Abstract: The National Emission Standards for Hazardous Air Pollutants (NESHAP) for Chemical Manufacturing Area Sources were proposed on October 6, 2008; promulgated on October 29, 2009; and amended on December 21, 2012. There are nine area source categories in the chemical manufacturing sector: Agricultural

Chemicals and Pesticides Manufacturing, Cyclic Crude and Intermediate Production, Industrial Inorganic Chemical Manufacturing, Industrial Organic Chemical Manufacturing, Inorganic Pigments Manufacturing, Miscellaneous Organic Chemical Manufacturing, Plastic Materials and Resins Manufacturing, Pharmaceutical Production, and Synthetic Rubber Manufacturing. These regulations apply process vents, storage tanks, equipment leaks, wastewater systems, transfer operations, and heat exchange systems at affected sources in each area source category and are combined in one subpart. New facilities include those that either commenced construction or reconstruction after the date of proposal. This information is being collected to assure compliance with 40 CFR part 63, subpart VVVVVV.

Form Numbers: None.

Respondents/affected entities:

Private-sector area sources involved in the chemical manufacturing of agricultural chemicals and pesticides, cyclic crude and intermediates, industrial inorganic chemicals, industrial organic chemicals, inorganic pigments, miscellaneous organic chemicals, plastic materials and resins, pharmaceutical production, and synthetic rubber.

Respondent's obligation to respond: Mandatory (40 CFR part 63, subpart VVVVVV).

Estimated number of respondents: 548 (total).

Frequency of response: Semiannually.

Total estimated burden: 10,500 hours (per year). Burden is defined at 5 CFR 1320.3(b).

Total estimated cost: \$2,830,000 (per year), which includes \$1,590,000 in annualized capital/startup and/or operation & maintenance costs.

Changes in the Estimates: There is an increase in burden from the most-recently approved ICR as currently identified in the OMB Inventory of Approved Burdens. The adjustment increase in burden from the most-recently approved ICR is not due to any program changes, but is due to an increase in the number of new sources. This ICR reflects an additional 10 respondents per year, assuming continued industry growth. The increase in the number of respondents also results in an increase in the operation and maintenance (O&M) costs.

Courtney Kerwin,

Director, Regulatory Support Division.
