BILLING CODE 7565–01–P

DEPARTMENT OF THE INTERIOR**National Indian Gaming Commission****25 CFR Part 559****RIN 3141–AA73****Submission of Gaming Ordinance or Resolution; Correction**

AGENCY: National Indian Gaming Commission, Department of the Interior.

ACTION: Proposed rule; correction.

SUMMARY: This document corrects the preamble to a proposed rule published in the **Federal Register** of December 9, 2021, regarding the Submission of Gaming Ordinances or Resolutions. The document contained incorrect dates for submitting comments. This correction clarifies that comments are due February 7, 2022.

BILLING CODE 7565–01–P

POSTAL REGULATORY COMMISSION**39 CFR Part 3050**

[Docket No. RM2022–3; Order No. 6090]

Periodic Reporting

AGENCY: Postal Regulatory Commission.

ACTION: Notice of proposed rulemaking.

SUMMARY: The Commission is acknowledging a recent filing requesting the Commission initiate a rulemaking proceeding to consider changes to analytical principles relating to periodic reports (Proposal One). This document informs the public of the filing, invites public comment, and takes other administrative steps.

DATES:

Comments are due: March 14, 2022.

Reply comments are due: March 28, 2022.

ADDRESSES: Submit comments electronically via the Commission's Filing Online system at <http://www.prc.gov>. Those who cannot submit comments electronically should contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section by telephone for advice on filing alternatives.

FOR FURTHER INFORMATION CONTACT:

David A. Trissell, General Counsel, at 202–789–6820.

- III. Notice and Comment
- IV. Ordering Paragraphs

I. Introduction

On January 5, 2022, the Postal Service filed a petition pursuant to 39 CFR 3050.11 requesting that the Commission initiate a rulemaking proceeding to consider changes to analytical principles relating to periodic reports.¹ The Petition identifies the proposed analytical changes filed in this docket as Proposal One.

¹ Petition of the United States Postal Service for the Initiation of a Proceeding to Consider Proposed Changes in Analytical Principles (Proposal One), January 5, 2022 (Petition). The Petition was accompanied by a study supporting its proposal. See Michael D. Bradley (Bradley), *On the Estimation of a Top-Down Model for City Carrier Street Time*, January 5, 2022. The Postal Service also filed a notice of filing of public and non-public materials relating to Proposal One. Notice of Filing of USPS–RM2022–3–1 and USPS–RM2022–3–NP1 and Application for Nonpublic Treatment, January 5, 2022.

II. Proposal One

Background. In Docket No. RM2015–7,² the Postal Service proposed, and the Commission accepted, an approach to estimating variabilities for city carrier street time that relied upon three separate econometric equations, one for letters and flats, one for in-receptacle parcels, and one for deviation parcels and accounts. Petition, Proposal One at 1. The Commission directed the Postal Service to undertake an effort to investigate what data would be needed to estimate a unified, or “top-down,” model. *Id.* Subsequent to Docket No. RM2015–7, the Commission opened a public inquiry case, Docket No. PI2017–1,³ to follow the Postal Service's progress in updating its data capabilities and modeling efforts for city carrier street time and specified the type and structure of the data set that would be appropriate to estimate a top-down model. *Id.* at 2. In response to the Commission's directives, the Postal Service compiled the appropriate data, investigated alternative methods of estimating a top-down model, and specified a model that includes an estimation of new variabilities for city carrier, letter route, and street time. *Id.* at 2–3.

Proposal. Proposal One would update the methodology for calculating attributable city carrier, letter route, street time costs by employing an overall top-down model that replies upon expanded operational carrier data. *Id.* at 1, 3. The Postal Service proposes that the new top-down study would improve the previous analysis of letter route street time by making use of ongoing operation data systems; incorporating seasonality effects and controls for day-of-week effects; including new characteristic variables that help control for non-volume variations in hours across ZIP Codes; relying upon a new econometric technique, called a correlated random effects model, that controls for unobserved differences across ZIP Codes while explicitly recognizing those differences are correlated with volume; taking a holistic approach to analyzing city street time; and producing marginal delivery and collection times that comport with current carrier street time operational practice. *Id.* at 3–4.

The overall levels of variabilities produced by the top-down model is lower than the current model because a
