under this part to limit competition to eligible 8(a) participants. (But see 6.302–5 and 6.303–1 for sole source 8(a) awards over \$22 million.)

PART 18—EMERGENCY ACQUISITIONS

18.114 [Amended]

- 4. Amend section 18.114 by removing “firms” and adding “participants” in its place.

PART 19—SMALL BUSINESS PROGRAMS

19.000 [Amended]

- 5. Amend section 19.000 by removing from paragraph (a)(3) “business development”.

- 6. Revise section 19.800 to read as follows:

19.800 General.

(a) Section 8(a) of the Small Business Act (15 U.S.C. 637(a)) established a program that authorizes the Small Business Administration (SBA) to enter into all types of contracts with other agencies and award subcontracts for performing those contracts to firms eligible for program participation. This program is the “8(a) Business Development Program,” commonly referred to as the “8(a) program.” A small business that is accepted into the 8(a) program is known as a “participant.” SBA's subcontractors are referred to as “8(a) contractors.” As used in this subpart, an 8(a) contractor is an 8(a) participant that is currently performing on a Federal contract or order that was set aside for 8(a) participants.

(b) Contracts may be awarded to the SBA for performance by eligible 8(a) participants on either a sole source or competitive basis.

(c) Acting under the authority of the program, the SBA certifies to an agency that SBA is competent and responsible to perform a specific contract. The contracting officer has the discretion to award the contract to the SBA based upon mutually agreeable terms and conditions.

(d) The contracting officer shall comply with 19.203 before deciding to offer an acquisition to a small business concern under the 8(a) program. For acquisitions above the simplified acquisition threshold, the contracting officer shall consider 8(a) set-asides or sole source awards before considering small business set-asides.

(e) When SBA has delegated its 8(a) program contract execution authority to an agency, the contracting officer must refer to its agency supplement or other policy directives for appropriate guidance.

■ 7. Revise section 19.802 to read as follows:

19.802 Determining eligibility for the 8(a) program.

Determining the eligibility of a small business to be a participant in the 8(a) program is the responsibility of the SBA. SBA's regulations on eligibility requirements for participation in the 8(a) program are found at 13 CFR 124.101 through 124.112.

■ 8. Revise section 19.803 to read as follows:

19.803 Selecting acquisitions for the 8(a) program.

Through their cooperative efforts, the SBA and an agency match the agency's requirements with the capabilities of 8(a) participants to establish a basis for the agency to contract with the SBA under the program. Selection is initiated in one of three ways:

(a) The SBA advises the contracting activity of an 8(a) participant's capabilities through a search letter and requests the contracting activity to identify acquisitions to support the participant's business plans. In these instances, the SBA will provide at a minimum the following information in order to enable the contracting activity to match an acquisition to the participant's capabilities:

(1) Identification of the participant and its owners.

(2) Background information on the participant, including any and all information pertaining to the participant's technical ability and capacity to perform.

(3) The participant's present production capacity and related facilities.

(4) The extent to which contracting assistance is needed in the present and the future, described in terms that will enable the agency to relate the participant's plans to present and future agency requirements.

(5) If construction is involved, the request shall also include the following:

(i) A participant's capabilities in and qualifications for accomplishing various categories of construction work typically found in North American Industrial Category System subsector 236 (construction of buildings), subsector 237 (heavy and civil engineering construction), or subsector 238 (specialty trade contractors).

(ii) The participant's capacity in each construction category in terms of estimated dollar value (*e.g.*, electrical, up to \$100,000).

(b) The SBA identifies a specific requirement for one or more 8(a) participant(s) and sends a requirements letter to the agency's Office of Small and Disadvantaged Business Utilization, or for the Department of Defense, Office of Small Business Programs, requesting the contracting office offer the acquisition to the 8(a) program. In these instances, in addition to the information in paragraph (a) of this section, the SBA will provide—

(1) A clear identification of the acquisition sought; *e.g.*, project name or number;

(2) A statement as to how the required equipment and real property will be provided in order to ensure that the participant will be fully capable of satisfying the agency's requirements;

(3) If construction, information as to the bonding capability of the participant(s); and

(4) Either—

(i) If a sole source request—

(A) The reasons why the participant is considered suitable for this particular acquisition; *e.g.*, previous contracts for the same or similar supply or service; and

(B) A statement that the participant is eligible in terms of its small business size status relative to the assigned NAICS code, business support levels, and business activity targets; or

(ii) If competitive, a statement that at least two 8(a) participants are considered capable of satisfying the agency's requirements and a statement that the participants are also eligible in terms of their small business size status relative to the assigned NAICS code, business support levels, and business activity targets. If requested by the contracting office, SBA will identify at

least two such participants and provide information concerning the participants' capabilities.

(c) Agencies may also review other proposed acquisitions for the purpose of identifying requirements which may be offered to the SBA. Where agencies independently, or through the self marketing efforts of an 8(a) participant, identify a requirement for the 8(a) program, they may offer on behalf of a specific 8(a) participant, for the 8(a) program in general, or for 8(a) competition.

■ 9. Revise section 19.804–1 to read as follows:

19.804–1 Agency evaluation.

In determining the extent to which a requirement should be offered in support of the 8(a) program, the agency should evaluate—

(a) Current and future plans to acquire the specific items or work that 8(a) participants are seeking to provide, identified in terms of—

(1) Estimated quantities of the supplies or services required or the estimated number of construction projects planned; and

(2) Performance or delivery requirements, including—

(i) Required monthly production rates, when applicable; and

(ii) For construction, the geographical location where work is to be performed;

(b) The impact of any delay in delivery;

(c) Whether the items or work have previously been acquired using small business set-asides, and the date the items or work were acquired;

(d) Problems encountered in previous acquisitions of the items or work from the 8(a) participants or other contractors; and

(e) Any other pertinent information about known 8(a) participants, the items, or the work. This includes any information concerning the participants' products or capabilities. When necessary, the contracting agency shall make an independent review of the factors in 19.803(a) and other aspects of the participants' capabilities which would ensure the satisfactory performance of the requirement being considered for commitment to the 8(a) program.

■ 10. Amend section 19.804–2 by—

■ a. Revising paragraphs (a) introductory text and (a)(10);

■ b. Redesignating paragraphs (a)(12) through (15) as paragraphs (a)(13) through (16), respectively;

■ c. Adding a new paragraph (a)(12);

■ d. Removing from the newly redesignated paragraph (a)(13)

“Program” and adding “program” in its place;

■ e. Removing from paragraph (b)(3) “firm” and adding “8(a) participant” in its place (twice).

The revisions and addition read as follows:

19.804-2 Agency offering.

(a) After completing its evaluation, the contracting office shall notify the SBA of the extent of its plans to place 8(a) contracts with the SBA for specific quantities of items or work. The notification, referred to as an offering letter, shall identify the time frames within which resulting 8(a) awards must be completed in order for the agency to meet its responsibilities. The offering letter shall also contain the following information applicable to each prospective contract:

* * * * *

(10) Identification of any particular 8(a) participant designated for consideration, including a brief justification, such as—

(i) The 8(a) participant, through its own efforts, marketed the requirement and caused it to be reserved for the 8(a) program; or

(ii) The acquisition is a follow-on or renewal contract and the nominated 8(a) participant is the incumbent.

* * * * *

(12) Identification of all 8(a) participants which have expressed an interest in being considered for the acquisition.

* * * * *

■ 11. Revise section 19.804-3 to read as follows:

19.804-3 SBA acceptance.

(a) Upon receipt of the contracting office’s offering letter, SBA will determine whether to accept the requirement for the 8(a) program. SBA’s decision whether to accept the requirement will be transmitted to the contracting office in writing within 10 working days of receipt of the offer if the contract is likely to exceed the simplified acquisition threshold and within two working days of receipt if the contract is at or below the simplified acquisition threshold. The contracting office may grant an extension of these time periods, if requested by SBA.

(1) For acquisitions exceeding the simplified acquisition threshold, if SBA does not respond to an offering letter within ten working days, the contracting office may seek SBA’s acceptance through the Associate Administrator for Business Development. The contracting office may assume that SBA has accepted the requirement into the 8(a)

program if it does not receive a reply from the Associate Administrator for Business Development within five calendar days of receipt of the contracting office’s request.

(2) For acquisitions not exceeding the simplified acquisition threshold, when the contracting office makes an offer to the 8(a) program on behalf of a specific 8(a) participant and does not receive a reply to its offering letter within two working days, the contracting office may assume the offer is accepted and proceed with award of an 8(a) contract.

(b) As part of the acceptance process, SBA will review the appropriateness of the NAICS code designation assigned to the requirement by the contracting officer.

(1) SBA will not challenge the NAICS code assigned to the requirement by the contracting officer if it is reasonable, even though other NAICS codes may also be reasonable.

(2) If SBA and the contracting officer are unable to agree on a NAICS code designation for the requirement, SBA may refuse to accept the requirement for the 8(a) program, appeal the contracting officer’s determination to the head of the agency pursuant to 19.810, or appeal the NAICS code designation to the SBA Office of Hearings and Appeals under subpart C of 13 CFR part 134.

(c) *Sole source 8(a) awards.* If an appropriate match exists, SBA will advise the contracting officer whether it will participate in contract negotiations or whether SBA will authorize the contracting officer to negotiate directly with the identified 8(a) participant. Where SBA has delegated its contract execution functions to a contracting agency, SBA will also identify that delegation in its acceptance letter.

(1) *Sole source award where the contracting officer nominates a specific 8(a) participant.* SBA will determine whether an appropriate match exists where the contracting officer identifies a particular participant for a sole source award.

(i) Once SBA determines that a procurement is suitable to be accepted as an 8(a) sole source contract, SBA will normally accept it on behalf of the 8(a) participant recommended by the contracting officer, provided that the 8(a) participant complies with the requirements of 13 CFR 124.503(c)(1).

(ii) If an appropriate match does not exist, SBA will notify the 8(a) participant and the contracting officer, and may then nominate an alternate 8(a) participant.

(2) *Sole source award where the contracting officer does not nominate a specific 8(a) participant.* When a contracting officer does not nominate an

8(a) participant for performance of a sole source 8(a) contract, SBA will select an 8(a) participant for possible award from among two or more eligible and qualified 8(a) participants. The selection will be based upon relevant factors, including business development needs, compliance with competitive business mix requirements (if applicable), financial condition, management ability, technical capability, and whether award will promote the equitable distribution of 8(a) contracts. (For construction requirements see 13 CFR 124.503(d)(1)).

■ 12. Amend section 19.804-4—

■ a. Removing from the introductory text “Program” and adding “program” in its place;

■ b. Revising paragraph (b); and

■ c. Removing from paragraph (d) “Program” and adding “program” in its place.

The revision reads as follows:

19.804-4 Repetitive acquisitions.

* * * * *

(b) A nominated 8(a) participant’s eligibility, and whether or not it is the same 8(a) participant that performed the previous contract;

* * * * *

■ 13. Amend section 19.804-5 by revising paragraphs (a) and (c) to read as follows:

19.804-5 Basic ordering agreements.

(a) The contracting office shall submit an offering letter for, and SBA must accept, each order under a basic ordering agreement (BOA) in addition to the agency offering and SBA accepting the BOA itself.

* * * * *

(c) Once an 8(a) participant’s program term expires, the participant otherwise exits the 8(a) program, or becomes other than small for the NAICS code assigned under the BOA, SBA will not accept new orders for the participant.

■ 14. Revise section 19.804-6 to read as follows:

19.804-6 Indefinite-delivery contracts.

(a) Separate offers and acceptances are not required for individual orders under multiple-award contracts (including the Federal Supply Schedules managed by GSA, multi-agency contracts or Governmentwide acquisition contracts, or indefinite-delivery, indefinite-quantity (IDIQ) contracts) that have been set aside for exclusive competition among 8(a) contractors. SBA’s acceptance of the original contract is valid for the term of the contract. Offers and acceptances are required for individual orders under multiple-award

contracts that have not been set aside for exclusive competition among 8(a) contractors.

(b) An 8(a) contractor may continue to accept new orders under the contract, even if it exits the 8(a) program, or becomes other than small for the NAICS code assigned to the contract.

(c) Agencies may continue to take credit toward their prime contracting small disadvantaged business or small business goals for orders awarded to 8(a) participants, even after the contractor's 8(a) program term expires, the contractor otherwise exits the 8(a) program, or the contractor becomes other than small for the NAICS code assigned under the 8(a) contract.

However, if an 8(a) contractor rerepresents that it is other than small for the NAICS code assigned under the contract in accordance with 19.301-2 or, where ownership or control of the 8(a) contractor has changed and SBA has granted a waiver to allow the contractor to continue performance (see 13 CFR 124.515), the agency may not credit any subsequent orders awarded to the contractor towards its small disadvantaged business or small business goals.

■ 15. Amend section 19.805-1 by—

■ a. Revising paragraph (a) introductory text;

■ b. Removing from paragraph (a)(1) “firms” and adding “participants” in its place;

■ c. Revising paragraph (b) introductory text;

■ d. Removing from paragraph (b)(1) “firms” and adding “participants” in its place; and

■ e. Revising paragraph (d).

The revisions read as follows:

19.805-1 General.

(a) Except as provided in paragraph (b) of this section, an acquisition offered to the SBA under the 8(a) program shall be awarded on the basis of competition limited to eligible 8(a) participants when—

* * * * *

(b) Where an acquisition exceeds the competitive threshold (see paragraph (a)(2) of this section), the SBA may accept the requirement for a sole source 8(a) award if—

* * * * *

(d) The SBA Associate Administrator for Business Development may approve a contracting office's request for a competitive 8(a) award below the competitive thresholds. Such requests will be approved only on a limited basis and will be primarily granted where technical competitions are appropriate or where a large number of responsible

8(a) participants are available for competition. In determining whether a request to compete below the threshold will be approved, the SBA Associate Administrator for Business Development will, in part, consider the extent to which the contracting activity is supporting the 8(a) program on a noncompetitive basis. The agency may include recommendations for competition below the threshold in the offering letter or by separate correspondence to the SBA Associate Administrator for Business Development.

■ 16. Revise section 19.805-2 to read as follows:

19.805-2 Procedures.

(a) Offers shall be solicited from those sources identified in accordance with 19.804-3.

(b) The SBA will determine the eligibility of the participants for award of the contract. Eligibility will be determined by the SBA as of the time of submission of initial offers which include price. Eligibility is based on Section 8(a) program criteria. An 8(a) participant must represent that it is a small business in accordance with the size standard corresponding to the NAICS code assigned to the contract.

(1) In either negotiated or sealed bid competitive 8(a) acquisitions SBA will determine the eligibility of the apparent successful offeror and advise the contracting office within 5 working days after receipt of the contracting office's request for an eligibility determination.

(i) If SBA determines that the apparent successful offeror is ineligible, the contracting office will then send to SBA the identity of the next highest evaluated offeror for an eligibility determination. The process is repeated until SBA determines that an identified offeror is eligible for award.

(ii) If the contracting officer believes that the apparent successful offeror (or the offeror SBA has determined eligible for award) is not responsible to perform the contract, the contracting officer must refer the matter to SBA for Certificate of Competency consideration under subpart 19.6.

(2) In any case in which an 8(a) participant is determined to be ineligible, SBA will notify the 8(a) participant of that determination.

(c) Any party with information questioning the eligibility of an 8(a) participant to continue participation in the 8(a) program or for the purposes of a specific 8(a) award may submit such information to the SBA in accordance with 13 CFR 124.112(c).

■ 17. Amend section 19.808-1 by removing from paragraph (c) “activity”

and “contractor” and adding “officer” and “participant” in their places, respectively, and adding paragraphs (d) and (e) to read as follows:

19.808-1 Sole source.

* * * * *

(d) An 8(a) participant must represent that it is a small business in accordance with the size standard corresponding to the NAICS code assigned to the contract.

(e) An 8(a) participant owned by an Alaska Native Corporation, Indian Tribe, Native Hawaiian Organization, or Community Development Corporation may not receive an 8(a) sole source award that is a follow-on contract to an 8(a) contract, if the predecessor contract was performed by another 8(a) participant (or former 8(a) participant) owned by the same Alaska Native Corporation, Indian Tribe, Native Hawaiian Organization, or Community Development Corporation (See 13 CFR 124.109 through 124.111).

■ 18. Revise section 19.808-2 to read as follows.

19.808-2 Competitive.

In competitive 8(a) acquisitions subject to part 15, the contracting officer conducts negotiations directly with the competing 8(a) participants. Conducting competitive negotiations among 8(a) participants prior to SBA's formal acceptance of the acquisition for the 8(a) program may be grounds for SBA's not accepting the acquisition for the 8(a) program.

■ 19. Revise section 19.809 to read as follows.

19.809 Preaward considerations.

The contracting officer should request a preaward survey of the 8(a) participant whenever considered useful. If the results of the preaward survey or other information available to the contracting officer raise substantial doubt as to the participant's ability to perform, the contracting officer must refer the matter to SBA for Certificate of Competency consideration under subpart 19.6.

■ 20. Amend section 19.810 by—

■ a. Removing from paragraph (a)(2) “firm” and “Program” and adding “participant” and “program” in their places, respectively;

■ b. Removing from paragraph (a)(3) “activity's” and adding “officer's” in its place;

■ c. Revising paragraph (b); and

■ d. Removing from paragraph (c) “firm” and adding “participant” in its place.

The revision reads as follows:

19.810 SBA appeals.

* * * * *

(b)(1) Notification by SBA of an intent to appeal to the agency head—

(i) Must be received by the contracting officer within 5 working days after SBA is formally notified of the contracting officer's decision; and

(ii) Must be provided to the contracting agency Director for Small and Disadvantaged Business Utilization or, for the Department of Defense, the Director of Small Business Programs.

(2) SBA must send the written appeal to the agency head within 15 working days of SBA's notification of intent to appeal or the appeal may be considered withdrawn. Pending issuance of a decision by the agency head, the contracting officer shall suspend action on the acquisition. The contracting officer need not suspend action on the acquisition if the contracting officer makes a written determination that urgent and compelling circumstances that significantly affect the interests of the United States will not permit waiting for a decision.

* * * * *

■ 21. Amend section 19.811–1 by revising paragraph (b) introductory text to read as follows:

19.811–1 Sole source.

* * * * *

(b) The contracting officer shall prepare the contract that the SBA will award to the 8(a) participant in accordance with agency procedures, as if awarding the contract directly to the 8(a) participant, except for the following:

* * * * *

19.811–3 [Amended]

■ 22. Amend section 19.811–3 by—

- a. Removing from paragraph (d) introductory text “Concerns” and adding “Participants” in its place; and
- b. Removing from paragraphs (d)(1) and (e) “concerns” and adding “participants” in its place, respectively.

■ 23. Amend section 19.812 by removing from paragraph (b) “firm” and adding “8(a) contractor” in its place and revising paragraph (d) to read as follows:

19.812 Contract administration.

* * * * *

(d) An 8(a) contract, whether in the base or an option year, must be terminated for convenience if the 8(a) contractor to which it was awarded transfers ownership or control of the firm or if the contract is transferred or novated for any reason to another firm, unless the Administrator of the SBA

waives the requirement for contract termination (13 CFR 124.515). The Administrator may waive the termination requirement only if certain conditions exist. Moreover, a waiver of the requirement for termination is permitted only if the 8(a) contractor's request for waiver is made to the SBA prior to the actual relinquishment of ownership or control, except in the case of death or incapacity where the waiver must be submitted within 60 calendar days after such an occurrence. The clauses in the contract entitled “Special 8(a) Contract Conditions” and “Special 8(a) Subcontract Conditions” require the SBA and the 8(a) subcontractor to notify the contracting officer when ownership of the firm is being transferred. When the contracting officer receives information that an 8(a) contractor is planning to transfer ownership or control to another firm, the contracting officer shall take action immediately to preserve the option of waiving the termination requirement. The contracting officer shall determine the timing of the proposed transfer and its effect on contract performance and mission support. If the contracting officer determines that the SBA does not intend to waive the termination requirement, and termination of the contract would severely impair attainment of the agency's program objectives or mission, the contracting officer shall immediately notify the SBA in writing that the agency is requesting a waiver. Within 15 business days thereafter, or such longer period as agreed to by the agency and the SBA, the agency head must either confirm or withdraw the request for waiver. Unless a waiver is approved by the SBA, the contracting officer must terminate the contract for convenience upon receipt of a written request by the SBA. This requirement for a convenience termination does not affect the Government's right to terminate for default if the cause for termination of an 8(a) contract is other than the transfer of ownership or control.

■ 24. Add sections 19.813 through 19.816 to read as follows:

Sec.

19.813 Protesting an 8(a) participant's eligibility or size status.

19.814 Requesting a formal size determination (8(a) sole source requirements).

19.815 Release for non-8(a) procurement.

19.816 Exiting the 8(a) program.

19.813 Protesting an 8(a) participant's eligibility or size status.

(a) The eligibility of an 8(a) participant for a sole source or competitive 8(a) requirement may not be challenged by another 8(a) participant

or any other party, either to SBA or any administrative forum as part of a bid or other contract protest (see 13 CFR 124.517).

(b) The size status of an 8(a) participant nominated for an 8(a) sole source contract may not be protested by another 8(a) participant or any other party.

(c) The size status of the apparent successful offeror for competitive 8(a) awards may be protested. The filing of a size status protest is limited to—

(1) Any offeror whom the contracting officer has not eliminated for reasons unrelated to size;

(2) The contracting officer; or

(3) The SBA District Director in either the district office serving the geographical area in which the contracting activity is located or the district office that services the apparent successful offeror, or the Associate Administrator for Business Development.

(d) Protests of competitive 8(a) awards shall follow the procedures at 19.302. For additional information, refer to 13 CFR 121.1001.

19.814 Requesting a formal size determination (8(a) sole source requirements).

(a) If the size status of an 8(a) participant nominated for award of an 8(a) sole source contract is called into question, a request for a formal size determination may be submitted to SBA pursuant to 13 CFR 121.1001(b)(2)(ii) by—

(1) The 8(a) participant nominated for award of the particular sole source contract;

(2) The contracting officer who has been delegated SBA's 8(a) contract execution functions, where applicable, or the SBA program official with authority to execute the 8(a) contract;

(3) The SBA District Director in the district office that services the 8(a) participant or the Associate Administrator for Business Development; or

(4) The SBA Inspector General.

(b) SBA's Government Contracting Area Director will issue a formal size determination within 15 business days, if possible, after SBA receives the request for a formal size determination.

(c) An appeal of an SBA size determination shall follow the procedures at 19.302.

19.815 Release for non-8(a) procurement.

(a) Once a requirement has been accepted by SBA into the 8(a) program, any follow-on requirements shall remain in the 8(a) program unless there is a mandatory source (see 8.002 or

8.003) or SBA agrees to release the requirement from the 8(a) program in accordance with 13 CFR 124.504(d).

(b) To obtain release of a requirement for a non-8(a) procurement (other than a mandatory source listed at 8.002 or 8.003), the contracting officer shall make a written request to, and receive concurrence from, the SBA Associate Administrator for Business Development.

(c)(1) The written request to the SBA Associate Administrator for Business Development shall indicate—

- (i) Whether the agency has achieved its small disadvantaged business goal;
(ii) Whether the agency has achieved its HUBZone, SDVOSB, WOSB, or small business goal(s); and

(iii) Whether the requirement is critical to the business development of the 8(a) contractor that is currently performing the requirement.

(2) Generally, a requirement that was previously accepted into the 8(a) program will only be released for procurements outside the 8(a) program when the contracting activity agency agrees to set aside the requirement under the small business, HUBZone, SDVOSB, or WOSB programs.

(3) The requirement that a follow-on procurement must be released from the 8(a) program in order for it to be fulfilled outside the 8(a) program does not apply to task or delivery orders offered to and accepted into the 8(a) program, where the basic contract was not accepted into the 8(a) program.

19.816 Exiting the 8(a) program.

(a) Except as provided in paragraph (c) of this section, when a contractor exits the 8(a) program, it is no longer eligible to receive new 8(a) contracts. However, the contractor remains under contractual obligation to complete existing contracts, and any priced options that may be exercised.

(b) If an 8(a) contractor is suspended from the program (see 13 CFR 124.305), it may not receive any new 8(a) contracts unless the head of the contracting agency makes a determination that it is in the best interest of the Government to issue the award and SBA adopts that determination.

(c) A contractor that has completed its term of participation in the 8(a) program may be awarded a competitive 8(a) contract if it was an 8(a) participant eligible for award of the contract on the initial date specified for receipt of offers contained in the solicitation, and if the contractor continues to meet all other applicable eligibility criteria.

(d) SBA's regulations on exiting the 8(a) program are found at 13 CFR

124.301 through 124.305, and 13 CFR 124.507(d).

19.1304 [Amended]

25. Amend section 19.1304 by removing from paragraph (d) "Program" and adding "program" in its place (twice).

19.1404 [Amended]

26. Amend section 19.1404 by removing from paragraph (d) "Program" and adding "program" in its place (twice).

27. Amend section 19.1504 by revising paragraph (a) to read as follows:

19.1504 Exclusions.

(a) Requirements that an 8(a) contractor is currently performing under the 8(a) program or that SBA has accepted for performance under the authority of the 8(a) program, unless SBA has consented to release the requirements from the 8(a) program;

PART 52—SOLICITATION PROVISIONS AND CONTRACT CLAUSES

28. Amend section 52.212-5 by revising the date of the clause and paragraph (b)(19) to read as follows:

52.212-5 Contract Terms and Conditions Required to Implement Statutes or Executive Orders—Commercial Items.

Contract Terms and Conditions Required To Implement Statutes or Executive Orders—Commercial Items (JAN 2017)

(b) * * *

(19) 52.219-14, Limitations on Subcontracting (JAN 2017) (15 U.S.C. 637(a)(14)).

29. Amend section 52.219-11 by revising the date of the clause and removing from paragraph (c) "and advance payments" to read as follows:

52.219-11 Special 8(a) Contract Conditions.

Special 8(a) Contract Conditions (JAN 2017)

30. Amend section 52.219-12 by revising the date of the clause and paragraph (b)(2) to read as follows:

52.219-12 Special 8(a) Subcontract Conditions.

Special 8(a) Subcontract Conditions (JAN 2017)

(b) * * *

(2) That the SBA has delegated responsibility, except for novation agreements, for the administration of this subcontract to the [insert name of contracting agency] with complete authority to take any action on behalf of the Government and_d conditions of this subcontract.

31. Amend section 52.219-14 by revising the date of the clause and removing from paragraphs (b)(1), (2), and (3) "8(a) concerns" and adding "8(a) participants" in its place to read as follows:

52.219-14 Limitations on Subcontracting.

Limitations on Subcontracting (JAN 2017)

32. Amend section 52.219-17 by revising the date of the clause and removing from paragraph (a)(2) "and advance payments" to read as follows:

52.219-17 Section 8(a) Award.

Section 8(a) Award (JAN 2017)

33. Amend section 52.219-18 by—
a. Revising the section and clause headings; and
b. In Alternate I, revising the date of the alternate and removing "concerns" and adding "participants" in its place.

The revisions read as follows:

52.219-18 Notification of Competition Limited to Eligible 8(a) Participants.

