

Upper Barataria Component Restoration project.

The RP/EA #3.3 evaluated three design alternatives and the No Action alternative in accordance with the OPA and the NEPA. Prior to finalizing the Draft RP/EA #3.3, public review was solicited. A Notice of Availability was published in the **Federal Register** at 85 FR 16081 on March 20, 2020. The Louisiana TIG hosted a public webinar on April 2, 2020, and the public comment period for the Draft RP/EA #3.3 closed on April 20, 2020.

The Louisiana TIG considered the public comments received on the Draft RP/EA #3.3 which informed the analyses and selection of the preferred design alternative for implementation in the Final RP/EA #3.3. A summary of the public comments received and the Trustees' responses to those comments are included in Chapter 6 of the Final RP/EA #3.3 and all correspondence received are provided in the DWH Administrative Record.

Overview of the Final RP/EA #3.3

The Final RP/EA #3.3 is being released in accordance with the OPA, NRDA implementing regulations, and the NEPA. The analysis focuses on an area ("the Project Area") in the upper Barataria Basin, 15 miles (24 km) south of New Orleans, in Jefferson and Plaquemines Parishes, Louisiana, from approximately 5.4 miles (8.7 km) west of the Mississippi River to the Mississippi River between river miles (RM) 64 and 67. In the Final RP/EA #3.3, the Louisiana TIG proposes a preferred design alternative to be funded under the DWH Louisiana Restoration Area Wetlands, Coastal and Nearshore Habitats restoration type allocation. The preferred design alternative would include filling of a combination of marsh creation areas (MCAs) for the creation of approximately 1,207 acres (12.1 km²) of intertidal marsh platform with a design life of 20 years. A total of approximately 10.6 million cubic yards (MCY) of fill

(sediment), comprising 8.4 MCY of currently available material to be dredged from the borrow areas and an additional 2.2 MCY expected to accumulate at the borrow areas during the construction time frame. This alternative would require a single construction mobilization and has an estimated time frame of 26 months for an estimated total project cost of approximately \$172 million, inclusive of Phase I design, construction, contingency, project management, and monitoring & adaptive management.

The Louisiana TIG has examined the injuries assessed by the DWH Trustees and evaluated restoration alternatives to address the injuries. In Final RP/EA #3.3, the Louisiana TIG presents to the public its plan for providing partial compensation to the public for injured natural resources and ecological services in the Louisiana Restoration Area. The proposed alternative is intended to continue the process of using DWH restoration funding to restore natural resources injured or lost as a result of the *Deepwater Horizon* oil spill. Additional restoration planning for the Louisiana Restoration Area will continue.
