The Economic Census is the primary source of information about the structure and functioning of the economies of the Nation and each Island Area and features the only recognized source of data at a geographic level similar to U.S. counties. Economic census statistics serve as part of the framework for the national accounts and provides essential information for government, business, and the general public. The Federal Government, governments of the Island Areas, Bureau of Economic Analysis (BEA), and the Bureau of Labor Statistics rely on the economic census as an important part of the framework for their income and

product accounts, input-output tables, economic indices, and other composite measures that serve as the basis for economic policymaking, planning, and program administration. Further, the Economic Census provides sampling frames and benchmarks for current business surveys which track short-term economic trends, serve as economic indicators, and contribute critical source data for current estimates of gross domestic product. State and local governments rely on the economic census as a unique source of comprehensive economic statistics for small geographic areas for use in policymaking, planning, and program administration. Finally, industry, business, academia, and the general public use information from the economic census for evaluating markets, preparing business plans, making business decisions, developing economic models and forecasts, conducting economic research, and establishing benchmarks for their own sample surveys.
