

completion,¹ ensures that all permitted fishermen will be included in the census and each fisherman will only be surveyed once per annum.

The questions contained on the vessel and gear survey form are needed to collect data as required by regulations implementing Amendment 13. All but Question 1 on the form are focused on activity in the past year. Questions 1–4 ask for year of vessel purchase, by whom the vessel was operated in the past year, number of days at sea and trips taken in the past year and in what areas and fisheries the vessel was operated. Questions 5–11 pertain to the most frequent type of gear used. Questions 12–13 pertain to the most frequently used bycatch reduction devices (BRD). Questions 14–26 pertain to the most frequently used turtle exclusion devices (TED). Question 27 asks for a list of all electronic equipment used on the vessel.

The primary purposes of collecting vessel and gear characterization data at the census level is to develop statistically valid sampling designs for the other aforementioned data collection programs. It is believed that the creation of stratified, random sampling designs for these data collection programs is necessary to ensure that the data, and the estimates of the fishery performance measures based on that data, are accurate (e.g., representative of the fishery's actual performance). The various vessel and gear characteristics serve as strata in these sampling designs.

The information collected by the vessel and gear characterization survey is used by NMFS economists, social scientists, and biologists to help evaluate the performance of existing regulations (e.g., BRDs, TEDs, time or area closures, etc.), and the impacts that changes to those regulations may have on individual fishermen, the shrimp fishing industry as a whole, and fishing communities. In addition, the vessel and gear characterization data are further linked to various biological, social, and economic data collected by other means.

It is anticipated that the information collected will be available to the public through technical memoranda and similar publications, or used to support publicly disseminated information, such as analyses contained within documents distributed by the Gulf of Mexico

Fishery Management Council (Council). Data may be reported according to the various types of nets, TEDs, BRDs or electronic equipment that is generally used, which will allow comparisons and evaluations of alternative vessel and gear configurations by analysts and vessel owners.

II. Method of Collection

NMFS mails a paper copy of the forms to respondents and provides a pre-paid business reply envelope for permit applications to submit the form. Permit applicants must complete and mail the form back to NMFS before a permit expires and before NMFS will issue or transfer a permit.
