

§ 32.7(a) and confirming the terms and conditions for use of this lending authority; and

- A description of how the board will exercise its continuing responsibility to oversee the use of this lending authority.

12 CFR 32.9(b)(1) outlines three alternative methods (the Internal Model Method, the Conversion Factor Matrix Method, and the Current Exposure Method) for national banks and savings associations to use in calculating the credit exposure of non-credit derivative transactions. 12 CFR 32.9(c) outlines two alternative methods for national banks and savings associations to use in calculating credit exposure arising from their securities financing transactions.

Under 12 CFR 32.9(b)(1)(i)(C), the use of a model (other than the model approved for purposes of the Advanced Measurement Approach in the capital rules) must be approved in advance and in writing by the OCC specifically for part 32 purposes. If a national bank or savings association proposes to use an internal model that has been approved by the OCC for purposes of the Advanced Measurement Approach, the institution must provide prior written notification to the OCC prior to use of the model for lending limits purposes. OCC approval also is required for any substantive revisions to an approved model before that model is used for lending limit purposes.