Notification of Competition Limited to Eligible 8(a) Participants (JAN 2017)

Alternate I (JAN 2017) * * *

DEPARTMENT OF DEFENSE**GENERAL SERVICES
ADMINISTRATION****NATIONAL AERONAUTICS AND
SPACE ADMINISTRATION****48 CFR Part 31**

[FAC 2005–95; FAR Case 2015–016; Item V; Docket No. 2015–0016; Sequence No. 1]

RIN 9000–AM97

**Federal Acquisition Regulation;
Prohibition on Reimbursement for
Congressional Investigations and
Inquiries**

AGENCY: Department of Defense (DoD), General Services Administration (GSA), and National Aeronautics and Space Administration (NASA).

ACTION: Final rule.

SUMMARY: DoD, GSA, and NASA are issuing a final rule to amend the Federal Acquisition Regulation (FAR) to implement section 857 of the Carl Levin and Howard P. ‘Buck’ McKeon National Defense Authorization Act for Fiscal Year 2015. This section provides additional requirements relative to the allowability of costs incurred by a contractor in connection with a Congressional investigation or inquiry.

DATES: *Effective:* January 13, 2017.

FOR FURTHER INFORMATION CONTACT: For clarification of content, contact Ms. Zenaida Delgado, Procurement Analyst, at 202–969–7207. For information pertaining to status or publication schedules, contact the Regulatory Secretariat at 202–501–4755. Please cite FAC 2005–95, FAR Case 2015–016.

SUPPLEMENTARY INFORMATION:

I. Background

DoD, GSA, and NASA published a proposed rule in the **Federal Register** at 81 FR 8031 on February 17, 2016, soliciting public comments on implementing section 857 of the Carl Levin and Howard P. ‘Buck’ McKeon National Defense Authorization Act (NDAA) for Fiscal Year (FY) 2015 (Pub. L. 113–291).

This statute amended 10 U.S.C. 2324(e)(1) to disallow costs incurred by a contractor in connection with a Congressional investigation or inquiry into an issue that is the subject matter of a proceeding resulting in a disposition as described in 10 U.S.C. 2324(k)(2).

While section 857 only applies to contracts with DoD, NASA, and the Coast Guard, for the purpose of promoting consistency in the

accounting systems of Federal contractors, it was decided to apply the section’s requirements to all agencies subject to the FAR.

Additionally, conforming language on unallowable costs is added to FAR 31.603–16 and 31.603–15 (to update language associated with whistleblower complaints).

Two respondents submitted public comments.

II. Discussion and Analysis

The Civilian Agency Acquisition Council and the Defense Acquisition Regulations Council (the Councils) reviewed the public comments in the development of the final rule:

A. Summary of Significant Changes

Several editorial changes are made to the rule as a result of the comments received; these were aimed at simplifying sentence structure for clarification purposes. There were no comments on the Initial Regulatory Flexibility Analysis.

B. Analysis of Public Comments

1. Unfair Withholding of Costs

Comment: One respondent stressed that contractors should not be penalized until guilt is determined by a court of law. Contractors should be reimbursed for their costs, as incurred, at the time of their participation in a Congressional investigation or inquiry. While affirming that it only makes sense that a contractor found guilty of defrauding or cheating the Government in association with their work should forfeit their reimbursement, the respondent maintained that, until guilt is determined by a court of law, the contractor should be reimbursed for its costs. Then, if the contractor is found guilty of defrauding or cheating the Government, it should pay those costs back to the Government.

Response: The disallowance of costs in accordance with 10 U.S.C. 2324(e)(1)(Q) (*i.e.*, any costs incurred by a contractor in connection with a Congressional investigation or inquiry into an issue that is the subject matter of a proceeding resulting in a disposition that meets conditions at FAR 31.205–47(b)(1) through (5)) does not constitute a penalty. The regulation clearly states that costs are unallowable if incurred in connection with a Congressional investigation or inquiry into an issue that is the subject matter of a proceeding that results in a specified disposition. Absent a specified disposition, no disallowance of costs would exist.

Comment: The same respondent stated that the “guilty verdict” must

come from an impartial court, and must be associated with the inquiry.

Response: The Councils appreciate this concern, but note that it extends beyond the scope of this case.

2. Use of Congressional Investigations

Comment: One respondent suggested fixing “the real problem” by writing regulations to penalize politicians who use Congressional investigations to promote their personal or their affiliated party’s agenda. The respondent noted that, in many cases, small businesses incur hundreds of thousands of dollars in costs associated with the inquiry, despite the fact that the only thing they did wrong was work for a Government entity that was targeted by a political party.

Response: The Councils appreciate this concern, but note that it extends beyond the scope of this case.

3. Clarify Relationship Among the FAR 31.205–47 Paragraphs

Comment: One respondent questioned whether FAR 31.205–47(c) or (d) would impact the allowability of the cost of a Congressional investigation or inquiry. Specifically, the respondent asked if the cost of a Congressional investigation or inquiry related to an issue that is the subject matter of a FAR 31.205–47(b) proceeding, whose result is described in FAR 31.205–47(b)(1) through (5), would be unallowable if one of the circumstances described in FAR 31.205–47(c) or (d) existed.

Response: The cost of a Congressional investigation or inquiry cannot be treated the same as the cost of a proceeding under FAR 31.205–47(c) or (d). Although the section 857 language ties the cost of the Congressional investigation or inquiry to an issue that is the subject matter of a proceeding resulting in a disposition as described in 10 U.S.C. 2324(k)(2), Congress did not enact parallel treatment. 10 U.S.C. 2324(e)(1)(O) disallows “Costs incurred by a contractor in connection with any criminal, civil, or administrative proceeding commenced by the United States or a State, to the extent provided in subsection (k),” which includes the exceptions in paragraphs (k)(3) and (k)(4), covered in the FAR at 31.205–47(c) and (d). Section 857, as implemented in 10 U.S.C. 2324(e)(1)(Q), references only paragraph (k)(2) and does not reference paragraph (k) in its entirety; nor does it reference paragraphs (k)(3) or (k)(4) specifically. Therefore, the statute requires that the costs incurred in connection with a Congressional investigation or inquiry be treated differently than the costs incurred in connection with other

criminal, civil, or administrative proceedings in which costs may be allowable under certain circumstances.

Comment: The same respondent questioned whether the limitations at FAR 31.205–47(e) would be applicable to the costs incurred in connection with a Congressional investigation or inquiry. Specifically, the respondent asked if the costs of a Congressional investigation or inquiry into a subject matter of a FAR 31.205–47(b) proceeding, whose result is *not* one described in FAR 31.205–47(b)(1) through (5), would be subject to the limitations in FAR 31.205–47(e).

Response: FAR 31.205–47(e) relates to costs *not* made unallowable by paragraph (b), while the new paragraph (f)(9) relates to costs made unallowable by paragraphs (b)(1) through (5), which describe the outcomes that would deem the costs unallowable. Because there is no overlap between the two concepts, there is no need to clarify that relationship in the FAR text.

Comment: The same respondent questioned whether requirements in FAR 31.205–47(g), regarding costs that may be unallowable under FAR 31.205–47(b), would be applicable to costs that may be unallowable under FAR 31.205–47(f)(9).

Response: FAR 31.205–47(g) pertains to *all* unallowable costs under 31.205–47.

4. Clarify the Relationship Between FAR 31.205–47(g) and FAR 31.603(b)(15) and FAR 31.603(b)(16)

Comment: One respondent questioned whether the FAR 31.205–47(g) segregation of cost requirements are to be imposed regarding costs that may be made unallowable based on FAR 31.603(b)(15) or (16). Since the proposed rule does not address this issue, there was a question as to whether FAR 31.205–47(g) is applicable to costs that may be made unallowable based on FAR 31.603(b)(15) or (16). For costs that may be made unallowable under FAR 31.205–47, the respondent argued that it would be in the Government's best interest for: (1) State, local, and federally recognized Indian tribal governments to segregate and account separately for costs that may be made unallowable under FAR 31.603(b)(15) and FAR 31.603(b)(16) during the pendency of a related proceeding, and (2) the contracting officer to normally withhold payment of such costs. Accordingly, the respondent recommended that FAR 31.603(b)(15) and (16) be revised to incorporate requirements similar to those in FAR 31.205–47(g).

Response: The Councils appreciate this concern, but note that adding this

as a requirement would require a separate FAR case. Although segregation of potentially unallowable costs (as described at FAR 31.205–47(g)) is a prudent business practice for State, local, and federally recognized Indian tribal governments, section 857 of the NDAA for FY 2016 did not extend this requirement to such entities.

5. Clarification of Regulatory Intent of FAR 31.205–47(f)(9)

Comment: One respondent focused a question upon Congressional inquiry or investigation activities that predate the existence of the proceeding, noting that the proposed version of FAR 31.205–47(f)(9) makes unallowable costs incurred in connection with a Congressional investigation or inquiry into an issue that is the subject matter of a proceeding resulting in a disposition as described in FAR 31.205–47(b)(1) through (5). The respondent interpreted this to mean that, in order for the costs of the Congressional investigation or inquiry to be unallowable, a proceeding would have to be in process. Therefore, it would follow that costs incurred in connection with a Congressional investigation or inquiry that predate the existence of a proceeding are allowable. Specifically, even if the issue becomes the subject matter of a FAR 31.205–47 proceeding at a later date, there is no intention under the proposed rule to retroactively make costs incurred in connection with a Congressional investigation or inquiry that is the subject matter of the proceeding unallowable. If that understanding is incorrect and the rule's intent is to make the costs incurred in connection with a Congressional investigation or inquiry that pre-date the existence of a proceeding unallowable, then the proposed rule should be revised to state that requirement in the cost principle.

Response: The statutory language states: “. . . congressional investigation or inquiry into an issue that *is* [emphasis added] the subject matter of a proceeding.” Therefore, the proceeding must be a known event, whether it has already commenced or is known to be commencing on a future date. Preparation (*i.e.*, segregation of costs) for a potential disallowance begins when it is known that a proceeding will ensue.

Comment: The same respondent asked about Government Accountability Office (GAO) investigations, noting that the proposed version of FAR 31.205–47(f)(9) makes unallowable the costs incurred in connection with a Congressional investigation or inquiry into an issue that is the subject matter

of a proceeding resulting in a disposition described in FAR paragraphs 31.205–47(b)(1) through (5). The respondent stated that no specifics are provided in the proposed rule concerning what is considered a Congressional investigation or inquiry into an issue that is the subject matter of a proceeding, cautioning that this could lead to different interpretations concerning costs incurred to facilitate or respond to a GAO audit or request, in the event that the project was suggested or specifically required by a Congressional committee or subcommittee. The respondent posited that some might conclude that the proposed rule makes such costs unallowable, and requested confirmation that there is, in fact, no intent to make such costs unallowable.

Response: The Councils believe that Congress intended 10 U.S.C. 2324(e)(1)(Q) to apply only to investigations and inquiries conducted by Congress, *per se*. Therefore, under FAR 31.205–47(f)(9), the potential disallowance and requisite segregation of costs would not be triggered by the GAO's efforts, but rather by an actual investigation or inquiry conducted by Congress. Further, the language is clear in its applicability to a Congressional investigation or inquiry into an issue—one that is the subject matter of a proceeding, a known event.

III. Executive Orders 12866 and 13563

Executive Orders (E.O.s) 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). E.O. 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. This has been deemed a significant regulatory action and, therefore, was subject to review under section 6(b) of E.O. 12866, Regulatory Planning and Review, dated September 30, 1993. This rule is not a major rule under 5 U.S.C. 804.

IV. Regulatory Flexibility Act

DoD, GSA, and NASA have prepared a Final Regulatory Flexibility Analysis (FRFA) consistent with the Regulatory Flexibility Act 5 U.S.C. 601, *et seq.* The FRFA is summarized as follows:

DoD, GSA, and NASA do not expect this rule to have a significant economic impact on a substantial number of small entities within the meaning of the Regulatory Flexibility Act,

5 U.S.C. 601, et seq., because the rule will be manifested as a cost principle to which only select small businesses are subject. Pursuant to FAR 31.000, the cost principles are applicable to contracts, subcontracts, and modifications whenever cost analysis is performed, or when a contract clause requires the determination or negotiation of costs. An analysis of contracts awarded during Fiscal Year 2014, the most recent full year for which information was available, revealed that fewer than 200 small businesses were performing contracts subject to FAR 31.

Again, the rule merely disallows costs incurred in the extremely rare instances when a contractor incurs costs in connection with a Congressional investigation or inquiry into an issue resulting in a disposition (e.g., conviction, liability, corrective action, etc.), as described in 10 U.S.C. 2324(k)(2). Accordingly, given the miniscule segment of the small business population that could potentially be impacted by the rule, and the low likelihood of the conditions being met, the impact on small businesses is insignificant.

There were no significant issues raised by the public in response to the Initial Regulatory Flexibility Analysis provided in the proposed rule. The final rule applies to all entities, both small and other than small, performing as contractors or subcontractors on U.S. Government contracts, and who are required to abide by the Cost Principles at FAR part 31. However, the rule is not expected to have a significant impact.

There are no reporting, recordkeeping, or other information collection requirements of the rule.

DoD, GSA, and NASA did not identify any significant alternatives that would reduce the impact on small entities and still meet the objectives of the statute.

Interested parties may obtain a copy of the FRFA from the Regulatory Secretariat. The Regulatory Secretariat has submitted a copy of the FRFA to the Chief Counsel for Advocacy of the Small Business Administration.

V. Paperwork Reduction Act

This rule does not contain any information collection requirements that require the approval of the Office of Management and Budget under the Paperwork Reduction Act (44 U.S.C. chapter 35).

List of Subjects in 48 CFR Part 31

Government procurement.

Dated: December 21, 2016.

William F. Clark,

Director, Office of Government-wide Acquisition Policy, Office of Acquisition Policy, Office of Government-wide Policy.

Therefore, DoD, GSA, and NASA amend 48 CFR part 31 as set forth below:

PART 31—CONTRACT COST PRINCIPLES AND PROCEDURES

■ 1. The authority citation for 48 CFR part 31 continues to read as follows:

Authority: 40 U.S.C. 121(c); 10 U.S.C. chapter 137; and 51 U.S.C. 20113.

■ 2. Amend section 31.205–47 by—

■ a. In paragraph (a):

■ i. In the definition of “Fraud”, removing “*Fraud*means” and adding “*Fraud* means” in its place;

■ ii. In the definition of “Penalty”, removing the comma after the word “Penalty”;

■ iii. In the definition of “Proceeding”, removing the comma after the word “Proceeding”;

■ b. Revising paragraph (b) introductory text; and

■ c. Adding paragraph (f)(9).

The addition reads as follows:

31.205–47 Costs related to legal and other proceedings.

* * * * *

(b) Costs incurred in connection with any proceeding brought by: A Federal, State, local, or foreign government for a violation of, or failure to comply with, law or regulation by the contractor (including its agents or employees) (41 U.S.C. 4310 and 10 U.S.C. 2324(k)); a contractor or subcontractor employee submitting a whistleblower complaint of reprisal in accordance with 41 U.S.C. 4712 or 10 U.S.C. 2409; or a third party in the name of the United States under the False Claims Act, 31 U.S.C. 3730, are unallowable if the result is—

* * * * *

(f) * * *

(9) A Congressional investigation or inquiry into an issue that is the subject matter of a proceeding resulting in a disposition as described in paragraphs (b)(1) through (5) of this section (see 10 U.S.C. 2324(e)(1)(Q)).

* * * * *

■ 3. Amend section 31.603 by—

■ a. Revising paragraphs (b) introductory text and (b)(15); and

■ b. Adding paragraph (b)(16).

The revisions and addition reads as follows:

31.603 Requirements.

* * * * *

(b) Agencies are not expected to place additional restrictions on individual items of cost. However, under 10 U.S.C. 2324, 41 U.S.C. 4304, 31 U.S.C. 3730, and 41 U.S.C. 4310, the following costs are unallowable:

* * * * *

(15) Unless any of the exceptions at 31.205–47(c) or (d) apply, costs incurred by a contractor in connection with any

criminal, civil, or administrative proceedings that result in dispositions described at 31.205–47(b)(1) through (5) commenced by: A Federal, State, local, or foreign government, for a violation of, or failure to comply with, law or regulation by the contractor (including its agents or employees); a contractor or subcontractor employee submitting a whistleblower complaint of reprisal in accordance with 41 U.S.C. 4712 or 10 U.S.C. 2409; or a third party in the name of the United States under the False Claims Act, 31 U.S.C. 3730. For any such proceeding that does not result in a disposition described at 31.205–47(b)(1) through (5), or to which 31.205–47(c) exceptions apply, the cost of that proceeding shall be subject to the limitations in 31.205–47(e).

(16) Costs incurred in connection with a Congressional investigation or inquiry into an issue that is the subject matter of a proceeding resulting in a disposition as described at 31.205–47(b)(1) through (5).

[Docket No. FAR 2016–0051, Sequence No. 9]

Federal Acquisition Regulation; Federal Acquisition Circular 2005–95; Small Entity Compliance Guide

AGENCY: Department of Defense (DoD), General Services Administration (GSA), and National Aeronautics and Space Administration (NASA).

ACTION: Small Entity Compliance Guide.

SUMMARY: This document is issued under the joint authority of DOD, GSA, and NASA. This *Small Entity Compliance Guide* has been prepared in accordance with section 212 of the Small Business Regulatory Enforcement Fairness Act of 1996. It consists of a summary of the rules appearing in Federal Acquisition Circular (FAC) 2005–95, which amends the Federal Acquisition Regulation (FAR). An asterisk (*) next to a rule indicates that a regulatory flexibility analysis has been prepared. Interested parties may obtain further information regarding these rules by referring to FAC 2005–95, which precedes this document. These

documents are also available via the Internet at <http://www.regulations.gov>.

DATES: January 13, 2017.

FOR FURTHER INFORMATION CONTACT: For clarification of content, contact the analyst whose name appears in the table below. Please cite FAC 2005–95 and the

FAR case number. For information pertaining to status or publication schedules, contact the Regulatory Secretariat Division at 202–501–4755.

RULES LISTED IN FAC 2005–95

Item	Subject	FAR Case	Analyst
* I	Uniform Use of Line Items	2013–014	Francis.
* II	Acquisition Threshold for Special Emergency Procurement Authority	2016–004	Francis.
* III	Contractor Employee Internal Confidentiality Agreements or Statements	2015–012	Davis.
* IV	Contracts Under the Small Business Administration 8(a) Program	2012–022	Uddowla.
* V	Prohibition on Reimbursement for Congressional Investigations and Inquiries	2015–016	Delgado.

SUPPLEMENTARY INFORMATION:

Summaries for each FAR rule follow. For the actual revisions and/or amendments made by these rules, refer to the specific item numbers and subjects set forth in the documents following these item summaries. FAC 2005–95 amends the FAR as follows:

Item I—Uniform Use of Line Items (FAR Case 2013–014)

This final rule amends the FAR to establish standards for the uniform use of line items in Federal procurement. These standards are designed to improve the accuracy, traceability, and usability of procurement data. The implementation of these standards will facilitate the identification and traceability of spending from appropriation through expenditure, supporting automated collection of information using key identifiers. The implementation date for FAR 4.1002 through 4.1008 will be October 1, 2019.

The requirements in the rule have the potential to impact any entity, small or large, that does business with the Federal Government because the proposed rule would apply to purchases of items, including commercial items and commercially available off-the-shelf items, and purchases under the simplified acquisition threshold. Any small business that contracts with a Federal agency could be impacted to at least some extent.

Item II—Acquisition Threshold for Special Emergency Procurement Authority (FAR Case 2016–004)

This final rule amends the FAR by increasing the simplified acquisition threshold (SAT) for special emergency procurement authority from \$300,000 to \$750,000 (within the United States) and from \$1 million to \$1.5 million (outside the United States) for acquisitions of supplies or services that, as determined by the head of the agency, are to be used to support a contingency operation or to facilitate defense against or recovery from nuclear, biological, chemical, or

radiological attack. This change implements Section 816 of the National Defense Authorization Act for Fiscal Year 2016 (Pub. L. 114–92). This rule provides contracting officers with more flexibility when contracting in support of contingency operations.

The rule is not anticipated to have a significant economic impact on small business entities, because the rule raises the SAT for special emergency procurements, an arena in which a smaller percentage of small businesses participate, as compared to larger businesses. This final rule does not place any new requirements on small entities.

Item III—Contractor Employee Internal Confidentiality Agreements or Statements (FAR Case 2015–012)

This final rule revises the FAR to implement section 743 of division E, title VII, of the Consolidated and Further Continuing Appropriations Act, 2015 (Pub. L. 113–235) and successor provisions in subsequent appropriations acts. Section 743 prohibits the use of funds appropriated or otherwise made available by Division E or any other act, for a contract with an entity that requires employees and subcontractors of such entity to sign internal confidentiality agreements or statements prohibiting or otherwise restricting such employees or subcontractors from lawfully reporting waste, fraud, or abuse, to a designated investigative or law enforcement representative of a Federal department or agency authorized to receive such information (e.g., agency office of the Inspector General). This rule is not expected to have a significant impact on small entities contracting with the Government.

Item IV—Contracts Under the Small Business Administration 8(a) Program (FAR Case 2012–022)

This final rule amends the Federal Acquisition Regulation (FAR) to implement clarifications made by the

Small Business Administration in its final rule, which published in the **Federal Register** at 76 FR 8222 on February 11, 2011. This final rule clarifies in the FAR the procedures and requirements used when contracting under the 8(a) program. Clarifications include the evaluation, offering, and acceptance process, procedures for acquiring SBA’s consent to procure an 8(a) requirement outside the 8(a) program, and the impact of exiting the 8(a) program in terms of the firm’s ability to receive future 8(a) requirements and its current contractual commitments.

This final rule does not place any new requirements, financial or otherwise, on small entities, and serves mainly to provide more explicit guidance to Federal contracting officials.

Item V—Prohibition on Reimbursement for Congressional Investigations and Inquiries (FAR Case 2015–016)

This rule amends the FAR to implement section 857 of the Carl Levin and Howard P. ‘Buck’ McKeon National Defense Authorization Act for Fiscal Year 2015. Section 857 imposes additional requirements relative to the allowability of costs incurred by a contractor in connection with a congressional investigation or inquiry. Contracting officers need to be aware of these new restrictions on certain costs, which cannot be charged under contracts. Although small businesses subject to FAR part 31 will need to maintain accounting records, this rule does not place any new requirements on small entities.

Dated: December 21, 2016.

RIN 1615-AC07

EB-5 Immigrant Investor Program Modernization

AGENCY: U.S. Citizenship and Immigration Services, DHS.

ACTION: Notice of proposed rulemaking.

SUMMARY: The Department of Homeland Security (DHS) proposes to amend its regulations governing the employment-based, fifth preference (EB-5) immigrant investor classification and associated regional centers to reflect statutory changes and modernize the EB-5 program. In general, under the EB-5 program, individuals are eligible to apply for lawful permanent residence in the United States if they make the necessary investment in a commercial enterprise in the United States and create or, in certain circumstances, preserve 10 permanent full-time jobs for qualified U.S. workers. This proposed rule would change the EB-5 program regulations to reflect statutory changes and codify existing policies. It would also change certain aspects of the EB-5 program in need of reform.

DATES: Written comments must be received on or before April 11, 2017.

ADDRESSES: You may submit comments, identified by DHS Docket No. USCIS-2016-0006, by any one of the following methods:

- *Federal eRulemaking Portal:* <http://www.regulations.gov>. Follow the Web site instructions for submitting comments.
- *Mail:* You may submit comments directly to U.S. Citizenship and Immigration Services (USCIS) by mail by sending correspondence to Samantha Deshommes, Acting Chief, Regulatory Coordination Division, Office of Policy and Strategy, U.S. Citizenship and Immigration Services, Department of Homeland Security, 20 Massachusetts Avenue NW., Washington, DC 20529. To ensure proper handling, please reference DHS Docket No. USCIS-2016-0006 in your correspondence. This mailing address may be used for paper or CD-ROM submissions.
- *Hand Delivery/Courier:* You may submit comments directly to USCIS through hand delivery to Samantha Deshommes, Chief, Regulatory Coordination Division, Office of Policy and Strategy, U.S. Citizenship and Immigration Services, Department of

Homeland Security, 20 Massachusetts Avenue NW., Washington, DC 20529; Telephone 202-272-8377. To ensure proper handling, please reference DHS Docket No. USCIS-2016-0006 in your correspondence.

FOR FURTHER INFORMATION CONTACT: Lori MacKenzie, Division Chief, Operations Policy and Performance, Immigrant Investor Program Office, U.S. Citizenship and Immigration Services, Department of Homeland Security, 131 M Street NE., 3rd Floor, Washington, DC 20529; Telephone 202-357-9214.

I. Public Participation

DHS invites comments, data, and information from all interested parties, including regional centers, investors, advocacy groups, nongovernmental organizations, community-based organizations, and legal representatives who specialize in immigration law on any and all aspects of the proposed amendments. Comments must be submitted in English, or an English translation must be provided. Comments that will provide the most assistance to DHS will reference a specific portion of the proposed amendments; explain the reason for any recommended change; and include data, information, or authority that support such recommended change.

In addition to its general call for comments, DHS is specifically seeking comments on the following proposals:

- A. Priority date retention for EB-5 petitioners;
- B. Increases to the minimum investment amount for targeted employment areas (TEAs) and non-TEAs;
- C. Revisions to the TEA designation process, including the elimination of state designation of high unemployment areas as a method of TEA designation;
- D. Revisions to the filing and interview process for removal of conditions on lawful permanent residence.

DHS also invites comments on the economic analysis supporting this rule and the proposed form revisions.

Instructions: All submissions must include the DHS Docket No. USCIS-2016-0006 for this rulemaking. Regardless of the method used for submitting comments or material, all submissions will be posted, without change, to the Federal eRulemaking Portal at <http://www.regulations.gov>, and will include any personal

information you provide. Therefore, submitting this information makes it public. You may wish to consider limiting the amount of personal information that you provide in any voluntary public comment submission you make to DHS. DHS may withhold information provided in comments from public viewing that it determines may impact the privacy of an individual or is offensive. For additional information, please read the Privacy Act notice that is available via the link in the footer of <http://www.regulations.gov>.

Docket: For access to the docket to read background documents or comments received, go to <http://www.regulations.gov>.

II. Executive Summary

A. Purpose of the Regulatory Action

DHS proposes to update its regulations governing EB-5 immigrant investors and regional centers to reflect statutory changes and codify existing policies. DHS also proposes changes to areas of the EB-5 program in need of reform.

B. Summary of Major Provisions

DHS proposes the following major revisions to the EB-5 program regulations.

(1) Priority Date Retention

DHS proposes to authorize certain EB-5 petitioners to retain the priority date¹ of an approved EB-5 immigrant petition for use in connection with any subsequent EB-5 immigrant petition.² Petitioners with approved immigrant petitions might need to file new petitions due to circumstances beyond their control (for instance, DHS might have terminated a regional center associated with the original petition), or might choose to do so for other reasons (for instance, a petitioner may seek to materially change aspects of his or her qualifying investment). DHS is proposing to generally allow EB-5 petitioners to retain the priority dates of previously approved petitions so as to avoid further delays on immigrant visa processing associated with the loss of priority dates. DHS believes that priority date retention may become increasingly important due to the strong possibility that the EB-5 visa category will remain

¹ An EB-5 immigrant petition's priority date is normally the date on which the petition was properly filed. In general, when demand exceeds supply for a particular visa category, an earlier priority date is more advantageous than a later one.

