

and low reservoir inflows, the applicant requests to reduce the seasonal minimum allowable reservoir elevation from 868 feet to 865 feet to increase spillway discharge in order to mitigate low tailrace dissolved oxygen levels (DO). When inflow to the reservoir is not equal to the discharge needed to maintain DO concentration in the project tailwater at the minimum standard (5.0 milligrams per liter), the applicant would increase project discharge in 25 cubic feet per second increments and subsequently lower the reservoir elevation below 868 feet but no less than 865 feet. The applicant requests the temporary variance to remain into effect until November 1, 2022.

[Docket No. CP22-21-000; Docket No. CP22-22-000]

Venture Global CP2 LNG, LLC, Venture Global CP Express, LLC; Notice of Revised Schedule for Environmental Review of the CP2 Lng and CP Express Projects

This notice provides the Federal Energy Regulatory Commission staff's revised schedule for the completion of the environmental impact statement (EIS) for Venture Global CP2 LNG, LLC's (CP2 LNG) and Venture Global CP Express, LLC's (CP Express) CP2 LNG and CP Express Projects. The first notice of schedule, issued on February 9, 2022, identified February 10, 2023 as the final EIS issuance date. However, a number of responses to environmental and engineering data requests continue to remain outstanding and/or are deficient.¹ These outstanding responses are necessary for staff to prepare a draft EIS for the projects. Based upon CP2 LNG's and CP Express' commitment to provide complete responses to the outstanding data requests by August 30, 2022, staff has revised the schedule for issuance of the final EIS and anticipates issuing a draft EIS in January 2023.

Schedule for Environmental Review

Issuance of the Notice of Availability of the final EIS—July 28, 2023
90-day Federal Authorization Decision Deadline²—October 26, 2023

¹ On July 6, 2022 the Commission issued a notice suspending the environmental review schedule for these projects based upon CP2 LNG's and CP Express' failure to file complete and timely information necessary for staff to prepare a draft EIS.

² The Commission's deadline applies to the decisions of other federal agencies, and state agencies acting under federally delegated authority, that are responsible for federal authorizations,

If a schedule change becomes necessary, an additional notice will be provided so that the relevant agencies are kept informed of the project's progress.

Additional Information

In order to receive notification of the issuance of the EIS and to keep track of all formal issuances and submittals in specific dockets, the Commission offers a free service called eSubscription. This can reduce the amount of time you spend researching proceedings by automatically providing you with notification of these filings, document summaries, and direct links to the documents. Go to <https://www.ferc.gov/ferc-online/overview> to register for eSubscription.

Additional information about the Project is available from the Commission's Office of External Affairs at (866) 208-FERC or on the FERC website (www.ferc.gov). Using the "eLibrary" link, select "General Search" from the eLibrary menu, enter the selected date range and "Docket Number" excluding the last three digits (*i.e.*, CP22-21 and CP22-22), and follow the instructions. For assistance with access to eLibrary, the helpline can be reached at (866) 208-3676, TTY (202) 502-8659, or at FERCOnlineSupport@ferc.gov. The eLibrary link on the FERC website also provides access to the texts of formal documents issued by the Commission, such as orders, notices, and rule makings.

The final rule became effective on May 20, 2022. Commission staff intends to conduct its NEPA review in accordance with CEQ's new regulations.

l. *Project Description*: The existing Watson Dam Project consists of: (1) a 285.25-foot-long, 12-foot-high concrete gravity dam that includes the following sections: (a) a 43-foot-long west abutment; (b) a 122-foot-long west spillway section with 24-inch-high flashboards, a crest elevation of 110.1 North American Vertical Datum of 1988 (NAVD 88) at the top of the flashboards, and a 3-foot-wide notch at an elevation of 109.6 NAVD 88; (c) an 11.25-foot-long, 11.5-foot-wide concrete spillway center pier; (d) an 80-foot-long east spillway section with 24-inch-high flashboards and a crest elevation of 110.2 feet NAVD 88 at the top of the flashboards; and (e) a 29-foot-long east abutment; (2) an impoundment with a surface area of 54 acres and a storage capacity of 300 acre-feet at an elevation of 110.1 feet NAVD 88; (3) a 23.5-foot-long intake structure in the east abutment that is equipped with an 8.5-foot-diameter headgate and trashrack with 2-inch clear bar spacing and a 1-inch mesh overlay; (4) a 26.5-foot-long, 34-foot-wide wood and steel powerhouse containing one 265-kilowatt vertical Flygt submersible turbine-generator unit; (5) a 250-foot-long, 20-foot-wide tailrace that discharges into the Cocheco River; (6) a 0.48/12.47-kilovolt (kV) step-up transformer and an 80-foot-long, 12.47 kV transmission line that connect the project to the local utility distribution system; and (7) appurtenant facilities. The project creates an approximately 400-foot-long bypassed reach of the Cocheco River.

Watson Associates operates the project in a run-of-river mode using an automatic pond level control system to regulate turbine operation, such that outflow from the project approximates inflow. Downstream fish passage is provided by a bypass facility located next to the project's intake on the east side of the dam that includes an

approximately 30-foot-long, 24-inch-diameter pipe that discharges to a plunge pool downstream of the dam.

Article 26 of the current license requires a minimum flow of 83 cubic feet per second or inflow to the impoundment, whichever is less, from the project, to protect and enhance aquatic resources in the Cocheco River. Watson Associates is required to operate the downstream fish passage facility from October 1 through November 15 of each year. The average annual energy production of the project is approximately 1,100 megawatt hours.

Watson Associates proposes to: (1) continue to operate the project in a run-of-river mode; (2) continue to provide downstream fish passage through the bypass facility; and (3) consult with the New Hampshire State Historic Preservation Officer before beginning any land-disturbing activities or alterations to known historic structures within the project boundary.
