(kV) step-up transformer and a 650-foot-long, 12.47-kV underground transmission line that connects the generators to the regional grid; and (7) appurtenant facilities. The project creates an approximately 1,900-foot-long bypassed reach of Reeds Brook.

The current license requires Green Lake Power to: (1) Maintain the elevation of Green Lake between 159.7 feet and 160.7 feet USGS datum from June 1 through Labor Day weekend each year, and between 157.5 feet and 160.7 feet USGS datum for the remainder of the year; (2) complete the fall drawdown of Green Lake by October 15 of each year; (3) reduce the elevation of Green Lake during the spring drawdown to no lower than the elevation attained on the previous October 15 of each year; and (4) release a year-round minimum flow to Reeds Brook of one cubic foot per second (cfs), or inflow to Green Lake, whichever is less, for the protection and enhancement of fish and wildlife resources downstream of the dam. In addition, the current license requires Green Lake Power to provide flows of up to 30 cfs to the FWS's Green Lake National Fish Hatchery (GLNFH).

The current license also requires Green Lake Power to install screens at the project intake to protect fish from turbine entrainment and prevent out-migration of adult salmonids from Green Lake. The existing screens have a two-inch mesh size and extend from the bottom of the intake to 2 feet above the crest of the spillway.

The average annual generation of the project was approximately 1,657.8
