The Department of State periodically publishes in the **Federal Register** its standard routine uses that apply to all of its Privacy Act systems of records. These notices appear in the form of a Prefatory Statement (published in Volume 73, Number 136, Public Notice 6290, on July 15, 2008). All these standard routine uses apply to Visa Records, State-39.

POLICIES AND PRACTICES FOR STORAGE OF RECORDS:

Records are stored both in hard copy and on electronic media. A description of standard Department of State policies concerning storage of electronic records is found in the Department's Foreign Affairs Manual (<https://fam.state.gov/FAM/05FAM/05FAM0440.html>). All hard copies of records containing personal information are maintained in secured file cabinets in restricted areas, access to which is limited to authorized personnel.

POLICIES AND PRACTICES FOR RETRIEVAL OF RECORDS:

Records may be retrieved through individual data fields including but not limited to: Applicant personal data; biometrics and namecheck data; case data; and visa data.

POLICIES AND PRACTICES FOR RETENTION AND DISPOSAL OF RECORDS:

The retention period for visa records depends on the nature of the information and disposition of the visa adjudication. Some files related to issued immigrant visas are destroyed six months after issuance. In some instances, files with historical significance are permanent records. Most files related to Certificates of Identity are retained for twenty-five

years after closure. These records are retired and destroyed in accordance with published Department of State Records Disposition Schedules as approved by the National Archives and Records Administration (NARA), and a complete list of the Department's schedules can be found on its Freedom of Information Act (FOIA) program's website (<https://foia.state.gov/Learn/RecordsDisposition.aspx>). More specific information may be obtained by writing to the following address: U.S. Department of State; Director, Office of Information Programs and Services; A/GIS/IPS; 2201 C Street NW; Room B-266; Washington, DC 20520.

ADMINISTRATIVE, TECHNICAL, AND PHYSICAL SAFEGUARDS:

All Department of State network users are given cyber security awareness training which covers the procedures for handling Sensitive but Unclassified information, including personally identifiable information (PII). Annual refresher training is mandatory. In addition, all Department OpenNet network users are required to take the Foreign Service Institute's distance learning course instructing employees on privacy and security requirements, including the rules of behavior for handling PII and the potential consequences if it is handled improperly. Before being granted access to Visa Records, a user must first be granted access to the Department of State network system.

Department of State employees and contractors may remotely access this system of records using non-Department owned information technology. Such access is subject to approval by the Department's mobile and remote access program and is limited to information maintained in unclassified information systems. Remote access to the Department's information systems is configured in compliance with the Office of Management and Budget Circular Memorandum A-130 multifactor authentication requirements and includes a time-out function.

All Department of State employees and contractors with authorized access to records maintained in this system of records have undergone a background security investigation. Access to the Department of State, its annexes and posts abroad is controlled by security guards and admission is limited to those individuals possessing a valid identification card or individuals under proper escort. While the majority of records covered in Visa Records are electronic, all paper records containing personal information are maintained in secured file cabinets in restricted areas,

access to which is limited to authorized personnel only. Access to computerized files is password-protected and under the direct supervision of the system manager. The system manager has the capability of printing audit trails of access from the computer media, thereby permitting regular and ad hoc monitoring of computer usage. When it is determined that a user no longer needs access, the user account is disabled.

The safeguards in the following paragraphs apply only to records that are maintained in government-certified cloud systems. All cloud systems that provide IT services and process Department of State personally identifiable information (PII) must be specifically authorized by the Department of State Authorizing Official and Senior Agency Official for Privacy.

Information that conforms with Department-specific definitions for FISMA low, moderate, or high categorization are permissible for cloud usage and must specifically be authorized by the Department's Cloud Management Office and the Department of State Authorizing Official. Specific security measures and safeguards will depend on the FISMA categorization of the information in a given cloud system. In accordance with Department policy, systems that process more sensitive information will require more stringent controls and review by Department cybersecurity experts prior to approval. Prior to operation, all Cloud systems must comply with applicable security measures that are outlined in FISMA, FedRAMP, OMB regulations, National Institute of Standards and Technology (NIST) Special Publications (SP) and Federal Information Processing Standards (FIPS) and Department of State policies and standards.

All data stored in cloud environments categorized above a low FISMA impact risk level must be encrypted at rest and in-transit using a federally-approved encryption mechanism. The encryption keys shall be generated, maintained, and controlled in a Department data center by the Department key management authority. Deviations from these encryption requirements must be approved in writing by the Department of State Authorizing Official. High FISMA impact risk level systems will additionally be subject to continual auditing and monitoring, multifactor authentication mechanisms utilizing Public Key Infrastructure (PKI) and NIST 800-53 controls concerning virtualization, servers, storage and networking, as well as stringent measures to sanitize data from the cloud service once the contract is terminated.
