

also be used by administrative support professionals to review and evaluate NSF programs, facilitate proposal submission, simplify reviewer activities, and provide data for the selection and management of reviewers and related merit review functions. This information will provide NSF with the necessary data to create dashboards across business applications that allow users to easily access and update their data over time and enable administrators to report on efforts to broaden participation. Additionally, the information collected as part of the NSF Account profile will align with the precedent set by the Department of State with the option to select a third gender marker for non-binary, intersex, and gender non-conforming individuals. This additional gender response option is based on the two-part qualitative study coordinated between the Department of State and the Centers for Disease Control and Prevention. The results concluded that “unspecified or another gender identity” is the most appropriate definition. “Unspecified” is also the International Civil Aviation Organization’s (ICAO) standard for third gender markers, aligning efforts with that of the international community, public commenters, and all U.S. citizens regardless of their gender identity.

Expected Respondents: Researchers and administrative support professionals, including those with a Principal Investigator role, a Reviewer role, or those applying to the Graduate Research Fellowship Program (GRFP), or those designated as current Fellow with GRFP.

Estimated Number of Annual Respondents: 587,776.

Burden on the Public: It should be noted that burden estimates associated with the NSF Account Profile amount to 5 minutes to fill out the contact information, demographic information, and academic/professional information, including the collection of data to fill in the fields. This assumption includes users who have filled out information in the past and do not wish to update their information. The demographic information should be readily available as the selection fields are available on *Research.gov* today and the professional information can be gathered from external data sources. The estimated number of annual respondents considers all users in *Research.gov*, regardless of role and demographic information completion status, all unique reviewers for NSF, all current GRFP Fellows, and the estimated annual number of GRFP applicants. The estimated burden time is 48,981 hours.
