SUPPLEMENTARY INFORMATION: Section 101(c) of the Federal Mine Safety and Health Act of 1977 and title 30 of the Code of Federal Regulations (CFR) part 44 govern the application, processing, and disposition of petitions for modification.

I. Background

Section 101(c) of the Federal Mine Safety and Health Act of 1977 (Mine Act) allows the mine operator or representative of miners to file a petition to modify the application of any mandatory safety standard to a coal or

other mine if the Secretary of Labor determines that:

1. An alternative method of achieving the result of such standard exists which will at all times guarantee no less than the same measure of protection afforded the miners of such mine by such standard; or

2. The application of such standard to such mine will result in a diminution of safety to the miners in such mine.

In addition, sections 44.10 and 44.11 of 30 CFR establish the requirements for filing petitions for modification.

II. Petition for Modification

Docket Number: M–2022–019–C.

Petitioner: Signal Peak Energy, LLC, 100 Portal Drive, Roundup, Montana 59072.

Mine: Bull Mountains Mine No. 1, MSHA ID No. 24–01950, located in Musselshell County, Montana.

Regulation Affected: 30 CFR 18.35(a)(5)(i), Portable (trailing) cables and cords.

Modification Request: The petitioner requests a modification of 30 CFR 18.35(a)(5)(i) to permit 1,000-foot versus the specified 700-foot No. 2 American Wire Gauge (AWG) 995-volt trailing cables for shuttlecars and roof bolters and to permit 1,000-foot versus the 850-foot ¾ 995-volt trailing cables for continuous mining machines.

The petitioner states that:

(a) The implementation of up to 1,000-foot trailing cables will eliminate the need for distribution boxes and their associated hazards, currently necessary to develop Bull Mountain Mine No. 1 pillar sizes in continuous mining sections.

(b) Minimizing the need for distribution boxes in continuous mining sections will reduce redundant electrical connections, reduce exposure to hazards related to setting breakers, and remove an installation that is prone to damage from passing equipment.

(c) The Bull Mountains Mine No. 1 runs continuous mining sections with two shuttlecars, one or two roof bolters, and two continuous mining machines.

(d) Cuts are made on 40-foot increments. Pillar dimensions are approved on centers up to 250 feet. Large block sizes are implemented for pillar stability, abutment control, and prevent ventilation pressure loss.

(e) The use of distribution boxes is currently necessary in areas where large pillar sizes are implemented. This includes Startlines, Recovery Rooms, and applications in Mains development.

(f) To comply with maximum trailing cable lengths, distribution boxes must be installed and advanced every crosscut in areas with pillar centers