² The priority date retention proposal, like other proposals described in this Executive Summary, is subject to important conditions and limitations described in more detail elsewhere in this proposed rule.

oversubscribed for the foreseeable future.

(2) Increases to the Investment Amounts

DHS is proposing to increase the minimum investment amounts for all new EB-5 petitioners. The increase would ensure that program requirements reflect the present-day dollar value of the investment amounts established by Congress in 1990. Specifically, DHS proposes to initially increase the standard minimum investment amount, which also applies to high employment areas, from \$1 million to \$1.8 million. This change would represent an adjustment for inflation from 1990 to 2015 as measured by the unadjusted Consumer Price Index for All Urban Consumers (CPI-U),³ an economic indicator that tracks the prices of goods and services in the United States. For those investors seeking to invest in a new commercial enterprise that will be principally doing business in a targeted employment area (TEA), DHS proposes to increase the minimum investment amount from \$500,000 to \$1.35 million, which is 75 percent of the proposed standard minimum investment amount. In addition, DHS is proposing to make regular CPI-U-based adjustments in the standard minimum investment amount, and conforming adjustments to the TEA minimum investment amount, every 5 years, beginning 5 years from the effective date of these regulations.

(3) TEA Designations

DHS proposes to reform the TEA designation process to ensure consistency in TEA adjudications and ensure that designations more closely adhere to Congressional intent. First, DHS proposes to allow any city or town with high unemployment⁴ and a population of 20,000 or more to qualify as a TEA. Currently, TEA designations are not available at the city or town level, unless a state designates the city or town as a TEA and provides evidence of such designation to a prospective EB-5 investor for submission with the Form I-526. *See* 8 CFR 204.6(i). Second, DHS proposes to eliminate the ability of a state to designate certain geographic and political subdivisions as high-unemployment areas; instead, DHS would make such designations directly, using standards described in more detail elsewhere in this proposed rule. DHS believes these changes would help address inconsistencies between and

³ *See* Bureau of Labor Statistics, CPI-U Inflation Calculator, <http://data.bls.gov/cgi-bin/cpicalc.pl>.

⁴ An area has "high unemployment" if it has an average unemployment rate of at least 150 percent of the national average rate.

within states in designating high unemployment areas, and better ensure that the reduced investment threshold is reserved for areas experiencing significantly high levels of unemployment.

(4) Removal of Conditions

DHS proposes to revise the regulations to clarify that derivative family members must file their own petitions to remove conditions on their permanent residence when they are not included in a petition to remove conditions filed by the principal investor. In addition, DHS is proposing to improve the adjudication process for removing conditions by providing flexibility in interview locations and to update the regulation to conform to the current process for issuing permanent resident cards.

(5) Miscellaneous Changes

Lastly, DHS proposes to update the regulations to reflect miscellaneous statutory changes made since the regulation was first published in 1991, as well as to clarify definitions of key terms for the program. By aligning DHS regulations with statutory changes and defining key terms, this proposed rule will provide greater certainty regarding the eligibility criteria for investors and their family members.

C. Legal Authority

The Secretary of Homeland Security's authority for the proposed regulatory amendments is found in various provisions of the Immigration and Nationality Act (INA), 8 U.S.C. 1101 *et seq.*, as well as the Departments of Commerce, Justice, and State, the Judiciary, and Related Agencies Appropriations Act, 1993, Public Law 102-395, 106 Stat. 1828; the 21st Century Department of Justice Appropriations Authorization Act, Public Law 107-273, 116 Stat. 1758; and the Homeland Security Act of 2002 (HSA), Public Law 107-296, 116 Stat. 2135, 6 U.S.C. 101 *et seq.* General authority for issuing the proposed rule is found in section 103(a) of the INA, 8 U.S.C. 1103(a), which authorizes the Secretary to administer and enforce the immigration and nationality laws, including establishing such regulations as the Secretary deems necessary to carry out his authority; section 101(b)(1)(F) of the HSA, 6 U.S.C. 111(b)(1)(F), which establishes that a primary mission of DHS is to ensure that the economic security of the United States is not diminished by the Department's efforts, activities, and programs; and section 102 of the HSA, 6 U.S.C. 112, which vests all of the

functions of DHS in the Secretary and authorizes the Secretary to issue regulations.

The aforementioned authorities for the proposed regulatory amendments include:

- Section 203(b)(5) of the INA, 8 U.S.C. 1153(b)(5), which makes visas available to immigrants investing in new commercial enterprises in the United States that will benefit the U.S. economy and create full-time employment for not fewer than 10 U.S. workers.
- Section 204(a)(1)(H) of the INA, 8 U.S.C. 1154(a)(1)(H), which requires individuals to file petitions with DHS when seeking classification under section 203(b)(5);
- Section 216A of the INA, 8 U.S.C. 1186b, which places conditions on permanent residence obtained under section 203(b)(5) and authorizes the Secretary to remove such conditions for immigrant investors who have met the applicable investment requirements, sustained such investment, and otherwise conformed to the requirements of sections 203(b)(5) and 216A.
- Section 610 of Public Law 102–395, 8 U.S.C. 1153 note, as amended, which created the Immigrant Investor Pilot Program (the “Regional Center Program”), authorizing the designation of regional centers for the promotion of economic growth, and which authorizes

the Secretary to set aside visas authorized under section 203(b)(5) of the INA for individuals who invest in regional centers.

D. Costs and Benefits

This rule proposes changes to certain aspects of the EB–5 program that are in need of reform, and would also update the regulations to reflect statutory changes and codify existing policies. There are three major provisions proposed with several minor provisions and some miscellaneous technical changes. DHS has analyzed these provisions carefully and has determined that due to data limitations and the complexity of EB–5 investment structures, which typically involve multiple layers of investment, finance, development, and legal business entities, it is difficult to quantify and monetize the costs and benefits of the proposed provisions, with the exception of total estimated costs of approximately \$91,000⁵ annually for dependents who would file the Petition by Entrepreneur to Remove Conditions on Permanent Resident Status (Form I–829) separately from principal investors, and familiarization costs to review the rule, estimated at \$501,154 annually.

However, DHS does provide qualitative discussions on the potential costs and benefits of these proposed provisions. One of the main proposed provisions increases the standard

minimum investment amount to \$1.8 million and the minimum investment amount for TEAs to \$1.35 million in order to account for inflation since the inception of the program. DHS has no way to assess the potential reduction in investments either in terms of past activity or forecasted activity, and cannot therefore estimate any impacts concerning job creation, losses or other downstream economic impacts driven by the proposed investment amount increases. DHS provides a full qualitative analysis and discussion on the increase in investment amounts in the executive orders 12866 and 13563 section of this proposed rule. DHS believes these provisions would increase the integrity, effectiveness, and economic impact of the program positively, stimulating investment in areas where it is needed most and generating jobs.

The costs and benefits summary of the proposed provisions is provided in Table 1, below. In addition, DHS has prepared an Initial Regulatory Flexibility Analysis (IRFA) under the Regulatory Flexibility Act (RFA) to discuss any potential impacts to small entities. As discussed further in the IRFA, DHS cannot estimate the exact impact to small entities. DHS, however, does expect some impact to regional centers and non-regional center projects, although it does not anticipate that this impact will be substantial or significant.

TABLE 1—SUMMARY OF CHANGES AND IMPACT OF THE PROPOSED PROVISIONS

Current policy	Proposed change	Impact
Current DHS regulations do not permit investors to use the priority date of an approved EB–5 immigrant petition for a subsequently filed EB–5 immigrant petition.	DHS proposes to allow an EB–5 immigrant petitioner to use the priority date of an approved EB–5 immigrant petition for a subsequently filed EB–5 immigrant petition for which the petitioner qualifies.	<p>Benefits:</p> <ul style="list-style-type: none"> • Makes visa allocation more predictable for investors with less possibility for large fluctuations in visa availability dates due to regional center termination. • Provides greater certainty and stability regarding the timing of eligibility for investors pursuing permanent residence in the U.S. and thus lessens the burden of unexpected changes in the underlying investment. • Provides more flexibility to investors to contribute into more viable investments, potentially reducing fraud and improving potential for job creation.
<p>The standard minimum investment amount has been \$1 million since 1990 and has not kept pace with inflation.</p> <p>Further, the statute authorizes a reduction in the minimum investment amount when such investment is made in a TEA by up to 50 percent of the standard minimum investment amount. Since 1991, DHS regulations have set the TEA investment threshold at 50 percent of the minimum investment amount.</p> <p>Similarly, DHS has not proposed to increase the minimum investment amount for investments made in a high employment area beyond the standard amount.</p>	<p>DHS proposes to account for inflation in the investment amount since the inception of the program. DHS proposes to raise the minimum investment amount to \$1.8 million. DHS also proposes to include a mechanism to automatically adjust the minimum investment amount based on the unadjusted CPI-U every 5 years.</p> <p>DHS proposes to decrease the reduction for TEA investment thresholds, and set the TEA minimum investment at 75 percent of the standard amount. Assuming the standard investment amount is \$1.8 million, investment in a TEA would initially increase to \$1.35 million.</p> <p>DHS is not proposing to change the equivalency between the standard minimum investment amount and those made in high employment areas. As such, DHS proposes that the minimum investment amounts in high employment areas would be \$1.8 million, and follow the same mechanism for future inflationary adjustments.</p>	<p>Costs:</p> <ul style="list-style-type: none"> • Not identified. <p>Benefits:</p> <ul style="list-style-type: none"> • Increases in investment amounts are necessary to keep pace with inflation and real value of investments; • Raising the investment amounts increases the amount invested by each investor and potentially increases the total amount invested under this program. • For regional centers, the higher investment amounts per investor would mean that fewer investors would have to be recruited to pool the requisite amount of capital for the project, so that searching and matching of investors to projects could be less costly. <p>Costs:</p> <ul style="list-style-type: none"> • Some investors may be unable or unwilling to invest at the higher proposed levels of investment. • There may be fewer jobs created if fewer investors invest at the proposed higher investment amounts. • For regional centers, the higher amounts could reduce the number of investors in the global pool and result in fewer investors and thus make search and matching of investors to projects more costly. • Potential reduced numbers of EB–5 investors could prevent projects from moving forward due to lack of requisite capital.

⁵ The cost estimate is rounded from \$90,762.

TABLE 1—SUMMARY OF CHANGES AND IMPACT OF THE PROPOSED PROVISIONS—Continued

Current policy	Proposed change	Impact
<p>A TEA is defined by statute as a rural area or an area which has experienced high unemployment (of at least 150 percent of the national average rate). Currently, investors demonstrate that their investments are in a high unemployment area in two ways:</p> <p>(1) Providing evidence that the Metropolitan Statistical Area (MSA), the specific county within the MSA, or the county in which a city or town with a population of 20,000 or more is located, in which the new commercial enterprise is principally doing business, has experienced an average unemployment rate of at least 150 percent of the national average rate or</p> <p>(2) Submitting a letter from an authorized body of the government of the state in which the new commercial enterprise is located, which certifies that the geographic or political subdivision of the metropolitan statistical area or of the city or town with a population of 20,000 or more in which the enterprise is principally doing business has been designated a high unemployment area.</p>	<p>DHS proposes to eliminate state designation of high unemployment areas. DHS also proposes to amend the manner in which investors can demonstrate that their investments are in a high unemployment area.</p> <p>(1) In addition to MSAs, specific counties within MSAs, and counties in which a city or town with a population of 20,000 or more is located, DHS proposes to add cities and towns with a population of 20,000 or more to the types of areas that can be designated as a high unemployment area.</p> <p>(2) DHS is proposing that a TEA may consist of a census tract or contiguous census tracts in which the new commercial enterprise is principally doing business if the weighted average of the unemployment rate for the tract or tracts is at least 150 percent of the national average.</p> <p>(3) DHS is also proposing that a TEA may consist of an area comprised of the census tract(s) in which the new commercial enterprise is principally doing business, including any and all adjacent tracts, if the weighted average of the unemployment rate for all included tracts is at least 150 percent of the national average.</p>	<ul style="list-style-type: none"> An increase in the investment amount could make foreign investor visa programs offered by other countries more attractive. <p>Benefits:</p> <ul style="list-style-type: none"> Rules out TEA configurations that rely on a large number of census tracts indirectly linked to the actual project tract by numerous degrees of separation. Potential to better stimulate job growth in areas where unemployment rates are the highest. <p>Costs:</p> <ul style="list-style-type: none"> The proposed TEA provision could cause some projects and investments to not qualify. DHS presents the potential number of projects and investments that could be affected in Table 5.
<p>Current technical issues:</p> <ul style="list-style-type: none"> The current regulation does not clearly define the process by which derivatives may file a Form I-829 petition when they are not included on the principal's petition. Interviews for Form I-829 petitions are generally scheduled at the location of the new commercial enterprise. The current regulations require an immigrant investor and his or her derivatives to report to a district office for processing of their permanent resident cards. 	<p>DHS is proposing the following technical changes:</p> <ul style="list-style-type: none"> Clarify the filing process for derivatives who are filing a Form I-829 petition separately from the immigrant investor. Provide flexibility in determining the interview location related to the Form I-829 petition. Amend the regulation by which the immigrant investor obtains the new permanent resident card after the approval of his or her Form I-829 petition because DHS captures biometric data at the time the immigrant investor and derivatives appear at an ASC for fingerprinting. 	<p>Conditions of Filing:</p> <p>Benefits:</p> <ul style="list-style-type: none"> Adds clarity and eliminates confusion for the process of derivatives who file separately from the principal immigrant investor. <p>Costs:</p> <ul style="list-style-type: none"> Total cost to applicants filing separately would be \$90,762 annually. <p>Conditions of Interview:</p> <p>Benefits:</p> <ul style="list-style-type: none"> Interviews may be scheduled at the USCIS office having jurisdiction over either the immigrant investor's commercial enterprise, the immigrant investor's residence, or the location where the Form I-829 petition is being adjudicated, thus making the interview program more effective and reducing burdens on the immigrant investor. Some applicants may have cost savings from lower travel costs. <p>Costs:</p> <ul style="list-style-type: none"> Not estimated. <p>Investors obtaining a permanent resident card:</p> <p>Benefits:</p> <ul style="list-style-type: none"> Cost and time savings for applicants for biometrics data. <p>Costs:</p> <ul style="list-style-type: none"> Not estimated.

III. Background

A. The EB-5 Program

As part of the Immigration Act of 1990, Public Law 101-649, 104 Stat. 4978, Congress established the EB-5

immigrant visa classification to incentivize employment creation in the United States. Under the EB-5 program, lawful permanent resident (LPR) status is available to foreign nationals who

invest at least \$1 million in a new commercial enterprise (NCE) that will create at least 10 full-time jobs in the United States. See INA section 203(b)(5), 8 U.S.C. 1153(b)(5). A foreign

national may also invest \$1 million if the investment is in a high employment area or \$500,000 if the investment is in a TEA, defined to include certain rural areas and areas of high unemployment. *Id.*; 8 CFR 204.6(f). The INA allots 9,940 immigrant visas each fiscal year for foreign nationals seeking to enter the United States under the EB-5 classification.⁶ See INA section 201(d), 8 U.S.C. 1151(d); INA section 203(b)(5), 8 U.S.C. 1153(b)(5). Not less than 3,000 of these visas must be reserved for foreign nationals investing in TEAs. See INA section 203(b)(5)(B), 8 U.S.C. 1153(b)(5)(B).

B. The Regional Center Program

Enacted in 1992, section 610 of the Departments of Commerce, Justice, and State, the Judiciary, and Related Agencies Appropriations Act, 1993, Public Law 102-395, 106 Stat. 1828, established a pilot program that requires the allocation of a limited number of EB-5 immigrant visas to individuals who invest through DHS-designated regional centers.⁷ The Regional Center Program was initially designed as a pilot program set to expire after 5 years, but Congress has continued to extend the program to the present day.⁸ The Regional Center Program was last extended in December 2016.⁹

Under the Regional Center Program, foreign nationals base their EB-5 petitions on investments in new commercial enterprises located within “regional centers.” DHS regulations define a regional center as an economic unit, public or private, that promotes economic growth, regional productivity, job creation, and increased domestic capital investment. See 8 CFR 204.6(e). While all EB-5 petitioners go through the same petition process, those petitioners participating in the Regional Center Program may meet statutory job creation requirements based on economic projections of either *direct* or *indirect* job creation, rather than only on jobs directly created by the new commercial enterprise. See 8 CFR 204.6(m)(3). In addition, Congress authorized the Secretary to give priority

⁶ An immigrant investor, his or her spouse, and children (if any) will each use a separate visa number.

⁷ Current law requires that DHS annually set aside 3,000 EB-5 immigrant visas for regional center investors. Section 116 of Public Law 105-119, 111 Stat. 2440 (Nov. 26, 1997). If this full annual allocation is not used, remaining visas may be allocated to foreign nationals who do not invest in regional centers.

⁸ See Section 116 of Public Law 105-119, 111 Stat. 2440, 2467 (Nov. 26, 1997); Section 1 of Public Law 112-176, 126 Stat. 1325, 1325 (Sept. 28, 2012); Section 575 of Public Law 114-113, 129 Stat. 2242, 2526 (Dec. 18, 2015).

⁹ See Public Law 114-254 (Dec. 10, 2016).

to EB-5 petitions filed through the Regional Center Program. See section 601(d) of Public Law 102-395, 106 Stat. 1828, as amended by Public Law 112-176, Sec. 1, 126 Stat. 1326 (Sept. 28, 2012).

Requests for regional center designation must be filed with USCIS on the Application for Regional Center Under the Immigrant Investor Program (Form I-924). See 8 CFR 204.6(m)(3)-(4). Once designated, regional centers must provide USCIS with updated information to demonstrate continued eligibility for the designation by submitting an Annual Certification of Regional Center (Form I-924A) on an annual basis or as otherwise requested by USCIS. See 8 CFR 204.6(m)(6)(i)(B). USCIS may seek to terminate a regional center's participation in the program if the regional center no longer qualifies for the designation, the regional center fails to submit the required information or pay the associated fee, or USCIS determines that the regional center is no longer promoting economic growth. See 8 CFR 204.6(m)(6)(i). As of November 1, 2016, there were 864 designated regional centers.¹⁰

C. EB-5 Immigrant Visa Process

A foreign national seeking LPR status under the EB-5 immigrant visa classification must go through a multi-step process. The individual must first file an Immigrant Petition by Alien Entrepreneur (Form I-526, or “EB-5 petition”) with USCIS. The petition must be supported by evidence that the foreign national's lawfully obtained investment capital is invested (*i.e.*, placed at risk), or is actively in the process of being invested, in a new commercial enterprise in the United States that will create full-time positions for not fewer than 10 qualifying employees. See 8 CFR 204.6(j).

If USCIS approves the EB-5 petition, the petitioner must take additional steps to obtain LPR status. In general, the petitioner may either apply for an immigrant visa through a Department of State consular post abroad¹¹ or, if the petitioner is already in the United States and is otherwise eligible to adjust status, the petitioner may seek adjustment of status by filing an Application to Register Permanent Residence or Adjust Status (Form I-485) with USCIS.¹² Congress has imposed limits on the

¹⁰ USCIS, Immigrant Investor Regional Centers, <https://www.uscis.gov/working-united-states/permanent-workers/employment-based-immigration-fifth-preference-eb-5/immigrant-investor-regional-centers>.

¹¹ See INA sections 203, 221 and 222; 8 U.S.C. 1153, 1201, and 1202.

¹² See INA section 245, 8 U.S.C. 1255.

availability of such immigrant visas, including by capping the annual number of visas available in the EB-5 category and by separately limiting the percentage of immigrant visas that may be issued on an annual basis to individuals born in any one country.¹³

To request an immigrant visa while abroad, an EB-5 petitioner must apply at a U.S. consular post. See INA sections 203(e) and (g), 221 and 222, 8 U.S.C. 1153(e) and (g), 1201 and 1202; see also 22 CFR part 42, subparts F and G. The petitioner must generally wait to receive a visa application packet from the DOS National Visa Center to commence the visa application process. After receiving this packet, the petitioner must collect required information and file the immigrant visa application with DOS. As noted above, the wait for a visa depends on the demand for immigrant visas in the EB-5 category and the petitioner's country of birth.¹⁴ Generally, DOS authorizes the issuance of a visa and schedules the petitioner for an immigrant visa interview for the month in which the priority date will be current. If the petitioner's immigrant visa application is ultimately approved, he or she is issued an immigrant visa and, on the date of admission to the United States, obtains LPR status on a conditional basis. See INA sections 211, 216A and 221; 8 U.S.C. 1181, 1186b and 1201.

Alternatively, an EB-5 petitioner who is in the United States in lawful nonimmigrant status generally may seek LPR status by filing with USCIS an Application to Register Permanent Residence or Adjust Status (Form I-485, or “application for adjustment of status”). See INA section 245, 8 U.S.C. 1255; 8 CFR part 245. Before filing such an application, however, the EB-5 petitioner must wait until an immigrant visa is “immediately available.” See INA section 245(a), 8 U.S.C. 1255(a); 8 CFR 245.2(a)(2)(i)(A). Generally, an immigrant visa is considered

¹³ See INA sections 201, 202 and 203; 8 U.S.C. 1151, 1152 and 1153.

¹⁴ When demand for a visa exceeds the number of visas available for that category and country, the demand for that particular preference category and country of birth is deemed oversubscribed. The Department of State (DOS) publishes a Visa Bulletin that determines when a visa may be authorized for issuance. See U.S. Dep't of State, Bureau of Consular Aff., Visa Bulletin, available at <https://travel.state.gov/content/visas/en/law-and-policy/bulletin.html>. Specifically, an individual cannot be issued an immigrant visa unless the individual's “priority date,” *i.e.*, the date USCIS received the properly filed Form I-526, is earlier than the “final action date” indicated in the “date for filing application” chart in the current Visa Bulletin for the relevant category and country of birth. See 8 CFR 204.6(d) (defining the “priority date” for EB-5 petitioners).

“immediately available” if the petitioner’s priority date under the EB–5 category is earlier than the relevant date indicated in the monthly DOS Visa Bulletin.¹⁵ See 8 CFR 245.1(g)(1).

Whether obtained pursuant to issuance of an immigrant visa or adjustment of status, LPR status based on an EB–5 petition is granted on a conditional basis. See INA section 216A(a)(1), 8 U.S.C. 1186b(a)(1). Within the 90-day period preceding the second anniversary of the date the immigrant investor obtains conditional permanent resident status, the immigrant investor is required to file with USCIS a Petition by Entrepreneur to Remove Conditions on Permanent Resident Status (Form I–829). See INA section 216A(c) and (d), 8 U.S.C. 1186b(c) and (d); 8 CFR 216.6(a)(1). Failure to timely file Form I–829 results in automatic termination of the immigrant investor’s conditional permanent resident status and the initiation of removal proceedings. See INA section 216A(c), 8 U.S.C. 1186b(c); 8 CFR 216.6(a)(5). In support of the petition to remove conditions, the investor must show, among other things, that he or she established the commercial enterprise, that he or she invested or was actively involved in the process of investing the requisite capital, that he or she sustained those actions for the period of residence in the United States, and that job creation requirements were met or will be met within a reasonable time. See 8 CFR 216.6(a)(4). If approved, the conditions on the investor’s permanent residence are removed as of the second anniversary of the date the investor obtained conditional permanent resident status. See 8 CFR 216.6(d)(1).

IV. The Proposed Rule

DHS has not comprehensively revised the EB–5 program regulations since they were published in 1993, see 58 FR 44606 (1993), but has issued policy guidance to conform agency practice to intervening changes in the governing

¹⁵ More specifically, an individual generally may file an application for adjustment of status with USCIS only if his or her priority date is earlier than the cut-off date for the relevant category and country of birth in the “final action dates” chart in the relevant Visa Bulletin. However, when USCIS determines that there are more immigrant visas available for the fiscal year than there are known applicants for such visas, USCIS will state on its Web site that, during that month, applicants may instead use the “dates for filing visa applications” chart in the Visa Bulletin for purposes of determining whether they may file applications for adjustment of status with USCIS. DOS, moreover, may not issue a visa and USCIS may not grant adjustment of status unless the individual’s priority date is earlier than the corresponding cut-off date in the “final action date” chart listed in the Visa Bulletin.

statutes. In addition to proposing changes to portions of the EB–5 program that are in need of reform, this proposed rule would codify and clarify certain policies. For example, the current regulation requires that the interview for the petition to remove conditions take place at the USCIS office located in the same location as the new commercial enterprise, although there is no requirement that the EB–5 immigrant petitioner reside in that vicinity. See 8 CFR 216.6(b)(2). In some instances, DHS has been allowing the interview to take place at a variety of different locations, including the USCIS office closest to the immigrant petitioner’s residence, as DHS recognizes the burden of conducting an interview in a location that is a considerable distance from an immigrant petitioner’s residence. DHS is proposing conforming revisions to the regulations in order to reflect this practice. See proposed 8 CFR 216.6(b)(2).

A. Priority Date Retention

DHS proposes to allow an EB–5 immigrant petitioner to use the priority date of an approved EB–5 immigrant petition for any subsequently filed EB–5 immigrant petition for which the petitioner qualifies. See proposed 8 CFR 204.6(d). This provision would not apply where DHS revoked the original petition’s approval based on fraud, willful misrepresentation of a material fact, or a determination that DHS approved the petition based on a material error. *Id.* Similarly, priority date retention would not be available once the investor uses the priority date to obtain conditional LPR status based upon the approved petition (*e.g.*, when such an investor fails to remove the conditional basis of that status and thus loses his or her LPR status). Should DHS seek to revoke the approval of an immigrant petition, DHS would provide notice of the revocation detailing the reasons for revocation.¹⁶ If the revocation is not based on fraud, a willful misrepresentation of a material fact, or material DHS error, the investor would be able to utilize the priority date of that petition should he or she seek to file another immigrant petition under the EB–5 program. See proposed 8 CFR 204.6(d). An investor seeking to use a retained priority date should provide a copy of the original immigrant petition’s approval notice indicating the earlier priority date when filing the new EB–5 immigrant petition. Under this proposal, denied petitions would not establish a priority date, and a priority date would

¹⁶ See 8 CFR 205.2.

not be transferable to another investor. See proposed 8 CFR 204.6(d).

The current regulation does not permit investors to use the priority date of an approved EB–5 immigrant petition for a subsequently filed EB–5 immigrant petition. See 8 CFR 204.6(d). DHS has generally allowed beneficiaries in the employment-based first, second, and third preference categories to retain the priority date of their previously approved immigrant petitions unless DHS revokes petition approval. See 8 CFR 204.5(e). DHS recently issued a final rule that will expand the ability of beneficiaries in these preference categories to retain their priority dates even when their petitions have been revoked, so long as the approval was not revoked based on fraud, willful misrepresentation of a material fact, material error, or the revocation or invalidation of the labor certification associated with the petition.¹⁷ See 8 CFR 204.5(e)(2). DHS’s proposal in this regulation to allow priority date retention for those in the EB–5 category would bring the EB–5 priority date retention policy into harmony with those other employment-based preference categories. See proposed 8 CFR 204.6(d).

