to replace the existing 6-foot-high wooden flashboards on the 176-foot long north section of spillway, which has a crest elevation of 534.2 feet, with an inflatable crest gate system. The proposal would result in a top crest elevation of 534.2 feet and the top of the inflatable crest gate, when fully raised, would be 539.9 feet (same as existing impoundment elevation). During construction, the applicant requests to temporarily draw down the impoundment (normal pond elevation at 539.9 feet NGVD29) to install a cofferdam on the upstream face of the dam to facilitate safe work conditions. The applicant proposes to draw down the impoundment from June 29 to July 20, 2023 by approximately 1.2 feet to install the cofferdam. Then the applicant would install the cofferdam and begin phase 1 construction from July 21 to mid-September, and during this phase proposes to maintain the water level at the dam crest elevation. Phase 2 construction would last from mid-September to November 23, and no draw down below the dam crest is anticipated during the transition from the phase 1 to phase 2. Finally, the cofferdam removal draw down is anticipated to last approximately 1 week, from November 23 to December 2, 2023 (water levels would be drawn down to elevation 533.0 ft or approximately 1.2 feet below the dam crest). During construction, the applicant proposes to continue to operate the project in a run-of-river mode and would maintain minimum flow requirements during and after construction.

upon lands or waters owned by others without the owners' express permission.

The proposed project would consist of the following: (1) an existing upper reservoir (Santa Margarita Lake) at an elevation of 1,300 feet above average mean sea level, with a surface area of 1,100 acres and a total storage capacity of 23,840 acre-feet; (2) an existing lower reservoir (Lopez Lake) at an elevation of 560 feet above average mean sea level, with a surface area of 950 acres and a storage capacity of 49,900 acre-feet; (3) 0.84-mile-long headrace tunnel, 0.19-mile-long vertical shaft, 5.86-mile-long horizontal tunnel, 0.09-mile-long penstock, and 1.22-mile-long tailrace tunnel to connect the powerhouse to the reservoirs; (4) a new powerhouse that would house 4 new pump-turbines rated at 150 megawatts each; (5) a new substation constructed in the western shore of Lake Lopez near the powerhouse, interconnected to the regional electrical utility network with either; (6) a new 2.5-mile-long 500-kilovolt (kV) transmission line from the powerhouse to a new switchyard located 1.3 miles south of the Lopez dam that will connect with PG&E's 500-kV line, or a new 4.5-mile-long 500-kV line that will connect the powerhouse to PG&E's 500-kV line at a new switchyard located 0.5 miles from Talley Vineyard using Lopez road as an existing right-of-way; and (7) appurtenant facilities. The estimated annual power generation at the Santa Margarita Pumped Storage Project would be 1,200,000 megawatt-hours.
