SUPPLEMENTARY INFORMATION: Section 101(c) of the Federal Mine Safety and Health Act of 1977 and title 30 of the Code of Federal Regulations (CFR) part 44 govern the application, processing, and disposition of petitions for modification.

I. Background

Section 101(c) of the Federal Mine Safety and Health Act of 1977 (Mine Act) allows the mine operator or representative of miners to file a petition to modify the application of any mandatory safety standard to a coal or other mine if the Secretary of Labor determines that:

1. An alternative method of achieving the result of such standard exists which will at all times guarantee no less than the same measure of protection afforded the miners of such mine by such standard; or

2. The application of such standard to such mine will result in a diminution of safety to the miners in such mine.

In addition, §§ 44.10 and 44.11 of 30 CFR establish the requirements for filing petitions for modification.

II. Petition for Modification

Docket Number: M-2022-004-C.

Petitioner: Century Mining, LLC, 7004 Buckhannon Road, Volga, West Virginia 26238.

Mine: Longview Mine, MSHA ID No. 46-09447, located in Barbour County, West Virginia.

Regulation Affected: 30 CFR 18.35(a)(5)(i), Portable (trailing) cables and cords.

Modification Request: The petitioner seeks modification of the existing standard to permit 995-volt, 575-volt, and 480-volt trailing cable lengths up to 1,000 feet providing power to section equipment including continuous mining machine, roof bolters, shuttle cars, and auxiliary fans during: Initial bottom development; mains, sub-mains, and three-entry sections development; bleeder and recovery entries development; and mining around gas wells.

The petitioner states that:

(a) The mine is currently under construction.

(b) The mine will utilize the room and pillar and longwall mining methods to extract coal and will employ approximately 375 coal miners.

(c) A modification to the existing standard would enhance the safety of the miners by minimizing the number of power center moves, thereby reducing exposure to electrical hazards associated with cable handling.

(d) Use of 1,000-foot cables would reduce the chance of a fire on a working section by allowing power centers to be farther from the working face.

The petitioner proposes the following alternative method:

(a) The maximum length of the 995-volt, 575-volt, and 480-volt trailing cables will be 1,000 feet.

(b) The section equipment's trailing cables will not be smaller than No. 6 American Wire Gauge (AWG). At no time will a trailing cable be smaller than specified in the approval documentation for the machine.

(c) All circuit breakers used to protect trailing cables exceeding the maximum length specified in 30 CFR 18.35(a)(5)(i) will have instantaneous trip units properly calibrated and adjusted to trip at no more than the smallest of the following values:

(1) The setting specified in 30 CFR 75.601-1;

(2) the setting specified in the approval documentation for the machine; or
