

morphological characteristics and the site's artifact assemblage, the human remains are determined to be Native American.

Site 39LM34 is an earth lodge village situated on a low terrace of the right bank of the Missouri River in central South Dakota. Based on the ceramic types (Talking Crow Straight Rim, Iona Indented, and Cloistered Rims), and brass and copper ornaments, the site is dated to the Post-Contact Coalescent variant (A.D. 1675–1780) of the Plains Village Tradition. Based on archeological, physical anthropological, oral tradition, historic evidence, and geography, Post-Contact populations are believed to be ancestral Arikara. The Arikara are represented today by the Three Affiliated Tribes of the Fort Berthold Reservation.

In 1955, human remains representing, at minimum, 4 individuals were removed from site 39WW301 in Walworth County, SD. The human remains are presently located at the South Dakota State Archeological Research Center (SARC), under the managerial control of the Omaha District. No known individuals were identified. No associated funerary objects are present.

Site 39WW301 was excavated by Wesley R. Hurt, University of South Dakota Museum (now known as the W.H. Over Museum) in conjunction with the South Dakota Archeological Commission as part of the Smithsonian Institute River Basin Surveys in 1955. The human remains of three infants and one subadult were collected. Two infants and one subadult were found together in a secondary burial. One infant was found in a refuse mound.

Following excavation, the collection became part of the W.H. Over Museum collections in Vermillion, SD. The collection was transferred to SARC in 1974. In 1978, an infant skull, probably belonging to Individual 1, was inventoried at SARC and by the University of Tennessee, Knoxville, after which it was reburied in 1986 at site 39ST15. During a collection review at SARC in 1993, additional human remains from Individual 1, as well as remains from Individuals 2, 3, and 4 were located. Based on morphological characteristics and the site's artifact assemblage, the human remains are determined to be Native American.

Site 39WW301 is a multi-component site on a high terrace above the confluence of Swan Creek and the Missouri River in Walworth County, north central South Dakota. Based on ceramics, projectile points, architectural features, and feature typologies, two components are represented—the

Akaska Focus of the Extended Coalescent variant (A.D. 1500–1675) and the LeBeau Phase of the Post-Contact Coalescent variant (A.D. 1675–1780). Based on archeological, physical anthropological, oral tradition, historic evidence, and geography, Extended and Post-Contact populations are believed to be ancestral Arikara, but in some cases may also represent the Mandan populations. The Mandan and Arikara are represented today by the Three Affiliated Tribes of the Fort Berthold Reservation.

History and Description of the Cultural Item(s)

In 1901, while on a museum-sponsored expedition to conduct linguistic and ethnological investigations among the Meskwaki (Fox), William Jones acquired the grizzly bear claw necklace from an unspecified individual(s) in Tama, Tama County, IA. The necklace consists of a circular core wrapped in otter fur, onto which are attached 27 grizzly bear claws, each spaced apart by 3 blue glass beads. The necklace has a long trailer that is formed from the folded pelt of the otter which hangs from the back and is decorated by three areas of beading.

Based on the museum's records and consultation with representatives of the Sac & Fox Tribe of the Mississippi in Iowa, this grizzly bear claw necklace is affiliated with the Sac & Fox Tribe of the Mississippi in Iowa. Evidence from museum records, scholarly publications, and information provided during consultation indicates that the necklace has ongoing historical, traditional, and cultural importance to the tribe, and that no individual had the right to alienate it.