DHS is proposing to allow priority date retention in order to: (1) Address situations in which petitioners may become ineligible through circumstances beyond their control (*e.g.*, the termination of a regional center) as they wait for their EB–5 visa priority date to become current; and (2) provide investors with greater flexibility to deal with changes to business conditions. For example, investors involved with an underperforming or failing investment project would be able to move their investment funds to a new, more promising investment project without losing their place in the visa queue.

Providing EB–5 investors with the opportunity to retain their priority dates is increasingly important as the demand for EB–5 visas outpaces the statutorily limited supply of such visas, which lengthens wait times for visa numbers. Since the severe economic recession between 2007 and 2009,¹⁸ the EB–5 program has experienced a dramatic increase in participation. Prior to 2008, the EB–5 program received an average of fewer than 600 EB–5 immigrant petitions per year. In the following years, the EB–5 program has received an

¹⁷ See Retention of EB–1, EB–2, and EB–3 Immigrant Workers and Program Improvements Affecting High-Skilled Nonimmigrant Workers, 81 FR 82398, 82485 (Nov. 18, 2016).

¹⁸ The Nat’l Bureau of Econ. Research, U.S. Business Cycle Expansions and Contractions, available at <http://www.nber.org/cycles.html>.

average of over 5,500 petitions per year. And between FY 2014 and FY 2015 alone, the program received over 25,000 petitions.¹⁹ As a result, demand for EB-5 visas by investors has now outpaced the annual supply, resulting in visa backlogs for certain petitioners and their family members. Individuals affected by those backlogs frequently wait for one year or more before they can obtain conditional permanent residence.

The EB-5 program began to experience oversubscription (*i.e.*, demand that outpaced the supply in visa numbers) for the first time during FY 2014. At that time, DOS announced that EB-5 visas were no longer available for the remainder of the fiscal year for individuals born in China.²⁰ Since then, the program has continued to experience annual demand from individuals born in China that has outpaced the supply in visas, resulting in increasingly long backlogs every year for those individuals.²¹ This trend is anticipated to continue and likely worsen for the foreseeable future, especially considering that individuals born in China currently file about 80 percent of the EB-5 immigrant visas granted on an annual basis.²² Indeed, given the 20,000 EB-5 petitions currently pending with USCIS, DHS estimates that there are currently 16,000 EB-5 petitions pending for individuals born in China.²³

Although Congress sets visa numbers, DHS recognizes that having to wait for a visa can create difficulties for individuals seeking to invest in the United States. There are also consequences for investors who invest through a regional center that is subsequently terminated through no fault of the investor. When a regional center is terminated, EB-5 immigrant petitions filed through that regional

center are generally also denied or revoked depending on the procedural status of the petition. The filers of such petitions may have met all requirements to participate in the EB-5 program, but absent priority date retention they will lose their place in the immigrant visa queue. Currently, an investor in this situation who wants to continue with the EB-5 immigrant visa process must start the process all over again by investing in a new commercial enterprise and going to the end of the EB-5 visa queue. Allowing priority date retention would allow such an investor to retain his or her place in the queue, thereby alleviating the harsh consequences of regional center terminations and other material changes that occur unexpectedly and through no fault of the investor.

Finally, priority date retention would also benefit other investors with approved EB-5 immigrant petitions who, while waiting for their priority dates to become current, learn that they have invested in severely delayed projects that are likely not to succeed. Under current regulations, such investors cannot reinvest their investment funds without losing their place in the immigrant visa queue. Under the proposed rule, such investors would be able to reinvest in new projects while retaining their previously established priority dates. By allowing priority date retention, DHS is thus eliminating an external incentive that currently distorts market forces and increases financial risk for investors.

DHS welcomes public comment on the proposal to allow investors in certain circumstances to retain their priority dates. DHS also welcomes comment on the proposed standards that may be considered when determining whether or not to allow for priority date retention, including alternative suggestions to those standards.

B. Increasing the Minimum Investment Amount

In 1990, Congress set the minimum investment amount for the program at \$1 million and authorized the Attorney General (now the Secretary of Homeland Security) to increase the minimum investment amount, in consultation with the Secretaries of State and Labor. INA section 203(b)(5)(C)(i), 8 U.S.C. 1153(b)(5)(C)(i). Neither the former INS nor DHS has exercised its authority to increase the minimum investment amount. As a result, over the past 25 years inflation has eroded the present-day value of the minimum investment required to participate in the EB-5

program.²⁴ After consulting with the Departments of State and Labor, DHS proposes to account for inflation by increasing the minimum investment amount consistent with increases in the CPI-U during the intervening period, for a new minimum investment amount of \$1.8 million.²⁵ As discussed below, DHS also proposes to include a mechanism for future adjustments every 5 years, based on the CPI-U.

DHS believes that it is appropriate to adjust the minimum investment amount upward based on inflation, without regard for the amount of capital that would likely be required to fulfill the statutory requirement to create 10 jobs. As a preliminary matter, DHS notes that Congress did not provide for adjustments in the investment threshold to be related in any way to the EB-5 job creation requirements. Indeed, based on the controlling statutory authorities, Congress itself does not appear to have tied the statutory investment thresholds to the job creation requirement. For example, when Congress first created the EB-5 category, Congress established a single job creation standard (*i.e.*, the direct creation of at least 10 jobs) but authorized three different levels of qualifying investments:

- (1) The standard minimum investment amount of \$1 million;
- (2) The reduced minimum investment amount of no less than 50 percent of the standard for investments in targeted employment areas; and
- (3) A higher minimum investment amount of up to three times the standard amount for investments in high employment areas.

²⁴ DHS also notes that prior to the passage of IMMACT, the former INS provided a written response to Senator Simon regarding the "creation of a subcategory for immigrant investors" and stated that the "minimum investment amount would be set in terms of the value of the dollar at the time of enactment and would be adjusted periodically based on some criteria such as the Consumer Price Index." *A Bill to Amend the Immigration and Nationality Act to Effect Changes in the Numerical Limitation and Preference System for the Admission of Immigrants: Hearing on S. 1611 Before the S. Subcomm. on Immigr. & Refugee Aff. of the S. Comm. on the Judiciary*, 100th Cong. 90 (1987) (statement of Mark W. Everson, Deputy Comm'r of the Immigr. and Naturalization Serv.).

²⁵ DHS may conduct further consultations following receipt of public comment and prior to issuing a final rule. The \$1.8 million figure is rounded down to the nearest hundred thousand from approximately \$1,813,443, based on an inflation factor of 1.813443 between 1990 and 2015. The actual increase in prices is obtained as $((CPI-U_{2015}/CPI-U_{1990})-1)$. Using a base period of 1982-84, the CPI-U increased from 130.7 in 1990 to 237.017 in 2015, for an actual increase in price of approximately 81.34 percent. DHS rounded the figure down for ease of agency administration and the convenience of all stakeholders. The CPI-U data is publicly available at <http://www.bls.gov/data/prices>.

¹⁹ Statistics provided by USCIS Immigrant Investor Program Office.

²⁰ DOS issued a statement in August 2014 indicating the EB-5 preference category was unavailable for Chinese nationals through the end of FY2014. See Nataliya Rymer, *U.S. Department of State Announces EB-5 Visas for China Unavailable Until October 1, 2014*, Nat'l L. Rev., Aug. 23, 2014, <http://www.natlawreview.com/article/us-department-state-announces-eb-5-visas-china-unavailable-until-october-1-2014>.

²¹ While the demand has exceeded supply for investors from China, the demand has not exceeded supply for investors from any other countries as of December 2016.

²² Dep't of State, Visa Statistics, Report of the Visa Office, available at <https://travel.state.gov/content/visas/en/law-and-policy/statistics.html>.

²³ USCIS, Number of I-526 Immigrant Petitions by Alien Entrepreneurs by Fiscal Year, Quarter, and Case Status 2008-2016, (May 25, 2016) available at https://www.uscis.gov/sites/default/files/USCIS/Resources/Reports%20and%20Studies/Immigration%20Forms%20Data/Employment-based/I526_performancedata_fy2016_qtr2.pdf.

As noted, Congress originally provided for up to three different qualifying investment amounts but did not vary the job creation requirements to correspond to the level of investment. Congress also did not tie investment levels to job creation criteria when it established the regional center program. For regional center investments, Congress used the same three investment levels as the original program but varied the job creation requirement by including both direct and *indirect* job creation. Based on the plain language of INA section 203(b)(5)(C)(i) and the regional center legislation, Congress does not appear to have intended to tie the minimum investment amounts to the number of jobs to be created.

DHS considered a number of different measures upon which to base the proposed adjustment and future adjustments. Among these, DHS is proposing to rely on the Consumer Price Index (CPI), which “is a measure of the average change over time in the prices paid by urban consumers for a market basket of consumer goods and services.”²⁶ According to the Bureau of Labor Statistics at the Department of Labor (DOL), the CPI is—

the most widely used measure of inflation It provides information about price changes in the Nation’s economy to government, business, labor, and private citizens and is used by them as a guide to making economic decisions. . . . The CPI and its components are used to adjust other economic series for price changes and to translate these series into inflation-free dollars.²⁷

The specific CPI index that DHS proposes to rely on is the unadjusted All Items CPI-U. The CPI-U is the “broadest and most comprehensive CPI,” and using unadjusted data is more appropriate for this purpose, because seasonally adjusted CPI data is subject to revision for up to five years after their original release, making such data difficult to use for escalation purposes.²⁸

DHS also considered other indices used by the Bureau of Labor Statistics to measure different aspects of inflation.²⁹ One of these is the Producer Price Indexes, which “measure changes in the

selling prices received by domestic producers of goods and services.”³⁰ Although the Producer Price Indexes could also provide an appropriate measure for adjusting the standard minimum investment amount, DHS believes the CPI-U is a better measure because it is more widely relied upon.³¹ The BLS also produces a number of other business cost statistics that measure labor costs or the costs of goods and services,³² but DHS chose not to propose these as measures as they are more narrowly focused on different and discrete aspects of economic activity.

Because the EB-5 program is focused on investment, DHS also considered adjusting the standard minimum investment amount based on changes in the overall value of a specific stock index, such as the Dow Jones Industrial Average or the Standard and Poor’s 500 Stock Index. But these indexes are based on trades in the secondary market that are tied to the value of existing companies strictly for investment purposes. By comparison, investment in the EB-5 program is related to job creation, which in turn results from an adequately capitalized enterprise (as determined by the costs of goods or services required to do business). DHS believes the CPI-U is a more appropriate indicator of the costs of goods and services necessary for an EB-5 enterprise to be adequately capitalized for the purpose of job creation.

DHS believes that increasing the standard minimum investment amount to account for inflation since creation of the EB-5 program would both modernize the program and ensure a level of capital investment in the United States that more closely adheres to congressional intent. DHS also believes that this change will benefit the U.S. economy by increasing the amount of foreign investment in the United States. This conclusion is supported by the fact that the EB-5 program has recently suffered from oversubscription at current investment levels; that investors’ economic resources have likely increased since the program’s creation by at least the rate of inflation; and that even with the proposed

increases, the EB-5 program would remain extremely competitive with other countries’ investor visa programs, which typically require higher investment thresholds.³³

In addition to raising the standard minimum investment amount effective as of the date specified in the final rule, DHS proposes that the minimum investment amount be adjusted every 5 years based on the CPI-U. See proposed 8 CFR 204.6(f)(1). DHS proposes that each such future adjustment will be in effect for a 5-year period beginning on October 1 of the year of the adjustment. *Id.* DHS believes it is important to include a periodic inflation-adjustment mechanism in the regulations to avoid a recurrence of the current situation, where the minimum investment amount remains unchanged for a lengthy period and is eroded by inflation. DHS also proposes to adjust the investment threshold every 5 years, rather than on an annual basis, as a way of balancing the need to counteract inflation with the need to provide predictability and reliability to stakeholders. Such predictability is especially helpful for investors and project developers who need to prepare for the infusion of pooled EB-5 capital into new commercial enterprises. DHS estimates that more than 96 percent of all EB-5 immigrant petitions filed are based on pooled investments involving more than one EB-5 investor in the same new commercial enterprise. In addition, a 5-year adjustment period would be straightforward for the agency to administer in adjudicating multiple petitions based on investments in the

³³ The United Kingdom’s Tier 1 Investor visa requires a minimum investment of £2,000,000 (approximately \$2.5 million USD), and offers permanent residence to those who have invested at least £5 million (approximately \$6.3 million USD). *Tier 1 (Investor) Visa*, Gov.UK, <https://www.gov.uk/tier-1-investor/overview>. Australia’s Significant and Premium Investment Visa Programs require AU \$5 million (approximately \$3.7 million USD) and AU \$15 million (approximately \$11.2 million USD), respectively; its “investor stream” visa program requires an AU \$1.5 million (approximately \$1.1 million USD) investment and a host of other requirements. *Business Innovation and Investment Visa*, Australian Government, <http://www.border.gov.au/Trav/Visa/1/188->. same new commercial enterprise and business plan, filed over a period of several years.

Finally, DHS proposes that each investor will be required to contribute the minimum investment amount that is designated at the time the initial petition is filed. See proposed 8 CFR 204.6(f)(1). EB-5 investors may qualify for the program based either on having made their investment prior to petition filing or by being in the process of investing at the time of filing. However, all EB-5 investors must demonstrate a present commitment of the full minimum amount of required investment at the time the petition is filed. DHS believes that tying the required minimum investment amount to the amount designated at the time of filing provides clarity for stakeholders and simplifies the adjudication process for the agency.

DHS seeks public comment on all aspects of this proposal, including the proposed increase of the standard minimum investment amount to \$1.8 million, the proposed 5-year inflation-adjustment periods, the proposed use of the CPI-U as the basis for the initial increase and the periodic adjustments, the proposal to round future adjustments down to the nearest 100,000, and the proposed requirement that the minimum investment amount be set at the time of filing the EB-5 immigrant petition. DHS recognizes that under this proposal, the required minimum investment amount would increase significantly, in relative and absolute terms, to account for a quarter century of inflation. DHS is seeking comment on whether it should increase the standard minimum investment amount as proposed under this rule, or whether a different methodology or different investment amount would be more appropriate. DHS also seeks comment on whether it should implement any such increase incrementally or by another method that reduces impacts on stakeholders. DHS notes, however, that incremental increases may result in a lack of clarity for stakeholders and may pose operational burdens on adjudicators.

C. Increasing the Minimum Investment Amount for High Employment Areas

Congress also provided DHS with the authority to set the qualifying investment amount for high employment areas to an amount greater than—but not three times greater than—the standard minimum investment amount. See INA section 203(b)(5)(C)(iii), 8 U.S.C. 1153(b)(5)(C)(iii). At the outset of the program, the former INS did not wish to

increase the investment for these areas beyond \$1 million. See 56 FR 60897, 60903. Because the standard minimum investment amount has applied to such areas since the program's inception, DHS has not tracked which projects have been set in high employment areas. DHS thus does not have sufficient information at this time to determine whether to increase the investment threshold for such areas. DHS recently adjusted its forms to capture this information, which, once collected and analyzed, may help the Department determine whether to adjust the minimum investment amount for high employment areas. For now, however, DHS is not proposing an increase beyond the standard minimum investment amount, and therefore proposes applying the standard investment threshold in high employment areas. See proposed 8 CFR 204.6(f)(3). DHS also proposes that the minimum investment amount for high employment areas be adjusted consistent with adjustments to the standard investment threshold—*i.e.*, every five years based on increases in the CPI-U and rounded down to the nearest 100,000.

DHS seeks public comment on all aspects of this proposal, including the continuing application of the standard investment threshold to high employment areas, which would increase the threshold to \$1.8 million, the proposed 5-year inflation-adjustment periods, the proposed use of the CPI-U as the basis for the periodic adjustments, and the proposal to round future adjustments down to the nearest 100,000.

D. Increasing the Minimum Investment Amount for TEAs

In 1990, Congress set the minimum investment amount for the program at \$1 million and authorized DHS to set a different amount for investments made in TEAs (*i.e.*, rural areas and areas of high unemployment). See INA section 203(b)(5)(C)(ii), 8 U.S.C. 1153(b)(5)(C)(ii). Specifically, Congress authorized DHS to reduce the minimum investment amount in a TEA by up to 50 percent of the standard minimum investment amount. *Id.* The former INS subsequently issued regulations in 1991 setting the TEA investment threshold at 50 percent of the minimum investment amount, or \$500,000.³⁴ See 8 CFR 204.6(f)(2).

³⁴ In the final rule published in 1991, the former INS noted that 82 commenters called for the maximum percentage reduction because they believed that “lowering the investment capital requirement would promote the purpose of the Act to stimulate investment in rural and high

unemployment areas.” 56 FR 60897 (Nov. 29, 1991). “They further felt that viable businesses could be maintained with the lower investment amount.” *Id.*

In establishing two tiers of investment, and setting aside 3,000 visas for those investing in rural areas and areas subject to high unemployment, Congress sought to incentivize investment in such areas.³⁵ But although some in Congress expected that most investors would invest at the higher amount,³⁶ experience shows that such investments have become relatively rare. An agency analysis of petitions filed in 2015 indicates that approximately 97 percent of all investments by EB-5 petitioners are made in TEAs and thus at the reduced amount of \$500,000. In other words, while Congress expressed concern about investments in TEAs and thus set aside approximately 30 percent of visas at a reduced investment amount for such purpose, investments in TEAs have effectively become the settled norm. As investments in TEAs have dominated the program in recent years, the *de facto* standard threshold has become \$500,000, thus undermining congressional aims to also encourage investments at the standard minimum investment amount of \$1 million.

Accordingly, DHS has determined that the large differential between the standard and reduced investment amounts has failed to strike the balance that Congress appears to have intended by creating a multi-leveled investment framework in the EB-5 program. Moreover, based on its 25-year history implementing the program, DHS believes that the differential—and the sizable monetary incentive it presents—has the potential of distorting general market forces and the business decisions that follow from such forces to an unintended degree. To strike a better balance between investments at the standard and reduced thresholds, and to reduce the degree to which the differential between the thresholds affects investment decisions, DHS is proposing to reduce the difference between the two investment thresholds. Specifically, DHS is proposing to set the

unemployment areas.” 56 FR 60897 (Nov. 29, 1991). “They further felt that viable businesses could be maintained with the lower investment amount.” *Id.*

³⁵ See 135 Cong. Rec. S7858–02 (July 13, 1989) (statement of Sen. Boschwitz) (stating that the amendment's purpose was to “attract significant investments to rural America.”); 136 Cong. Rec. S17106–01 (Oct. 26, 1990) (statement of Sen. Simon) (“We are mindful of the need to target investments to rural America and areas with particularly high unemployment—areas that can use the job creation the most . . . America's urban core and rural areas have special job creation needs.”).

³⁶ See 136 Cong. Rec. S17106–01 (Oct. 26, 1990) (statement of Sen. Simon) (“The general rule—and the vast majority of the investor immigrants will fit in this category—is that the investor must invest \$1 million and create 10 U.S. jobs.”).

minimum amount for investments in TEAs at 75 percent of the standard amount (*i.e.*, change the percentage reduction for investments in TEAs from 50 percent of the standard amount to 25 percent of the standard amount). *See* proposed 8 CFR 204.6(f)(2). Because DHS has proposed to set the standard investment amount at \$1.8 million, the effect of this change is to set the TEA investment amount at \$1.35 million (*i.e.*, 75% of \$1.8 million).

DHS considered changing the percentage reduction for TEA investments to various degrees but settled on a 25 percent reduction for several reasons. First, DHS believes that reducing the TEA investment discount by half will significantly reduce the potential for unintended distortions in investment decisions. Second, DHS notes that a 25 percent reduction represents a midway point between the two extremes allowed by Congress—applying the maximum 50 percent reduction and applying no reduction at all. Because DHS is seeking to reduce the investment imbalance caused by the 50 percent differential on the one hand, while continuing to effectuate the congressional intent of incentivizing investments in rural and high unemployment areas on the other, DHS believes that proposing the midway point between the two possible extremes for public comment is appropriate. Third, DHS determined that due to other proposed changes to the standard minimum investment amount in this rulemaking, the impact of a 25 percent reduction for TEA investments would initially be softened by the fact that the difference between the standard amount and the TEA investment amount, in terms of dollars, would remain roughly the same (changing from \$500,000 to \$450,000). Thus, at least for the first 5 years after the change proposed in this section, investors who choose to invest in TEAs will be able to invest at approximately the same savings in terms of real dollars as they do under the current regulations.

Finally, in addition to proposing to raise the minimum investment amount for TEAs, DHS proposes to adjust this amount every five years consistent with other parts of this proposed rule. *See* proposed 8 CFR 204.6(f)(2). Specifically, DHS proposes to keep the investment threshold for TEAs at 75 percent of the standard investment threshold. *Id.* As with the standard investment threshold, adjustments to the TEA investment threshold would be in effect for a 5-year period beginning on October 1 of the year of the adjustment. *Id.*

DHS welcomes public comment on all aspects of this proposal, including the

proposed minimum investment amount for TEAs as well as the proposal for adjusting the amount every five years. DHS also welcomes comment on the specific percentage reduction for TEA investments relative to the standard investment threshold, including alternative suggestions on the percentage to be considered.

E. TEA Designation Process

As discussed in the previous section, Congress created the two-tier investment system in order to incentivize investments in targeted employment areas, defined in the statute as “a rural area or an area which has experienced high unemployment (of at least 150 percent of the national average rate).” 8 U.S.C. 1153(b)(5)(B)(ii). In subsequent regulations published in 1991, the former INS allowed investors to demonstrate that their investment was in a high unemployment area in one of two ways: (1) By providing evidence that the metropolitan statistical area, the specific county within a metropolitan statistical area, or the county in which a city or town with a population of 20,000 or more is located, in which the new commercial enterprise is principally doing business has experienced an average unemployment rate of at least 150 percent of the national average rate; or (2) by submitting a letter from an authorized body of the government of the state in which the new commercial enterprise is located which certifies that the geographic or political subdivision of the metropolitan statistical area or of the city or town with a population of 20,000 or more in which the enterprise is principally doing business has been designated a high unemployment area. 8 CFR 204.6(j)(6)(ii). When the INS promulgated this provision, it permitted states to designate smaller TEAs—areas within an MSA or within a city or town with a population of 20,000 or more—because the agency believed that due to the nature of the data involved, states should have an opportunity to participate in TEA determinations.³⁷

Reliance on states’ TEA designations has resulted in the application of inconsistent rules by different states. Some of these rules understandably may be motivated primarily by the desire to promote economic development in the

relevant state, rather than by the desire to fulfill congressional intent with respect to the EB–5 program.³⁸ As mentioned previously, at least 97 percent of all EB–5 petitions filed in 2015 involved investments at the lower investment threshold for projects in TEAs. In addition, the deference to state determinations provided by current regulations has resulted in the acceptance of some TEAs that consist of areas of relative economic prosperity linked to areas with lower employment, and some TEAs that have been criticized as “gerrymandered.”³⁹

For these reasons, DHS proposes to eliminate state designation of high unemployment areas. This change would help ensure consistency across TEA designations. DHS would itself determine which areas qualify as TEAs, by applying standards proposed in this rule to the evidence presented by investors and regional centers. DHS alternatively considered continuing to allow states to make TEA designations while providing a clearer basis for DHS to scrutinize and overturn such designations. DHS, however, currently prefers to avoid such an approach because of the administrative burden it presents. DHS believes it would be more difficult to evaluate the individualized determinations of the various states than to implement and administer a nationwide standard on its own.

The proposed new standards for designating TEAs are as follows. First, the term “targeted employment area” would be defined, consistent with statutory authority, to mean an area which, at the time of investment, is a rural area or is designated as an area

³⁸ *Is the Investor Visa Program an Underperforming Asset?: Hearing Before the H. Comm. on the Judiciary*, 114th Cong. 62 (2016) (statement of Matt Gordon, Chief Exec. Officer, E3 Inv. Group) (“Generally, States quickly learned to be as permissive as possible in an attempt to attract ever greater amounts of EB–5 capital.”); *see also The Distortion of EB–5 Targeted Employment Areas: Time to End the Abuse: Hearing Before the S. Comm. on the Judiciary*, 114th Cong. 12 (2016) (statement of Gary Friedland, Scholar-in-Residence, N.Y. Univ., Stern School of Bus.) (“USCIS’ continued delegation to the states of the TEA authority without guidelines results in the application of inconsistent rules by the various states. More important, each state has the obvious self-interest to promote economic development within its own borders. Delegation presents an opportunity for the states to establish lenient rules to enable project locations to qualify as a TEA. Compounding the problem, often the state agency that is charged with making the TEA determination is the same agency that promotes local economic development. As a consequence, virtually every EB–5 project location qualifies as a TEA.”).

³⁷ 56 FR 60897 (Oct. 26, 1990) (“With respect to geographic and political subdivisions of this size, however, the Service believes that the enterprise of assembling and evaluating the data necessary to select targeted areas, and particularly the enterprise of defining the boundaries of such areas, should not be conducted exclusively at the Federal level without providing some opportunity for participation from state or local government.”).

³⁹ *See, e.g.,* Eliot Brown, *Swanky New York Condo Project Exploits Aid Program*, Wall St. Journal, Oct. 13, 2015, <http://www.wsj.com/articles/posh-tower-proposed-for-struggling-new-york-neighborhood-central-park-south-1444728781>.

which has experienced unemployment at least 150 percent of the national average rate. See proposed 8 CFR 204.6(e). DHS is also proposing to amend the definition of a “rural area” to mean any area other than an area within a metropolitan statistical area (as designated by the Office of Management and Budget (OMB)) or within the outer boundary of any city or town having a population of 20,000 or more based on the most recent decennial census of the United States. See proposed 8 CFR 204.6(e). This definition clarifies, consistent with statute, that qualification as a rural area is based on data from the most recent decennial census of the United States.

DHS is also proposing new guidelines for the designation of a TEA. As in the current system, investors may continue to provide evidence that the new commercial enterprise is principally doing business in (1) an MSA, (2) a specific county within an MSA, or (3) a county with a city or town with a population of 20,000 or more, that has experienced an average unemployment rate of at least 150 percent of the national average rate. See proposed 8 CFR 204.6(j)(6)(ii)(A). To this list, DHS proposes to add cities and towns with a population of 20,000 or more. *Id.*

Because cities and towns fall between counties and MSAs on the one hand, and geographic or political subdivisions within counties and MSAs on the other, DHS believes it is appropriate to include them as an area that could independently qualify as a TEA if the average unemployment rate for the city or town is at least 150 percent of the national average.

In addition to including cities and towns, DHS proposes new rules for determining when a geographic or political subdivision could qualify as a TEA—determinations that states currently make on a case-by-case basis. DHS proposes that a TEA may consist of a census tract or contiguous census tracts in which the new commercial enterprise is principally doing business⁴⁰ (the “project tract(s)”) if the weighted average of the unemployment rate⁴¹ for the tract or tracts is at least 150 percent above the national average. See proposed 8 CFR 204.6(i). Moreover, if the project tract(s) do not independently qualify under this analysis, a TEA may also be designated if the project tract(s) and any or all additional tracts that are directly adjacent to the project tract(s) comprise an area in which the weighted average of the unemployment rate for all of the

included tracts is at least 150 percent of the national average. *Id.* DHS proposes that petitioners submit a description of the boundaries of the geographic or political subdivision and the unemployment statistics in the area for which designation is sought as set forth in proposed 8 CFR 204.6(i), and the method or methods by which the unemployment statistics were obtained. See proposed 8 CFR 204.6(j)(6)(ii)(B).

