

Trustees' completion of a damage assessment or the filing of legal actions against parties liable under CERCLA at the Sites.

The agreement provides for the completion of natural resource restoration work as described below, in return for a \$73.5 million credit to offset liability for natural resource damages at the Sites. The amount of credit is based on the Trustees' estimate of the cost of undertaking the work themselves. The agreement specifies that the work only partially provides compensation for natural resource damage liability at the Sites, and reserves the Trustees' rights for further recovery against any PRP, including BASF. The proposed location for the restoration work is at the intersection of Clay Street and Passaic Avenue in East Newark, New Jersey. The project includes five acres adjacent to the Passaic River, and includes the transformation of a former manufacturing site of BASF and an adjacent property, into restored naturalized flora and fauna with a hydrological connection to the River. BASF will undertake the design and construction, provide funding for future operation and maintenance, reimburse Trustee oversight costs, and impose a conservation easement and restriction on the property to protect against future development. The work also includes creation of public access to the River.

**SUPPLEMENTARY INFORMATION:**

Potentially gassy (explosive) conditions underground are largely controlled by the main fans. When accumulations of explosive gases, such as methane, are not swept from the mine by the main fans, they may reasonably be expected to contact an ignition source. The results of such contacts are usually disastrous, and multiple fatalities may be reasonably expected to occur. The standard contains significantly more stringent requirements for main fans in “gassy” mines than for main fans in other mines. Title 30 CFR 57.22204, which only applies to metal and nonmetal underground mines that are categorized as “gassy,” requires main fans to have pressure-recording systems. This standard also requires main fans to be inspected daily while operating if persons are underground and certification made of such inspections by signature and date. Certifications and pressure recordings must be retained for one year and made available to authorized representatives of the Secretary. For additional substantive information about this ICR, see the related notice published in the **Federal Register** on January 26, 2022 (87 FR 4048).

This information collection is subject to the PRA. A Federal agency generally cannot conduct or sponsor a collection of information, and the public is generally not required to respond to an information collection, unless the OMB approves it and displays a currently valid OMB Control Number. In addition, notwithstanding any other provisions of law, no person shall generally be subject to penalty for failing to comply with a collection of information that does not display a valid OMB Control Number. See 5 CFR 1320.5(a) and 1320.6.

DOL seeks PRA authorization for this information collection for three (3) years. OMB authorization for an ICR cannot be for more than three (3) years without renewal. The DOL notes that information collection requirements submitted to the OMB for existing ICRs receive a month-to-month extension while they undergo review.
