Abstract: The New Source Performance Standards for Industrial/Commercial/Institutional Steam Generating Units (40 CFR part 60, subpart Db) apply to existing and new industrial/commercial/institutional steam generating units (boilers) that have a heat input capacity from fuels combusted in the unit of greater than 29 megawatts (MW) (100 million British thermal units per hour (MMBtu/hr)). In general, all NSPS standards require initial notifications, performance tests, and periodic reports by the owners/operators of the affected facilities. They are also required to maintain records of the occurrence and duration of any startup, shutdown, or malfunction in the operation of an affected facility, or any period during which the monitoring system is inoperative. These notifications, reports, and records are essential in determining compliance, and are required of all affected facilities subject to NSPS.

Form Numbers: None.

Respondents/affected entities: Owners and operators of commercial,

industrial, or institutional steam generating units.

Respondent’s obligation to respond: Mandatory (40 CFR part 60, subpart Db).

Estimated number of respondents: 2,068 (total).

Frequency of response: Quarterly, semiannually.

Total estimated burden: 1,890,000 hours (per year). Burden is defined at 5 CFR 1320.3(b).

Total estimated cost: \$265,000,000 (per year), which includes \$37,900,000 in annualized capital/startup and/or operation & maintenance costs.

Changes in the Estimates: The increase in burden from the most-recently approved ICR is due to an adjustment. This increase is not due to any program changes. The increase is based on an increase in the number of sources subject to the NSPS due to continued growth in the industry. There is no increase in capital costs, but there is an increase in O&M costs because the number of existing respondents conducting O&M has increased.

Director, Regulatory Support Division.