The figure below illustrates how to apply the proposed limitations.⁴² The areas on the map outlined with a thin solid line represent census tracts. The tract outlined in a solid bold line near the center, just south of the waterway, represents the project tract in which the new commercial enterprise (represented by the pointer) is principally doing business. The broader area outlined in a dashed bold line contains all of the tracts that are adjacent to the project tract. Under the proposed limits, the tract outlined in a solid bold line may independently qualify as a TEA. If it does not, an area consisting of that tract and any or all of the additional tracts outlined in the dashed bold line could qualify as a TEA. Qualification is determined by looking to the weighted average unemployment rate of the entire area proposed.

⁴⁰ According to USCIS policy in effect at the time of issuance of this proposed rulemaking:

A new commercial enterprise is principally doing business in the location where it regularly, systematically, and continuously provides goods or services that support job creation. If the new commercial enterprise provides such goods or services in more than one location, it will be principally doing business in the location most significantly related to the job creation.

Factors considered in determining where a new commercial enterprise is principally doing business include, but are not limited to, the location of:

- Any jobs directly created by the new commercial enterprise;

- Any expenditure of capital related to the creation of jobs;

- The new commercial enterprise's day-to-day operation; and

- The new commercial enterprise's assets used in the creation of jobs.

USCIS Policy Manual, 6 USCIS-PM G (Nov. 30, 2016).

⁴¹ In order to determine if a project qualifies for TEA designation USCIS would first determine the weighted unemployment rate for each census tract in the TEA area. To determine the weighted unemployment rate of a census tract, USCIS would divide the labor force (civilians ages 16 and older

who are employed or employed, plus active duty military) of each census tract by the labor force of the entire TEA area. USCIS would then multiply this figure by the unemployment rate of that specific census tract. The resulting figure is the weighted unemployment rate for each individual census tract. The total weighted unemployment rate is the sum of the weighted unemployment rates for each census tract in the TEA area. If the total weighted unemployment rate is 150% above the national unemployment rate then the project would qualify for TEA designation.

⁴² For ease of reference, a color-coded version of this figure is available in the docket for this rulemaking.

The proposed new TEA designation rules would rely on the census tract as the building block for the geographic or political subdivision for multiple reasons. First, census tracts offer uniformity. Although census tracts vary in size, they are generally drawn to define a residential population of between 1,200 and 8,000 people, with an optimum size of 4,000 people per census tract according to the U.S. Census Bureau.⁴³ No census tract can extend beyond county lines, meaning the largest census tract would, at most, cover a single county.⁴⁴ Second, data at the census tract level is more readily publicly available, and is updated annually based on data collected through the Census Bureau's "American Community Survey" (ACS).⁴⁵ Third, census tract numbering is generally stable and would only change at the time of the next available census (generally every 10 years). Fourth, as local planning agencies can request changes to census tract configurations, the use of census tracts still provides localities with some input into the overall process. However, DHS believes this input is sufficiently limited to avoid concerns regarding political influence on TEA designations, because census tracts typically only change when populations change to the point that a tract is split or two tracts are merged.⁴⁶ DHS also surveyed agencies in several locations to obtain information regarding how they have approached the TEA designation process, namely: the states of Illinois, New York, and California, and the city of Dallas, Texas. Every state or local agency consulted by DHS relied on census tract level unemployment data in the TEA designation process.⁴⁷

In addition to utilizing the census tract as the most appropriate and reliable building block for EB-5 program purposes, DHS believes it is appropriate for a TEA to consist of both the project tract(s) and the census tracts adjacent to the project tracts as such an area—including the tracts immediately

surrounding the project tract(s)—is likely to experience the employment-creation impact of the investment. DHS considered extending the cluster to census tracts beyond those directly adjacent to the project tract(s), but determined that doing so in some cases would include areas that are too far from the site of the proposed project.⁴⁸

DHS considered other options presented by stakeholders⁴⁹ and during congressional hearings⁵⁰ to determine

⁴⁸ See Stuart S. Rosenthal and William C. Strange, *Evidence on the Nature and Sources of Agglomeration Economies*, Aug. 24, 2003, available at <http://siteresources.worldbank.org/INTLED/Resources/339650-1105473440091/WillAndStuart.pdf> ("More recently still, Rosenthal and Strange (2003) provide a micro-level analysis of the geographic scope of agglomeration economies. The environment of an establishment is measured by constructing rings around the centroid of the establishment's zip code. Rings of 1 mile, 5 miles, 10 miles, and 15 miles are included. For each of the six industries studied . . . new arrivals are more likely to be attracted to zip codes as employment in the own industry within one mile increases. Employment in the own industry just five miles away, however, has a much smaller effect, as does employment further out in the ten and fifteen mile rings."); see also John C. Ham, Charles Swenson, Ayşe İmrohoroğlu, and Heonjae Song, *Government Programs Can Improve Local Labor Markets: Evidence from State Enterprise Zones, Federal Empowerment Zones and Federal Enterprise Communities*, 95 J. Pub. Econ. 779, 779–97 (2011) ("Federal and state governments spend well over a billion dollars a year on programs that encourage employment development in disadvantaged labor markets through the use of subsidies and tax credits We find that all three programs have positive, statistically significant, impacts on local labor markets in terms of the unemployment rate, the poverty rate, the fraction with wage and salary income, and employment.").

⁴⁹ On April 25, 2016, DHS held an EB-5 Listening Session, in which it solicited and received feedback from stakeholders on several issues, including the TEA process. Stakeholders expressed concerns about a lack of consistency in state TEA designations ("I think we all know that every single state in this union has a different way of doing targeted employment areas"), the inefficiency of state TEA designation ("I think that the current process is very inefficient . . . the states are reviewing . . . federal data and the states don't provide any benefit."), and the natural incentive for states to approve TEAs ("The other thing is that . . . there's an incentive to lower the hurdle for their state."). DHS further solicited feedback on the same issues through its Idea Community Web site, an online portal available to the general public. See USCIS Idea Community, <https://www.uscis.gov/outreach/uscis-idea-community>; Remarks, EB-5 Immigrant Investor Program Stakeholder Engagement (July 28, 2016), available at https://www.uscis.gov/sites/default/files/USCIS/Outreach/Notes%20from%20Previous%20Engagements/PED_EB5NatStakeholderEng072816_MackenzieRemarks.pdf. DHS received various suggestions for changing the TEA process, including the consideration of commuting patterns and greater scrutiny of the state designation process by DHS.

⁵⁰ See *The Distortion of EB-5 Targeted Employment Areas: Time to End the Abuse: Hearing Before the S. Comm. on the Judiciary*, 114th Cong. (2016) (statement of Gary Friedland, Scholar-in-Residence, N.Y. Univ., Stern School of Bus.).

the parameters for a TEA. One option DHS considered was limiting the geographic or political subdivision to the project tract(s). This option would be easy to put in practice for both stakeholders and the agency, but was considered too restrictive in that it would exclude immediately adjacent areas that would be impacted by the investment. Another option DHS considered was limiting the geographic or political subdivision to an area containing up to, but no more than, 12 contiguous census tracts, an option currently used by the state of California in its TEA designation process.⁵¹ However, DHS is not confident that this option is necessarily appropriate for nationwide application, as the limitation to 12 census tracts may be justifiable for reasons specific to California but may not be apt on a national scale.

DHS also considered options based on a "commuter pattern" analysis, which focuses on defining a TEA as encompassing the area in which workers may live and be commuting from, rather than just where the investment is made and where the new commercial enterprise is principally doing business. The "commuter pattern" proposal was deemed too operationally burdensome to implement as it posed challenges in establishing standards to determine the relevant commuting area that would fairly account for variances across the country.⁵² In addition, DHS could not identify a commuting-pattern standard that would appropriately limit the geographic scope of a TEA designation

⁵¹ See Cal. Governor's Office of Bus. and Econ. Dev., EB-5 Investor Visa Program, available at <http://business.ca.gov/International/EB5Program.aspx>.

⁵² DHS reviewed a proposed commuter pattern analysis incorporating the data table, Federal Highway Administration, CTPP 2006–2010 Census Tract Flows, available at (http://www.fhwa.dot.gov/planning/census_issues/ctpp/data_products/2006-2010_tract_flows/) (last updated Mar. 25, 2014). DHS found the required steps to properly manipulate the Census Transportation Planning Product (CTPP) database might prove overly burdensome for petitioners with insufficient economic and statistical analysis backgrounds. Further, upon contacting the agency responsible to manage the CTPP data table, DHS was informed that the 2006–2010 CTPP data is unlikely to be updated prior to FY2018 to incorporate proposed changes to the data table. U.S. Census is currently reviewing the CTPP proposed changes. As an alternate methodology for TEA commuter pattern analysis, DHS reviewed data from the U.S. Census tool, On the Map, <http://onthemap.ces.census.gov/>, which is tied to the U.S. Census Bureau's American Community Survey. Although the interface appeared to be more user-friendly overall, using this data would be operationally burdensome, potentially requiring hours of review to obtain the appropriate unemployment rates for the commuting area.

⁴³ U.S. Census Bureau, *Census Tracts*, available at <https://www.census.gov/geo/reference/webatlas/tracts.html>.

⁴⁴ U.S. Census Bureau, *Geographic Terms and Concepts—Census Tract*, available at https://www.census.gov/geo/reference/gtc/gtc_ct.html (Note: Tribal census tracts are unique and can cross state and county boundaries).

⁴⁵ U.S. Census Bureau, *Am. Cmty. Survey*, available at <http://factfinder.census.gov/faces/nav/jsf/pages/programs.xhtml?program=acs>.

⁴⁶ U.S. Census Bureau, *Geography: Census Tracts*, available at <https://www.census.gov/geo/reference/webatlas/tracts.html>.

⁴⁷ We note that only one state, California, set parameters on the use of census tracts, limiting the tracts to 12 contiguous tracts encompassing the investment project location.

consistent with the statute and the policy goals of this proposed regulation.

DHS believes the proposed guidelines limiting TEAs to MSAs, counties, cities, or project tracts (including any and all adjacent tracts) would remove the possibility of gerrymandering and better ensure that the reduced investment threshold is reserved for areas experiencing significantly higher levels of unemployment. DHS seeks public comment on all aspects of this proposal, including on the feasibility and appropriateness of each of the potential alternatives to the census tract model discussed above, as well as any other alternatives that commenters wish to propose. With respect to all such alternatives, DHS would particularly benefit from comments that set forth a clear and easily administrable methodology.

F. Technical Changes

DHS is also proposing a number of other technical changes. These changes would variously: (1) Clarify the filing process for derivatives who are filing the Petition by Entrepreneur to Remove Conditions on Permanent Resident Status (Form I-829) separately from the immigrant investor; (2) enhance flexibility in determining the interview location related to the Form I-829 adjudication; and (3) update the regulation to conform to the current process for issuing permanent resident cards after the removal of conditions on status. DHS is also proposing miscellaneous other changes. The proposed changes are described in more detail below.

(1) Separate Filings for Derivatives

The proposed rule would clarify the process by which an immigrant investor's spouse and children file separate Form I-829 petitions when they are not included in the Form I-829 filed by the immigrant investor. Generally, an immigrant investor's derivatives should be included in the principal immigrant investor's Form I-829 petition. See 8 CFR 216.6(a)(1). However, there are situations in which derivatives may not be included on the principal immigrant investor's Form I-829 petition, such as when the immigrant investor dies during the conditional residence period, or when the immigrant investor decides not to continue his or her conditional permanent resident status. In such circumstances, if the immigrant investor would have otherwise been eligible to have his or her conditions on status removed, then the derivatives would remain eligible to remove the conditions on their status even if the immigrant

investor cannot or will not file a Form I-829 petition.⁵³

The current regulation does not clearly define the process by which derivatives may file a Form I-829 petition when they are not included on the principal's petition, including whether each derivative in such cases should file his or her own separate Form I-829 petition or whether the derivatives should jointly file on the same petition. The proposed regulations specify that where the dependent family members cannot be included in the Form I-829 petition filed by the principal investor because that principal is deceased, all dependents of the deceased investor may be included on a single Form I-829 petition. See proposed 8 CFR 216.6(a)(1)(ii). DHS also clarifies, however, that consistent with current practice, each derivative must file a separate Form I-829 petition in all other situations in which the investor's spouse and children are not included in the investor's Form I-829 petition. See *id.*

(2) Interviews

Section 216A(c)(1)(B) of the INA, 8 U.S.C. 1186b(c)(1)(B), generally requires Form I-829 petitioners to be interviewed prior to final adjudication of the petition, although DHS may waive the interview requirement in its discretion, see INA section 216A(d)(3), 8 U.S.C. 1186b(d)(3). The statute also provides that the interview may be held at a location that "is convenient to the parties involved." See INA section 216A(d)(3), 8 U.S.C. 1186b(d)(3). Under current regulations, however, interviews are generally scheduled in the location of the new commercial enterprise, even though there is no statutory or regulatory requirement that the immigrant investor reside in the same location as the new commercial enterprise. Specifically, the current regulation requires the interview to be conducted by an immigration examiner or other officer so designated by the director of the USCIS District Office "that has jurisdiction over the location of the alien entrepreneur's commercial enterprise." 8 CFR 216.6(b)(2).

Under this rule, DHS is proposing to give stakeholders greater flexibility in the interview location by clarifying the agency's discretion under the INA to determine the appropriate location for Form I-829 petition interviews. Specifically, the proposed amendment

would allow USCIS to schedule an interview at the USCIS office holding jurisdiction over either the immigrant investor's commercial enterprise, the immigrant investor's residence in the United States, or the location where the Form I-829 petition is adjudicated. See proposed 8 CFR 216.6(b)(2). DHS believes this change will both benefit the agency by making the interview process more effective and benefit immigrant investors by reducing the need to travel long distances to participate in Form I-829 petition interviews.

(3) Process for Issuing Permanent Resident Cards

DHS also proposes to amend regulations governing the process by which immigrant investors obtain their new permanent resident cards after the approval of their Form I-829 petitions. After an immigrant investor's Form I-829 petition is approved, the immigrant investor and each included derivative is entitled to a Permanent Resident Card (Form I-551). The provision of this card documents that the conditions on the immigrant investor's LPR status have been removed. Current regulations include an outdated description of the process for obtaining such permanent resident cards. Specifically, the current regulation requires the immigrant investor and his or her derivatives to report to a district office for processing of their permanent resident cards after approval of the Form I-829 petition. 8 CFR 216.6(d)(1). This process is no longer necessary in light of intervening improvements in DHS's biometric data collection program.⁵⁴ DHS now captures the required biometric data during the pendency of the Form I-829 petition, at the time the immigrant investor and his or her derivatives appear at an Application Support Center for fingerprinting, as required for the Form I-829 background and security checks. DHS then mails the permanent resident card directly to the immigrant investor by U.S. Postal Service registered mail after the Form I-829 petition is approved. There is therefore no need for each immigrant investor or any derivatives to report to a district office for processing of their permanent resident cards after petition approval.

DHS is thus proposing to remove the mandatory reporting requirement from the regulatory text, and to replace that requirement with the discretionary authority to require an immigrant investor to report to a district office to provide biometric data when needed to

⁵³ See INA section 204(l), 8 U.S.C. 1154(l) (providing that upon the death of the principal beneficiary, surviving relative petitions and "related applications" must be adjudicated notwithstanding the death of the principal beneficiary).

⁵⁴ DHS already has authority to collect this information under 8 CFR part 103.

complete card production. *See* proposed 8 CFR 216.6(d)(1). This discretionary authority is intended to address circumstances in which an in-person meeting is necessary, such as when the biometrics captured during the Form I-829 background process may not be suitable for issuing a permanent resident card.

(4) Miscellaneous Other Changes

DHS is also proposing a number of other technical changes to the EB-5 regulations. First, DHS is proposing to update a reference to the former United States Customs Service, so that it will now refer to U.S. Customs and Border Protection. *See* proposed 8 CFR 204.6(j)(2)(iii). On March 1, 2003, the Homeland Security Act of 2002 created U.S. Customs and Border Protection, which is now responsible for activities previously handled by the U.S. Customs Service, including the issuance of commercial entry documents. *See* 6 U.S.C. 211.

Second, DHS is proposing to conform DHS regulations to the 21st Century Department of Justice Appropriations Authorization Act, Public Law 107-273, which eliminated the requirement that immigrant entrepreneurs establish a new commercial enterprise from both section 203(b)(5) and section 216A of the INA. Accordingly, USCIS proposes to remove references to this requirement in 8 CFR 204.6 and 216.6.

Third, DHS is proposing to further conform DHS regulations to Public Law 107-273 by removing the references to “management” at 8 CFR 204.6(j)(5) and 8 CFR 204.6(j)(5)(iii). Section 203(b)(5)(A) of the INA requires that EB-5 petitioners be seeking “to enter the United States for the purpose of engaging in a new commercial enterprise.” INA section 203(b)(5)(A), 8 U.S.C. 1153(b)(5)(A). To give effect to this provision, existing regulations require investors to be “engaged in the management of the new commercial enterprise,” which can be accomplished in one of two ways: “through the exercise of day-to-day managerial control” or “through policy formulation.” 8 CFR 204.6(j)(5). DHS has determined that the reference to “management” should be removed, as actual management of the new commercial enterprise is not strictly required by section 203(b)(5)(A) of the INA. The statutory text does not use the term, and strictly requiring the exercise of managerial control may be inconsistent with Public Law 107-273, which amended section 203(b)(5) to expressly permit new commercial enterprises to take the form of limited partnerships (as had been previously

permitted by existing regulation). Removal of the reference to “management” from 8 CFR 204.6(j)(5) would have no practical effect, as the provision already allows and would continue to allow investors to demonstrate eligibility either through management or through policy formulation. The reference to “management” would also be removed from 8 CFR 204.6(j)(5)(iii) because that provision pertains to evidence that is largely unrelated to management.

Fourth, DHS is proposing to remove the phrase “as opposed to maintaining a purely passive role in regard to the investment” from 8 CFR 204.6(j)(5). DHS deems this phrase unnecessary as both the existing regulations at 8 CFR 204.6(j)(5)(iii) and the proposed version of that subsection specify the circumstances in which investments may be essentially passive in nature.

Fifth, DHS is proposing to allow investors in any type of entity to demonstrate that they are sufficiently engaged in a new commercial enterprise through policymaking activities by virtue of being an equity holder in the new commercial enterprise with rights, powers and duties normally granted to such equity holders. *See* proposed 8 CFR 204.6(j)(5)(iii). DHS recognizes that the amendment made by Public Law 107-273 to allow limited partnerships to serve as new commercial enterprises was intended to require flexibility in the administration of the EB-5 program with respect to the use of different entity types. Accordingly, to provide clarity and flexibility for all currently existing entity types, including limited liability companies, as well as to accommodate future entity types without creating an unnecessary distortion in the choice of entities used within the EB-5 program, DHS is proposing to revise the regulations to cover all types of entities and to consider equity holders in any type of entity to be considered sufficiently engaged if they are provided with the rights, duties, and powers normally provided to those types of equity holders. *See id.*

Sixth, DHS is proposing to amend 8 CFR 204.6(k) to remove the requirement on USCIS to specify in the decision on the EB-5 immigrant petition whether the new commercial enterprise is principally doing business in a TEA. *See* proposed 8 CFR 204.6(k). This requirement provides no operational benefit to USCIS, as the agency relies on other means to track which approved petitions were based on investments in TEAs. The requirement also provides no benefit to investors; an approved petition based on an investment in a

TEA necessarily means that the petitioner has met the burden of satisfying that eligibility requirement, and if a petition is denied due to failure to satisfy the requirement, the decision and analysis will be explicitly stated in the denial. This revision would also replace a reference to the Associate Commissioner for Examinations with a reference to the Administrative Appeals Office, which is now the appropriate appellate authority in denied cases. *See id.*

Finally, DHS is proposing revisions to otherwise unaffected portions of section 204.6 and 216.6 to replace the term “entrepreneur” with the term “investor.” This will provide clarity and consistency in the program’s terminology, including by mirroring terminology in USCIS policy. DHS also proposes to remove the “Form I-526” and “Form I-829” references in 8 CFR 204.6(a), and 8 CFR 216.6(a) and (b), respectively. Throughout the proposed regulations, DHS has removed references to specific form names and numbers to ensure the regulations remain relevant and informative, regardless of potential future form name or number changes. Additionally, the proposed revision to 8 CFR 216.6(a)(5) would replace the word “deportation” with “removal” proceedings to conform to terminology used in the INA.

V. Statutory and Regulatory Requirements

A. Unfunded Mandates Reform Act of 1995

The Unfunded Mandates Reform Act of 1995 is intended, among other things, to curb the practice of imposing unfunded Federal mandates on State, local, and tribal governments. Title II of the Act requires each Federal agency to prepare a written statement assessing the effects of any Federal mandate in a proposed or final agency rule that may result in a \$100 million or more expenditure (adjusted annually for inflation) in any one year by State, local, and tribal governments, in the aggregate, or by the private sector. The value equivalent of \$100 million in 1995 adjusted for inflation to 2015 levels by the Consumer Price Index for All Urban Consumers is \$155 million.

This proposed rule does not include any unfunded Federal mandates. The requirements of Title II of the Act, therefore, do not apply, and DHS has not prepared a statement under the Act.

B. Small Business Regulatory Enforcement Fairness Act of 1996

This rule is not a major rule as defined by section 804 of the Small

Business Regulatory Enforcement Fairness Act of 1996. This proposed rule will not result in an annual effect on the economy of \$100 million or more, a major increase in costs or prices, or significant adverse effects on competition, employment, investment, productivity, innovation, or on the ability of United States companies to compete with foreign-based companies in domestic and export markets. However, as some small businesses may be impacted under this regulation, DHS has prepared an IRFA under the Regulatory Flexibility Act.

C. Executive Orders 12866 and 13563

Executive Orders 12866 and 13563 direct agencies to assess the costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). Executive Order 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. This proposed rule has been designated a “significant regulatory action” under section 3(f) of Executive Order 12866. Accordingly, the rule has been reviewed by OMB.

(1) Summary

This rule proposes changes to certain aspects of the EB-5 program that are in need of reform, and would also update the regulations to reflect statutory changes and codify existing policies.

This proposed rule would make three major changes along with other technical and miscellaneous changes to the current regulations. First, DHS proposes to allow EB-5 immigrant petitioners, with limited exception, to use the priority date of an approved EB-5 immigrant petition for any subsequently filed EB-5 immigrant petition for which the petitioner qualifies. Second, DHS proposes to increase the standard minimum investment amount to \$1.8 million to account for inflation since the program’s inception, and builds in a mechanism to adjust the investment amount based on the unadjusted CPI-U every 5 years. Similarly, DHS proposes to increase the TEA minimum investment amount to \$1.35 million, or 75 percent of the standard amount, and to periodically adjust the TEA minimum investment amount so that it remains 75 percent of the standard amount. Third, DHS proposes to eliminate state designation of high unemployment areas and proposes new standards for the designation of TEAs.

DHS is also proposing several technical changes. These changes include clarifying the filing process for derivatives who are filing Form I-829 petitions separately from the principal immigrant investor, providing flexibility in determining the location of interviews for Form I-829 petitions, and updating outdated regulations on how an immigrant investor obtains a new permanent resident card after approval of the Form I-829 petition. Additionally, this proposed rule would make miscellaneous changes including updating references to the U.S. Customs

and Border Protection, removing references to requirements that foreign entrepreneurs establish a new commercial enterprise (NCE) in 8 CFR 204.6 and 216.6, removing references to “management” at 8 CFR 204.6(j)(5) and 8 CFR 204.6(j)(5)(iii), removing the phrase “as opposed to maintain a purely passive role in regard to the investment” from 8 CFR 204.6(j)(5), allowing any type of entity to serve as a new commercial enterprise, amending 8 CFR 204.6(k) to specify how USCIS will issue decisions, and revising 8 CFR 204.6 and 216.6 to use the term “investor” instead of “entrepreneur” and “removal” instead of “deportation.”

Several of the provisions are expected to generate costs and benefits, although DHS does not have the necessary data to monetize these costs and benefits, with the exception of total costs of approximately \$91,000⁵⁵ expected for dependents who would file Form I-829 petitions separately from principal investors. The proposed rule would likely result in long term expected benefits in the form of job stimulation due to increased EB-5 investment overall. The Table below is the same as Table 1 found in the “Costs and Benefits” portion of the Executive Summary above and provides a synopsis of each of the provisions in this proposed rule and its estimated impacts. In addition to the impacts outlined in the table, DHS believes that there would be some familiarization costs associated with reading and assessing the proposed rule. Based on several assumptions, DHS estimates these costs to be about \$501,154 annually.

TABLE 2—SUMMARY OF CHANGES AND IMPACT OF THE PROPOSED PROVISIONS

Current policy	Proposed change	Impact
Current DHS regulations do not permit investors to use the priority date of an approved EB-5 immigrant petition for a subsequently filed EB-5 immigrant petition.	DHS proposes to allow an EB-5 immigrant petitioner to use the priority date of an approved EB-5 immigrant petition for a subsequently filed EB-5 immigrant petition for which the petitioner qualifies.	<p>Benefits:</p> <ul style="list-style-type: none"> • Makes visa allocation more predictable for investors with less possibility for large fluctuations in visa availability dates due to regional center termination. • Provides greater certainty and stability regarding the timing of eligibility for investors pursuing permanent residence in the U.S. and thus lessens the burden of unexpected changes in the underlying investment. • Provides more flexibility to investors to contribute into more viable investments, potentially reducing fraud and improving potential for job creation. <p>Costs:</p> <ul style="list-style-type: none"> • Not estimated.

⁵⁵The cost estimate is rounded from \$90,762.

