SUPPLEMENTARY INFORMATION:

Management strategy evaluation (MSE) is a process that allows fishery managers and stakeholders (e.g., industry, scientists, and non-governmental organizations) to assess how well different strategies achieve specified management objectives for a fishery. ICCAT has been engaged in developing an MSE for bluefin tuna for several years. NMFS, and the United States more broadly, participates in this MSE development process and has been

engaging stakeholders and considering their input throughout the process through various means, including consultation with the Advisory Committee to the U.S. Section to ICCAT. The United States also participates in the development of the bluefin tuna MSE through active participation by U.S. scientists in ICCAT's Standing Committee on Research and Statistics (SCRS).

The November 4 workshop is intended to update stakeholders on the MSE approach being developed by ICCAT, including an update on preliminary candidate management procedures that will help to illustrate management tradeoffs for Atlantic bluefin tuna. The workshop will primarily be informational and educational. No binding decisions or formal, consensus-based recommendations will be made. While discussions at the workshop will help to inform U.S. scientists who are participating in work of the SCRS, recommendations directly affecting the development of the U.S. position relative to the bluefin tuna MSE will occur through established means, including consultation with the Advisory Committee. This workshop is intended to complement, not replace, existing opportunities for U.S. stakeholder input.
