History and Description of the Remains

At an unknown date, human remains representing, at minimum, one individual were removed from Silver Mound (47JA21) site in Jackson County, WI. The human remains—a partial temporal bone—belong to an adult of unknown sex. No known individual was identified. No associated funerary objects are present.

Silver Mound is a National Historic Landmark located two miles west of Alma Center and near the headwaters of the Trempealeau River, in western Wisconsin. The site is characterized by a large outcropping of silicified sandstone. Numerous investigations have taken place there; which one resulted in the recovery of the temporal bone is unknown. Warren Wittry and James W. Porter, UW-Madison Department of Anthropology graduate students, worked at the site in 1958, so they possibly brought the temporal bone to the Department at that time.

History and Description of the Remains

In 1965, human remains representing, at minimum, one individual were removed from Mound 4 of the Nekoosa Mound Group (47WO14) in Wood County, WI. The fragmentary remains belong to an adult of unknown sex. No known individual was identified. The 18 associated funerary objects are 16 soil samples, one processed flotation sample, and one small shell disc.

The site was originally comprised of one linear, six oval, and four conical mounds, and one bear effigy mound. In August of 1965, William Hurley, then a UW-Madison graduate student in the Department of Anthropology, excavated the bear effigy mound and Mound 4 (the largest extant conical mound) as part of a program to examine and analyze ancient soil surfaces buried beneath effigy mounds.