TABLE 2—SUMMARY OF CHANGES AND IMPACT OF THE PROPOSED PROVISIONS—Continued

Current policy	Proposed change	Impact
<p>The standard minimum investment amount has been \$1 million since 1990 and has not kept pace with inflation.</p> <p>Further, the statute authorizes a reduction in the minimum investment amount when such investment is made in a TEA by up to 50 percent of the standard minimum investment amount. Since 1991, DHS regulations have set the TEA investment threshold at 50 percent the minimum investment amount.</p> <p>Similarly, DHS has not proposed to increase the minimum investment amount for investments made in a high employment area beyond the standard amount.</p>	<p>DHS proposes to account for inflation in the investment amount since the inception of the program. DHS proposes to raise the minimum investment amount to \$1.8 million. DHS also proposes to include a mechanism to automatically adjust the minimum investment amount based on the unadjusted CPI-U every 5 years.</p> <p>DHS proposes to decrease the reduction for TEA investment thresholds, and set the TEA minimum investment at 75 percent of the standard amount. Assuming the standard investment amount is \$1.8 million, investment in a TEA would initially increase to \$1.35 million.</p> <p>DHS is not proposing to change the equivalency between the standard minimum investment amount and those made in high employment areas. As such, DHS proposes that the minimum investment amounts in high employment areas would be \$1.8 million, and follow the same mechanism for future inflationary adjustments.</p>	<p>Benefits:</p> <ul style="list-style-type: none"> • Increases in investment amounts are necessary to keep pace with inflation and real value of investments; • Raising the investment amounts increases the amount invested by each investor and potentially increases the total amount invested under this program. • For regional centers, the higher investment amounts per investor would mean that fewer investors would have to be recruited to pool the requisite amount of capital for the project, so that searching and matching of investors to projects could be less costly. <p>Costs:</p> <ul style="list-style-type: none"> • Some investors may be unable or unwilling to invest at the higher proposed levels of investment. • There may be fewer jobs created if fewer investors invest at the proposed higher investment amounts. • For regional centers, the higher amounts could reduce the number of investors in the global pool and result in fewer investors and thus make search and matching of investors to projects more costly. • Potential reduced numbers of EB-5 investors could prevent projects from moving forward due to lack of requisite capital. • An increase in the investment amount could make foreign investor visa programs offered by other countries more attractive.
<p>A TEA is defined by statute as a rural area or an area which has experienced high unemployment (of at least 150 percent of the national average rate). Currently, investors demonstrate that their investments are in a high unemployment area in two ways:</p> <ol style="list-style-type: none"> (1) providing evidence that the MSA, the specific county within the MSA, or the county in which a city or town with a population of 20,000 or more is located, in which the new commercial enterprise is principally doing business, has experienced an average unemployment rate of at least 150 percent of the national average rate or (2) submitting a letter from an authorized body of the government of the state in which the new commercial enterprise is located, which certifies that the geographic or political subdivision of the metropolitan statistical area or of the city or town with a population of 20,000 or more in which the enterprise is principally doing business has been designated a high unemployment area. 	<p>DHS proposes to eliminate state designation of high unemployment areas. DHS also proposes to amend the manner in which investors can demonstrate that their investments are in a high unemployment area.</p> <ol style="list-style-type: none"> (1) In addition to MSAs, specific counties within MSAs, and counties in which a city or town with a population of 20,000 or more is located, DHS proposes to add cities and towns with a population of 20,000 or more to the types of areas that can be designated as a high unemployment area. (2) DHS is proposing that a TEA may consist of a census tract or contiguous census tracts in which the new commercial enterprise is principally doing business if the weighted average of the unemployment rate for the tract or tracts is at least 150 percent of the national average. (3) DHS is also proposing that a TEA may consist of an area comprised of the census tract(s) in which the new commercial enterprise is principally doing business, including any and all adjacent tracts, if the weighted average of the unemployment rate for all included tracts is at least 150 percent of the national average. 	<p>Benefits:</p> <ul style="list-style-type: none"> • Rules out TEA configurations that rely on a large number of census tracts indirectly linked to the actual project tract by numerous degrees of separation. • Potential to better stimulate job growth in areas where unemployment rates are the highest. <p>Costs:</p> <ul style="list-style-type: none"> • The proposed TEA provision could cause some projects and investments to not qualify. DHS presents the potential number of projects and investments that could be affected in Table 5.

TABLE 2—SUMMARY OF CHANGES AND IMPACT OF THE PROPOSED PROVISIONS—Continued

Current policy	Proposed change	Impact
<p>Current technical issues:</p> <ul style="list-style-type: none"> • The current regulation does not clearly define the process by which derivatives may file a Form I-829 petition when they are not included on the principal's petition. • Interviews for Form I-829 petitions are generally scheduled at the location of the new commercial enterprise. • The current regulations require an immigrant investor and his or her derivatives to report to a district office for processing of their permanent resident cards. <p>Current miscellaneous items:</p> <ul style="list-style-type: none"> • 8 CFR 204.6(j)(2)(iii) refers to the former U.S. Customs Service. • Public Law 107-273 eliminated the requirement that alien entrepreneurs establish a new commercial enterprise from both INA § 203(b)(5) and INA § 216A. • 8 CFR 204.6(j)(5) and 8 CFR 204.6(j)(5)(iii) reference "management"; • Current regulation at 8 CFR 204.6(j)(5) has the phrase "as opposed to maintain a purely passive role in regard to the investment"; • Public Law 107-273 allows limited partnerships to serve as new commercial enterprises; • Current regulation references the former Associate Commissioner for Examinations • 8 CFR 204.6(k) requires USCIS to specify in its Form I-526 decision whether the new commercial enterprise is principally doing business in a targeted employment area • Sections 204.6 and 216.6 use the term "entrepreneur" and "deportation." These sections also refer to Forms I-526 and I-829 <p>Miscellaneous Cost:</p> <ul style="list-style-type: none"> • Familiarization cost of the rule 	<p>DHS is proposing the following technical changes:</p> <ul style="list-style-type: none"> • Clarify the filing process for derivatives who are filing a Form I-829 petition separately from the immigrant investor. • Provide flexibility in determining the interview location related to the Form I-829 petition. • Amend the regulation by which the immigrant investor obtains the new permanent resident card after the approval of his or her Form I-829 petition because DHS captures biometric data at the time the immigrant investor and derivatives appear at an ASC for fingerprinting. <p>DHS is proposing the following miscellaneous changes:</p> <ul style="list-style-type: none"> • DHS is updating references at 8 CFR 204.6(j)(2)(iii) from U.S. Customs Service to U.S. Customs and Border Protection. • Removing references to requirements that alien entrepreneurs establish a new commercial enterprise in 8 CFR 204.6 and 216.6. • Removing references to "management" at 8 CFR 204.6(j)(5) and 8 CFR 204.6(j)(5)(iii); • Removing the phrase "as opposed to maintain a purely passive role in regard to the investment" from 8 CFR 204.6(j)(5); • Clarifies that any type of entity can serve as a new commercial enterprise; • Replacing the reference to the former Associate Commission for Examinations with a reference to the USCIS AAO. • Amending 8 CFR 204.6(k) to specify how USCIS will issue a decision. • Revising sections 204.6 and 216.6 to use the term "investor" instead of "entrepreneur" and to use the term "removal" instead of "deportation." <p>Applicants would need to read and review the rule to become familiar with the proposed provisions.</p>	<p>Conditions of Filing:</p> <p>Benefits:</p> <ul style="list-style-type: none"> • Adds clarity and eliminates confusion for the process of derivatives who file separately from the principal immigrant investor. <p>Costs:</p> <ul style="list-style-type: none"> • Total cost to applicants filing separately would be \$90,762 annually. <p>Conditions of Interview:</p> <p>Benefits:</p> <ul style="list-style-type: none"> • Interviews may be scheduled at the USCIS office having jurisdiction over either the immigrant investor's commercial enterprise, the immigrant investor's residence, or the location where the Form I-829 petition is being adjudicated, thus making the interview program more effective and reducing burdens on the immigrant investor; • Some applicants may have cost savings from lower travel costs. <p>Costs:</p> <ul style="list-style-type: none"> • Not estimated. <p>Investors obtaining a permanent resident card:</p> <p>Benefits:</p> <ul style="list-style-type: none"> • Cost and time savings for applicants for biometrics data. <p>Costs:</p> <ul style="list-style-type: none"> • Not estimated. <p>These provisions are technical changes and will have no impact on investors or the government. Therefore, the benefits and costs for these changes were not estimated.</p> <p>Familiarization costs to review the rule are estimated at \$501,154 annually.</p>

(2) Background and Purpose of the Proposed Rule

The preceding sections of the preamble review key historical aspects and goals of the program, and specific justifications for the particular provisions proposed in the rule. This section supplements and provides additional points of analysis that are pertinent to this regulatory impact assessment.

A person wishing to immigrate to the United States under the EB-5 program must file an Immigrant Petition by Alien Entrepreneur (Form I-526). Each individual immigrant investor files a Form I-526 petition containing information about their investment.⁵⁶

⁵⁶ To be eligible at the time of the Form I-526 petition's filing, investors must demonstrate either that they have already invested their funds into the NCE or that they are actively in the process of

The investment must be made into either an NCE within a designated regional center in accordance with the Regional Center Program or a standalone NCE outside of the Regional Center

investing. Some investors choose to demonstrate commitment of funds by placing their capital contribution in an escrow account in a U.S. financial intermediary, to be released irrevocably to the NCE upon a certain trigger date or event, such as approval of the Form I-526 petition.

Program (“non-regional center” investment). The NCE may create jobs directly (required for non-regional center investments), or serve as a source of funding for separate job creating entities (JCEs) (allowable for regional center investments).

With respect to regional center investors, once a regional center has been designated, affiliated investors can submit Form I-526 petitions in the concurrent year and in future years, provided the regional center maintains its designation. Each year, the stock of approved regional centers represents the previous year’s approved total, plus new regional centers approved during the current year, minus a relatively small number of regional centers that are terminated in the concurrent year.⁵⁷

DHS analysis of Form I-526 filing data for FY 2013–2015 indicates that on average, 10,547 Form I-526 petitions were filed annually. Regional centers accounted for 9,623 such petitions annually, or 91 percent of all submitted Form I-526 petitions, while non-regional centers accounted for an average of 924 Form I-526 petitions annually, or 9 percent.

EB-5 filings grew rapidly starting in 2008, when the U.S. financial crisis reduced available U.S.-based commercial lending funds and alternative funding sources, such as the EB-5 program, were sought. Based on the type of projects that Form I-526 petitions describe, it appears that EB-5 capital has been used as a source of financing for a variety of projects, including a large number of commercial real estate development projects to develop hotels, assisted living facilities, and office buildings.

In general, DHS databases do not track the total number of investment projects associated with each individual EB-5 investment, but rather track the NCE associated with each individual investment. Any given NCE could fund multiple projects. DHS analysis of filing data reveals that for FY 2013–2015, on average per year, 1,246 unique NCEs were referenced in the Form I-526 petitions submitted. On average, 726 of these NCEs (58 percent of the overall number of unique NCEs) were found in petitions associated with regional centers. And on average, 520 of these NCEs, or 42 percent of the overall number of NCEs, were found in non-

regional center-associated petitions. This suggests that on average, unique NCEs are more common in non-regional center filings, as 91 percent of filings are associated with regional centers.⁵⁸

DHS obtained and analyzed a random sample of Form I-526 petitions that were submitted in FY 2016. The files in the sample were pending adjudicative review at the EB-5 program office in May 2016.⁵⁹ As the results obtained from analysis of this random sample are utilized in forthcoming sections of this regulatory analysis, it will be referred to as the “2016 NCE sample” for brevity. A key takeaway from the review of the sample is that a majority of all NCEs (80 percent) blended program capital with other sources. For regional center NCEs sourced with blended capital, the EB-5 portion comprised 40 percent of the total capital outlay, while for non-regional center NCEs sourced with blended capital, the EB-5 portion comprised 50 percent of the total capital outlay.

(3) Baseline Program Forecasts

DHS produced a baseline forecast of the total number of Form I-526 receipts, beginning in the first year the rule would take effect and extending for 10 years for the period FY 2017–2026.⁶⁰ This Form I-526 forecast includes the historical trend of Form I-526 receipts from FY 2005 to FY 2015, the filing projections from the USCIS Volume Projections Committee (VPC), and input from the EB-5 program office. The VPC projects that the high rate of growth in EB-5 investment filings, which averaged 39 percent annually since FY 2008, will slow to about 3.3 percent over the next 3 years and will

subsequently level off.⁶¹ The program grew exponentially starting in 2008 with the economic downturn. At that time, commercial lending was extremely difficult to obtain. Over time as the U.S. economy has improved, commercial lending is now more viable, resulting in fewer overall petitions. In addition, over the past two fiscal years, USCIS has experienced significant spikes in filings in anticipation of Congress either allowing the regional center program to sunset or implementing new legislative reforms that would make it difficult for some regional centers to immediately comply. These spikes have occurred around the program’s anticipated sunset (September 2015, December 2015, and September 2016). USCIS believes that the filings will level off once the program is extended for longer than one year at a time. DHS used this information to inform a forecasting model based on a logistic function that captures the past increase in receipts from a low baseline, the exponential growth that the program experienced from FY 2008–2015, the anticipated growth rate for the next 3 years, and then the projected levelling off of future growth. The technical details are provided in the accompanying footnote, and as can be seen in the graph, the DHS estimation technique closely fits past filings and captures the expected trends alluded to above.⁶²

Figure 1 graphs the volume of past Form I-526 filings from 2005 to 2015, compared with DHS’s estimation of the filings for that period, and the forecasts thereafter.

⁶¹ The VPC estimates that the final total number of Form I-526 filings for FY 2016 will be about 12,000. While this projection is below the FY 2015 total filings, the VPC expects growth to increase again in FY 2017 by 3.3 percent. FY 2015 was an anomaly for Form I-526 petitions and experienced an influx of petitions that DHS does not expect in the future.

⁶² DHS utilized a logistic function of the format, $(C/(\lambda + \beta e^{-\rho t}))$ where input t is the time year code (starting with zero), e is the base of the natural logarithm, and C , λ , β , and ρ are parameters such that C/λ asymptotically approaches the maximum level of the predicted variable, the Form I-526 receipts. The parameters β and ρ jointly impact the inflection and elongation of the sigmoidal curve. Because the data includes non-sample information, DHS did not attempt an estimation procedure focused on minimizing the sum of squared errors (such as least squares regression) or other fitting technique, and instead utilized a direct trial-and-error approach for calibration. For the final forecast run, the specific calibration was $C = 17,000$, $\lambda = 1.05$, $\beta = 180$, and $\rho = .66$. The maximum expected level of receipts (equal to $17,000/1.05$ which is approximately 16,200) was determined via input from EB-5 program management.

⁵⁸ EB-5 program office NCE data records indicate that the disparity in the regional center share of investments compared to NCEs—91 percent compared to 58 percent, respectively—exists because regional center projects include 15 investors on average, while non-regional center investments include only 2 investors on average.

⁵⁹ The figures for yearly volumes of Form I-526 filings are publicly available under DHS performance data: USCIS, Number of I-526 Immigrant Petitions by Alien Entrepreneurs by Fiscal Year, Quarter, and Case Status 2008–2016, available at https://www.uscis.gov/sites/default/files/USCIS/Resources/Reports%20and%20Studies/Immigration%20Forms%20Data/Employment-based/1526_performancedata_fy2016_qtr3.pdf. The NCE data were obtained from file tracking data supplied by the EB-5 program office. Because the NCE file submissions contain detailed business plan and investor information, the NCE data are not captured in formal DHS databases that are provided publicly, but rather in internal program office and adjudication records.

⁶⁰ DHS did not attempt a similar forecast for Form I-924 receipts, because DHS does not have a sound basis for predicting how the proposed rule would affect such receipts.

⁵⁷ Between May 2008 and May 2016, 51 regional centers have been terminated, averaging about 6 per year. USCIS, Immigrant Investor Regional Centers, <http://www.uscis.gov/working-united-states/permanent-workers/employment-based-immigration-fifth-preference-eb-5/immigrant-investor-regional-centers>.

The forecast values are listed in Table 3, below:

TABLE 3—DHS FORECASTS FOR INVESTOR FORM I-526 RECEIPTS AND NCEs

FY	Investors	NCEs
2017	15,241	1,314
2018	15,685	1,353
2019	15,925	1,373
2020	16,052	1,384
2021	16,119	1,390
2022	16,153	1,393
2023	16,171	1,395
2024	16,181	1,395
2025	16,185	1,396
2026	16,188	1,396
10-year total	159,900	13,789
Annual Average	15,990	1,379

The last column of Table 3 provides estimates of the total number of NCEs. An assumption of the NCE forecasts is that there is no change in the relationship between the number of NCEs and the number of Form I-526 filings over time.⁶³ The impact of the proposed provisions on the forecasts will be described in the relevant sections of this analysis.

⁶³ In other words, the assumption is that the current number of investors per NCE holds in the future. For the NCE projections, the 2016 value is set at the 2013–2015 average of 1,246. For each year thereafter, the figure is based on the growth rate of predicted Form I-526 receipts.

(4) Economic Impacts of the Major Rule Provisions

a. Retention of Priority Date

This rule proposes to generally allow an EB-5 immigrant petitioner to use the priority date of an approved EB-5 immigrant petition for any subsequently filed EB-5 immigrant petition for which the petitioner qualifies. Provided that petitioners have not yet obtained lawful permanent residence pursuant to their approved petition and that such petition has not been revoked on certain grounds, petitioners would be able to retain their priority date and therefore retain their place in the visa queue. DHS is proposing to allow priority date retention to: (1) Address situations in which petitioners may become

ineligible through circumstances beyond their control (e.g., the termination of a regional center) as they wait for their EB-5 visa priority date to become current; and (2) provide investors with greater flexibility to deal with changes to business conditions. For example, investors involved with an underperforming or failing investment project would be able to move their investment funds to a new, more promising investment project without losing their place in the visa queue.

There would be an operational benefit to the investor cohort because priority date retention would make visa allocation more predictable with less possibility for massive fluctuations due to regional center termination that could, in the case of some large regional

centers, negatively affect investors who are in the line at a given time. This change would provide greater certainty and stability for investors in their pursuit of permanent residence in the United States, helping lessen the burden of situations unforeseen by the investor related to their investment. In addition, by allowing priority date retention, investors obtain more ability to move their investment funds out of potentially risky projects, thereby potentially reducing fraud and improving the potential for job creation in the United States. DHS cannot quantify or monetize the net benefits of the priority date retention provision or assess how many past or future investors might be impacted. DHS welcomes public comment on the costs and benefits of the priority date retention provision.

b. Investment Amount Increase

DHS proposes to raise the standard minimum investment amount from the current \$1 million to \$1.8 million to account for the rate of inflation since the program's inception in 1990. DHS also proposes to raise the reduced investment amount, for TEA projects, to \$1.35 million, which is 75 percent of the general investment amount.⁶⁴ DHS further proposes to adjust the minimum investment amounts every 5 years so that the standard minimum investment amount keeps pace with the rate of inflation and the TEA minimum investment amount remains 75 percent of the standard minimum investment amount. These increases are necessary because the investment amounts have not kept pace with inflation, thereby eroding the real value of the investments.

Because the proposed discounted amount for investments in TEAs is higher than the current minimum amount for investments in non-TEAs, DHS believes it is reasonable to assume that some investors may be unable or unwilling to invest at either of the higher proposed levels of investment. However, DHS has no way to assess the potential reduction in investments either in terms of past activity or forecasted activity, and cannot therefore estimate any impacts concerning job creation, losses or other downstream economic impacts driven by the proposed investment amount increases.

⁶⁴ The adjustment to the standard minimum investment amount is based on the CPI-U, which, as compared to a base date of 1982–1984, was 130.7 in 1990 and 237.017 in 2015. The actual increase in prices for the period was approximately 81.34 percent, obtained as $((CPI-U_{2015}/CPI-U_{1990}) - 1)$. The \$1.8 million proposed investment amount is rounded. See generally Bureau of Labor Statistics, Inflation & Prices, available at <http://www.bls.gov/data/#prices>.

DHS evaluates the source of investor funds for legitimacy but not for information on investor income, wealth, or investment preferences. DHS cannot therefore estimate how many past investors would have been unable or unwilling to have invested at the proposed amounts, and hence cannot make extrapolations to potential future investors and projects. DHS requests public input on the impact of the newly proposed amount on potential investors' willingness to participate in the program. DHS also welcomes any input, including identification of relevant data sources, that might provide insight on the number of total jobs that these potential investors may create.⁶⁵

In addition to the effect on investors, it is reasonable to assume that the proposed changes to the investment amounts would also affect regional centers. If the higher amounts reduce the number of investors in the global pool, competition for fewer investors may make it more costly for regional centers to identify and match with investors. The net effect on regional centers would depend on the elasticities associated with these activities and is not something DHS can forecast with accuracy. DHS requests information from the public on how the proposed changes may impact regional center costs.

DHS also believes that for both regional center and non-regional center investments, the projects and the businesses involved could be impacted. A reduced number of EB-5 investors could preclude some projects from going forward due to outright lack of requisite capital. Other projects would likely see an increase in the share of non-EB-5 capital, such as capital sourced to domestic or other foreign sources. As alluded to above in Section Two of the analysis, analysis of the 2016 NCE sample reveals the 80 percent of NCEs involving EB-5 capital blend this type of capital with other sources of capital. DHS believes that the costs of capital and return to capital could be different depending on the source of the capital. As a result, a change in the composition of capital could change the overall profitability for one or more of the parties involved; however, if the project on the whole promises net profitability, it is likely to proceed. The

⁶⁵ DHS has arranged with the Department of Commerce to assess the EB-5 program to determine the number of jobs created, but the report has not yet been released. Remarks, EB-5 Immigrant Investor Program Stakeholder Engagement (July 28, 2016), available at https://www.uscis.gov/sites/default/files/USCIS/Outreach/Notes%20from%20Previous%20Engagements/PED_EB5NatStakeholderEng072816_ColucciRemarks.pdf.

specific impact on each party for each project would vary on a case by case basis, and would be dependent on, among other things, the particular financial structures and agreements between the regional center, investors, NCE, and project developer. It would also be determined by local and regional investment supply and demand, lending conditions, and general business and economic factors. DHS welcomes any comments the public may provide on how the proposed rules may impact regional center and non-regional center investments, projects and businesses.

DHS also considers that an increase in the investment amount could make other countries' foreign investor visa programs more attractive and therefore there could be some substitution into such programs. The decision to invest in another country's program would depend in part on the investment and country-specific risk preferences of each investor. While DHS has no means of ascertaining such preferences, it is possible that some substitution into non-U.S. investor visa programs could occur as a result of the higher required investment amounts. However, according to DHS research, substitution into another countries' immigrant investor program would likely be more costly for investors than investing in the EB-5 program even with increases in the EB-5 investment amounts. As stated earlier in this preamble, the United Kingdom's immigrant investor programs range in minimum investment amounts of approximately \$2.5 million to \$6.3 million, Australia's immigrant investor programs range in minimum investments amounts from approximately \$1.1 million to \$11.2 million, Canada's immigrant investor programs range from approximately \$1.5 million and require a net worth of \$7.6 million, and New Zealand's immigrant investor programs range from minimum investment amounts of approximately \$1.8 million to \$7.2 million. All of these values are approximations, in U.S. dollars, and are not an exhaustive list. DHS notes that most of these minimum investment amounts are considerably higher than the proposed increased investment amounts in the EB-5 program. DHS requests comments from the public regarding foreign investor visa programs from other countries and how they may compare to the U.S. EB-5 program, and the likelihood that investors will shift their investments to other countries' programs as a result of the changes proposed here.

There are numerous ancillary services and activities linked to both regional center and direct investments, such as, but not limited to, business consulting

and advising, finance, legal services, and immigration services. However, DHS is not certain how these services would be affected by the proposed rule. Similarly, DHS does not have information on how the revenues collected from these types of activities contribute to the overall revenue of the regional centers or direct investments. DHS requests information from the public on the several layers of business and financial activities that focus on matching foreign investor funds to development projects, and on the potential effects of this proposed rule on such activities.

In summary, DHS believes that the proposed increase in the minimum investment amount would bring the nominal investment amounts in line with real values and increase the investment amounts in areas where it is needed most. However, DHS recognizes that some of the investment increase benefits could be offset if some investors are deterred from investing at the higher amounts. DHS does not have the data or information necessary to attempt to estimate such mitigating effects. It is reasonable to conclude that the higher investment amounts could deter some investors from EB-5 activity and therefore negatively impact regional

center revenue in some cases, although the magnitudes and net effects of these impacts cannot be estimated. However, it is also possible that the higher investment amounts could attract additional capital overall and stimulate projects to get off the ground that otherwise might not. Due to the complexity of EB-5 financial arrangements and unpredictability of market conditions, DHS cannot forecast with confidence how many projects could be affected by the increased investment amounts through a change in the number of individuals investing through the EB-5 program. However, it is possible that some projects could be forgone and that others would proceed with a higher composition of non-EB-5 capital, with resultant changes in profitability and rates of return to the parties involved. An overall decrease in investments and projects would potentially reduce some job creation and result in other downstream effects.

c. Periodic Adjustments to the Investment Amounts

In addition to initially raising the investment thresholds to account for inflation, DHS proposes to adjust the standard investment threshold every 5 years to account for future inflation, and to adjust the reduced investment

threshold for TEAs to keep pace with the standard amount. DHS projected the effects of this methodology using a relatively low, recent, inflation index (1.4 percent) and a more moderate inflation index (3.2 percent). DHS made two separate projections based on two different indexes because DHS cannot predict with certainty what the future inflation index will be. The 1.4 percent estimate is based on the average rate of inflation for the period 2009–2015, which economists generally consider to be relatively low compared to earlier periods. The 3.2 percent estimate used for the higher-end projection is based on the 3.2 percent inflation rate in 2011, which was the highest annual inflation rate observed from the 2009 to 2015 period. DHS believes it is appropriate to characterize the 3.2 percent rate as a “moderate” inflation baseline, because although it is higher than the average annual rate since 2008, it is not considered by economists to be high as compared to other historical periods.⁶⁶

Table 4 lists the general minimum investment amounts and reduced investment amounts after 5 and 10 years if the amounts are raised initially as proposed in this rule. The figures are in millions of U.S. dollars and are rounded to the nearest fifty-thousandth.

TABLE 4—PROJECTED INVESTMENT AMOUNTS AT 5-YEAR REVISIONS
(Figures are in millions of \$)

Proposed provision: initial increase	Revision (year)	Projected investment amount based on average inflation scenario, 1.4 percent	Projected investment amount based on moderate inflation scenario, 3.2 percent
Standard Investment Amount = \$1.8 Million in 2017	5 year	1.90	2.04
	10 Year	2.04	2.40
Minimum Investment Amount = \$1.35 Million in 2017	5 year	1.43	1.53
	10 Year	1.53	1.80

DHS attempted to assess the costs of these proposed changes. As described above, the potential cost of the higher amounts may result in a reduction in the number of investors and projects and a lower share of EB-5 capital for some projects, which could result in capital losses, fewer jobs created, and other reductions in economic activity. DHS is not able to predict how many investors and projects will be impacted, nor can we predict the impact to the capital available for projects. DHS requests any data sources the public

may provide, as well as comments on anticipated outcomes.

d. Targeted Employment Areas

Under the current regulations, a state may designate an area in which the enterprise is principally doing business as a high-unemployment TEA if that area is a geographic or political subdivision of a metropolitan statistical area (MSA) or of a city or town with a population of 20,000 or more. DHS generally defers to the state determination of the appropriate boundaries of a geographic or political

subdivision that constitutes the TEA, but there is currently no limit to the number of census tracts that a state can aggregate as part of a high-unemployment TEA designation. TEA configurations that DHS has evaluated from state designations have included the census tract or tracts where the NCE is principally doing business (“project tract(s)”), one or more directly adjacent tracts, and others that are further removed, resulting in configurations resembling a chain-shape or other contorted shape. This proposed rule

⁶⁶ Allan Meltzer, *A Slow Recovery with Low Inflation*, Hoover Inst., Econ. Working Paper No. 13,110 (2013), available at http://www.hoover.org/sites/default/files/13110_-_meltzer_-_a_slow_recovery_with_low_inflation.pdf; see also Michael T. Kiley, *Low Inflation in the United States: A*

Summary of Recent Research, FEDS Notes, Board of Governors of the Federal Reserve System (Nov. 23, 2015), available at <http://www.federalreserve.gov/econresdata/notes/feds-notes/2015/low-inflation-in-the-united-states-a-summary-of-recent-research-20151123.html>; Mary C. Daly and Bart

Hobijn, *Downward Nominal Wage Rigidities Bend the Phillips Curve*, Fed. Reserve Bank S.F., Working Paper No. 2013–08 (2014), available at <http://www.frbsf.org/economic-research/files/wp2013-08.pdf>.

would remove states from the TEA designation process; instead, investors would be required to provide sufficient evidence to DHS in order to qualify for the reduced investment threshold. DHS would generally limit the number of census tracts that could be combined for this purpose.⁶⁷ Specifically, DHS is proposing that a TEA may also consist of an area comprised of the census tract(s) in which the new commercial enterprise is principally doing business, including any and all adjacent tracts, if the weighted average of the unemployment rate for all included tracts is at least 150 percent of the national average.

