

notifies employees of the minimum safe distance they must maintain between goods undergoing electrostatic detearing and the electrodes or conductors of the equipment used in the process. Doing so reduces the likelihood of igniting the explosive chemicals used in electrostatic detearing operations.

II. Special Issues for Comment

OSHA has a particular interest in comments on the following issues:

- Whether the proposed information collection requirement is necessary for the proper performance of the agency's functions to protect workers, including whether the information is useful;
- The accuracy of OSHA's estimate of the burden (time and costs) of the information collection requirement, including the validity of the methodology and assumptions used;
- The quality, utility, and clarity of the information collected; and
- Ways to minimize the burden on employers who must comply. For example, by using automated or other technological information collection and transmission techniques.

III. Proposed Actions

The agency is requesting to retain its previous burden hour estimate of one (1) hour contained in the Standard on Additional Requirements for Special Dipping and Coating Operations (Dip Tanks) (29 CFR 1910.126(g)(4)). There are no program changes or adjustments associated with the information collection requirement in the standard. The agency has correspondingly adjusted the per response burden to maintain a time burden as close as is possible to the actual time of one (1) hour.

OSHA has determined that where electrostatic equipment is being used, the information has already been ascertained and that the "safe distance" has been displayed on a sign in a permanent manner. The agency will summarize the comments submitted in response to this notice and will include this summary in the request to OMB.