In order to assess the potential impact of this aspect of the proposed rule, DHS performed further analysis on the 2016 NCE sample. First, DHS determined, based on the sample, that 99 percent of regional center investments and 64 percent of non-regional center investments are made into TEAs. Because the 2016 sample significantly over-represents non-regional center investments and over-represents non-regional center NCEs by a smaller, but still noticeable, margin, DHS also

determined the percentage of investments overall that were applied to TEAs. DHS found that 97 percent of investments and 85 percent of NCEs were applied to TEAs.⁶⁸ About 10 percent of investments that were made into TEAs were made into rural TEAs. This 10% was the same for regional center and non-regional center investments.

DHS then parsed the TEA filings comprising the 2016 NCE sample into specific cohorts. The first cohort is the number of non-rural high-unemployment TEA filings that did not rely on state designations to qualify. The TEAs in this cohort did not require state designations because the project was located in a specific geographical unit that met the unemployment threshold.⁶⁹ They would be unaffected by the changes proposed in this rule. The next two cohorts are the filings that relied on one or two census tracts, respectively. These too would be unaffected by this rule. The fourth cohort is the filings that relied on three or more census tracts. The proposed rule would potentially affect some of the designations in this cohort. Because of this, DHS attempted

to subject these tracts to further analysis, as described further below.

DHS determined the relative size of each cohort by determining the total number of filings per cohort, and then weighting these percentages to reflect the appropriate regional center and non-regional center proportions, first for investments, and then for NCEs. The relative size of each cohort, as a share of the total number of investments in TEAs and the total number of NCEs in TEAs, are listed in Table 5 below. Note that the amounts are based on the average of filings for FY 2013–2015; potential changes in future filing patterns are discussed below. The share figures are in percentages and are provided first on the basis of all investments and NCEs and next on the basis of high-unemployment TEA investments and NCEs (the last two columns of the table). DHS could have also presented the shares on a per total-TEA basis, but since almost all investments (97 percent) were made into TEAs, little additional insight would be gained by providing figures on such a basis.

TABLE 5—TEA METRICS

TEA Cohort	Investments		NCEs		Share of high-unemployment TEA filings	
	Amount	Share (percent)	Amount	Share (percent)	Investments (percent)	NCEs (percent)
High-unemployment TEA	9,159	87	929	75	N/A	N/A
Qualify without state certification	735	7	135	11	9	18
Qualify with one Census Tract	1,883	18	177	14	20	18
Qualify with two Census Tracts	667	6	50	4	7	4
Cohort not affected by the rule because it would meet the provision	4,672	44	679	55	36	41
Qualify with three or more tracts (maximum that could be affected)	5,875	56	567	45	64	59

⁶⁷ According to USCIS policy in effect at the time of issuance of this proposed rulemaking:

A new commercial enterprise is principally doing business in the location where it regularly, systematically, and continuously provides goods or services that support job creation. If the new commercial enterprise provides such goods or services in more than one location, it will be principally doing business in the location most significantly related to the job creation.

Factors considered in determining where a new commercial enterprise is principally doing business include, but are not limited to, the location of:

- Any jobs directly created by the new commercial enterprise;
- Any expenditure of capital related to the creation of jobs;
- The new commercial enterprise's day-to-day operation; and

• The new commercial enterprise's assets used in the creation of jobs.

USCIS Policy Manual, 6 USCIS-PM G (Nov. 30, 2016).

⁶⁸ DHS used a weighted average calculation to determine these percentages because the 2016 NCE sample over-represents non-regional center investments—non-regional center investments accounted for exactly half the 2016 NCE sample but less than a tenth (9 percent) of submitted investments. This bias is not a feature of the sampling methodology but rather an inherent feature of the population, because non-regional center investments comprise 42 percent of NCEs. The 2016 NCE sample over-represents non-regional center NCEs as well, but not by as much as investments. The sample share of non-regional center NCEs is 50 percent, while the true share in the NCE population is 42 percent. Hence, the

overrepresentation is about 8 percentage points but DHS feels this is significant enough that the NCE aggregate shares should be weighted as well. The weighted average for TEA investments is the sum of the regional center share of investments (.91) multiplied by the TEA share found in the sample (.99), and the non-regional share of investments (.09) multiplied by the TEA share in the sample (.64). The resulting weighting equation is $.91 + .06 = .97$. The weighted average for TEA NCEs is the sum of the regional center share of NCEs (.58) multiplied by the TEA share found in the sample (.99), and the non-regional share of NCEs (.42) multiplied by the TEA share in the sample (.64). The resulting weighting equation is $.58 + .27 = .85$.

⁶⁹ For the TEA geographies that met the high unemployment threshold in the sample analyzed, 90 percent utilized MSAs and the remaining 10 percent utilized counties.

DHS draws a number of conclusions from the metrics described above. Foremost, a large share of investments (87 percent) were made in, and three-quarters of related NCEs were located in, high-unemployment TEAs. Second, a small share of investments (7 percent) qualified as high unemployment TEAs without state certification,⁷⁰ meaning that the MSA or county in which the related project was located qualified independently for such designation. About 18 percent of the investments qualified based on a single-census-tract designation, and a small share (6 percent) qualified based on a two-tract designation. Third, more than half of investments (56 percent) and just under half of related NCEs (45 percent) relied on three or more census-tract configurations.

DHS calculated additional metrics to assess the impact of the rule. To obtain the cohort that would be unaffected by the rule, DHS added together the five subcategories representing non-TEA, rural TEA, those that qualified without state attestation, single tract configurations, and two-tract configurations. This cohort is reported in the second to last row of Table 5. Next, DHS obtained the number of investments and related NCEs that could potentially be affected by the rule. This cohort is reported in the last row of Table 5. These figures represent our maximum. In reality, some portion of the maximum cohort for projects and NCEs would have continued to qualify for TEA designation under the changes proposed by this rule. However, currently DHS does not have reliable, statistically valid information from which DHS can estimate what share would likely be impacted by the rule.

DHS obtained Census Bureau data on adjacent tracts that were utilized in studies unrelated to the current rulemaking provision.⁷¹ From the population of 74,001 tracts provided in the Census dataset, DHS randomly sampled 390 tracts, which is slightly more than the 383 needed for 95 percent confidence and a 5 percent margin of error. The average number of adjacent

tracts was 6.4 and the median was 6, with a maximum of 11, a minimum of 3, and a range of 8. Since “partial” tracts are not viable under the EB-5 program, the average was rounded to the nearest whole number and 1 tract was added to account for the primary tract for which the adjacencies were counted, to yield an average of 7 total tracts. This suggests that it may not be unusual for a TEA designation of three or more tracts to satisfy the adjacency requirements of this proposed rule.

The benefit of this aspect of the proposed rule is that it would prevent certain TEA configurations that rely on a large number of census tracts indirectly linked to the actual project tract(s) by multiple degrees of separation. As a result, some investments may be re-directed to areas where unemployment rates are truly high, according to the 150 percent threshold, and therefore may stimulate job creation where it is most needed.

Finally, DHS also considered an alternative provision, under which TEA designations would be subject to a twelve-tract limit. This limit is used by the State of California in its TEA certifications. DHS considered this limit as an alternative approach because it is the only case in which a state limits the number of census tracts to a specific number. Analysis of the NCE sample revealed that for tract configurations with two or more tracts, the average number of tracts aggregated was 16, but the median was 7. The figures are slightly higher at 17 and 8, respectively, when the cohort is isolated to three or more multiple tract configurations. The difference in the mean and median indicate that the distribution is right-skewed, characterized by a small number of very large-tract number compilations, evidenced by a sample range of 198 tracts. DHS notes that there is sufficient variation in the data to preclude state locational bias, as 22 states including the District of Columbia were represented in the 2016 NCE sample. Ultimately, DHS did not choose this alternative option because it is not necessarily appropriate for nationwide application, as the limitation to 12 census tracts may be justifiable for reasons specific to California but may not be apt on a national scale.

DHS stresses that the maximum cohorts presented in Table 5 overstate the number and shares of future investments and NCEs that would be impacted by the TEA reform provision because some of the configurations that relied on multiple tracts (3 or more) would be able to meet the requirements of the proposed rule. Furthermore, the number of impacted investments and

NCEs is also likely to be lower because regional centers may be able to replace forgone projects in places that would not meet the high unemployment criteria under the proposed rule with other projects that would in fact qualify. For example, a regional center seeking to locate a project on one city block that would no longer qualify as a TEA may opt to locate the project on another block that could qualify as a TEA under the new rule. In that sense, the proposed rule may provide additional incentive for investments in rural areas, because such investments would be unaffected by this rule, or in areas that are more closely associated with high unemployment. In other words, if a regional center is considering a project in a specific location that would no longer qualify as a TEA, the regional center can opt to move the project to a TEA or seek another project that would fall within a TEA. DHS believes that some regional centers will not be able to make such a substitution and that there may be costs in the forms of forgone investments and projects, and accompanying reductions in job creation and other economic activity.

DHS requests any data sources or comments from the public on the estimated costs for the number of investments and projects impacted by this aspect of the proposed rule. DHS has described some of the possible negative consequences of a reduced number of investors. A decrease in investments and projects would potentially reduce some job creation and have other downstream effects.

Finally, DHS notes that because state designations will no longer be accepted, it is reasonable to expect cost savings germane to the labor time and opportunity costs of state government institutions previously involved in TEA designations. It is reasonable to expect that these cost savings to states would transfer into some additional costs for DHS in adjudication review time in order to evaluate TEA submissions. However, DHS cannot accurately predict such added time burden to the Government at this time.

e. Other Provisions

DHS has analyzed the other provisions and sub-provisions to those discussed above:

Removal of Conditions Filing. DHS is proposing to revise its regulations to clarify that, except in limited circumstances, derivative family members must file their own petitions to remove conditions from their permanent residence when they are not included in a petition to remove conditions filed by the principal

⁷⁰ State certification is currently required for high unemployment areas encompassing geographic or political subdivisions smaller than an MSA or county. See 8 CFR 204.6(i) and 204.6(j)(6)(ii).

⁷¹ As of 2016, the Census Bureau records show 73,057 Tracts in the United States, including the District of Columbia but not counting U.S. Territories. U.S. Census Bureau, 2010 Census Tallies of Census Tracts, Block Groups and Blocks, available at <https://www.census.gov/geo/maps-data/data/tallies/tractblock.html>. The data utilized in this analysis is currently available publicly from Brown University's (Providence, RI) American Communities Project Web site at <http://www.s4.brown.edu/us2010/Researcher/Pooling.htm>.

investor. Generally, an immigrant investor's derivatives are included in the principal immigrant investor's Form I-829 petition. However, there have been cases where the derivatives are not included in the principal's petition but instead file one or more separate Form I-829 petitions. The proposed regulation clarifies that, except in the case of a deceased principal, derivatives not included in the principal's Form I-829 petition cannot use one petition for all the derivatives combined but must each separately file his or her own Form I-829 petition. Based on EB-5 program office review of historical filings for this group, on average over a 3-year period about 24 cases per year involved such circumstances. Biometrics are currently required for the joint Form I-829 petition submissions, so the provision requiring separate filings would not impose any additional biometric, travel, or associated opportunity costs. The only costs expected from the rule would be the separate filing fee and associated opportunity cost. The filing fee for a Form I-829 petition is \$3,750. DHS estimates that the form takes 3 hours to complete. DHS recognizes that many dependent spouses and children do not currently participate in the U.S. labor market, and as a result, are not represented in national average wage calculations. In order to provide a reasonable proxy of time valuation, DHS has to assume some value of time above zero and therefore uses an hourly cost burdened minimum wage rate of \$10.59 to estimate the opportunity cost of time for dependent spouses. The value of \$10.59 per hour represents the Federal minimum wage with an upward adjustment for benefits.⁷² Each applicant would face a time cost burden of \$32, which when added to the filing fee, is \$3,782. Extrapolating the past number of average annual filings of 24 going forward, total applicant costs would total \$90,762 annually.⁷³

Removal of Conditions Interview. In addition to the separate filing requirement discussed above, DHS is proposing to improve the adjudication process relevant to the investor's Form I-829 interview process by providing flexibility in interview scheduling and location. Section 216A(c)(1)(B) of the INA, 8 U.S.C. 1186b(c)(1)(B), generally

requires Form I-829 petitioners to be interviewed prior to final adjudication of the petition, although DHS may waive the interview requirement at its discretion. *See* INA section 216A(d)(3), 8 U.S.C. 1186b(d)(3). Under this rule, DHS is proposing to give USCIS greater flexibility to require Form I-829 interviews and determine the appropriate location for such an interview. Additionally, current DHS regulations allow for Form I-829 petitioners to be interviewed prior to final adjudication of a Form I-829 petition, but require the interview to be conducted at the USCIS District Office holding jurisdiction over the immigrant investor's new commercial enterprise. However, there is no requirement that the immigrant investor reside in the same location as the new commercial enterprise, and DHS has determined through some very preliminary surveys conducted by the EB-5 program office that many immigrant investors are located a considerable distance from the new commercial enterprise. Therefore, DHS proposes to clarify that USCIS has authority to schedule an interview at the USCIS office holding jurisdiction over either the immigrant investor's commercial enterprise, the immigrant investor's residence, or the location in which the Form I-829 petition is being adjudicated. DHS cannot currently determine how many petitioners would potentially be affected by these changes. From fiscal years 2011 to 2015, DHS received an average of 1,911 Form I-829 petitions. While not all of these petitioners would require an interview or face hardship to travel for an interview, some of this maximum population may be impacted.⁷⁴ Some petitioners would benefit by traveling shorter distances for interviews and thus see a cost savings in travel costs and opportunity costs of time for travel and interview time. DHS welcomes any comments by the public that may provide further data sources on the potential costs and benefits associated with this proposed change.

Process for Issuing Permanent Resident Cards. DHS also proposes to amend regulations governing the process by which immigrant investors obtain their new permanent resident cards after the approval of their Form I-829 petitions. Current regulations require the immigrant investor and his or her derivatives to report to a district

office for processing of their permanent resident cards after approval of the Form I-829 petition. This process is no longer necessary in light of intervening improvements in DHS's biometric data collection program.⁷⁵ DHS now captures the required biometric data while the Form I-829 petition is pending, at the time the immigrant investor and his or her derivatives appear at an Application Support Center for fingerprinting, as required for the Form I-829 background and security checks. DHS then mails the permanent resident card directly to the immigrant investor by U.S. Postal Service registered mail after the Form I-829 petition is approved. Accordingly, there is generally no need for the immigrant investor and his or her derivatives to appear at a district office after approval of the Form I-829 petition.

DHS does not estimate any additional costs for this proposed provision. This proposed provision will likely benefit immigrant investors and any derivatives, including by providing savings in cost, travel, and time, since this regulation will no longer require them to report to a district office for processing of their permanent resident cards. DHS also benefits by removing a process that is no longer necessary.

Miscellaneous other changes. DHS is also proposing a number of other technical changes to the EB-5 regulations. First, DHS is proposing to update a reference to the former United States Customs Service, so that it will now refer to U.S. Customs and Border Protection. Second, DHS is proposing to conform DHS regulations to Public Law 107-273, which eliminated the requirement that immigrant entrepreneurs establish a new commercial enterprise from both section 203(b)(5) and section 216A of the INA. Accordingly, USCIS proposes to remove references to this requirement in 8 CFR 204.6 and 216.6. Third, DHS is proposing to further conform DHS regulations to Public Law 107-273 by removing the references to "management" at 8 CFR 204.6(j)(5) and 8 CFR 204.6(j)(5)(iii). Fourth, DHS is proposing to remove the phrase "as opposed to maintaining a purely passive role in regard to the investment" from 8 CFR 204.6(j)(5). Fifth, DHS is proposing to allow any type of entity to serve as a new commercial enterprise. Sixth, DHS is proposing to amend 8 CFR 204.6(k) to remove the requirement on USCIS to specify in the decision on the EB-5 immigrant petition whether the new commercial enterprise is

⁷² Minimum Wage, U.S. DOL, <http://www.dol.gov/dol/topic/wages/minimumwage.htm> (indicating the Federal Minimum Wage is \$7.25 per hour). The calculation for total employer costs for employee compensation for dependent spouses and children of principals with an approved Form I-140: \$7.25 per hour × 1.46 = \$10.59 per hour.

⁷³ Calculation: the burdened wage of \$10.59 per hour multiplied by 3 hours. The individual fee and total cost figures are rounded from actuals of \$3,781.76 and \$90,762.12, respectively.

⁷⁴ USCIS, Number of I-829 Petitions by Entrepreneurs to Remove Conditions by Fiscal Year, Quarter, and Case Status 2008-2016, available at https://www.uscis.gov/sites/default/files/USCIS/Resources/Reports%20and%20Studies/Immigration%20Forms%20Data/Employment-based/I829_performance_data_fy2016_qtr3.pdf.

⁷⁵ DHS already has authority to collect this information under 8 CFR part 103.

principally doing business in a TEA. Finally, DHS is proposing revisions to otherwise unaffected sections of section 204.6 and 216.6 to replace the term “entrepreneur” with the term “investor.” These provisions are technical changes and will have no impact on investors or the government. Therefore, the benefits and costs for these changes were not estimated.

Miscellaneous Costs

Familiarization costs: DHS assumes that there will be familiarization costs associated with this rule. To estimate these costs, DHS relied on several assumptions. First, DHS believes that each approved regional center would need to review the rule. Other than regional centers, the NCEs would also need to be familiar with the proposed rule. Based on the 790 regional centers referenced herein as having approved Forms I-924 and 520 non-regional center NCEs, a total of at least 1,310 identified entities would likely need to review the rule. DHS believes that lawyers would likely review the rule and that it would take about 4 hours to review and inform any additional parties of the changes in this proposed rule. Based on the BLS “Occupational Employment Statistics (OES)” dataset, the 2015 mean hourly wage for a lawyer was \$65.51.⁷⁶ DHS burdens this rate by a multiple of 1.46, consistent with other rulemakings, to account for other compensation and benefits, to arrive at an hourly cost of \$95.64. The total cost of familiarization is \$501,154 annually based on the current number of approved regional centers and non-regional center NCEs in the recent past.⁷⁷

D. Executive Order 13132

This proposed rule would not have substantial direct effects on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government. Although DHS has historically deferred to state designations of high unemployment areas, DHS is ultimately responsible for the adjudication of each petition (including TEA designations).⁷⁸ This

⁷⁶ Bureau of Labor Statistics, May 2015 National Occupational Employment and Wage Estimates United States, https://www.bls.gov/oes/current/oes_nat.htm#23-0000.

⁷⁷ Calculation: 1,310 entities × 4 hours each × burdened hourly wage of \$95.64. Final figure is rounded from 501,153.6.

⁷⁸ USCIS Policy Manual, 6 USCIS-PM G at 8 (May 30, 2013) (“However, for all TEA designations, USCIS must still ensure compliance with the statutory requirement that the proposed area designated by the state in fact has an

proposed rule would not directly alter the states’ rights or obligations under the EB-5 program, and is fully consistent with the federal role in administration of immigration programs. DHS is unaware of any state laws that would be preempted or otherwise affected by this proposed rule.⁷⁹ Therefore, in accordance with section 6 of Executive Order 13132, it is determined that this rule does not have sufficient federalism implications to warrant the preparation of a federalism summary impact statement. DHS nonetheless welcomes public comment on possible federalism implications of this proposed rule.

E. Regulatory Flexibility Act

The Regulatory Flexibility Act of 1980 (RFA), 5 U.S.C. 601–612, as amended by the Small Business Regulatory Enforcement Fairness Act of 1996, Public Law 104–121, 110 Stat. 847 (March 29, 1996), requires Federal agencies to consider the potential impact of regulations on small entities. The term “small entities” comprises small businesses, not-for-profit organizations that are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000. An “individual” is not defined by the RFA as a small entity and costs to an individual from a rule are not considered for RFA purposes. In addition, courts have held that the RFA’s regulatory flexibility analysis requirements apply to direct small entity impacts only.⁸⁰ Consequently, any indirect impacts from a rule to a small entity are not costs for RFA purposes.

However, the changes proposed by DHS to modernize and improve the EB-5 program may have the potential to affect several types of business entities involved in EB-5 projects. Therefore, DHS has prepared an Initial Regulatory Flexibility Analysis (IRFA) under the RFA because some of the entities

unemployment rate of at least 150 percent of the national average rate.”).

⁷⁹ For example, California’s Office of Business and Economic Development notes: “While the EB-5 visa program is administered by the U.S. Citizenship and Immigration Services and is therefore governed by federal laws and regulations, GO-Biz provides customized TEA certifications for projects that qualify under the \$500,000 special TEA requirements.” *EB-5 Investor Visa Program*, California Governor’s Office of Business and Economic Development, <http://www.business.ca.gov/Programs/International-Affairs-and-Business-Development/EB-5>.

⁸⁰ See, e.g., *Mid-Tex Elec. Coop. v. FERC*, 773 F.2d 327, 342 (D.C. Cir. 1985) (concluding that an agency may certify a rule under Section 605(b) of the Regulatory Flexibility Act when the agency determines the rule will not directly impact small entities).

involved may be considered small entities.

Initial Regulatory Flexibility Analysis

EB-5 investment structures are complex and can involve numerous entities involved in project financing and development. The rule proposes to raise the investment levels to account for inflation and reform the way in which TEAs are constructed. It is difficult to determine the small entity status of regional centers because there is a lack of official data on employment, income, and industry classification for these entities. Such a determination is also difficult because regional centers can be structured in a variety of different ways, and can involve multiple business and financial activities, some of which play a direct, and some an indirect, role in linking investor funds to NCEs and job-creating projects or entities. Although DHS does not know if regional centers are small entities, DHS believes some regional center NCEs and some non-regional center NCEs could be small entities. A detailed description of DHS’s attempt to identify such entities is provided below. DHS welcomes public comment on the potential impact of the proposed changes on small entities.

a. A Description of the Reasons Why the Action by the Agency Is Being Considered

DHS proposes to update its EB-5 regulations to update aspects of the EB-5 program in need of reform and to reflect statutory changes and codify existing policies. Elsewhere in this preamble, DHS provides further background and explanation for the proposals contained in the rule.

b. A Succinct Statement of the Objectives of, and Legal Basis for, the Proposed Rule

DHS objectives and legal authority for this proposed rule are discussed in Section II of the preamble.

c. A Description and, Where Feasible, an Estimate of the Number of Small Entities to Which the Proposed Changes Would Apply

DHS believes the changes outlined in the proposed rule could affect the following types of groups that are involved in EB-5 investments: Entrepreneurs, regional centers, and new commercial enterprises (NCEs). Below, DHS identifies which of these groups may qualify as small entities under the RFA.

1. Entrepreneurs

An entrepreneur who wishes to immigrate to the United States must file an Immigrant Petition by Alien Entrepreneur (Form I-526). DHS analysis of filing data for the Form I-526 reveals that for FY 2013–2015 an average of 10,547 EB-5 foreign entrepreneurs filed Form I-526 petitions to DHS annually, and DHS forecasts that over the next ten years the annual average will be about 16,000. Form I-526 petitions are filed by individuals who voluntarily apply for immigration benefits on their own behalf and thus do not meet the definition of a small entity. Therefore, entrepreneurs were not considered further for purposes of this RFA.

2. Regional Centers

As previously mentioned, the small entity status of regional centers is very difficult to determine because of the lack of official data concerning employment, income, and industry classification of the regional center itself. Regional centers use Form I-924 to obtain regional center designation and use Form I-924A to demonstrate continued eligibility for regional center designation annually. The information provided by regional center applicants as part of the Form I-924 and I-924A processes does not include adequate data to allow DHS to reliably identify the small entity status of individual applicants. Although regional center applicants typically report the North American Industry Classification (NAICS) codes associated with the sectors they plan to direct investor funds toward, these codes do not necessarily apply to the regional centers themselves. In addition, information provided to DHS concerning regional centers generally does not include regional center revenues or employment.

DHS nonetheless attempted to identify how many regional centers may be small entities. DHS obtained a sample of 440 regional centers operating 5,886 projects. At the time of DHS's analysis, there were 790 approved regional centers.⁸¹ DHS used subscription and publicly available data to identify those regional centers that may qualify as small entities by trying to obtain revenue information or information on the number of employees and the NAICS codes. Obtaining the revenue or employee count and NAICS codes would allow DHS to determine if the regional center

was a small entity as recommended by the SBA. For the vast majority of the entities in the sample, DHS could not conclusively determine the entity's small entity status. For 15 of the regional centers in the sample, search queries generated preliminary results, but DHS could not confirm them as the entities of interest. This is because regional centers often utilize very broad terms, such as a combination of the term "regional center" and the name of the state, city, or geographic area in which the regional center is located. Non-regional center entities, such as local economic development organizations, as well as consultancies and legal units involved in the EB-5 program, often utilize very similar or even exact name syntax, and, as such, the multiple initial results could not be de-conflicted. For about 5 of the target regional centers, DHS could reasonably verify the results of the search query. However, such a low response proportion prevents DHS from drawing statistically valid conclusions.

DHS did not attempt to determine the small entity status of regional centers based on the bundled capital investment amounts available to such regional centers. Such bundled investments are not indicative of whether the regional center is appropriately characterized as a small entity for purposes of the RFA because there is no way to know, based solely on the information available, how much of these bundled investment amounts are used for the investment projects that the regional center may be affiliated with and how much may be used as administrative fees paid to the regional center. DHS assumes that some amount of the administrative fees contribute to a regional center's revenue, and if DHS were able to obtain information on administrative fees, along with industry data, DHS might be able to make a determination on whether the regional center was a small entity. DHS welcomes any public comment on data sources or information on regional centers, including their sources of revenue, their employment data, the industries in which they should be categorized, and other information relevant to their small entity status.

3. New Commercial Enterprises (NCEs)

Similar to the challenges with identifying regional centers as small entities, DHS experienced challenges when attempting to identify NCEs as small entities, whether the NCE is affiliated with a regional center or not.

First, NCEs can be involved with the job-creating activity in a variety of ways that create analytical challenges.

Regional center NCEs usually are established to receive EB-5 funding, and then deploy the funding to a separate JCE. They can also engage in the job creating activity directly. Both regional center NCEs and non-regional center NCEs can fund multiple job creating activities. Under USCIS's current regulations at 8 CFR 204.6(e), an NCE can constitute a parent company and its wholly-owned subsidiaries and through these wholly-owned subsidiaries an NCE can also engage in job-creating activities in multiple industries. The multiplicity of ways in which an NCE can engage in the job creating activity make it difficult to assign a NAICS code to any particular entity that constitutes or comprises part of what is considered the NCE.

Second, DHS does not require regional center applicants or petitioners to submit on their applications or petitions the type of revenue and employment data appropriate for analysis, regardless of the type of NCE or how it is structured.⁸² Although petitioners are required to submit a number of different types of documents to DHS to establish eligibility, DHS does not specifically require revenue or employment data for a specific NCE entity itself. Rather, petitioners relying on future job creation must provide a business plan for the job-creating activity (regardless of which entity is engaged in the activity), and the plan may contain projected revenues, although it is not required to. The business plan or an accompanying economic analysis will also project the expected number of jobs created by the EB-5 investment. However, these are projections only. It is not appropriate to use these projected revenues as a substitute for actual revenues in this analysis. For these reasons, although DHS recognizes that the proposed rule could result in some impacts to NCEs that may be small entities, DHS cannot feasibly or reliably estimate the number of such small entities that could be impacted. DHS requests comments from the public that provide more information how to identify the small entity status of NCEs, what the potential impacts of the rule might be on small entity NCEs, and whether and to what extent those impacts could be transferred to small entity regional centers.

⁸¹ DHS attempted to conduct a small entity analysis on regional centers for another DHS rule in January 2016.

⁸² DHS notes that regional centers and individual petitioners provide such information regarding the NCEs with which the regional centers are associated or in which the petitioners have invested.

4. Job-Creating Entities (JCEs)

Due to the complex nature of the EB-5 program and the various structures involved, DHS assumes that the proposed provisions that would increase the investment amount or change the TEA designation criteria could indirectly impact the JCEs.

However, DHS requests public comment on this assumption given the various structures that are possible under the EB-5 program. Due to data capture limitations, it is not feasible for DHS to reliably estimate the number of JCEs at this time. DHS anticipates forthcoming form revisions that may collect additional data on JCEs that receive EB-5 capital, and expects to be able to examine this more closely in the future.

d. A Description of the Projected Reporting, Recordkeeping, and Other Compliance Requirements of the Proposed Rule, Including an Estimate of the Classes of Small Entities That Will Be Subject to the Requirement and the Types of Professional Skills

The proposed rule does not directly impose any new or additional “reporting” or “recordkeeping” requirements on filers of Forms I-526, I-829 or I-924. The proposed rule does not require any new professional skills for reporting. However, the proposed rule may create some additional time burden costs related to reviewing the proposed provisions, as is discussed above. As noted above, DHS believes that lawyers would likely review the rule and that it would take about 4 hours to review and inform any additional parties of the changes in this proposed rule. Based on the BLS “Occupational Employment Statistics (OES)” dataset, the 2015 mean hourly wage for a lawyer was \$65.51.⁸³ DHS burdens this rate by a multiple of 1.46, consistent with other rulemakings, to account for other compensation and benefits, to arrive at an hourly cost of \$95.64, or \$382.56 per entity.

While DHS has estimated these costs, and assumes that they may affect some small entities, for reasons stated previously, data limitations prevent DHS from determining how many such small entities may be impacted or the extent of the impact to the small entities.

⁸³ Bureau of Labor Statistics, May 2015 National Occupational Employment and Wage Estimates United States, https://www.bls.gov/oes/current/oes_nat.htm#23-0000.

e. An Identification of All Relevant Federal Rules, to the Extent Practical, That May Duplicate, Overlap, or Conflict With the Proposed Rule

DHS is unaware of any duplicative, overlapping, or conflicting Federal rules, but invites any comment and information regarding any such rules.

f. Description of Any Significant Alternatives to the Proposed Rule That Accomplish the Stated Objectives of Applicable Statutes and That Minimize Any Significant Economic Impact of the Proposed Rule on Small Entities

This proposed rule would modernize and make necessary updates to the EB-5 program. While DHS knows that some regional centers may be considered small entities, DHS does not have enough data to determine the impact that this proposed rule may have on those entities.

With respect to the proposal to reform the TEA designation process, DHS considered several alternatives, but found that they did not feasibly accomplish the stated objective of INA section 203(b)(5)(B)(ii). One alternative DHS considered was limiting the geographic or political subdivision of TEA configurations to an area containing up to, but no more than, 12 contiguous census tracts, an option currently used by the state of California in its TEA designation process.⁸⁴ However, DHS is not confident that this option is necessarily appropriate for nationwide application, as the limitation to 12 census tracts may be justifiable for reasons specific to California but may not be feasible on a national scale.

Another significant alternative DHS considered that would be relatively straightforward to implement and understand would be to limit the geographic or political subdivision of the TEA to the actual project tract(s). While this option would be easy to put in practice for both stakeholders and the agency, it was considered too restrictive in that it would exclude immediately adjacent areas that would be impacted by the investment.

DHS also considered options based on a “commuter pattern” analysis, which focuses on defining a TEA as encompassing the area in which workers may live and be commuting from, rather than just where the investment is made and where the new commercial enterprise is principally doing business. The “commuter

⁸⁴ See Cal. Governor’s Office of Bus. and Econ. Dev., EB-5 Investor Visa Program, available at <http://business.ca.gov/International/EB5Program.aspx>.

pattern” proposal was deemed too operationally burdensome to implement as it posed challenges in establishing standards to determine the relevant commuting area that would fairly account for variances across the country.⁸⁵ In addition, DHS could not identify a commuting-pattern standard that would appropriately limit the geographic scope of a TEA designation consistent with the statute and the policy goals of this proposed regulation.

With respect to the minimum investment amount provision, DHS also considered an alternative to the proposed increase to the investment amount for TEAs. Specifically, DHS considered the alternative of setting the reduced TEA investment amount to \$900,000 instead of \$1,350,000, consistent with the existing regulatory framework.⁸⁶ DHS is proposing a 75 percent reduction rather than a 50 percent reduction to better balance the Congressional aim of incentivizing investment in TEAs with the goal of encouraging greater investment in the United States more generally. History has shown that a 50 percent reduction coincides with an extremely large imbalance in favor of TEA investments, at the expense of additional overall investment and therefore economic benefit that may accrue to the U.S. economy more generally. Removing the TEA discount entirely, although allowable by statute, would run the risk of removing the incentive to invest in TEAs altogether. Setting the reduced minimum investment at 75 percent of the standard minimum investment amount (*i.e.*, the midpoint between the maximum discount and no discount)

⁸⁵ DHS reviewed a proposed commuter pattern analysis incorporating the data table, Federal Highway Administration, CTPP 2006–2010 Census Tract Flows, available at (http://www.fhwa.dot.gov/planning/census_issues/ctpp/data_products/2006-2010_tract_flows/) (last updated Mar. 25, 2014). DHS found the required steps to properly manipulate the Census Transportation Planning Product (CTPP) database might prove overly burdensome for petitioners with insufficient economic and statistical analysis backgrounds. Further, upon contacting the agency responsible to manage the CTPP data table, DHS was informed that the 2006–2010 CTPP data is unlikely to be updated prior to FY2018 to incorporate proposed changes to the data table. U.S. Census is currently reviewing the CTPP proposed changes. As an alternate methodology for TEA commuter pattern analysis, DHS reviewed data from the U.S. Census tool, On the Map, <http://onthemap.ces.census.gov/>, which is tied to the U.S. Census Bureau’s American Community Survey. Although the interface appeared to be more user-friendly overall, using this data would be operationally burdensome, potentially requiring hours of review to obtain the appropriate unemployment rates for the commuting area.

⁸⁶ The current reduced minimum investment amount (\$500,000) is 50 percent of the standard minimum investment amount (\$1,000,000).

likely would produce greater investment levels in absolute terms while still providing, given the very significant imbalance in favor of TEAs produced by the 50 percent discount, a meaningful incentive to invest in TEAs.

DHS is requesting comments on other alternatives that may minimize the impacts to small entities.

F. Executive Order 12988

This rule meets the applicable standards set forth in sections 3(a) and 3(b)(2) of Executive Order 12988.

G. National Environmental Policy Act

DHS Directive (Dir) 023–01 Rev. 01 establishes the procedures that DHS and its components use to comply with NEPA and the Council on Environmental Quality (CEQ) regulations for implementing NEPA. 40 CFR parts 1500–1508. The CEQ regulations allow federal agencies to establish, with CEQ review and concurrence, categories of actions (“categorical exclusions”) which experience has shown do not individually or cumulatively have a significant effect on the human environment and, therefore, do not require an Environmental Assessment (EA) or Environmental Impact Statement (EIS). 40 CFR 1507.3(b)(2)(ii) and 1508.4. Dir. 023–01 Rev. 01 establishes Categorical Exclusions that DHS has found to have no such effect. Dir. 023–01 Rev. 01 Appendix A Table 1. For an action to be categorically excluded from further NEPA review, Dir. 023–01 Rev. 01 requires the action to satisfy each of the following three conditions: (1) The entire action clearly fits within one or more of the Categorical Exclusions; (2) the action is not a piece of a larger action; and (3) no extraordinary circumstances exist that create the potential for a significant environmental effect. Dir. 023–01 Rev. 01 section V.B(1)–(3).

DHS analyzed this action and does not consider it to significantly affect the quality of the human environment. This proposed rule would change a number of eligibility requirements and introduce priority date retention for certain immigrant investor petitioners. It would also amend existing regulations to reflect statutory changes and codify existing EB–5 program policies and procedures. DHS has determined that this rule does not individually or cumulatively have a significant effect on the human environment because it fits within Categorical Exclusion number A3(d) in Dir. 023–01 Rev. 01, Appendix A, Table 1, for rules that interpret or amend an existing regulation without changing its environmental effect.

This rule is not part of a larger action and presents no extraordinary circumstances creating the potential for significant environmental effects. This rule is categorically excluded from further NEPA review.

H. Paperwork Reduction Act

Under the Paperwork Reduction Act (PRA) of 1995, all Departments are required to submit to OMB, for review and approval, any reporting requirements inherent in a rule. See Public Law 104–13, 109 Stat. 163 (May 22, 1995). USCIS is revising one information collection and requesting public comments on the proposed change as follows: Immigrant Petitioner by Alien Entrepreneur (Form I–526) to collect additional information about the new commercial enterprise into which the petitioner is investing to determine the eligibility of qualified individuals to enter the United States to engage in commercial enterprises. DHS is requesting comments on the proposed information collection changes included in this rulemaking. Comments on this revised information collection should address one or more of the following four points:

(1) Evaluate whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(2) Evaluate the accuracy of the agency’s estimate of the burden of the collection of information, including the validity of the methodology and assumptions used;

(3) Enhance the quality, utility, and clarity of the information to be collected; and

(4) Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, such as permitting electronic submission of responses.

Overview of Information Collection—Form I–526

a. *Type of information collection:* Revision to a currently approved information collection.

b. *Abstract:* USCIS uses this information collection to determine if an alien can enter the U.S. to engage in commercial enterprise.

c. *Title of Form/Collection:* Immigrant Petitioner by Alien Entrepreneur.

d. *Agency form number, if any, and the applicable component of the DHS sponsoring the collection:* Form I–526; USCIS.

e. *Affected public who will be asked or required to respond:* Individuals.

f. *An estimate of the total number of respondents:* 15,990 respondents.

g. *Hours per response:* 1 hour and 50 minutes.

h. *Total Annual Reporting Burden:* 29,261 burden hours.

List of Subjects

8 CFR Part 204

Administrative practice and procedure, Adoption and foster care, Immigration, Reporting and recordkeeping requirements.

8 CFR Part 216

Administrative practice and procedure, Aliens.

Proposed Regulatory Amendments

Accordingly, DHS proposes to amend chapter I of title 8 of the Code of Federal Regulations as follows:

PART 204—IMMIGRANT PETITIONS

■ 1. The authority citation for part 204 continues to read as follows:

Authority: 8 U.S.C. 1101, 1103, 1151, 1153, 1154, 1182, 1184, 1186a, 1255, 1324a, 1641; 8 CFR part 2.

■ 2. Section 204.6 is amended by:

■ a. Revising the title of the section, paragraphs (a), (c), and (d); and

■ b. Amending paragraph (e) by:

■ i. Removing the terms “Immigrant Investor Pilot” and “Pilot” and adding in their place the term “Regional Center” in the definitions for *Employee* and *Full-time employment*;

■ ii. Removing the term “entrepreneur” and adding “investor” in the definitions for *Capital*, *Invest*, *Qualifying employee*, and *Troubled business*;

■ iii. Revising the definitions for *Rural area* and *Targeted employment area*;

Adding a new definition for *Regional Center Program*;

■ iv. Replacing “Form I–526” with “EB–5 immigrant petition”;

■ c. Revising paragraphs (f)(1), (f)(2), and (f)(3);

■ d. Amending paragraph (g)(1) by removing the term “entrepreneur” and adding in its place the term “investor” and revising paragraph (g)(2).

■ e. Revising paragraph (i);

■ f. Revising the paragraph (j)(2)(iii), (5) introductory text and (5)(ii), (6)(i), and (6)(ii)(B);

■ g. Revising paragraph (k);

The revisions and addition read as follows:

§ 204.6 Petitions for employment creation immigrants.

(a) *General.* An EB–5 immigrant petition to classify an alien under

section 203(b)(5) of the Act must be properly filed in accordance with the form instructions, with the appropriate fee(s), initial evidence, and any other supporting documentation.

* * * * *

(c) *Eligibility to file and continued eligibility.* An alien may file a petition for classification as an investor on his or her own behalf.

(d) *Priority date.* The priority date of an approved EB-5 immigrant petition will apply to any subsequently filed petition for classification under section 203(b)(5) of the Act for which the alien qualifies. A denied petition will not establish a priority date. A priority date is not transferable to another alien. The priority date of an approved petition shall not be conferred to a subsequently filed petition if the alien was lawfully admitted to the United States for conditional residence under section 203(b)(5) of the Act based upon that approved petition or if at any time USCIS revokes the approval of the petition based on:

- (1) Fraud, or a willful misrepresentation of a material fact by the petitioner; or
- (2) A determination by USCIS that the petition approval was based on a material error.

(e) * * * *Regional Center Program* means the program established by Public Law 102-395, Section 610, as amended.

Rural area means any area other than an area within a metropolitan statistical area (as designated by the Office of Management and Budget) or within the outer boundary of any city or town having a population of 20,000 or more based on the most recent decennial census of the United States.

Targeted employment area means an area that, at the time of investment, is a rural area or is designated as an area that has experienced unemployment of at least 150 percent of the national average rate.

(f) * * *

(1) *General.* Unless otherwise specified, for EB-5 immigrant petitions filed on or after [INSERT EFFECTIVE DATE OF FINAL RULE], the amount of capital necessary to make a qualifying investment in the United States is one million eight hundred thousand United States dollars (\$1,800,000). Beginning on October 1, [INSERT YEAR FIVE YEARS AFTER EFFECTIVE DATE OF FINAL RULE], and every five years thereafter, this amount will automatically adjust for petitions filed on or after each adjustment's effective date, based on the cumulative annual percentage change in the unadjusted All

Items Consumer Price Index for All Urban Consumers (CPI-U) for the U.S. City Average reported by the Bureau of Labor Statistics for the previous five years. The qualifying investment amount will be rounded down to the nearest hundred thousand. DHS may update this figure by publication of a technical amendment in the **Federal Register**.

(2) *Targeted employment area.* Unless otherwise specified, for EB-5 immigrant petitions filed on or after [INSERT EFFECTIVE DATE OF FINAL RULE], the amount of capital necessary to make a qualifying investment in a targeted employment area in the United States is one million three hundred and fifty thousand United States dollars (\$1,350,000). Beginning on October 1, [INSERT DATE YEAR FIVE YEARS AFTER EFFECTIVE DATE OF FINAL RULE], and every five years thereafter, this amount will automatically adjust for petitions filed on or after each adjustment's effective date, to be equal to 75 percent of the standard minimum investment amount described in paragraph (f)(1) of this section. DHS may update this figure by publication of a technical amendment in the **Federal Register**.

(3) *High employment area.* Unless otherwise specified, for EB-5 immigrant petitions filed on or after [INSERT EFFECTIVE DATE OF FINAL RULE], the amount of capital necessary to make a qualifying investment in a high employment area in the United States is one million eight hundred thousand United States dollars (\$1,800,000). Beginning on October 1, [INSERT DATE YEAR FIVE YEARS AFTER EFFECTIVE DATE OF FINAL RULE], and every five years thereafter, this amount will automatically adjust for petitions filed on or after each adjustment's effective date, based on the cumulative annual percentage change in the unadjusted All Items Consumer Price Index for All Urban Consumers (CPI-U) for the U.S. City Average reported by the Bureau of Labor Statistics for the previous five years. The qualifying investment amount will be rounded down to the nearest hundred thousand. DHS may update this figure by publication of a technical amendment in the **Federal Register**.

(g) * * *

(1) * * * (2) *Employment creation allocation.* The total number of full-time positions created for qualifying employees shall be allocated solely to those alien investors who have used the establishment of the new commercial enterprise as the basis for a petition. No allocation must be made among persons

not seeking classification under section 203(b)(5) of the Act or among non-natural persons, either foreign or domestic. USCIS will recognize any reasonable agreement made among the alien investors in regard to the identification and allocation of such qualifying positions.

* * * * *

(i) *Special designation of a high unemployment area.* USCIS may designate a particular geographic or political subdivision as an area of high unemployment (at least 150 percent of the national average rate). Such geographic or political subdivision must be composed of the census tract or contiguous census tracts in which the new commercial enterprise is principally doing business, and may also include any or all census tracts contiguous to such census tract(s). The weighted average of the unemployment rate for the subdivision, based on the labor force employment measure for each census tract, must be at least 150 percent of the national average unemployment rate.

* * * * *

(j) * * *

(2) * * *

(iii) Evidence of property transferred from abroad for use in the United States enterprise, including U.S. Customs and Border Protection commercial entry documents, bills of lading, and transit insurance policies containing ownership information and sufficient information to identify the property and to indicate the fair market value of such property;

* * * * *

(5) To show that the petitioner is or will be engaged in the new commercial enterprise, either through the exercise of day-to-day managerial control or through policy formulation, the petition must be accompanied by:

* * * * *

(iii) Evidence that the petitioner is engaged in policy making activities. For purposes of this section, a petitioner will be considered sufficiently engaged in policy making activities if the petitioner is an equity holder in the new commercial enterprise and the organizational documents of the new commercial enterprise provide the petitioner with certain rights, powers, and duties normally granted to equity holders of the new commercial enterprise's type of entity in the jurisdiction in which the new commercial enterprise is organized.

* * * * *

(6) * * *

(i) In the case of a rural area, evidence that the new commercial enterprise is

principally doing business within a civil jurisdiction not located within any standard metropolitan statistical area as designated by the Office of Management and Budget, nor within any city or town having a population of 20,000 or more as based on the most recent decennial census of the United States; or

(ii) In the case of a high unemployment area:

(A) Evidence that the metropolitan statistical area, the specific county within a metropolitan statistical area, the county in which a city or town with a population of 20,000 or more is located, or the city or town with a population of 20,000 or more, in which the new commercial enterprise is principally doing business has experienced an average unemployment rate of at least 150 percent of the national average rate; or

(B) A description of the boundaries of the geographic or political subdivision and the unemployment statistics in the area for which designation is sought as set forth in 8 CFR 204.6(i), and the reliable method or methods by which the unemployment statistics were obtained.

(k) *Decision.* The petitioner will be notified of the decision, and, if the petition is denied, of the reasons for the denial. The petitioner has the right to appeal the denial to the Administrative Appeals Office in accordance with the provisions of part 103 of this chapter.

* * * * *

PART 216—CONDITIONAL BASIS OF LAWFUL PERMANENT RESIDENCE STATUS

■ 3. The authority citation for part 216 continues to read as follows:

Authority: 8 U.S.C. 1101, 1103, 1154; 1184, 1186a, 1186b, and 8 CFR part 2.

■ 4. Amend § 216.6 by

■ a. Revising paragraph (a)(1) introductory text;

■ b. Removing “Form I–829, Petition by Entrepreneur to Remove Conditions” from paragraph (a)(1)(i);

■ c. Removing and reserving paragraph (a)(4)(i);

■ d. Replacing “entrepreneur” with “investor” in paragraph (a)(4)(iv);

■ e. Revising paragraphs (a)(5) and (6);

■ f. Revising paragraph (b);

■ g. Removing and reserving paragraph (c)(1)(i) and revising paragraphs (c)(2); and

■ h. Revising paragraph (d).

The revisions to read as follows:

§ 216.6 Petition by investor to remove conditional basis of lawful permanent resident status.

(a) * * *

(1) *General procedures.* (i) A petition to remove the conditional basis of the permanent resident status of an investor accorded conditional permanent residence pursuant to section 203(b)(5) of the Act must be filed by the investor with the appropriate fee. The investor must file within the 90-day period preceding the second anniversary of the date on which the investor acquired conditional permanent residence. Before the petition may be considered as properly filed, it must be accompanied by the fee required under 8 CFR 103.7(b)(1), and by documentation as described in paragraph (a)(4) of this section, and it must be properly signed by the investor. Upon receipt of a properly filed petition, the investor's conditional permanent resident status shall be extended automatically, if necessary, until such time as USCIS has adjudicated the petition.

(ii) The investor's spouse and children may be included in the investor's petition to remove conditions. Where the investor's spouse and children are not included in the investor's petition to remove conditions, the spouse and each child must each file his or her own petition to remove the conditions on their permanent resident status, unless the investor is deceased. If the investor is deceased, the spouse and children may file separate petitions or may be included in one petition. A child who reached the age of 21 or who married during the period of conditional permanent residence, or a former spouse who became divorced from the investor during the period of conditional permanent residence, may be included in the investor's petition or must each file a separate petition.

* * * * *

(5) *Termination of status for failure to file petition.* Failure to properly file the petition to remove conditions within the 90-day period immediately preceding the second anniversary of the date on which the investor obtained lawful permanent residence on a conditional basis shall result in the automatic termination of the investor's permanent resident status and the initiation of removal proceedings. USCIS shall send a written notice of termination and a notice to appear to an investor who fails to timely file a petition for removal of conditions. No appeal shall lie from this decision; however, the investor may request a review of the determination during removal proceedings. In proceedings, the burden of proof shall rest with the investor to show by a preponderance of the evidence that he or she complied with the requirement to file the petition within the designated

period. USCIS may deem the petition to have been filed prior to the second anniversary of the investor's obtaining conditional permanent resident status and accept and consider a late petition if the investor demonstrates to USCIS' satisfaction that failure to file a timely petition was for good cause and due to extenuating circumstances. If the late petition is filed prior to jurisdiction vesting with the immigration judge in proceedings and USCIS excuses the late filing and approves the petition, USCIS shall restore the investor's permanent resident status, remove the conditional basis of such status, and cancel any outstanding notice to appear in accordance with 8 CFR 239.2. If the petition is not filed until after jurisdiction vests with the immigration judge, the immigration judge may terminate the matter upon joint motion by the investor and DHS.

(6) *Death of investor and effect on spouse and children.* If an investor dies during the prescribed 2-year period of conditional permanent residence, the spouse and children of the investor will be eligible for removal of conditions if it can be demonstrated that the conditions set forth in paragraph (a)(4) of this section have been met.

(b) *Petition review.* (1) *Authority to waive interview.* USCIS shall review the petition to remove conditions and the supporting documents to determine whether to waive the interview required by the Act. If satisfied that the requirements set forth in paragraph (c)(1) of this section have been met, USCIS may waive the interview and approve the petition. If not so satisfied, then USCIS may require that an interview of the investor be conducted.

(2) *Location of interview.* Unless waived, an interview relating to the petition to remove conditions for investors shall be conducted by a USCIS immigration officer at the office that has jurisdiction over either the location of the investor's commercial enterprise in the United States, the investor's residence in the United States, or the location of the adjudication of the petition, at the agency's discretion.

(3) *Termination of status for failure to appear for interview.* If the investor fails to appear for an interview in connection with the petition when requested by USCIS, the investor's permanent resident status will be automatically terminated as of the second anniversary of the date on which the investor obtained permanent residence. The investor will be provided with written notification of the termination and the reasons therefore, and a notice to appear shall be issued placing the investor in removal proceedings. The investor may

seek review of the decision to terminate his or her status in such proceedings, but the burden shall be on the investor to establish by a preponderance of the evidence that he or she complied with the interview requirements. If the investor has failed to appear for a scheduled interview, he or she may submit a written request to USCIS asking that the interview be rescheduled or that the interview be waived. That request should explain his or her failure to appear for the scheduled interview, and if a request for waiver of the interview, the reasons such waiver should be granted. If USCIS determines that there is good cause for granting the request, the interview may be rescheduled or waived, as appropriate. If USCIS waives the interview, USCIS shall restore the investor's conditional permanent resident status, cancel any outstanding notice to appear in accordance with 8 CFR 239.2, and proceed to adjudicate the investor's petition. If USCIS reschedules that investor's interview, he or she shall restore the investor's conditional permanent resident status, and cancel any outstanding notice to appear cause in accordance with 8 CFR 239.2.

(c) * * *

(2) If derogatory information is determined regarding any of these

issues or it becomes known to the government that the investor obtained his or her investment funds through other than legal means, USCIS shall offer the investor the opportunity to rebut such information. If the investor fails to overcome such derogatory information or evidence that the investment funds were obtained through other than legal means, USCIS may deny the petition, terminate the investor's permanent resident status, and issue a notice to appear. If derogatory information not relating to any of these issues is determined during the course of the interview, such information shall be forwarded to the investigations unit for appropriate action. If no unresolved derogatory information is determined relating to these issues, the petition shall be approved and the conditional basis of the investor's permanent resident status removed, regardless of any action taken or contemplated regarding other possible grounds for removal.

(d) Decision. (1) *Approval*. If, after initial review or after the interview, USCIS approves the petition, USCIS will remove the conditional basis of the investor's permanent resident status as of the second anniversary of the date on which the investor acquired conditional permanent residence. USCIS shall

provide written notice of the decision to the investor. USCIS may request the investor and derivative family members to appear for biometrics at a USCIS facility for processing for a new Permanent Resident Card.

(2) *Denial*. If, after initial review or after the interview, USCIS denies the petition, USCIS will provide written notice to the investor of the decision and the reason(s) therefore, and shall issue a notice to appear. The investor's lawful permanent resident status and that of his or her spouse and any children shall be terminated as of the date of USCIS' written decision. The investor shall also be instructed to surrender any Permanent Resident Card previously issued by USCIS. No appeal shall lie from this decision; however, the investor may seek review of the decision in removal proceedings. In proceedings, the burden shall rest with USCIS to establish by a preponderance of the evidence that the facts and information in the investor's petition for removal of conditions are not true and that the petition was properly denied.

Jeh Charles Johnson,

Secretary.

LIST OF PUBLIC LAWS

Note: No public bills which have become law were received by the Office of the Federal Register for inclusion

in today's **List of Public Laws**.

Last List January 11, 2017

Public Laws Electronic Notification Service (PENS)

PENS is a free electronic mail notification service of newly

enacted public laws. To subscribe, go to <http://listserv.gsa.gov/archives/publaws-l.html>

Note: This service is strictly for E-mail notification of new laws. The text of laws is not available through this service. **PENS** cannot respond to specific inquiries sent to this address.
